Lincoln School of Nursing in the Bronx, where she was a Sigma Theta Tau member, and received a B.S. degree from Hunter College. She is studying for her Ph.D. in Mental Health-Psychiatric Nursing at New York University. For relaxation she attends theatre and sporting events.

Mrs. Susan Winickoff

Mrs. Susan Winickoff, from Massachusetts, teaches Psychosocial Aspects of Patient Care. She attended Pembroke College before receiving her nursing degree from Columbia in 1965, and she later earned an M.A. in Adult Psychiatric-Mental Health Nursing at NYU. She has worked at Bronx State Hospital and has done private duty nursing. Her husband, Dr. Richard Winickoff, is a medical resident at the Medical Center. Handicrafts and politics are her extracurricular interests.

Lucy Warren

The South also claims Lucy Warren who came from Tennessee to get her nursing training at Columbia-Presbyterian and graduated in 1966. She holds a B.A. in biology and psychology from Huntington College in Alabama. Now she teaches Pediatric Nursing and studies part-time for a master's in that field at Columbia. Other nursing experiences have included psychiatric nursing at New York's Psychiatric Treatment Center for Adolescents, surgical nursing at Emory University, and medical nursing here at the Medical Center. Her enjoyments include beach and snow activities.

## Mother Goose Ball Saturday, March 29

The 1969 Mother Goose Ball, a benefit in behalf of the Medical Center Nursery School, will be held Saturday, March 29 at the Columbia University Faculty Club, 400 West 117th Street, New York, New York 10027.

Mrs. Peter Rosen and Mrs. Frank Smith are Co-chairmen of the Ball with Mrs. John Schullinger, Trustee-chairman.

There will be balloons and raffle prizes and music by Peter Duchin. For tickets at \$10 a couple (\$5 a couple for medical students) please call Mrs. Joseph O'Brien, SW 5-9036.

## DOINGS OF DOCTORS

### ● ENGAGEMENTS

Anne Eagle and Michel Bernoville plan a May wedding. Miss Eagle's father, Dr. J. Frederick Eagle, was formerly Associate Dean, P&S.

Zoila Gutierrez and Ralph Nunez are engaged. Miss Gutierrez is with the Nursing Office.

### ● MARRIAGES

Eileen O'Brien and John Kennedy were married on January 11. Mr. Kennedy, formerly Admitting Clerk, HP, is now in military service. Mrs. Kennedy is the daughter of Mrs. Rita O'Brien, Personnel Office.

Joanna Yoke May Chin, Staff Nurse, Sloane Hospital, and William Robinson, of the Lamont Geological Laboratory of Columbia University, were married on January 18.

Patricia Clarke, Staff Nurse, Squier, and Shackley Raffetto were married on January 18. Mr. Raffetto is a student at the New York University School of Law.

### ● BIRTHS

Dr. and Mrs. Chu H. Chang welcomed a son, Eric, born on December 17. Dr. Chang is Attending Radiotherapist at the Radiotherapy Center.

Mr. and Mrs. Ralph Durso welcomed a second daughter, Mary Helen, born January 14. Mr. Durso is with the Maintenance and Construction Department.

Mr. and Mrs. Gus Carrion welcomed their first son, Gus, Jr., born on December 17. Mr. Carrion is with the Radiotherapy Center.

Mr. and Mrs. Ronald Smollen welcomed a daughter, Cara Stacey, born on January 15. Mrs. Smollen is a histology technician, Urology, P&S.

### ● WELCOME

To Mrs. Carmel Fee, Technician, Radiotherapy Center, a graduate of Hammersmith Hospital, London.

To Mrs. Pat Corletti, Secretary to Miss Oring, of the Personnel Department.

To Xiamora Alba of the Columbia-Presbyterian Medical Center Development Fund Office.

To Julie Sloane of the Public Interest Office.

To Mrs. Susan Schildwachter of the Milbank Library. She is the daughter of Mrs. Alice Clark, secretary to Dr. Langford.

### ● FAREWELL

To Mrs. Sophie Katsaris, Milbank Library, who left on January 16 to await the birth of her child.

### ● CONDOLENCES

To the family of Mrs. Eleanor Fries, R.N., a Supervisor in the Sloane Nursery until 1947, who then worked with Dr. Merritt in the Fetal Life Study until her retirement in 1957. Mrs. Fries, who made her home in Walden, New York, passed away in December after a ten month illness.

To the family and friends of Winston Lewis, Night Supervisor, PH, who died on January 11.

## RETIREMENTS

Continued from page seven

### Mrs. Kathleen Bray

Mrs. Kathleen Bray, Payroll Clerk, Nursing Department, PH, retired in December.

"When I first started working at PH 21 years ago I really never thought I would stay so long" . . . famous last words! Today, Mrs. Bray told us that she looked upon her job as a "challenge" and enjoyed it very much. "I found it rewarding."

Kathleen, a vivacious lady, enjoys reading, swimming and walking, and she and her husband frequently go swimming at their local "Y". Mr. Bray, also retired, was born in Ireland (Mrs. Bray is a native

New Yorker) and they hope to visit Ireland in the near future. The Brays have four children and eleven grandchildren.

A tea was given in Mrs. Bray's honor on December 12 and it was well-attended by well-wishing friends and fellow employees.

Mrs. Kathleen Bray

DR. LOWELL GREENBAUM, Associate Professor of Pharmacology, P&S, upon invitation, gave lectures on "The Role of Kinins in Inflammation and Injury," at Baylor University, Houston, Texas; Kansas City Medical Center, Kansas City, Kansas; and Oklahoma City Medical Center, Oklahoma City, Oklahoma. The lectures were presented during the week of November 18.

DR. SOLOMON ROSENSTEIN, Professor of Dentistry and Director of the Division of Pedodontics, DOS, conducted an instructional course in "Dental Problems in Cerebral Palsy" and led a group discussion on "Dentistry" at the annual meeting of the American Academy for Cerebral Palsy, held in Miami Beach, Florida, from December 10 to 14. Dr. Rosenstein also serves as Director of the Cerebral Palsy Dental Program at the Medical Center.

DR. KARLIS ADAMSONS, Associate Professor of Obstetrics and Gynecology, P&S, and Associate Attending Obstetrician and Gynecologist, PH, was an invited speaker of the XII International Pediatric Congress held in Mexico City during the first week of December. He presented a paper on "Treatment and Prophylaxis of Erythroblastosis Fetalis." On November 22 Dr. Adamsons served on the guest faculty of the Post Graduate Course of the Chicago Medical Association and spoke on "Biochemical Assessment of the Intrauterine Patient." On December 17 Dr. Adamsons addressed the Combined Pediatrics and Obstetrics staff conference of the University of Pennsylvania in Philadelphia on "Biophysical Techniques in the Diagnosis of Fetal Disorders."

DR. MAXIMILIAN SILBERMANN, Emeritus Professor of Neurology, P&S, has been elected a member of the National Advisory Council of the New Hampshire College, the "College of the 21st Century." The election was held on December 10 at a luncheon given by the Trustees and Officers of the College at the Sky Club.

DR. CHARLES L. FOX, JR., Professor of Microbiology (Surgery), was invited to describe the clinical experience in the treatment of burns with silver sulfadiazine developed here at the Medical Center to the International Symposium on Pharmacological Treatment in Burns held in Milan, Italy, November 30-December 1. Dr. Fox received an award and a medal from the Mayor of Milan. Subsequently, Dr. Fox was a guest of the Medical School of the University of Basel, Switzerland, where he lectured on "Fluid and Electrolyte Therapy in Surgical Patients" in addition to the "Treatment of Burns." Dr. Fox then was a guest of Dr. Maurice Wilkins and Watson Fuller at Kings College, London, where much of the basic work on DNA structure was accomplished.

DR. THOMAS SANTULLI, Attending Surgeon, PH, and Professor of Surgery, P&S, spoke on "Congenital Atresia of the Bile Ducts" at the November 30 World Symposium of Pediatric Surgery. On December 5, at the XII International Congress of Pediatrics, Dr. Santulli presented a paper entitled "Congenital Occlusions of the Lower Intestine." Both events were held in Mexico City.

DR. J. LAWRENCE POOL, Professor and Chairman, Neurological Surgery, spoke on "Microsurgery of Aneurysms" and "Acoustic Tumors of the Brain" at the International Meeting on Microneurosurgery, held in Zurich, Switzerland, from November 14-17. Because of the pioneer work in this field done at the Neurological Institute of New York, Dr. Pool was the guest of honor.

DR. J. LOWRY MILLER, Emeritus Clinical Professor of Dermatology, P&S, was re-elected to serve as Treasurer of the Dermatology Foundation. The elections were held on December 7 at the Foundation's third annual meeting in Chicago.

Dr. Miller

Dr. Rose

DR. HARRY M. ROSE, Chairman, Department of Microbiology, P&S, attended a Conference on Myxovirus Infections, sponsored by the Japan-United States Cooperative Medical Science Program, which was held in Tokyo, Japan, on December 2-4. Dr. Rose presented a paper entitled "Factors Concerned with Immunity to Influenza in Man."

DR. WILLIAM BLANC, Professor of Pathology, P&S, and Director of Pathology, BH, presented a course on pathology at the Colombian Society of Pathology, as well as several lectures in Bogota and Medellin on "Pediatric and Placental Pathology" from December 4 to 19. His trip was sponsored by the A. L. D. division of the American Embassy in Colombia. Dr. Blanc also gave several lectures to pathologists and pediatricians in Lima and Rio de Janeiro and discussed the possibility of an exchange program with several pathologists in children's and lying-in hospitals in South America. Dr. Blanc was made an honorary member of the Colombian Society of Pathology, the Peruvian Society of Pathology, and the Brazilian Pediatric Society.

## HONG KONG FLU

Continued from page one

employees' respiratory tracts. "We received the first vaccine against the A2 Hong Kong virus only on December 17 or 18," said Dr. John M. Baldwin, Jr., of the Personnel Medical Department. Altogether, under 1,000 doses of the vaccine were given to phy-

sicians, nurses and staff. The two clinics charged with administering the vaccine to employees were Personnel Medical and the Graduate Nurse Clinic in Atchley Pavilion. "Unfortunately," Dr. Baldwin said, "the amount was too little and too late to modify the course of the epidemic."

Vaccines were administered

to outpatients and staff by Admitting Emergency as part of Vanderbilt Clinic's service to the community. Dr. Joseph Snyder, Assistant Vice President for Vanderbilt Clinic and Other Services, and Dr. John Dean, Director of Emergency Medical Services at Vanderbilt Clinic, came in weekends to administer immunizations.

## THE HOSPITAL AT NIGHT

### Vanderbilt And Its Helpers

On crisp, windless nights you can hear an ululating ambulance for miles on the straightaways that lead to Mitchel Square in front of Vanderbilt Clinic. The odds are heavy that the ambulance will sharply cut into the Vanderbilt Clinic court from

Broadway and make a whining stop in front of the narrow emergency door. Of almost 500 visits that are made to the Admitting Emergency Clinic every 24 hours, many are made in an ambulance or a police car at night.

The crass difference between a hospital's night and day is nowhere more obvious than in the initial care and screening facilities of the Vanderbilt Clinic. Unlike the measured internal aches of most of the daytime patients, the complaints that arise at night tend to seem acute to the patients.

"Most of the people who come here at night need immediate attention," says Mary Moran, Evening Supervisor of the Vanderbilt Clinic's initial care facility. Many of Miss Moran's patients are brought to the nurse's desk sprawled in wheel chairs or supine on

stretchers. They include car accident cases—especially when it rains—and barroom casualties with bullet wounds and knife punctures. A staff of two interns, one resident, a pediatric resident, an attending physician and an attending pediatrician is on hand during the hours of four to midnight to give them immediate care and initiate further treatment. At the discretion of the Resident on duty, additional residents, attending physicians, and other specialists are on call and can be on the scene within minutes.

Miss Moran and her associate Gleena Gilbert, who received her nurse's training in England, have been on evening duty for one and a half years. On her off days, Miss Moran knows that the Clinic

BALCONY STACKS  
COLUMBIA UNIVER.

MAR 10 1969

MEDICAL LIBRARY

will continue running smoothly under Patricia Walsh, a staff nurse with four years of

experience evenings on both the first and third floors. Prior to her current assignment, Miss Walsh did one year of surgical nursing on 14 West of Presbyterian Hospital. Miss Walsh compares night duty favorably with her experience days, emphasizing the greater rapport that seems to thrive between sunset and dawn. Her evening associate Penny Sharratt points out that a young nurse can learn so much more about nursing in this period. Both Miss Sharratt and Linda McDonald profess a distaste for imitating the "early birds" among their contemporaries; both nurses are likely to accomplish more in the afternoon and evening.

The Clinic's evening squad of nurses, which is rounded out by Gail Holst, covers not only the medical care facilities on the first floor and the initial-care unit for patients with trauma on the third floor,

## \$1.5 Million for Pharmacology Studies Awarded by National Heart Institute

Dr. S. C. Wang (left), Pharmacology, Dr. J. R. Malm (center), Surgery, and Dr. B. F. Hoffman, Pharmacology, are recipients of a five-year \$1,441,822 Program Project Grant of the National Heart Institute of the National Institutes of Health. The funds will support inter-disciplinary work in solving research and clinical problems relating to the physiology and pharmacology of the autonomic and cardiovascular systems.

In January the National Heart Institute of the National Institutes of Health awarded a Program Project Grant of \$1,441,822 to Drs. B. F. Hoffman and S. C. Wang of Phar-

macology and Dr. J. R. Malm of Surgery to support their studies of "Physiological Pharmacology and Its Clinical Applications" for a five year

## THE HOSPITAL AT NIGHT—PART 1

As the sun retreats behind the palisades across the Hudson, thousands of employees, students and visitors scurry from the Medical Center, leaving it in the hands of the Night People. Rarely more than the obligatory exchanges of job-connected information pass between the day shift and the evening shift. Equally rare are occasions when employees request to be transferred from the day shift to one of the nocturnal shifts, or vice versa.

Thus, inevitably, an understanding gap exists between days and nights. "Tell the day people that the Hospital does not shut down at midnight," a night nurse told *The Stethoscope*. She was not the only one to voice this message.

One may infer that Night People feel that their endeavors do not receive enough recognition. For this reason, *The Stethoscope* has initiated a survey of the Night People—of their activities, opinions, and problems.

This issue of *The Stethoscope* centers attention on the Hospital's initial-care facility and on its ancillary services that closely cooperate with it throughout the night. The other units of the Medical Center will be covered in subsequent issues.

## \$1.5 MILLION AWARDED FOR PEDIATRIC ACID-BASE RESEARCH

A new award from the National Institute of Child Health and Human Development of the National Institutes of Health has been announced by Dr. H. Houston Merritt, Dean of the College of Physicians and Surgeons. The grant of \$1,484,673 will finance research work for a five-year period on "Physiology of Growth, Acid-Base and Energy Metabolisms."

The project will be under the direction of Dr. Robert W. Winters, Professor of Pediatrics, and Dr. John C. Sin-

clair, Assistant Professor of Pediatrics. Working with them in a team effort will be Dr. Ralph B. Dell, Assistant Professor of Pediatrics; Dr. Knud Engel, Assistant Professor of Pediatrics; Dr. Leonard Glass, Associate in Pediatrics (Harlem); Dr. L. Stanley James, Professor of Pediatrics; Dr. Poul A. Kildeberg, Assistant Professor of Pediatrics; Dr. Eugene L. Klenk, Associate in Pediatrics; Dr. Gabriel V. Duc, Visiting Fellow in Pediatrics.

## Our Ambassadors Of Ophthalmology Go to Puerto Rico

President Nixon, who would like to improve the Alliance for Progress, might do well to look into the alliance between the Ophthalmology Department of P&S and its counterpart in San Juan.

According to members of the Department's research staff who have just completed consecutive one-week teaching assignments at the University of Puerto Rico, the medical

*Please turn to page three*

## \$2.3 Million for Nurse Training Center

The Department of Health, Education and Welfare has made a grant of \$2,324,892 to Columbia University, College of Physicians and Surgeons, and The Presbyterian Hospital in the City of New York for a new Nurse Training Center at Columbia-Presbyterian Medical Center.

In a joint statement, Dr. H. Houston Merritt, Vice Presi-

dent for Medical Affairs at Columbia University, and Augustus C. Long, President of The Presbyterian Hospital, said that this matching grant has been met through the generosity of Mr. and Mrs. Van Alan Clark, who have been benefactors of the School of Nursing for many years.

The new facility will adjoin

*Please turn to page three*

At the Capping Convocation for the Class of 1970 Dental Hygienists, School of Dental and Oral Surgery, the academic procession (photo at left) included Dr. Melvin Moss, Dean; Dr. Donald Wallace, the guest speaker; Dr. George O'Grady, Assistant Dean; Dr. Edward Zegarelli, Chairman, Department of Stomatology; Julie A. Wehrle, Instructor; M. Diane Curi, Instructor; and the Reverend Robert B. Reeves, Jr., Medical Center Chaplain.

Ceremony was opened by a welcome from the Director of Dental Hygiene Division, Mrs. Patricia McLean (photo, lower left). Dr. Moss extended best wishes to the students.

The guest speaker was Dr. Donald Wallace, who is Vice President of the American Association of Dental Examiners and Secretary to the New York State Department of Education. Speaking of the future of dental hygiene, he stressed "the need for more hands to do what dentists do not have time to do."

Placing the caps on the students (photo at right) are Nancy L. Sisty (left), Senior Clinical Instructor, and Carolyn M. James. For Juniors, first cap for beginning of clinical experience; for Seniors, cap with stripe signifying a milestone in level of clinical experience.

Code of Ethics was presented by Joanne Rita Hoffman, President of Junior Dental Hygienists Association, "... for the good and welfare of each individual whom I am privileged to serve...."

Students capped are part of the tri-educational programs in the Dental Hygiene Division. Other programs provide students already holding certificates in Dental Hygiene to obtain a baccalaureate degree for Dental Hygiene teaching, public health, and speech.

Also one-third of the students within this division are candidates for the

Masters degree in Dental Hygiene Education, Administration, or Public Health.

Caps are waiting (photo above) for the class of 1969: Eckhaus, Hann, Harbach, Hodge, Ishida, Kancyr, Kolberg, Morrow, Person, Salsbury, Sauer, Siegel; and the class of 1970: Boutin, Currie, Flette, Goldsmith, Hyatt, Kucar, Ma, Sexson, Themann, Yee.

Many states of the United States and several foreign countries were represented by the students of these two classes.

## Unusual Triumph Marks Retirement Of Hans Frohlich

Hans Frohlich, Plumbing Foreman, Maintenance and Construction, retired in February after completing almost 28 years of employment at the Medical Center.

Mr. Frohlich, however, is a little more than just "an employee." Twenty years ago he was stricken with cancer of the throat, his larynx was removed and he successfully mastered the very difficult process called "esophageal speech." This is a method of speaking whereby the patient swallows air and "burps" it through his mouth. Bands form in the mucous membrane of the reconstructed pharynx which sets this air into vibra-

tion with the production of sound. The patient is then able to articulate this sound. He mastered this process of "esophageal speech" so successfully, and speaks so clearly and is such a warm and responsive person, that he has been acting as a liaison between doctor and patient whenever one of our otolaryngologists encounters a patient who finds it difficult or impossible to accept this surgery. At one time Mr. Frohlich acted as an instructor of speech for patients who had undergone laryngectomy. In some instances he was able to teach patients how to speak after a single lesson.

The idea for this originated with Dr. Edmund P. Fowler, Jr., then Professor and Chairman of the Department of

Otolaryngology, and has been carried on since then at the request of many of the otolaryngologists, particularly Dr. Daniel C. Baker, Jr., Professor and Chairman, Department of Otolaryngology, and Drs. Robert Hui, Jules G. Waltnr, and John Conley. Dr. Baker told us his services will be greatly missed by the Department.

Mr. Frohlich frequently lectures at "The Lost Cord," the Laryngectomy Club sponsored by the American Cancer Society; the sponsoring Society supplies him with booklets, pamphlets and other material. He speaks to these people gently but forcefully, "speaking softly but carrying a big stick." Mr. William Gargan, former Hollywood movie star who also underwent laryngeal surgery and overcame this same problem, is the Honorary Chairman of this club.

Mr. Frohlich was born in Danzig, Germany, and makes his home in Queens with his wife. There are two children and two grandchildren. In his spare time he is a cabinet maker with a fully equipped "shop" in the basement of his home.

Mr. and Mrs. Frohlich are planning a visit to Germany shortly and—this is a new wrinkle—"We are going to fly

## Improved Patient Identifications Are Evolving

Patients reporting to Vanderbilt Clinic nowadays can see evolution at work. They are receiving pocket-size appointment folders of lightblue, flexible vinyl. The 3½ by 8¼-inch folders are provided with neatly lined squares of white overlay for making written notations, and with a transparent pouch for the patient's identification card. More than 20,000 folders have been given out since mid-December, at a rate of 2,000 folders per week.

As a news item, the mutation of appointment cards at VC from beige cardboard to sky blue vinyl will not excite the general reader. But there is more to the handsome folders than pleases the eye. Astute observers of the modern hospital scene see the folders as still another step in the evolution of patient processing toward speed and accuracy. This evolutionary process, which started from the dog-eared, heavy-paper card of yesteryear, is now in the plastic-card stage. Its further development is limited only by the bounds of creative imagination and technological progress of computers.

At present, however, "the goal of our patient identification system is to have one type of card for any patient, anywhere in the hospital," said William E. Vanderhaak, Associate Director of Medical Data Processing, in an interview about the future in patient registry.

In Mr. Vanderhaak's opinion, one direction this evolutionary process may take in the U. S. is toward the use of social security numbers for identification purposes by banks or by hospitals. "The issuance of social security numbers would have to be centrally controlled to avoid the assignment of the same num-

ber by different regional offices," Mr. Vanderhaak warned.

At Presbyterian Hospital, the progress of patient identification has taken giant forward strides, especially in the last 3½ years. Since Calvin Hatcher, then an Administrative Assistant, sought to adapt the credit-card shape to patient identification 15 years ago, the Hospital has developed its own plastic patient card, has designed multi-purpose requisition forms and adapted them to use by computers. Today 14 embossing machines, deployed in admitting units, print the patient's name, sex, birthdate and unit number on the plastic card. Plastic cards of another type are used for each laboratory test or medical procedure. Nearly 300 special devices in all parts of the Hospital imprint the raised lettering of the plastic cards onto 15 types of requisition forms to order or report a variety of lab tests and x-ray, surgical or therapeutic procedures. Of several carbon copies in the requisition form, one copy travels to the IBM scanner in the Service Building.

"We were one of the first hospitals in the country to scan the card of a requisition form," recalled Mrs. Terry Orzano, who supervised installation of the patients' identification system. She is credited with much of the Hospital's progress in this area.

"Most of the modification of our imprinting machines were undertaken to insure correct scanning," Mrs. Orzano said. The scanner "reads" the horizontal lines of numbers and converts them to punched holes. The computer then uses the information to compile work-load statistics for individual units and to bill patients for services performed.

because my wife doesn't like ships."

On February 14 (St. Valentine's Day appropriately), a reception was held in Harkness Hall both to honor and to bestow a small measure of the affection that is held for this man by his own department and by his many friends and

fellow employees. Among those present were Dr. Joseph E. Snyder, Mr. Eugene T. Cleary, Mr. G. R. Masten and Mr. William Fleck. He was given a very clever and very decorative lamp on a walnut base made up of tiny replicas of plumbing facilities done in brass.

Mr. and Mrs. Hans Frohlich and daughter Celeste at the recent retirement party held in Mr. Frohlich's honor.

# 1.5 MILLION FOR PHARMACOLOGY

*Continued from page one*  
period. One of the major objectives of this program is to achieve more effective interaction between groups of investigators who can bring the expert knowledge and the experimental techniques of their own field to bear on the solution of problems of common interest. The program is designed also to bridge the gap between basic research and clinical medicine by providing for further and more effective collaboration between investigators in several departments.

The major emphasis of the program will be studies on the physiology and pharmacology of the autonomic nervous system and cardiovascular system. This research will be developed to help solve diagnostic and therapeutic problems in clinical medicine. These studies are the outgrowth of numerous collaborative efforts between members of the Department of Pharmacology and investigators in Surgery, Anesthesiology, and other clinical departments, who have attempted to

apply the techniques of basic research to problems in their own disciplines.

The grant provides support not only for laboratory studies and training in Pharmacology but also their direct application to patient care. The College of Physicians and Surgeons has provided clinical research space adjacent to the Open Heart Recovery Room which will be renovated and partially equipped through funds provided by the Program Project Grant. The new facilities will permit continuous monitoring of cardiovascular activity in all patients to complement existing facilities for measurement of the oxygen cost of breathing. The new support will expand facilities for recording data on magnetic tape for instant replay and for computer processing.

Faculty Members of other departments responsible for some of the supported studies include Dr. J. T. Bigger, Jr., of Medicine, Dr. S. Sullivan of Anesthesiology, and Dr. Mary Jane Jesse of Pediatrics.

## NURSE TRAINING, \$2.3 MILLION

*Continued from page one*

Maxwell Hall on land fronting Riverside Drive and the excavation work is expected to get underway in the near future. Total cost of the new facility is estimated at \$4,500,000.

One of the nation's most pressing health needs today is for more Registered Nurses. That is why the federal government is making sizeable grants to existing schools of

nursing to enlarge and modernize their teaching facilities.

The new addition to Maxwell Hall will provide enlarged, modern classrooms and needed faculty and administration offices.

Approximately 115 new students are enrolled in the School of Nursing each year. This number is expected to be increased substantially when the new facilities become available.

## PUERTO RICO

*Continued from page one*

alliance is doing well and is "showing no signs of fatigue."

The San Juan-based institution annually hosts a four-month international training program in ophthalmology for Latin American and South American doctors. As sponsor of the program, the Commonwealth's medical school in San Juan provides both facilities and teaching cadre. Columbia University contributes a team of lecturers for the project as part of its "alliance for mutual professional benefit."

This is the second year of Columbia University's official participation in the program. The affiliation of the Ophthalmology Departments of the two universities was announced in December, 1967, by Dr. José Sifontes, Dean of the School of Medicine in San Juan, and Dr. H. Houston Merritt, P&S Dean.

Actually, arrangements for a cross-fertilization of ideas between the two eye-study centers were made three years ago by Dr. George K. Smelser, Director of Eye Research at P&S, in collaboration with

Professor Guillermo Picó, Chairman and Head of the Department of Ophthalmology in San Juan. In 1967, a training grant from the National Institutes of Health was obtained. Financial support from private agencies enabled Dr. Sifontes to invite 20 doctors from Latin America and South America to participate in the training program along with doctors doing their residencies at the University of Puerto Rico Medical School.

This year, Dr. Smelser, as Professor of Anatomy specializing in the eye, led off the procession of eye specialists from the Medical Center to San Juan. He was accompanied by his associate Victoria Ozanics and by Visiting Professors Missotten of Louvain and Vrabec of Prague. The group was followed by: Dr. Paul Witkovsky, who taught visual physiology; Dr. Laszlo Bitó, whose subject was physiology of the eye; Dr. Wladyslaw Manski, specialist in eye immunology; Dr. Abraham Spector, who discussed biochemistry of the eye; and by Dr. Arthur G. DeVoe, Chairman of the Department of Ophthalmology, who lectured on corneal surgery.

*Continued from page one*

but also the Admitting Ward on the first floor.

One more practical reason for preferring the evening shift is given by Margaretta Alston, nursing aide, Miss Alston, who has served Vanderbilt Clinic for six years, commutes to Montclair, New Jersey, and stays on the evening shift to avoid the brutal crowding of New York's subways and Port Authority buses during the rush hour.

Another full-time permanent aide, Gloria House, has done the evening trick for two years. Miss House, who hopes to become a nurse, prefers her late assignment because nights "you are given responsibilities that you don't get days." Her opinion is echoed by aides and nurses alike. Says Fran Eshleman, night staff nurse in the initial surgical care unit: "Night nurses have a store of general knowledge of medical and surgical emergencies."

In the initial-care and screening stage of this young patient's visit, Dr. John Mudd decides what action should be taken.

Just before dawn, after the last of the emergency patients have been taken care of, a lilting aria may be heard on the third-floor of Vanderbilt Clinic. The voice is Miss Eshleman's, and her purpose is as much to practice for her voice training with a professor of the Julliard School of

Virginia Enright, clinic receptionist on the evening shift, is the first to query incoming patients with medical complaints.

Music as to usher in the coming day.

Pat De Pompei, the night supervisor of nursing at Vanderbilt Clinic, has held the midnight to eight in the morning shift two years. Her other assignments at the Medical Center include a two-year stint as an evening head nurse and one year as a head nurse on the day shift. Although Miss DePompei concedes that daytime sleep is not as restful as night sleep and that the more normal way is to start the day with the sun, she has much positive to say about the night shift. "Besides the greater variety of outpatient and intensive care nights, you really get to know what is going on in the surrounding community on the night shift." Miss DePompei also lauds the closeness and camaraderie of the night staff—"a bond that simply does not exist days."

Miss DePompei is assisted by nurses Yvonne Hall and Martha Joseph and by nursing aide Sallie Raine.

## The Registrars

Backstopping the nurses and no less closely involved with patients are Vanderbilt Clinic's permanent evening and night registrars. They include Mrs. Violet Dattorre, James Duffy, and Mrs. Janet Furman of the earlier shift, and Hugh Daly, who is on full-time night assignment. The registrars are

The nurse's desk in the Admitting Emergency Clinic has people standing on both sides of it around the clock.

Near the end of a long night shift, Dr. Gerald Verdi sutures the arm of a lady patient who sought medical attention from Vanderbilt Clinic at daybreak.

important cogs in the human machinery that conveys the patient back to health. They interview patients about their family situations, financial status, try to understand their problems and help them with guidance, such as making clinic appointments for them.

*Please turn to page four*

The initial, screening phase completed, a patient is being taken to the third floor for further tests.

OVERHEARD IN A CAFE AT MIDNIGHT: "That young newspaper man came to our floor at three in the morning; I think he was interviewing all night long."

Yes—from 6 p.m. to 6 a.m. for several nights. More of THE HOSPITAL AT NIGHT will appear next month.

# THE HOSPITAL AT NIGHT

Continued from page three

## The Bishop

Patients seeking medical attention at the Admitting Emergency Clinic at night may have their anxiety eased by the soothing words of a bishop. He is Jesse Singletary of the Church of God in Christ Jesus. Bishop Singletary has served the Vanderbilt Clinic as an attendant on the night shift for fifteen years. He chose these hours to enable him to officiate at his Church's all-day services on Sundays.

The Brooklyn-based Church holds services also Tuesday and Friday evenings, after which Bishop Singletary hastens to his job uptown.

In these days of material affluence in America, Bishop Singletary fulfills the stringent requirements for being a Christian set forth by Christianity's first teacher. His commitment to help others has left him little time for his own affairs. The Bishop splits his

day between helping patients at the uptown Medical Center and acting as a spiritual counselor to his parishioners. He spends much time at police precincts in Brooklyn, trying to make youngsters in trouble with the law to see the foolishness of their ways. The 77th Precinct, for example, "has made him its youth advisor. The Bishop estimates he spends two nights a week counseling the youth of his parish. He is frequently on the phone with the D.A.'s Office for the same reason.

On other days, the Bishop brings a word of cheer to parishioners in hospitals. Twice a week he visits mental hospitals to help patients who are being released to begin new lives. He makes sure they are properly clothed and have a place to stay. The Bishop also runs a job agency for former patients or anyone in the community who is looking for a job. In cases of disability, he contacts the Welfare Department on behalf of needy families. Bishop Singletary also finds time to officiate at funerals and solemnize marriages. He has the assistance of seven clergymen and of his wife, who takes calls from parishioners while the Bishop grabs a few hours of sleep after his all-night duties at Vanderbilt Clinic. His official ecclesiastical day starts at two in the afternoon.

is a greater opportunity to use your own initiative in improving the standard of radiological procedures. Mr. Reeves does not mind his evening assignment because it gives one the freedom to attend school at day time. Furthermore, "night life really gets going after midnight."

Plunging into nocturnal activities of this kind is not too easy for some night members of the x-ray department who commute long distances. One of this group, William Moakler, who inhabits the x-ray department overnight, chose that shift so that he could continue studies at the Bergen County Community College in Paramus.

## The Record Keepers

Each reverberation from a population explosion in the initial care and screening facilities of the Vanderbilt Clinic, such as might result from badly iced streets, is immediately felt in the Presbyterian Hospital's Record Department. The Department is sandwiched between the hectic first and third floors of the Clinic. Not at all accidental, this location reflects the vital need to have a patient's medical record immediately available upon his return to the Vanderbilt Clinic or any other part of the Medical Center.

When a new patient is brought into the Vanderbilt Clinic, he is assigned a unit number and begins to accrue a medical record that is filed in the records repository on the second floor. The filing of records is partly the responsibility of the evening shift in the Department, headed by Mrs. Mary Waltke. After replacing files that were consulted during the day, Mrs. Waltke's team begins, around nine in the evening, to pull medical records for patients scheduled to be seen or admitted the next day. About 6,000 files are pulled each day on the basis of requisition forms that have been prepared by the distributing section during the filing phase of the operation. While the files are being pulled, still another section is engaged in

A supermarket atmosphere reigns in the Record Department on the second floor of Vanderbilt Clinic as carts laden with records are taken to checkout points. There are no "slow" evenings here, since an average of 6,000 records are needed in various parts of Medical Center the next day.

Thomas Gilligan receives keys to all doors in the Medical Center from Mrs. Frances Gidius, Chief Night Clerk of Record Department, to enable him to pick up needed medical records.

transcribing medical records. A lone operator, Mrs. Dominici, types up name cards for patients.

The typical member of the Record Department is a young housewife with children, whose father babysits for them after they've been put to bed. Mrs. Waltke, who has been with the Medical Center for 15 years, has four grown children; her assistant Mrs. Dorothy Ziffer has five children, of whom the youngest is 14. While Mrs. Ziffer works, her husband acts in a supervisory

capacity at home. A late riser whose "temperature cycle" does not go up before noon, Mrs. Ziffer is ideally suited for the 4:15 p.m. to midnight shift. The temperature of the average "day person" is said to go down in the evening, fall as much as two degrees, and then rise in the morning. Mrs. Ziffer's co-workers, Mrs. Mary Cumiskey and Mrs. Vitina Puma, appear also to have late-rising temperature cycles that would qualify them as night persons.

The pattern of young housewives taking advantage of the hospital's not insignificant night differential while a familial babysitter takes over at home is continued on the night shift at the Record Department. The night staff does not have the all-female character of the previous shift, however, since it includes Frank Ballester and Thomas Gilligan. The two men are the leg men of the department. Their job is to trace needed records and recover them from closed offices, as well as to deliver medical records to offices requesting them for the next day.

The main task of the night staff is to trace elusive records, according to Mrs. Fran-

Jesse Singletary

## The X-Rayers

The steadily rising number of upper Manhattanites with complaints who decide to visit Vanderbilt Clinic at night has forced several ancillary services to expand their coverage or to provide for more personnel for duty between the hours of four in the afternoon and eight in the morning. Such was the case in the Department of Radiology, whose main facility on the third floor of the Presbyterian Hospital is adjacent to one Admitting Emergency floor of the Vanderbilt Clinic. The Radiology Department maintains many divisions in other parts of the Presbyterian complex, such as Eye Institute and the Harkness Pavilion, but these departments function only days. It is not so much the unexpected jobs from the outlying areas of the Medical Center as the heavy load of patients

with trauma from Vanderbilt Clinic that occupies the attention of four radiologic technologists, one aide, one film clerk and one secretary permanently assigned to the four to midnight shift. From midnight to eight in the morning, one technologist copes with the trickle of patients that may at any moment turn into an avalanche. The evening crew is headed by Charles Mitchell, evening supervisor, who represented the x-ray unit nights for four years before taking the supervisory assignment on the earlier shift. A resident of Paramus, New Jersey, Mr. Mitchell is a graduate of the School of X-ray Technology of Bergen Pines County Hospital. He supervises two Radiologic Technologists who work from four in the afternoon until midnight.

The dusk to dawn people on the x-ray staff agree with Jerome Reeves, R.T., that there

Flanked by her assistant Mrs. Dorothy Ziffer (left), and by Mrs. Carmela Dattorre, Mrs. Mary Waltke, Chief Evening Clerk of Record Department, discusses a requisition requiring individual attention.

ces Gidius, chief night clerk. Her assistants include Mrs. Anna O'Grady, Mrs. Julia White and Mrs. Victoria Manos. "We have a nice little family here," says Mr. Gilligan about the group.

Mrs. Gidius, whose children range in ages from 13 to 24, believes that most of her staff cherish the convenience of the night shift in their home situations. The working mother is able to put her offspring to bed before leaving for the Medical Center, and she returns in time to prepare them for school.

One other advantage, adds Mrs. Alice McGuire, who is on the eleven p.m. to seven a.m. trick, is that the working parent can attend P.T.A. meetings and other important community discussions.

## The Protectors

The Protective Department and Vanderbilt Clinic strike up a symbiosis at night that is characteristic of the co-operation of night personnel.

As the crowd in the Clinic's waiting room goes through its daily metamorphosis from day patients to night patients, members of the Protective Department migrate from their diggings in the basement of the Clinic to the Central Desk on the first floor. This move gives the Department a more strategic location for keeping abreast of the constant movement of people in and out of the hospital and in the halls. In exchange, the department's members help the Clinic staff by expediting the transport of critically ill patients and by taking over with visitors whose problems are not primarily medical.

One such visitor, recalls Sergeant Gus Carrion of the evening shift, forcefully lowered a paper bag full of coconuts on his head and then blamed him for "spoiling my fruit."

"One of the additional duties of Protective Department at night is the guarding of emotionally disturbed people until a medical disposition of them is made," Sergeant Carrion said, recalling the incident with considerable professional equanimity. The main duty of the Protective Department, of course, is the protection of the Hospital's property and the safeguarding of the Hospital personnel. The Department maintains surveillance, for example, of the facility for surgical trauma care on the third floor of the Vanderbilt Clinic by closed-circuit television. Starting in late evening, the Protective Department is required to make clock rounds in all patient care areas. At least five clock rounds are made in these areas; repeated rounds are also undertaken in other buildings of the Presbyterian Hospital.

Sergeant Carrion, who has been with the Hospital for 15

years, is also a Special Patrolman with the New York City Police Department.

Another Special Patrolman on the four a.m. to midnight shift is Paul Rodriguez, who covers the dining room area and the main entrance to Presbyterian Hospital. He is responsible for the safe conduct of cashiers from the Hospital's cafeterias to the vault.

Other members of the Protective Department with regular assignments include Alan Abell at Neurological Institute, with 13 years of service; Bernard Morsehead at Harkness Hall, with 18 years of service; and John O'Connor at Doctors' Parking Lot, with 17 years on the force.

On the night shift, long-timers with regular posts include Officer Cornelius Alvarado, who covers South Property, and Officer Kevin Rau, who covers the Eye Institute.

In comparison with the evening shift, the night trick is heavy on clock rounds, according to Sergeant William Ne-

lan, the night officer in charge. Sergeant Nelan, who served in the U. S. Army as a crypto code operator in Vietnam from 1962 to 1963, has been on the night shift at Presbyterian Hospital for 13 years. He is responsible for all the rounds being made by officers on his staff.

When the influx of patients with stab and bullet wounds and special problems subsides around five o'clock in the morning, the Protective Department retreats to its subterranean "station house" in the Basement.

The College of Physicians and Surgeons has its own security department, headed by William Sim. The P&S force, which patrols the Black Building as well, has several members with admirable longevity: Robert Meade, with 23 years of day and night service; Vladimirs Strelcovs, with 12; Patrick Malone, a ten-year man; and Lawrence Jeter, also with ten years on the force.

## The Pharmacists

The diversification of Vanderbilt Clinic's services and the trend of recent years of many community residents to visit the Clinic after their working hours have been factors in the decision two years ago to keep Presbyterian Hospital's Pharmacy going until eleven o'clock in the evening. Not infrequently, patient after patient appears at the Pharmacy's window counter in the Clinic basement. After eleven o'clock, the Vanderbilt Clinic taps its own emergency sup-

pliments—a theoretical test, an essay test, and a practical test.

The Hospital's Pharmacy team includes two licensed pharmacists, Harry Morelli, who teaches three courses at the Fordham University's College of Pharmacy and Charles Glauda. Paul Cardillo and Charles Casamento are the juniors on the evening shift. The leg man on the squad, George Guerra, may be seen in various parts of the Hospital during the late evening hours with stapled pouches containing medications.

Hospital Pharmacy's "night persons" pose for group portrait near end of their three to eleven o'clock shift. They are, from left: Charles Casamento, Paul Cardillo, Charles Glauda, and Harry Morelli.

ply of drugs. In case of need for an unusual drug, the Hospital's Night Manager and a nurse open the pharmacy and find the needed medication from telephoned instructions by the pharmacist, who is on call.

The pharmacists who staff Presbyterian's Pharmacy include junior pharmacists who are completing their six-month test programs. In addition to practical work done under the supervision of licensed pharmacists, these trial periods comprise three separate exam-

on at noon, and five more working from 5 until midnight. Walter Wilson, who has been affiliated with the Medical Center since 1956, has served as Evening Supervisor of this lab for the past two years.

Walter Wilson

James Papayaoanu, Evening Supervisor, is one of four technicians rotating on-call night duty at the Blood Gases laboratory situated on P&S 17.

James Papayaoanu

According to Mr. Papayaoanu, the work load now reaches approximately 25 tests nightly, and this has resulted in the technician remaining in the lab throughout the night on the cot that is stored in the corner of the lab. This highly specialized laboratory does all the arterial blood gas requisitions for the Medical Center excluding Babies Hospital.

Working closely with Clinical Pathology is the MEDICAL BACTERIOLOGY Laboratory located on the twelfth floor of P&S. About 100 specimens, as blood cultures, CSF's, cervicals, sputums, and urines, are processed here every night. The lab has a rotating staff

Bob Schmidt, Medical Student

of 8 medical students working from 5 p.m. until 8 a.m. during the week and both days and nights during the week-ends. This laboratory covers requests coming from throughout the Medical Center with the exception of the pediatric and surgical services.

Mrs. Joan Alvarez has been Evening Supervisor of the CLINICAL CHEMISTRY laboratory for the past six years. In

Mrs. Joan Alvarez

this lab, on the fourteenth floor of the College, about 200 serum chemistry tests are analyzed nightly. Specimens come from all of the Medical Center excluding Babies Hospital. Mrs. Yolanda Pinzas serves as Mrs. Alvarez's assistant supervisor. They are aided by 21 medical students who rotate on a part-time basis.

Cross-matching constitutes the bulk of the evening work in the BLOOD BANK. John McMurray, Evening Supervisor,

John McMurray

estimates that between 50 and 100 cross-matches are done nightly before 9:30 in preparation for the next day's operating schedule. In addition, the Blood Bank staff processes about 20 transfusions during the night, the majority of these going to the labor rooms. Donors are welcomed until 8 o'clock, and one receptionist, working with a house staff doctor, one nurse, and one lab assistant greet them. Also working until midnight is technologist Charles Dore. Medical students rotate on-duty hours on both week-nights and week-ends from six in the evening until eight the following morning.

The MICROCHEMISTRY DIAGNOSTIC LABORATORY in Babies Hospital Addition is open for business throughout the night. About 75 analyses are undertaken every night by the single laboratory technician

Winona De Leon

now assigned to night duty. Dr. Knud Engel, who directs the lab, hopes to be able to assign two technicians to night duty in the near future, because the demand for blood determinations is increasing.

## THESE PERSONS ARE RETIRING

Michael Laspina

Michael Laspina, Mason, Maintenance and Construction, retired in November. He had been employed at PH since 1960.

Mr. Laspina enjoyed the company of all the people he met and worked with, and, as he so aptly put it—"If I had the opportunity, I would have stayed, but age creeps up on us."

Mrs. Blanche O'Meally

Mrs. Blanche O'Meally retired just before Christmas after 20 years at the Medical Center. She worked as an attendant on the Food Service.

Blanche enjoyed her years at the Medical Center but, between her job and her home, she never found enough time to pursue her favorite pastime—reading. As she told us, "I love to read and now that I am retiring I am sure I will be able to catch up with my reading." (It is with some pride that we report that Mrs. O'Meally especially enjoys reading Stethoscope!) She also plans to "catch up with her grandchildren" from whose company she derives a great deal of pleasure.

A native of South Carolina, Mrs. O'Meally now makes her home in Leonia, New Jersey.

Mrs. Louise Casala

Mrs. Louise Casala retired in February from her position as X-ray technician in Neurological Institute, a post she had held since 1950.

"I enjoyed my association with the Hospital very much and I enjoyed it even more before the installation of the X-omat (the automatic film developing machine) when films

Mrs. Louise Casala

were developed by hand. Somehow, it was more interesting that way." She hastened to add, "I did meet some wonderful people and made many friends while I was here."

Mrs. Casala's retirement plans are not very definite at the moment but she does expect to seek part-time employment. With four children and fourteen grandchildren we somehow got the message that she will never be lonely or bored.

A tea was given on February 3rd in Mrs. Casala's honor and she was very delighted at the big turnout of so many of her friends and co-workers.

Henry Clark

If you notice any change in the taste of the soup you have been eating recently in the soda fountain or cafeteria, it will probably be because the delightful gentleman who has been responsible for concocting these delicious soups for the past ten years, Mr. Henry Clark, retired in December.

Despite his years, Mr. Clark still actively participates in baseball and football. When he can no longer "get up at the

## Anthony Cassaniti, Maker of Models, is Building His Own Cathedral

Anthony Cassaniti has a penchant and a tolerance for detail. That explains why and how he spent four years making a miniature replica of an Egyptian tomb.

Mr. Cassaniti has been interested in duplications since his childhood, and he has accumulated a fantastic collection of his works ranging from drawings of stained-glass windows to a model of the *Titanic*. One reproduction, an 1890's scene of the area including the Chapel of the Intercession of Trinity Parish at Broadway and 155th Street, is complete with trees, trains, and elevated tracks. Presently Mr. Cassaniti is working on a cathedral of his own design based on the many he has visited. An example of his ingenuity is evidenced in this project by his use of silver-painted and carved pencils to imitate organ pipes.

As a night student at City College who plans to enter the Lutheran ministry, an amateur Egyptologist, and a mem-

Anthony Cassaniti points to one of the intricacies of the model chapel he is building from his own design.

ber of the Protective Department at Presbyterian Hospital assigned to the South Property, Mr. Cassaniti must also be a magician when finding time to devote to all his interests. But he does, somehow, and his works will be on display this Spring at the Medical Center's Art Show.

Have you ever seen an Egyptian tomb? This one may be seen at the Spring Art Show.

diamond" as he puts it, he will enjoy watching these games on television.

Mr. Clark was born in Round Hill, Virginia, but now makes his home in New York City with his wife. When we asked him how he felt about his years at the Hospital and his retirement he said, "I had a lovely time and it was a pleasure being with this organization."

The first thing he will do on retiring is "to take it easy for a little while." Then he and his wife plan to take a trip to the West Indies to visit some friends. When they return to New York, Mr. Clark will re-

sume his athletic activities and pursue his sideline of several years duration—a "catering" service for parties and other social events.

Henry was feted at a farewell party in the Hospital on December 23 which was attended by his many friends and fellow workers.

Nan Clarke

Nan Clarke, an assistant supervisor, Basal Metabolism, retired in February, having completed 18 years of employment with the Medical Center.

Thrilled as she was by the wonderful reception given in her honor on January 23, Miss Clarke is particularly and justifiably proud of a personal letter she received from Mr. A. J. Binkert, Executive Vice President, who could not attend the reception. We quote from that letter: "I want you

Nan Clarke

to know that we have full realization of the fact that your efforts have contributed in no small measure toward making our Hospital one of the great leaders in its field. Please accept my sincere appreciation for your years of loyal and devoted service."

Miss Clarke has two hobbies: growing African violets

## Mother Goose Ball Planned for March 29, Nursery School Announces

Balloons fill the air on March 29, as the Medical Center Nursery School once again holds its spring fund-raising dance: The Mother Goose Ball.

The first Ball was held in 1958 as an attempt by the parents to provide a firm financial basis for the then-fledgling Nursery School. In the subsequent eleven years, the Medical Center Community has grown to look forward to this social event which is open to the entire community without regard for medical subdivisions or specialties. This dance has become the once-a-year chance to meet old colleagues and new from all departments, in a relaxed, informal atmosphere of good music and good friends.

The Medical Center Nursery School was started in 1955 by a small group of Presbyterian Hospital house staff physicians and their wives, who envisioned a co-operative nursery school that would provide their children the best in pre-school education at a cost

commensurate with the limited income of doctors-in-training.

During the following two years, with the support of members of the Women's Auxiliary of Presbyterian Hospital and others of the Medical Center Community, these parents bent their efforts to the fashioning of such a school. Various certificates and seals of approval from the Departments of Health, Buildings, Sanitation and the Fire Department attested to their success in forays through the jungles of red tape. In the fall of 1957, the Medical Center Nursery School opened its doors to the first group of three and four-year-old children.

Since then, the original parents and their children have moved on, but the places of both have been filled each year by incoming house staff with equally high aspirations for their children. Each succeeding generation of parents has leaned heavily on the coopera-

tion of the Board of Trustees, composed of members of the Women's Auxiliary and attending physicians at the Medical Center.

The Medical Center Nursery School is now open five days a week, with two sessions each day. Three-year-old children attend from 9:00 to 11:30 a.m. and four-year olds from 1:00 to 4:30 p.m. The children participate in various creative activities, both free and structured, under the guidance of Dorothy Jones, a certified pre-school teacher, and the wife of Edward (Biff) Jones, a third year student at P&S. Tuition is \$350 for the ten-month school year.

The Nursery School has been able to maintain its policy of a minimal tuition only through the generous support of its Patrons and Friends throughout the Medical Center Community, and the funds raised each year at the Mother Goose Ball to meet the operating expenses not covered by tuition payments.

## Benefit Bridge Announces 1969 Prizes

A trip for two from New York City to Bermuda, plus a week-end at the Elbo Beach Hotel, is the top prize in this year's raffle for the Student Nurses' Scholarship Fund.

Mrs. Charles S. Neer III, Chairman, Prize Committee, reported that other prizes will include a Zenith Portable Color Television—donated by Bernard E. Smith; Black Broadtail Jacket and Mink Collar—donated by Fredrica; \$100.00 gift certificate; Steuben Glass Dish; Two Pieces Men's Matched Luggage; Silver Ice Bucket, and many other valuable prizes.

Tickets for the raffle will be available this month; and the drawing will take place on April 23, 1969, at the Annual Student Nurses' Benefit Card

Party in Maxwell Hall. Tickets may be obtained from Louisa Kent, Babies Hospital Nursing Office; Laurie Verdisco, Orthopaedic Nursing Office; Mrs. Finnerty, 4th floor Nursing Office; and at Maxwell Hall. Students at Maxwell Hall in charge of prize books are Doris Cabeche and Madelyn Maniscalco. A single chance, purchased for \$.50, includes all of the above mentioned gifts. All who hold tickets are eligible to win.

A special drawing is also held for those who attend the Benefit Card Party at Maxwell Hall. Anyone wishing to attend the Card Party may purchase tickets from the above people.

Do come and join us in a fun afternoon!

# New Approach To Help In Major Surgery

Dr. Katherine Sprunt and two of her associates in the Department of Pediatrics of P&S, Grace Leidy and Winifred Redman, have devised an approach toward preventing superinfection. The procedure may prove to be a significant adjunct to currently accepted measures of preventing infection during open-heart surgery and other major operations. Their approach was outlined in a paper presented to the Eighth Interscience Conference on Antimicrobial Agents and Chemotherapy in New York City on October 23.

The investigation that led to the paper was centered on the bacterial flora inhabiting the lining of the human throat, a site of superinfections, which commonly follow the use of large doses of antibiotics during major surgery.

It has been known for years that massive administration of antibiotics leads to "a gross alteration in the normal pattern of bacterial flora," according to Dr. Sprunt. As antibiotics suppress one kind of bacterium in the throat, another, potentially more dangerous kind takes over. The result is known as superinfection, which may produce complications that can be prolonged and serious, even fatal.

Dr. Sprunt and Miss Redman showed in an earlier paper, published in the *Annals of Internal Medicine* last March, that alpha hemolytic streptococci inhibit the growth of enteric Gram-negative bacilli. The Gram-negative organisms "overgrow"

and sometimes cause stubborn infections when the alpha streptococci are suppressed with penicillin or other antibiotics.

In their earlier investigation, Dr. Sprunt and Miss Redman noticed, however, that the alpha streptococci of some patients were resistant to penicillin. These organisms therefore persisted throughout massive-dose penicillin therapy, and no superinfection developed in these cases.

More or less simultaneously, the research team noted that about 75 per cent of patients given penicillin orally for other purposes developed alpha-streptococci at least one per cent of which were resistant to at least one unit of penicillin per milliliter. In the experience of Dr. Sprunt and her co-workers, the streptococci having this level of resistance persist in the pharynx and soon make up the majority of the flora despite the massive influx of penicillin intravenously.

Putting the two findings together, the research group tested their theory in clinical practice. The test was suc-

cessful. Deliberate development of resistant alpha-streptococci in the pharynx by exposure to oral penicillin did produce organisms on a pre-planned basis which were not removed by subsequent antibiotic therapy. Consequently it appears possible to protect surgical patients slated to receive large doses of penicillin from oral superinfection by giving oral penicillin three to four weeks prior to surgery.

"Unfortunately," added Dr. Sprunt, "only about a half of the cases that developed penicillin-resistant streptococci in this fashion carry strains resistant to only one unit per milliliter." The other half develops strains resistant to 5, 10, and even 20 units. This high degree of resistance is undesirable.

The task of developing the "ideal" inhibitor remains, Dr. Sprunt concluded. The ideal inhibitor flora would be one that can be induced in all patients and that includes alpha streptococci at least 1 per cent of which are resistant to 1 unit of penicillin per milliliter and none of which is resistant to 5 units.

married."

Peggy, as Mrs. Clark is best known, has a very ready smile and a captivating Scotch brogue, which is as it should be for she was born in Glasgow, Scotland. With her husband she hopes to go back to Scotland for a visit. The Clarks will then go to Australia before returning to their New York City home at which time, Peggy told us, she will be happy just being a "full time housewife."

On January 29, a post-retirement luncheon was given in Mrs. Clark's honor in the Harkness Pavilion Restaurant, attended by Drs. Snyder, Charlton, and Goldenson, Doris Goddard, Janice Blauvelt and other friends.

## Mrs. Irene Stewart

Mrs. Irene Stewart, Cafeteria Supervisor, Food Service, retired in December after almost 11 years at Presbyterian. Mrs. Stewart has had an exciting and most rewarding career. She was born in Newfoundland, Canada, and her first five years of schooling were in the traditional storybook, one-room "little red school house"; she went on to graduate from Bishop Spencer College in St. John, Newfoundland, following which she taught school for two years. Then came marriage and raising six children.

Following her husband's illness in 1942, Mrs. Stewart went to work for a very famous New York City restaurant chain "temporarily" and stayed for 15 years. She told us, "The work was very de-

manding and very hectic and I had to find something less hectic and more serene—I found that serenity at Presbyterian Hospital."

Mrs. Stewart also told us how much she enjoyed her daily contact with many different people and felt that PH was "like a second home."

Irene plans to visit her mother and family in Canada this summer, as she has in the past, and hopes to visit England "and find out more about the places I so often heard my grandfather tell about." And although she lives alone, her large family is so scattered about in New York and New Jersey that she can never possibly be lonely or at a loss for someplace to go or something to do. Happy retirement, Irene!

## Tommy Wynn

There is only one word to describe Tommy Wynn, who retired in December from the Protective Department—happy!

"I've been very happy on the job, I am very happy working with my boys at St. Jude's and I'm even happy I am retiring because now I will have more time to spend with my boys."

His "boys" are the youngsters from his parish at St. Jude's church that he coaches in baseball, football and basketball. He took great pride in telling us that one of the boys he helped coach as a youngster is Lew Alcindor, basketball great of U.C.L.A.

Mr. Wynn, a jovial man with twinkling eyes and an

# News of Nursing

Mila Segura

Bonnie Jones

Bonnie Jones, an American nurse, was working in Spain at Puerta de Hierro Clinic. There she met Mila Segura, a Spanish nurse who was coming to America for advanced nursing study at Columbia-Presbyterian's Exchange Visitor Program. Miss Jones' interest was aroused. That was one year ago. Now Miss Jones has become an instructor in the program, and Miss Segura is returning to Spain.

Miss Segura took her nursing training at the Hospital of the Faculty of Medicine in Salamanca, north of Madrid, and then spent two and a half years at London's St. Mary Abbott's Hospital where she qualified as a State Registered Nurse in England and Wales. She returned to Spain and its Institute of Hematology in Madrid before travelling to New York. When she reaches

her homeland this time, Miss Segura will assume responsibilities as Director of Nursing at Puerta de Hierro Clinic, a new 400-bed government hospital-research center on the border of Madrid.

After Miss Jones left her native Pennsylvania, she spent five years at the University of California in San Francisco where she earned a B.S. in nursing and an M.S. in nursing education. She journeyed to Spain and worked at the Puerta de Hierro Clinic. Before returning to America, she spent six months travelling, and she managed to visit several foreign hospitals. In October she came to the Medical Center and worked as a staff nurse on PH 12 and PH 14 for three months before beginning her teaching post with the Exchange Visitor Program.

Fair exchange, wouldn't you say?

Irish brogue, spoke very warmly of his 12 years at the Medical Center.

Tommy was born in County Leitrim, Ireland, and now makes his home in Washington Heights. The Wynns have two daughters (one married) and three grandchildren.

In addition to his coaching activities, Tommy has another

wonderful project that occupies a good deal of his time—taking underprivileged children to baseball, football and basketball games with reduced rate, and sometimes free, tickets provided by his many friends from the church.

There can be no doubt that Tommy Wynn is indeed a very happy man.

## In Memoriam

### Mrs. Margaret Scholtz

Mrs. Margaret Scholtz, one of our Volunteers, died on December 26. She had given a total of 8,000 hours as a Volunteer working in the Department of Urology and the Pharmacy.

Mrs. Scholtz has no surviving relatives in this country but she had many friends at the Hospital who were saddened by the news of her death.

She had been the Director of the Isabella Home and held executive positions in Children's and Old Age Homes before becoming a Volunteer at Presbyterian Hospital.

### Irving Schneider

Mr. Irving Schneider, who retired in June, 1966, after completing nineteen years of employment at the Medical

Center in Ward Admitting, Mary Harkness Unit, died suddenly in his home in Venice, Florida, on November 30.

Mr. Schneider is warmly remembered by many of his co-workers at the Hospital who wish to express their sympathy to his family. He is survived by his wife, four children and eight grandchildren.

Irving Schneider

## RETIREMENTS

*Continued from page six*

and crocheting. Her crocheting has frequently been displayed at the Medical Center annual Art Show.

This spring she will visit her brother in Chattanooga, Tennessee, and will then visit her home state of North Carolina, before returning "home" to New York City as she now considers herself an "adopted Yankee!" She will then begin her part-time job with Dr. John M. Baldwin, Jr., about which she is very pleased because, as she said, "Now I am still a part of PH and can be with my friends."

### Mrs. Margaret C. Clark

Mrs. Margaret C. Clark retired in January, completing 19 years at the Hospital. She was Secretary in the Seizure Clinic (Neurological) of VC. She explained that this clinic originally handled only children but later expanded to include adults. Mrs. Clark was quite thrilled by the fact that many of the babies in that clinic in 1950 "grew up into wonderful young men and women, some of them even

### • ENGAGEMENTS

Elizabeth Ferris and Dr. Peter Puchner are engaged. Miss Ferris is doing medical research at the Institute for Muscle Disease, Inc. Dr. Puchner is a resident in urology at Squier Urological Clinic.

Helen Eggleson, an occupational therapist at Neurological Institute, and Michael Bellas, a management consultant, plan a Spring wedding.

Geraleen Singletary and Thomas Mensah, Ph.D., plan an early Spring wedding. Miss Singletary is Supervisor of the Clinical Pathology Department at Neurological Institute. Dr. Mensah is with the legal division of IMCO in London.

### • MARRIAGES

Lynn Ann McCullough and Michael Robl were married in January. Mrs. Robl is a computer programmer at the Medical Center. Her father, John McCullough, is Comptroller, Presbyterian Hospital.

Dolly Houston, of Clinical Pathology, was married in December to Fritz Alexander, attorney with Dyett, Alexander and Dinkins.

### • BIRTHS

Mr. and Mrs. Harry Morelli are the proud parents of Marianne, their first child, born on January 17. Mr. Morelli is a pharmacist at the Medical Center.

Mr. and Mrs. Gregorio Salinas welcomed their first child, Gregorio, Jr., born in Sloane Hospital on February 10. Mr. Gregorio is with the Maintenance and Construction Department.

Dr. and Mrs. Joel Moskowitz welcomed their second daughter, Danielle-Lynn, on February 5. Dr. Moskowitz is Attending Psychiatrist, Columbia University Health Services.

Drs. Donald and Marcia Gerber welcomed their first child, Susan Eve, on December 25. Dr. Marcia Gerber, P&S '67, is on the staff at the State University of New York Downstate Medical Center in Brooklyn. Dr. Donald Gerber, P&S '57, is assistant professor of medicine at Downstate.

### • WELCOME

To Mrs. Jane Everhart, Mrs. Loretta Jones, and Joan Whalen of the Office of the Columbia-Presbyterian Medical Center Development Fund.

### • NOTES OF INTEREST

Mrs. Estelle Durand, Secretary in Operations and Maintenance, has returned from a February vacation in Florida.

## Violinist Allen Steere in Concert March 14

Allen Steere (above), violinist and medical student at P&S, will appear in concert with cellist Steve Kates and pianist David Garvey on March 14 at 8 p.m. at Bard Hall. All Medical Center staff and personnel are invited to attend this free event.

Steve Kates, cellist who won the Silver Medal in the 1966 Tchaikovsky competition, and David Garvey, pianist with Leontyne Price, are scheduled to appear with violinist Allen Steere, fourth year P&S medical student, on March 14 at 8 p.m. in a concert sponsored

by the P&S Club. Personnel of the Medical Center are invited to attend, and there is no admission charge.

Mr. Steere has studied violin at Juilliard for the past eight years with Ivan Galamian and Paul Makanowsky. During the summer Mr. Galamian teaches his students at Meadowmount, his summer home near Lake Placid, and it was there that Mr. Steere met Mr. Kates and Mr. Garvey.

Mr. Kates records for RCA Victor. He has appeared with the New York Philharmonic and the Boston Symphony Orchestra in both subscription concerts and over national television.

Mr. Garvey, who also records for RCA, will appear with Miss Price in April at New York's Philharmonic Hall. He is a faculty member of the Aspen, Meadowmount, and University of Illinois Schools of Music.

Their program includes Mendelssohn's *D Minor Trio*, Beethoven's *C Major Sonata* to be performed by Mr. Kates, and Brahms' *B Major Trio*.

DR. ANTHONY SHAW, Assistant Clinical Professor of Surgery, P&S, has completed a two month tour of service as a volunteer aboard the hospital ship, S.S. HOPE, now concluding a ten-month medical teaching-treatment mission to Colombo, Ceylon. In Ceylon the HOPE medical staff treated more than 1,700 patients aboard ship and, with Ceylonese counterparts, conducted 2,100 operations. More than 3,000 patients were treated in the ship's dental department, and 50,000 children received immunization against diphtheria, whooping cough and tetanus. HOPE's mission to Ceylon was the most comprehensive ever undertaken by the ship.

DR. SIDNEY C. WERNER, Associate Attending Physician, PH, and Professor of Clinical Medicine, P&S, was elected Director for a four year term of the American Thyroid Association at the annual meeting of the Association held in Washington, D. C., in October.

DR. JOHN K. LATTIMER, Director, Squier Urological Clinic, and Professor and Chairman, Department of Urology, P&S, was inaugurated as President of the Society of University Urologists, a member of the Council of Academic Societies of the Association of American Medical Colleges, at its meeting in Chicago on February 8 and 9. Dr. Lattimer conducted an all-day symposium on methods for supporting urological research and academic programs. He is also chairman of a committee of the American Urological Association to gather data for a national program for urology.

DR. ANDREW DEROETH, JR., Assisting Attending Ophthalmologist, presented a series of three papers on "Chronic Simple Glaucoma" in Seattle, Washington, at the annual meeting of the Puget Sound Academy of Ophthalmology, January 17 and 18.

DR. RICHARD M. EHRLICH, Chief Resident, Urology Service, spoke on "Regenerative Histology Following Cryosurgery of Prostate" at the January 17 annual meeting of the Society for Cryosurgery held in Miami, Florida.

DR. WILLIAM A. BAUMAN, Director, Medical Data Processing, gave an address of welcome and served as chairman at the medical data processing session of the 163rd Annual Con-

vention of the Medical Society of the State of New York, held at the Hotel Americana, New York City, February 9 to 13.

DR. HAROLD SPALTER, Assistant Ophthalmologist, was one of eight visiting lecturers at the Far East Graduate Course of Ophthalmology held in Manila, The Philippines, from January 24 to 31. The course was given for seventy ophthalmologists from various Asian countries.

DR. ROBERT DARLING, Director and Chairman, Rehabilitation Medicine, served on January 29 as Visiting Professor in the Rehabilitation Program of the University of Rochester School of Medicine and Dentistry.

Dr. Robert C. Darling

Dr. Landrum B. Shettles

DR. LANDRUM B. SHETTLES, Assistant Attending Obstetrician and Gynecologist, PH, and Assistant Professor of Clinical Obstetrics & Gynecology, P&S, has been selected to appear in the 1969 edition of "Community Leaders of America." Recipients of this honor are chosen because of their achievements and service to their community, state, and nation. The 1969 directory may be found in each state library and the Library of Congress, Washington, D. C.

DR. RALPH VEENEMA, Attending Urologist, PH, and Chief of Urology, Delafield Hospital, presented three papers to the University of Miami School of Medicine Postgraduate Symposium on "Current Concepts and Techniques in the Management of GU Tumors" that was held from January 23 to 25. The papers were "Hormonal Palliation in Renal Cancer," "Bladder Cancer: Clinical and Experimental Studies," and "DNA and RNA Studies in Prostate Cancer." Dr. Veenema also participated in three panel discussions concerning cancer of the kidney, bladder, and prostate.

## 1.5 MILLION AWARDED FOR PEDIATRIC RESEARCH

Continued from page one

The team-work concept involved in the planning of this research project is seen in the five-point statement of objectives. As Dr. Winters has expressed it, "We are interested in three areas: questions posed by patients, questions which may be answered by animal experiments, and questions which may be answered by computers."

The five objectives are:

1. To define in quantitative terms the acid-base metabolism, the body composition, the energy metabolism and thermoregulatory mechanisms of normal newborn infants and children and to study the interrelationships between these variables.

2. To define the types, de-

grees and mechanisms of abnormal growth, energy- and acid-base metabolism, and temperature acclimation which characterize diseases of the neonate and infant.

3. To develop and reproduce in animal and/or computer models the physiological systems being studied in order to ascertain the effects of experimental manipulation of such models in ways which simulate the clinical disorders being investigated.

4. Ultimately to develop rational programs of therapy based upon the above sources of information.

5. To develop computer-based systems for processing of data of all of the above studies and to explore the role of the computer in assisting in the interpretation of clin-

ical abnormalities in neonates, infants and children.

The National Institute of Child Health and Human Development was established by the Surgeon General of the Public Health Service in 1963. It does not focus its attention upon any one disease or group of diseases, nor on any organ or organ system. It is concerned, instead, with the whole child and his array of health problems and requirements. It is interested in the normal processes of life and development, as well as in the pathological and the abnormal.

In the present study, Dr. Winters and his associates hope that the pooling of answers from their several areas of research will result in new knowledge of benefit to the patient.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIV, NUMBER 4

APRIL, 1969

From Studies By Dr. Adamsons And Team—

## Effects of Nicotine on the Unborn

Dr. Karlis Adamsons, Associate Professor of Obstetrics and Gynecology at Columbia University, monitors maternal and fetal oxygen levels and blood pressures in Rhesus monkey following the infusion of nicotine.

Researchers at Columbia-Presbyterian Medical Center have shed light on the mechanism that makes an unborn child develop less well if his mother smokes.

The adverse effect of smoking by mothers-to-be on the fetuses had been suggested from statistical studies. Conclusions that maternal smoking and the weight of the fetus are inversely proportional were thus based on indirect evidence. The Columbia University research team, however, was able to monitor the blood streams of both mothers

and fetuses for the chemical effects of nicotine, a potent plant alkaloid found in tobacco leaves.

This advance in the knowledge about smoking may be compared with an analogy about imperfect watches: while numerous customer complaints gave a bad reputation to a certain make of watches, a group of specialists delved into their mechanisms to explain the defect in detail.

The explanation why smoking mothers have, on the average, smaller babies appears to

## Ward Admitting Office

"A patient is never a cut-off unit," John Steinbeck wrote in his essay about the Vanderbilt Clinic in 1947. Likewise, the Clinic itself could never be cut off from the rest of the Medical Center. It is symbolic, therefore, that the boundaries between the Clinic and the rest of the Medical Center are expressed by no more than a different shade of floor tile.

Yet an invisible boundary does exist between the Clinic and Presbyterian Hospital proper. A proof of its existence is the presence of a kind of administrative stem through which patients must pass to hospitalization and to convalescence.

This way-station of patients'

## Course Begins May 1— Career Opportunity For Operating Room Technicians

The Nursing Department of Presbyterian Hospital announces that a course for Operating Room Technicians will begin on May 1, 1969.

The new program will be formulated with the supervision of Beatrice Langmuir, Assistant Director of Operating Rooms, and Gilda Gehm, Supervisor, who will instruct the first group.

The number of trainees expected to enter the first class will be between 6 and 8. The length of the course will be twelve months. Upon completion of the course students will receive a certificate from the Hospital.

Applicants must be 18 years of age and a high school graduate or the equivalent.

The course will consist of formal classes for basic sciences and theory of aseptic technique, demonstrations and some supervised procedures in the operating rooms.

At the end of six months, trainees would be expected to be functioning in the operating rooms with graduate nurses supervising and teaching operating room procedures.

Employees of the Medical Center are invited to inform relatives and friends who might be interested in preparing for a career in Operating Room Technology about the new program.

Those interested in applying for enrollment in this program should address inquiries to Mrs. Gilda Gehm, Columbia-Presbyterian School of Operating Room Technology, Columbia - Presbyterian Medical Center, 622 West 168th Street, New York, N. Y., 10032.

progress is peopled by the Staff of the Ward Admitting Office. Its place in the table of organization reflects its position in no-man's land between Vanderbilt Clinic and PH: while doing work for the latter, the Admitting Office's staff is administratively part of the former. This Office functions at night so that the whole Hospital can make some

## "Salute to Excellence" for Dr. Yahr

Dr. Melvin D. Yahr, Associate Dean of the College of Physicians and Surgeons and one of the organizers of research in parkinsonism, has been selected for an award for his recent achievements.

Dr. Yahr, who is also Executive Director of the Parkinson's Disease Foundation and a Professor of Neurology here, has been selected by the American Academy of Achievement as one of the nation's leaders in accomplishment from various fields. Dr. Yahr will be honored with the Academy's Golden Plate Award during the annual "Salute to Excellence" weekend in Dallas, Texas, June 26 to 28.

Dr. Melvin D. Yahr

In the past, those singled out for this award have been

## Grant of \$100,000 from Given Foundation To Aid Research in Surgical Metabolism

Dr. George H. Humphreys, II, Chairman of the Department of Surgery, recently received word that the Irene Heinz Given and John La Porte Given Foundation Inc., has approved the gift to the Department of Surgery of the College of Physicians and Surgeons of Columbia University in the amount of \$100,000 to be used to support a one-

year research program of the Surgical Metabolism Unit, directed by Dr. John M. Kinney, Professor of Surgery. The Surgical Metabolism Unit was specifically designed for active collaboration with members of the Columbia University Faculty of Engineering to pursue its dual objectives of clinical research and development of

## HEALTH PROFESSIONS COMMITTEE LOOKS TO AN ERA OF EXPANSION

The nation faces a great need not only for doctors and nurses but also for other trained personnel in the field of health services. Within the next decade more than 1,000,000 trained persons will be needed.

To encourage programs of training in this field, Congress passed, in 1966, the Allied Health Professions Training Act. The term "allied health professions" embraces more than 100 varieties of health-related occupations, including

nurses, dentists, medical and hospital administrators, medical technologists, pharmacists, clinical psychologists, nutritionists and dietitians, sanitary engineers, public health technologists and rehabilitation workers. The current explosion of medical knowledge has reached such proportions that these are necessary to make up the health and medical team.

Can this nation produce, within the next ten years, the

## Benefits to 40 Presbyterian Employees Through Sidney J. Weinberg Aid Plan

According to figures submitted by Mr. C. Douglas Aty, Assistant Vice President for Personnel, tuition assistance will be granted to 40 employees under the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan for study during

the Spring Semester. Ten are candidates for an A.A.S. degree, 10 for a Bachelors degree, 3 for a Masters degree and 1 for a Doctorate.

The candidates and their departments are: Joseph Adlerly, Maintenance Department

## THE HOSPITAL AT NIGHT

### PART 2

Continuing the series on "The Hospital At Night," the writers of The Stethoscope only wish that due attention might be given to the many workers who keep the show going through the night. Only a few personnel can be mentioned; recognition is intended for all.

MAKE THIS YOUR YEAR!  
Show it like it is!

Now is the time for all amateur or professional Picassos, Michelangelos, Goyas, Rembrandts and Dalis to make the 1969 Art Show the greatest.

The annual Art Show will open on April 29 and continue through May 9, and once again it will be housed on the 20th floor of The Presbyterian Hospital, adjacent to the Milbank Library.

This event, arranged by the Art Exhibit Committee and the Department of Public Interest, depends for its success upon your participation.

So—whether it be the snap of a shutter that clicks out a great photo, or the daub of a brush on canvas that creates a colorful oil, or the sketching of a pencil, or the gentle probing of the fingers that sculpt—

Or, for the ladies, if the knitting needles play a tune "work pat to last 14 sts, K 2, y.o., sl. 1, k 1, pss, k 1 3 x" and it results in a handsome sweater for the man in your life—

Or, if the hands that cro-

Last year's Art Show had everything. This year's may have even more.

chet are hooked by "sc in frs. sc, ch. 2, skip next ch, 1 sp, sc in next sp, ch 1, sc in next sp, ch 2, skip 2 sps, sc in next sp" and this turns out to be a lovely afghan for those chilly evenings—

Remember—

ALL employees of the Medical Center are urged to submit

their art or craft to be shown at this traditional annual event.

For information and entry blanks, please call the office of Public Interest, Extension 1911 or 1912, or the Chaplain's Office, Extension 1817.  
COME ON—MAKE THIS YOUR YEAR!

## BENEFITS TO 40 EMPLOYEES . . .

*Continued from page one*

ment; Christine Adorno, Nursing Service; Robert Bechner, Protective Department; Gus Carrion, Radiotherapy Center; Charles Casamento, Pharmacy; Mary Castelo, Vanderbilt Clinic; Harvey Chapman, Personnel Office; Michael Checinsky, Optical Shop; Richard Collias, Accounting Department; Ellen Connolly, Clinical Chemistry Laboratory; Anita DeLuca, Accounting Department; James Duffy, Vanderbilt Clinic; Joyce Egan, Food Service; Luis Figueroa, Maintenance Department; Thomas Gilligan, Record Department; Sylvia Haber and Karol Krasnik, Vanderbilt Clinic; Reeva Kravet, Nursing Service; Clayton Leander, Receiving Department; Jean-Paul LeJeune, P.H. Unit Manager (Nights); Kenneth Loforte, Collection Department; Pauline MacDonald, Nursing Service; Andrew McDaniel, Vanderbilt Clinic; John McKinney, Protective Department; Willa McKinney, Collection Department; Juana Martinez, PH Admitting Office; Marion Marx, Physical Therapy; Antoinette Mattison, Clinical Pathology; William

Moakler, X-Ray Department; Letty Munz, Pediatric Psychiatry; Christina Neacy, Record Department; Ida Oliver, Nursing Service; Nancy Pauley, PH Admitting Office; Pamela Reiss, Physical Therapy; Dorothy Rock, Nursing Service; Iris Sierra, PH Admitting Office; Jose Tellechea, Surgery; Lois Townsend, Vanderbilt Clinic; Vincent Vicidomini, Pharmacy; and Rose Wagschal, Pediatric Psychiatry.

They are attending the following universities or schools:

Albert Merrill Institute, American Language and Cultural Institute, Ballard School (YWCA), Bergen Community College, Bronx Community College, Brooklyn College of Pharmacy, Columbia University, Drake Business School, Fairleigh Dickinson University, Hunter College, Iona College, Manhattan Community College, New York City Community College, New York University, Pace Business School, Programming and Systems Institute, RCA Institute, State University of New York (Agricultural and Technical College).

The Weinberg Aid Plan is available to full-time employees who have completed at least six months employment with the Hospital previous to making application. The plan offers to those who receive approval 50% of the tuition fee for one to six credits per semester, or the equivalent for non-credit courses upon satisfactory completion of courses. The selected subjects or courses must be job-related or allied to career development with future job responsibilities in the Hospital.

For further information and application, contact Lillian Oring, Personnel Assistant, HP 1-163, Ext. 3215.

is being utilized to assure maximum timely care and support of the energy demands of the patients being studied. A more fundamental understanding of the limitations of energy supply is being related to diagnosis and therapy. The effectiveness of a completely integrated team, when that team is able to work in an atmosphere of intellectual equality, offers a unique opportunity to apply combined skills to challenging problems, the solution of which may save certain patients that cannot, at present, be saved.

## GRANT, \$100,000 . . .

*Continued from page one*

advanced procedures for the intensive care of critically ill and injured patients, uniting bioengineering techniques with surgical research experience.

The Unit is located on the surgical floor of Presbyterian Hospital and attracts visits from physicians and research scientists because of its advanced design and sophisticated equipment. Here is a controlled environment for the intensive and concerned care of patients and a simultaneous study of the overall theme of energy exchange. The study of energy has been divided into investigations on tissue fuel, gas exchange, balance studies of calories, water and electrolytes, and studies of alteration in heat exchange.

A skilled interdisciplinary team has been developed, consisting of specially trained nurses, dietitians, technicians, biochemists, bioengineers, and surgeons, to develop advanced procedures for the intensive care of the critically ill and to develop as well, specialized research methods, with on-line computer processing of data.

About seventy patients a year come to the Unit from the emergency ward, and post anesthesia recovery room, the orthopedic, neuro-surgical and general surgical services. Both immediate and long-range benefits are expected from the research that will be carried out on the Surgical Metabolism Unit. Methods of acquiring and quickly analyzing physiological and biochemical information from critically ill patients are being constantly improved. Such information

## Smile! You're On Candid Camera

If you've never seen Havana, now is the time to go . . . whether you want to or not! At least that's what George Sarno, Supervisor of Radiology at Squier Urological Clinic, BH-10, discovered when his plane to Miami was hijacked to Cuba this February.

Mr. Sarno and 95 other passengers, including Allen Funt of Candid Camera fame, boarded Eastern Airlines Flight #7 from Newark to Miami at 9:00 a.m., February 3. Mr. Sarno recalls a Spanish-speaking family in the seats in front of him, but by lunchtime, the man had disappeared. Then Mr. Funt came down the aisle and asked if anyone aboard knew Spanish. One man responded, and was shown to the front of the plane. All was quiet until the pilot announced over the intercom, "We have some visitors with us up front, and it looks like we'll be going to Havana today." Not surprisingly, several of the passengers thought it was a Candid Camera stunt, although Mr. Funt hastily assured them that it was not.

The plane landed in Havana at 12:30 p.m. and an armed guard boarded the plane and took the passengers into the airport. Mr. Sarno recalls, "They gave us sandwiches, Cuban cigars, and some Communist literature . . . we were told we'd be on our way to Miami very soon."

Four hours later, the passengers were taken on a sightseeing tour of Havana, which took another three hours. "Our

George Sarno

bus route was lined with people shouting and waving," says Mr. Sarno. "They seemed to be very pro-American." The tour wound up at a nightclub, where the Cubans treated their guests to a steak dinner and propaganda-filled entertainment. Finally, at 10:30, they boarded an Airlift International plane to Miami.

Back home, the hijacked passengers were checked through Customs and interviewed by the FBI. Mr. Sarno learned that the man in front of him on the plane had threatened a stewardess with a knife, and when the second man arrived, they took control of the plane. The men were Cuban refugees who had been granted political asylum in the United States.

Mr. Sarno was able to continue his vacation, despite the fact that he was one of six people on the flight who lost all their luggage in Havana. "It's a nice place to visit, but I wouldn't want to live there," Mr. Sarno comments drily. Is this any way to run an airline?

## FROM THE MAILBAG

Babies Hospital:

During the past year my husband and I have come to know Medical Center better than we ever expected to. Our son, Timothy, died in Babies Hospital on February 25, 1969, after a year-long bout with leukemia.

We are writing this letter to convey our thanks to the personnel of Babies Hospital. We are particularly grateful to the professional staff of the hospital—

Dr. James Wolff, who did more to save Timothy than any parent could expect.

Doctors Speck, Hans and Kaymen, who worked so hard in Timothy's behalf and Dr. Hans particularly for his assistance in Timothy's last hours.

All the nurses, but especially Miss Zysling and Miss Moody, two young ladies who have proven to our family that nurses are not "hired hands" but truly angels of mercy if such a phrase may be tolerated in the twentieth century.

Please accept the gratitude of this family for the fine efforts of the hospital staff.

The parents of a former patient.

## HEALTH PROFESSIONS COMMITTEE

Continued from page one

needed 1,000,000 health care personnel?

Columbia-Presbyterian Medical Center is alert to this challenge and is looking forward to a greatly expanded program, in order to shoulder its share of the national responsibility. Here is a brief summary of the action that has been taken:

Last year Dr. H. Houston Merritt, Dean of Columbia University's College of Physicians and Surgeons, appointed a Committee to look into the situation.

The Committee—Dr. Douglas Damrosch, Chairman, and Drs. Robert H. E. Elliott, Jr., C. R. Wise and Melvin Yahr—undertook as its first task a survey of existing health professions training programs.

The Committee's survey noted that training programs exist on three levels.

1. Technical and vocational schools are developing apprentice type personnel. Certificates are awarded to graduating students.

2. Many junior colleges and 2-year community colleges provide technical and occupational training. Students may receive associate degrees in the allied health professions field.

3. Many 4-year colleges and universities offer programs aimed at the preparation of the true professional. At such institutions baccalaureate and—on the graduate level—Masters degrees and Doctorates may be earned in the health field.

The State University system of New York sponsors at least 36 institutions which include health science curricula. Throughout the state and the nation there is a striking growth of such programs.

Dean Merritt's Committee has now released a report of its study, embracing these five points:

1. An impressive number and variety of programs in the allied health professions are already being offered at Columbia-Presbyterian Medical Center. The University sponsors no less than 15 different curricula leading either to a baccalaureate or to a Masters degree. The program has a dozen on-going programs, mainly of the apprentice type, to be increased to 16 by this summer. All in all, just under 2,000 individuals, excluding dental and medical students, are being prepared each year at Columbia-Presbyterian Medical Center for occupations in

the allied health field. This large group is taught by a faculty of over 160 instructors. J. Warren Perry, Dean of the State University's School of Health Related Professions at Buffalo, who generously lent assistance to the Committee, was of the opinion that the overall allied health programs now underway at the Medical Center are possibly unsurpassed in size and abundance in this country.

2. The Committee has found the department heads and course directors of existing Medical Center programs highly cooperative and ready to look forward to an era of expansion.

3. The Committee has recommended the formation of a Joint Allied Health Council to constitute a forum in which program directors and appropriate staff members could share mutual problems and discuss new developments. Such a forum could serve as an instrument of idea exchange for many of the faculty and teaching staff who feel the need of more adequate representation on the administrative councils.

4. The Committee recommends that the Medical Center continue to make available its training facilities to outside community colleges. (During the past year Rockland Community College used the Hospital facilities in the training of the nursing students.)

5. Finally, it is the Committee's desire to encourage a further awakening of interest within the Medical Center community in this field of such vital importance to the University, the Hospital, and the nation at large.

If a Joint Allied Health Council is formed, as envisioned by the Committee, it will be confronted by questions whose answers may have far reaching significance, such as:

a. Should a separate division or school of the Allied Health sciences—perhaps with its own building—be created on Washington Heights?

b. Should a two-year, associate-degree college be started at the Medical Center under the aegis of Columbia?

A fuller discussion of the Medical Center's possible role in helping to develop allied health professions personnel will be contained in an article which Dr. Elliott, Secretary of the Committee, is preparing for a forthcoming issue of the P&S Quarterly.

## Four-Day Course

### Well Attended:

## "Children With Pulmonary Disease"

The Pediatric Department of Columbia University College of Physicians and Surgeons, under the sponsorship of the New York Metropolitan Regional Medical Program, presented a 4-day course, March 18-21, 1969, on "The Care of Infants and Children with Chronic Pulmonary Disease." The course was offered to nurses, physical therapists, inhalational therapists, and other interested paramedical personnel.

The course was planned and directed by Dr. Martin I. Lifschitz, Associate in Pediatrics, P&S, Program Coordinator of the Pediatric Pulmonary Disease Center (PPDC), and Dr. Carolyn R. Denning, Assistant Professor of Pediatrics, P&S, Director of PPDC. Both doctors also participated in lectures and seminars. The course covered basic anatomy and physiology of the normal respiratory system and the pathophysiology of various chronic pulmonary diseases in pediatrics, with emphasis placed on a rational and physiological approach to therapy. Lectures were given on such topics as asthma, tuberculosis, cystic fibrosis, respiratory problems of the newborn, microbiology, and psychological problems of chronic lung disease. Workshops were held on the use of physical therapy and respirators in children with chronic lung disease.

The course was attended by 46 nurses, five physical therapists, and five inhalational therapists, representing hospitals from all over the United States, in addition to many staff members from the Medical Center.

Three guest lecturers participated in the course. They were Dr. Rosa Lee Nemir, Professor of Pediatrics, New York University; Dr. Emile Scarpelli, Assistant Professor

## Hallmark Gallery Exhibit, "Toy Collection," Brings A Bountiful Gift To Babies Hospital

The antique toy exhibit at the Hallmark Gallery has earned \$3,629.23 in donations for Babies Hospital, co-sponsor of the exhibit. Miss Elizabeth Callahan (left), Unit Manager of Babies Hospital, and Mrs. Allen F. Maulsby, President of the Board of Women Managers of Babies Hospital, were presented the check on Monday, March 17, by Mr. Roger Railton-Jones, Director of Public Relations for the Hallmark Gallery.

The exhibit, entitled "The Toy Collector," was on display from October 16th through December 31st at the Hallmark Gallery, 720 Fifth Avenue in Manhattan. The toys are owned by Mr. Jerry Smith, a Kansas City automobile dealer, who is active in child affairs there. A check in an equal amount was presented to Children's Mercy Hospital of Kansas City, the exhibit's other co-sponsor.

Dr. Denning and class

of Pediatrics and Physiology, Albert Einstein College of Medicine; and Mrs. Helen Vinck, R.P.T., Unit Supervisor, Institute of Rehabilitation Medicine.

## "SALUTE TO EXCELLENCE" FOR DR. YAHR

Continued from page one

Dr. Michael E. DeBakey, Dr. Edward Teller, Professor Harold Urey, Dr. Denton Cooley, Astronaut James A. Lovell, Jr., and Bob Hope, among others who have made significant contributions to mankind's welfare.

Last year, Dr. Yahr and his group—Drs. Roger C. Duvoisin, Margaret M. Hoehn, Myrna J. Schear and Robert E. Barrett, all of the Neurological Institute—reported to the American Neurological Association's annual meeting in Washington, D. C., on the clinical effectiveness of L-dopa in Parkinson's Disease pa-

tients treated at Neurological Institute. This report, covering the utilization of L-dopa in 38 patients stricken with the crippling malady, was delivered when the drug was relatively new as a means of treatment for parkinsonism.

Drs. Yahr, Duvoisin, Hoehn, Schear and Barrett found that "L-dopa represents a promising advance in the treatment of parkinsonism." The number of patients that Dr. Yahr and his group have treated in the L-dopa program at NI has risen from 38, at the time his paper was delivered to the ANA, to about 175. Dr. Yahr is preparing a report based on

his group's and his observations and findings of the 175 Parkinson's disease victims.

Dr. Yahr, in recent weeks, has held extensive meetings with NIH officials and drug industry leaders to the end that a network of 20 centers would be evolved for treatment of Parkinson's disease in 20 institutions in the U. S. Dr. Yahr and others would then be in a better position, it is felt, to assess the overall effectiveness and safety of L-dopa.

Dr. Yahr and his wife, Felice, reside in Scarsdale, N. Y. They have four daughters, and one, Carol, is a student at Barnard College.

## VOLUNTEER AWARDS TEA

The Volunteers Awards Tea will be held on Wednesday, April 30, from 4 to 7 p.m., in Maxwell Hall. A program will be presented between 5 and 6 p.m. All active volunteers and those who served during 1968 and are eligible for the Presbyterian Hospital and United Hospital Awards are invited to attend.

# "You Never Run Up Against The Identical Problem Twice," Says A

Continued from page one

kind of sense as an administrative unit the next day.

As do her associates, Mrs. Florence Le Conte, the admitting interviewer on the evening shift, collects personal data of all persons being admitted to any of the Hospital wards. A 16-year veteran at this post, Mrs. Le Conte has developed a technique of allaying the fears of relatives while getting their help in filling out the patient's admission papers. She echoes the opinion of night people in Vanderbilt Clinic, voiced in the previous

## THE HOSPITAL AT NIGHT

issue of *The Stethoscope*, that after dusk conditions requiring hospitalization tend to be more acute. In reviewing her long association with the Medical Center, Mrs. Le Conte tries to balance the evening shift's corrosive effect on social life—"you don't have any"—with a positive aspect—"you get a lot more accomplished at work and at home." And a proof of this—in the case of a working mother—is Mrs. Le Conte's son, Michael Barry, who works in the Hospital's Accounting Department.

Mrs. Le Conte's opinion about the efficiency of night work is mirrored in the words of Tom Mangelsdorf, one of two staffers on the midnight to eight shift in Ward Admitting. "Night hours are conducive to concentration," says Mr. Mangelsdorf in explaining why he "went out of the way to find another 12 to 8 position" after working overnight at Nyack Hospital. A real "night person," the Blauvelt, New York, resident likes "to

putter around at night" on his days off.

Mr. Mangelsdorf alternates admissions work, which he undertakes for a whole month at a time, with doing the Hospital census. This important compilation of 43 items covering each service, unit and subunit at The Presbyterian Hospital compares each day's bed occupancy and cumulative patient days care with last month's and last year's figures. The census is invaluable in assisting the Hospital's administration in the decision-making of the next day.

### Night Managers

Another group of night people dividing their attention between Vanderbilt Clinic and the rest of The Presbyterian Hospital consists of the Night Managers. Working in the PH Unit Manager's office, these talented young men are charged with keeping the Hospital running in the evening and at night. After the Hospital's top officers leave in the evening, a Night Manager is the highest-ranking administrative official in all the units of PH.

Because of the high caliber of evening and night supervisors in various departments, the various units of PH can and do run "on automatic pilot" at night. But problems have a way of lying in ambush during the day and then descending upon a metropolitan

hospital after sunset. When this happens at PH, the Night Manager is summoned. Seasoned trouble-shooters, the four PH Night Managers have had an average of 10 years of service each in the Medical Center.

In recent years, they have been called upon to protect hospitalized celebrities from free-lance photographers, obtain "half 'n' half" for a lye-burned throat in the middle of the night, coordinate action at fires, confront suspicious visitors, and even pacify pistol-waving patients. Problems at Vanderbilt Clinic take up about a third of Night Managers' time.

"In dealing with the public a Night Manager can be of help by letting patients or relatives blow off steam," says Night Manager Jaime Gill. Mr. Gill, who was born in Puerto Rico and came to this country when he was two, finds his knowledge of Spanish of great help on his job. Mr. Gill is married and has a ten-month-old daughter.

Being on duty from five in the afternoon to nine the next morning, the Night Managers get the lion's share of interesting visitors. Night Manager Aaron Hale, who has genealogical connections with the family tree of the Revolutionary War hero Nathan Hale, recalls the visit of an "African potentate," who arrived at the Medical Center accompanied by two MD's

from another well-known hospital in the U. S. The two physicians appeared impressed with the honor of taking the monarch here for treatment. Admitted to PH for kidney stones, the potentate was up early the next morning, despite a huge dose of Demerol. He left the hospital alone, claiming he had to attend an important United Nations session. He was never seen again and the United Nations professed ignorance of his person.

Mr. Hale, who started working here ten years ago while attending college, devotes his free time to his family and to music. He has taught piano, composed music, and has sung baritone with the Robert Wagner Choral.

Many interesting people call up the Hospital at night. Night Manager John Adams, for example, received a call from Washington, D. C., one evening. It was a Mr. Richard Nixon inquiring about the medical condition of his mother. Mr. Adams, a Marine Corps veteran and an instant diplomat, handled the situation with great aplomb. A quick check confirmed Mrs. Nixon's presence as a patient and her lack of connection with the White House. Mr. Adams was able to give the wanted information without betraying his momentary incredulity.

"You never run up against

### Dr. Gorman Honored

Dr. John G. Gorman

It was unanimously decided by the judges that the 1968 Redway Medal for excellence in medical writing given by the New York State Journal of Medicine, Medical Society of the State of New York, be awarded to Dr. John G. Gorman, Director of the Blood Bank. The presentation was held on February 9 at New York City's Americana Hotel. Dr. Gorman's article, Rh Immunoglobulin in Prevention of Hemolytic Disease of New Born Child, appeared in the May 15, 1968, issue of the New York State Journal of Medicine.

At the same ceremony, Dr. Erol Gursel, Resident in Urology, received the Merit H. Cash Essay Prize, also sponsored by the Medical Society of the State of New York. This prize is presented to the author of the best original paper on a scientific subject. Dr. Gursel's essay was entitled The Effects of Diuretics on Renal and Intestinal Handling of Calcium.

## NATIONAL HOSPITAL WEEK

The theme for the 1969 observance of National Hospital Week (May 11-17) is "Your Hospital—Pathway to Progress in Community Health."

National Hospital Week, as an annual observance, was established by the American Hospital Association to focus attention on the work that hospitals are performing in providing high quality year-round care in the community.

This year places new stress on community-wide health care. Hospital health care programs are, or should be, reaching deeper into the communities to offer a broader spectrum of health services.

The traditional role of a community hospital has been to provide care for patients within its walls. However, hospitals are now evolving into centers of many health services, aimed at diagnosis, treatment, rehabilitation, education and prevention.

In this issue of *The Stethoscope*, readers will find a page-one article on the allied health professions. Here is one of the many evidences that this medical center is planning future developments with reference to a "broader spectrum" concept.

## COPY OF 15TH CENTURY WORK RESCUED FROM JUNKYARD

Dr. Jack G. Shiller

Art of della Robbia

official seal.

Dr. Jack G. Shiller, Assistant Pediatrician, PH, and Associate in Pediatrics, P&S, and his wife, who make their home in Westport, Connecticut, found the plaque in a junkyard in Stamford over a year ago. The plaque, made of plaster of Paris, was in poor condition; it was chipped and cracked in several places, and Dr. Shiller recalls that at least two people to whom he showed it told him it was "a piece of junk." Unwilling to accept this judgment, Dr.

Shiller bought the plaque and brought it to Babies Hospital.

Miss Elizabeth Callahan, Unit Manager of Babies Hospital, was able to locate an Italian family who had been in the business of restoring works of art for three generations. They mended the plaque, "fiberglassed" it for strength, and gave it a coating of glaze in keeping with the original della Robbia work.

The restorers estimate that the plaque is at least 60 years old, and Dr. Shiller believes that it probably decorated a church in Fairfield County, Connecticut, an area that was settled by Italian immigrants at the turn of the century. The lines radiating from the center of the plaque are a feature of the della Robbia infants on the Hospital D'Innocenti, and they are meant to represent the spokes of a wheel. In medieval Italy, a wheel called a "rota" with a cradle at its hub was placed outside a foundling hospital, and unwanted babies were left there to be cared for by the hospital. The swaddling clothes were a common feature of child care in the middle ages, and their use persists in many parts of the world even today.

Continued from page one

the identical problem twice," Mr. Adams says in summing up his work. This may be the reason why he enjoys this assignment.

Jean-Paul LeJeune, the remaining Night Manager of the foursome, was Superintendent of Services at PH with a daytime schedule when he requested a night assignment in order to complete his college education at N. Y. U. He hopes to go on to graduate work in Hospital administration at Columbia University. Mr. LeJeune started his career at this Hospital as a registrar in 1960 and was appointed Night Manager two years later. A Louisianan of French-Acadian descent, Mr. LeJeune stayed in New York to study at N. Y. U. after being released from military service.

The Night Managers are back-stopped in their work by cheerful Mrs. Carol Hughes, the 4:30 to 12:30 Information Clerk, who has served in this capacity since last December, and by George E. Morse, night information clerk. The information clerks, in addition to their regular duty of giving information about patients, answer the Night Manager's telephones when he is called away to other parts of the Hospital.

#### P&S ARTS FESTIVAL FRIDAY, APRIL 11

The P&S Arts Festival, sponsored by the Arts Committee of the P&S Club, will take place Friday, April 11, starting at 7:30 p.m., at the Bard Hall Lounge.

Prizes will be awarded for paintings, sculptures and other art work. Poetry and stories will be read.

The happening will be followed by the showing of the movie "Forbidden Games."

#### HOUSE STAFF WIVES CLUB

The Columbia-Presbyterian House Staff Wives Club cordially invites the staff to attend a "Wine Tasting Party" featuring guest lecturer Martin L. Gross, renowned social critic and author of *The Doctors*. The event will be held on April 11 at 8:00 p.m. in the recreation room of Harkness Hall. Admission will be one dollar.

revolve around impeded supply of nutrients and oxygen to the fetus. This could be dangerous, since perinatal mortality tends to increase as birth weight decreases.

The research crew of the University's Department of Obstetrics and Gynecology at P&S performed experiments on 40 pregnant Rhesus monkeys to find out that nicotine moves quickly from the mother's blood stream to that of the fetus. "Our data suggest that nicotine given to the mother may adversely affect the circulatory system of the fetus and thus cause acidosis and a reduction in the availability of oxygen," Dr. Kotaro Suzuki, co-investigator of the research project, said in an abstract report, prepared for a meeting of the Society for Gynecologic Investigation in Denver, Colorado, on March 21.

The research work, carried out by the principal investigator, Dr. Karlis Adamsons, and Drs. Terusada Horiguchi, Arsenio C. Comas-Urrutia, Hisayo O. Morishima and James M. Perel, in addition to Dr. Suzuki, was made possible by a grant from the American Medical Association. Dr. Adamsons is an Associate Professor of Obstetrics and Gynecology at P&S.

The researchers used fluothane anesthesia to insert catheters, or minute tubing, into the major blood vessels of the unborn baby and into those of its birth parent. After the incision was closed, precise amounts of nicotine were injected into the maternal or fetal blood streams in various doses.

The researchers went to great pains to isolate and measure nicotine from the monkeys' circulatory systems. An eleven-step method of centrifuging and visualizing the nicotine on a chromatography plate was used, and nicotine tagged with isotopes of hydrogen, which could be measured with a scintillation counter, was employed. In this way, otherwise undetectable amounts of nicotine were found in the fetus.

The experiments confirmed the well-known depressive effect of an injection of nicotine upon the circulatory system of the mother. But more importantly, the tests showed that an infusion of nicotine into the mother had a depressive effect on the heart rate and blood pressure of the fetus.

The use of the radioactive nicotine enabled the scientists to show that nicotine introduced into the mother's blood stream, swiftly crosses the "placenta barrier," reaching a plateau in the baby monkey 15 minutes after the injection. Gently peaking at about 60 minutes in the maternal blood, nicotine levels decline "rather slowly" in the fetus.

In an interview prior to at-

Mr. Portela is to be interviewed about his record 15-year association with the Columbia-Presbyterian Medical Center.

You take the Black Building elevator up to Mr. Portela's quarters and announce yourself to Mr. Raymond Perez, the person you have to get past to talk to Mr. Portela or any of his associates.

"Interview Mr. Portela for *The Stethoscope*?" An incredulous smile flits across Mr. Perez's face: he does not want to deprive Mr. Portela of a chance to become a part of Medical Center's history and at the same time he wants you to know that he suspects a gag.

"That's him there, in the corner."

You approach Mr. Portela and explain to him the purpose of your visit. Without wanting to, you assume an air of diffidence reserved for meeting people of accomplishment in a success-oriented society.

The eyes of Mr. Portela show a curious mixture of puzzlement, cunning, and impatience. Saying nothing, he attempts to look around you. It is obvious that he is not pleased that his line of vision is being interfered with.

"Mr. Portela is in love," Mr. Perez explains, and his glance points across the room to a lady who appears to be agitatedly talking to herself. And indeed, Mr. Portela has eyes only for her. His steady gaze is frankly possessive.

Discomfited by this show of naked emotion and at the same time accepting it in one so distinguished, you try to find out to what Mr. Portela attributes his position of eminence in his department. The darting, searching eyes meet yours for a moment, and then Mr. Portela, evidently upset, turns his back to you and walks away. You look helplessly at Mr. Perez, who knows as much about the big ape as anyone in the Medical Center.

"Until a year ago, Mr. Por-

tending the Society for Gynecologic Investigation meeting, Dr. Suzuki estimated that a pack of 20 cigarettes could yield 1 milligram of nicotine per each kilogram of body weight "in an average American expectant mother, depending on how much she inhales."

The investigators emphasized that "the purpose of the report was not to link cigarette smoking and negative effects on the fetus in a cause-and-effect relationship." But they conceded that the team's research on Rhesus monkeys—as fellow Primates of Man—could be taken as direct evidence to buttress conclusions from epidemiologic studies of smoking mothers.

The report to the Society for Gynecologic Investigation

Mr. Portela appears to be looking up a word in a pocket dictionary in his quarters in Black Building.

tela was 'king,' " explains Mr. Perez. "But then, by accident, he got into a showdown fight with 'The General,' and 'The General' defeated him. Now Mr. Portela does not have the same position in the community." The change in the attitudes of Mr. Portela's associates manifests itself in subtle ways. Respectful silences or appropriate vocal responses used to follow Mr. Portela's pronouncements in the past; nowadays it is The General who gets the attention.

Mr. Portela's vague feeling of disappointment over his fall in rank to number two is sweetened by his infatuation with 489. He is so single-mindedly intent on watching her that he has all but forgotten 496, who is visiting him.

The females in Mr. Perez's care carry numbers not because they are secret agents but because they are involved in scientific work, where such handles as "George," "Chico," and "The General" would be out of place.

The origin of "Mr. Portela" is obscure. The name is thought to have originated with the late Dr. Albert Plenti, who was working with Mr. Portela many years ago.

Strictly speaking, neither the females nor Mr. Portela, Chico, and the other boys are apes. In the animal kingdom, they go by the scientific name of *Macaca rhesus*, a species of

monkeys that has saved countless human lives through its contributions to medical science. The very concept of Rh factor in blood stems from Rhesus monkeys.

At present, the colony of nine males and 36 females is helping Dr. Karlis Adamsons and his colleagues Kotaro Suzuki, Terusada Horiguchi, Arsenio C. Comas-Urrutia, Hisayo O. Morishima, and James M. Perel to chart the transmission of nicotine from maternal to fetal tissue.

While Mr. Portela and the boys are responsible for providing the latter, the females do all the scientific work. In addition, they make like geishas, grooming and cleaning the relaxed males.

The good life that Mr. Portela leads as a patriarch of the Macaca tribe has, over the years, improved his personality. Rhesus males are pugnacious and aggressive, but, according to Mr. Perez, the colony's senior simian goes by the motto: "If you don't bother me, I won't bother you."

Mr. Perez is a five-year veteran with the Institute of Comparative Medicine, which is responsible for the animal's welfare. In these five years, the monkey and his keeper have developed a good working relationship. The Institute's staff wishes Mr. Portela another 15 productive years at the Medical Center.

pointed out that the "effects of nicotine upon the acid-base state and oxygen supply of the fetus seemed to depend on the maturity of the fetus." In a species with a 160 to 168-day period of pregnancy, monkey fetuses between 80 and 120 days old did not register increases in blood acidity or in its carbon dioxide content. Monkey babies in the last quarter of gestation invariably showed potentially harmful disturbances in their acid-base state and oxygen supply. The increased susceptibility of the older fetuses was attributed to the more advanced develop-

ment of their autonomic nervous system which is the principal target of nicotine. No data were obtained on fetuses less than 80 days in gestation because they proved too fragile for experiments.

The research of Dr. Adamsons and his team mates, now in its third year, indirectly assumed significance following a report by the Federal Trade Commission of substantive increases in the nicotine and tar content of many cigarette brands. The report claimed that nicotine levels had increased in 78 types of cigarettes.

## "Delivery of Medical Services To Ghetto" Will Be Discussed In Meeting, April 29

There will be a meeting of the Conference Committee of the P&S Club on April 29, in the Alumni Auditorium at 8:00 p.m. The topic to be discussed is "Delivery of Medical Services to the Ghetto" on a national level. Steve Lichtenberg, P&S 3rd year, is Chairman of this Committee.

The moderator will be Mr. Gerard Piel, Publisher of Scientific American. He was Chairman of the Municipal Commission which published the famous Piel Report on city hospitals.

Other speakers will include Dr. George Silver, HEW; Dr. Raymond Duff, Yale; Dr. Desmond Kallen, N. Y.; Dr. John Holloman, N. Y.; Mr. George Goodman, N. Y.; Dr. John Knowles, Massachusetts General.

It is hoped that medical students, physicians, nurses, social workers and other paramedical personnel will be able to attend.

## "Care and Understanding Of the Dying Patient"

"Care and Understanding of the Dying Patient" is the subject of a conference to be held on Saturday, April 19th, in the Alumni Auditorium at the College of Physicians and Surgeons. The conference is sponsored by the P&S Club, and coordinated by the Conference Committee on Religion and Medicine under the Chairmanship of Henry R. Palmer.

Some of the highlights of the program will be a film, "Death," to be shown on Friday, April 18th, from 1-2 p.m. in the Alumni Auditorium and 7-8 p.m. in Bard Hall lounge; a Combined Staff Clinic on Saturday from 10:30 a.m.-12:00 p.m. in the Alumni Auditorium; and an Open Dialogue from 1:15-2:45, also in the Alumni Auditorium. For further information about the program, please call Mr. Edwin Barton at 923-6800.

## HEAR YE! HEAR YE! BAKE SALE—APRIL 11

Hospital employees are asked to contribute cakes, cookies, candy or preserves (preferably homemade). The Nursing Department will sell them. All money realized from this sale will be sent directly to the aid of the starving Biafran children. For further information call Miss Cynthia White, Nursing Office, PH 4th floor, Ext. 3181.

## Our Young At Heart Help Area Students Get A Head Start In Local Track Meet

The employees of Columbia-Presbyterian Medical Center last month helped carry out what may turn out to be one of New York City's most demanding administrative tasks in 1969—the staging of an athletic meet for 800 young kids.

The young competitors—most of them from six parochial grammar schools in Harlem, Washington Heights and Inwood—filled the spacious track floor of the 168th Street Armory on March 7, as 2,200 parents, relatives and friends crowded the spectator areas.

The 1969 Grammar School Athletic Meet was officially sponsored by an Upper West Side council of the Knights of Columbus, but the estimated total of 50 Medical Center employees in various executive and committee functions gave the meet sponsorship a Medical Center flavor. Many of the frisky thinly clad were children of the Center's staff, with their parents in attendance.

Anthony J. Fisher, Assistant Supervisor of Inhalation Therapy Department, was General Chairman of the annual athletic event, which this year drew its biggest crowd in six years. Sam Manchess, whose son Paul works for Accounting Department of PH, served as Co-Chairman. James Lahiff, Secretary for the meet, is a member of the Hospital's Out-Patient Collection and Billing Department. Laura Valentin and Carmen Lermant, wives of Inhalation Therapy Supervisor, Juan Valentin, and Night Supervisor of Attendants, Oliver Lermant, served as Matrons for the newly established girls' division. Mr. Valentin was Treasurer for the event, and Mr. Lermant was Publicity Chairman.

Other chairmen with spe-

## Fourteen Foreign Nurses—"Exchange Visitors"—Say Farewell

Left to right; standing: P. H. Chen-Ho, N. Ovivir, M. Hunt, E. Lourey, M. Se-

gura, G. Sthalekar, A. Kurian, T. S. Bae, Y. Ueno. Seated: O. S. Kim,

S. E. Suh, R. Kirk. Not shown: E. Mayer, C. Radnell.

Fourteen nurses representing nine different countries have completed their year here under the "Exchange-Visitor" program for graduate nurses, coordinated by Ruth Rayner. During their stay, the nurses acquired clinical experience for four days a week in various departments of the hospital; the fifth day was devoted to classes in nursing, medicine, and American culture. In addition to their hospital program, the nurses had the op-

portunity to travel in different parts of this country, Canada, and Mexico.

At the farewell reception given in their honor on March 6th on the fourth floor of PH, the nurses expressed regret at leaving and an appreciation of their experience here. They were especially glad of the opportunity to learn something about this country's history and way of life. "This is something I would have done even if I weren't a nurse," said

Margaret Hunt of England. "Learning about this country has been a wonderful experience."

The nurses are Tae sook Bae, Oak Sue Kim, and Sun Ei Suh, Korea; Mrs. Pi-Hsiang Chen-Ho, Taiwan; Margaret Hunt, England; Rhoda Kirk, Rhodesia; Mrs. Annamma Kurian and Ganga Sthalekar, India; Elizabeth Lourey and Carole Radnell, Australia; Erna Mayer, Austria; Nurhanena Ovivir, Philippines; Milagros Segura, Spain; and Yae Ueno, Japan. About half the group will return to their homelands, the other half moving on to other programs at such places as the University of Texas Hospital, St. Lukes Hospital in Saginaw, Michigan, and the United Hospitals of Newark, New Jersey.

cial assignments included: John A. Clohessy, a staff member of P&S Information Desk, in charge of medals; William McCabe, whose mother works in Compensation and Liability Department of PH, supervisor of ticket sales; and Hugh King, Assistant Supervisor of Buildings and Grounds at P&S, Finance Chairman.

Other volunteer track meet officials from the PH side of the Medical Center included William Delaney of the Out-Patient Billing and Collection Department, Wilfredo Sanchez, Supervisor of Central Equipment Room, John Daly of the Department of Maintenance and Construction, Fred Torres of X-ray Department in Achley Pavilion, and the following members of the

Service Building Storeroom: Alfred Holt, Ray Crosas, Gilbert Melendez and Charles Reilly. Mrs. Elly Metrakos of the Department of Radiology stood by in case of a medical emergency.

Nine out of ten official Matrons for the girl competitors had PH ties of one sort or another. In addition to the afore-mentioned Mrs. Lermant and Mrs. Valentin, the nine included: Catherine Heckman and Rita O'Brien of Personnel Department, Connie Dodd and Mary Murray of Personnel Medical, Phyllis Wolfthal of the Accounting Department, and Eileen Manchess, mother of Paul Manchess, also of Accounting.

The competitive disciplines for the youngsters from 7 to 14 years old included the broad jump, 50-yard dash, 60-yard dash, 75-yard dash, 220-yard relay and 440-yard relay.

The team trophy was won by the Good Shepherd School. Altogether, four trophies and 270 medals were awarded.

The enthusiastic participation of Medical Center employees in this project is seen as a testimonial of good will from the Hospital to the community that surrounds it. The Annual Athletic Meet, Mr. Fisher declared in a published welcoming statement, was "conducted in the interest of the youth of the community—the leaders of the future." In

James E. Foley, State Deputy of the Knights of Columbus, presents the team trophy, donated by now Cardinal Terence J. Cooke, to a young competitor as Anthony J. Fisher, Director of the 1969 Grammar School Athletic Meet, looks on.

the sense that the event may have directed the energies of many youths into healthy channels, this endeavor of our Medical Center staffers may also be classified as preventive medicine.

## Charles Peterson Wins Foreign Fellowship

Charles Peterson

Jean Peterson

Charles Marquis Peterson, a senior at Columbia University College of Physicians and Surgeons, is one of 31 American medical students to receive Smith Kline & French Foreign Fellowships from the Association of American Medical Colleges. The \$780 fellowship will permit him to assist for 10 weeks this spring at the Pfeiffer Memorial Hospital in La Paz, Bolivia. His wife, the former Jean Brown, a social worker with a Master's Degree in Social Work from Columbia University, will accompany him.

## NEW MEMBERS OF 25-YEAR CLUB

The annual dinner of the Twenty-Five Year Club of Columbia Presbyterian Medical Center will be held on Thursday evening, May 1. The 40 new club members will be named in the May issue of *The Stethoscope*.

Mrs. Mildred Weber

Mrs. Mildred Weber

In 1947 Mrs. Mildred Weber's little girl was a patient in the Hospital. Coming here to visit the child, Mrs. Weber had an opportunity to observe the varied activities in the Medical Center complex. She resolved then and there that when her daughter recovered she would offer her services to the Hospital as a volunteer. That same year she accepted her first volunteer assignment on PH 16-Sloane Hospital. Approximately one year later, Mrs. George Perera, among others, suggested she enroll in the Red Cross Nurses' Aide training program at Bellevue Hospital, which would enable her to broaden her skills, thus qualifying her for more technical responsibilities. Mrs. Weber accepted this suggestion and has been working since then on PH 16 as a Red Cross Nurses' Aide.

She laughingly recalls her nervous approach to caring for her firstborn and, as her family grew, her sagacious remark, "you learn to do more by living with it" . . . don't we all! She claims to have undergone somewhat the same nervous approach to her early days in training as a Red Cross Nurses' Aide.

Mrs. Weber, very trim and very affable, summed it all up by saying, "I get much more than I give by volunteering. I'll bet there isn't a volunteer worker in the world that's lonely."

Mrs. Weber makes her home in Yonkers, New York. She has two children and four grandchildren living in New Jersey with whom she spends as much of her free time as possible.

Helen Morgan Murphy

Helen Morgan Murphy is a living example of "an institution within an institution." This grand lady retired in 1963 after forty years of service with the Medical Center as Secretary in Obstetrics and Gynecology and finally as Administrative Assistant in Obstetrics and Gynecology, P&S. But "retired" cannot be applied to Helen in any sense of the word. She is still seen frequently busting in and out of the Hospital, bubbling with energy, stopping to chat with

her many friends and acquaintances.

Her charming Irish brogue to the contrary, Miss Murphy was born in New York City but she and her mother returned to Ireland when she was a little girl and most of her education was acquired in Killecullen, County Kildare. After intervening trips she finally returned to New York City in 1920 or thereabouts and almost immediately began her long career at the Sloane Hospital (when it was still located on 59th Street). About one year after she retired, she visited her beloved Ireland and occupied a lovely 7-room chalet uniquely named "Sursum Corda" (Latin for "Lift Up Your Heart") in Strand Hill, County Sligo, a seaside resort. This chalet is owned by a long-time friend and will always be available to Miss Murphy any time she wishes to return. At present she is working part-time for one of

Helen Morgan Murphy

the physicians on the staff of PH.

For ten years before Miss Murphy retired she had also been serving the Hospital as a volunteer, coming each Sunday morning at 6:00 a.m. to escort hospital patients to Mass at 7:00 a.m. To date, she continues to serve in this capacity, making a total of fifteen years of volunteer service, and intends to "carry on for as long as the good Lord is willing."

## THESE PERSONS ARE RETIRING

Mrs. Maureen Kelly

Mrs. Maureen Kelly

Mrs. Maureen Kelly chose early retirement in February. She came to Presbyterian in 1958 and has been the "go-between" for patient and doctor for those patients requiring admission to the Mary Harkness Unit. "The doctor explains the patient's need, therapeutically, and I take it from there," said Mrs. Kelly. "My job is to explain to them (the patients) what kind of a place Mary Harkness is and what they'll need when they go there. We also discuss finances."

Mrs. Kelly, a sprightly little lady, went on to say that she "loved every minute of it."

She is an avid knitter and her family—husband, three sons and three grandchildren—keep her knitting needles flying! The Kellys will travel through Scotland before returning to her native Dublin, Ireland, to settle down.

Mrs. Emilie King

Mrs. Emilie King, L.P.N., Gynecology Clinic, V. C., retired in February, having completed 16 years at the Medical Center. Mrs. King came to PH in 1953 and at first was told there was no position as

Mrs. Emilie King

practical nurse in the clinic but after shuttling between the 15th floor Sloane, PH, and VC 4, she became the first practical nurse to work as a nurse in that clinic and remained there 15 years. She pioneered the way for practical nurses in V. C. "I've enjoyed working here," Mrs. King stated. "What impressed me most about PH is the care they give employees and their families when illness strikes."

She is an avid reader, loves camping out and is a travel enthusiast. She is quite active in her church and has been leader of the kindergarten there for many years. She plans to "finish seeing America" before settling down, hopefully in Alabama, near her daughter and four grandchildren.

On February 5th Mrs. King was honored with a tea and was just delighted at the large turnout of friends and fellow employees.

Kay B. Simon

Kay B. Simon, R.N., Presbyterian Hospital Orthopaedic staff nurse, evenings, retired in February. She had been with the Orthopaedic service since 1949 and has enjoyed

## News of Nursing

### "I Am Glad To Have This Opportunity To Take The Practical Nursing Course"

For Mrs. Katherine Touw of Paterson, New Jersey, to enter the field of nursing has been a lifetime dream. Now, at the age of 53, Mrs. Touw's dream is being realized, because she is a member of the first class of the Columbia-Presbyterian School of Practical Nursing.

Without her family's encouragement, Mrs. Touw probably would not have begun this endeavor. Because her daughter, Jacqueline, is a nurse, she was able to talk to her mother and explain the various nursing programs for which she might qualify. Jacqueline, an instructor in the Department of Nursing at the Bronx Community College, is now working on her doctorate in pediatrics and obstetrics at Teachers College, Columbia University. Mrs. Touw's husband and her son Philip, a recent graduate of Calvin College in Michigan and about to enter the Armed Services, also supported her decision to enter a school of practical nursing.

Says Mrs. Touw of her new career in nursing, "Now that my children are well along in their educational programs, I think it is time for my turn. Therefore, I am glad to have this opportunity to take the practical nurse course at the Columbia-Presbyterian Medical Center. Such a program opens a whole new area of interest for a housewife, such as myself."

The Columbia-Presbyterian School of Practical Nursing was established to prepare qualified men and women to help meet the increasing health needs of the American people. The program is one year in length, including three weeks

Mrs. Katherine Touw

vacation. The first 16 weeks of the course is devoted largely to instruction and practice in the classroom. After this, practice takes place on the various patient units of The Presbyterian Hospital, under the supervision of the School instructors. Scholarship aid is available to assist students in meeting tuition and residence fees. Students who satisfactorily complete the course will be eligible to take the State Board Examinations which lead to a license as a Practical Nurse.

The members of the present class, which met for the first time on September 23, range in age from 18 to 53. In addition to recent high school graduates, several of the students are women who have raised their families and are now able to devote a year of their time in order to prepare themselves for a career in practical nursing.

working here. She feels that in some ways, "orthopaedic nursing is more interesting and more diversified—they are doing things now that couldn't be done before." She claims that there is "never a dull moment—the work is difficult sometimes but you don't seem to mind it. When you see the patients being helped, it's great."

Miss Simon is very excited about her new apartment, which is now in the process of being furnished (she had been living at Harkness Hall), and will be kept quite busy with her numerous hobbies which include color photography (both still and movie) of landscapes all over the United States, an interest in Rya rugs (which are handcrafted in the Nordic countries) and music—all music except jazz.

Miss Simon also hopes to travel extensively, specifically in the United States, her motto being "See the U.S.A. first!"

On February 13 a tea was given in Miss Simon's honor and all her friends and co-workers were on hand to bid her farewell.

Mrs. Marie Doran

Mrs. Marie Doran retired in December after 10 years with the Medical Center where she worked at the PH Information Desk.

She enjoyed the atmosphere at the Hospital and found each year more enjoyable than the foregoing one. She especially enjoyed "meeting so many different people."

Mrs. Doran told us, "It is a good place to work—I wish I were starting again."

## • ENGAGEMENTS

Candia Joy Fisher is engaged to John Goodman of New York City. The wedding is planned for June 14. Mr. Goodman is the grandson of Mrs. Dora Goodman, Presbyterian Hospital Volunteer in the Public Interest Department.

Erika Hackenjos and John Rehack became engaged on St. Valentine's Day. They plan an October wedding. Miss Hackenjos is secretary to Dr. Robert Wylie, Department of Surgery.

Joanne Barzelay and Robert Earl Snyder plan to be married in September. Mr. Snyder is the son of Dr. Joseph Snyder, Assistant Vice President for Vanderbilt Clinic.

## • MARRIAGES

Jacqueline Ferguson and William Robert Dorsey were married on March 13 in the Pauline A. Hartford Memorial Chapel. The bride is the daughter of Mrs. Jacqueline Ferguson, secretary to Dr. Paul Marks in the Department of Medicine.

Inge Renate Roehrig, Oral Surgery Assistant, married Dr. Edward Ras on March 1 in the Pauline A. Hartford Memorial Chapel. Dr. Ras is a graduate of the School of Dental and Oral Surgery, and is an Assistant in the Department of Restorative Dentistry.

Marie Luizet of Clinical Pathology was married to Frank Vocek on March 9.

Barbara Smith, formerly of the Department of Ophthalmology, was married to James Goode of Medical Data Processing on March 1.

## • BIRTHS

Mr. and Mrs. Adelo Murphy welcomed their third child, David, on January 15. Mr. Murphy is a technician in the Blood Bank.

Mr. and Mrs. Charles Duffy are the proud parents of a baby girl, Caryn Joan, born on February 10. Mrs. Diana Duffy is a former nurse in the Blood Bank.

Mr. and Mrs. Terrance Geoghegan welcomed their first child, Peter Terrance, born on February 26. Mr. Geoghegan was a member of the Engineering Department; Mrs. Geoghegan was formerly employed in the Accounting Department.

Mr. and Mrs. John Valentin are the proud parents of a son, John, born on February 23. Mr. Valentin is a Security Officer in the Protective Department.

Dr. and Mrs. Peter Polatin welcomed their son, Christopher Barth, on March 12. Dr. Polatin, P&S '68, is interning at Greenwich Hospital in Connecticut. He is the grandson of Dr. Phillip Polatin of the Department of Psychiatry, P&S '34.

Mr. and Mrs. Robert Rice are the proud parents of a baby girl, Mary-Lynne Patricia, born on February 21. Mrs. Rice (nee Jackson) is a '67 graduate of the School of Nursing.

Mr. and Mrs. Marvin Patrello welcomed Sarena, their first child, on March 9th. Mrs. Patrello is a former secretary in the Department of Epidemiology. Her mother is Mrs. Janet Catherwood of the Dean's Office.

Mr. and Mrs. Antranik Der Ohannessian welcomed their first child, Annie Maral, on February 18. Mrs. Der Ohannessian is a former technician in Clinical Pathology at the Neurological Institute.

## • CONDOLENCES

To the family and friends of Mrs. Edith K. Rall, secretary to Dr. Eric Josephson, Adolescent Health Project, School of Public Health, who died on March 14. A memorial service was held for Mrs. Rall in the Pauline A. Hartford Memorial Chapel on March 24.

## • WELCOME

To Mrs. Ovale Silvy, Marilyn Terzano, and Candace Dittman, new members of the EEG Department.

To Karol Murov of the Blood Bank.

## • FAREWELL

To Michael Santana, Blood Bank Technician. To Mrs. Aida Perez, Assistant Open Heart Coordinator. We wish them well.

To Mrs. Devyani Shah of the Record Library. She and her husband will spend the summer traveling in Europe before settling in Canada.

## • NOTES OF INTEREST

Mrs. Magdalen McCarthy, Assistant Office Manager of the Department of Public Interest, enjoyed a vacation in Florida.

Margaret Burke, Blood Bank nurse, is enjoying a vacation in Aruba.

# DOINGS OF DOCTORS

DR. WILLIAM A. BLANC, Attending Pathologist, Director of Pathology, Babies Hospital, and Professor of Pathology, P&S, was an invited speaker on February 5 at the Westchester Academy of Medicine. His topic was "Are There Congenital Malformations Due to Amniotic Bands?" Dr. Blanc was also an invited discussant at the International Conference on Rubella Immunization held in Bethesda, Maryland, February 18-20. He discussed "The Pathology of Rubella in the Infant and in the Placenta." On March 6, Dr. Blanc lectured at the Fifth Annual Uniformed Services Pediatric Seminar at West Point on "Physical Examination of the Umbilical Cord and Placenta."

DR. DONALD H. HARTER, Assistant Attending Neurologist, Neurological Institute, delivered lectures on slow virus infections of the nervous system at the University of Colorado School of Medicine, the University of Washington School of Medicine, and the University of Pennsylvania School of Medicine.

DR. HERNANDO CARDONA, Research Associate in Ophthalmology, spoke on "Recent Advances in Keratoprotheses," "Illuminated Gonioscopy," and "Indirect Gonioscopy" on February 26-28 in Caracas, Venezuela. On March 2-7, he spoke on "Physiological Optics Related to the Cornea" and "The Present Status of Keratoprotheses" at the Colombian Congress of Ophthalmology in Medellin, Colombia.

DR. JOHN K. LATTIMER, Director, Squier Urological Clinic, and Professor and Chairman, Department of Urology, P&S, represented the specialty of urology at a two-day workshop at the National Library of Medicine, February 25-26, in Bethesda, Maryland. The workshop was sponsored by the Association of American Medical Colleges to discuss the need for a National Biomedical Education Communication Network. Dr. Lattimer also lectured and showed motion pictures of cancer cells growing in tissue culture at the Kidney Disease Prevention Unit of Health, Education, and Welfare in Arlington, Virginia.

DR. CAROLYN R. DENNING, Assistant Professor of Pediatrics, P&S, and Director of the Pediatric Pulmonary Disease Center (PPDC), and DR. MARTIN I. LIFSCHITZ, Associate in Pediatrics, P&S, and Program Coordinator of the PPDC, conducted a one-day course on December 18, 1968, for pediatricians and general practitioners on the "Recent Advances in Chronic Pulmonary Disease of Infants and Children." This is the first of a series of courses planned for physicians, nurses, physical therapists, and inhalational therapists under the sponsorship of the New York Metropolitan Regional Medical Program. On January 8, Dr. Denning was guest lecturer at Beth Israel Hospital, N. Y. C., and spoke on "Newer Concepts in the Management of Children with Chronic Lung Disease." She spoke at Fordham Hospital on January 15, on "Malabsorption in Children." On January 30, Dr. Denning lectured to the combined staffs of the Department of Pediatrics of New York Medical College and Flower Fifth Avenue Hospital and the Metropolitan Hospital on "Newer Concepts in the Management of Cystic Fibrosis."

DR. KARLIS ADAMSONS, Associate Professor of Obstetrics and Gynecology, P&S, received

an award from the Fullbright Commission of the Department of State to serve during the month of January as a Visiting Professor to the Faculty of Medicine at the University of Uruguay. His lecture series dealt with topics pertinent to the physiology and pathology of reproduction.

DR. FRANK MIGNONA, Resident in Otolaryngology, and DR. ROBIN RANKOW, Assistant Professor of Otolaryngology, P&S, are the co-authors of a paper on "Cancer of the Sublingual Salivary Gland," which was delivered by Dr. Mignona at the Annual Meeting of the Society of Head and Neck Surgeons in Mexico City, March 19. Dr. Rankow has also been invited to discuss a paper on "The Use of Deltopectoral Skin Flap in Reconstruction about the Head and Neck," given by Drs. Sherlock and Maddox of the University of Alabama Medical Center.

DR. JULES G. WALTNER, Attending Otolaryngologist and Professor of Clinical Otolaryngology, P&S, read two papers on February 27 at the New York Eye and Ear Infirmary Annual Conference in the Biltmore Hotel. The topics were "Cartilage Tympanoplasty" and "Complications in Stapes Surgery." Cartilage tympanoplasty is a new surgical technique in reconstructing the middle ear sound-transmitting mechanism in chronic destructive middle ear disease.

Dr. Walter

Dr. DeVoe

DR. ARTHUR GERARD DEVOE, Director, Institute of Ophthalmology, and Professor of Ophthalmology, P&S, presented a paper on "Ocular Injuries" on February 15, 1969, at the Washington Hospital Center, Washington, D. C. Dr. DeVoe also presented a paper on "Microsurgery" and moderated a panel discussion on "Advances in Corneal Surgery" at the Sectional Meeting of the American College of Surgeons in Boston, Massachusetts, on March 11.

DR. DOMINGA T. CHUA, Resident at Delafield Hospital, won second prize for Clinical Research in the Prize Essay Contest of the American Urological Association for the May, 1969 annual meeting, for his paper, "Acid Phosphatase Levels in Bone Marrow: Value in Detecting Early Bone Metastasis from Carcinoma of the Prostate."

DR. GEORGE H. HUMPHREYS, Director, Surgical Service, PH, Professor and Chairman of the Department of Surgery, P&S, spoke on "Congenital Lesions and Cysts of the Lung" on Tuesday, March 11, as a part of the Northeastern Sectional meeting of the American College of Surgeons in Boston, Massachusetts. He was one of a panel of four discussing "Problems in Pulmonary Resection," moderated by Dr. Herbert C. Maier.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIV, NUMBER 5

MAY, 1969

## OPEN HOUSE, 13TH FLOOR, NEUROLOGICAL INSTITUTE

Brain-scan procedure, conducted by technician Thomas Regan, is filmed by NBC cameraman for news program pegged to the opening of the diagnostic floor on April 17.

After a year's exile in various parts of the Neurological Institute and Presbyterian Hospital, the electrodiagnostic and the brain-scan units are returning to their quarters on the 13th floor. The diagnostic floor opened officially last month after extensive modernizing and renovation. The event, fittingly, took place 40 years after the construction of the present building and on the 60th anniversary of the Neurological Institute, which first accepted patients in a six-story building on 67th Street

in December, 1909.

The open house held on April 17 could be likened, in the words of one guest, to "taking bandages off someone's face after plastic surgery." The renovation job on the 13th floor of Neurological Institute, however, went beyond the surface improvements that often characterize cosmetic surgery. While the color scheme of the walls, doors and the floor was pleasing aesthetically and elicited admiration, it was the structural improvements that

## Dr. Spiegelman Heads Cancer Research

Columbia University has appointed Dr. Sol Spiegelman Director of the Institute of Cancer Research and Professor in the newly created Department of Genetics at P&S, according to an announcement by Dr. Andrew W. Cordier, Acting President of the University. Dr. Spiegelman, who

holds a professorship in Microbiology at the University of Illinois, will assume his new duties on July 1.

For the Brooklyn-born biologist, the assignments at P&S mean a return to the city of his undergraduate pursuits and to the institution of his graduate studies. The young scientist obtained his B.S. in mathematics and physics from the City College of New York in 1939. From 1940 to 1942, he pursued graduate studies in cellular physiology at Columbia University. He received his Ph.D. from Washington University in 1944. Dr. Spiegelman stayed on at the St. Louis-based institution during the post-war years, first as Instructor in Bacteriology, later as Assistant Professor. He was appointed Professor of Microbiology at the University of Illinois in 1949.

Dr. Sol Spiegelman

## SCHOOL OF RADIOLOGIC TECHNOLOGY

The Department of Radiology of the Presbyterian Hospital announces that a two-year School of Radiologic Technology will begin instruction on May 19. The addition of the New York State-licensed course to the educational programs offered by the Hospital will be the Hospital's second response this month to the growing need in the nation for trained medical personnel. A twelve-month course for Operating Room Technicians started on May 1 under

*Please turn to page three*

## JOHN A. HARTFORD FOUNDATION AIDS STUDIES OF RHEUMATIC ILLS

A three-year grant totaling \$215,616 has been made to The Presbyterian Hospital in the City of New York by The John A. Hartford Foundation, Inc., New York City, for microbiological and immunological studies of the rheumatic diseases. This gift will support a continuing research program that began with a grant of \$353,566 made by the Hartford Foundation in October, 1965.

The specific aims of the study relate to such diseases as rheumatoid arthritis (RA)

## Gift for Surgical Intensive Care

Early in April, Augustus C. Long, President of The Presbyterian Hospital, announced a gift of \$750,000 to the Hospital by two of its strong supporters, Mr. and Mrs. Robert Winthrop of New York City. They have asked that the gift be used to pay the cost of the new Surgical Intensive Care Unit, which is part of the present development program.

Mr. Winthrop, a partner in the firm of Wood, Struthers and Winthrop, is a Trustee of The Presbyterian Hospital.

The Surgical Intensive Care Unit, as planned, will be ideally located on the 18th floor of the new Court Building, whose

Robert Winthrop

construction has recently been approved by the Board of Trustees. This Unit, together with supporting ancillary services, will provide intensive care before and after operations for the critically ill surgical patient.

More than 1,150 major surgical operations are performed each month on the 18th floor of The Presbyterian Hospital, where surgeons from the various special services share the use of 14 surgical suites. Surgical capabilities continue to improve with the development of new techniques, new tools and new equipment, and new concepts of preoperative and postoperative care. Increasing numbers of patients who could not have risked an operation even a few years ago are now being successfully treated by surgery. For many elderly patients, serious burn and other accident victims, and those suffering from a variety of chronic diseases, surgery is successful only because of the intensive care that can now

## "THE DRAMA OF LIFE'S BEGINNINGS"

When a color photo appears on the cover of The New York Times Magazine, taken from a forthcoming book by two doctors of the Columbia-Presbyterian Medical Center, that's news—not only for the readers of *The Stethoscope*, but for thousands of others.

Appearing in the March 23 issue, the photo showed "a 9-week old fetus, still in its amniotic sac, 15 minutes after a therapeutic abortion. It is 1½ inches long. The bulb at the bottom is the yolk sac, which aids the formation of blood cells in an early embryo . . ." and the front page caption was, "New life and the biological revolution."

The book is entitled, *From Conception to Birth: The Drama of Life's Beginnings*. The authors are Roberts Rugh, Ph.D., and Landrum B. Shet-

Forty-day normal human fetus showing already well developed eye pigment, and digits forming in both hands and feet. By this time the heart and circulation are well established. —From the photos of Drs. Rugh and Shettles.

les, M.D., D.Sc., Ph.D. Harper and Row, publishers, will bring

## FORTY NEW MEMBERS OF 25-YEAR CLUB

The annual dinner of the Twenty-Five Year Club is being held, May 1, as this issue of *The Stethoscope* goes to press. Story and photos next month.

Below are the names and departments of the 40 new members of the Twenty-Five Year Club:

Ernest Borek, Ph.D., Biochemistry, P&S; Alfred E. Brewer, M.D., Medicine; Mrs. Rena Brown, D.P.P.O.; John Campbell, Cash Receipts; Miss

## TWO P&S STUDENTS WIN

Caroline Riely, P&S 3rd year, and Geoffrey Redmond, P&S 2nd year, are two energetic and talented people. They entered a nationwide competition sponsored by the American Society for Pharmacology and Experimental Therapeutics in which there are only 8 awards. Miss Riely's presentation was selected as one of the two best papers and she received a Medical Student Essay Award in Pharmacology, a cash award of \$200 and a paid trip to the spring meeting of the Society to be held in Atlantic City, New Jersey, in mid-April.

Mr. Redmond also received a Medical Student Essay Award in Pharmacology and a cash award of \$200.

Miss Riely and Mr. Redmond took advantage of a program offered by the Department of Psychiatry which provides a limited number of summer fellowships for medical students to do research in laboratories

in areas of neurobiology, drug studies, behavior studies, neurochemistry and other psychiatric-related subjects. Students engaged in these programs receive a \$600 stipend for the two months and work under the supervision of one or more staff members in the Department of Psychiatry, of which Dr. Lawrence J. Kolb is Professor and Chairman.

Miss Riely and Mr. Redmond both carried out their original research studies under the preceptorship of Dr. Gerald Cohen, Assistant Professor of Biochemistry, P&S, in 1967 and 1968 respectively.

It was at the suggestion of Dr. Brian Hoffman, Chairman of the Department of Pharmacology that both students submitted their papers to the American Society for Pharmacology and Experimental Therapeutics.

Miss Riely's work was concerned with evolution of the hydrocarbon gas ethane from

## WINTHROP GIFT

*Continued from page one*

be given before and following surgery.

However, the cost for providing such services can be very expensive. Often it must be provided in the patient's room, where special nurses are required around the clock and portable equipment for providing oxygen and pulmonary ventilation must be installed. Serial laboratory testing, often a necessity to guarantee the body's chemical balance, may not be convenient because the laboratory is at a distance.

In the new Court Building, which will adjoin Presbyterian on the north, the new Intensive Care Unit will provide maximum convenience and economy. At hand will be a variety of special-care facilities and a professional staff experienced in dealing with preoperative and postopera-

tive medical situations. The enlarged General Recovery Room, which will also have space on the 18th floor, will increase its service from 15 to 25 beds. In addition, there will be provided a recovery room for patients undergoing open-heart surgery, and for new surgical suites, as needed, for organ transplants and other surgery. All of these facilities will be convenient to the new Intensive Care Unit.

The Surgical Intensive Care

Unit will provide 15 beds, each equipped with the most advanced devices for monitoring the patient's body functions, permitting early detection of a developing crisis, and special facilities for dealing with such emergencies will be instantly available. Patients will be able to have the support of the same nursing staff before and after surgery when this is important to their recovery. The Unit will be large enough to meet the needs of all Services that perform surgery.

### Have YOU Seen the Art Show?

Art abounds on PH 20 where the Annual Art Show

is now in progress. You can see it from 10:00 until 5:30, Monday through Friday, ending May 9.

### "With Sadness and Condolences . . ."

With sadness and condolences to the staff at the Mary Harkness Unit, and to Margaret Del Mar in particular, *Stethoscope* reports the untimely demise of King Lear Quail, who expired at 7:58 a.m., April 22, 1969. Although an autopsy was not completed, the medical opinion is that King Lear died of loneliness or exhaustion, perhaps a combination of both, since he was found feet up in a basket from which he was trying to escape.

King Lear was born April 20, 1969—or perhaps one should say hatched—from an

egg obtained by Miss Del Mar from a hatchery in Atlanta, Georgia. Altogether there were 14 eggs set to hatch at Mary Harkness, but only King Lear emerged successfully. It was thought that lack of other young quail was responsible for King Lear's determination to escape the basket.

Miss Del Mar and the Mary Harkness staff are saddened but not defeated. A new clutch of quail eggs is being shipped from Georgia.

Caroline Riely with Dr. Gerard Cohen, left, and Geoffrey Redmond. The news is all good.

## DR. SOL SPIEGELMAN . . .

*Continued from page one*

During his association with that institution, Dr. Spiegelman has been in the forefront of research on genetic controls of cell function. During the early 1950's he made notable contributions to the understanding of factors regulating enzyme formation. Subsequently he made important experimental contributions to the knowledge about the transfer of information from genes, DNA, to the site of new protein formation on cell particles, ribosomes. Perhaps his most important recent contribution has been the demonstration of the mechanism whereby viruses reproduce themselves, and the achievement of a biological synthesis of active and infectious virus particles in the test tube. This achievement attracted national attention as the first demonstration of the synthesis of "life in a test tube."

During the past year, Dr. Spiegelman has been working on the problem of virus-induced cancer in animal tissue. He has described how cancer-causing viruses reproduce in animal cells. In his new post at the Institute of Cancer Re-

search, Dr. Spiegelman will continue this line of investigation. The Institute has been in the forefront of cancer research since its founding in 1912.

The honors bestowed on Dr. Spiegelman include: the Pasteur Award from the Illinois Society for Microbiology; selections to give, among others, the Jessup Lecture at Columbia University in 1963, the Harvey Lecture at New York University in 1968; honorary doctorates from several universities, and election to the National Academy of Sciences.

### James Quirk Appointed

The College of Physicians & Surgeons also announced, effective June 1, the appointment of an Executive Director for the Institute of Cancer Research. He is James S. Quirk, an administrative officer with the National Institutes of Health. Mr. Quirk will be in charge of the business management of the Institute. During a recent leave of absence from NIH, Mr. Quirk served on the staff of President Johnson's Committee on Population Matters.

Mr. Redmond's studies were devoted to the adaptive changes in alcohol metabolism in the mouse. Persons who regularly use one of the two substances, alcohol or barbiturates, can tolerate much larger doses of the other than others can. Mr. Redmond's work showed that phenobarbital, a barbiturate, increases the amount of an enzyme called aldehyde dehydrogenase in the mouse liver. This enzyme is involved in alcohol metabolism. The increased enzyme level enables the animal to remove alcohol from its body at a faster rate and this may explain the increased tolerance to alcohol. The overall purpose of this experiment is to find out something about why there is a large cross-tolerance between alcohol and barbiturates.

This research on alcohol and barbiturates is quite basic and lacks specific aim at treatment and cure of addiction but Dr. Cohen expressed the hope that perhaps in the not too distant future research now being undertaken in other laboratories will be gathered together and perhaps some framework of a pattern may be evolved towards eventual treatment and cure.

## FROM THE MAILBAG

WE LOVE YOU TOO!

Recently a spry, twinkling 80-year-old former patient came to the Office of Public Interest armed with a box of cookies which she had brought all the way from Pennsylvania for *The Stethoscope* staff. Inside the box of cookies was a note which we quote verbatim:

I thank you with all my heart. I am so delighted to get the *STETHOSCOPE*—it's news

from the Hospital I love so dearly. And so many Doctors and Nurses and people I know. It's very lonesome in Lewisburg (Pennsylvania) at 80; you don't know new people. But the young folks I meet are wonderful to me. And I stay very cheerful.

God bless you one and all and watch over you each day.

Lovingly,  
(A former Patient)

Dr. Elliott Greenfield, Assistant Professor of Otolaryngology, P&S, and head of the neuro-otological diagnostic unit, flanks twin doors of the soundproof testing chamber on 13th floor of Neurological Institute.

gratified the staff. It will be these improvements that will increase the efficiency of the EEG, EMG and brain-scan devices and will allow the personnel servicing them to take advantage of technological advances, such as latest computers, in analyzing the diagnostic results.

The EEG laboratory requested, for instance, that the electroencephalograph consoles be located in the patient rooms so that the technician could observe the patients more closely. There are four EEG machines in operation on the floor, and five are planned. Dr. Paul Hoefer, Professor of Neurology, said a plan is under consideration to hook up one of the EEG devices to a computer in the Black Building. The purpose of this experiment would be to find out if computer analysis of EEG data is capable of helping diagnosticians to better localize points of abnormal electrical activity in the brain.

Equally bright hopes are held out for the computerization of results from the new Teca electromyograph, or device to measure the electrical

activity of muscles. The Teca EMG has the capacity to record responses to pairs of stimuli—a refinement that may often prove crucial in arriving at the correct diagnosis.

While the combined EEG-EMG laboratory is under the direction of Dr. Hoefer, electromyography is the particular field of London-educated Dr. Robert Lovelace.

Space for advanced computers is also the bright motto that describes the diagnostic advances made by the brain-scan laboratory in its sixth year of work under grants from the John A. Hartford Foundation, Inc. The relatively simple brain-scan procedure consists of injecting a short-lived isotope, which tends to collect in a patient's diseased tissue. Scintillation counters then scan the brain for isotope concentrations, which can be seen on an oscilloscope and photographed. One of the roles of the computer is to give an important third dimension to the photo by converting the picture into numbers representative of various shades of grey and then by restructuring it into a schematic picture. Not only is a permanent re-usable record of the brain-scan obtained, but the computer creates a "motion picture" effect by showing up the isotope concentration in a series of graduated exposures. The brain-scan unit, whose chief is Dr. Edward B. Schlesinger, also has two consulting physicists, Drs. Bruce Biavati and William A. Gross.

The array of diagnostic facilities on the new floor includes two ultramodern "silent chambers"—a control chamber and a testing chamber—which will be used by the Department of Otolaryngology for examination of the hearing and balance systems and their central connections. Soundproofed with outer steel shells and thick layers of sound-absorbing material, the chambers block all sounds or vibrations that are not part of a test. Since the soundproof chambers rest on sound-killing shock absorbers, they are not structurally connected to each other or to the building. The testing chamber actually con-

## NEW SCHOOL . . .

Continued from page one

the sponsorship of the Nursing Department.

Registration for the School of Radiologic Technology is now going on for the fall semester, slated to begin September 15, although "a few openings" are available to employees of the Hospital in the class beginning in two weeks. All candidates for admission to the School must be high school graduates 18 or older. The first three to four months of instruction will concentrate on classroom instruction, but the rest of the continuous course will include practical training. Subjects covered will include anatomy and physiology, physics, psychology, surveys of medical and surgical diseases, and such specialized topics as pediatric radiology, topographic anatomy and intra-oral radiography.

"The school for radiologic technologists may be seen as a long-range answer to the demand for competence in a field where rapid technological advances make specialized training a must," Clarence Modeste, the new school's Director of Education, told *The Stethoscope*.

Clarence Modeste

The new school's faculty will consist, in addition to Mr. Modeste, of Mrs. Catherine Greene, Dr. Philip Johnson, Mrs. Elly Metrakos, Mr. Reginald Peake, and Mrs. Helen Steck, among others. Mrs. Metrakos and Mr. Modeste, Drs. William Seaman and Guy Potter, and Mr. Calvin Hatcher of the Professional Services have been appointed to the Committee on Admissions.

Qualified persons interested in the course on Radiologic Technology should address inquiries to Mr. Clarence Modeste, School of Radiologic Technology, Columbia-Presbyterian Medical Center, 622 West 168th Street, New York, N. Y., 10032.

sists of unconnected twin rooms—one inside the other. Shielded, furthermore, from all extraneous electromagnetic waves with special plates, the chambers are equipped for EEG audiometry. EEG audiometry data help diagnose hearing disturbances in very young children. The otological testing facility on the 13th floor will also conduct tests such as electronystagmography for disturbances of the balance apparatus in the inner ear and its connections in the brain.

## WINNERS OF ESSAY CONTEST

At the recent combined meeting of the New York Academy of Medicine and the New York Section of the American Urological Association, the Residents of Squier Urological Clinic received the following awards at the Annual Residents Prize Essay Contest:

In the category of Clinical Research, Dr. David Schwartz won Third Prize for his work on "Relation of intestinal carcinoid to renal hypertension." Dr. Erol Gursel of Francis Delafeld Hospital won First Prize in the category of Laboratory Research for "Thyrocalcitonin deficiency and urolithiasis in man: a preliminary report." In the same category, Dr. Peter Puchner won Second Prize for his work

in "The absorption of  $p^{32}$  labeled Thiolepa from normal rat bladder: an *in vivo* study," and Dr. C. Pierre-Louis of Francis Delafeld Hospital won Third Prize for "The morphological appearance of the Leydig cells in patients with prostatic carcinoma and benign prostatic hypertrophy."

Dr. Arthur Smith won the prize in the category of Laboratory Research for Fellows for his study, "Determination of acid tolerance in the critically ill urologic patient: a new facet of metabolic and bioengineering research." Dr. Robert Pickens received Honorable Mention in the same category for his work on "Antilymphocyte serum: a study of its biological effects on homotransplants."

## CU-PH SCHOOL OF NURSING ALUMNAE ASSOCIATION ANNUAL MEETING

The annual meeting of the Columbia University-Presbyterian Hospital School of Nursing Alumnae Association will be held on Alumnae Day, June 2, 1969, at 2:30 p.m. in the P&S Alumni Auditorium, Black Building.

## PROGRAM FOR GRADUATION WEEK

Sunday, June 1, 1969, 4:00 p.m.

Tuesday, June 3, 1969, 3:00 p.m.

Columbia University Campus: all candidates for 1969 degrees  
Presentation of Diplomas—Men's Faculty Club following commencement. Students receiving June degrees only.

## Jimmy, One of Our Barbers, Stroops the Funny Bone

"An urgent call for Jimmy the barber, an urgent call for Jimmy the barber," echoes the hospital loudspeaker, and Jimmy Segarra is on his way to Neurological Institute to prepare a patient for surgery. The chances are good that he will leave his customer with a smiling face as well as a shaved head, for Jimmy the barber believes there is more to his job than skill with a razor and scissors. "I try to give my patients some cheer," he explains. "Wouldn't you rather have a barber with a sense of humor?"

Jimmy, "The Notorious Barber," ran his own shop in Washington Heights for 31 years before joining the Hospital barbershop concession, headed by Arthur Washell, eight years ago. His day here starts at 6 a.m. with "pre-ops" at Neuro, and may run as late as 6:30 p.m. When he has time, Jimmy squeezes in appointments with Medical Center personnel, as long as they are made in advance. "I am a very busy man," he smiles. In fact, one of his regular customers has remarked

that it is easier to get an appointment with the President of the United States than with Jimmy the barber! Jimmy admits that this is probably true. "You may say," he declares, stepping back from his customer and slicing the air emphatically with his scissors, "that my ambition in life . . ."

" . . . Is to be a barber? puts in Roy Eberhardt from the chair. Laughter resounds through the little barbershop in the basement of PH. "Yes, yes," chuckles Jimmy. "But seriously, my ambition is to win the New York State Lottery. Then I can work only 40 hours a week!"

"This is the only part of my husband that still functions," Marie Curie exclaimed as Pierre Curie's pocket watch was brought to her upon his death. The watch was given in custody of Dr. Edward B. Schlesinger for eventual repository at Columbia University by William B. Meloney, whose mother had received it from Mme. Curie in gratitude for her help in obtaining desperately needed radium for her research. Displayed at open house on 13th floor of Neurological Institute, the timepiece in effect represented the Curies at the opening of diagnostic facilities that their pioneering work in radioactivity made possible.

porter one Saturday morning to introduce him to their new world of interest. The boys were Clarence Ware, Richard Bohan, Anthony and Harry Ero, Dennis Dahill, and Louie Pizzonia.

"Last week they took our heartbeat and our pulse."

"Upstairs we watched a movie on air pollution."

"They put a stick in your mouth and made a smear."

"And found bacteria."

We asked, "How did you learn about this program?"

The answers were varied. Some children have been notified through their schools; others directly, because they had taken part in an animal feeding program last summer; some had been invited from the street.

The program of this day (see photos) was to visit the dental laboratories. Whether some who attended will one day become dental surgeons only the future can answer; but the lessons which each child received on the care of the teeth are not likely ever to be forgotten.

Through March, April, and the first Saturday in May, the programs have included a skit, "The World of Medicine," by the New York State Council on the Arts; personal health survey films, *The Heart*, *Little Man*, *Big City*; dental health; community health; origin of life; a field trip to Pelham Park.

### Honor to May Kent, 50 Years of Service

May Kent, PH X-ray Department, was recently honored by the Girl Scouts of America for 50 years of "distinguished service to Girl Scouting." The Girl Scout nominating and resource chairman of Yonkers made the award at the Girl Scout Cabin in Yonkers and presented Miss Kent with a bronze statuette.

Miss Kent founded Cadette Troop 202 in Yonkers, where she lived many years ago, and has continued to travel from her home in New York City to meet with her troop each week. She was also cited by the Episcopal Church of St. John in Yonkers, where the troop meets each week, for "her unselfish dedication and leadership."

Miss Kent describes her position in PH X-ray as that of a "jack-of-all-trades." "I frequently jump in as a typist, receptionist, answer the telephones, maintain the card files, among other things."

She may consider herself a "jack-of-all-trades" in PH X-ray, a position she has held since 1952, incidentally, but she is quite definitely a "jack-of-one-trade" when it comes to Girl Scouting. Fifty years is a nice, round figure and the

Susan Tremble, R.N., who will be leaving soon for the Ivory Coast as part of the MERCY Project, selling chances on cake made by Master Baker, Jack Rothstein, Hospital Food Service, and won by Mrs. M. Mitchell of Communications.

For many months we in the United States have again been seeing, through mass communications, what effect war has on children. This time it is Biafran children. Many of us have said to ourselves, "This is a political conflict—how can I help without taking sides?" While we ask ourselves this question, children are dying of starvation. Starving children transcend politics.

Several months ago, the Ivory Coast Red Cross set up 3 medical camps to which to fly sick Biafran children for medical care. MERCY (Medical Emergency Relief Care for Youth) a Columbia-based program, was set up to provide medical and nursing personnel, medical equipment and medication. But no program can continue to operate without money, and MERCY is no exception.

The Presbyterian Hospital

Nursing Service Department wanted to help in some concrete way and as quickly as possible, since the need for supporting funds is urgent. Hence, the idea of having a Medical Center Bake Sale. Members of the Nursing Auxiliary, Practical Nurse/Infant Care Technicians, Social and Graduate Staff Committees met together to make plans for a Bake Sale, which was held on April 11.

The result was a truly cooperative Medical Center project. While it is impossible to name all of the departments and individuals who contributed to the Bake Sale, it is possible to announce the result of their combined effort—\$1,220 for the Mercy Project to support its program of care for starving Biafran children.

Many thanks to all who were willing to "get involved."

### Kick-off Rally for United Fund, GNY

The 1969 campaign for the United Fund of Greater New York will begin on Thursday, May 15, with a kick-off rally in the 4th floor amphitheater, Babies Hospital, at 9:45 a.m.

Dr. C. R. Wise, Chairman of the campaign, will review results of last year's campaign and discuss the goals for 1969.

Mr. A. J. Binkert, Executive Vice-President of The Presbyterian Hospital, will

be present to speak to the captains representing the various departments, who will cooperate in the all out effort to keep Presbyterian at the top of this year's campaign.

A representative of the Fund will show a film related to the effectiveness of our contribution.

A total of 425 Health and Welfare agencies are sponsored by the United Fund of Greater New York.

### Dr. Bauman Chairs Panels; Fortran Course Begins

Dr. William A. Bauman, Director, Medical Data Processing, was panel chairman at the afternoon session of the New York Heart Association Conference, April 2, on "Automated Multiphasic Health Screening." Eight speakers from various parts of the United States and Canada participated in the afternoon session. The Conference was held in the Waldorf-Astoria Hotel, New York City.

At the 163rd Annual Conference of the Medical Society of the State of New York, held

at the Americana Hotel, New York City, on February 9, Dr. Bauman welcomed the doctors and served as chairman of the forenoon session on "Data Processing in Medicine."

### FORTRAN IV COURSE NOW BEGINNING

As this issue of *The Stethoscope* goes to press, the tenth Fortran IV course at this Medical Center is just beginning, with classes at the Armory, 168th Street, from 4 to 5 p.m. on Mondays, Wednesdays and Fridays, May 5 through June 16, Dr. Bauman has announced.

May Kent, right, accepting bronze statuette. This photo appeared recently in *The Herald Statesman*, Yonkers, New York. Photo by Jerry Sarno.

Hospital is justifiably proud of this charming, unassuming lady who has given so unstint-

ingly of her time and effort to the youngsters in the Girl Scout program.

There is no doubt that a stable and experienced staff results in the successful functioning of any department. And the Chaplain's Department is no exception.

Following is a list of the Staff of the Chaplain's Department and their years of service in their unique capacities: Rev. Robert B. Reeves, Jr., Chaplain, 15 years; Miss Doris E. Miller, Secretary, 14 years; Rabbi Marvin J. Goldfine, Jewish Chaplain, 14 years; Rev. George Gilligan, Associate Roman Catholic Chaplain, 9 years; Rev. Guy S. Vinci, Roman Catholic Chaplain, 5 years; Rev. Luther T. Freimuth, Associate Chaplain, Mary Harkness Unit, 4½ years; Rev. David B. Maxwell, Associate Chaplain, 4½ years.

The distribution of patients by religious faith remained the same as in 1967: Roman Catholic 41%, Protestant 31%, Jewish 18%, other and undesignated 10%. This was the first year since 1952 in which the proportions did not change.

There was an increase of 53% in the number of staff, students, personnel and outpatients who came to the Protestant chaplains for counseling or advisement.

Weekly religious and holy day services for the year were

Chaplain Robert B. Reeves

## "The Drama of Life's Beginnings" — Drs. Rugh and Shettles

Continued from page one

the book out this fall. The initial printing will be 20,000 copies. The price—so that it may be available to all who are interested—will be less than eight dollars.

There will be 35 pages of photos in color and 150 other pictures, both photos and drawings. Rhoda Van Dyke, a Columbia-Presbyterian Medical Center artist, will receive a by-line for her aid with the art work.

The incentive for writing the book, said Dr. Rugh, whose title is Associate Professor of Radiology but who was a Professor of Embryology before coming to Columbia in 1948, was simply to describe in palatable language what happens, month by month from the moment of conception until the child takes its first breath.

Some of the chapters deal with the first month of pregnancy; the second month; the

# MOTHER GOOSE BALL — FLOATING ON AIR

Approximately 300 people braved the pouring rain on the evening of March 29 to attend the annual Mother Goose Ball, a fund-raising event for the Medical Center Nursery School. The walls of the third floor of the Men's Faculty Club at Columbia University were bright with murals, paintings and collages done by the children from the Nursery School. Photographs of the young artists themselves proved a main attraction, mounted, appropriately enough, each on its own silver star.

The high point of the evening was the introduction, by Dr. Virgil Damon, Honorary Chairman of the Ball, of the guest of honor, Miss Emily MacCormack. Miss MacCormack, the Director of the Brick Presbyterian Nursery School, has been a Trustee of the Medical Center Nursery

Emily MacCormack, right, guest of honor, with Mrs. Frank Smith.

School for two and a half years. It is due to her energy, time and talent that the plans for the new Nursery School are so exciting. This school, which is being built into the new Columbia University residence for married medical students and house staff, is scheduled to undergo construction shortly.

The raffle and door prize drawings followed the presentation. For those who did not win, there was no need to go

pensioners and employees on military leave of absence, to whom it is sent regularly.

Chaplain Reeves was pleased to state that there was a renewal of teaching contact, after a lapse of several years, with social service staff and trainees, and new seminar discussions with medical students on the problems of patients terminally ill with cancer.

He was particularly grateful to the Volunteers, who have given a total of 2,782 hours of service, and for the many services rendered by neighborhood clergymen who responded to requests for specific ministrations or covered for emergencies.

This is Chaplain Reeves' third year as Chairman of the Columbia University Seminar on the Roles of the Health Profession.

"Higher and higher are the aims for the Nursery School."

home empty-handed, for there were hundreds of colorful balloons suspended over the dance floor which could be purchased for a dollar and exchanged for a prize.

Grateful thanks for the success of the Ball must go to the Presbyterian Hospital Women's Auxiliary, particularly: Mrs. Charles A. Flood, Honorary Chairman and Trustee; Mrs. W. Duane Todd, President of the Presbyterian Hospital Women's Auxiliary; Mrs. John J. Schullinger, Trustee of the Nursery School; Mrs. Frank Rees Smith and Mrs. Peter Rosen, Co-Chairmen of the Ball, and to all our friends and patrons for their invaluable advice and help. With such loyal and enthusiastic support, the occasion could not help but be a success.

Proceeds from the Mother Goose Ball will be used to cover the annual operating deficit of the Nursery School.

Dr. Virgil Damon is about to introduce the guest of honor.

Mrs. Charles A. Flood "fishing" for a winner. At left, Mrs. Frank Smith.

Dr. Thomas Cottrell tries to drive away in his newly won "automobile."

## JOHN A. HARTFORD FOUNDATION . . .

Continued from page one

fectious agents, e.g. *Erysipelothrix insidiosa*, in inducing chronic arthritis in animal species, are in progress.

The clinical facilities of the Edwards Daniels Faulkner Arthritis Clinic, The Presbyterian Hospital and Babies Hospital provide adequate numbers of patients with RA and related syndromes. Studies will be made on subjects in varying stages of disease. Special attention will be directed at patients with early disease. The early phase of juvenile RA especially suggests a septic process—high fever, rash, lymphadenopathy. Several such patients with early active diseases are encountered each year. All clinical study procedures are subjected to the scrutiny of the Department of Medicine Human Investigation Committee.

Nine physicians and two other staff members are named as personnel available for this program. Dr. Charles L.

Christian, Associate Professor of Medicine, Columbia University's College of Physicians and Surgeons, is Chief of the Edward Daniels Faulkner Arthritis Clinic of The Presbyterian Hospital. He has been associated with the Hospital since 1953, and has been Chief of the Arthritis Clinic since 1961.

Other Medical Center personnel participating in the program are Dr. Karl Meyer, Professor of Biochemistry, Dr. Robert W. Lightfoot, Jr., Instructor in Medicine; Dr. Lawrence W. Kaken, Instructor in Medicine; Dr. Paul E. Phillips, Research Associate in Medicine; Paul D. Ellner, Ph.D., Associate Professor of Microbiology; Dr. Jerry C. Jacobs, Associate in Pediatrics; Dr. Carmen Neu, Associate in Medicine; Dr. Dorothy Estes, Associate in Medicine; Edna C. Farrington, R.N., Nurse-Technician; Jane Cosgrove, Secretary.

Dr. Roberts Rugh

third month—"Truly a human fetus, and prenatal care"; the second trimester; the third trimester—"Growth and preparation for the outside world"; there is a chapter on genetic probabilities; there are discussions of drugs, diseases and radiation, and warnings on the use of drugs.

The final chapter is devoted to the interconceptional period—a time for family plan-

ning, for the mother's caring for herself after giving birth, and her preparation for the next child.

Although the photos are abundant, the presentation is supported by a great deal of text and is expected to be highly understandable, tailored to the taste of the layman reader.

"I had a sort of missionary purpose in this writing," said Dr. Rugh. "We hope women who might otherwise be obsessed by fears of the moment of birth will be led into a greater appreciation and anticipation of what is surely the most dramatic and wonderful experience in all human life."

Dr. Shettles, Assistant Attending Obstetrician and Gynecologist, Presbyterian Hospital, Dr. Rugh's co-author, has checked the medical accuracy of all parts of the book. This work has been in progress for about three years.

# These Persons Are Retiring From Columbia-Presbyterian

John J. Mahoney

After 19 years of going up and down, elevator operator John J. Mahoney is finally going forward with his plans to spend more time with his family. He retired in January.

Born in County Kerry, Ireland, Mr. Mahoney makes his home in the Bronx with his wife. The Mahoneys have four children and nine grandchildren.

We asked John if there was any special event that he remembered in all his years at the Hospital. He told us proudly but poignantly of the time he had the late Senator Robert F. Kennedy in his elevator car in HP on the occasion of the Senator's visit to a VIP and that at the end of his "ride," "Senator Kennedy shook hands with me."

Mr. Mahoney holds "with warm regards and remembrance all my fellow employees."

Mrs. Rose MacLeod

Mrs. Rose MacLeod retired from her position as Nurses' Aide on the 16th floor in the Newborn Nursery in March, having completed 13 years of employment.

We believe the following excerpt quoted from Miss Isabel MacLeod, R.N., Mrs. MacLeod's supervisor (no relation), is better than anything we could say: "She has served

Mrs. Rose MacLeod

tirelessly and with loyalty and devotion. Her quiet, unassuming manner and quick wit have won the admiration of her co-workers and many friends... Her friends in Sloane Nursery will miss 'their so gracious Grandma' and wish her many more happy years."

Mrs. MacLeod was born in Nova Scotia, Canada, and lives with her daughter in the lovely area of the Bronx near Manhattan College. She also has a married son and six grandchildren. She plans to visit Canada this summer.

A reception honoring Mrs. MacLeod was held on March 13 and many of her friends and co-workers were on hand to bid her a fond farewell.

Mrs. Celia Magnone

Some folks can be described with one word and if there is one word to describe Mrs. Celia Magnone, it is compassionate. Ceil, as she is best known, has been working as a

Nurses' Aide on PH 11 East from 1959 until her retirement in March. "I enjoyed every minute of it—I'll miss it very much—I love people—talking to them. If they are troubled, I want to speak with them and help them."

She will particularly miss her supervisor, Miss Hagner, and Mrs. Carlson, head nurse.

Mrs. Magnone, a gentle but vivacious and motherly lady, was born in Providence, R. I. She resides in the Bronx. She

Mrs. Celia Magnone holding her two great-grandsons, David and Danny.

has two sons, six grandchildren and two great-grandchildren. We may be wrong, but we believe this is the first great-grandmother we have interviewed.

Ceil doesn't think she will find retirement a "drag." She intends to catch up with her sewing and knitting and "just putter around the house... I love keeping my home just so." She just might go to Italy in a few months to visit the birthplace of her forebears.

On March 12 a tea was held in her honor, and many of her friends, including co-workers, nurses and physicians, were gathered to bid her farewell. Dr. Daniel C. Baker, Jr., Professor and Chairman, Department of Otolaryngology, said a few words during the festi-

ties and we would like to quote from those words—"Some people can never be replaced and Ceil is one of those people. This is a sad day for us, but we hope it is a happy day for her."

Joseph Dunn

Joseph Dunn

Joseph Dunn, Porter, House-keeping Service, completed 10 years of employment at Presbyterian when he retired in February.

Mr. Dunn, a sprightly man, said, "They were very pleasant years. I enjoyed working here and I am only sorry that my age crept up on me so quickly."

He enjoys lounging at home and watching TV but will seek a part-time job because, as he put it, "You can just watch TV for so long."

Born in Augusta, Georgia, Mr. Dunn now lives in Manhattan with his wife. There are one son and one grandchild.

Grace Kent

Grace Kent, Senior Secretary, Student and Graduate Records, Faculty of Nursing, Columbia University, retired in March after completing 20 years of service to the Columbia-Presbyterian Medical Center.

She handled all Registrar and Placement functions, and many PH nursing alumnae are grateful to her for her efforts in their behalf.

Miss Kent was born in Arizona and taught school there for several years before coming to the Medical Center and has always maintained a keen

Grace Kent

## DEAN'S MEETING, TUESDAY, MAY 13

The Dean's Meeting for the Presentation of Student Research will take place on Tuesday, May 13, sponsored by the Columbia-Presbyterian Medical Society and the P&S Club. Four students will present the results of their research and receive awards from Dean Merritt. Time: 4:00 p.m. Place: 9th Floor Amphitheater, P&S.

## MEET OUR VOLUNTEERS

Mrs. Alma Worden has been doing volunteer work for the better part of 35 years, serving in many different capacities and covering a wide variety of people and places. She has served as a volunteer director for the A.S.P.C.A. and has been the unit captain of a Red Cross Bloodmobile, going into such diverse areas as jails, the Wall Street area, the insurance district and the Grand Central area to solicit blood for our fighting men during World War II. She served with the Civilian Defense Volunteer Organization as a personnel supervisor, placing volunteers in different locations. It was during her service for the CDVO that she became interested in the

Presbyterian Hospital, having placed many CDVO volunteers here, and decided to offer her own services.

Mrs. Worden's first "job" here was in the Volunteer Office; she was a "floater" which meant that she filled in wherever the need was the greatest. Following this she was assigned to the Eye Clinic. She currently works in the Children's Muscle Clinic and "Patient Services," the latter means escorting in-patients to all areas of the hospital and delivering specimens to the laboratories. At the time Mrs. Worden was interviewed she gave us the impression that she thoroughly enjoys every minute of her volunteer work and she speaks with great enthusiasm of all the many volunteer projects she has been involved with.

Before her husband's death the Wordens traveled extensively, chiefly to the south, including Mexico and Florida. Mrs. Worden told us that she was an avid fisherman and exclaimed delightedly that "I once caught the largest sailfish ever caught in that season" when she and her husband were on a fishing trip near Miami Beach, Florida. Mrs. Worden makes her home in Washington Heights.

THE  
HOSPITAL  
AT  
NIGHT

The series of articles on "The Hospital at Night" will be resumed in an early issue of *The Stethoscope*.

RECEIPTS OF APPROXIMATELY \$12,000  
FOR STUDENT NURSES' SCHOLARSHIPS

An estimated \$12,000 was taken in receipts from the card party and raffle for the Student Nurses' Scholarship Fund.

The party held April 23 in Maxwell Hall was attended by more than two hundred persons. Winning raffle tickets were drawn at this time.

Everyone seems to be winning a prize at the April 23 card party and raffle held at Maxwell Hall. About \$12,000 was raised. More than 200 persons attended.

Mrs. Frank Stinchfield (left), and Mrs. Harold Brown tumble the names of those who bought tickets to benefit the Student Nurses' Scholarship Fund. Mrs. Brown donated the tumbler which she had made especially for the Student Nurses' Fund.

Top prize, a trip to Bermuda for two, was won by Mrs. Edward Noroian of Pittsburgh, Pa. Other winners include Decker Orr, Zenith Portable TV; Florence Schimer, Black Broadtail Jacket with Mink Collar; Paul Alley, Ranch Mink Shim; Muriel Farley, Steuben Bud Vase; Dolores Farrell, \$100 Gift Certificate, Lord and Taylor; M. B. Watkins, Silver Ice Bucket; Mr. M. Franks, two pieces Matched Luggage; Betty Watson, Electric Blanket; L. H. Zabon, Clairol Kindness Instant Hair Setter; Joyce Jabrizi, Toastmaster Steam and Dry Iron; Mary Chamberlin, Salton Hot Tray; C. C. Clark, Sterling Silver Measuring Tumbler; Maria Kolodziej, Handbag; Charles Flood, Caron Perfume.

Also taking prizes were: George Brooks, Persian Lamb Shim; R. B. Alton, Case of Scotch; Dale Saunders, Ladies Woolen Bee Craft Suit; T. Graham, two tickets to Hadrian

News of Nursing

"Open House" in New Quarters

Visitors and guests enjoy the hospitality at "Open House."

The halls were filled to overflowing, the sound of gay voices filled the air, as we gingerly threaded our way in and out of the spanking clean

refurbished new quarters of the Nursing Department now located in Harkness Pavilion, on the Main Floor, on the occasion of an "Open House" on

April 23 from 9:00 to 11:00 a.m.

Small groups were clustered everywhere, coffee cups in hand and among the many visitors and guests we caught glimpses of not only members of the Nursing Staff and Faculty, but representatives of almost all of the Hospital departments. Especially welcome were the Harkness housekeeping staff and the men from Maintenance and Construction, who worked under the direction of Carmine Dolce, Supervisor, in bringing about the metamorphosis from the old Doctors' Private Offices to the new quarters.

The high point of the "housewarming" must be the expertise of Marion D. Cleveland, who is responsible for the decor of the offices, which can only be described with one word—magnificent!

VII; Miss Puckafer, Andrew Geller Gift Certificates; B. Steiner, Saks Gift Certificate \$25; Mrs. H. V. Guile, Chinese Shawl; Mrs. Mildred Bysshe, Silver Salt and Pepper Shakers; Danu Bogert, Electric Can Opener; Kay Kronin, Hamilton Mixetts; Mrs. R. Horgan, Silver Tonges; Mr. Bostwick, Gift Wrappings; Wanda Striffler, Dinner for two at Tappan Hill Restaurant; Miss Elizabeth Gill, Dinner for two at Schraffts'; Kay Wackman, Portrait Sitting.

Prizes to student nurses for selling raffle books went to Madelyn Maniscalco and Doris Cabeche. Mrs. Galanter, Babies Nursing Office was also awarded a prize for the number of raffle tickets sold.

The Committee wishes to thank all those who helped to make the event such a splendid success.

Conventions, Conferences, Workshops

Mary I. Crawford, Director of Nursing and Associate Dean, reports that the 14th Annual Convention of the American College of Nurse-Midwifery, held at the Sheraton Belvedere Hilton Hotel, Baltimore, Md., April 16 through 18, was attended by the following staff members: Miss Crawford, Bernice R. Derby, Mrs. Carole Kauffmann, Phyllis Leppert, Ruth Helmich, Dorothy Robinson and Mary Abbott. Graduate students also in attendance were Beatrice Adorno, Doris Barker, Elsie Dahl, Mary Louise Hicks, Sister Gertrude Louise (Welsh) and Patricia Urbanus.

Mary E. Windrow, Assistant Director, and Constance P. Cleary, Associate Professor, were delegates to the Conference Workshop sponsored by the New York State Nurses' Association, Education Committee and Council on Nursing Practice. The theme of this Workshop was "Nursing Education—Nursing Service: Partnership for Practice." It was held at Thruway Hyatt House,

Albany, N. Y., from April 29 through May 1.

The Harvey Cushing Meetings of the American Association of Neurosurgeons and Neurosurgical Nurses in Cleveland, Ohio, April 13 through 17, were attended by Elizabeth Kittle, Assistant Head Nurse, Intensive Care Unit, Neurological Institute, and Mary Miskimon, Supervisor, Operating Room, Neurological Institute.

Delegates to the Obstetrics and Gynecological Nursing Meetings sponsored by Lenox Hill Hospital, held at Lenox Hill Hospital, New York City, April 21-22, were Karen Winans, Supervisor, Sloane, and Kathleen O'Connell, Head Nurse, Sloane.

On April 8, an all day meeting of United Hospital Fund was held at New York City Headquarters, 3 East 54 Street. The topic was "In-service Education and Training" for Operating Room Nursing Staff. Mrs. Christina S. Johnston, Supervisor, Operating Room, was a delegate.

IN MEMORIAM

Dr. Edward Vollmer

Dr. Edward Clinton Vollmer, a member of the post-graduate Orthodontic Staff of The School of Dental and Oral Surgery for the past eight years, died in an automobile accident on Sunday, April 13.

Dr. Vollmer was born in Huntington, Long Island, in 1933, and attended Hofstra University. He received his D.D.S. degree from New York University College of Dentistry in 1957 and the Certificate of training in Orthodontics from Columbia in 1961.

Dr. Vollmer was vice president of the Orthodontic Alumni Society of Columbia University, a member of the New York Academy of Dentistry, the American Dental Association, the Northeastern Society of Orthodontists and Psi Omega Fraternity.

Dr. Vollmer had a private practice in New York City

and served as a member of the Cleft Palate Team of St. Luke's Hospital Center.

Funeral services were held at St. Patrick's Cathedral on Thursday, April 17.

Grace MacMullen

Grace MacMullen, photographer for the Department of Pediatrics, died suddenly of a heart attack at her home in New York City on Easter Sunday, April 6.

Although Miss MacMullen had officially retired on February 28 of this year, she had continued, by special arrangement, with her work in her 12th floor studio, Babies Hospital, and was active until the time of her death.

Born January 20, 1894, Miss MacMullen had a long career of devoted service to Babies Hospital and Columbia University, dating back to the old Babies Hospital at Lexington Avenue and 55th Street, where

she began work in 1926 under the directorship of the late Dr. Herbert B. Wilcox. She came to the Medical Center with Babies Hospital in 1929. Throughout most of these years she handled her busy photography department alone, taking pictures, developing, and enlarging, to meet the needs of the Pediatrics teaching research and attending staffs. She was a stalwart, warm-hearted person who had justifiable professional pride in her work and extraordinary loyalty to the Medical Center, where she was widely known, liked, and respected by successive generations of staff, students, and patients.

Miss MacMullen was a member of the Columbia-Presbyterian Medical Center 25-Year Club. About eight weeks ago, at the time of her retirement, she was honored at a farewell party given by her many friends.

Spring Has Sprung! Nature's Pageant, Aided By Man

What more delightful sight than a soft yellow blanket of swaying daffodils; row upon row of multi-colored tulips, straight as soldiers; colorful clusters of hyacinths and crocuses! And what more absolute sign that spring has sprung than the odor of newly-mown grass on an expanse of velvet-green lawn that was a bare muddy-brown a few short weeks before.

The men responsible for laying the ground-work of this pageantry of nature in the garden and on the lawns surrounding the Medical Center, do their job under the expert aegis of Mr. Dominick Reda, Head Gardener at the Hospital. Says Mr. Reda of his crew, "They're great. I've got two good assistants, and, as for the rest, you couldn't find better men anywhere."

Be that as it may, never have so few brought so much beauty and color to so many.

## • ENGAGEMENTS

Joan Leslie Hunter is engaged to Henry William Hansen, Jr. They plan a wedding in late May. Miss Hunter is the daughter of Marian Hunter, Presbyterian Hospital Information Desk. She was employed here for three summers by Dr. William Langford and by the Ear, Nose and Throat Clinic.

Linda Elena Frisa is engaged to David Murray McCarthy. Mr. McCarthy is a second year student at the College of Physicians and Surgeons.

Janice Hardy of Social Service is engaged to Dr. Philip Sorabella, P&S '68. They plan to be married on June 28. Dr. Sorabella is interning at Harlem Hospital.

Barbara Connors and John Lahiff plan to be married on June 14. Miss Connors is an Account Representative in the Out-Patient Collection Department; Mr. Lahiff is a member of the IBM section of the Accounting Department. The couple will spend their honeymoon in Bermuda.

Dorothy Cassels of the Assistant Treasurer's Office is engaged to Cortez Prichard. They plan a wedding on May 24 in Incarnation Church.

## • BIRTHS

Dr. & Mrs. Jerome Tepperberg welcomed their second child, David Frederick, on March 29. Dr. Tepperberg is a Fellow in Pediatric Neurology at the Medical Center.

Mr. & Mrs. Martin Ivers welcomed their first child, John Joseph, on March 25. Mrs. Ivers was employed as a receptionist in Vanderbilt Clinic.

## • CONDOLENCES

To the family and friends of Mrs. Eileen Curley, who died on March 13. Mrs. Curley was a receptionist in Vanderbilt Clinic for eight years.

To Mrs. Patrick McCarthy, whose son Brian was killed in Vietnam on March 15. Mrs. McCarthy is secretary to Dr. Katherine Sprunt in the Department of Pediatrics.

## • CONGRATULATIONS

To Ellen Connolly of the Clinical Chemistry Lab, who was promoted from Senior Clerk to Trainee Technologist.

To the following members of the Food Service Department who have recently received promotions: Robert Gibson, from Vegetable Room Attendant to Soda Fountain Attendant; Ewell Hall, from Soda Fountain Dishwasher to Soda Fountain Attendant; Mrs. Frances Van Patten, from C.F.S. Attendant to Diet Aide; Miss Mary Jackson, from Diet Aide to Records Processing Clerk; Roscoe Charles, from C.F.S. Assistant Belt Supervisor to Assistant Steward; Jose Mayorca, from M. K. Attendant to Preparation Attendant; Eustaquio Morales, from Vegetable Attendant to M. K. Attendant; Mrs. Angelina Rodriguez, from Dining Room Attendant to Dining Room Supervisor.

## • NOTES OF INTEREST

Charles Lubrecht, son of Mrs. Anne Lubrecht of the Public Interest Department, was elected President of the Junior Chamber of Commerce of Anchorage, Alaska. Mr. Lubrecht is a former volunteer here.

Mrs. Edna Casey, secretary in Vanderbilt Clinic Administration, recently visited Virginia, where her sister lives, and toured the Pennsylvania Dutch country.

Mrs. Devyani Shah, Assistant Record Room Librarian, left the Hospital February 28, 1969. She and her husband, who finished his residency in New York City, will tour Europe before they return to India.

## NEW MEMBERS OF 25-YEAR CLUB

Continued from page one

Isabella Clarke, Electrocardiology; Mrs. Emily Connell, Nursing; James A. Coss, Jr., M.D., Medicine; Frederick S. Craig, M.D., Orthopaedic Surgery;

Mrs. Verna Delli Bovi, D.P.P.O.; Richard B. Duane, Jr., M.D., Medicine; Mrs. Helen S. Ellis, Nursing; Henry Clay Frick, II, M.D., Obstetrics & Gynecology; Rodman Gilder, Jr., M.D., Psy-

chiatry; Miss Doris Goddard, Vanderbilt Clinic; Miss Louise Goode, Microbiology, P&S; Mrs. Mary Graham, Registry;

Albert W. Grokeost, M.D., Medicine; Robert E. Herlands, D.D.S., Dental & Oral Surgery; Frederic P. Herter, M.D., Surgery; Mrs. Jean Hickey, D.P.P.O.; Mrs. Edith Hinkle, Operation & Maintenance; Mrs. Irene Lebel, Nursing; Mrs. Howard Mc-

DR. HAROLD W. BROWN, Professor of Parasitology, P&S, was awarded a medal for his teaching and his work in tropical and preventive medicine by the New York Academy of Medicine at its annual meeting on April 11.

DR. JOHN K. LATTIMER, Director, Squier Urological Clinic, and Professor and Chairman, Department of Urology, P&S, presented a paper on "A demonstration of the study of virus-like particles in cancers of the prostate through tissue culture, time-lapse photography, and electron microscopy" at the Methodist Hospital Alumni Association on March 27.

DR. WILLIAM A. BAUMAN, Director, Medical Data Processing, was a guest speaker for the Medical Staff at the Huntington Hospital, Huntington, Long Island, on March 21. His talk was entitled, "Computer Activities at the Columbia-Presbyterian Medical Center—Present and Planned."

DR. DANIEL C. BAKER, JR., Director of Otolaryngology and Professor and Chairman of the Department of Otolaryngology, P&S, presented a paper on "Tracheal Stenosis" at the New York Academy of Medicine on March 19. On March 23, Dr. Baker presented a paper on "Chronic Laryngeal Stenosis" before the American Laryngological Association in New Orleans.

DR. GEORGE W. MELCHER, Associate Attending Physician, PH, Associate Professor of Clinical Medicine, P&S, and President of Group Health Insurance Inc., New York, is one of four new members to be elected to the Board of Directors of the National Foundation for Neuromuscular Diseases.

DR. RALPH J. VEENEMA, Attending Urologist, PH, Chief of Urology at Delafeld Hospital, and Professor of Clinical Urology, P&S, was elected to the position of President-elect for the year 1969-70 at the March 26 meeting of the New York Section of the American Urological Association.

DR. WALTER E. BERDON, Attending Radiologist, BH X-Ray Department, and Associate Professor of Radiology, P&S, lectured on "Diagnostic Radiology" at the Pediatric Radiology Postgraduate Course at Cornell Medical Center on May 3. He will present a paper on "Renal Tubular Obstruction by Tamm Horsfall Urinary Mucoprotein" at the 17th Annual Meeting of the Association of University Radiologists in San Francisco, May 7. Dr. Berdon will also present "A Pediatric Radiologist's View of the Battle on Reflux, Bladder Neck Obstruction" and "Pediatric Mediastinal Abnormalities" at the 23rd Annual Convention of the Pacific Northwest Radiological Society on May 23 in Vancouver, B. C. On May 12 and 13, Dr. Berdon will be Visiting Pediatric Radiologist at the University of Washington School of Medicine in Seattle.

Ateer, Bd. of Women Mgrs., B.H.; Charles S. Neer, II, M.D., Orthopaedic Surgery; Miss C. Blanche Paisley, Registry; Eduardo R. Pons, Jr., M.D., Medicine; Ellen F. Regan, M.D., Ophthalmology; James Regan, Operation &

Maintenance; Miss Mary Regan, D.P.P.O.; Mrs. John H. Reynolds, Bd. of Women Mgrs., B.H.; Leon Roizin, M.D., Neuropathology, P&S; Frederick A. O. Schwarz, Trustee; Mrs. Lucile Seguin, Pathology, P&S; John Slevin, M.D.,

Podiatry; Miss Eva A. Switoyus, Nursing; Miss Margaret Tappen, Nursing; Cornelius J. Tyson, Jr., M.D., Medicine; Harry B. van Dyke, M.D., Pharmacology, P&S; Miss Iris Wills, Nursing; Miss Ruth Wilson, Food Service.

Dr. Melvin L. Moss

Dr. Richard L. Masland

DR. RICHARD L. MASLAND, Director of Neurological Institute and Professor and Chairman, Department of Neurology, P&S, has been designated as physician member of the Board of Directors on the Medical Advisory Board of the National Foundation for Neuromuscular Diseases. Dr. Masland will present the Reynolds Lecture at Winston-Salem, North Carolina, on May 9. The Reynolds Lecture is presented each year at the Bowman Gray School of Medicine of Wake Forest University by an appointed guest Professor, who also makes rounds at the Medical School. Dr. Masland will also be a guest speaker at the Annual Meeting of the Canadian Council on Neurological Sciences. His speech will deal with methods of obtaining public and federal support for neurological research.

DR. RAFFAELE LATTES, Director of Surgical Pathology, PH, and Professor of Surgical Pathology, P&S, conducted the short course on "Tumors and Tumor-like Lesions of the Soft Tissue" at the Fifty-Eighth Annual Meeting of the International Academy of Pathology, held in San Francisco, March 11-15.

DR. EDWARD V. ZEGARELLI, Director of the Division of Stomatology, Attending Dental Surgeon, and Edwin S. Robinson Professor of Dentistry, P&S, presented a paper on "Ulcerative Diseases of the Mouth" as part of the Weisberger Memorial Lectures for 1969 at Harvard University School of Dental Medicine, on February 19, March 5, and March 12.

DR. ARNOLD P. GOLD, Assistant Attending Neurologist and Assistant Professor of Clinical Neurology, P&S, will be presented with the Samaritan Award of the New York Association for Brain Injured Children on May 24 at the Malibu Club, Lido Beach, Long Island.

JUNE, 1969

## New Intensive Care Nursery in Memory of Dr. LaFetra

It has been announced by General Lucius D. Clay, Chairman of The Presbyterian Hospital \$100-Million Development Program, that the family, friends and former patients of the late Dr. Linnaeus E. LaFetra will honor his memory by providing a new and enlarged Intensive Care Nursery at Babies Hospital. Dr. LaFetra was the grandfather of Mrs. Allen F. Maulsby, President of the Board of Women Managers of Babies Hospital.

This advanced special care facility, to cost an estimated \$500,000, will incorporate concepts and features proved feasible by Babies Hospital physicians during the past few years. It will replace the present experimental Intensive Care Nursery, where so much pioneer work in providing better care for the newly-born has been accomplished.

Dr. LaFetra, who died at the age of 97 in 1965, was until then one of the oldest living graduates of Columbia University's College of Physicians and Surgeons.

He was graduated from Wesleyan University in 1891, and was a member of Phi Beta Kappa, and received his M.D. degree from the College of Physicians and Surgeons. He served as an associate professor of diseases of children at P&S from 1902 to 1920, and was one of America's first physicians to specialize in Pediatrics.

From 1911 to 1920, he also served as director of the Chil-

dren's Medical Division at Bellevue Hospital. In 1917 and 1918, Dr. LaFetra was president of the American Pediatric Society and an editor of the *Archives of Pediatrics*. In 1941 he received a Doctor of Science degree from Wesleyan, and the photograph shown here was taken upon that occasion. Dr. LaFetra published many scientific papers and his 1917 paper, "The Hospital Care of Premature Infants," which appeared in *Archives of Pediatrics*, anticipated treatment methods that are employed today. His medical textbook, "The Diseases of Children," enjoyed several edi-

tions and an international reputation.

Babies Hospital is proud of this memorial to a distinguished physician, who gave so much of his life in the service of children, and grateful to his family, friends and patients who chose such an appropriate way to honor his memory.

The new nursery will be contained in approximately 7,000 square feet of space, a 50 per cent increase, and is planned to be constructed in two phases. Phase 1, involving 4,000 square feet of space, is expected to begin as soon as plans can be completed; phase

Dr. LaFetra

2 will follow as soon as other facilities can be moved to provide needed space.

When the present experimental Intensive Care Nursery was opened, Babies Hospital physicians believed that

## Presbyterian's Hallways Echo "Bob Hope Was Here"

"Hope was here." No such inscription is drawn on the walls of the room on Eye Institute's sixth floor where one of America's most popular comedians stayed for four days last month. But weeks after Bob Hope's visit, the message still floats on the wings of conversation in hallways and sparkles, as a bright irrepressible memory, in the eyes of the Institute staff.

Bob Hope's five-day visit to the Medical Center—including one day at Harkness Pavilion—confirmed his position as one of the most beloved individuals in the country. The Institute's switchboard was jammed with calls expressing concern about his welfare; many callers offered their eyes,

"if that would only help Bob." He received xenon-arc photocoagulation treatment to stop small hemorrhages in his eye. Drs. Algernon Reese and Robert Ellsworth were in charge of his case at the Institute,

while Dr. Stuart Cosgriff was has general physician. Just before the photocoagulation procedure, Bob, an avid golfer, was quoted as inquiring: "By the way, doc, what's your handicap for this treatment?"

When Mr. Hope made his exit at 10:44 a.m. on May 6 after being discharged from the Institute, "they were," as Bob might have put it, "selling tickets for window space to wave goodbye." "I'm chickening out," Bob projected his voice up to the people clustered in the windows. He was corraled by newsmen and agreed to pose for TV and questions in front of a battery of microphones. Interspersing his quips with praise for the hospital and its staff, Bob recalled that his blood had been taken so many times "that some of it had a head." Asked if he had been treated under Medicare, Bob said, no, but that the next motion picture he and Bing

SKYWARD VIEW OF BABIES HOSPITAL. The new addition is now rising rapidly.

## JOHN A. HARTFORD FOUNDATION GIFT OF \$77,866 FOR EYE RESEARCH

Another three-year grant has been made by the John A. Hartford Foundation, Inc., for research at the Columbia-Presbyterian Medical Center. The new grant will enable medical scientists to determine if the lenses of the eyes of the young are more sensitive to radiation than those of adults, and if this is so, to what degree. *The Stethoscope* reported in its May, 1969 issue that a three-year grant was made by the Foundation to The Presbyterian Hospital for the study of rheumatic diseases.

It is believed that children's eyes are more sensitive to ionizing radiation than adults',

but to date there has been no definitive proof for this belief. An understanding of the relationship of age and radiation sensitivity is of great importance because radiation is frequently used in the treatment of children with tumors of the eye or of the adjacent areas. In some instances radiation can result in the formation of cataracts.

The John A. Hartford Foundation grant, which will total \$77,866.50 over a three year period, was made to Dr. George R. Merriam, Jr., Associate Professor of Clinical Ophthalmology at Columbia University's College of Physicians and

Surgeons, and to Dr. Elizabeth F. Focht, Assistant Professor of Radiology at Cornell University Medical College. The award was announced jointly this week by the New York-based philanthropic foundation and by Columbia University. The research team will use the facilities of the Department of Radiobiology and Radiation Physics at the College of Physicians and Surgeons for this project.

Dr. Merriam and Dr. Focht will study the radiation effects in experiments on rats. The scientists are now studying the development of four groups

of rats, each of which has received doses of x-ray at different times of their growth—at one day of age, one week, three and one-half weeks and sixteen weeks. A special microscope will be used to examine the animals at weekly intervals for the duration of their life spans, which range from two to three years. In addition to the animals now under observation, additional rats will be required for the verification of results. The data will be subject to statistical analysis and programmed for the computer at Columbia University's Computer Center.

# Night of Feasting and Joy for Members of Presbyterian's 25-Year Club

Dr. Elliott, Toastmaster

P&S Quintessants

Dr. Werner

Dr. Hanford

From left, Rose Florio, Rena Brown (new member) and Aida De Jorio.

From left, Dr. Wise, John Campbell (youngest member) and Dr. Lamb.

It was the one wonderful night of the year when old friends get together, the night of the annual 25-Year-Club Banquet, held this year on May 1. It gives this reporter great pleasure to say that this year's party was considered by many, one of the best—in all categories — atmosphere, conviviality, food, and last but not least—speakers.

The evening began with Chaplain Reeves giving the invocation.

This year the Toastmaster was Dr. Robert H. E. Elliott, Jr., Assistant Vice President, who was eloquent. He introduced the new members individually, giving a capsule biography of each one. Diplomas and pins were presented by Helen Scott of the Nursing Office and Mrs. Frederic F. deRham, Honorary Trustee.

Dr. Elliott then introduced Dr. Sidney C. Werner, Attending Physician, PH, and Professor of Clinical Medicine, P&S, who greeted the guests generally and the new members particularly. Dr. Werner spoke of "another and peculiar type of stick-to-it-iveness" exhibited by the new members. He said, "I took the trouble to examine the histories of each

and every one of you since your coming to the Medical Center. Despite the distractions of work, family life and problems, war and social discontent, each one of you has kept up one particular, remarkably foolish side-activity—getting older."

Dr. Werner was followed by Dr. Frederic P. Herter, Attending Surgeon, PH, and Professor of Surgery, P&S, who represented the new members. Dr. Herter touched on progress defined in the expansion of the physical plan of the Medical Center in the past quarter century and related some amusing incidents in his own career at PH that spanned the twenty-five years since he first arrived as an intern.

Dr. Elliott then returned to the 'mike' and introduced the P&S Quintessants, who had

Dr. Herter

First mother and daughter members, Mrs. Dorothy Barry and Jean Hickey.

From left, C. Douglas Auty, Doris Goddard and Knute Fogard.

sung earlier in the evening, for their closing song. These young men, P&S medical students G. James Avery, Walter R. Buhl, William A. Harbison, Henry R. Palmer and Colin J. Weber, are an excellent, professional-sounding group who did so much to contribute to the festive evening.

A high point of the Banquet was the presence of a beloved man, Dr. John Munn Hanford, Emeritus Professor of Clinical Surgery, P&S and Consultant in Surgery, PH, who has served the Hospital for 59 years. We were delighted and honored to have him with us.

Officers for 1969 were: Dr. Robert H. E. Elliott, Jr., President; Mrs. Frederic F. deRham, Vice President; Helen Scott, Vice President; Albert Saker, Secretary; Marjorie Peto, Assistant Secretary; J. G. McCullough, Treasurer. The Committee Chairmen were Dorothy Hagner and Dr. Al-

bert R. Lamb, Jr., Reception; Dr. Stuart W. Cosgriff, Nominating; Mrs. Virginia Lippe and Thomas P. Fleming, Arrangements; Dr. George A. Perera, Entertainment and Frank Johnston, Publicity.

Our grateful thanks go to these Officers and Committee Chairmen, who were responsible for the success of this year's Banquet and its program.

Officers unanimously elected for 1970 are—President: Dr. Charles M. Steer; Vice Presidents: Mrs. Byron Stookey and Gilbert P. Smith, D.D.S.; Secretary: Mrs. Margaret Graham; Assistant Secretary: Cora L. Shaw; Treasurer: Inez E. Klinck.

Following benediction by Rabbi Goldfine, the party was over and everyone left in a sort of glow of warmth and friendship and the parting words were loud and clear—"See you next year."

## IN MEMORY OF DR. LAFETRA

*Continued from page one*

much brain damage, mental retardation and other anomalies in normal-term infants was due, not as generally believed, to prenatal conditions, but to environmental influences that could be altered by accurate diagnosis, immediate intensive care, and the use of special equipment during the first minutes, hours, or days, following birth. The experimental nursery, which has a total of 23 isolettes, was specially designed and provided with original equipment to meet every anticipated need, including ultramicrochemistry laboratories that can give tests to the newly-born that were previously available only to older children. Such tests are now routinely made from a single drop of blood.

Results to date have justified the research of Babies Hospital physicians. Hundreds of newly-born infants have not only been saved from almost certain death, but saved without physical or mental de-

fects. In fact, this experimental unit has captured the attention of the medical world, and visitors from hospitals at home and abroad have come to Babies Hospital seeking guidance in establishing such units in their communities.

The new Intensive Care Nursery will include many new concepts that have now been proved feasible, including a mobile unit that can be taken to an infant when minutes may mean the difference between life and death; "clean air rooms," in which infants will be isolated by barriers of air, permitting doctors and nurses to handle them more effectively; and new electronic monitoring devices to signal dangerous symptoms as they develop.

The new Nursery is part of the \$20,300,000 development program being carried out at Babies Hospital. When all construction is completed there, it will be one of the nation's largest and most modern pediatric teaching hospitals.

## "BOB HOPE WAS HERE"

*Continued from page one*

Crosby would make would be entitled "The Road to Medicare." Bob was discussing his itinerary when the wailing of a police car was heard on 165th Street. His instant adlib, "There's my car," drew a big laugh from the crowd of passersby, newsmen and hospital staff.

And so Bob departed, leaving behind him fruit baskets he had ordered for the children in the Eye Institute nursery, and a lot of warm feeling all around. Laurie Bryant, head nurse on the Institute's sixth floor, perhaps summed up best what Bob Hope means to Americans: "It's a nice feeling to have people like him on the floor—it sort of renews your faith in the continuity of things—like finding a prize in a box of crackerjacks."

The Medical Center's staff wishes Bob many years of continuity as an American tradition, which he is.

## P&S ALUMNI DAY MOST SUCCESSFUL

The Association of the Alumni of Columbia University's College of Physicians and Surgeons had its most successful and outstanding Alumni Day so far on Saturday, May 8. A new format concentrated the morning program held in the Alumni Auditorium on concise clinical papers, presented entirely by alumni from various parts of the country who were members of the 25th and 20th Anniversary Classes (1943 December; 1944 and 1949). It was enthusiastically received by alumni and faculty who attended.

Midway in the program, Dr. Frode Jensen, '37, Chairman of the Committee on Honors and Awards of the Association, officiated at the unveiling of the bust of Dr. Rudolph N. Schullinger, '23, Professor Emeritus of Clinical Surgery, and expressed the appreciation of the Alumni Association to Dr. Schullinger and his colleagues whose efforts made the Alumni Auditorium possible. The bust was unveiled by the sculptor, Dr. Henry S. F. Cooper, Associate Clinical Professor of Surgery, Retired. Dr. Schullinger responded with great warmth and appreciation. The bust will stand in the Alumni Auditorium Lobby as a symbol of appreciation of the Alumni for Dr. Schullinger and the retired staff who did the major part of the promotional work to raise the money for the Auditorium.

Following the program, the

Annual Luncheon and Business Meeting were held at Bard Hall. Dr. Graham B. Blaine, '43, Chief of Psychiatry, Harvard University Health Service, spoke on the topic: "A College Psychiatrist Looks at Student Rebellion."

Evening events were held at the Plaza Hotel with a Cocktail Reception and Anniversary Reunions, followed by the Dinner-Dance. During the evening, the 1969 Achievement Medals were presented, as follows:

Dr. Albert Starr, Professor of Surgery and Chief of the Division of Cardiopulmonary Surgery at the University of Oregon Medical School, Portland, Oregon, was awarded the Gold Medal for distinguished achievement in medicine. Dr. Starr pioneered in mitral and aortic valve replacement when he developed a new ball valve prosthesis in 1960. In March of 1965 he developed a second series of ball valve prostheses which extended the cloth covering of the ball valve. He is an outstanding thoracic surgeon and

his work on valve replacement has been widely recognized. The Gold Medal is the highest award the Alumni of the College of Physicians and Surgeons can bestow upon one of their members.

Dr. Abram J. Abeloff was awarded the Silver Medal, which is presented each year to an alumnus who over a period of years has rendered meritorious service to the College of Physicians and Surgeons and its Alumni Association. Dr. Abeloff, who served as Alumni President, 1956-57, has been active in Alumni affairs of the College and the University for more than 25 years.

Leland G. Dobbs, who will graduate with the Class of 1969 of the College of Physicians and Surgeons, was awarded the Bronze Medal and a check for \$100 in recognition of his leadership and demonstrated interest in his medical school. This award is made by the Alumni Association of P&S upon the recommendation of the senior class and the faculty of the College.

Unveiling the bust of Dr. Rudolph N. Schullinger: from left, Dr. Frode Jensen, Dr. Schullinger, Dr. Henry S. F. Cooper, sculptor.

## GIFTS OF PHILANTHROPIST LACHMAN AND NATIONAL HEALTH INSTITUTES AUGMENTED P&S TEACHING CAPACITY

From left, Dr. Kusch, Dr. Cordier, Mr. Lachman.

The College of Physicians and Surgeons officially closed another exemplary chapter in its evolution last month with the dedication of the Charles R. Lachman Teaching Laboratories.

A group of forty top university officials, department chairmen, leading researchers and invited guests gathered on May 21 to honor the man without whose help the chapter could not have been written. He was the American philanthropist and motion picture producer Charles R. Lachman. It was Mr. Lachman's gift of \$1 million and a matching contribution from the National Institutes of Health that enabled P&S to modernize its medical teaching laboratories for future physicians, dentists and nurses. The renovation took place over a period of several years.

The teaching facilities that were improved under this program include workshops for anatomical studies, physiology, biochemistry, microbiology, pathology and pharmacology, as well as two large amphitheaters used for major lectures and grand rounds. The modernization of these basic medical science teaching laboratories was the medical school's first major internal expansion since P&S moved here in 1928.

Dr. H. Houston Merritt, Dean of the Faculty of Medi-

cine, gave credit for the ten per cent increase in P&S enrollment in recent years to Mr. Lachman. As a result of the modernization, P&S can now accommodate 132 new students each year, instead of 120.

Dr. Merritt spoke briefly but warmly in a small reception room on 15th floor of P&S, prior to the unveiling of the plaque at the front entrance to P&S on 168th Street. His remarks were followed by those of Dr. Andrew W. Cordier, Acting President of Columbia University, Dr. Polykarp Kusch, University Vice President, and by those of Mr. Lachman himself.

Mr. Lachman is a co-founder of "Two World Enterprises," a motion picture company whose two latest productions, "More" and "Chez Maud," are entered in this year's Cannes Film Festival. He retired in 1965 as Senior Vice President and technical director of Revlon, Inc. Mr. Lachman was one of the founders of the cosmetics firm. His many other interests include art collecting and support of Boy Scouts of America.

## Friendships Renewed, Grand Rounds, Discussions . . .

## BABIES HOSPITAL ALUMNI DAY

Babies Hospital Alumni Day, held on Friday, April 25, was an eventful day for the 120 alumni who attended. The day's schedule included the election of new officers, Grand Rounds, and a panel discussion, as well

as a time-out for alumni members, enabling them to renew acquaintances and friendships.

The program began at 9:30 A.M. with an open house, visiting, and a coffee hour. At 11:00, Dr. Edward C. Curnen, Jr., Director of the Pediatric Service of Columbia-Presbyterian Medical Center, presided over Grand Rounds in the Fourth Floor Amphitheatre. A patient with Tetralogy of Fallot was presented and discussed by Dr. Sidney Blumenthal, Professor of Clinical Pediatrics, P&S, and Dr. Frederick O. Bowman, Jr., Assistant Professor of Clinical Surgery, P&S.

The luncheon and business meeting took place at Harkness Hall from 12:30-2:00. Dr. Walter Kessler, the outgoing President, presided. Dr. William S. Langford, Chairman of the Nominating Committee, presented the new officers for the year 1969-70. The new President, Dr. Rustin McIntosh, is Professor Emeritus of Pediatrics at P&S, and was Director of

Babies Hospital from 1932 to 1960. The election of Dr. McIntosh marks the first time that a former Director of Babies Hospital has become President of the Alumni Association. Dr. David Stiles, Assistant Pediatrician, Babies Hospital, and Associate in Pediatrics, P&S, is the new Vice President. Dr. Joseph Silverman, Assistant Attending Pediatrician, will continue as Treasurer, and Dr. William Bauman, Assistant Attending Pediatrician and Assistant Clinical Professor of Pediatrics, P&S, will continue as Secretary.

Dr. Curnen moderated the afternoon panel discussion, on "Abuses of Drugs," from 2:15-4:30. Members of the panel were Frederick G. Hofmann, Ph.D., Associate Professor of Pharmacology, P&S; Dr. Solomon J. Cohen, Associate in Pediatrics, P&S; Dr. Richard Brotman, Professor and Director of the Division of Community Mental Health, New York Medical College; and Thomas A. Facelle, Jr., Chief

Assistant District Attorney for the County of Westchester.

It was noted during the business meeting that death had claimed seven members during the past year. They were Dr. Hattie Alexander, Dr. Franz Altmann, Dr. Sue Buckingham, Dr. Jack Garnant, Dr. Ralph Platou, Dr. David Sherwood, and Dr. Merl Fisk.

The members of the house staff who will be leaving in July were taken into membership at this time. The new members are:

GRADUATING RESIDENTS: Drs. Eugene W. Adcock, III, Stanley H. Block, John M. Driscoll, Jr., Dan G. Handels-

man, Allen Hordof, Nathan Ionascu, Louis I. Levy, Margaret H. MacLeish, David D. Nicholas, Mark Platt, Jeffrey J. Pomerance, Anne H. Roseborough, Joel S. Saland, William T. Speck, Phienvit Tanthibhdyangkul, and Grace S. Wolf.

ATTENDING STAFF: Drs. Walter Coon, Susan T. Fischler, Welton Gersony, Camilla Jones, and Betty C. M. Kuo.

FELLOWS: Drs. John Balfe, James C. Chan, Anbukli Chetty, Puraeza-Flor Gaerlan, Constance Heyes, Carl Steeg, Marta Valcarcel, and Rafael Zapata-Martinez.

Dr. Rustin McIntosh

# THE HOSPITAL AT NIGHT

## PART 3

### Maintenance and Construction

In the maze of tunnels and subterranean passageways under the Medical Center, a visitor almost needs a compass to find the engineer's office—the nighttime nerve center for both Engineering and Maintenance Departments.

After the offices of the Maintenance and Construction Department close at 5:00 p.m., "trouble calls" to the Department are received in the

engineer's office. Its telephones, manned by a member of the Engineering Department, convey messages of emergencies and all requests for help from anywhere in the Hospital when something goes wrong with equipment or facilities.

The engineer-clerk who covers the telephones from four p.m. to midnight, William Peterson, has been on the evening shift for 31 years.

Besides coordinating the assignments of the Maintenance personnel, Mr. Peterson and his successor on the midnight to eight a.m. shift, Mr. Dennis Gibson, also monitor the Fire Register Equipment and Annunciator devices, which give basic information about fires at the Medical Center—the building and floor from where the alarm originates, the time and the date of the fire.

When the fire alarm sounds, all available men from the Maintenance and Engineering Departments hasten to the small mobile fire extinguish-

ing units that are kept ready for instant use in strategic spots in the Tunnel. The location of the fire can be pinpointed from a locator board in the engineer's office. The fire fighters from the two departments are joined at the site of the fire by members of the Protective Department, Housekeeping Department and by the Night Manager, who also has access to an identical annunciator.

In addition to fires, flooding from broken water pipes constitutes a critical emergency for the men from Maintenance and Housekeeping, requiring immediate action. The majority of the cries for help are not as serious, however, and are for broken bed rails, defective light bulbs, suitcases with jammed locks, stopped-up drains, water and oxygen leaks, and various objects flushed down the drain, from surgical instruments to contact lenses. "Once I even recovered a glass eye that was looking at the inside of a drain pipe," recalls plumber Joe Chaplar, a ten-year veteran of the evening shift.

His associate John Antillo, the evening electrician, explains the great variety of tasks he and Mr. Chaplar take care of with the very nature of night, "because of darkness and other reasons, problems seem more diversified at night."

Mr. Antillo, a capable electrician, is knowledgeable about the three emergency generator systems which serve the Hospital buildings in case of electrical failure.

Mr. Antillo has served our Medical Center all of 40 years—31 of them on the evening shift. Monday being one of his off-days, he takes advantage of the week-day solitude on the shores of nearby bodies of water. His recreation is fishing, but he enjoys as much the soothing sounds of nature after hearing the nervous hum of Presbyterian's electric machinery for a week.

On the midnight to eight a.m. shift, both plumbing and electrical work are given to John Ansbro, a veritable jack-of-all-trades. Mr. Ansbro was hired by Presbyterian Hospital 12 years ago as a lampman and was advanced in his job as he improved his knowledge of the electrical trade. A year ago he exchanged his day assignment for increased responsibilities and pay on the night shift.

On the off nights of both Mr. Ansbro and Mr. Antillo, their work is carried out by Gene Mozzillo. He has served the Hospital 16 years.

As nocturnal troubleshooter, Mr. Ansbro has been involved in adventures not unlike those of medieval knights. Once, for example, he rescued a lady from imprisonment—of sorts. The facts of that episode, in the recollection of eyewitnesses, are as follows: With

Caesar Lozada, assistant to fireman George Thomas (right), attempts communication in the P.H. boiler room above the pervasive roar of combustion.

a Babies Hospital elevator stuck on the sixth floor two hours past midnight, Mr. Ansbro went into the overhead, shouted encouragement to the elevator's lone woman passenger, and lowered the elevator manually in 45 minutes of tense work.

Had the elevator elected to get stuck before the witching hour, the knight to the rescue would have been Heinz Urban, a veteran of nine years of service with the Presbyterian Hospital. As elevator mechanic, Mr. Urban receives many calls on his four to twelve shift. This is not surprising, since there are 53 elevators in the Medical Center and since Mr. Urban responds also to calls for repairs on dumbwaiters and conveyor belts.

Contrasting with their dizzying vertical dimension, the Hospital's world of boilers is essentially three dimensional. Looking like gargantuan monsters, the boilers do not lack height to fill the huge cavern they occupy below the tunnel level in the Presbyterian Hospital. Their roar is so pervasive that it accompanies a visitor seconds after he has emerged from the cavern.

In that steady roar, signifying continued warmth to the Hospital, the blowing of boiler tubes is "the hiss that refreshes." A cleaning procedure to assure maximum heat transfer through the tubes, the blowing of tubes indeed sounds like the hiss of a mechanical sea serpent, but the doughty boiler room crews are used to it.

The evening crew of the PH boiler room consists of Marc Toles, a fireman who paints in his free time, and of Alfredo Ruiz, his assistant. Both men have stayed on the four to midnight shift for 11 years.

The fireman on the night crew is George Thomas, who has given 18 years of service to the Hospital, except for a two-year hitch in the U. S. Army. "Quite a few of these years have been on the night shift," but Mr. Thomas would not have it any other way:

Available from midnight to morning for repairs of faulty equipment, John Ansbro rubs elbows with night nurses and doctors while repairing oxygen leaks in patient areas, as above.

"the four to twelve shift ruins your day." His assistant, Caesar Lozada, is a veteran of Merchant Marine and U. S. Navy. His tales of visiting Danang, Qui Nhon Bay, Camranh Bay and Saigon sound oddly out of place in the mechanical world of Presbyterian's underground.

All the above-mentioned men and their duties are supervised by the Watch Engineers—Mr. W. McKenney from 4:00 p.m. to midnight, and Mr. J. Miller from midnight to 8:00 a.m.

All heating and air-conditioning, as well as essential services such as water, gas, oxygen, nitrous oxide, etc., must be supplied on around-the-clock basis. The night Watch Engineer and his crew keep these vital services flowing to their destinations throughout the hospital.

All major repairs which would cause inconvenience to patients and to the professional staff on the "upper" floor are done at night. It is therefore not unusual to see many men of the day crew working through the night, doing these repairs. This is done so that any inconvenience is kept to a minimum. The engineers seek the understanding of other night people for the infrequent times when there is a planned "shutdown" of services. It is quite necessary to insure future good service and to minimize the chances of an emergency breakdown.

## MEDICAL CENTER ART SHOW

Did you see the art show? Approximately 1,500 employees and visitors did.

The nineteenth annual show was again held on PH 20 in the Milbank Library Annex. About sixty artists, all of whom are affiliated with the Medical Center, contributed their work to the show. The 141 entries included crafts, oils, water colors, sculptures, and photographs. Several observers were heard to comment on the excellency of the material submitted this year.

A tea for all exhibitors and their guests was held on the afternoon of April 28. Mrs. A. J. Binkert and Mrs. H. Houston Merritt were the co-hostesses. The show opened to the public on the following day and continued through May 9.

If you missed this year's show, don't be dismayed. Indeed, start a project now, so that you may exhibit your work in 1970.

# Program Honors Dr. George H. Humphreys II, Prior to Retirement

On May 9 a day's program in honor of Dr. George H. Humphreys, II, Valentine Mott Professor of Surgery, P&S, and Director of Service, Department of Surgery, PH, was arranged by his attending staff prior to his retirement on July 1 after 23 years as Chairman of the Department and Director of the Surgical Service at Presbyterian Hospital. Dr. Humphreys began his long association with the Hospital as an intern in 1930.

The program was held in the Alumni Auditorium from 9:00 a.m. through 2:00 p.m. with a buffet luncheon in Bard Hall at 12:00 noon.

The speakers all were trained at Presbyterian Hospital as residents of Dr. Humphreys, with the exception of Dr. Plimpton, who is an alumnus of the Department of Medicine.

With Dr. Frederic P. Herter, Professor of Surgery,

P&S, presiding, the program was as follows:

Dr. John E. Connolly, Professor of Surgery, University of California, Irvine, spoke on *Mechanical Circulatory Assistance by Left Heart By-Pass Without Use of Anticoagulants*, with discussion by Dr. James R. Malm, Professor of Clinical Surgery, P&S, and discussion from the floor; Dr. Samuel R. Powers, Jr., Professor of Surgery, Albany Medical College, spoke on *The Renal Response to Systemic Trauma*, with discussion by Dr. John M. Kinney, Professor of Surgery, P&S, and discussion from the floor; Dr. Stephen Wangenstein, Associate Professor of Surgery, University of Virginia, spoke on *External Pressure and Hemorrhage*, with discussion by Dr. Frank Gump, Assistant Professor of Surgery, P&S, and discussion from the floor.

Dr. Richard C. Britton, Sur-

geon-in-Chief, Brooklyn-Cumberland Medical Center, spoke on *A Reappraisal of the Surgical Role in the Management of Complications of Portal Hypertension*, with discussion by Dr. Arthur B. Voorhees, Jr., Associate Professor of Clinical Surgery, P&S, and discussion from the floor; Dr. Keith Reemtsma, Professor of Surgery, College of Medicine in Utah University, spoke on *The Heart as a Transplantation Model*, with discussion by Dr. Robert Hoehn, Assistant Professor of Clinical Surgery (Plastic), P&S, and discussion from the floor.

The final speaker was Dr. Calvin H. Plimpton, President of Amherst College, who gave the 1969 Sample Lecture. Dr. Plimpton's provocative subject was "Who Put The LSD In The DNA?"

The day's program was appropriately concluded with a banquet in the Baroque Room

Dr. Calvin H. Plimpton, left and Dr. George H. Humphreys, II.

at The Plaza at 7:00 p.m.

Dr. John F. Prudden, Associate Professor of Clinical Surgery, P&S, was the Toastmaster, and speakers at the festivities included Dr. Herter, Dr. Shivaji Bhonslay, Assistant Professor of Clinical Surgery, P&S; Dr. Milton R. Porter, Professor of Clinical Surgery, P&S; Dr. Robert H. E.

Elliott, Jr., Professor of Clinical Surgery, P&S; Mr. A. J. Binkert, Executive Vice President; Dr. H. Houston Merritt, Dean, Faculty of Medicine, P&S; Dr. Reemtsma and Dr. Humphreys.

The attending staff presented Dr. Humphreys with a silver tray with their signatures engraved upon it.

## PRESBYTERIAN HOSPITAL'S VOLUNTEERS HONORED AT ANNUAL AWARDS TEA

Volunteers who have given outstanding service to The Presbyterian Hospital were honored at the Annual Awards Tea for Volunteers, held in Maxwell Hall on April 30.

Mrs. Henry Clay Frick, II, Chairman of the Volunteer Committee of The Presbyterian Hospital Auxiliary, presided over the event, which was attended by over 300 people. Mr. A. J. Binkert, Executive Vice President, extended greetings to the volunteers. Entertainment was provided by Mrs. Edna Husband, vocal-

ist, accompanied by Mrs. Frieda Dankwerth, and by the P&S Club 1969 which presented selections from "Boys From Syracuse."

Mrs. Frick presented the awards, "Honor Awardees," contributing more than 10,000 hours of service, were Mrs. Stella Brown, 11,817 hours; Mrs. Royall G. Cannaday, 10,325 hours; Mrs. Helen R. Harris, 11,313 hours; Mrs. Katalin Kalley, 15,227 hours; Mrs. Anne Kingsford, 11,111 hours; Mrs. Ida Rosch, 19,064 hours; and Mrs. Charles

Stroud, 10,256 hours. "Honor Volunteers of 1968," contributing over 1,000 hours last year, were Mrs. Ida Rosch, Mrs. Anne Kingsford, Mrs. Helen Harris, Mrs. Frances Freymark, Miss Nancy Coleman, Mr. Walter Barton, Mr. Fred Iradian, and Mrs. Georgia Pappas.

# Dr. Atchley Receives Kober Medal, Highest Honor; Dr. Richards Named For Next Year

A standing ovation was given Dr. Dana W. Atchley at the Annual Meeting of the Association of American Physicians, held in Atlantic City on May 6. The occasion was the presentation to him of the Kober Medal, an annual award bestowed by the Association, regarded as the highest honor in American Medicine.

Presenting the medal to Dr. Atchley was Dr. Dickinson W. Richards, who has been named to receive this same honor next year. This will be the first time that the Kober Medal has been awarded two years in succession to doctors of the same institution, a very great honor for The Presbyterian Hospital.

Dr. Atchley is Emeritus Professor of Clinical Medicine, Columbia University's College of Physicians and Surgeons, and Consultant in Medicine, The Presbyterian Hospital. Dr. Richards is Lambert Professor Emeritus of Medicine and Special Lecturer in Medicine, Faculty of Medicine, Columbia University, and a Nobel Prize winner.

Dr. Atchley has given fifty years of service to the medical profession, a career notable for both scientific and literary achievements and crowned with many honors. In December, 1968, the new doctors' office building at the Columbia-Presbyterian Medical Center was named "Dana W. Atchley Pavilion." In 1961 Macmillan Company published Dr. Atchley's book, *Physician: Healer and Scientist*, which has since been translated into several languages. A few years earlier Dr. Atchley was honored at the Gold-Headed Cane Ceremony at the University of California School of Medicine, upon which occasion his address was "The Uses of Elegance."

In response to the presentation of the Kober Medal, Dr. Atchley spoke upon the theme: "Discipline, External and Internal." *The Stethoscope* is pleased to present the following excerpts:

"Before I engage in the theme of my response, I want to mention three remarkable men who greatly influenced my life. A year at Hopkins with Dr. Theodore Janeway opened my eyes to the mechanisms of disease, Bill Palmer was a generous and inspiring Chief, and Bob Loeb has been my guiding partner over many happy years.

"The theme of my response is discipline; both external, academic discipline, and internal, the influence of conscience on behavior.

"It is rather disturbing for those of us who are on the far side of the generation gap to recognize that the young are relatively unaware of history. Perhaps they fail to 'subject their views to the cleansing discipline of historical per-

spective.' Our attention was on the charting, we were less concerned with the lines of command.

"My only sit-in as a young man was in the streetcars going back and forth from the old Presbyterian Hospital to the Dean's office on 59th Street. It was a long sit-in with one transfer. When I started teaching at P&S I was shocked to find that the anatomy course extended well into the second year, with consequent crowding of other more vital basic sciences. I called comfortably on the Dean and several department heads and the curriculum was changed. Nobody carried me on his shoulders but no cops were called.

"There is small comfort in the realization that resentment toward discipline and the struggle against authority are perennially manifested in a free society. Over the past years these leakages of emotional pressure have become threatening to the quality of the educational process, even to its survival. Those of us whose life-long commitments have been in medical education find ourselves in an intellectual and an administrative dilemma. There is need for change but also there is need for the preservation of long-time values. Medical education in both its scientific and humanistic involvements has, in most schools, been a continuously evolving affair. There has been steady curriculum change and many good responses to altered social demands. What then shall we change and what shall we preserve?

"First of all, we must preserve and defend the primary goal of medical education—namely, to develop physicians who are not only familiar with facts but who have the critique necessary for the appraisal of new values. This is a responsibility of Faculty guidance. It must be preserved by academic discipline accompanied by student advice, which should be based not primarily on the content of courses but on the skill and the conscientiousness with which they are conducted. Curriculum committees must be responsive to student opinion, but they should never abandon their ultimate authority.

"General academic discipline must be preserved, though not on an authoritarian basis. This discipline falls into many categories. Some are easy to justify, some are not. First, scholastic standards must be preserved, both for admission and for graduation. A medical school has special obligations to the community. Admissions should be based on proven quality, capacity and motivation. When current ethnic pressures abrogate these standards of admission, it is not only the community that may suffer

but also the embarrassed and handicapped student who is unable to compete. The urge to be more than fair should never be an excuse to admit the clearly inadequate.

"Maintenance of high academic standards must be preserved by the idealist cooperation of both students and faculty. Student advice should go into the computer and be received with an open mind. When such advice is rejected, careful refutations should be made, clearly acceptable to anyone who is acting in good faith.

"The mechanics and techniques of grading might well profit from student advice as long as that advice does not tend to debase scholastic standards or disregard the maintenance of sound qualifications

Dr. Dana W. Atchley

for the practice of medicine—our primary obligation. The right to dismiss a student who has failed to pass his required work is a Faculty prerogative; student participation must not void this responsibility, for such responsibility is a community obligation as well as an academic one. Any student protest about Faculty judging should be listened to attentively but not in a mood of unreasoning passivity.

"Clinical discipline is qualitatively different from academic discipline. Failure to assume those clinical responsibilities that are assigned to a clinical clerk in either wards or outpatient departments cannot be forgiven except on the basis of clearly acceptable reasons, such as ill health. A serious lack of integrity is exposed by a candidate's failure to accept clinical responsibility; such a person would omit an important scientific recheck or be lazy in a government job. Discipline may not always correct such people but it should never be prevented from eliminating them. This is the stern face of discipline. This stern face is hard to assume because being stern is not a happy act.

"I have indicated some areas in which there are clear indications for discipline, basically strict but always warm and, we hope, always understanding and always perceptive. And also, we hope, evoking a reciprocal response from the students. No discipline should be on a 'because we say so'

basis, no discipline should be obscure in its reasoning or in its values. If it can't be defended logically or historically, it should be quickly discarded.

"There is a finer type of discipline, more valuable than that which is superimposed from above or impressed by colleagues. This is derived from forces within the individual himself and is not primarily dependent on the environment. There are many origins of these forces, some are pragmatic, some are spiritual.

"The discipline that a sense of duty implies must be based upon a careful appraisal of the values involved; goals should be clearly discernible and the tasks be neither trivial nor impossible. Duty must not be confused with hysterical or anarchistic behavior. There is no sense of duty in the student who destroys furniture or soils obscenely the office of the Dean. I am grateful that medical students have confined their protests to peaceful methods.

"While I appreciate the value of high standards and worthwhile goals, the essence of my approach to internal discipline is concerned with the conscientiousness with which a recognized and valid duty is performed. This is the test of real discipline and this true internal discipline is the foundation of good medicine, whether it be patient care or research activity. No cutting of corners, no disregard of important facts, performance up to the bounds of perfection, exercising knowledge and experience to the limits of their capacities.

"Internal discipline is the force that duty exercises to prevent laxness in assuming responsibility. If I may be permitted the anachronism, it is the voice of conscience that tends to be scored by the immaturity of all age groups. Conscience concentrates on the ultimate goal and ignores the immediate inconvenience. It makes one execute carefully the boring, the unexciting tasks of education and of life, realizing that they are stepping stones to higher spots that will be exciting. It may be more fun to talk to a sick patient from a haze of ignorance than to learn the physiology of pulmonary ventilation, but if the goal is understanding, the stimulation of the healer can be postponed while he is becoming a scientist. We should not seek a neurotic perfectionism, but when we have thoughtfully established a sound standard it should be rigorously enforced upon ourselves and it should be expected of others.

"A physician can be conscientious in two ways. First, scientifically; ignoring no discoverable detail of his patients' physical and mental status. Second, humanistically pursuing the course of kindness,

compassion, tolerance and understanding. This latter duty takes time and may easily be neglected in a busy life.

"In our teaching of medicine, we must add to the two basic goals, namely imparting knowledge and inculcating an intellectual critique, another essential ingredient—a disciplined sense of responsibility. The more internal discipline that is exercised along the way, the less external discipline will be required. We must not yield to youthful importunities to make everything easy and exciting. We must insist that the road is hard, and often uninteresting; but that the way is always UP."

## Winners of Student Research Competition

On Tuesday, May 13, The Dean's Meeting for the Presentation of Student Research was held at 4:00 in the Hangar Amphitheatre, 9th floor stem. The program, presented by The Columbia Presbyterian Medical Society and the P&S Club, announced the four winners of the Student Research Competition.

Mr. Stephen A. Cole '70, sponsored by Dr. B. W. Low, Department of Biochemistry, spoke on "Coproclatation and Crystallization of Insulin in the Presence of Lysozyme and Protamine."

Mr. Richard E. Fleming, Jr. '72, sponsored by Professor Jacques Fresco of the Princeton University Department of Chemistry presented "Studies on a Transfer RNA Pyrophosphorylating Enzyme System."

Mr. Neil Kavey '69, sponsored by Dr. David Gocke, Department of Medicine, spoke on "The Hepatitis Antigen: Correlation with Disease and Infectivity of Blood Donors."

Mrs. Judith Palfrey '71, sponsored by Dr. Herbert J. Bartelstone, Department of Pharmacology, presented "Summer Laboratory Experience."

Each of the winning students received a check and a certificate signed by Dr. H. Houston Merritt, Dean, College of Physicians and Surgeons.

## EMERGENCY DRILL

A test drill of Emergency Procedure Plan I was held by the Presbyterian Hospital on May 7. The drill involved primarily Vanderbilt Clinic's admitting emergency staff. The patients' waiting area in the Emergency Admitting Clinic was cleared in anticipation of casualties from a theoretical natural disaster or a man-made catastrophe. About a dozen theoretical patients with fractures and other types of trauma were processed in an emergency reception station set up in the Doctors' Dining Room.

## Awards for Distinguished Achievement at X-Ray Film Exhibit

For the first time in the history of Columbia-Presbyterian Medical Center the radiologic technicians of the Department of Radiology in all Units of the Hospital exhibited their work. The exhibit

### United Fund Drive Rolls Into Action

UNITED FUND  
OF GREATER NEW YORK, INC.

The drive is on for the United Fund of Greater New York.

At the kick-off rally for The Presbyterian Hospital, held on May 15, Dr. C. R. Wise, Presbyterian Hospital Chairman for the Fund, explained the changed name: henceforth, the campaigns of the Greater New York Fund and the American Red Cross are united under the name "United Fund of Greater New York."

Alvin J. Binkert, Executive Vice President, complimented the departmental captains for their high performance in the past and expressed confidence that the campaign this year will be successful.

Miss Wadkins, Unit Director of the United Fund of Greater New York, gave illustrations to show how effective our contributions may be.

Contributions are to be turned over to George Minaya, Service Building 6, Room 621, once a week, on Fridays.

was held at Harkness Hall on April 29.

There were 20 exhibits—it was difficult for the judges to select the five best. They chose the following:

**FIRST PRIZE:** Sandy Burgess—routine skull series. This was done on vacuum cassettes to obtain the greatest detail. They were mounted with a complete and detailed account of the technical and anatomical information on the displayed films.

**SECOND PRIZE:** Vincent L. Marco—demonstration of the third and fourth ventricles. The exhibit on autotomography was presented so that one might understand the value of body section radiography. Although autotomography is performed in a different manner than routine tomography, it employs the same principles and results are the same.

**THIRD PRIZE:** Betsy Schefter—breathing dorsal spine. Four films in the lateral projection demonstrating the advantage of breathing dorsal spine techniques over non-breathing; also how motion can be used to advantage in pediatric radiology.

**HONORABLE MENTION** went to Edward Stenbar for his presentation of Bronchography and to Joseph Infantino for his exhibit on the Sternum.

Luis A. Yrizarry, R. T., Chief Technician and Supervisor of Babies Hospital X-ray Department, conceived, organized and coordinated the program.

Said Mr. Yrizarry, "The Radiology field has advanced a great deal in the last decade and there are many new things to be learned—new techniques, new materials, new ways of performing the old routine examinations. By participating in more programs such as the one we undertook, the technicians have an opportunity to see how others perform similar or related work, and learn from the experience."

lar or related work, and learn from the experience."

"Participating more actively in the various societies will help us elevate the quality of work—such as the American Society of Radiologic Technologists, New York State Society, New York City Society and Kings-Queens-Richmond Society of Radiologic Technologists."

Mr. Yrizarry is justifiably proud of the Medical Center's first such program and it is his hope that more programs of this kind will be made available to Radiological Technologists here.

He would also like to extend his gratitude to all who worked with him to make the program possible.

The Exhibit was open for general viewing from 4 to 6 p.m. with a buffet supper from 5 to 6 p.m. The program at 6:30 included an introduction by Mrs. Elly Metrakos, R.T., Administrative Assistant, Department of Radiology; a welcoming speech by Dr. Guy Potter (pinchhitting for Dr. William B. Seaman, Chairman, Department of Radiology); a lecture on "Contrast Media" by Robert C. Rakers, R.T., Production Manager, Winthrop Laboratories; a lecture on "Why Film Exhibits" by Theodore Lattof, R.T., President, Radiologic Technology Society of New York State; Presentation of Awards by Mr. Yrizarry.

## News of Nursing

### Jane McConville Is Assistant Director of Nursing

Jane F. McConville has been appointed Assistant Director of Nursing, Babies Hospital, replacing Marjorie Peto, who is retiring July 1.

Miss McConville came to New York City from Ogdensburg and graduated from the Presbyterian Hospital School of Nursing in 1951. She served as staff nurse for one year and then spent another year at the Children's Hospital in Denver, Colorado, returning to the Medical Center in 1953. She was Head Nurse, Medical Service, Babies Hospital, until 1959, when she was appointed Senior Supervisor of Nursing, Babies Hospital, the post she held until her present appointment.

Miss McConville is described

Jane F. McConville and patient.

by her associates as a "dedicated nurse, with superior judgment, carrying this dedication to her high standards of nursing. . . . She is devoted to children. . . . She has a great sense of humor."

Marilyn Stein, formerly Assistant Supervisor, in charge of normal newborn nurseries at Mount Sinai Hospital, has been appointed Educational Coordinator for Neonatal Intensive Care Nursing, under the supervision of Dr. John C. Sinclair, Assistant Attending Pediatrician, BH, and Assistant Professor of Pediatrics, P&S. Miss Stein's appointment became effective May 19.

Janet A. Alley has been appointed Senior Supervisor of Nursing, Babies Hospital, the post previously held by Miss McConville.

Eileen Sullivan and Sandra Scheetz have been promoted to operating room supervisors in General Surgery.

Susan Wachsberger, Head Nurse, Operating Room, announced her engagement to

Winston Harrison, medical student at Case Western Reserve.

Gloria Link, Head Nurse, Operating Room, announced her engagement to John Allen, a lawyer.

Helena Juhola, Head Nurse, Operating Room, was married on April 5 to Jussi Himanka, news commentator for the United Nations.

Zoila Gutierrez, Clerk-Typist, Central Nursing Office, was married on April 20 to Ralph Nunez.

Mrs. Catherine Finnerty, Receptionist, Nursing Office, is on a 21-day vacation trip that will include visits to Japan, Hong Kong, Taiwan and Honolulu. A highlight of her trip will be a visit with her brother-in-law, Father Joseph Finnerty, a missionary priest stationed in Tokyo.

### From the Mailbag

Dear Doctors, Nurses and all on Babies 2:

This letter should have been written months ago—and, we apologize for the delay.

Understandably, you will not remember us—but, we will never forget you.

Enclosed is a photo of our son. Eight months ago, on August 27, 1968, he was born in Newburgh, New York. Several hours later he took an ambulance ride to Babies Hospital—a very sick little boy. For us, his parents, it was a long two weeks, for we'd been this route twice before in a different part of the world, and with negative results. The words "Babies Hospital" hold some magic, though—and we felt sure all would be well. Surely, our son could not have been at a better place.

We shall always be filled with love and gratitude for all of your help. Truly, with God's help, you work miracles—and, we have living proof! Your skill and patience will forever be appreciated more than you can know.

We thank God—and we thank you.

Sincerely,

The parents of a recent patient at Babies Hospital.

## IN MEMORIAM

### Mrs. Uma Reddy Prasad

Mrs. Uma Reddy Prasad, social worker assigned to the Medical Staff, died on April 18 as a result of injuries sustained in an automobile accident in Pennsylvania. Mrs. Prasad was 29 years old.

Mrs. Prasad, who was from India, joined the staff in October, 1967. She was a graduate of Nizam College and the Madras School of Social Work, and had further training at McGill University and University of California.

Mrs. Prasad's professional experience began as a member of the staff of the Family Planning Clinic in the Railway Hospital in Madras, India. Later she served on the social work staff in the Douglas Hospital in Montreal, Canada,

and later as a member of the staff of the Homemaker Service of San Francisco, California, where she was case work supervisor of the Home Health Aides.

In November, 1968, Mrs. Prasad, then Miss Reddy, was married to Mr. Kumar Prasad.

The funeral service, held on April 20, was attended by many of Mrs. Prasad's friends from the Medical Center. Mrs. Prasad was a dedicated social worker, and a warm, sensitive human being. All who knew her are deeply saddened by her untimely death.

On Tuesday, April 29, at noon, a memorial service was conducted by Reverend Robert B. Reeves, Jr., in the Pauline A. Hartford Memorial Chapel.

**NURSES' CONVOCATION:** In a short but meaningful ceremony, twenty-one nurses of the class of 1969 received their pins at a Convocation held in the Pauline A. Hartford Memorial Chapel on Friday, May 16. Mary I. Crawford, Associate Dean of the School of Nursing, presided over the program. The main graduation ceremony of 1969 will occur in August.

**THE WELCOMING PARTY FOR NEW STAFF NURSES,** held in Harkness Hall Recreation Room on May 20, was a friendly, informal event for the nurses who have joined the hospital staff in recent months. There are 142 newcomers, including seven "Exchange Visitors." The party was attended by more than 100 guests.

# Stethoscopia

## • ENGAGEMENTS

Joan Whelan of the Fund Raising Department was engaged in April to Michael Farrelly.

Linda B. Howells is engaged to Daniel E. Hadrava. Miss Howells is the daughter of Donald Howells, Manager of the Data Processing Department, and Barbara Howells, secretary to Dr. William A. Bauman, Director of Medical Data Processing. Mr. Hadrava is presently serving in the Navy.

## • MARRIAGES

Carol Lynn Friedman and Robert Bruce Armstrong were married on June 1. The new Mrs. Armstrong is the daughter of Dr. Arnold P. Friedman, Clinical Professor of Neurology at P&S. Mr. and Mrs. Armstrong plan to attend the College of Physicians and Surgeons in September.

Margaret Mullane, Assistant Supervisor of Medical Information, was married to Daniel O'Connor on May 3. The couple plan to honeymoon in Florida.

Dr. Kathleen B. Agayoff and Dr. James Lowell Barzun were married on May 17. Dr. Barzun is a graduate of P&S, and a resident in medicine at St. Luke's Hospital. Dr. Agayoff is a resident in psychiatry at the Payne-Whitney Clinic of the New York Hospital-Cornell Medical Center.

## • BIRTHS

Mr. and Mrs. Steven Lannon welcomed their first child, a girl, on May 5. Mrs. Lannon is a medical secretary in the Medical Information Department.

Mr. and Mrs. John Wazny are the proud parents of John, their second child, born on April 23. Mr. Wazny is an IBM programmer at the Medical Center.

Mrs. June Rutkowsky, Open Heart Coordinator in the Blood Bank, welcomed her third grandchild, Karen Beth, on April 28.

Mrs. Kathleen Quigley, secretary in the Clinic Administration Office, is the proud grandmother of a grandson born on Mother's Day.

## • CONGRATULATIONS

Mrs. Betsy Koenigsberg has been a volunteer at the Information Desk on the first floor of Vanderbilt Clinic since November 1955, putting in 5,132 hours over this period of time. Mrs. Koenigsberg has been very faithful about coming to work every Monday—our busiest day—and the Staff of Vanderbilt Clinic wishes to congratulate her and thank her for her faithfulness in this volunteer work.

## • WELCOME

To Blood Bank nurse Roberta McCaffray.

## • FAREWELL

To Blood Bank nurse Betty Ferguson.

## • CONDOLENCES

Condolences to the relatives of Laura Marie Orth, whose mother died April 12. Miss Orth is secretary to the Unit Manager of Babies Hospital.

## DOINGS OF DOCTORS

DR. VIOLA W. BERNARD, Clinical Professor of Psychiatry, who for the past fourteen years has been Director of the Division of Community and Social Psychiatry in the Department of Psychiatry and the School of Public Health and Administrative Medicine, has announced her resignation from this post effective August 31, 1969, in order to concentrate more fully on other academic activities of her professorship. In addition to continued teaching, Dr. Bernard will devote more time to her ongoing investigations of psychosocial dynamics of family planning, child bearing, and family development at the Family Development Research Unit of this Division. A dinner in her honor, attended by faculty, students, and alumni as well as by many friends and associates was held on May 16 at the Hotel Delmonico.

DR. DAVID H. BAKER, Director of Radiology at Babies Hospital and Professor of Radiology, P&S, spoke on "Urinary Tract Anomalies in Relation to Other Congenital Anomalies" and participated in a panel on Genitourinary Radiology at the Albert Einstein College of Medicine on May 12. Dr. Baker attended the Annual Meeting of the Association of University Radiologists in San Francisco, May 7-10. He will also be host to the John Caffey Society meeting to be held at Presbyterian Hospital, June 19-21. Dr. Caffey is the former Director of Radiology at Babies Hospital.

DR. GEORGE R. MERRIAM, JR., Attending Ophthalmologist at the Institute of Ophthalmology and Associate Professor of Clinical Ophthalmology, P&S, presented "The Diagnosis and Management of Lesions of the Lids" and "The Diagnosis and Therapy of Orbital Lesions" at the Memphis Eye, Ear, Nose and Throat Convention on March 8-10 in Memphis, Tennessee.

DR. GEORGE F. CRICKLAIR, Professor of Surgery, P&S, and Director of the Plastic Surgery Service, PH, attended the meeting of the American Association of Plastic Surgeons in San Francisco and presented a paper entitled "The Surgical Treatment of Submucous Cleft Palate," co-authored by Dr. Bard Cosman and Dr. Paul Striker. Dr. Cricklair also attended the meeting of the Advisory Committee to the Secretary of Commerce on fabric flammability in Washington, D. C., on May 2.

DR. HANS KAUNITZ, Assistant Attending Physician, Vanderbilt Clinic, and Associate Clinical Professor of Pathology, P&S, and Ruth E. Johnson of the Department of Pathology, P&S, presented a paper with Dr. Mildred Adams of the Human Nutrition Research Division, Agricultural Research Service, U. S. Department of Agriculture, on "Pesticide Effect on Thyroids of Rats on Marginal Iodine Intake" before the 53rd Annual Meeting of the Federation of American Societies for Experimental Biology in Atlantic City on April 16.

DR. JULIUS TARSHIS, Associate Clinical Professor of Orthodontics, D&O, will be giving a three-day course, June 30—July 3, at the University of Puerto Rico, for General Practitioners of South and Central America. The subject will be "Preventive and Interceptive Orthodontics."

DR. WILLIAM B. SEAMAN, Director of the Radiological Service, PH, and Professor of Radiology, P&S, gave the Kirklen-Welser Memorial Lecture at the Mayo Clinic, Rochester, Minnesota, in April.

DR. DANIEL C. BAKER, JR., Director of the Otolaryngological Service, PH, and Professor and Chairman, Department of Otolaryngology, P&S, presented the Leroy Schall Memorial Lecture at the New England Otolological Society in Boston, Massachusetts, on April 29. His topic was "Cancer of the Larynx." Dr. Baker was also a participant in a Workshop on Communication Disorders at the National Institute of Health, National Institute of Neurological Diseases and Stroke, on April 16 and 17.

DR. MORTON S. BROD, Assistant Clinical Professor of Dentistry, D&O, will spend two weeks on a dental mission to the island of Anguilla. Dr. Brod will be caring for the island's 6,000 inhabitants from a mobile medical and dental unit. The island has no dentist and only one physician. He will be accompanied by his wife, Anne Bigelow Brod, a 1952 graduate from The Presbyterian Hospital Nursing School.

DR. LESTER C. MARK, Attending Anesthesiologist, PH, and Professor of Anesthesiology, P&S, has been selected for inclusion in *Who's Who in America* (Volume 36).

Dr. Mark

Dr. Chargaff

DR. ERWIN CHARGAFF, Professor of Biochemistry, P&S, has been invited to give the F. Miescher Lecture in Basel, Switzerland, on May 30, to celebrate the hundredth anniversary of the discovery of DNA. Professor Chargaff has also been invited to the University of Tübingen later in the year to deliver a lecture at, and to be chairman of, the Miescher Colloquium where the hundredth anniversary of the discovery of DNA by Miescher and of RNA by Hoppe-Seyler will be observed.

DR. GUY D. POTTER, Assistant Attending Radiologist, PH X-Ray Department, and Assistant Professor of Radiology, P&S, presented a paper on "The Pterygopalatine Fossa and Canal" before the Association of University Radiologists in San Francisco, May 9. Dr. Potter has been appointed an Expert Examiner in Roentgenology for The City of New York. On April 23, Dr. Potter presented a paper on "Anatomic and Radiographic Analysis of the Optic Canal and Orbital Apex," before the Association for Research in Ophthalmology in Sarasota, Florida. Dr. Potter also spoke on "Pathology and Radiographic Visualization of the Pterygopalatine Canal and Fossa" before the Spring Conference of the New York Roentgen Society on April 25.

DR. KARLIS ADAMSONS, Associate Professor of Obstetrics and Gynecology, P&S, participated in the International Symposium on Cause and Prevention of Perinatal Mortality, sponsored by the National Institute of Child Health and Human Development on April 16-18 in Washington, D. C. On April 29 he was a member of the "Meet the Press" panel on "Why Infants Die," organized by the National Institutes of Health in Atlantic City, as a preview of the Annual Meeting of the American Pediatrics Society.

The Medical Society of the State of New York recently presented the state's eleven medical schools with checks totalling \$53,255.50 as part of the seventh annual American Medical Association Education and Research Foundation program in support of medical education. In the above photo, Dr. Walter Scott Walls, left, president-elect of the Medical Society of the State of New York, presents one of the checks to Dr. H. Houston Merritt, Dean, Columbia University's College of Physicians and Surgeons.

The program funds result from donations by thousands of interested physicians, women's auxiliaries and other benefactors. Dr. Walls noted that less than 20 per cent of the cost of a medical education is covered by tuition; he spoke of these awards as an "encouragement to our colleagues of tomorrow."

# The Stethoscope

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIV, No. 7

JULY, 1969

## GRADUATION CEREMONY FOR P&S CLASS OF '69

The Columbia University College of Physicians and Surgeons awarded the degree of Doctor of Medicine to 117 members of the Class of 1969 on Tuesday, June 3. Dr. H. Houston Merritt, Dean of the Faculty of Medicine, administered the Hippocratic Oath to the graduates at the main graduation exercises, held at Columbia's Morningside Campus.

The graduates received their diplomas at a ceremony held in the Medical Center garden at 6:00 p.m. The Invocation was given by Reverend Edwin M. Barton, B.D., Director of Student Activities at the College of Physicians and Surgeons. Dr. George A. Perera, Associate Dean of the Faculty of Medicine, extended the Class Greeting. The Commencement Address was given by Dr. George H. Humphreys, II, retiring Valentine Mott

Professor of Surgery, P&S, and Director of the Surgical Service, PH.

In his address, Dr. Humphreys discussed changes in the physician's role that have been brought about by increased scientific understanding, and the implications of these changes for the relationship between a doctor and his patients:

"The miracles of medicine, all too vividly displayed in daily communications media, have produced unwarranted

hopes, bitter disillusion, and irrational demand. There is conviction that the fruits of science are unduly restricted and suspicion that this restriction is due to sinister self-interest of the privileged at the expense of the needs, and in violation of the rights of the mass. Young idealists outside, and increasingly within the profession, decry the pursuit of excellence, and proclaim the right of all to equal care, however bad.

"As doctors, responsibility

for your every act as it affects your patient's health, or even life, is inescapable. So you must retain control of yourself and your actions. In doing so, your patient will recognize your authority, give you control, and hold you responsible. But responsibility also implies responsiveness.

You must recognize and respond to his real needs as well as recognize and treat his illness. If, on the other hand, he rejects your authority and seeks to control you, you cannot accept responsibility and must refuse to care for him.

"It will be your task, far

### AMERICAN CANCER SOCIETY AWARD TO DR. OSSERMAN

Dr. Osserman

The American Cancer Society has awarded a lifetime Research Professorship to Dr. Elliott F. Osserman at Columbia University, effective July 1. The announcement was made jointly this week by Dr. Sidney Farber, President of the American Cancer Society, and Andrew W. Cordier, Acting President of Columbia University.

The Research Professorship is the highest award made by

### Graduation for D&O Class of '69

Graduation exercises for the Columbia University School of Dental and Oral Surgery were held on Wednesday, June 4, in the Alumni Auditorium. Dean Melvin L. Moss presided. Following the Invocation, given by the Reverend Robert B. Reeves, Jr., awards of achievement were presented to 11 of the 23 members of the graduating class.

Dr. Michael Alan Rubin received the Rowe-Wiberg Medal, presented by Professor John J. Lucca, and the Award of the International College of Dentists—United States Section, presented by Professor Sidney L. Horowitz.

The Van Woert Award was given for the first time to two students, Dr. Allan B. Klein and Dr. Allen J. Pintoff. The award was presented by Dr. Alexander N. Lifschutz.

Dr. Berill Gershun Goodkin was awarded the Prize for Excellence in Operative Dentistry, presented by Professor Ed-

ward A. Cain, Jr., and the Alpha Omega Fraternity Prize, presented by Mr. Steven J. Peiser.

Dr. Donald Francis Snow received the Certificate for Excellence in Pedodontics, presented by Professor Solomon N. Rosenstein.

Dr. David James Zegarelli was presented the Ella Marie Ewell Medal by Professor Edward V. Zegarelli.

Dr. Austin Irving Mehrhof, Jr., received the Psi Omega Fraternity Award, presented by Mr. Dennis N. Morea.

Dr. Ephraim Elliott Shulman received the William Bailey Dunning Medal, presented by Professor George L. O'Grady.

Omicron Kappa Upsilon Keys were presented by Professor T. Mitchell Bundrant to Dr. Berill G. Goodkin, Dr. Allen J. Pintoff, and Dr. Michael A. Rubin.

The diplomas were presented by Dean Melvin L. Moss.

### FOUR RECEIVE MASTER'S DEGREES UNDER NEW PROGRAM FOR NURSES

MASTER'S DEGREES for these nursing students. Left to right, Patricia A. Kane, Mary L. Knipe, Gretchen C. Camp, Catherine V. Cyrus.

Four nursing students have received M.S. degrees for the completion of their studies in the Psychiatric Community Mental Health Program, the first group to graduate from this new program under the Department of Nursing, Faculty of Medicine, Columbia University.

The graduating students are Gretchen C. Camp, Cortland, New York; Catherine V. Cyrus, Milwaukee, Wisconsin;

Patricia A. Kane, Springfield, Mass.; Mary L. Knipe, Everett, Washington.

Graduation exercises were held at the Faculty Club on Tuesday afternoon, June 3, following the Columbia University Commencement.

The Director of the Psychiatric Community Mental Health Program is Anne Earle, who received her Doctor's Degree from New York University.

## P&S DEGREES . . .

Continued from page one

more than it has ever been ours, to find those authentic voices that can truly show their authority to speak for the people you are asked to care for, and who will take full responsibility for the controls that are rightfully theirs. These are the controls of facilities for care, and of the means of financing costs. They must be responsive to your needs in these matters. And you must be responsive to them in taking responsibility for the controls you cannot relinquish—the actual management of care, and control of its quality.”

Dean Merritt awarded prizes and diplomas. The prize winners were:

**Walter Winchester Prize:** Glenda Josephine Garvey, New York, New York.

**Alumni Association Senior Student Award:** Leland George Dobbs, Washington, D. C.

**Joseph Garrison Parker Award:** Jerome Harvey Liebowitz, Fairlawn, New Jersey.

**Borden Undergraduate Research Award:** Neil Barton Kavey, Scarsdale, New York.

**William Perry Watson Prize in Pediatrics:** Dorothy Ann Rollefson, Madison, Wisconsin.

**Helen M. Sciarra Prize in Neurology:** Laurance Jacobius Guido, Great Neck, New York.

**Alvin Behrens Memorial Prize in Ophthalmology:** William Edmunds Benson, Waterbury, Connecticut.

**Urology Prize:** William Sherwood Abernathy, Omaha, Nebraska; Jeffrey Robert Fisher, Birmingham, Michigan; Walter H. Stingle, New York, New York.

**IN GARDEN SETTING,** Dr. George H. Humphreys, II, delivers commencement address. Seated, left to right: Reverend Edwin M. Barton, Dr. Willard Rappleye, Dr. Robert Elliott, Jr., Dr. Douglas Damrosch, Dean H. Houston Merritt, Dr. George A. Perera, Mrs. Eileen H. Daly, Dr. Melvin Yahr, (Dr. Aura Severinghaus, Dr. Shirley Fisk).

## Award For Film From Babies Hospital

“Robin, Peter, and Darryl: Three to the Hospital,” a teaching film developed by the faculty of the Department of Nursing, has won a Golden Eagle award from the Council for International Non-theatrical Events (C.I.N.E.), a national organization that reviews new non-theatrical film productions and gives awards for excellence. The Golden Eagle is C.I.N.E.’s highest award, and winning it entitles “Robin, Peter, and Darryl” to be shown at international film festivals.

“Robin, Peter, and Darryl” was produced and directed by

Phyllis Johnson for George C. Stoney Associates. It was filmed at Babies Hospital, its premiere performance was held on December 10 in the Alumni Auditorium of P&S (see *Stethoscope*, February, 1969).

## FATHER VINCI LEAVING, FATHER BECKER ARRIVES

The Rev. Guy S. Vinci, Catholic Chaplain at PH, who was appointed in 1964, has been assigned to the parish of the Church of the Immaculate Conception at 414 East 14 Street, New York City.

Father Vinci became interested in the chaplaincy to the sick many years ago and, in fact, volunteered his services

at Bellevue Hospital and Montefiore Hospital for five years before his appointment as full-time chaplain here at the Medical Center.

Father Vinci participated in a training program for student seminarians during July and August of 1966 to acquaint these young men with the unique and sometimes unusual aspects of a hospital priestly practice. The summer student chaplains’ training program was under the direction of Chaplain Robert B. Reeves, Jr.

Father Vinci thoroughly enjoyed his chaplaincy here at PH and said, “I only wish I could have been here forever, but as a parish priest I also feel I am needed in parish work.”

Father Frederick Becker will be replacing Father Vinci. The Rev. Frederick Becker

has been appointed Catholic Chaplain at The Presbyterian Hospital and celebrated his first Mass on Sunday, June 8.

Like his predecessor, Father Guy Vinci, Father Becker has devoted much of his time as a volunteer—at the Lincoln Hospital from 1959 to 1960 and at the Mount Vernon Hospital from 1967 to 1969—bringing the chaplaincy to the sick.

Father Becker is 35 years of age. He entered St. Joseph’s Seminary in 1953 and was or-

dered at Saint Patrick’s Cathedral in 1959. He then undertook an intensive three-month study of the language and customs of the island of Puerto Rico at the Catholic University at Ponce.

From 1960 to 1965 he was

full-time chaplain at the Bronx Municipal Hospital Center.

Father Becker said, “I hope I may be of some use and comfort to the patients in their time of need and I am looking forward to getting to know many others at the Hospital.”

Rev. Vinci

Rev. Becker

## New Lab Directory For Presbyterian

The Presbyterian Hospital’s Laboratory Directory, published by Professional Services, is gaining the reputation of a collector’s item only days after the distribution of its first and only scheduled printing of 600 copies.

Designed primarily as an aid to newly assigned interns and nurses, the handsomely bound, 257-page loose-leaf book is sought after not only as a guide to the Medical Center’s 65 laboratories and other diagnostic facilities but also as a primer of laboratory procedure in general.

Copies of the directory have been deposited at clinic stations, nurses’ stations, in laboratories and unit managers’ offices, at information desks, and in all 75 suites of Atchley Pavilion.

Encyclopedic and yet concise, the book gives directions and telephone extensions to all laboratories, describes the preparation of patients, outlines both general and specific instructions for all procedures as well as for the storage of specimens, and lists abbreviations for all procedures commonly used in laboratory practice.

The directory was compiled by Mrs. Winifred Bennett in two and a half years of yeoman’s work of visiting laboratories all over the Medical Center and gathering data. Mrs. Bennett praised laboratory directors and supervisors for their help and cooperation.

The directory vividly illustrates the proliferation of medical specialties and procedures: the previous directory, published eight years ago, was only 89 pages long. Because of further anticipated diversification in medicine, space has been left between the directory’s covers to accommodate about 100 additional pages.

## Seeing Eye Gift Converts Area For Research

Hospital observation domes—gazed through by generations of medical students—are losing the struggle for survival to the TV camera. Today fantastic closeups of surgical procedures can be repeatedly shown to medical classes on videotape. Furthermore the ecological niche of observation

domes—just above the operating room—is often required for urgent research projects.

Such is the case with the observation dome in the Eye Institute of Columbia-Presbyterian Medical Center. Now that videotape can record the minutest details of eye operations, the gallery above the

Eye Institute's operating room has become superfluous. The Institute has announced that the area will be converted to a specialized laboratory for basic and applied research on retinoblastoma, a highly malignant congenital tumor of the light sensitive tissue in the eye.

The conversion of the new desolate gallery on the Institute's eighth floor to a humming research area was made possible by a \$50,000 grant from The Seeing Eye, Inc., America's pioneer dog guide organization.

The donation will enable the Eye Institute scientists to expand their research in two directions. Of immediate and practical value will be the study of the effect of various drugs and of radiation therapy on tumor cells.

A second major dimension of research on retinoblastoma proposed for the new facility will deal with the body's immunological reaction to tumor cells, more particularly, with the role of antibodies in spontaneous regression. This line

Made redundant by videotape, observation dome above Eye Institute's operating room faces gentle demolition by (from left) Thomas Duffy, Carmine Dolce and Aldo Armati of Maintenance & Construction Department. The area will be converted to modern research laboratory, underwritten by Seeing Eye, Inc.

of inquiry has potential implications for other types of cancer.

Dr. Algernon Reese and Dr. Robert Ellsworth are directing

the Clinical work, and Dr. David Kitchin is directing the research projects. The conversion will start shortly and is estimated to take three months.

## DR. OSSERMAN . . .

*Continued from page one*

the American Cancer Society and was created for experienced, exceptional investigators with an unusual capacity for productive, scientific work who, for the major portion of their time under this award, will be able to conduct research on some aspect of the cancer problem for the rest of their scientific lifetime or until the cancer problem is solved.

Dr. Osserman is Professor of Pathology (Immunology and Oncology) and Associate Director of the Institute of Cancer Research of the College of Physicians and Surgeons. His offices and laboratories are in the Francis Delafield Hospital at Columbia-Presbyterian Medical Center in New York City.

Dr. Osserman was graduated from Columbia University's College of Physicians and Surgeons in 1947, following which he served his internship and residency on the Medical Service of the Presbyterian Hospital with Dr. Robert Loeb. After three years in Bethesda at the Naval Medical Research Institute, he returned to Delafield Hospital in 1952 to complete his specialty training in medical oncology (cancer) with Dr. Alfred Gellhorn. He continued in the Department of Medicine until 1968 when he became Professor of Pathology.

### NARCOTIC CONTROL

"A narcotic addict," according to New York State Law, is "... a person who is ... dependent upon opium, heroin, morphine, or any derivative or synthetic drug of that group (drugs made from opium) or who by ... the repeated use of any such drug is in imminent danger of becoming dependent."

The Upper Manhattan Council on Drug Prevention recently presented a special program by the New York State Narcotic Control Commission, open to the public, in the P&S Auditorium. Dr. Christopher Terrence, Vice President of the Commission, spoke and a film was shown.

Co-sponsor of the program was the Community Narcotic Education Center. Address of both of the sponsoring organizations is: 25 West 125th Street, New York City.

Since 1952 Dr. Osserman has been carrying out both clinical and biochemical investigations of a specific type of cancer known as multiple myeloma. In this disease there are profound abnormalities in the blood gamma globulins which normally function as protective antibodies.

In a related area of research, Dr. Osserman discovered in 1966 that patients suffering from a certain form of leukemia known as monocytic leukemia excreted very large quantities of enzyme lysozyme, in their urine. This has now been shown to be a specific and very useful diagnostic test for this form of leukemia. This discovery also made possible detailed biochemical studies of lysozyme, and in 1967 Dr. Osserman succeeded in crystallizing this enzyme. This made crystallographic analyses possible, and these studies are being carried on at Oxford University, in cooperation with Dr. Osserman.

In his laboratories, overlooking the Hudson River, the casual visitor senses the excitement of this world of research. The members of Dr. Osserman's professional and technical staffs are highly selected and work very closely as a team. Each year three to five doctors share in Dr. Osserman's research, and many P&S students participate during their elective research periods. "These men who have come through this laboratory," Dr. Osserman said in a recent interview, "are now pretty well scattered over the world—in Europe, Canada, the Middle East, Japan, Australia." Photos of some of these adorn the walls of the office.

For the past several years Dr. Osserman's research has been supported by grants from the National Institutes of Health and the American Cancer Society. He has served on several national scientific advisory committees and is a member of numerous scientific societies. For the past two years he has been secretary of the Harvey Society.

The American Cancer Society's grant for a lifetime professorship will ensure continuance of this vital research.

Mrs. Osserman is a graduate of the Columbia School of Occupational Therapy and is presently supervising a psychiatric program at the Hackensack Hospital. The Ossermans have three children, Pamela, age 18, who is a fresh-

The Institute of Cancer Research of Columbia University was established in 1909 with funds bequeathed to the University by George Crocker, a western railroad magnate.

In 1909 a three-story building was erected by the University at 116th Street and Amsterdam Avenue, and Professor Francis Carter Wood (1869-1951) was appointed the first director of the "Crocker Institute" in 1912. The initial group of investigators numbered only six, but they pursued a broad integrated approach to cancer from the very first. In 1938 the Cancer Institute moved to two floors of the College of Physicians and Surgeons at 168th Street.

Following Dr. Wood's retirement in 1940, Professor William Woglom (1879-1953) was Acting Chairman of the Department of Cancer Research until his own retirement in 1946. In 1949, the Institute of Cancer Research was reconstituted under a coordinating committee headed first by Professor Cushman D. Haagen of the Department of Surgery. In 1952 Professor Alfred Gellhorn of the Department of Medicine became the Director of the Institute of Cancer Research and also of

man at Sarah Lawrence and a serious ballet dancer, Douglas, 16, a junior at Horace Mann and primarily interested in Renaissance Art and Music, and Deborah, age 13, at the Dwight School and Art Students League. The Ossermans live in Closter, New Jersey.

## How the Institute of Cancer Research Began

Crystals of human lysozyme chloride. Lysozyme isolated from the urine of patients with monocytic leukemia and crystallized from a 5 percent solution of NaCl at pH 10.5 24 hours at 9° C. The largest crystals are 1.3 millimeters long. Photomicrograph by Lewis W. Koster, R.B.P., FBPA. (Elliott F. Osserman, Columbia College of Physicians and Surgeons, New York, N. Y.)

the Medical Service of the Francis Delafield Hospital. This 300-bed hospital, devoted primarily to the care of patients with cancer, was built by the City of New York on land donated by Presbyterian Hospital at 163rd Street and Fort Washington Avenue, and was dedicated in 1950. The hospital was named after Dr. Francis Delafield who was Professor of Medicine and Pathology at the College of Physicians and Surgeons from 1882 to 1901 and an outstanding contributor to medical research and teaching. The Francis Delafield Hospital quickly became the center of clinical and experimental cancer research

at P&S. In 1967, a five-story research wing was added to the Delafield Hospital enabling the consolidation of all the laboratories of the Institute of Cancer Research in one building.

Among the fundamental contributions made by investigators in the Institute of Cancer Research in recent years were the elucidation of the blood protein abnormalities in multiple myeloma and related diseases, discovery of the lysozyme abnormality in monocytic leukemia, elucidation of induced enzyme formation mechanisms, detailed clinical studies of cancer of the breast, investigations of the universality of the genetic code in tumor tissues, and clarification of the mechanisms responsible for the anemia of cancer.

In 1968 Professor Gellhorn left to become Dean of the School of Medicine of the University of Pennsylvania. Dr. Jacob Furth, Emeritus Professor of Pathology, served as Acting Director until July 1969 when Professor Sol Spiegelman was appointed Director of the Institute of Cancer Research and Professor of Genetics. Professor Spiegelman is a world-renowned molecular biologist whose primary studies concern the mechanisms of RNA replication in bacteria and viruses. It is anticipated that the knowledge obtained from these basic studies can now be utilized to further understanding of the fundamental underlying chemical and cellular abnormalities responsible for the abnormal growth of cancer.

# John A. Hartford Gift For Argon Laser Lab

The argon laser laboratory of the Eye Institute has received a grant of \$71,560 from the John A. Hartford Foundation, Inc., for the continuation of its work in the treatment of vascular eye disease. Buttressed by this two-year extension of support, the laser laboratory now stands on the threshold of exciting campaigns in new fields of ophthalmic surgery. The latest grant has been jointly announced by the John A. Hartford Foundation and the Presbyterian Hospital. The Foundation had previously contributed more than \$259,000 to further the application of argon laser photocoagulation to vascular eye disease.

Sponsored by the Foundation, an extremely powerful 10-watt argon laser became the first parallel-light device on February 14, 1968, to be used in a surgical procedure within a human organ when it cauterized abnormal blood vessels on the iris of an eight-year-old girl.

Many photocoagulations of blood vessels in the eye have been done since that historic day, most of them to attempt to control the degeneration of the light sensitive retinal tissue in the eyes of diabetics. The Eye Institute has maintained follow-up studies on these patients to evaluate the effectiveness of laser photocoagulation on diseased blood vessels in the eye. Thanks to the cross-fertilization of ideas from many people in many sciences, significant improvements have been made in the lasers.

As a result of unqualified success in this arcane field at the Eye Institute, argon laser centers have been set up in other major cities, with the assistance of Dr. Francis A. L'Esperance, Jr., Assistant Attending Ophthalmologist and Director of the laser lab here.

It was the research and clinical work of Dr. L'Esperance and his staff that established the great advantages of using argon, an inert gas, for laser photocoagulation of vascular abnormalities in the eye. Argon radiation is absorbed by blood twelve times more effectively than any other acceptable laser emission. This high absorption of argon light by blood permits the blood to be coagulated within the vessel without extensive damage to surrounding tissue; it permits fragile vessels to be cauterized with much less energy transmitted through the delicate central portions of the eye.

The funds supplied by the John A. Hartford Foundation, Inc., has enabled the laser laboratory to construct a mobile three-watt argon laser with the assistance of the Bell Telephone Laboratories in Murray Hill, N. J. Another moveable laser—a six-watt unit—has been developed for the inves-

Argon laser photocoagulation (upper right) of subretinal hemorrhage caused by choroiditis (arrow upper left). The coagulation zones are seen by fluorescein angiography (lower left), and regular photography three weeks after photocoagulation when the patient's vision had returned to 20/20 from the pre-treatment level of 20/50. These fine pictures of the retina were taken with a Zeiss fundus camera.

tigation of ophthalmic surgical procedures requiring actual incisions of tissue.

Giving lasers a wheel base will permit their use in operating rooms for surgical interventions requiring sterile procedures, such as the excision of tumors and coagulation of bleeding vessels in the iris or the choroid, the middle membrane surrounding the eyeball.

The minimum diameter of the laser beams presently in use is about 40 microns, or 1/625 of an inch. Photocoagulations created by such a beam would be many times smaller than those done by any other method. For the minute structures of the eye, the narrowest possible beam is also the most desirable.

It is possible to produce such a narrow beam and keep it from spreading because laser light is basically different from all other lights. Light—whether produced by electric bulbs, projectors or emissions from the sun—travels in waves. These waves are uncontrolled, however, and stream in various directions, like masses of people leaving a sports stadium. Laser waves, on the other hand, are all identical, perfectly parallel to each other, and move in unison, like pedals on a tandem bicycle.

In the argon laser, the trick of making light waves move in unison, or "in phase," is accomplished by passing an electric discharge through a pencil-thin 60-inch-long tube filled with argon gas. Neutral argon atoms are thus charged to an energized state and are then called ions. Since the nature of matter is to return to its normal state, the ions immediately sink to their previous neutral level. However, if the energized ion can be struck with a particle of light

—a photon—the ion will be stimulated to release its energy in the form of a photon which is the exact twin of the photon that hit it. These photons maintain parallel paths to each other and travel inside the tube. The ends of the tube are blocked, however, with specially coated mirrors. Traveling at the speed of light, photons are reflected back into the tube, where they excite more energized ions to emit more photons. A kind of chain reaction ensues that would immediately burn through the mirrors if it weren't for the partial transmission of one of the mirrors that allows part of the highly powerful beam to escape. In the case of the argon laser, the beam is in the visible part of the spectrum and appears as a bluish light.

The process was originally called "light amplification by the stimulated emission of radiation," or l-a-s-e-r for short.

Since the discovery of the laser principle nine years ago, one of the two major problems encountered in medicine has been to neutralize the overwhelming heat generated by this amplification. The Eye Institute's 10-watt laser is cooled by a water jacket that circulates five gallons of water at a pressure of 100 pounds per square inch.

The other problem, peculiar to medical lasers, was to develop a precise technical means of prefocusing and then delivering the beam of searing light in the exact microscopic spot in the patient's eye. The importance of prefocusing can be appreciated from the fact that the duration of each laser treatment is measured in fractions of one thousandth of a second. The Eye Institute, in collaboration with the Bell Telephone Laboratories, has developed a robotlike arm contain-

## Pediatrics Dept. Holds Course on Aspiration

The Pediatric Department of Columbia University College of Physicians and Surgeons and the Pediatric Pulmonary Disease Center, Babies Hospital, presented a symposium on "Problems of Recurrent Aspiration in Infants and Children" on Wednesday, June 4, in the P&S Alumni Auditorium. The symposium was offered to pediatricians, surgeons, dental surgeons, and radiologists.

Dr. Martin I. Lifschitz, Associate in Pediatrics, P&S, and Program Coordinator of

the Pediatric Pulmonary Disease Center, moderated the symposium and spoke on "General Aspects of Aspiration." Dr. Sidney L. Horowitz, Professor of Dentistry, D&O, spoke on "Anatomical Malformations of the Nose, Mouth, and Pharynx," and Dr. John N. Schullinger, Instructor in Surgery, P&S, spoke on "Special Problems of Tracheo-Esophageal Fistulas." Dr. James F. Bosma, Chief, Oral and Pharyngeal Development Section, National Institute of Dental Research, Bethesda, Maryland, presented "Oral-Pharyngeal Dysphasia in Infants and Children." Dr. Ralph E. Moloshok, Clinical Professor of Pediatrics at Mount Sinai Hospital, spoke on "Dysautonomia."

### POSTSCRIPT TO P&S ALUMNI DAY

At the morning program of P&S Alumni Day, May 3, these papers were presented by alumni from various parts of the country:

"Nuclear Medicine"—Jack Davidson, '43D, Chief, Nuclear Medicine, N.I.H.

"Emphysema 1969"—Anne Logan Davis, '49, Associate Professor of Clinical Medicine, New York University School of Medicine.

"Cerebral Circulation and CSF pH in Respiratory Alkalosis"—John W. Severinghaus, '49, Professor of Anesthesiology, University of California School of Medicine, San Francisco.

"Office Treatment of Heroin Addicts"—William W. Field, '43D, Attending in Medicine at Roosevelt Hospital.

"Health Care and Life Styles of People as seen in Watts Health Center"—Elsie A. Giorgi, '49, Medical Director and Coordinator, Watts Family Neighborhood Center.

"Research in Psychiatry"—Kenneth T. Calder, '44, Psychiatrist, New York Psychoanalytic Clinic.

"Respiratory Problems in Head Injuries"—Charles E. Brackett, '44, Professor of Neurosurgery, University of Kansas School of Medicine.

"Recent Advances in Esophageal Surgery"—F. Henry Ellis, Jr., '44, Professor of Surgery, University of Minnesota School of Medicine.

"Valvular Prostheses"—Albert Starr, '49, Professor of Surgery, University of Oregon School of Medicine.

### SUBJECTS WANTED

for psychological experiment. \$3.00 an hour. Ten 2-hour sessions, or to be arranged. Call Bruce Klayman, LO 8-4000, Ext. 281, 10 a.m.—5 p.m., Monday-Friday.

ing a sophisticated system of prisms which conducts the light to a slender handle equipped with a focusing lens. This attachment, called the "light knife," can be used alone to incise tissue or can be coupled to a microscope, enabling the operator to magnify the area that is to receive the beam.

## From the Mailbag

House Staff and Nurses  
Neo-Natal Special Care  
Nursery  
Babies Hospital  
Columbia-Presbyterian  
Hospital

Dear Doctors and Nurses:

My wife and I wish to express our appreciation for the outstanding care and attention you gave our son during those critical, initial hours of his young life.

Your work was admired by myself, as a physician, and by my wife, as a registered nurse. However, your tenderness and concern moved us greatly, as parents.

Although words will never be adequate enough to express our feeling, we wish to say thank you from the bottom of our hearts.

With kindest personal regards.

The father of a recent patient at Babies Hospital.

## In Memoriam

Dr. George Renfrew Brighton

Dr. George Renfrew Brighton, retired otolaryngologist at PH, and former associate professor of Otolaryngology at P&S, died on June 16 at Putnam Memorial Hospital in Bennington, Vermont. He was 69-years-old and lived in Whittingham, Vermont.

Dr. Brighton was born in Jersey City, New Jersey. He received his B.S. from Columbia College in 1921 and his M.D. from P&S in 1924. He was Associate Professor of Otolaryngology here from 1937 to 1951.

He is survived by his wife, the former Dorothy Rosenkrans, a son, G. Renfrew Brighton of Weston, Conn., two daughters, Mrs. James E. Jones of Mount Kisco, New York and Mrs. Hans C. Vitzhum of Chappaqua, New York, and nine grandchildren.

## D. D. Stevens Retiring

Daniel D. Stevens

Daniel D. Stevens, Administrative Assistant, Buildings and Grounds, retired in June.

Born in Baltimore, Maryland, Mr. Stevens received his engineering education at Johns Hopkins University. He is a Registered Professional Engineer in Pennsylvania and holds engineering licenses in Maryland, the District of Columbia and Texas. Just prior to coming to Presbyterian Hospital in 1959 Mr. Stevens worked for ten years as a mechanical engineer for the Statler-Hilton Hotel Corporation.

Mr. Stevens' wife is the former Edyth C. Zimmerman of Baltimore. They have one son, Daniel, Jr., who graduated from Oberlin, B.A., B.Mus. and received his Master's Degree from the University of Wisconsin. Dan is an accomplished pianist and gave a most successful recital at Bard Hall

## CHAPLAINCY PROGRAM

One ordained minister and two seminarians have been assigned to engage in a full-time chaplaincy training program under the supervision of Chaplain Robert B. Reeves, Jr., from June 9 through August 29. The three are Rev. Ralph Bainbridge, Mr. Robert C. Demler, Jr., and Mr. W. Charles Naugle.

Rev. Mr. Bainbridge is Minister of the First Methodist Church of Elmhurst, Long Island, N. Y., and is also part-time chaplain at the Elmhurst General Hospital. He was trained as a chemical engineer and for seven years was chief microscopist for the United States Testing Company. Therefore, at a relatively late age for entering the ministry, he began his studies at the Drew Theological Seminary and was ordained in 1964 to

the Methodist Ministry.

Mr. Demler is beginning his second year at the General Theological Seminary, the Episcopal seminary here in New York. He graduated from the University of Texas and held the rank of Lieutenant, U. S. Navy Aviation, for 4½ years, 1963-1968. After his stint in the Navy, Mr. Demler taught school for one year before entering the Seminary. He will be ordained as a priest in the Episcopal church.

Mr. Naugle was born in Georgia and graduated from Lycoming College in Williamsport, Pennsylvania. He is currently in his third and final year at Union Theological Seminary in New York City. He has held several jobs in both church work and youth centers. For one year prior to entering the seminary he was

From left, Chaplain Reeves, Rev. Bainbridge, Mr. Naugle, Mr. Demler.

a case worker for the New York City Department of Social Services. Mr. Naugle is preparing for ordination in the Methodist ministry.

Chaplain Reeves said that the Presbyterian Hospital has been provisionally accredited as a training center by the Association for Clinical Pastoral Education, a national body that certifies these centers on behalf of theological schools.

The course here spans a 12-week period. The students work full-time and each one is assigned to a ward floor where he is designated chaplain for the Protestant patients and where he confers regularly with members of the staff and with the families of the patients.

The students also meet daily with Chaplain Reeves for seminars at which time they discuss orientation and the mechanics of the course, and then

move over to problems with patients and how to deal with them. Other people from other departments are invited to compare problems. During the 12-week period of study the students will cover many areas of the hospital so that they may have a wide exposure to the multifaceted problems involved in ministering to the sick.

Dr. Lloyd A. Hamilton, Jr., of the Department of Psychiatry, who was associated in these programs for part-time students for eight years, will again be actively cooperating with Chaplain Reeves in this full-time program.

A phrase borrowed from a brochure issued by the sponsoring association best describes how these students feel about their new assignment. "The major teachers in clinical pastoral education are the persons to whom we minister."

this past January.

Mr. Stevens is an enthusiastic golfer and plans to devote a great deal of time to the joyful pursuit of this hobby.

The Stevenses plan to do some traveling and Mrs. Stevens said, "A must is a trip to Salzburg, Austria." Unforeseen circumstances prevented Mr. Stevens from accepting a position in Hawaii, unfortunately, so this plan has been shelved for the time being. Instead, Mr. Stevens and his

wife will take up residence in Silver Spring, Maryland, and future plans will be made from there.

On Friday, June 6, a reception in Harkness Hall was held in Mr. Stevens' honor on the occasion of his retirement. At his side was his charming wife and a host of friends; co-workers and administrators were on hand to bid him a fond farewell and to wish him much luck and happiness in the coming years.

## Medical Emergency Relief For Biafran Children is P&S Club Project

Reverend Edwin M. Barton with a group of new arrivals to Cocody.

Two students at the College of Physicians and Surgeons, James A. Mathers '72 and Arthur D. Hayward '72, are serving as technicians this summer in the Ivory Coast, at medical camps founded by MERCY (Medical Emergency Relief Care for Youth). MERCY, an activity of the P&S Club of the College of Physicians and Surgeons, gives medical support to three medical camps in the Ivory Coast.

Last fall, members of the P&S Club met to discuss what the medical profession could do to help the starving and diseased infant victims of the Bi-

afra-Nigerian conflict. Since December, MERCY has been a reality. Reverend Edwin M. Barton, Director of Student Activities at P&S, is General Director of the program; Dr. Michael Rees, of Peter Bent Brigham Hospital in Boston, is the Medical Director. MERCY operates in conjunction with the government of the Ivory Coast and the Ivory Coast Red Cross. The project is supported by voluntary contributions.

The photographs on this page were taken at Abidjan, capitol of the Ivory Coast, and at Cocody, one of the three medical camps sponsored by

Dr. David Davidson, Assistant Resident in the Department of Surgery, PH, examines a Biafran child.

The DC-3 operated by the Ivory Coast Red Cross and the Order of Malta, a French service organization, unloads the children at Abidjan. From there they will be taken by bus to the medical camps.

MERCY. To date, over 850 children have been flown from Biafra to the camps at Cocody, Bouake, and Grand Bassam. The children are given medical attention, food, and affection by volunteer doctors and nurses

sent over by MERCY. Although most of them are now recovering, the children will remain at the camps until the war is over and they can be returned to their homes and villages.

Because many of the children are orphans, they have learned to take care of each other.

# DOINGS OF DOCTORS

(See also page eight.)

The Eye Research Group at P&S was well represented at the national meeting of the Association for Research in Ophthalmology, held at Sarasota, Florida, April 19-23. DR. GEORGE SMLER organized two symposia, one on "Neuronal Connections in the Retina" with co-chairman Dr. John Dowling of Johns Hopkins University. DR. PAUL WITKOWSKY assisted in its organization, and also contributed his observations on myelinated nerve fibers with most unusual synapses in the retina. The second symposium, on "Methods of Use in Anatomy and Pathology," co-chairman, Dr. Paul Henkin, New York University, was highlighted by a paper given by DR. FRANTISEK VRABEK. Dr. Vrabec is a Visiting Professor in Ophthalmology here at P&S and is Chief of the Clinic at Charles University in Prague, Czechoslovakia. His paper was on "Application of Replica Techniques to Ocular Anatomy."

DR. ABRAHAM SPECTOR, Associate Professor of Ophthalmology, organized the Symposium on "Retinal Pigments" and presented a paper with DR. LU-KU-LI entitled "The Subunits of Alpha Crystallin."

Other papers presented by members of the Department of Ophthalmology Research included "The Ultrastructure of the Corneal Epithelium of the Rat," by DR. IRWIN BEITCH, "The Fine Structure of Regenerating Endothelium and Descemet's Membrane," by DRS. HAJIME INOMATA and GEORGE SMLER, "The Effect of Anticorneal Serum on the Rabbit Cornea," by DRS. W. MANSKI and G. EHRLICH and "The Effect of Prostaglandins on the Intraocular Pressure of the Rabbit and Cat," by DRS. E. A. EAKINS, B. R. BEITCH, and H. EAKINS.

DR. MALCOLM H. SCHVEY, Assistant Attending Otolaryngologist, PH, and Assistant Clinical Professor of Otolaryngology, P&S, presented "Peripheral Facial Paralysis—Electro-

diagnosis and Surgical Timing" to the New Jersey Academy of Ophthalmology and Otolaryngology, on June 14 in Atlantic City.

DR. MEYER M. MELICOW, Given Professor Emeritus of Uropathology, P&S, and DR. JOSHUA BECKER, Chief of Uro-Radiology, Squier Urological Clinic, participated in a two-day Seminar and Panel Discussion on "The Adrenal Gland," April 4-5, held at the College of Medicine of the University of South Florida in Tampa. The Seminar was sponsored by the University's Division of Continuing Medical Education.

At the 94th Annual Meeting of the American Neurological Association held in Los Angeles on June 9-11, DRS. ROGER DUVOISIN, MELVIN YAHRE, and LUCIEN COTE of the Parkinson's Disease Research Group presented a paper on "The Reversal of the Dopa Effect in Parkinsonism by Pyridoxine." DRS. RONALD BRISMAN and ABE CHUTORIAN presented a paper on "Inappropriate ADH Secretion with Unique Features in a Child with a Hypothalamic Glioma." DR. H. HOUSTON MERRITT was elected an Honorary Member of the Association, and DR. MELVIN D. YAHRE was installed as the President for 1969-70.

DR. WILLIAM A. BLANC, Attending Pathologist, PH, Director of Pathology, Babies Hospital, and Professor of Pathology, P&S, was program chairman for the Annual Meeting of the Pediatric Pathology Club held in Boston on April 16-18. Papers were presented by Dr. Blanc, Dr. H. J. Wigger, Assistant Professor of Pathology, P&S, and by Drs. Belinda Bransilver and Jacqueline Bartman, both trainees in Developmental Pathology. Dr. Blanc was also a participant at the National Science Writers Association Seminar, sponsored by the National Institute of Child Health and Development.

## "Some Continuing Problems in the Philosophy of Science"—Coming

Professor Shmuel Sambursky, Eleanor Roosevelt Professor of the History and Philosophy of Science at the Hebrew University of Jerusalem, will give a series of three lectures

early next fall, on the general subject: "Some Continuing Problems in the Philosophy of Science." The second lecture will be held at the College of Physicians and Surgeons; the

first and third at the University.

The subjects of the lectures will be:

1. Wednesday, October 1: "Structure and Periodicity—Centenary of the Discovery of the Periodic Table." At the University.

2. Thursday, October 2: "Causality in Greek Medicine and Physics." At the College of Physicians and Surgeons.

3. Wednesday, October 8: "Freedom of the Will in the Light of Physical Theories." At the University.

Details of time and place will be announced later.

Born in Germany, Professor Sambursky studied in the Universities of Konigsberg and Berlin, taking his doctor's degree in physics in 1923. From 1928 to 1958 he was a member of the Department of Physics in the University of Jerusalem, moving to the Department of the History and Philosophy of Science in 1958. He is a well known and distinguished lecturer, and has been Visiting Professor at Oxford and the University of Heidelberg. He is the author of: *The Physical World of the Greeks; Physics of the Stoics; The Physical World of Late Antiquity.*

## Movie Makers Bring Questions to Dr. Crikelair

WHAT IS A BURN? WHAT ARE BURN SCARS? HOW CAN WE PORTRAY THEM IN A MOVIE? Such questions as these were answered by Dr. George Crikelair (at left in photo), Professor of Surgery and Director of Plastic Surgery Service, for Mr. Otto Preminger during the noted producer's recent visit to the Medical Center.

Mr. Preminger is directing the movie "Tell Me That You Love Me, Junie Moon," based on the best-selling novel written by Marjorie Kellogg, a teaching associate in the Department of Rehabilitation Medicine, P&S (standing with Mr. Preminger in photo). The novel told a touching story of the growth and maturing of three handicapped patients, one of whom had been disfigured by a burn (See November 1968 STETHOSCOPE). Miss Kellogg also wrote the movie script. Accompanying Mr. Preminger on his visit with Dr. Crikelair were (from right) Mr. Eddie Senz, the makeup artist, his assistant Erik Kirkland, and actress Liza Minelli, who will play the female lead role.

## DAUGHTERS OF PENELOPE PRESENT GIFT

DAUGHTERS OF PENELOPE present a check of \$2,500 to Dr. Robert E. Barrett, Assistant Neurologist, Presbyterian Hospital, and Research Associate, P&S. The presentation is made by Daughters of Penelope's Grand President, Mrs. Alice Damaskos, of Gary, Indiana. Others witnessing the event are (from left) National Chairman Mary Georgiou, Brooklyn; Grand Vice President Mrs. Joanna Panagopoulos, Peabody, Mass.; District Governor Mrs. Mariko Drewes, Bronx, N. Y.; National Chairman Mrs. Georgia Anthros, Forest Hills, N. Y., who introduced the Peter Cass Research Laboratory Memorial Fund and is current New York State District Chairman for the project.

## Real Live Indians at Babies Hospital Windows

AFTER WATCHING HOLLYWOOD INDIANS in windows of TV sets, these young patients of 10th Floor Babies Hospital were thrilled to look out a window and meet two real-life Mohawk Indians, Roy Diabo (left) and Robert Smalence, during construction of Babies Hospital Addition. Called the Wallendas of the construction business, the hard-working Mohawks from a Caughnawaga, Canada, reservation cultivate a courageous indifference to heights. They are as highly prized by contractors as outstanding baseball pitchers are by major league clubs.

## Awarded Scholarship to University of Madrid

Raymond Maldonado

Raymond Maldonado, a part-time employee in the hospital Security Department, has been awarded a full scholarship to the University of Madrid Medical School. The scholarship, given by The Institute for Hispanic Culture, will pay for his education for up to six years.

Mr. Maldonado was graduated in May from St. John's University in New York City, where he majored in biology and psychology. He plans to leave for Spain in July, and spend the summer traveling in Europe before beginning his course work in October.

EDITOR'S NOTE: Many stories of retirements, held over for lack of space, will appear in the August Stethoscope.

# News of Nursing

## NURSING ALUMNAE DAY

"You're all much better looking now than as students," the speaker began, addressing an audience of nurses who had gathered in the auditorium in Maxwell Hall. The more than 250 alumnae smiled and were individually and collectively radiant. This was the opening of the morning program of Nursing Alumnae Day at the Columbia-Presbyterian Medical Center on Monday, June 2.

The speaker was the Reverend Robert B. Reeves, Jr., Chaplain at the Medical Center. In his address he presented the story of unique research in hospitals on the attitudes of patients as correlated with the speed of recovery in certain illnesses. An "Acceptance Scale" has been developed as an instrument for continuing research in this area. (A report will appear in a forthcoming issue of *The Stethoscope*.)

Registration, coffee and a bazaar at 9:30—Chaplain Reeves' address at mid-morning, and a delicious luncheon at 12:30—and the alumnae were well into the spirit of the day. This year official reunions were held for the classes of '99, '04, '09, '14, '19, '24, '29, '34, '39, '44, '49, '54, '59, '64 and '66.

The afternoon meeting was held in the P&S Alumni Auditorium, and was presided over by Mrs. Alvin J. B. Tillman, retiring President. The mem-

bers of the class of '69 were formally welcomed into the Alumnae Association.

Margaret Wells reported legacies that have come in during the past year, one of which was a gift from the Helen Young estate. The class of '64 gave its residue to the Association's distributing fund—\$690. Money left to the Alumnae Association is used for scholarships and educational purposes.

Roll call was the next order of the day, and there was a reading of the names of the deceased of the past year.

The oldest class represented was that of 1909; one member was present—Theo Woodruff—having traveled all the way from Los Angeles.

The Association elected its new year's officers, choosing Grace E. Davidson, Director of Nurses, University Hospital, New York University, for President.

Mary Crawford, Associate Dean, School of Nursing, Faculty of Medicine, Columbia University, and Director of Nursing, Presbyterian Hospital, spoke, describing the new building program for the School.

A social hour followed, at 4:00, to enable the various class groups to meet for separate reunions. As one member of the class of '29 expressed it, "We had fun all day."

Ruth Helmich, Director, Nurse-midwifery Service, Department of Nursing (Maternity), participated in a conference at the University of West Virginia, Morgantown, West Virginia, from June 17 to June 25. The title of the conference was "Family Planning: The Nurse's Role." The workshop was sponsored by the Department of Health, Education and

Welfare, Department of Nursing of the University of West Virginia, and the Department of Health, Division of Maternal Child Health.

Ann Riley, Staff Nurse, N.I., was married to John Teter on June 7, 1969.

Mary Ellen Werdann, Staff Nurse, N.I., was married to John Blake on June 7, 1969.

## Marjorie Peto Completes 43 Years' Service

Marjorie Peto, Assistant Professor of Nursing, Department of Nursing, Faculty of Medicine, Columbia University, and Assistant Director of Nursing, Babies Hospital, retired on July 1 after a distinguished career in nursing spanning 43 years at the Columbia-Presbyterian Medical Center.

Miss Peto received her R.N. and B.S. degrees from Presbyterian Hospital and Teachers College, Columbia University, in 1926. She also received her M.A. degree from the School of Education, New York University, in 1951.

Probably the most colorful and extraordinary aspect of her career was the three year period from 1942 to 1945 when "Pete," the nickname given her by her many co-workers and friends, was U. S. Army Chief Nurse, 2nd General Hospital, affiliated with the Medical Center in England and

France. She held the rank of Lieutenant-Colonel and was in charge of 90 nurses, all of whom were devoted to her.

Shortly after resuming her duties at the Hospital in 1946, Miss Peto authored a book, "Women Were Not Expected," an informal story of the nurses of the 2nd General Hospital in the E.T.O. The book is filled with pathos, humor and drama, and is a candid account of how nurses lived and worked in World War II. The book was published in 1947.

Many descriptions of the kind of person Miss Peto is were given by her colleagues . . . "she is very wise . . . people just naturally come to her for advice . . . she is thoughtful and understanding."

Perhaps a few specially chosen quotes excerpted from letters to and from friends, which appear in her book, will give a clearer picture of what these people were trying to convey:

"Miss Peto goes around and gets everyone settled in, and never thinks of her own comfort. She is in a tiny 2 x 4 with another nurse when she could have an apartment to herself, but she would never ask for it."

"Miss Peto had come back safely from her Paris trip (to personally deliver mail and Christmas packages from home that had gotten snafued) and had worked her special magic on a temperamental stove, bringing cozy warmth to a freezing room. Miss Peto does such nice thoughtful things for the girls."

During the war Miss Peto was promoted from 1st Lieutenant through the successive ranks to Lieutenant-Colonel, and was awarded the Bronze Star. Her citation reads in part: ". . . for meritorious service in connection with military operations against an enemy of the United States . . . her skill in organization and administration of the nursing staff was instrumental in much alleviation of suffering and undoubted saving of life in members of the United States and Allied Military forces."

Miss Peto was born in

Marjorie Peto

Brooklyn, New York, but now resides in Tenafly, New Jersey, with her mother. Her mother is an authority on crewel work and antiques. In a clear-cut case of "like mother-like daughter" Miss Peto is also an authority on these two fine arts. But Miss Peto's accomplishments extend into other fields. She is an avid gardener, a swimming enthusiast—preferably Long Island or Cape Cod—where she says "the water is never too cold!" In the past several years she has taken a fancy to playing the piano and her friends tell us "she is very good at it, but more importantly derives a great deal of joy from playing."

She also belongs to that rare group of people known as "early morning walkers." Her most recent accomplishment has been involved with Braille, at a local New Jersey school, where she transcribes reading into Braille for blind youngsters.

Her love for dogs is also quite evident throughout the pages of her book, "Women Were Not Expected," where there are several references to her beloved "Sooner" and "Echo," the two dogs that played an important role in boosting the morale of all the nurses in the 2nd General Hospital during World War II.

Miss Peto has also taken a keen interest in the Doll House that belongs to the Recreational Therapy Department and from time to time has refurbished it for its annual Christmas appearance as part of the Babies Hospital Christmas activities for the patients.

On June 4, Miss Peto was honored at a reception attended by approximately 300 of her friends and colleagues. Two books containing letters and photographs were presented to Miss Peto at this time; one from her many friends from the 2nd General Hospital and the other from her Medical Center friends. The Board of Women Managers of Babies Hospital presented her with a beautiful pin.

All of the above people also gave Miss Peto a gift toward the purchase of a piano.

## Robin Clark Elected

On the Columbia University Senate, the Faculty of Medicine is entitled to one student representative. The person who has been elected to this position is a nursing student, Robin Clark.

Miss Clark received her A.B. degree in sociology from Mt. Holyoke in 1967. At the time, she had no definite career in mind, but because of her interest in people she became a social worker in Northern Westchester Hospital, Mt. Kisco. Later she was employed as an aide in emergency service there.

She was interested in Columbia University because of the opportunity for further studies beyond the Bachelor's Degree, and because of the University's association with metropolitan agencies. She entered the School of Nursing here in the fall of 1968.

As a member of the student-faculty Senate of Columbia, she has volunteered for work on two committees.

TREES ARE FALLING, earth is moving, and soon the Maxwell Hall new addition for educational purposes will rise on this site.

# Stethoscopia

## • ENGAGEMENTS

*Ella Troy*, a Clinical Pathology technician, is engaged to *Jose Sanchez* of the New York City Fire Department. A September wedding is planned.

*Patricia Ann Guthrie* and *Frank Davis* plan a December wedding. Miss Guthrie is a secretary in Clinical Pathology.

*Michele Burke*, secretary to Dr. Carolyn R. Denning, Department of Pediatrics, is engaged to *Neal Cherbonneau*. The couple are planning a winter wedding.

## • MARRIAGES

*Maida Wright Archer*, a staff nurse at the Medical Center and a graduate of the Columbia University School of Nursing, was married on May 24 to *William Austin Tansey, III*, a member of the Class of 1970 at the College of Physicians and Surgeons.

*Vilma Ortiz* and *Nelson Diaz* were married on June 21. Mrs. Diaz is a secretary to Mrs. C. I. Long in Clinical Pathology; Mr. Diaz is a law student at New York University.

*Jean Van Haaften*, staff physical therapist in Harkness Physical Therapy, was married on May 31 to *Alfredo Di Marino*, Editor, Scott Meredith Literary Agency in New York City. The combined Protestant and Catholic ceremony was performed by Reverend Robert B. Reeves, Jr. and Father Michael Orzechowski in St. Paul's Chapel, Columbia University.

*Barbara Paz*, an Evening Nurse in Sloane Hospital, and *Peter Medal* were married in the Pauline A. Hartford Memorial Chapel on June 7.

*Wanda K. Troyanowski*, a staff nurse at Presbyterian Hospital, was married to *Dr. Brian D. Mohr* on June 6 in the Pauline A. Hartford Memorial Chapel. Dr. Mohr is an Intern at Presbyterian Hospital.

*Elizabeth Ferris* and *Dr. Peter Puchner* were married on May 31. Dr. Puchner is a Resident in Urology at the Squier Urological Clinic, and a graduate of the College of Physicians and Surgeons.

*Doris Evelyn Hamilton*, a student at the Columbia University School of Nursing, was married on May 31 to *Richard Lee Evert*. Mr. Evert is a 1969 graduate of Columbia University.

## • BIRTHS

Mr. & Mrs. *Ira Weissman* welcomed a son, *Miles Asher*, on May 30. Mrs. Weissman is known professionally as *Dr. Myrna J. Schear*, Assistant Neurologist, N.I., and Associate in Neurology, P&S.

Mr. & Mrs. *Ray Lopez* welcomed their first child, *Nicholas Augustus*, on May 27. Mr. Lopez is a programmer at the Medical Center.

Dr. & Mrs. *John J. McGroarty* welcomed their second son, *James Francis*, on June 6. Dr. McGroarty is a Resident at the Institute of Ophthalmology.

## • CONGRATULATIONS

To *Mrs. Dorothy Rothman*, Public Interest, whose son *Kenneth* has been appointed Book Review Editor of the *American Journal of Sociology*, published by the University of Chicago in the University of Chicago Press.

To the following members of the Housekeeping Department who have received promotions: *Clinton Lyons*, from Porter to Head Porter, Atchley Pavilion; *John Tucker*, from Porter to Head Porter, Vanderbilt Clinic; *Sterlie Wilson*, from Porter to Head Porter, Presbyterian Hospital.

To *Phyllis Smith*, transcriber in Babies Hospital X-Ray Department, who has been promoted to the position of office manager of the X-Ray Department at Neurological Institute.

## • WELCOME

To *Sonia Niaz*, *Julio Diaz*, and *Jairo Vasquez*, new members of the Radiotherapy Department.

## • FAREWELL

To *Mrs. Carol Smith* of Medical Data Processing, who is leaving the Medical Center after eight years.

## • NOTES OF INTEREST

*Mrs. Mary Hiller* of the Clinic Administration Office and her niece, *Ann Cushin*, went to Dublin, Ireland, to attend the wedding of a cousin. Both the bride and groom are lawyers, and many dignitaries attended the wedding.

The *Old Grand-Daddy Club* does its own thing with a bus outing to Atlantic City, New Jersey, on Saturday, July 19. The bus leaves New York from 168th Street and St. Nicholas Avenue at 7 A.M. and leaves Atlantic City at 6 P.M. Please be on time! A round trip ticket is \$7.50. For information, see *Harvey Cheeseboro*, President, at Central Food Service.

## DOINGS OF DOCTORS

DR. JOHN K. LATTIMER, Director of the Urological Service, PH, and Professor and Chairman, Department of Urology, P&S, spoke on "New Horizons for Urological Cancer through Radioautography, Time-lapse Photography, and the Electron Microscope," "Medical Education in Urology," and "Wilms' Tumors" at the XX Reunion of the Nacional de Urologia (Mexican), in Mexico City on April 27 and May 1. At the Annual Meeting of the American Urological Association, held in San Francisco on May 15, Dr. Lattimer presented two papers at the Urological Research Forum, on "More Accurate Staging of Bladder Cancers by Electron Microscopy" and "Similar Virus-like Particles in Cancers of the Prostate and Breast." In the latter paper, Dr. Lattimer presented new evidence that a virus is present in cancers of the prostate gland, and in cancers of the breast, two of the most devastating human cancers. It appears to be the same virus that is associated with an experimental cancer, namely the Lucké tumor virus.

Dr. Lattimer

Dr. Smelser

DR. GEORGE K. SMELSER, Professor of Anatomy, Department of Ophthalmology, P&S, has been appointed to the first National Advisory Eye Council of the newly established National Eye Institute of the National Institutes of Health, Bethesda, Maryland. The primary function of the Advisory Council is to review and recommend to NIH grants to support non-governmental research and training in the field of vision research.

DR. J. LAWRENCE POOL, Professor of Neurological Surgery, P&S, spoke on "Diagnosis and Treatment of Acoustic Neuromas" at Baylor Medical School, Houston, Texas, on April 18, and gave a course on "Microneurosurgery" at Mt. Sinai Hospital on May 1. Dr. Pool was also a discussor of several papers at the Annual Meeting of the American Association of Neurological Surgeons in Cleveland, Ohio, April 12-16.

## WORK CAN BE FUN; FUN CAN BE WORK?

Dr. Gustave Gavis, Clinical Instructor in Pediatrics, P&S, recently spent a two-week Caribbean vacation on Saba, one of the islands of the Netherlands Antilles. The Monticello, N. Y., physician had precious little time, however, for the island's beautiful beaches: he used his stay arranging for skin biopsies from the island's inbred population for a leukemia-virus study by the National Cancer Institute under the

direction of Dr. Albert Sabin. Dr. Sabin believes that a human cancer virus could be isolated if a human sarcoma extract were to be grown on genetically inbred cells. Dr. Gavis persuaded 21 friendly English-speaking Dutch citizens to permit the taking of skin biopsies. The "fun can be work" assignment of Dr. Gavis was successful: a letter from Dr. Sabin announces that 19 of the 21 skin specimens

are growing and will be incubated soon with sarcoma extracts.

Dr. Gustave Gavis is seen doing a skin biopsy procedure on a native of the island of Saba. Dr. Levendag, a Dutch physician (seated), is placing the skin specimen in a petric dish.

DR. HENRY J. PRITZKER, Fellow in Pediatric Radiology, completed his three-year Fellowship on June 30 at Babies Hospital X-Ray Department. He is taking over the position of Director of Pediatric Radiology at Montefiore Hospital, Bronx, New York.

DR. DAVID B. MOORE, Assistant Clinical Professor of Obstetrics and Gynecology, P&S, and Assistant Attending Obstetrician and Gynecologist, PH, has been elected First Vice President of the New York Obstetrical Society. Dr. Quinn Munnell, Associate Clinical Professor of Obstetrics and Gynecology, P&S, and Associate Attending Obstetrician and Gynecologist, PH, has been reelected Secretary of the Society.

DR. CAROLYN R. DENNING, Assistant Professor of Pediatrics, P&S, participated in a half-day symposium entitled "Cardiopulmonary Teaching Day" at the Mid-Island Hospital, Bethpage, New York, where she spoke on "The Management of Chronic Respiratory Disease in Children." On May 23, Dr. Denning lectured on "The Management of Chronic Lung Disease" at Brooklyn Hospital.

DR. PHILIP M. JOHNSON, Associate Attending Radiologist and Director of Nuclear Medicine, recently attended the meeting of the Association of University Radiologists in San Francisco, where he presented a paper entitled "Myocardial Perfusion in the Normal and Infarcted Canine Heart." In June, Dr. Johnson attended the Annual Meeting of the Society of Nuclear Medicine in New Orleans, where he presented "Radiation-Induced Pulmonary Ischemia: Quantitative Studies," and gave a refresher course in Lung Scanning. Dr. Johnson is co-editor of a new textbook in Nuclear Medicine, "Clinical Scintillation Scanning," published in May by Hoeber.

DR. DAVID B. SPRINSON, Professor of Biochemistry, P&S, presented "Regulatory Aspects of Aromatic Biosynthesis in Bacteria" at the 6th Annual Meeting of the Federation of European Biochemical Societies in Madrid, April 8.

DR. DAVID SCHACHTER, Associate Professor of Physiology, P&S, lectured on "Biochemistry of Active Transport: Calcium Transfer in Small Intestine and Galactoside Accumulation in *E. coli*" at a seminar sponsored by the Department of Pharmacology, University of Colorado Medical Center, on June 2.

(Additional DOINGS OF DOCTORS on page six.)

AUGUST, 1969

## DR. HERTER APPOINTED

Dr. Frederic P. Herter

1944. He began his internship at PH in 1944-1945 and then entered the military service where he served as Captain, M.C., A.U.S., Madigan General Hospital, Tacoma, Washington; Ft. Lawton Station Hospital, Seattle, Washington, and was with the occupation forces in Japan until March, 1947. After completing his military service he returned to Presbyterian Hospital to finish his internship and served his residency in surgery from 1948 to 1953.

Since that time he has been a member of the Surgical Attending Staff at Presbyterian and of the Visiting Surgical Staff at Francis Delafield Hospital. In 1966, he became Director of the Surgical Service at Delafield.

Dr. Herter is married to the former Harriet Ames Conel. Dr. and Mrs. Herter live in Dobbs Ferry, New York, and have three children.

Dr. Frederic P. Herter, Attending Surgeon, PH, and Professor of Surgery, P&S, has been appointed Acting Director of Surgery, replacing Dr. George H. Humphreys, II, Director, who retired July 1. Dr. Herter received his M.D. at Harvard Medical School in

## FILM FROM CORNEAL CENTER WINS INTERNATIONAL AWARD

Having directed the prize-winning movie on prostherkeratoplasty, Dr. Ramon Castroviejo (left) receives first-prize trophy from Dr. Christian Barnard. The movie, filmed by Don Allen, took the honors at San Sebastian film festival in Spain. Dr. Castroviejo represented the Eye Institute prosthesis team, consisting of Dr. A. G. DeVoe, Dr. Hernando Cardona, and himself.

A tiny mushroom from the Columbia-Presbyterian Medical Center stole the show at an international film festival in Spain. The mushroom starred in a color movie about the work of Dr. Hernando Cardona at the Corneal Center of the Eye Institute.

The half-hour long motion picture was awarded the first prize at the National Scientific Film Festival in San Sebas-

tian. The competition, which drew 40 entries, took place from June 13 to June 16. Dr. Ramon Castroviejo presented the Eye Institute entry to the festival.

The Columbia-Presbyterian entry, guided by the appropriate scientific modesty, was entitled "Prostherkeratoplasty: The Latest Techniques and Results." An enterprising jour-

*Please turn to page five*

## Our Test Drills—How They Evolved

The date was July 10; the time 3:30 p.m.; the voice over the hospital-wide paging system blared—"Your attention please. This is a test drill. Emergency plan number one is in effect. Assigned doctors take their stations. Unassigned doctors report to the doctors' pool."

Thus began an exercise in the handling of mass casualties, which simply means injured people in large numbers. The

July 10 exercise had its beginning on a hot July afternoon in 1948, twenty-one years

ago, when the late John S. Parke, then Executive Vice President of the Hospital, asked Dr. Stuart Cosgriff, Associate Attending Physician on the Medical Service, and Dr. Joseph E. Snyder, newly arrived Administrative Assistant for Professional Services, to begin organizing a plan for the handling of large numbers of casualties from a possible military or civil disaster.

The atomic age had arrived and the military jet airplane

*In this article Dr. Joseph E. Snyder, Assistant Vice President, Vanderbilt Clinic and Other Services, recalls the origin of our Emergency Test Drills.*

was capable of rapidly carrying nuclear weapons over long distances in a very short time. The old days of the World War II air raid drill were gone—no longer could we expect hours of warning from military disaster. Automobiles were being again turned out by the million, highways were being

*Please turn to page five*

## MOON DAY WAS NOT SO TRANQUIL AT THE PRESBYTERIAN HOSPITAL

As humanity held its breath for the Eagle's touchdown on the moon, doctors and nurses at Presbyterian Hospital fought desperately to keep some breaths going. Sickness and tragedy took no holiday that Sunday afternoon here. Although all the available TV sets were turned on, few nurses could afford to take time off from their pressing chores to have more than a passing glimpse at the animations on the screen. Several "arrest stat" alarms on the intercom—signaling cardiac and other emergencies—instantly erased any moon thoughts from the minds of the involved Hospital staff.

It was mostly "business as usual" on the ever-active first and third floors of the Vanderbilt Clinic, as residents of the surrounding communities kept trickling in to present their complaints, punctuated by the arrivals of accident victims and cardiac patients.

An Apollo-connected departure from Hospital routine was the presence of two CBS-TV camera crews. They were here to film a documentary on what America did on the day our astronauts landed on the moon. CBS sent out 44 filming units to all parts of the country on July 20 to record the typical happenings of that day on earth. The 90-minute documentary, to be telecast in color from coast to coast sometime in December, will show that the urgent responsibilities of ministering to the sick at PH turned the landing in the Sea of Tranquility into a very distant event indeed.

## Columbia University Creates New Genetics Department

Columbia University has created a Department of Human Genetics and Development, centering on a rapidly growing field of scientific investigation which has far-reaching implications for the future.

The establishment of the new department in the Faculty of Medicine at Columbia University's College of Physicians and Surgeons was announced on June 28 by Dr. Andrew W. Cordier, acting president of the University.

The new department will institute a broad program of instruction, research, and related patient services in the areas of human genetics, development, and human reproductive biology. The chairman

Dr. Paul A. Marks

is Dr. Paul A. Marks, Professor of Medicine and Professor of Human Genetics and Development, P&S, and Attending

Physician, PH.

In a recent interview Dr. Marks said, "Investigations in these areas hold out the prospects for effective approaches to correct or prevent the undesirable effects of certain genetically determined abnormalities; for early detection, prevention, or possible therapy in birth defects; for reduction in infant mortality, maternal mortality, and stillbirths; and for effective approaches to a wide-ranging number of diseases in which genetic factors or hereditary material play a role, including cancer and even the aging process."

The department will offer a program of courses for medical students.

# These Doctors Have Retired From Columbia-Presbyterian Medical Center

## Dr. George H. Humphreys, II, Retires After Many Years at Medical Center

Dr. George H. Humphreys, II, Valentine Mott Professor of Surgery, College of Physicians and Surgeons, and Attending Surgeon and Director, Surgical Service, The Presbyterian Hospital, since 1946, retired effective July 1 after a long and notably eminent career of service.

Dr. Humphreys was born in New York City and received his B.A. from Harvard College in 1925, his M.D. from Harvard Medical School in 1929, and his Med.Sc.D. from Columbia University in 1935.

His postgraduate training included Voluntary Assistant, Pathologisches Institut, Munich, Germany, in 1929; Surgical Intern, PH, 1930-1932; Junior Surgical Fellow, PH, 1932-1933, and Senior Surgical Fellow, PH, 1933-1935.

Dr. Humphreys' outside hospital appointments have included posts as Attending Surgeon, Seaside Hospital on Staten Island, 1936-1939; Assistant Visiting Surgeon, 1936-1940, and Associate Visiting Surgeon, 1940-1945, City Hospital, N. Y.; Visiting Surgeon, Thoracic Surgery, 1939 and Active Consulting Surgeon, Thoracic Surgery, 1939-1944, New York City Cancer Institute; Visiting Surgeon and Director, First Surgical Service, Welfare Hospital, 1939-1942.

In addition to his latest position as Director of Surgical Service at PH, he is also Consultant at Delafield Hospital, Harlem Hospital, St. Luke's Hospital and at Vassar Brothers Hospital in Poughkeepsie, N. Y.

Dr. Humphreys was certified by the American Board of Surgery in 1939 and was a Founder Member of the American Board of Thoracic Surgery.

His professional memberships include the International Surgical Society, International Cardiovascular Society, American Academy of Pediatrics, American College of Surgeons, American Surgical Society, American Association for Thoracic Surgery, Society of University Surgeons, Society for Clinical Surgery, Allen O. Whipple Society, Harvey Society and many others.

He is Director, New York City Division, American Cancer Society; Director, New York Heart Association; Director of American Board of Medical Aid to China and is a Trustee of the Mary Imogene Bassett Hospital in Coopers-town, New York.

Dr. Humphreys has written extensively — his publications number 78 — and his main interest has been in the field of pediatric and thoracic surgery, and particularly pediatric-thoracic surgery in the treatment of children. He performed the

Dr. George H. Humphreys, II

first heart surgery done in New York, at Babies Hospital, with Dr. Richmond L. Moore, Consultant in Surgery, PH, on a patient with patent ductus arteriosus. This was the 11th such operation done in the world.

Another early interest was in congenital atresia of the esophagus in babies which had always been fatal until the early 1940's. Dr. Humphreys performed the third successful operation for this condition in the world.

Dr. Humphreys' special field of interest is still in the area of heart and esophageal surgery.

Dr. Humphreys, with Drs. Richmond L. Moore, Dickinson W. Richards, Lambert Professor Emeritus, Medicine, PH, and Special Lecturer, Medicine, P&S, and Andre F. Cour-nand, Emeritus Professor, Medicine, PH, and Special Lecturer, Medicine, P&S, instituted the Chest Clinic of the Surgical Service at Vanderbilt Clinic in the mid-1930's.

Dr. Humphreys is married to the former Edith Sturgis. Mrs. Humphreys served for many years at the Hospital as a volunteer in the Surgical Diagnostic Clinic, the Chest Clinic and also as a volunteer aide in the Medical Clinic, which was the precursor of the present-day Group Clinic.

Dr. and Mrs. Humphreys have two children and five grandchildren. Their younger daughter, Mrs. Edith Mas, just received her degree from Columbia University's School of Social Work. She had previously earned her R.N. degree from the Massachusetts General Hospital.

The Humphreys live on New York City's East Side and have a summer home in West Dover, Vermont. "In fact," Dr. Humphreys reminisced, "we have spent about 58 summers there."

Hobbies of Dr. Humphreys include a tree farm in Vermont and handcarving. He

shared in the painstaking handcarving of a complete chess set, made of meerschaum, with his brother-in-law, Dr. Somers Sturgis, a prominent Boston obstetrician-gynecologist. Dr. Sturgis completed the 16 white chess pieces and Dr. Humphreys the 16 red chess pieces. The custody of this set is shared alternately between the Sturgis' and Humphreys' residences.

In the fall of this year Dr. Humphreys will go to Formosa as Visiting Professor of Surgery at the National University Medical School.

"Beyond that," he said, "my plans are not yet decided."

## Neurologist Dr. Paul A. Hoefer Retires

Dr. Paul F. A. Hoefer, Professor of Neurology, P&S, and Attending Neurologist, PH, retired in June.

Dr. Hoefer was born in Munich, Germany, and received his M.A. and Ph.D. (Physics) from the University of Berlin in 1927. He received his M.D. from the University of Wuerzburg in 1928.

He completed his internship and residencies at the University Hospitals of Wuerzburg, Heidelberg, Berlin and the Kennenburg Sanatorium. His training at these institutions included internal medicine,

Dr. Paul F. A. Hoefer

neurology and psychiatry. He was also an Assistant in Physiology at the University of Berlin.

From 1932 to 1933 Dr. Hoefer was Assistant Neurologist at the University of Heidelberg. In 1934 he came to the United States and held teaching posts at Tufts College Medical School in Boston, and at the Harvard Medical School. He held hospital appointments at the Boston Dispensary, Boston City Hospital and Faulkner Hospital.

In 1939 Dr. Hoefer began his long and distinguished career at the Columbia-Presbyterian Medical Center.

He has written extensively — over 100 publications — in the fields of neurophysiology, clinical neurology, clinical neurology in basal ganglia diseases, head injuries, myasthenia gravis, epilepsy and encephalitis.

Dr. Hoefer introduced, founded, designed and directed until his retirement, the laboratories of electroencephalography and electromyography — the first in this country to give routine clinical services of this type.

Dr. Hoefer also founded and directed, with Dr. Henry Aronow, Jr., Associate Attending Physician, PH, and Professor of Clinical Medicine, P&S, the Myasthenia Gravis Clinic at Vanderbilt Clinic.

His professional memberships in numerous scientific societies include: American Medical Association, American

## Forty-one Years at Medical Center Completed by Dr. Gilbert P. Smith

After almost 41 years of service to the Columbia-Presbyterian Medical Center, Dr. Gilbert P. Smith retired in February as Director of the Dental Service of Presbyterian Hospital and was appointed a Consultant. Dr. Smith came to the Center in 1928 when the School of Dental and Oral Surgery was moved from its location on East 34th Street.

Dr. Smith received his D.D.S. from the University of Minnesota College of Dentistry in 1927. He served as Clinical Assistant from 1927 to 1930; Instructor, 1930 to 1936; Assistant Professor, 1936 to 1945; Professor, 1945 to present. He was Director of Prosthodontia Division from 1945 to 1968; Associate Dean of the Faculty of Medicine for Dental and Oral Surgery from 1956 to 1959. On July 1, 1959 he was appointed Dean of the Faculty of Dental and Oral Surgery and Director of the Dental Service of the Presbyterian Hospital until his retirement in 1969.

Dr. Smith is now Dean Emeritus, DOS and Consultant in Dentistry, PH. He had been engaged in private practice in New York City from 1931 to 1968.

His professional memberships include Diplomate of American Board of Prosthodontics, Member, 1959-1965 and President, 1962; American College of Dentists, American Dental Association, American Prosthodontic Society, First District Dental Society of New York, Secretary of Prosthodontia Section, 1939-1940 and Chairman, Prosthodontia Section, 1941-1942; Greater New York Academy of Prosthodontics, New York Academy of Dentistry and Omicron Kappa Upsilon.

Dr. Smith's articles on clinical dentistry and dental education have been published in a number of dental publications.

Dr. Smith was born in St. Louis County, Minnesota and married the former Katharine

Dr. Gilbert P. Smith

Spencer Edsall in 1933. Dr. Smith met his wife at the Medical Center where she was working in charge of the Clinical Pathology laboratory staff. The Smiths live in New York City and also maintain a home in northern New Jersey, in Sussex County. They formerly ran a dairy farm and now own a tree farm near Colesville, New Jersey. Concerning hobbies Dr. Smith said, "Oh, I'm a jack-of-all-trades." He apparently enjoys putting around the house and grounds and maintains a complete workshop in his suburban home. He is looking forward to having more free time but feels he is not really "retired" as he will be acting as a Consultant in the Department of Dentistry.

# THE HOSPITAL AT NIGHT

Many moons ago, a Stethoscope team made a night visit. Here's its report, fourth in the series.

## Neurological Institute

Six o'clock on a cold, clear winter night—a sooty blanket of snow covers the city. The elevator took us to the 9th floor of the Neurological Institute. Outside, the view of the George Washington Bridge

spanning the Hudson River was stunning. We two "day people" were about to investigate what makes night people "tick."

Our first stop on the 9th floor was the Intensive Care Unit. Here we saw two youngsters, one about 10 years old, in a wheel chair, the other, a teenager, on a stretcher-table, watching TV. Both were under intensive surveillance for a neurological disorder. On duty were four registered nurses and a nurses' aide: Mrs. Rose Hynes, L.P.N., Linda Mehl, R.N., Laurie Pollock, R.N., Jeanette Beckett, R.N., and Eloisa Dinkins, nursing aide. The ICU has a capacity of 9 adult beds and 7 pediatric cribs. There is also one isolated pediatric crib for infectious disease. All pediatric admissions are Babies Hospital admissions from neurosurgery. Post-operative patients are admitted from the

10th floor operating room in Neurological Institute.

Typical patients admitted to this unit come for arteriograms, pneumoencephalograms and brain scans. Here, too, postoperative patients are admitted via the operating room with a wide variety of conditions—craniotomies, brain tumors, shunts, hydrocephalus, spinal cord operations, laminectomies and meningomyeloceles.

We were permitted to observe a one-week old infant with spina bifida with massive nerve involvement who had just been operated upon. We also saw a young man who had just been returned from the operating room following surgery for a brain tumor.

These staff members were a very close-knit and affable group whose unlimited energy and sense of humor were needed for their never-ending vigil over those entrusted to their care.

On 9 East we visited the Neurosurgical Unit. Mrs. Mabel Orton and Elaine Austin were the staff nurses on duty here. Said Mrs. Orton, "This is a fairly stable and quiet floor. We receive all routine post-operative neurosurgical patients." Mrs. Orton and Miss Austin seemed to enjoy their night watch.

We made our way to the 8th floor, which houses Rehabilitation Medicine. Here there is a bed capacity of 16. Patients come here from all areas of the Medical Center via transfer or outside referral. The resident staff in consultation with the Attending Staff refers patients in. They are, for the

Left to right, Nurses Maria Paran, Emily Ventosa and LPN Annie L. Smith have time for a smile on N.I. 5.

greater part, long-term admissions.

This floor has been set up to return handicapped patients to a more normal life. It is designed to permit wheel chairs to go through doorways easily, to wheel into the bathroom and fit under the sink.

These patients make home visits 2 to 3 days a week before they are finally discharged, so that any necessary adjustments can be made.

Patients admitted to this unit are post-injury, post CVA, rheumatoid arthritis, physical disability, prostheses. The floor is staffed evenings by Joan Ahlers, R.N., and Mrs. Juanita Ervin, nursing aide. Mrs. Ervin has been with the Medical Center for 17 years, always a "night person."

"This is not a busy night-floor," Miss Ahlers told us. "Most of the activity goes on in the day-time." She showed us the Rehabilitation Room with its fully equipped walking area, bicycles and many other "props" used in rehabilitating disabled patients. "We just mostly tuck them in for the night," Miss Ahlers concluded.

We visited the 5th floor, which houses only semi-private patients and has a capacity of 37 beds. To this floor come patients with brain tumors, back injuries, Parkinson's Disease, multiple sclerosis and some types of vascular disease. Here we encountered Maria Paran, R.N., and Emily Ventosa, R.N., delightful, energetic young ladies, both from the Philippines but unknown to each other until they met at the Medical Center. Here they have become fast friends. With them was Mrs. Annie L. Smith, L.P.N., who has been working at the Medical Center for 8 years. These three agreed that "night life was for them." Miss Paran and Miss Ventosa told us that this was a ward where you gain much experience, so valuable to the young nurse. They agreed that the night watch was usually fairly quiet but that sometimes "things pop."

Lois O'Hanley, R.N., was the evening staff nurse on the 12th floor, which houses the Psychiatric Unit. Miss O'Hanley is a graduate of the St. Joseph

Nurse Joan Ahlers, left, and nursing aide Juanita Ervin check supplies on hand on N.I. 8 Rehabilitation.

Nurse Lois O'Hanley keeps her ear to the phone and her eyes on her patients on N.I. 12 Psychiatric Unit.

School of Nursing in Chicago and is a "loner" on this floor. Although always interested in Psychiatric Nursing, she did general medical and surgical nursing for a time to gather broader experience. She also did private duty nursing for a while. She is currently working toward a B.S. degree at Teachers College. She has been at this post for three and one-half years.

Miss O'Hanley explained that this unit is only six years old and is equipped to handle 15 patients. Most admissions are acute depressions, some alcoholics and attempted suicides. "We can't accept many

## DR. HOEFER . . .

Continued from page two

Neurological Association, American Psychiatric Association, American Physiological Society, New York Academy of Medicine, Harvey Society and Royal Society (England). He is also a founding member of the American Academy of Neurology and the American Electroencephalographic Society; and an honorary member of the Sociedad Sudamericana de Electroencefalografia y Neurofisiologica Clinica.

In 1932 Dr. Hoefer married Dr. Maria Kuehl, a practicing psychiatrist. Dr. and Mrs. Hoefer live on Manhattan's East Side and have a cottage in Garrison, New York, where they week-end year round and spend their summers. Dr. Hoefer's hobbies include traveling, reading and gardening. When asked if Mrs. Hoefer shared his apparent enthusiasm for gardening, he said, "Yes, but she is more of a spectator gardener."

Dr. Hoefer plans to continue in private practice and to work as a Consultant at another institution, probably in New York City.

## Dr. Louis Schneider, Medicine, Retires Because of Illness

After more than 35 years of service, Dr. Louis Schneider has been obliged to retire due to illness.

A Diplomate of the American Board of Internal Medicine, he is also a Fellow of the American College of Physicians.

He was Attending Physician in Medicine at Vanderbilt Clinic, and Lecturer in Public Health and Administrative Medicine at the Columbia University School of Public Health. For many years he was also Physician in Charge of the Chest Clinic at Washington Heights Health Center.

—He has written a score of papers on the clinical aspects of diseases of the respiratory tract.

He was Attending Physician in Diseases of the Chest at Mount Vernon Hospital, and at one time served as Assistant Clinical Professor of Medicine at the Albert Einstein College of Medicine.

During his tenure at Columbia, he has seen revolutionary changes taking place in the treatment of pulmonary tuber-

Dr. Louis Schneider

culosis. Artificial pneumothorax and the sanatorium have been abandoned, and intensive use of anti-microbial therapy substituted, often on an outpatient basis.

Dr. Schneider served as an officer during World War II, retiring with the rank of Lieutenant Colonel.

He is the father of three children. His daughter, Rhoda, is a senior at Wellesley College, and a son, Edward, resides in Buffalo, New York, where he is associated with the Goodyear Rubber Company. Dr. Schneider's elder son, Major William J. Schneider, also a physician, has just returned from service in Vietnam.

# News of Nursing

During May, representatives from the Nursing Department participated in various meetings:

*Edith J. Ankers*, Director, Columbia-Presbyterian School of Practical Nursing, attended

Edith J. Ankers

the 1969 convention of the National Association for Practical Nursing Education and Service, held in Dallas, Texas, May 4-9.

*Violet Mastroberte*, Supervisor, Medical/Surgical Nursing Service, and *Carolyn Campbell*, Head Nurse, Babies Hospital, attended the 1969 convention of the National League for Nursing, held at Cobo Hall in Detroit, Michigan, May 18-23.

*Mary R. D'Agostino*, Head Nurse, Delivery Room, Sloane Hospital, and *Zona G. Burtlew*, Head Nurse, Neonatal Intensive Care Unit, BH, were department delegates to the Symposium

held at Yale University, New Haven, Connecticut on "Scientific Foundations of Fetal Intensive Care Nursing," May 26-28.

In June, the following nursing staff and student representatives attended various meetings:

*Leonore J. Cuomo, LPN*, Sloane Clinic, represented our Nursing Department at the 27th Annual Convention of the Licensed Practical Nurses of New York, held at the Mark Twain Hotel, Elmira, New York, June 8-11.

*Marilyn A. Stein*, Instructor, Neonatal Intensive Care Unit, BH, attended the symposium on Continuing Educa-

Marilyn Stein

tion held at Teachers College, Columbia University.

Miss Stein guided the program preparation and participated in the round-table discussions on "Educational

Objectives in Neonatal Intensive Care Nursing," which were sponsored by the United States Children's Bureau in cooperation with the Neonatal Intensive Care Unit of Babies Hospital. The all-day session was held in the Conference Room, the session.

Mary I. Crawford

1st floor Annex of Babies Hospital. *Mary I. Crawford*, *Jane McConville*, *Priscilla Parke* and *Zona Burtlew* also attended the session.

Everyone showed great interest in the 14th Quadrennial Congress of the International Council of Nurses, held in Montreal, Canada. *Ruth Alberta Rayner*, coordinator, represented our Exchange Visitor Program. The winners among the group recommended by each Clinical Unit, *Mrs. Arlene Mayo*, of Sloane Hospital, and *Barbara Stuchfield*, of Neurological Institute, were sponsored by the group which conducted the recent Cake Sale to raise the necessary funds. *Grace Mackay*, Supervisor, Neurological Institute, also represented the Nursing Department.

*Hilde Verbarg*, Director of Nursing at the Mary Harkness Unit, Port Chester, New York, and *Ruth Snodgrass* of our Special Duty Registry, also felt the lure of these international meetings and arranged to be there.

Two student nurses, *Molly Snell* and *Margaret Tuxen*, and two nursing faculty members, *Susan Kun* and *Susan Greenberg*, also attended this Congress.

Mary E. Windrow

## MARY E. WINDROW APPOINTED

Mary E. Windrow, Assistant Professor of Nursing (Medicine & Surgery), Department of Nursing, Faculty of Medicine, C.U., and Assistant Director of Nursing for Medical and Surgical Units of Presbyterian Hospital, has been appointed Assistant Professor of Nursing, Department of Nursing, Faculty of Medicine, C.U., and Director of Nursing Service, P.H., replacing *Marion D. Cleveland*, who retired July 1.

Miss Windrow received her R.N. at the Presbyterian Hospital School of Nursing in 1940, her B.S. at Teachers College, Columbia University, and her M.A. at New York University in 1959.

## Gibson Lectures

The Twenty-Second John G. Gibson, II, Lecture will be given on Thursday, September 4, from 4 to 5 p.m. in the Alumni Auditorium. The lecture, on "Leukocyte Typing and its Role in Organ Transplantation," will be delivered by Mr. Peter John Morris, F.R.C.S., F.R.A.C.S., First Assistant in the Department of Surgery at

the University of Melbourne, Royal Melbourne Hospital, Australia.

The Gibson Lectures, held semi-annually at the College of Physicians and Surgeons, were established by Dr. John Scudder in 1958 for the purpose of presenting essays by outstanding leaders in the field of blood: blood groups, blood transfusions, blood preservation, and blood banking. Dr.

John Gorman, Director of the Blood Bank at Presbyterian Hospital, is now host to the series.

The Gibson Lectures, presented by the Blood Bank and sponsored by Fenwal Laboratories, have achieved a unique position due to the outstanding talents of the essayists. Both the Lecture and its subsequent publication have attracted a wide following.

## AFTER YEARS OF BLINDNESS—

Ralph Voelker of Arlington Heights, Pennsylvania, came home last month from a short visit to the Corneal Center of the Eye Institute. He saw the world again through one of Dr. Cardona's prostheses—after 31 years of total blindness. He saw his four young children for the first time, and he broke down and cried. Later on he would watch a fellow man step down on the moon. His wife, Dolores, recalled he'd said before his visit here that "if he was ever able to see, maybe at the dinner table he'd get a good piece of meat." "I guess now I eat the meat with the fat on it," she told newspaper reporters, whose story was carried nationwide.

Mr. Voelker lost sight at 17 when a pressure tank he was

using blew up in his face. He went through a series of unsuccessful operations before coming to the Corneal Center.

The gift of second sight to Ralph Voelker is typical of the benefits to patients resulting from research at the Corneal Center. Equally dramatic improvements of patients' sight are the result of research conducted in other parts of the Eye Institute. The Addition to the Eye Institute was constructed to give more space to these sight-restoring programs and to centralize ophthalmological laboratories scattered in other parts of the Medical Center. The Addition is nearing completion, but additional financial support is urgently needed for the completion of interior facilities.

## A Request

Babies Hospital Recreational Therapy appeals for men's shirts, to become protective smocks on young artists; also for washed nylon stockings, used for stuffing toys. If you would like to donate either of these items, they may be left at the Volunteer Office, V.C. 10, or at Babies Hospital Recreational Therapy, B.H. 7th Floor. Thank you.

## New Dental Appointments

New Appointments at the School of Dental and Oral Surgery, Columbia University:

**HERBERT J. BARTELSTONE**—Professor of Dentistry, Professor of Pharmacology, Director and Coordinator of Clinical Education.

**ROBERT GOTTSERGE**—Professor of Dentistry, Director of the Division of Periodontics.

**SIDNEY L. HOROWITZ**—Pro-

fessor of Dentistry, Director of the Division of Orofacial Development.

**IRWIN D. MANDEL**—Professor of Dentistry, Director of the Division of Preventive Dentistry and Community Health.

**HAROLD L. APPLEWHITE**—Associate Professor of Dentistry, Head of Section of Community Health.

A graduation ceremony was held on Wednesday, June 25, for three graduates of P.S. 401 X. The three graduates were Janice Wolff, Nina Silberger, and Lilibeth Pacheco. Diplomas and honor certificates were presented to them by Mr. Herbert H. Tutelman, Principal of P.S. 401 X. Also present at the ceremony were Elizabeth Callahan, Unit Administrator of Babies Hos-

pital, the two teachers assigned by the Board of Education to Babies Hospital, Rosalie Castagnetta and Mrs. Lillian Graham, Cynthia Lepore, Director of Recreational Therapy, the parents of the graduates, and members of the nursing and medical staff. The ceremony was followed by refreshments, served in the 7th floor playground.

Dr. Joseph E. Snyder

stretched around and through the city, and New York was be-

## FILM WINS AWARD

*Continued from page one*

nalist, however, might well have been justified to change the title to "Making The Blind See Again."

For prosthetikeratoplasty has indeed worked in cases where other sight-restoration methods have failed. The technique helps patients suffering from several very specific corneal conditions, such as advanced bullous keratopathy after a cataract operation, severe corneal dystrophy, eye accidents with damage to the lens from trauma or chemical burns.

Unlike its fungous cousins of the forest, Dr. Cardona's mushroom is made of a special plexiglass-type plastic that is well tolerated by the eye tissue. The mushroom's two-millimeter-long stem is filled with several lenses. An amazing example of microengineering, the lenses enable the patient to see objects in focus from 17 inches near his face to an unlimited distance. These precision lenses are so efficient that at least one formerly blind person now drives a car after being outfitted with the prosthesis.

While keeping its basic mushroom shape, Dr. Cardona's keratoprosthesis has undergone many modifications since the Colombian-born ophthalmologist designed it 14 years ago at the Barraquer Institute in Spain. After coming to the Eye Institute with Dr. Castroviejo's encouragement in 1960, Dr. Cardona undertook several modifications of his minimushroom and reduced its rejections by the patient's eye tissue to 20 per cent.

The presently used model, developed at the Corneal Center with the financial assistance of the National Institutes of Health and the National Council to Combat Blindness, has been inserted into the eyes of 40 patients. While it is still considered an experimental device, its extrusion, or rejection rate so far has been nil.

The Corneal Center, created with the help of a \$1,600,000 grant from the U. S. Public Health Service, was the nation's first institution of research on corneal diseases when it opened in June, 1965. The Center has devoted its energies to a broad range of

beginning to commit mass suicide in its zeal to travel. Buildings were getting older, gas lines were beginning to break, and the potential of entire apartment houses blowing up was becoming a reality.

The Hospital must prepare itself to receive and treat large numbers of severely injured people in minutes. Thus it became necessary to plan to suddenly convert a monstrous hospital which deliberately plods

along its daily path much like a waddling elephant into the swift decisive movement of a stiff gale.

The Medical Board appointed an Emergency Committee with Dr. Cosgriff as chairman, and for over four years this committee met every Monday evening from 6 until many nights after midnight, hammering out bit by bit the emergency job for every member of the staff and all the personnel.

Dr. Hernando Cardona at the Corneal Center of Eye Institute

research problems, including physiology of the cornea, virology, search for new surgical techniques for corneal transplantation, and development of artificial corneas.

The key improvement in the latest model is the addition of a small plastic disc that can be screwed onto the stem. To insert the mushroom prosthesis into a patient's eye, the disc is first slipped in through a small incision on the periphery of the cornea. The mushroom prosthesis is then inserted stem-first through the disc into the eye and turned until the mushroom head and the disc hold the prosthesis in place. The surgical procedure

takes from ten to fifteen minutes in all. The top of the mushroom's head comes in various hues of dappled blue or brown and approximates the iris in position and appearance.

The Eye Institute's keratoprosthesis team, which includes Drs. A. G. DeVoe, Cardona, and Castroviejo, has performed more than 230 keratoplasties to date. By applying the nut-and-bolt principle to the mushroom device, the team appears to have taken an important step toward the development of a practical and effective corneal prosthesis.

The committee arrived at the following basic policies: There would be three plans, one to be used when a civilian disaster occurred and no damage had occurred to the hospital building, a second for a military catastrophe involving large numbers of casualties and a third for a military catastrophe in which either electrical power was knocked out or structural damage was inflicted on the building.

The second basic policy is that in times of disaster operation, the medical staff would operate under the unit direction of an Emergency Medical Director, rather than under the individual directors of clinical services as it does during non-emergency conditions.

The third basic policy is that staff and personnel who were likely to be scattered throughout the building, such as doctors, nurses and students, would by and large report to pre-designated pools for reassignment to specific emergency duties, and that all the staff and personnel including technical and clerical personnel would essentially work in a given area, or out of a given area, would remain in their area, or return to it for assignment of emergency duties.

These plans have all carefully been outlined in a manual entitled: "Manual of Emergency Operation." This manual is covered in bright red and has become known as the "Red Book." Every member of the staff and each employee is entitled to have, and encouraged to secure, a copy through his

Dr. Stuart W. Cosgriff

or her supervisor.

All hospitals are now required to have a plan for the handling of mass casualties to meet the standards set by both the Joint Commission on the Accreditation of Hospitals and, in New York State, by the New York State Department of Health. The Joint Commission further requires that the hospital hold at least two drills per year.

Since the emergency organization in 1948, the hospital has mobilized its emergency plan on two occasions, once when the telephone company building exploded, and again during the 1966 blackout.

Though to some it may seem trite and unduly disruptive to "play out" a disaster drill, experience in other places has shown that the greatest number of lives have been saved in the hospitals which paid the most attention to their drills. Participation in a drill is a most important part of the life of each member of the staff and personnel of the Medical Center. Get your copy of the "Red Book," ask your supervisor what your job is in an emergency drill and do it. It may save your life.

## Columbia University Creates New Department of Human Genetics and Development

*Continued from page one*

cal students and candidates for the Ph.D. degree enrolled in the University's Faculty of Pure Science. It will also offer post-graduate training for holders of the M.D. and Ph.D.

With the establishment of the department, Columbia assumes a leading role in the study of human genetics, development, and reproductive biology. Already functioning at the Columbia-Presbyterian Medical Center is the International Institute for the Study of Human Reproduction, established with the aid of grants of \$8.5 million from the Ford Foundation and \$1.5 million from the Rockefeller Foundation. The Institute is pursuing programs in the full range of the physiological, psychological, and sociological factors in human reproduction.

In addition to its functions in instruction and research, the department will provide both out-patient and in-patient consultation services, including diagnostic counseling and therapeutic services in the areas of genetic and developmental disorders. These pa-

tient services will be developed during the coming year and be added to the already existing facilities in other areas at the Columbia-Presbyterian Medical Center.

A number of new faculty members are being recruited for the department. Among them is Dr. Sol Spiegelman, who recently was appointed director of Columbia's Institute of Cancer Research. Other faculty members are: Dr. Elvin A. Kabat, Professor of Microbiology; Dr. Orlando J. Miller, Associate Professor of Obstetrics and Gynecology, and Dr. Richard A. Rifkind, Associate Professor of Medicine. They will hold appointments in their respective departments and in the new department.

The proposal to establish the Department of Human Genetics and Development was made by H. Houston Merritt, Dean of the College of Physicians and Surgeons. Dr. Merritt stated:

"Human or medical genetics—a relatively young science which lagged behind animal, plant, and bacterial genetics—has become an important field and now an essential one in

the education of the medical student, in research, and in the understanding, prevention, and management of disease.

"The scope of human genetics, development, and reproductive biology is very broad. These areas concern themselves with problems of natural selection, embryology and development, the structure of populations, biochemistry as in studies of hemoglobin, bacterial and viral diseases and in their therapy, tissue transplantation and tolerance, the fertilization process, psychiatric disorders, and cancer, as well as understanding many of the complex interactions which exist between man and his environment."

"The creation of the department," Dr. Merritt stated, "is of interest to almost all of the departments of the Faculty of Medicine, as well as the Department of Biological Sciences on the Morningside Heights campus."

The department's research facilities will be housed in the William Black Medical Research Building, the Delafield Hospital, the New York State Psychiatric Institute, and

other facilities at the Columbia-Presbyterian Medical Center. The department's educational and patient care activities will be coordinated with on-going programs in other departments, primarily those of the departments of psychiatry, medicine, obstetrics and gynecology and pediatrics.

Dr. Marks received his A.B. degree from Columbia College in 1945 and his M.D. degree from the College of Physicians and Surgeons in 1949. He was appointed Professor of Medicine and Attending Physician in Presbyterian Hospital in 1967, and has been director of the hematology training program at the medical center. He has published extensively in the areas of genetic and developmental aspects of blood cell formation and diseases affecting the blood cells. He is editor-in-chief of the Journal of Clinical Investigation. He has been the recipient of a number of awards, including the Bicentennial Medal from the College of Physicians and Surgeons awarded last year.

Dr. Marks, who is 42, is married and the father of three children.

# THE HOSPITAL AT NIGHT

Continued from page three

severe psychotics because we are simply not equipped to handle them."

Shock treatment is available on this floor to both in- and out-patients. Patients gener-

The smiling face of Mrs. Catherine Porcaro eases the tension of a nervous relative inquiring at N.I. Information Desk.

Lewis Danish adjusts head measurement of patient having skull x-ray.

Mary Efferson prepares for a journey into the night bringing needed sterile supplies to one of the floors in N.I.

Left to right, Nurses Emily Bailey, Nada Pecnik and nursing aide Ellen Connolly make certain their patient is safely secured on O. R. stretcher.

ally remain on this unit a maximum of six weeks, after which they are referred to another facility either within or outside the Medical Center complex.

There is a general aura of relaxation on this floor at night. Those patients who are well enough watch television, listen to records and otherwise find some kind of amusement until "lights out." The floor is under the medical direction of Psychiatric Institute and the nurses are under the aegis of PH Nursing. Patients are somewhat restricted regarding visitors, telephone calls and mail service, and require "permission" to obtain these privileges.

The Operating Room on the 10th floor is staffed evenings by Elizabeth Bailey, R.N., from England, Nada Pecnik, R.N., from Canada, and Mrs. Ellen Connolly, nurses' aide from Ireland—quite a continental group. Mrs. Connolly has been with the Medical Center for 15 years.

Miss Bailey and Miss Pecnik told us, "This is a fairly quiet evening for us."

Typical of the emergency cases admitted here is "subdural hematoma." There are approximately five emergency procedures per week, on an average. "Sometimes we go 24 hours a day; then it really is 'wild.'"

Mrs. Mary Efferson is the nursing aide on duty evenings in the Central Supply Room, located in the Basement. She has been working here for 14 years.

Here we found row after row of carefully labeled sterile supplies for every conceivable emergency need. There were sets for OB, suture, block, dressing, liver biopsy, ventricular tap, catheter, tracheotomy, cardiac arrest, trephine with twist drill, scalp vein infusion, telethermometer for patients with reduced body temperature during surgery, to name a few.

Mrs. Efferson has three large autoclaves in her care, one gas-operated and two steam. She explained that some supplies cannot tolerate the high intensity steam autoclave and are thus more suitable for the gas autoclave.

She will deliver to the floor whatever is needed if her autoclaves are not running. If they are, the floor must send someone down to pick up the needed item.

Said Mrs. Efferson, "We use a lot of disposable equipment, to say the least."

Also housed in the Basement is the Neurological X-ray Unit. The evening technologist on this night was Lewis Danish, who has been with the Hospital one and a half years. He informed us that the entire staff of eleven neurological x-ray technologists alternates on night duty, from 5:30 to 8:00 p.m. After that, the technologist remains on emergency call. "We take only neurological patients. All routine films are done at Vanderbilt Clinic emergency and are referred here only if warranted by the physician."

"Any type of film required for any patient at Neurological Institute is done here at night on a portable X-ray machine," Mr. Danish told us.

At the Information Desk on the 1st floor we met Mrs. Catherine Porcaro, who has been working at the Medical Center for ten years. Two people man this desk until 8:30 p.m. and one until midnight. They act as receptionist, cashier, information clerk—"you name it and we do it," laughed Mrs. Porcaro. She said that there can be anywhere from 0 to 6 admissions, with a wide range of diagnoses; some emergencies of course are inevitable. "Patients come from all over the world," she said. "They come from Jamaica, Montego Bay, Australia or what have you."

Mrs. Agnes Albro, evening supervisor of nurses at Neurological Institute since 1947, is a graduate of Long Island College Hospital School of Nursing. Mrs. Albro has been at the Medical Center for 33 years, always at Neurological Institute. She was associated with N.I. before it became a part of the Medical Center in 1938. She began as a staff nurse and went on to become assistant head nurse; she worked part time while her family was growing up and in 1947 accepted her present post.

Mrs. Albro and Mrs. Mabel

## Dr. Homan's New Book, "Child Sense"

Dr. William E. Homan, a Westchester pediatrician who has long been associated with the pediatric service of the Columbia - Presbyterian Medical Center, has written a new book, *CHILD SENSE: A Pediatrician's Guide for Today's Families*, published by Basic Books in April.

Advance acclaim greeted the publication of the book. It provides a sensible, thorough guide for parents, teachers and physicians, on how to bring up a child into an emotionally healthy unit.

Evaluating *Child Sense*, Dr. William S. Langford, Director of Children's Psychiatric Services with the Medical Center, writes: "Dr. Homan is down to earth, pragmatic, and sound in his ideas. His book could be helpful to many confused and perhaps bewildered parents who are suffering the uneasy self-consciousness that so many of our twentieth century moth-

ers and fathers have about their roles as parents."

Over 10,000 children in Westchester, New York, have grown up with Dr. Homan's counsel. His consultations frequently last two hours or more and deal often with emotional and behavioral, rather than strictly medical problems. He has been in private practice for the past twenty years.

*Child Sense* is available in local bookstores at \$6.95 each

## Julie Sloane Joins Public Interest

A new and lively addition to the staff of the Office of Public Interest is Julie Ann Sloane, Associate Editor of *The Stethoscope*.

Julie hails from New City, New York, where she attended Spring Valley High School. She received her B.A. in English and Philosophy from Douglass College, New Brunswick, N. J., in 1968.

In the summer of 1962, Julie was among a group of ten students from Rockland County high schools who ranked in the top 25 percent of their classes chosen to participate in a "summer science program" at Letchworth Village, Thiells, N. Y., working with the mentally retarded.

In the summer of 1963 she returned to Letchworth as a paid recreation aide.

She also did a one-year stint with *Time Magazine*.

Nurses Agnes Albro, left, and Mabel Orton. The nursing students who trained together and have worked together since 1936.

Orton (see the section on 9 East, above) are an excellent example of "togetherness." They both received their nurse's training at the Long Island College Hospital School of Nursing, graduating in 1936. (The L. I. College Hospital is now known as the Downstate Medical Center, State University of New York.) They both began their nursing careers at the N.I. in 1936. Mrs. Albro arrived here on the same day that Dr. J. Lawrence Pool arrived, and both these nurses saw Drs. Carmine Vicale, Lester Mount, J. Lawrence Pool, Edward Schlesinger and others come to Neurological Institute as residents and go on to become distinguished and prominent members of the N.I. attending staff.

Mr. Albro laughingly recalled how she happened to come specifically to the N.I. "In those days if a job was offered to you, you didn't ask questions, you just took it."

She has two children and four grandchildren, and her close and long-time friend and co-worker Mrs. Orton is godmother to both of her children.

Julie Sloane

Julie's avocation is photography and many of the photographs appearing in recent issues of *The Stethoscope* are the results of her work.

Her hobbies, in addition to playing the guitar, are restoring old furniture and horseback riding.

Julie's father is author William Sloane (*To Walk the Night* and *The Edge of Running Water*), who is currently director of The Rutgers University Press. Her mother is a speech therapist at Camp Jawonio, a Rockland County center for the physically handicapped. She has one brother and one sister.

# These Persons Are Retiring From Columbia-Presbyterian

## Bernard Moreshead

Bernard Moreshead retired in May after 17 years of employment as Special Officer, Protective Department. Mr. Moreshead applied for employment in Maintenance and Construction in 1952 but there was no opening in that department. He accepted, instead, an assignment in Protective and stayed on because "I liked it."

"In fact," he said, "I enjoyed it so much I would do it all over again."

Mr. Moreshead has many fond memories of the years he spent at PH, but the high spot for him was the day Arthur Godfrey was discharged from the Hospital in 1958. "I'll never forget that day—there was literally an 'army' of photographers and reporters."

Mr. Moreshead was born in

Prince Edward Island, Canada; now he and his wife live in Manhattan. Mr. and Mrs. Moreshead have two daughters (one married) and two grandchildren.

He enjoys fishing and hopes to take up golf. He and his family spend as much time as they can at their summer cottage in Prince Edward Island.

To the inevitable question, "What are your plans for your retirement years?" he answered: "I'm working full time at the Englewood Hospital!"

## Mosetta Carroll

Mrs. Mosetta Carroll, Attendant, Food Service, retired in May, after 21 years of employment. She moved up to the Medical Center in 1950 when the New York Ortho-

pedic Hospital on 59th Street moved up here.

paedic Hospital on 59th Street moved up here.

Mrs. Carroll enjoyed her long association with the Hospital and has made many lasting friendships. She enjoys reading, cooking and horticulture. She was born in Charleston, South Carolina, and lives now in Manhattan with her husband. Mr. and Mrs. Carroll have two children and one grandchild. Mrs. Carroll is active in the Women's Auxiliary of her church.

Her plans for the future include some traveling and what sounds like a most interesting venture—working with youngsters in one of the poverty programs.

## Ernest Phifer

Ernest Phifer of the wall-washing group, Housekeeping Department, retired in June after 22 years of employment at the Medical Center.

Mr. Phifer was born in Mooresville, North Carolina, (near Charlottesville) and came to New York in 1927 during the era of Mayor Jimmy Walker, which he vividly recalls. He was married in the same year by Adam Clay-

stamp collection," Dr. Amols recalled. The nature of the drug and the way it works have "thrown some light" on the etiology of Trigeminal Neuralgia, according to Dr. Amols. As a result, several new lines of investigation are being pursued to gain an understanding of the mechanism of its action.

in Columbia University.

An Associate Professor of Clinical Neurology at the College, Dr. Amols will thus retain some of his teaching commitments here.

While at the Neurological Institute Dr. Amols studied the effect of a new drug, Carbamazepine, on more than 400 patients with Trigeminal Neuralgia. This condition—of unknown cause—is characterized by brief attacks of sharp pain about the face. Dr. Amols' published report establishing the drug's effectiveness brought him much publicity. "I had such a huge correspondence following its publication that I developed an excellent

ton Powell's father in the Abyssinian Baptist Church on 126 Street.

Mr. and Mrs. Phifer have five children, 14 grandchildren and seven great grandchildren. Mr. Phifer's wife also retired the same month from her job at R. H. Macy & Co. Ernest and his wife intend to spend most of their time visiting and enjoying their large and wonderful family.

On June 11 Ernest was honored at a reception attended by many of his friends and co-workers.

Said Mr. Eugene T. Cleary, Administrative Assistant, Projects, "Everyone in Maintenance, as well as Housekeeping, where he worked under Mr. Liscombe, will miss him and the energetic and personal feeling that he brought to his job during the past 22 years."

## John Galvin

Working in a hospital can be a family affair!

John Galvin, who retired on May 1, traces his years of employment back to 1934 when he started working at the Medical Center as an orderly. Ten years later he transferred to the Protective Department where he had been stationed as Special Officer until his retirement.

Mr. and Mrs. Galvin have 3 children and 7 grandchildren. His daughter-in-law, Mrs. Margaret Galvin, is employed in the Accounting Department. John Galvin, his grandson, works in the Accounting Department also, and Paul Galvin, another grandson, works in the Laundry part-time, attending college during the day. Both grandsons are the children of Mrs. Margaret Galvin.

To quote his daughter-in-law, "He loves the Hospital and enjoyed every minute working here."

Jack, as Mr. Galvin is best known, enjoys meeting people and particularly remembered meeting Mrs. Mary Harkness many years ago. "She was a wonderful person," he said.

Jack is a sports enthusiast, particularly of baseball, and watches all the games on TV, occasionally venturing out to the ball park to pursue his hobby.

unteering her services to the Hospital, Mrs. Epstein told her all she had to do was report to the Volunteer Office. Mrs. Kallay wasted no time and the very next day signed up. That was 17 years ago.

From that time on, she has given her time and effort continually to the Sterile Supply Department, and in fact has occupied the same chair in the same spot these many years.

Mrs. Kallay is a motherly woman with a quick smile and a marvelous sense of humor. She has two daughters, one in

## May Fearn

May Fearn

Mrs. May Fearn retired on May 29 completing a thirty-one year association with the Medical Center. She came to work as a nursing aide in 1938, took time out to have her two children, and returned as an X-ray aide in P.H., the job she held until her retirement.

Mrs. Fearn was born in County Sligo, Ireland — "Where else?" she asked in her delightful brogue—and resides now in New York City.

We managed to find out that she loves to travel, enjoys the sun and sand of the beaches in the summer and is a crochet enthusiast, before she invariably led us back to her favorite subject—her two sons. One of these, William Fearn, works in the Harkness Pavilion Front Office.

Mrs. Fearn recalls the first day she worked at the Hospital, feeling strange in new surroundings, and was invited to lunch by another employee. Today, thirty-eight years later, she and Theresa Donnelly, of BH 9th floor operating room, are still close friends. Said Mrs. Fearn, "That was one of the nicest things that happened to me at PH."

She has enjoyed her many years at the Hospital, and after she has rested up a bit, and after her son, John, returns from Korea, she plans to do some traveling—"back to the old country for a bit." Then she will probably look for some part-time work.

On May 6 Mrs. Fearn was honored at a Tea when many friends, fellow-employees and many doctors were on hand to say farewell.

New York and one still in Hungary, one grandson and two great-grandchildren. She resides in the Isabella Home in New York City. She is an expert in embroidery, a craft peculiarly identifiable with the Hungarian people, and spends her spare time in the Crafts Program at Isabella doing weaving and other applied skills.

In one specific year she gave an outstanding total of 2,600 hours to the Volunteer service and has a grand total of 15,200 hours to her credit.

## DR. AMOLS LEAVES MEDICAL CENTER

Dr. William Amols, for 16 years an Associate Attending Neurologist at PH, has joined the staff of Mary Imogene Bassett Hospital as Associate Physician (Neurology). His appointment became effective July 1.

Interviewed prior to his departure, Dr. Amols said he was "delighted over the opportunity to serve the Mary Imogene Bassett Hospital, an institution with a rich tradition of its own." The Cooperstown, N. Y., hospital has long been affiliated with P&S, Dr. Amols pointed out. Medical students go there for elective clerkships, and the attending staff holds teaching appointments

## HERE ARE TWO OF PRESBYTERIAN'S VOLUNTEERS

### Gertrude Moss

Mrs. Gertrude Moss, who was associated with the Medical Center from 1929 to 1963 as an employee, volunteers at the Hospital on Sundays in the Pauline A. Hartford Memorial Chapel, where she arrives at 6:00 a.m. to escort the Hospital patients to 7:00 a.m. Mass. She has been serving in this capacity for 16 years, since the Chapel first opened.

Mrs. Moss' first position at PH was Secretary in Personnel until 1937, when she be-

came Secretary to Dr. Lyman R. Hartley, then Chaplain of the Hospital, until his death in 1954. Following this she joined the Department of Anesthesiology as Secretary where she remained until she chose early retirement in 1963.

Mrs. Moss is a sterling example of devotion to duty. Her own words best describe her reaction to the question of how she felt about getting up so early in the morning to volunteer. "It's wonderful!—the patients are so grateful—they feel it is so wonderful they can get to Mass."

Mr. William Moss, her husband, has also been volunteering in this same capacity for the past 3 years.

The Moss family lives in Washington Heights, has two sons and five grandchildren. Mrs. Moss told us that both she and her husband have part-time jobs; Mrs. Moss works for two Medical Center physicians, Dr. Paul Gross and Dr. Susan Williamson.

She and her husband spend as much time as they can with their grandchildren and enjoy vacationing in Bermuda.

### Katalin Kallay

Katalin Kallay

Mrs. Katalin Kallay arrived in the United States from Budapest, Hungary, in 1947. Five years later, in 1952, she became an American citizen and was asked by the judge, "What will you do for your new country?" Mrs. Kallay told him she had no immediate plans but that she would surely contribute something to her adopted country.

Several days later she met a lady at her English class, and in the course of a conversation this lady, Mrs. Deborah Epstein, told Mrs. Kallay she was a Volunteer at the Medical Center. When Mrs. Kallay expressed an interest in vol-

Gertrude Moss

## • ENGAGEMENTS

Rochelle Bruff and George Lazarus became engaged in July. Mr. Lazarus is a member of the Class of '71 at the College of Physicians and Surgeons.

Eva Polack, of Neurological Institute Clinical Pathology, is engaged to James Spinelli of Vanderbilt Clinic Clinical Pathology.

Ruth Lythcott is engaged to Clifford Ellis Darden of Delano, California. Miss Lythcott's father is Dr. George I. Lythcott, Associate Dean for Urban and Community Affairs, College of Physicians and Surgeons.

Margaret Bergmann, secretary to Drs. Charles W. Findlay, Jr., and Shivaji B. Bhonslay, became engaged on May 23 to Ronald O'Neil. They are planning a wedding for March 28, 1970.

## • MARRIAGES

Iona Madis and Donald O. Quest were married on July 20. Mrs. Quest is an Occupational Therapist at Presbyterian Hospital. Mr. Quest is a member of the Class of '70 at the College of Physicians and Surgeons.

Hedy Mens and Carel Folkersma were married on July 19 in The Pauline A. Hartford Memorial Chapel. Mrs. Folkersma is a member of the Exchange Visitors Program, Department of Nursing.

Camilla Patrick, cousin of Dr. Wilson C. Starr, Attending Ophthalmologist, was married on June 28 to Hugh Davis, Jr., in The Pauline A. Hartford Memorial Chapel.

## • BIRTHS

Mr. & Mrs. Harold Barnes welcomed a son, Jeffrey, on June 19. Mrs. Barnes is a former Head Nurse on the 9th Floor of Neurological Institute.

Mr. & Mrs. William P. Bonny are the proud parents of a son, William P., Jr., born July 15. Mr. Bonny is the Assistant Supervisor of Vanderbilt Clinic Medicare.

Mr. & Mrs. Robert Rice welcomed a daughter, Mary-Lynne, in February. Mrs. Rice was a '67 graduate of the School of Nursing, and worked on the third floor of Harkness Pavilion until December, 1968.

## • CONGRATULATIONS

To Joseph Rivera, Evening Foreman of the Presbyterian Hospital Mail Service, who received a promotion to Assistant Supervisor of that department. Congratulations and good luck to Joe.

## • CONDOLENCES

To the family and friends of Barbara Lahiff, Account Representative, Out-Patient Collection Department, whose father, John Connors, died on July 5.

## • NOTES OF INTEREST

Mrs. Margaret Muccilli, secretary to Mr. Eugene Cleary, Administrative Assistant, Projects, enjoyed a European holiday recently. She and her husband visited Dublin, Edinburgh, Vienna, London, and several cities in Italy, including Rome.

## In Memoriam

Sidney J. Weinberg

Sidney J. Weinberg, a Trustee of The Presbyterian Hospital since 1946 and a household name here because of an educational aid plan in his name, died at Harkness Pavilion July 23. A partner in Goldman, Sachs & Co., since 1927, the director at various times of more than 30 blue chip companies and a financial adviser to five Presidents, Mr. Weinberg was known the country over as "Mr. Wall Street." His death at 77 was front page news not only in this country

Sidney J. Weinberg

## DOINGS OF DOCTORS

The Corneal Center bids a sad farewell to two of its research fellows. DR. TEIICHI MORISUE and DR. YOSHINOBU SHIMIZU are leaving, after a two-year Fellowship, for their native Japan, where they will resume their research in ophthalmology.

DR. PAUL J. POPPERS, Assistant Professor of Anesthesiology, P&S, and Assistant Attending Anesthesiologist, PH, has been appointed consultant-lecturer to the U. S. Navy Hospital in St. Albans, New York. Dr. Poppers recently attended the 20th Anniversary Congress of the Scandinavian Societies of Anesthesiology, in Bergen, Norway, where he presented a research paper on "Treatment and Prevention of Maternal and Fetal Methemoglobinemia," lectured on the application of paracervical and pudendal blocks in childbirth, and was a member of a panel discussing obstetrical analgesia. He also conducted a seminar on local anesthetic drug development, in Stockholm, Sweden.

On June 6th and 7th, the annual Corneal Conference was held in Boston, sponsored by the Retina Foundation and the Massachusetts Eye and Ear Infirmary. DR. FRANTISEK VRABEC,

Chief of the Clinic at Charles University in Prague, Czechoslovakia, Visiting Professor in Ophthalmology at P&S, delivered a paper on "The use of the replica method for the study of the corneal surface and its changes." Other papers were given by DR. TAKEO IWAMOTO, Assistant Professor of Ophthalmology, on "Electron microscopy of Fuchs' dystrophy," and by FIGHT FOR SIGHT Fellows DR. HAJIME INOMATA and DR. NOBUHIKO MATSUO on "Neovascularization" and "Electron microscopic observation of chloroquine keratopathy." Members of the Corneal Center Staff DR. LINSY FARRIS and DR. FRANK HOEFLE spoke on "Corneal swelling during contact lens wear" and "In vitro studies on stored rabbit endothelium."

DR. CYRIL A. L. ABRAMS, Assistant Attending Pediatrician, Babies Hospital, and Assistant Professor of Pediatrics, P&S, spoke on "Inter-sex problems in pediatrics" on May 28 at a meeting of the Detroit Pediatric Society. On May 29, Dr. Abrams spoke on "Clinical syndromes associated with chromosomal abnormalities" at the Detroit Children's Hospital Grand Rounds.

but in other parts of the world.

Mr. Weinberg was a Trustee at the Neurological Institute from 1935 to 1938. He was elected to the Board of Trustees of Presbyterian Hospital in 1946. In the fall of 1961, Mr. Weinberg's friends and associates commemorated his 70th birthday by donating \$70 each to Presbyterian Hospital in his name. Mr. Weinberg added a donation of \$24,000 to the total contributed, \$46,000, and requested that an endowment fund be set up to provide educational assistance to Presbyterian Hospital employees. The educational aid fund, popularly known as the Weinberg Plan, has helped more than 400 employees since its inception in the spring of 1962. Mr. Weinberg also set up a loan fund of \$70,000 for PH residents in financial straits.

Dr. Rudolph N. Schullinger

Dr. Rudolph Nicholas Schullinger, Emeritus Professor of Surgery, P&S, and Consultant in Surgery, PH, died on June 27 at age 73.

Dr. Schullinger was born in New York on March 11, 1896. He received his B.S. from Princeton in 1917, and his M.D. from Columbia University's College of Physicians and Surgeons in 1923.

He served as a Colonel in the Medical Corps in World War II, receiving the Legion of Merit.

He was a former President of the Alumni Association of the College of Physicians and Surgeons.

Dr. Rudolph Schullinger

A Diplomate of the American Board of Surgery, he was a Fellow of the American Surgical Association, the New York Surgical Society, and the New York Academy of Medicine, and a member of the New York Academy of Sciences.

Surviving are his widow, the former Audrey Poole Bender; a son, Dr. John N. Schullinger, Assistant Attending Surgeon, PH, and Instructor in Surgery, P&S; a daughter, Mrs. Joan S. Seabrook; a brother, Karl W.; a sister, Mrs. Hilda S. Peters; and four grandchildren.

A memorial service was held on July 2 at the Brick Presbyterian Church, where Dr. Schullinger had been an elder.

Dr. Charles Lee Buxton

Dr. Charles Lee Buxton, prominent obstetrician-gynecologist, died on July 8 at his

home in Hamden, Connecticut. He was 64 years old.

Dr. Buxton was born in Superior, Wisconsin, in 1904. He was graduated from Princeton University in 1927 and received his M.D. from Columbia University's College of Physicians and Surgeons in 1932.

After interning at Bassett Hospital in Cooperstown, New York, in 1932, he became a Fellow in endocrinology at the Harvard Medical School. He was a resident at the Sloane Hospital for Women of the Presbyterian Hospital from 1934 to 1938. He was a director of the Endocrine Clinic of the Vanderbilt Clinic, Presbyterian Hospital, from 1938 to 1954, and Associate Attending Obstetrician-Gynecologist from 1947 to 1954.

From 1938 to 1946, Dr. Buxton was an Instructor in Obstetrics and Gynecology at Columbia University's College of Physicians and Surgeons and Associate Professor of Obstetrics and Gynecology from 1947 to 1954. In 1954 he joined the faculty of the Yale Medical School and was the chairman of the Department of Obstetrics and Gynecology there until 1966.

In 1965 he was the recipient of the Albert Lasker Award.

Dr. Buxton is survived by his widow, the former Margaret Palmer Mithoefer, three sons, one daughter, two stepsons, two stepdaughters, a sister, and a step-grandchild.

A memorial service was held on Thursday, July 10 in the Dwight Memorial Chapel at Yale University.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIV, No. 9

SEPTEMBER, 1969

## New Emergency Facility at Vanderbilt Clinic —Groundbreaking Set for Week of September 15

Dr. Milton R. Porter

Groundbreaking for a new building to adjoin Vanderbilt Clinic on the north and east, in the area off 168th Street that is now being used as a parking lot, will begin the week of September 15th.

"Plans for this new facility have been in progress for many months," said Dr. Milton R. Porter, President of the Medical Board of Presbyterian Hospital. "The medical, nursing, and administrative staffs have been work-

ing in close collaboration to make this new Emergency Facility one of the finest, and to plan it to meet the specific needs of this hospital and the community it serves."

It should be added that various members of the professional staff have continued to visit other emergency units in hospitals throughout the country, in an effort to learn of innovations and concepts that might be incorporated into the new facility

Dr. Joseph E. Snyder

at Vanderbilt Clinic. In addition, Mr. Jonathan P. Butler, a member of Rogers, Butler and Burgun, hospital architects, has spent many weeks at Vanderbilt Clinic to better understand its special problems and special needs.

The architect's preliminary sketch, shown below, on page five, is just that—a general sketch to show the areas in which the new facility will be located, and show it in relationship to other parts of Vanderbilt Clinic's first floor, to other parts of the Medical Center, and to show its easy access to Broadway and 168th Street.

Within the shaded areas will be deployed the X-ray suite, examining and operating rooms, laboratories and special diagnostic facilities necessary to provide complete emergency medical and surgical treatment within the unit. And it will be of a size

sufficient to meet the immediate and long-range emergency needs of The Presbyterian Hospital and the Washington Heights Community.

To cost an estimated \$5,000,000, the new Emergency Facility is being planned to:

- Provide on the north, from 168th Street, a new ambulance entrance that will admit seriously ill or injured patients to the Emergency Service without disturbing regular Clinic patients; today, ambulance patients must pass through the Clinic waiting room to the emergency area. This often results in delay, because of congestion in the waiting room, and the sight of injured or acutely ill patients is upsetting for waiting patients who are often frightened and anxious about their own medical problems.

- Provide a comfortable

## Fire Threatens Neonatal Nursery— Quick Action Averts Possible Disaster

At 3:53 a.m., August 5, a fire, of unknown origin, broke out in a nurses' classroom on the second floor of Babies Hospital, about thirty yards up the corridor from the Neonatal Intensive Care Nursery, where twenty-two infants, some prematurely born, were being given intensive care in isolettes.

As the call for help went out to the Fire and Police Departments, the Hospital's Emergency Plan was going into effect. Physicians and surgeons, hospital administrators and members of various special services were notified at their homes and began arriving at the Hospital within a very short time. Members of the professional staff on duty within the Hospital reported immediately to emergency stations.

Dr. Robert S. Jackson

The fire was under control by 4:35 and completely out by 5:00 a.m. All of the infants were safely evacuated within minutes after the fire was discovered, and physical examinations, completed in Vanderbilt Clinic a short time later, revealed that none had suffered undue stress because of the quick move.

Hospital officials, firemen and policemen who inspected the damage and interrogated those involved in the dramatic evacuation are convinced that a major hospital fire, with all its tragic consequences, was avoided only by the quick actions of hospital employees, the prompt arrival of units of the 5th Division of the New York Fire Department and Policemen of the 34th Precinct. All did their job with superb professional skill, demonstrating once again that most major fires can be averted if detected early and quick actions are taken by those at the scene.

Common concern on the part of all who were involved was for the welfare of the babies, none of whom could have withstood even a small amount of smoke inhalation. The possibility of such a tragedy was very real, because three hospital employees working in the immediate area, two firemen and a policeman were treated for

smoke inhalation, and one employee, Thomas Batchelor, of the Hospital Security Force, was found unconscious twice and had to be hospitalized.

DR. ROBERT S. JACKSON, an assistant resident in Pediatrics, was on call at Vanderbilt Clinic that night and at about 3:50 a.m. was reading in his room in staff quarters on the second floor of Babies Hospital, near to the door leading into the patient area. He probably had a better overall view of the fire and those involved than any other person. He reported, "I heard someone run past my door and at that moment smelled smoke for the first time. I ran at once to the corridor door and opened it. The corridor in front of the elevators was thick with smoke. I tried to go through, then turned to come out, kicking something with my foot. When I looked down, I realized that it was the leg of a man lying on the floor. I pulled him out of the B.H. corridor, discovering that it was a security guard. I gave him stimulation. When I knew that he was breathing regularly, I ran to a phone to report the fire and ask for help, learning that the fire had been reported. When I got back to my room, I found that the security guard was gone. I

### A DISCUSSION OF FIRE PREVENTION

It was an appropriate time, during the hours immediately following the fire in Babies Hospital on August 5, for discussions of fire prevention. Eugene T. Cleary, Administrative Assistant, Projects, invited John Bolger, Chief Engineer, and William Fleck, Supervisor of Maintenance, to a discussion in the Conference Room, Projects. Here are some of the points of information which emerged:

Fire prevention is an unending program. Because changes

in personnel occur continuously, instructions must be repeated.

Periodic fire prevention demonstrations are held for personnel, and have proved highly beneficial.

We have regular inspections made by our insurance carriers, Marsh and McLennan, our brokers, and our city fire department. All of these make periodic inspections. We have maintenance men who go around and inspect our equip-

## Marion Cleveland, Nursing Administrator, Retires

When Marion D. Cleveland, Director of Nursing Service, Presbyterian Hospital, and Assistant Professor of Nursing, Department of Nursing, Faculty of Medicine, Columbia University, retired in July, it marked the completion of a distinguished career in nursing at the Presbyterian Hospital.

Marion Cleveland was a member of the last class of student nurses to graduate from the old Presbyterian Hospital at East 70th Street, and it was from this class of 1927 that Miss Helen Young recruited young nurses to help in the opening of the new Columbia-Presbyterian Medical Center.

The 12 young nursing graduates were well known at the Medical Center: Ernestine Arnold, Joanna Auchincloss, Alberta Choate, Rieta Denison, Margaret Hawthorne, Helen Henry, Helen Scott, Madeline Walsh, Elizabeth Wilcox, Florence Vanderbilt, Phyllis Young, and, of course, Miss Cleveland.

Always claiming that she was first and foremost a "medical nurse," Miss Cleveland became a head nurse on a medical ward, a supervisor and the assistant director of nursing for medicine and surgery, before being appointed director

Marion D. Cleveland

of nursing service in 1955. She was the first to be given the appointments to the last two newly created positions. She was granted a B.S. and an M.S. from Teachers College, Columbia University, in 1941 and 1945, respectively.

As a nursing administrator Miss Cleveland made her own very real contribution to the

Presbyterian Hospital, to its patients and to its nursing staff. She always evidenced the greatest concern for the care that patients needed and the way in which it was given. One of her chief abilities was that of working harmoniously with other departments, interpreting fairly and honestly the problems of patient care.

Retirement days began very pleasantly for her, with a flight to Brussels to visit good friends from New Hampshire who have been living and working in Belgium for several years, followed by a trip with them to England, Scotland, Ireland and Wales. Although she and Cecile Covell plan to keep their Haven Avenue apartment, in the fall they expect to start "really living" at Miss Covell's house on Quaker Hill, Pawling, New York, where their friends from the Medical Center will always find an enthusiastic welcome.

## Dr. Lythcott, New Associate Dean, P&S, Receives Distinguished Visitor From Mali

Dr. George I. Lythcott, Dr. Benitieni Fofana, Dr. Herbert G. Cave, Dr. Douglas Damrosch.

The long procession of V.I.P.'s to visit the Medical Center in one or another capacity since it formed here in 1928 was joined on August 7 by the Minister of Health of the Republic of Mali, Dr. Benitieni Fofana.

The Minister's visit here was an unofficial one and came at the tail end of a month-

long coast-to-coast tour of hospitals and schools in the United States.

Dr. Fofana, who devotes two days each week to clinic patients in the land-locked republic he serves, represented his country at the annual conference of the World Health Organization in Boston. He also visited Washington, D. C., Bethesda, Md., San Francisco, New Orleans, and Atlanta, Georgia, where he participated in two days of round-table discussions at the National Communicable Disease Center.

His informal visit to the Medical Center and to Columbia University took place as a result of his acquaintance with Dr. George I. Lythcott, who served as Regional Director of a five-year U. S. assistance program to help 19 West African countries to eradicate small pox and to control measles. The program was sponsored by the Communicable Disease Center. Earlier, Dr. Lythcott conducted clinical research in pediatric pulmonary diseases at the West Africa Research Laboratory at Accra, Ghana, for the National Institutes of Health.

Dr. Lythcott was recently appointed Associate Dean for Urban and Community Affairs at the College of Physicians and Surgeons of Columbia University. Prior to his service in Africa, Dr. Lythcott was an Attending Pediatrician at the University of Oklahoma Medical Center. He directed the Center's pediatric clinics from 1956 to 1959.

## Capping of Practical Nurses

A proud moment for students of The School of Practical Nursing—Edith Ankers, director, officiating.

FORTRAN IV COURSE ANNOUNCEMENT: MEDICAL DATA PROCESSING.

A short course in Medical Data Processing, for all Columbia-Presbyterian administrative and Medical Center personnel, sponsored jointly by the Hospital and the Columbia University Computer Center, will begin on October 13. This course will cover applications of computers and principles of computing for the medical and medical administrative areas. This course consists of 18 one-hour lectures and problems, and is scheduled for Mondays, Wednesdays and Fridays, October 13 to November 21.

Registration cards may be obtained from the receptionist in PH 4-33, Medical Data Processing Department. Phone 579-2077. The class will be limited to 50 students. The book to be used for this course may be purchased at the Columbia University Bookstore in the Black Building.

Pre-requisites: attendance at the "Introduction to Computers" course; purchase of Decima M. Anderson's "Computer Programming, Fortran IV" book; spend 3 hours per week in class; do homework.

For further information, consult William A. Bauman, M.D., Director, Medical Data Processing, PH 4-33—Ext. 2077.

Fourteen members of the Columbia-Presbyterian School of Practical Nursing were honored in a Capping Ceremony held on Friday, August 22, in The Pauline A. Hartford Memorial Chapel. Edith J. Ankers, Director of the School of Practical Nursing, presided over the ceremony.

The Invocation was delivered by The Reverend Robert B. Reeves. Dr. Robert H. E. Elliott, Jr., Associate Dean, College of Physicians and Surgeons, and Assistant Vice President, The Presbyterian Hospital, welcomed the students and spoke of the Medical Center's pride in the new School of Practical Nursing, which opened less than a year ago.

Miss Ankers complimented the class on its high standards, and expressed appreciation to the students' families, whose cooperation has been important to their progress.

Four instructors at the School assisted Miss Ankers in the ceremony: Nuha Dabbekeh, Lea Battiatto, Annie Laurie Bryant, and Mrs. Jane Jewel. After receiving their caps, the new nurses held candles in the darkened chapel as

they recited their pledge.

Following the ceremony a reception was held for the newly capped students, their families, friends, and invited guests. The students are: Clara Antenucci, Lillian Beutell, Lillian Galante, Mrs. Mary Gee, Mrs. Exie Jones, Johnnie Mae King, Dorothy Kramer, Ruth Mertz, Mrs. Joyce O'Loughlin, Mrs. Socorro Romanelli, Joyce Seidner, Erma Syarto, Elizabeth Thompson, and Shirley Viglione.

## Announcing Computer Courses

A short course, "Introduction to Computers," open to all Columbia-Presbyterian Medical Center Personnel, sponsored jointly by the Hospital and the Columbia University Computer Center, will begin on September 29. This class, limited to 50 students, will cover applications of computers and principles of computing for the medical and administrative areas. It is designed as a preliminary for further studies in *Programming Languages, Machine Operation and Systems Analysis*.

There will be 4 one-hour lectures and 1 one-hour demonstration. The subjects to be covered are: Applications of Medical Computing; Computing Aids—Examples and Characteristics; Computer Equipment—Demonstration; Problem Solving; Programming; How the Computer Works.

Students and members of the CPMC staff who have permission of their supervisor, department chairman or appropriate faculty advisor are eligible. No previous knowledge of computing assumed.

Classes will be held in the Armory from 4 to 5 on Monday, Sept. 29; Wed., Oct. 1; Fri., Oct. 3 (Service Building, 2nd Floor); Monday, Oct. 6; Wed., Oct. 8.

A registration form may be obtained from Medical Data Processing, PH 4-33.

# QUICK ACTION AT BABIES HOSPITAL

Continued from page one

then went downstairs and up the rear stairway to the Intensive Care Nursery. There, lying on the floor, was the same security guard (Thomas Batchelor) that I had given treatment in my room. A nurse and another employee were giving him oxygen, while he was saying such things as "The babies, the babies, I've got to reach the babies. . . no more smoke. . . please no more smoke!"

(Editor's Note: Thomas Batchelor does not remember being pulled to Dr. Jackson's room, nor can he give an explanation of how he got from that room to the other end of the corridor. It is believed

ment had just arrived when we reached the first floor. Since there were others to take care of the security guard, I decided to inspect the rest of Babies Hospital."

Dr. Jackson began questioning the nurses, starting at the fourth floor. He learned that fire had not extended upward, but that there was considerable smoke coming into the north end of the floors, apparently from the elevator shafts and the front stairwell. Spread of the smoke had been generally restricted by the quick closing of the fire doors, and in some cases the nurses had stuffed wet towels into cracks that were leaking smoke.

"I instructed the nurses to remove the children from the siderooms into the solarium areas, to keep the doors closed and to call down to the admitting desk if any emergency should develop. This worked out fine until my arrival on the 8th floor, where the question of what to do with the Intensive Care Unit patients came up. Because the unit was well closed off and the air-conditioning was functioning, I instructed the nurse to maintain the patients there and that if any problem arose to notify the admitting desk immediately."

Dr. Jackson gave the same instructions to the nurse in charge of the Intensive Care Unit on the 9th floor, finished inspecting the other floors, then returned to the first floor to report ". . . what I had done and seen to the Fire Marshall and to Dr. Arthur Levin, the senior pediatric resident on duty."

After hearing this report of his activities, Dr. Jackson protested that too much space had been given to his actions, that he was just one of many who did their jobs. *Stethoscope* agrees that equally interesting accounts could have been written from the point of view of many employees. Dr. Jackson's activities, however, gave the best overall picture of what had happened.

As many as four people were required to return a single isolette with its precious occupant. This makes the rapid and safe evacuation of the babies from the fire area seem even more miraculous.

We regret that space is not available to present more of the individual stories. Great credit must be given to many people for their outstanding performance in that moment of crisis—to the six people on duty at the Neonatal Intensive Care Nursery: Margaret Steinbeck, R.N., Ellen McGarry, R.N., Barbara Swain, R.N., Aileen Heerans and Heide Lambert, Pediatric Technicians; to Jean Deutsch, R.N., the floor supervisor; to Roosevelt Brown and others of the Housekeeping Staff; to Dr. Levin, Dr. Budd and the physicians and nurses who cared for the infants as they arrived at Vanderbilt Clinic; to Sgt. William Nolan, to Thomas Batchelor and other members of the Security Force; to members of the 5th Division, New York Fire Department, and policemen of the 34th Precinct; and to Aaron Hale, night manager at P.H., who did a fine job of putting the emergency plan into effect, and in handling the press and broadcast reporters who arrived with the fire engines.

Special thanks must go to members of the Maintenance Department who helped get the Neonatal Intensive Care Nursery back in operation on the evening of August 7, only two days after the fire. This

Members of the Maintenance Department helped return the babies to their Intensive Care Nursery, on Thursday evening.

was a remarkable accomplishment, if one considers that the entire Nursery had to be completely rewired for electricity, that all walls had to be washed down and then repainted. The results of their efforts seemed worthwhile as one watched the tiny infants being returned to the safety of their special-care nursery (see photographs).

There are great lessons to be learned from this near tragedy. Each of us should reread the instructions about "what to do" when a fire is discovered (ask your supervisor for a set of instructions); and we should pay

## Weinberg Aid Plan For Employees of Presbyterian Hospital

Do you know about the Weinberg Aid Plan? If you are an employee of The Presbyterian Hospital, are you aware that this plan can help you advance your education?

If you have the feeling that the world is rushing by and you are standing still, read this article thoughtfully.

More education means more opportunities to advance. You can rise to a better job, better pay, and a fuller life—through your own efforts. The assistance of the Sidney J. Weinberg Reimbursement Plan may be a turning point for you.

Let us repeat the story of this plan for the benefit of all Presbyterian Hospital employees who may be interested:

This plan permits full-time Presbyterian Hospital employees of six months or longer to pursue job-related studies at accredited schools and reimburses up to 50 per cent of the tuition fee for 1 to 6 credits per semester, or the equivalent in non-credit courses, upon satisfactory completion of courses.

Whether you are working toward a Bachelor's degree, a Master's, a Ph.D., or a certificate in the line of your specialty, the plan is probably available to you.

Why not inquire at once?

Your supervisor can give you details of the plan or you may talk directly with Lillian Oring, Personnel Assistant, Harkness Pavilion 1-163, Extension 3215.

The time to act is now. All applications for fall courses must be turned in to Miss Oring on or before Tuesday, September 30. If you are uncertain as to the best course of action, do not hesitate to drop into her office to talk over your situation.

strict attention to "No Smoking" signs, avoid blocking fire doors and all the other points mentioned in the accompanying article on fire prevention.

## A DISCUSSION OF FIRE PREVENTION

Continued from page one

ment, our trucks and our masks. We're well covered for inspection—safety inspection as well as fire inspection—one building after another.

Fire extinguishers carry a date for being recharged; we follow a regular program of servicing these.

We stress the importance of fire-prevention instructions to our maintenance men. They are well aware of the danger of tying back the fire doors. There's an inevitable tendency on the part of people working at the hospital to block open the stair doors or corridor doors—however, this is a vio-

lation of fire-prevention rules. Maintenance men are taught to pick up any wedges that have been used to hold doors open.

The Hospital's safety committee meets every month and its discussions encompass fire prevention. In the minutes of these meetings, there's a record of fire drills and any fire alarms of the previous month. These are carefully analyzed as to the response to the fire alarm, the description of the fire, and the written reports, we're able to digest details in the light of what has been found after the incident, and

Please turn to page six

This photo of the nurses' classroom, where the fire originated, was taken only a few minutes after the fire was out. As you can see, the fire was intense, consuming all of the contents of the room, except metal frames. The remains of a bed and an isolette, used in the instruction of nurses, are shown at back of room.

# "...all special facilities necessary to give the best possible"

*Continued from page one*  
and dignified setting, free of unnecessary traffic and noise, for emergency patients.

- Provide on a single floor, in sufficient space and in close proximity to each other, all of the special facilities and equipment necessary to give the best possible emergency treatment in the quickest possible time. At present, the Emergency Service is in cramped quarters on the first and third floors of Vanderbilt Clinic, an arrangement that is inefficient, wasteful of both

time and personnel.

- Provide all the advanced equipment needed to give complete emergency diagnostic and treatment services at the lowest possible cost.

## Need is Urgent

"The need for modern, enlarged emergency facilities at Vanderbilt Clinic cannot be overstated," said Dr. Joseph E. Snyder, Assistant Vice President, Vanderbilt Clinic and Other Services. "Of all the demands made upon Presbyterian Hospital, the in-

creased demand for emergency medical and surgical treatment has been greatest. For example, during a typical 24-hour period from Sunday midnight to Monday midnight, more than 600 persons will appear at Vanderbilt Clinic seeking emergency medical assistance. This represents an increase of 100 per cent over the past ten years and an increase of 50 per cent over the past five years. This trend seems likely to continue."

The reasons for this are

quite obvious when one is familiar with the health problems of New York City in general and of the Washington Heights Community in particular. Prior to World War II, most of the people in Washington Heights received emergency treatment from their family doctors, who could personally handle a majority of the problems that came to them, referring only the more serious cases to the Vanderbilt Clinic Emergency Facility. The present facility, created in 1928, was designed

to meet this type of community need, and for many years it was adequate to efficiently meet the demands made upon it. Today it is much too small, inefficient and, thus, expensive to operate.

When asked to further explain why demands for emergency services have increased so greatly while the community population has remained fairly stable, Dr. Porter said, "As the shortage of family doctors within the community continues to increase, demands

## School of Nursing Commencement Exercises in the Garden

Seated, left to right: Rabbi Marvin J. Goldfine, Helen F. Pettit, Rev. Robert B. Reeves, Associate Dean Mary I. Crawford, Shirlee A. Stokes, Rev. Frederick Becker. Speaking, Dr. Lynne T. Greene.

Ninety members of the Class of 1969 took their places in the rows of red and gold chairs on the lawn. The weather cooperated to make it a beautiful garden ceremony.

Dr. Mary I. Crawford

The seventy-fifth commencement exercises of the School of Nursing, Faculty of Medicine, Columbia University, were held on the afternoon of August 15 in the garden at the Columbia-Presbyterian Medical Center.

Class President Regina McCarthy

Ninety members of the Class of 1969 marched down the walks from the Chapel and took their places in the rows of red and gold chairs on the lawn. The procession included supervisors, head nurses, students in the School of Nursing, and members of the faculty. Parents, relatives, hospital personnel and friends made up an audience of approximately 1,000 persons.

Presiding over the ceremony was Mary Crawford, R.N., Ed.D., Associate Dean (Nursing), Faculty of Medicine, Columbia University, and Director of Nursing, Presbyterian Hospital.

Following the Invocation by The Reverend Robert B. Reeves, Jr., Chaplain, Dr. Crawford introduced the speaker of the occasion, Dr. Lynne T. Greene, Assistant Professor of Anesthesiology, Faculty of Medicine, Columbia University, and Assistant Attending Anesthesiologist, Presbyterian Hospital.

In part, Dr. Greene told the class, "Our present method of health care is characterized by the process of 'problem-solving': we see individual areas in health care as problems for which we devise solutions, usually through administrative shuffling, compromise or robbing Peter to pay Paul. We have to get away from this

Dr. Lynne T. Greene

system of reaction. We need a better method, that of goal-definition—as is done on a trip to the moon—it is planned with a specific set of goals in mind, and then simulated over and over again to assure success. This kind of technique can be applied to the goal of providing adequate first-class health care to our entire nation. Our Medical Center needs such orientation to a specific goal.

"And here we need your expertise, common sense, and youthful exuberance. We need you to help develop a syncretism of medical practice and social change. We need your influence both inside and outside the medical community. I have it on good authority that you have been dissatisfied about many things. I

hope you will stay dissatisfied the rest of your lives. We have too many satisfied people."

A prayer was delivered by Rabbi Marvin J. Goldfine, Chaplain.

Dr. Crawford then greeted the class and presented the awards.

The Alpha Zeta chapter of Sigma Theta Tau, the national honor society for nursing, presents annually a medal of excellence to a member of the graduating class who best exemplifies the principles of Sigma Theta Tau and the high ideals of the nursing profession. Two graduating students received this award: Nancy Ellen Jones and Marian Higginbotham.

The Margaret Eliot Prize, given in honor of a former Director of Nursing by her sister, Mrs. William A. Forbes, is awarded to the senior nursing student who most nearly combines professional competence, capacity for leadership, and wholehearted compassion for patients. Marian Higginbotham and Gail Berry Swinney were the recipients of this award.

The Arlene Myers award is given in memory of a former head nurse in the Labor and Delivery Room by her family and by members of the Nursing and Medical Staffs of Sloane Hospital for Women.

Singing "Stand, Columbia"

It is awarded to a member of the graduating class who has demonstrated professional competence and a sincere interest in Maternity Nursing. The recipient of this award was Kathleen Dawn McCauley.

The presentation of certificates and pins was made by Helen F. Pettit, M.A., Professor of Nursing, and Shirlee A. Stokes, M.S., Assistant Professor of Nursing.

The ceremony closed with a benediction given by The Reverend Frederick Becker, Chaplain.

The graduates have completed the requirements for the Bachelor of Science degree, which will be conferred in October.

Following the ceremony, graduates, faculty, students, parents and friends attended the reception for the Class of '69 in Maxwell Hall.

# Emergency treatment in the quickest possible time..."

made upon the emergency facilities of local hospitals go up proportionately. The doors of Vanderbilt Clinic are open 24 hours a day, and citizens of the Washington Heights Community are calling upon its Emergency Service to treat minor as well as major complaints and injuries. It should be remembered that all patients who appear at night and on weekends, whatever their problems might be, are treated as emergency cases.

"I would also like to point

out," Dr. Porter said, "that because of the heavy flow of patients to the Emergency Service, those with minor complaints must sometimes wait to see a physician today. This delay is understandable only if one is aware that the physicians on duty may be giving life-saving treatment to patients who were acutely ill or seriously injured when they arrived at the Emergency Facility."

All who are active in planning the new Emergency Fa-

cility have three basic goals in mind: that it will be of a size sufficient to meet demands made upon it, that it will be so carefully designed that its services can be delivered quickly, at the lowest possible cost, and that none of the services at Vanderbilt Clinic shall be interrupted because of new construction. To avoid such an interruption, construction of the new facility will be done in phases. Groundbreaking and construction of the new building will

come first, in areas now not in use (see sketch), then areas of the first floor of Vanderbilt Clinic to be used by the new facility will be reconstructed section by section; those units now occupying such areas will be moved to new quarters as construction progresses. One of the first units to be moved will be the Eye Clinic, which, early in October, is expected to move to quarters in the new addition of the Institute of Ophthalmology. All units will be

notified well in advance of their move, and every effort will be made to inconvenience patients and personnel as little as possible.

Those who give their financial support to this important project in the Hospital's Development Program can take satisfaction in knowing that it will play a most important part in providing emergency medical services to the community and in the education of future physicians and nurses.

AREA OF NEW EMERGENCY FACILITIES

PRESENT AMBULANCE COURT

The initial construction phase of the new Emergency Facility in Vanderbilt Clinic will include excavation work on the east side of the main entrance of Presbyterian Hospital (marked "Present Court"), and the parking area off 168th Street marked "Present Parking Lot." In addition to excavation, phase 1 will include the foundation and construction through at least the first floor of the new building, and the new ambulance entranceway off 168th Street. The Eye Clinic will be moved from its present location on the first floor of Vanderbilt Clinic to

new facilities in the Eye Institute about October 1. The space made available by this move will be used by Vanderbilt Clinic for relocations necessitated by construction. Later it will become the main entrance lobby of the Vanderbilt Clinic. During the first phase of construction the Vanderbilt Clinic Administration offices: Speech and Hearing, Ear, Nose and Throat Clinics will remain where they are. As construction progresses, they will be relocated in other quarters. Every effort will be made to minimize inconvenience to patients and personnel.

# Welcome to Radiotherapy Center at Presbyterian Hospital—

The Radiotherapy Center of the Presbyterian Hospital has the look from the outside of a rural electric generator plant. The Center's unprepossessing appearance is misleading, for behind it there hides one of the nation's leading training, research and treatment facilities for neoplastic diseases. Arranged somewhat like an iceberg, the Center is most spacious on its lowest level. This is the floor housing the treatment area itself, patient waiting rooms, which include a children's play room, and areas for study and research by staff physicians, trainees and technologists. A large reception area greets the visitor's eye with its pleasing decor. Although the Center started carrying a near-capacity load of patients soon after it was dedicated in the spring of 1966, it still gives that recently-opened feeling of newness to its patients and staff. The high-voltage machinery needed to produce its therapeutic radiation is isolated within 36-inch-thick walls, including lead plates in the doors. Over the machinery

The Radiotherapy Center's superstructure, as seen from the Medical Center's garden.

section lie 42 inches of concrete and several feet of earth. These precautions give an absolute guarantee of protection to the staff from any stray radiation.

The offices of the Attending Radiologists and of the secretarial staff are located just above the treatment floor, near the Conference Room. The supporting machinery for the Center, including ventilation

and cooling, is located in the superstructure, as seen from the garden. A separate elevator connects the subterranean facility with the main offices of the diagnostic Radiology Department on the third floor of P.H.

During the more-than-22-year tenure of Dr. Jacox as Chief of the Radiotherapy Division and as Professor of Radiology at P&S, the Center increased its patient capacity through the physical expansion of its plant in 1966. The Radiotherapy Center became one of the outstanding departments in its field with the opening of the new facilities. The new Center was the culmination of many years of planning by Dr. William B. Seaman, head of Radiology Department, by Dr. Jacox and the rest of the Department's

staff—a persistent team effort. It was, in Dr. Jacox's words, "a magnificent dream come true."

If persistence and effort are the stuff of dreams-come-true, Mrs. Helen Steck, Supervisor of Center Personnel, should receive a certificate of merit in dream building. Mrs. Steck was instrumental in ironing out the problems connected with moving the Radiotherapy Division from the third floor, PH, to its temporary abode in the basement of Neurological Institute, and thence to its permanent quarters. It was her administrative prowess and ingenuity that kept the Hospital's radiotherapy service operating through those long months of displacement and inconvenience. The design for the new plant provided for the addition of a linear accelerator with the energy of six million volts to the Center's superb equipment. The linear accelerator is one of the newer types of apparatus for the production of high-energy radiation, considered superior to other radiation types. The Center's other units are a 24 million volt Betatron with both X-Ray and electron beam capabilities, one of few Betatrons in the country, and two radioactive cobalt machines, with the energy equivalence of two million volts each. Last year the Radiotherapy Center treated about 1,200 new patients and gave more than 21,600 treatments. Dr. Jacox

attributes this increase to the new centralized facilities, which are designed to accommodate 2,400 new cancer patients per year in the 1970's.

A special area for treatment planning is located in another part of the treatment floor. It includes a large room for the planning of treatments, and a number of small rooms, plus a dark room. These facilities are used by radiology trainees while they are pursuing their particular interests in radiology, especially in therapy. The point of this emphasis is that familiarity with the most recent developments will help them to get the most out of the Radiotherapy Center's sophisticated equipment and training methods and will speed them along the road of advancement. A discipline with great future potential, radiology has little, if any, prospect of unemployment in the decades to come.

Dr. Jacox is due to retire on October 1st of this year. Behind him he leaves a burgeoning legacy of research in many fields of radiotherapy, designed to widen the applications of radiation and to increase its specificity for certain kinds of tissue.

An example of the Center's research accomplishments is its work with oxygen. Two of the Center's radiotherapy rooms are equipped with hyperbaric, or high pressure oxygen facilities. The Radiotherapy Department was the first in America to use radiotherapy combined with high-pressure oxygen.

The first demonstration of

Mary Ryan, receptionist, handles much of the Center's administrative paper work, including appointments and the arrangement of treatment schedules.

## A DISCUSSION OF FIRE PREVENTION

*Continued from page three*  
this alerts us to the possibilities.

A very important point to be stressed: In case of fire, employees should use, not the telephone, but the hospital fire alarm call box. There are fire alarm boxes on each floor of every building. The phone can only be a delay. We are the same as a fire department. We'd rather have you pull the box, and answer a false alarm, than risk a delay.

Note the importance of this. Once the alarm is pulled, the time and the location of the fire are all recorded on tape, and there can be no question about when the alarm was transmitted or where it was transmitted from.

Another point about using the alarm is that it simultaneously informs the three nerve communication centers of the Hospital: (1) the Engineer's Office; (2) the Presbyterian first floor Information Desk and Night Manager's Desk; and (3) the Telephone Room, second floor, Service Building.

The alarm also sounds automatically in all basement, tunnel and shop areas where most members of the fire brigade are routinely assigned to duty. These men are instantly notified of the building and floor reporting a fire, and respond without further orders.

In two offices—the Engineer's Office and the Telephone Room—all of the information is instantly recorded on tape. At the Hospital's first floor Information Desk, the same signal is received visually.

All three of these areas are manned 24 hours a day, without exception.

At the first floor Information Desk there is a "Class 3" alarm box—an alarm directly connected with the central station of the city's Fire Department. When this alarm is pulled, it brings the fastest possible Fire Department response.

To repeat, the use of the telephone is a delay. The fire alarms save precious seconds of time, and they reveal instantly the location of the fire.

In the case of the recent fire on the second floor of Babies Hospital, the seemingly automatic responses of the nurses were the result of their previous training. Their actions were a part of the fire-safe plan which the City has approved for the Hospital and which are being instituted through meetings with the Nursing Department and other affected services.

Hospital personnel have appreciated training programs held outdoors periodically. Familiarity with the use of elementary fire fighting equipment removes psychological barriers.

However, the major point for nurses, in case of fire, is to report the fire, evacuate the room, and in other respects follow the fire programs to the letter.

Evacuation of the premature nursery is of course very different from that of the normal nursery in the maternity ward. Those nurses who took part in the prema-

Rita Downing, R.N., records a treatment in the Radiotherapy Center's log, as Dr. Jerome Krieger looks on.

ture nursery evacuation did a very fine job.

Our buildings are one hundred percent safe, constructed of concrete floors and masonry walls. In case of fire, it is not the building that burns, but the contents of the room. Therefore, good housekeeping is closely tied in with fire prevention. All staff must keep the closest possible observation on obedience to fire-smoking regulations and other fire and safety precautions.

Smoke and the heat of combustion may be fully as dangerous as fire itself.

Bulletins are available outlining the regulations for personnel related to fires and other dangers. Every supervisor is trained and is aware of his specific responsibilities in his area.

In some areas the administration has charged the nurses with responsibility for watching for unsafe devices—heating appliances, electric blankets, and so on, which people are inclined to bring into the Hospital, but which, of course, are definitely barred.

The Hospital people who were initially present at the

discovery of the recent fire and who responded to the first alarm did an exemplary job. There was, needless to say, a degree of risk. (See story on Thomas Batchelor.)

Much time and care were expended in examining the burned contents of the room. The professionals of the Fire Department have noted various lessons to be learned from this fire. The Hospital cooperated in taking pictures which the Fire Department will use—without naming Presbyterian Hospital—in its educational program.

# One of the Nation's Leaders in Research, Training, Treatment

Dr. Harold W. Jacox, next to closed circuit TV monitor of one of the Center's five treatment rooms.

Mrs. Helen Steck, Supervisor of Radiotherapy personnel, with Dr. Chu H. Chang, Attending Radiologist, P.H.

the role of oxygen in enhancing radiation damage to tumor cells was carried out in England by Grey. Later, hyperbaric oxygen was introduced in radiotherapy. A pilot hyperbaric oxygen radiotherapy program was first set up here in 1960 to treat advanced cancers of the head and neck with radiation while the patient breathed oxygen at four times normal atmospheric pressure. In 1963, with improved equipment and a double-wall plastic tank, the project continued to study the effect of radiotherapy at three times normal oxygen pressure on a particular brain tumor called glioblastoma and on metastatic tumors in the lung, as well as on extensive oropharyngeal neoplasms. General anesthesia is no longer required for this approach. The pilot studies showed that radiation doses should be reduced 1.4 times for patients receiving radiation in a greatly reduced fractionation scheme under high-pressure oxygen.

Dr. Chu H. Chang, Professor of Radiology, P&S, and Attending Radiotherapist, P.H., in charge of the hyperbaric oxygen program, which is supported by N.I.H. grants, is pleased with the swift regression of oropharyngeal cancers

in most cases and with the rapid-response of some large metastatic cervical nodes to irradiation under hyperbaric oxygen. The three-year tumor-control rate in a randomized series of oropharyngeal cancers is about 70% higher in the group irradiated under high pressure oxygen than in a control group receiving radiation under normal atmospheric conditions. The complication rate, has been the same as in a control group. Dr. Chang emphasized that more cases of head and neck malignancies have to be followed over a longer period of time to reach valid conclusions. The same applies to conclusions about the efficacy of treating glioblastoma with hyperbaric oxygen, but the survival rate in this category of patients is also slightly higher than that of the control group.

The Radiotherapy Center's Betatron is playing an important part in the treatment of retinoblastoma. For more than a decade and a half, a team of Columbia-Presbyterian doctors, consisting of a radiologist, an ophthalmologist, a pediatrician, a chemo-therapist, and a surgeon, have been treating this childhood malignancy with three approaches: with Betatron-produced x-rays

totaling 3,500 to 4,500 rads over a three-to-four week period, with light coagulation, and in cases of advanced local disease with the use of a drug called TEM (triethylenemine), channeled via the neck artery leading to smaller arteries supplying the eye, and administered before and after the x-ray bombardment. The Radiotherapy Center's effort in this program is directed by Dr. Patricia Tretter, Associate Attending Radiologist. This program has resulted in a betterment of the cure rate from 23 per cent prior to 1953 to 55 per cent at present. The Medical Center's facilities and concentration of talent attract about one half of this country's retinoblastoma patients.

The Radiotherapy Center has recorded another significant improvement in the survival of children with cerebellar medulloblastoma, one of the most malignant types of brain tumors. Known as the "mega-voltage technique," the method involves irradiating the patient's whole brain and the upper half of his cervical spine with two opposing lateral ports horizontally and subsequently irradiating the rest of the whole spine with two or three midline ports vertically. The junctions of adjacent ports are deliberately overlapped on alternate days to avoid "hot spots." The technique, which was developed by Dr. Chang, Dr. Edgar Houseman, Associate Professor of Clinical Neurosurgery, P&S, and Associate Attending in Neurological Surgery, N.I., and Mr. Charles M. Herbert, Jr., staff physicist, P.H., was presented at the annual meeting of the Radiological Society of North America, in December 1968. The method improves dose distribution in the brain and has achieved a drastic increase of five-year survival rate of 40 per cent, the highest among the reported series of medulloblastomas in the literature.

The above few samples of

innovations in techniques show that the Radiotherapy Center thrives on new ideas. The creative spirit that permeates this "underground" institution not only meshes with its primary purpose—to provide the best-available treatment to patients—but also tends to attract residents who are interested in the educational programs offered by the Radiotherapy Center. An example is the

Center's three-year, straight radiotherapy training program for radiotherapists, which was launched three years ago with a United States Public Health Service Training Grant. It has just been expanded this July to accommodate more trainees through an additional grant of \$202,764.00 from the National Cancer Institute for the next three years under the direction of Dr. Chang.

The faces of Dr. Patricia Tretter, Associate Attending Radiologist (right), and Beverly Dilendick mirror the demands and tension of handling sophisticated equipment as they work with young patient about to be treated with the Center's powerful Betatron.

Anne Elliott is checking a patient's x-ray and reading treatment instructions in the linear accelerator room. The light source behind the accelerator is for localization of treatments.

Mrs. Helen Steck, R.N., Supervisor (right) discusses equipment in the x-ray simulator room with a group of visiting nurses.

Anne Prendergast, R.N., adjusts television camera prior to administering irradiation with radioactive cobalt particles to a patient.

This hyperbaric oxygen chamber in the Radiotherapy Center is equipped with telephone connection to patient.

# Stethoscopia

## DOINGS OF DOCTORS

### ● ENGAGEMENTS

Dr. Susan Botsford and Dr. Peter Workum plan an October wedding. Both doctors are graduates of the College of Physicians and Surgeons.

Dr. Anne Moore, a 1969 graduate of the College of Physicians and Surgeons, is engaged to Dr. Arnold Lisio, Assistant Attending Physician, PH, and Instructor of Medicine, P&S. They plan a fall wedding.

### ● BIRTHS

Mr. & Mrs. William Fife welcomed a son, William Andrew Fife, Jr., on July 15. Mrs. Fife is the former Patricia Ann DeAngelis, School of Nursing '68.

Mr. & Mrs. Peter Fuchs welcomed their third son, Eric, on July 2. Mr. Fuchs is a member of the Maintenance and Construction Department.

### ● WELCOME

To Mrs. Rita Baez, new member of the Development Program Office.

### ● NOTES OF INTEREST

Mrs. Judy Brzosko, secretary in the Medical Information Department, has been transferred to the Clinic Administration Office.

Mrs. Bernard Maxwell, the former Barbara Dillon, School of Nursing '65, is serving as a missionary nurse in Panama, where she lives with her husband and two children.

### ● MARRIAGES

Elizabeth Sos and Earl Suri were married on August 30 in The Pauline A. Hartford Memorial Chapel. The bride is a 1969 graduate of the School of Nursing, and a Staff Nurse at the Neurological Institute.

### ● CONGRATULATIONS

To Mrs. Margaret Sughrue, Compensation Department, who welcomed a second grandson, born in Honolulu to her daughter who was head nurse in the Operating Room here before her marriage. Mrs. Sughrue and her husband plan to spend the month of October visiting with their daughter and her family.

To Mrs. Renata Fitzpatrick, medical secretary in the Medical Information Department, who has been promoted to Assistant Supervisor of that department.

### ● WELCOME

To Kathleen Thompson, new member of the Public Interest Department.

To Georgina Ffrench, new Staff Nurse in Babies Hospital. Miss Ffrench is the granddaughter of Mrs. Mae Ffrench, a Nursing Aide on the Fifth Floor of Vanderbilt Clinic.

## Emergency Care Course, October 9-11

"Emergency Care and Transportation of the Sick and Injured" is the subject of a course to be given on October 9-11 in the Alumni Auditorium. The course, sponsored by The American Academy of Orthopaedic Surgeons Committee on Injuries, is designed for ambulance attendants, emergency squads, firemen, policemen, safety engineers, and emergency room personnel; it is also open to nurses, civil defense, industrial health and public health personnel. Registrants are expected to have had advanced first aid training.

The registration fee is \$50, including all luncheons and materials. The deadline for

registration is September 22. To register, send your name, address, and a brief statement of your emergency care function to: David L. Andrews, M.D., 161 Fort Washington Avenue, New York, New York 10032. A check for \$50, payable to The American Academy of Orthopaedic Surgeons, must accompany the application. Registration is limited to 200.

**WE NEED YOU!!  
DO YOU FORM TARTAR ON YOUR TEETH?  
IF YOU NEED YOUR  
TEETH CLEANED 3 OR  
4 TIMES A YEAR—WE  
CAN HELP YOU!**

We will clean your teeth at no charge and you can help us in studying tooth tartar.

Please call Mrs. King, Ext. 3473, Division of Preventive Dentistry and Community Health, for an appointment.

**MEDICAL CENTER  
NURSERY SCHOOL**, parent-cooperative, still has a few places available for four-year-olds. For further information call Mrs. Roberta Rosen at 568-0564.

DR. GUY D. POTTER, Associate Attending Radiologist, PH, and Associate Professor of Radiology, P&S, spoke on "Trauma to the Temporal Bone" on August 13, and "The Facial Canal" on August 14, at the IXth International Congress of Oto-Rhino-Laryngology Meeting in Mexico City.

DR. JOHN K. LATTIMER, Director of the Urological Service, PH, and Professor and Chairman, Department of Urology, reports that in the 10th floor Stem exhibit area, the Department of Urology and the Extraction Department of the Dental School have a collaborative exhibit showing everything from huge Mastodon teeth down to current human molars, for comparison. They also have a saber-toothed tiger skull with unbelievably large fangs, a dinosaur footprint in a slab of rock, along with a fragment of dinosaur bone and some gizzard stones from one of these huge reptiles. The saber-toothed tiger skull was given to Dr. Lattimer by the late father of our own

Dr. Henry Clay Frick, who was an authority on relics of this geological era. We are not sure how urology fits into this particular exhibit except to show that the Urology Service is interested in more kinds of stones than just kidney stones.

DR. EDWARD B. SCHLESINGER, Attending Neurological Surgeon, Neurological Institute, and Professor of Clinical Neurological Surgery, P&S, has been elected President of the New York Neurosurgical Society for 1969-1970, and President Elect of the Neurosurgical Society of America for 1970-1971.

DR. ROBERT B. HIATT, Attending Surgeon, PH, and Professor of Surgery, P&S, returned on July 1 from Sydney, Australia, after a year's absence on sabbatical leave. Dr. Hiatt was a Visiting Professor at the University of Sydney, spending his time mainly in gastrointestinal physiological research. He was accompanied by his wife and four daughters.

Dr. Richard L. Masland

Dr. J. Lawrence Pool

Dr. H. Houston Merritt

The Fourth International Congress of Neurological Surgery and the Ninth International Congress of Neurology will meet at the New York

### Program at Delafield

A scientific program supported by the New York City Division of the American Cancer Society will be held in September at the Francis Delafield Hospital Auditorium.

On Friday, September 19, from 4:00-5:00 p.m., A. A. Moscona, Ph.D., University of Chicago, will speak on "Induction of Glutamine Synthetase in Embryonic Neural Retina: A System for Studying Control Mechanisms in Differentiation."

On Friday, September 26, from 4:00-5:00 p.m., Charles A. Thomas, Jr., Ph.D., Harvard Medical School, will speak on "The Theory of the Master Gene."

On Monday, September 29, a special lecture will be held at 4:00 p.m. Dr. George Klein, Karolinska Institutet, Stockholm, Sweden, will speak on "Experimental Tumor Immunology."

Hilton Hotel during the week of September 20-27. DR. H. HOUSTON MERRITT, Dean of the Faculty of Medicine, Columbia University, will preside over the Ninth International Congress of Neurology. Among the representatives of the Neurological Institute at the congresses will be DR. J. LAWRENCE POOL, Director of Service for Neurological Surgery, and DR. RICHARD L. MASLAND, Director of Service for Neurology. In addition to a dozen papers co-authored by our researchers and clinicians, the Parkinson

Information Center will demonstrate remote information retrieval from the Parkinson data bank. Through a typewriter terminal installed in the P.I.C. exhibit booth, congress participants will be able to order a distant computer to supply them instantly with titles of latest papers in their fields.

Further information about these two major convocations may be obtained from World Congresses of Neurological Sciences, 420 Lexington Avenue, Suite 417, New York, New York 10017.

## Enroll Now in Operating Room Technology Course

The Columbia-Presbyterian School of Operating Room Technology will start a fall class on September 29, 1969.

The length of the course will be twelve months. Upon completion of the course, students will receive a certificate from the hospital.

Applicants must be 18 years of age and a high school graduate or the equivalent.

The course will consist of formal classes for basic sciences and theory of aseptic technique, demonstrations and

some supervised procedures in the operating rooms.

At the end of six months, trainees will be expected to be functioning in the operating rooms with graduate nurses supervising and teaching operating room procedures.

Those interested in applying for enrollment in this program should address inquiries to Mrs. Gilda Gehm, Columbia-Presbyterian Medical Center, 622 West 168th Street, New York, New York 10032 or telephone 579-6191.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIV, No. 10

OCTOBER, 1969

## \$50,000 STOUFFER PRIZE TO DR. LARAGH

On September 17 it was announced that Dr. John H. Laragh, Professor of Clinical Medicine at the Columbia-Presbyterian Medical Center, Associate Attending Physi-

Dr. John H. Laragh

cian, PH, was a co-recipient of the \$50,000 Stouffer Prize, awarded annually for notable achievements in research into causes of high blood pressure and arteriosclerosis.

The other recipients of the Prize were: Dr. Jerome W. Conn, Louis Harry Newburgh Professor of Internal Medicine, University of Michigan, Ann Arbor, Michigan; Dr. Jacques Genest, Scientific Director, Clinical Research Institute of Montreal, Montreal, Canada and Dr. Franz Gross, Head, Department of Pharmacology, University of Heidelberg, Heidelberg, Germany.

In the announcement of the prestigious award, Dr. Laragh's work was especially cited in which he first described the basic nature of the

interaction of kidney and adrenal hormones (renin and aldosterone), their role in causing malignant hypertension, and their important role in the normal regulation of the amount of salt and water in the body.

Dr. Laragh joined the Medical Center in 1948 as Intern in Medicine. After completing his clinical residency training in internal medicine and then cardiology, he became a New York Heart Association Research Fellow and he began his studies of problems of fluid and salt metabolism in congestive heart failure. In his early work he received considerable guidance and encouragement from Dr. Robert F. Loeb, later Bard Professor of Medicine. It was Dr. Loeb who, with his associates in 1932, had demonstrated sodium deficiency in patients with diseased adrenal glands (Addison's Disease). These patients were restored to health by administering sodium chloride supplements. These studies identified one function of the adrenal glands and presaged the explosive growth in adrenal physiology which followed upon the chemical identification of the two adrenal hormones, cortisol and aldosterone.

Dr. Laragh, with his co-workers Dr. Stanley Ulick and Dr. Seymour Lieberman, developed new methods for measuring the salt-retaining hormone, aldosterone. They

## COLUMBIA-PRESBYTERIAN WELCOMES

### New Students

#### PHYSICIANS

One hundred thirty-two new freshmen at Columbia University's College of Physicians and Surgeons were launched into their first year of study by an intensive and stimulating orientation week, September 11-15.

The students, from about 30

states in the United States including New York, and five children of staff members, had an opportunity to get together at scheduled informal functions including guided tours of the Medical Center, a picnic and soft-ball outing and a Fac-

*Please turn to page four*

#### NURSES

September 17th was a day fraught with much activity as 107 incoming nursing students moved into Maxwell Hall. Girls arrived and suitcases and trunks arrived but somehow the pieces all fell into place as the 78th incoming class prepared to embark on their studies in the Department of Nursing, Faculty of Medicine, Co-

lumbia University.

According to Helen F. Pettit, Director of Nursing Education, of these 109 students, 32 have baccalaureate degrees, 68 have had two, but less than four, years of college. Nine are already R.N.'s.

Nineteen new graduate students have been admitted.

*Please turn to page four*

#### DENTISTS

Dr. Melvin L. Moss, Dean; Dr. George L. O'Grady, Assistant Dean, and Dr. Joseph A. Cuttita, Chairman of Admissions, and the members of his committee, School of Dental and Oral Surgery, had the not enviable task of selecting, from 450 applicants, 46 persons to enter the 1973 dental school freshman class. The

students were chosen from 30 different colleges throughout the country.

Of the 46, three are women, nine are sons of dentists, 14 had been on the Dean's List in college, two have Ph.D. degrees, 40 have a bachelor's degree and four have the minimum requirement of three

## Honor to Birny Mason, Hospital Trustee

Birny Mason, Jr., a Trustee of The Presbyterian Hospital in the City of New York, will receive, from the National Conference of Christians and Jews, the NCCJ Brotherhood Award for distinguished service. The presentation will be made on October 6 at a dinner to be held at the Americana Hotel.

Mr. Mason, who is chairman of the Board of the Union Carbide Corporation, will be cited for his dedication and service to the human community and for his positive influence in combating bigotry. Leading industrialists from more than 120 top corporations will pay tribute to him.

Chairman at this event will be Andrew W. Tarkington, vice-president of the board of the Continental Oil Company. Joseph H. Blatchford, Director of the Peace Corps, will be the featured speaker.

Mr. Mason, born in Brownsville, Pennsylvania, in 1909, is a graduate of the Hill School in Pottstown, Pennsylvania, and of Cornell University, where he received his B.S. degree in chemical engineering in 1931. He joined Union Carbide in 1932, where he held positions in research and production during his early years; later, he moved to the corporation's industrial relations department, of which he became manager in 1952. He was

Birny Mason, Jr.

made secretary of the corporation in 1955, a vice-president in 1957, executive vice-president and member of the board of directors in 1958, president in 1960, chief executive officer in 1963, and chairman of the board in 1966.

Mr. Mason is a member of the board of directors of Manufacturers Hanover Trust Company and the Metropolitan Life Insurance Company, a director of the Economic Club of New York, and a member of The Business Council in Washington, D. C.

A resident of Larchmont, New York, Mr. Mason is married to the former Elizabeth Brownson Smith. The Masons have one son, Jerome Acheson Mason.

Come and join the party—a typical student-faculty get-together during the week of new student orientation. Here the scene is Bard Hall on Sept. 12—a welcoming tea for incoming freshmen, Columbia University's College of Physicians and Surgeons.

## Ernest Traber, Brace Office, Cites Need For Orthotists

At a luncheon recently, Ernest W. Traber discussed the need for skilled people in his field of orthotics—the knowledge and use of orthopedic appliances.

If you have ever been fitted with a metal brace here at Presbyterian, you already know Mr. Traber—his dry manner of speech and his easy good humor. In his twenty years of service at this Hospital, he has worked with tens of thousands of patients.

"There's a critical shortage of orthotists," he said. "Only those trainees who are deeply interested come through." He told about two well qualified young men who were forced to drop training. "They would have been good men—they possessed the intelligence, the education, the personalities to work with patients and doctors. They had the mechanical ability. But they found it rough going. Because his family needed money, one turned away from Prosthetics and Orthotics work to drive a Coca-Cola truck; the other to become a roofing salesman. . . . You stay with it because you become involved. But there has to be a monetary inducement as well."

It was 31 years ago that Mr. Traber started on the trail that would lead him to become a Certified Orthotist—he accepted employment with The Institute for the Crippled and Disabled, a rehabilitation center at 400 First Avenue, financed by the Milbank Foundation. In time, he was asked by the Institute to go to The Presbyterian Hospital. "They sent me here on a sort of lend-lease arrangement to get things started. I was impressed by many doctors who were deeply dedicated, and I found friends here. The Institute asked me to stay on, and I became so much involved that I couldn't get away."

In his two decades here, he has noted many improvements in the various types of prostheses and braces. New materials, especially plastics, have made a great difference. Although he has passed along many recommendations, he recognizes that much remains to be done. He believes that older orthotists might well be utilized in research.

It was Mr. Traber's background in metallurgy research which first kindled his interest in the making of orthopedic appliances.

Have the passing years, we asked, brought any changes in the public acceptance of prostheses?

"Yes, very great changes. People have acquired a forthrightness in facing problems, in complete contrast to the attitude of a number of years ago, when, in some extreme cases, parents would hide a crippled child in the closet. Nowadays, parents don't hesitate to bring the crippled child to the clinic."

Although Mr. Traber has been considered a part of The Presbyterian Hospital, he has actually remained in the service of The Institute for the Crippled and Disabled. He retired last spring, but continued as a consultant. In early August we found him at work in his usual headquarters, the Brace Office, 3rd Floor, Vanderbilt Clinic, and we asked to accompany him on one of his rounds. In less than two hours he visited patients in five different areas of the Medical Center. Here is what we witnessed: On Fifth Floor, Presbyterian, he applied a knight brace, post-operative spinal fusion, to the back of a young man.

On Second, Harkness Pavilion, he adjusted a dynamic hand brace for a veteran who lost an index finger in Vietnam, and whose three fingers and thumb are being molded into a new hand.

In Vanderbilt Clinic he measured a patient for a knee cage to stabilize his arthritic knee.

In another part of the Hospital, for a lady who had lost a knee cap, he took measurements from which to make a long leg brace to stabilize the knee.

And in another part of the Hospital, for a man who lost a leg two weeks ago, he measured for a pylon to facilitate the patient's getting out of bed.

"There is no question about it—Ernest Traber is a dedicated man," said Robert Mitchell of The Institute for the Crippled and Disabled. Mr. Mitchell has temporarily taken over the responsibilities of the Brace Office.

Mr. Traber, now officially retired, will make his home in Florida after October 15.

Ernest W. Traber

## Dr. Jacox, Radiology, Completes 22 Years at P&S, PH

Dr. Harold W. Jacox, Chief, Radiotherapy Division, Radiological Service, PH, and Professor of Radiology, P&S, retired October 1, completing a total of more than twenty-two years of dedicated and distinguished service to the Columbia-Presbyterian Medical Center.

Dr. Jacox was born in Detroit, Michigan, and received his B.S. from the University of Michigan in 1926, and his M.D. from the University of Michigan School of Medicine in 1928. He served his internship at the Naval Hospital in Boston, Mass., 1928-29, and his residency in the Department of Radiology, University of Michigan, 1929-31.

From 1931 until 1936 he served on the radiological staff at the University of Michigan as Instructor in Radiology, Assistant Professor, and Director of Radiation Therapy. In 1936 he was appointed Director, Department of Radiation and Physical Therapy, Western Pennsylvania Hospital in Pittsburgh, where he remained until 1947, when he was appointed to his position at Columbia-Presbyterian.

Dr. Jacox's professional memberships include Alpha Omega Alpha; American Board of Radiology; American Roent-

Dr. Harold W. Jacox

gen Ray Society; New York Roentgen Society (Treasurer, 1951, Secretary, 1952, Vice President, 1953, President, 1954); Radiological Society of North America (Vice President, 1944); Consultant, Radiologic Registry of Armed Forces Institutes of Pathology; Radiology Section, Medical Society, State of New York (Vice President, 1952); the American Radium Society, and other specialty societies. He is Consultant in Radiotherapy to the Bronx Veterans' Hospital and several regional community hospitals.

Dr. Jacox has published widely in the field of Radiology; 51 articles in the past 31

years. His main interest has been in the treatment of all forms of neoplasia with specific reference to immunology, possible viral implications, and chemotherapy of cancer.

He was Editor, section of Radiation Therapy in the Year Book of Radiology, 1951-64, and is serving as Associate Editor, Publication Committee of the Journal of Radiology, 1950 to present.

Dr. Jacox served with the U. S. Navy in 1928-29, and with the U. S. Naval Reserve from 1938 to retirement. Holding the rank of Commander in World War II, he served with a mobile hospital unit as radiologist in the South Pacific, 1942-44.

He is planning a trip to Tokyo to attend the 12th International Congress of Radiology, the first week in October. After that? Dr. Jacox hasn't the slightest intention of just retiring. He plans to continue in his capacity as a practicing radiotherapist at a suburban hospital, possibly in Westchester County.

He is married to the former Lois Kimball and they have two daughters, Mrs. Judith Peachey and Mrs. Elizabeth Warner, and seven grandchildren. Dr. and Mrs. Jacox live in Tenafly, New Jersey.

## Multiple Sclerosis Research Grant to Dr. Richard Bunge

Dr. Richard P. Bunge, Associate Professor of Anatomy at Columbia's College of Physicians and Surgeons, has been awarded a research grant of \$26,787 by the National Multiple Sclerosis Society. The grant will be used to support Dr. Bunge's investigation of the relationship between glial cells and myelin, the nerve-insulating substance destroyed in multiple sclerosis.

The destruction of myelin results in the disruption of nerve impulses, and the nerves themselves may be replaced by scar tissue. Glial cells, which surround nerve fibers in the brain and spinal cord, are the cells which form myelin. Dr. Bunge is presently engaged in two projects involving the effects on myelin when the glial cells which maintain it are damaged. In addition, he hopes to continue a study of the mechanisms involved in regrowth of myelin which has been damaged by various disease conditions.

The award, one of a series which has supported Dr. Bunge's work since 1963, was made possible in part by a bequest from the estate of the late Irma Anderson, and it is known as the Irma Anderson Memorial Grant for Research on Multiple Sclerosis.

Dr. Bunge is assisted in this work by his wife, Dr. Mary Bunge, and by his associate, Dr. Edmund Masurovsky.

## Carol Lewis Raises Money for S. S. Hope

Miss Carol Lewis, right, of Sea Girl, New Jersey, completes the sale of a doll's bed to two young customers at her annual backyard fair. Carol, who is 14 years old, has held a fair each summer for the past five years to raise money for the hospital ship S.S. Hope. She became interested in the project when she was a patient of Dr. Lester

Mount, Associate Professor of Clinical Neurological Surgery, P&S, Attending Neurological Surgeon, Neurological Institute, and medical volunteer on the Hope. This year, Carol's efforts were responsible for raising \$125, the largest amount in the fair's history. The money will be sent to the New York Office of Project Hope.

## Dr. John N. Robinson Memorial Fund for Urological Research

Mrs. John N. Robinson of Easton, Maryland, presenting check for \$20,000 to the Director of the Squier Urological Clinic and Chairman of the Department of Urology of Columbia University, Dr. John K. Lattimer, to establish the Dr. John N. Robinson Memorial Fund for Urological Research at the Medical Center.

The late Dr. Robinson was Associate Professor of Urology at the College of Physicians and Surgeons of Columbia University and Associate Attending Urologist in the Squier Urological Clinic of the Presbyterian Hospital. Dr. Robinson participated in the pioneering studies of the use of the acid phosphatase test as a test for cancer of the prostate with metastases with Dr. Alexander B. Gutman.

During World War II Dr. Robinson went with the Presbyterian Hospital Unit as its Chief of Urology and later rose to the rank of Colonel in charge of all Army Urology in the European Theater of Operations.

Dr. Robinson came to Presbyterian Hospital as a surgical intern in 1931, after graduating from the Harvard Medical School. He became Assistant Resident in the Sloane Hospital, and then settled on Urology, finishing Squier Urological Clinic Residency in 1935.

Since 1956 he had been practicing in Easton, Maryland. The Memorial Fund in his honor has been established by Mrs. Robinson, as "Dr. John" had put it, "to show that Dr. Robinson had passed this way."

## IN MEMORIAM

### Dr. Magnus I. Gregersen

Dr. Magnus I. Gregersen, who was chairman of the Department of Physiology, College of Physicians and Surgeons, from 1937 until 1961, died on August 26 at age 66.

At his death, Dr. Gregersen had been John C. Dalton Professor of physiology since 1945 and director, for eight years, of the Laboratory of Hemorrhology.

He was born in Kimballton, Iowa, and received his A.B. and M.A. degrees from Stanford University in 1923 and 1924. He received his Ph.D. from Harvard Medical School in 1930.

Dr. Gregersen helped develop methods for the measurement of blood volume. He specialized in the study of shock, the viscosity of blood and the effects of radiation upon circulation.

He is survived by his widow, the former Georgiane Schenck; their son, Peter; three daughters by his first marriage, Mrs. Kirsten Henderson, Mrs. Carlotta Prahl and Mrs. Sofia Sterling; two brothers, Halfdan and Albert, and six grandchildren.

A funeral service was held on August 28 in the First Presbyterian Church of Englewood, N. J.

A memorial service was held on September 18 in the Pauline A. Hartford Memorial Chapel at Columbia-Presbyterian Medical Center.

### Dr. William von Lackum

Dr. William von Lackum, Sr., an orthopedic surgeon who acquired an international reputation as an expert in the treatment of scoliosis and spinal curvature, died on August 26 at the age of 76.

Dr. von Lackum received his M.D. from the University of Iowa Medical School and a doctor of science degree from the New York Orthopedic Hospital. He started his internship at New York Orthopedic in 1930 and remained on the staff there until that hospital moved up to the Medical Center in 1951. He was As-

sociate Attending Orthopedic Surgeon, PH, and Assistant Clinical Professor of Orthopedic Surgery, P&S, until his retirement in 1958.

He is survived by his widow, the former Lena Parsons; a son, William, Jr.; two daughters, Mrs. Carl Marquis, Jr., and Mrs. Findley Williams, and eight grandchildren. A brother, Dr. J. Kenneth von Lackum and two sisters, Mrs. Cecil Stuart and Mrs. Lawrence Davis, also survive.

### Dr. Jean Corwin

Dr. Jean Corwin, former staff member of the Department of Obstetrics and Gynecology, P&S, died on August 27. She was 77 years old.

Dr. Corwin graduated from Wellesley College in 1914 and was among the first women to receive an M.D. from Columbia University's College of Physicians and Surgeons in 1918.

She was on the teaching staff at P&S for many years. She retired from private practice in 1959.

Dr. Corwin is survived by a sister, Ruth.

### Edward Sparks

His many friends at the Medical Center were very saddened to learn of the death of Edward Sparks. Eddie, who had been employed at the Hospital since 1928, died at home in Bergenfield, N. J., on May 11, at age 62.

Eddie manned elevator 9 in PH for many years before moving over to the Neurological Institute.

His devotion to the Presbyterian Hospital was unique. He apparently had many opportunities for employment elsewhere, but his wife said that he could never bring himself to leave because "Presbyterian was the only place that gave me a job when I needed one." Eddie had a physical disability acquired during childhood.

He is survived by his wife, the former Esther Brage; a sister, Anna Buscaglia; one nephew; and six grandnieces and grandnephews.

## Infant Management

The Pediatric Pulmonary Disease Center at Babies Hospital, Columbia-Presbyterian Medical Center, under the Regional Medical Programs, is conducting a 5-day course, October 27-31, 1969, for nurses and physical therapists, on the management of infants and children with chronic respiratory disease. The course will cover the basic anatomy and physiology of the normal respiratory system and the pathophysiology of various chronic pulmonary diseases in pediatrics. Emphasis will be placed on a rational and physiological approach to therapy. The course, consisting of lectures and workshops, will be held in the Alumni Auditorium. For information call Dr. Carolyn R. Denning, 579-2406.

## Dental Student In Movie Role

Most people who dream of acting in the movies eventually become resigned to sitting in the audience. "Most people" no longer includes Mark Swerdloff, a second-year student at the School of Dental and Oral Surgery, who was recently recruited to play a supporting role in the film "Tell Me That You Love Me, Junie Moon," under the direction of Otto Preminger. The movie's script and the book on which it is based were written by Marjorie Kellogg, a teaching associate in the Department of Rehabilitation Medicine, P&S (see November '68 *Stethoscope*).

Mark Swerdloff

Mark, who was disabled by a car accident several months ago, was approached during his stay in the hospital by Miss Kellogg and Eric Kirkland, Mr. Preminger's assistant. "It happened from one day to the next," he recalls. "All of a sudden I was going to be in a movie."

In the film, Mark plays a patient, Goren, who is seeing his fiancé for the first time since his accident. It is an emotional scene, and Mark drew on what he knew of "method" acting to pull it off. "I would work myself up for it, play the scene, and then Preminger would say 'cut' and I was back to being myself again. It was a fascinating experience."

The sequence in which he appears was filmed during one week at Salem Hospital in

Massachusetts. When not actually on camera himself, Mark was able to watch other members of the cast at work, and learn about the complex process of making a movie. "It's incredible," he relates, "how many people are involved in each scene—cameramen, makeup men, light crew, sound crew, script girl—and you never see any of them on film. I enjoyed watching Mr. Preminger work; sometimes he got very angry at the actors or the crew, but it got results."

Would Mark do it again? "Well, when I saw the rushes (completed portions of the film before editing) I thought I wasn't very good even if no one else did. But I'm a ham at heart . . . I'd love to do it again."

## How Do Our Walls and Ceilings Stay So Fresh and Clean?

Gerhard Jordan

Robert Wolfe

Benito Milan, Walter Szerwenski

When it comes to painting ceilings, these men will tell you that Michelangelo's job was a snap. They are members of the Maintenance Department painting crew, currently demonstrating their skill, patience, and gymnastic ability at Neurological Institute, Harkness Pavilion, and the basement of Presbyterian Hospital.

Headed by Robert Wolfe, Foreman, and Benito Milan, Assistant Foreman, the painters are busy throughout the year at the difficult task of keeping the Hospital covered. Their palette ranges from the functional battleship gray of a locker room to the pleasing pastel tones in patient areas; whatever the job, it is done meticulously.

# First Graduation Ceremony for School of Practical Nursing

The first graduating class of the Columbia-Presbyterian School of Practical Nursing received their diplomas and pins on Friday, September 19, in the Pauline A. Hartford Memorial Chapel. The new nurses wore their white uniforms and specially designed white organdy caps with a blue velvet band for the first time. They walked down the Chapel aisle and took their places for the ceremony, which was attended by their families, friends, and members of the Medical Center staff.

Following the Invocation by the Reverend Robert B. Reeves, the graduation address was delivered by Dr. Douglas S. Damrosch, Associate Dean, Faculty of Medicine, Columbia University. Mary I. Crawford, Associate Dean (Nursing), Faculty of Medicine, Columbia University, and Director of Nursing at The Presbyterian Hospital, ex-

Top row: Laurie Preble, Margaret Cushin, Terrella Ivery, Mrs. Fredericka Armstrong, Mrs. Katherine Touw. Second Row: Mrs. Jean Mickens, Mrs. Grethel Joseph, Pamela Parsons, Karen Johnson, Vivian Davis. Front Row: Mrs. Nereida Vasquez, Sandra Daniels, Mrs. Harnetha Doby, Benjamin Williams. Not shown: Susan Franklin.

tended greetings to the class. Diplomas and pins were presented by Edith J. Ankers, Director of the School of Practical Nursing. Pride and happiness were visible on the faces of everyone present when Miss Ankers told the class, "I know that each de-

partment in the Medical Center would like you all to join its staff."

The Reverend G. K. Davis of Metropolitan A.M.E. Church, Ridgewood, New Jersey, the father of one of the graduates, gave the Benediction. After the ceremony a reception was

held for the new nurses, their families, and friends. Of the 15 members of the graduating class, 14 will stay on at the Medical Center; one, Susan Franklin, is attending the Registered Nurse program at the Englewood School of Nursing in New Jersey.

## Fowler Lecture At Otolaryngology Alumni Meeting

A convocation of PH ear, nose and throat specialists—past and present—met at the Medical Center last month to hear the Second Fowler Memorial Lecture and other interesting papers in otolaryngology.

The PH Otolaryngology Alumni Meeting is sponsored annually by the Department of Otolaryngology, P&S. The Edmund P. Fowler Memorial Lectureship was made possible through a gift from the Audiology Foundation. Dr. Fowler headed the Otolaryngology Department here until 1964.

The Fowler Lecture was given this year by Dr. Francis L. Lederer, Professor Emeritus of Otolaryngology at the University of Illinois School of Medicine. Other papers delivered at the day-long sessions in the Alumni Auditorium included those by Dr. Robin Rankow, Associate Clinical Professor of Otolaryngology, P&S, who discussed the treatment and management of external trauma of the larynx and trachea, and Dr. John S. Lewis, Assistant Clinical Professor of Otolaryngology, whose presentation was entitled "Sarcoma of the Nasal Cavity and Paranasal Sinuses."

The returning alumni were welcomed by Dr. H. Houston Merritt, Dean of the medical school, and by Dr. Daniel C. Baker, Jr., chief of ENT service, who introduced the guest of honor, Dr. DeGraaf Woodman. The event, which took place on September 12, was organized by Dr. Malcolm H. Schvey.

## Milbank Library Announces Book Sale

The Milbank Library announces its annual fall book sale, October 13 through 24, 9:00 a.m. to 5:30 p.m. (Monday-Friday) in the Library on the 20th floor of the Presbyterian Hospital. The sale will feature many new books—fiction, non-fiction, and children's books.

## NURSES . . .

*Continued from page one*

Eight of these will study psychiatric community health nursing, and 11, maternity nursing, including nurse-midwifery. Each of these 19 students is preparing for advanced, or specialized, nursing practice in patient care and will receive her Master's Degree upon completion of her studies.

The undergraduate students come from 28 states and one comes from the Virgin Islands. Seventy-eight come from the New York, New Jersey, Pennsylvania, Connecticut area. They represent 73 colleges, of which ten are junior colleges.

Sixteen of the new students have relatives who have graduated either from P&S or from the School of Nursing.

The students were invited to a picnic at Peacock Point, Long Island, as the guests of Mr. F. Trubee Davison, son of Mrs. Henry P. Davison. Mrs. Davison, a former Trustee of The Presbyterian Hospital, first invited the incoming class to a picnic on her estate in

1950. This has become a most popular and enjoyable event.

Approximately 25 senior students, under the leadership of Grace te Velde, Student Government President, and Joyce Abrams, Senior Class President, returned early from their summer holiday to serve as orientation leaders for the incoming class.

On September 18, in Maxwell Hall, the students were officially welcomed by Dr. H. Houston Merritt, Dean, Faculty of Medicine, Columbia University, and Mary I. Crawford, Director of Nursing, PH, and Associate Dean (Nursing), Faculty of Medicine, Columbia University.

The welcoming address was given by Miss Crawford who told the students, "You have already spent some twenty or more years as a learner. I hope that you will never stop being a learner. I would like to point out, however, that, from now on you are going to have an even greater opportunity for learning, because you are going to be learning in the reality situation."

She stressed what seems to

ulty Tea on September 12.

A distinct aura of tradition manifested itself at this gathering. Deans Merritt and Perera, standing near the entrance of the Bard Hall Lounge, warmly greeted and shook hands with each student and guest as he arrived, and the sound of voices mingling with tinkling, ice-filled glasses of frosty tea or coffee was very pleasant. For those who preferred their tea or coffee hot, Mrs. H. Houston Merritt, Mrs. George A. Perera and Mrs. Douglas S. Damrosch were the gracious hostesses presiding at the pouring.

Religious services were held for the students on Saturday, September 13, for Jewish stu-

be the current trend in teaching today, namely that medicine in the future will no longer be aimed primarily at the individual physician, surgeon or nurse. "The nurse of the future is not going to be able to work solely as an individual. She is going to have to accomplish her work through many different kinds of workers. She is going to have to promote attitudes and beliefs among these workers conducive to good patient care." Miss Crawford quoted Fillmore Sanford (Interpersonal Communication; *Industrial Medicine and Surgery*, XXV, June 1966, p. 261). "Too much of the intended communication of the world today misfires, or miscarries, or fails entirely because the communicator pays more attention to his bow and arrow than to his target."

The students also received their caps at this welcoming ceremony.

dents, and Roman Catholic Mass and Protestant Services on Sunday, September 14.

The orientation program had its grand finale on September 14 at the Annual First Year Reception in the Bard Hall Lounge with greetings from Dr. J. Lawrence Pool, Professor and Chairman, Department of Neurosurgery; Mr. Edwin M. Barton, Director of Student Activities, and an address by Dean George A. Perera.

Dr. Perera discussed the responsibilities which go with being a physician-to-be, and details regarding the curriculum approach to medical studies, and the student-evaluation methods used at P&S.

At the opening exercises of the 1969-70 academic year at P&S, held on September 15 in the Alumni Auditorium, the incoming class of medical students was welcomed by President Andrew Cordier and Dean Houston Merritt. The address was given by Dr. Douglas S. Damrosch, Associate Dean and Assistant Professor of Pediatrics. This talk, entitled "The Education of the Compassionate Scientist," will be printed in the winter issue of the *P&S Quarterly*, and may be reprinted in a forthcoming issue of *The Stethoscope*.

"Which way to Maxwell Hall?" ask arriving students, Department of Nursing

Dr. H. Houston Merritt, Dean, P&S, with new students.

# Dr. Yahr Heads Parkinson's Group at Neurology and Neurosurgery Congresses

For an eventful week last month, the Parkinson's Disease Foundation and the Parkinson Information Center played the roles of managers watching their team play in the World Series.

The twin congresses of Neurology and Neurological Surgery that took place in the New York Hilton from September 20 to 27 were indeed a

neurological World Series with participants from all continents. And the Parkinson's medical group, headed by Dr. Melvin D. Yahr, Executive Director of the Parkinson's Disease Foundation, was a significant factor in the twin congresses.

Dr. Yahr served as Secretary-General of the 9th International Congress of Neurology. During the neurological meetings, a number of the Parkinson's group—Dr. Abner Wolf, Dr. Lucien Coté, Dr. Robert Barrett, Dr. Sid Gilman, Dr. Virginia Tennyson and Dr. Yahr—participated in a closed circuit television program which was viewed by neurologists from the U.S. and abroad.

The Parkinson's Disease Foundation, in addition to its scientific investigation, publishes papers on parkinsonism and L-Dopa. It distributes

## DR. LARAGH . . .

*Continued from page one*

then demonstrated enormous over-production of aldosterone in patients with heart failure, cirrhosis and nephrosis.

Dr. Laragh and Dr. H. C. Stoerk then demonstrated that aldosterone regulated potassium balance because its secretion was controlled by increases in dietary and serum potassium levels. However, this pathway did not explain why the hormone was overactive in heart failure and other edematous states of nephrosis and cirrhosis. This vital signal eliciting increased secretion of aldosterone thus remained obscure.

Then a new clue was uncovered. Because salt intake had long been related to high blood pressure, the group decided to study aldosterone secretion in hypertensive patients. In 1960 Dr. Laragh and his associates reported that patients with malignant hypertension (an accelerated, rapidly fatal form of hypertension) all exhibited a marked overproduction of aldosterone. These results led Dr. Laragh in the same year, to infuse the kidney pressor substance, angiotensin, into normal subjects. It was discovered that angiotensin, unlike noradrenalin and other pressor agents, markedly stimulated the adrenals to secrete aldosterone. This discovery led to the postulation of a new and different type of hormonal system involving the kidneys and adrenal glands, which acts for regulating body salt content and blood pressure. The system involves renin secretion by the kidney, the release of angiotensin from a plasma protein and then the activation of aldosterone secretion. Derangement of this hormonal system was shown by Dr. Laragh's group to be a causal factor in malignant hypertension as well as in congestive heart failure.

Dr. Laragh and his associates have made many other contributions to research and to the treatment of patients. Among these were the introduction of chlorothiazide in 1958 into clinical medicine. This diuretic and its many derivatives, which act on the kidney to promote salt excretion, have revolutionized the treatment of edema. These

diuretics have prolonged life and relieved suffering in countless patients with heart failure, cirrhosis or nephrosis. These studies were carried out here in a collaboration with Dr. Felix Demartini and Dr. Paul Cannon.

More recently a report from Dr. Laragh's group of some interest is the observation that oral contraceptive pills can cause high blood pressure in certain susceptible individuals. Presently, Dr. Laragh and his co-workers, Jean Sealey, Joan Gerten Banes and Dianne Kirshman, are very excited about their isolation and characterization of a newly discovered salt-excreting hormone which they have detected in human plasma and urine. Work on this so-called "third factor," which has already attracted international interest, could help clarify the role of salt in hypertensive disease. These findings were presented this year at the annual meeting of the American Society for Clinical Investigation, in Atlantic City and at the International Nephrology Congress in Stockholm.

Since 1963 Dr. Laragh has served as a consultant for review of research grant programs for the National Heart Institute and the National Institutes of Health. He is also Chairman of the Council for High Blood Pressure Research of the American Heart Association. He is a member of the American Society for Clinical Investigation and of the Association of American Physicians and a Fellow of the American College of Physicians.

Dr. Laragh lives in Bronxville, New York, with his wife and two sons. He is an avid golfer and an enthusiastic amateur photographer. He was born and raised in the New York City area. He comes from a family of lawyers. His

Dr. Melvin D. Yahr, Executive Director of Parkinson's Disease Foundation (left), and Patrick D. J. Rae, Head of Parkinson Information Services, pose in front of exhibit by Parkinson Information Center at the New York Hilton.

them to physicians, hospitals and other interested parties in different areas of the world from its offices on the third floor of the William Black Medical Research Building.

When William Black, Chairman of the Board of Chock Full O' Nuts, donated five million dollars for the 20-story medical research metropolis at Columbia-Presbyterian Medical Center, he stipulated that one floor be devoted to explorations in Parkinson's Disease.

These facilities now include specialized laboratories for investigations in pharmacology, chemistry, physiology, pathology, and virology. They are manned by 55 physicians and technicians, an impressive battling order engaged in a common goal.

The research is significantly aided by the Foundation's Brain Bank, established nine years ago. The organization's scientists have studied tissues of about 100 brains, willed to the Foundation by Parkinson

patients. The knowledge gained from this area of research has been most helpful to medical scientists. The results of these studies have been published in international medical journals and have been presented at many scientific meetings.

The Foundation has a Research Advisory Board, composed of the nation's leading neurologists. Its brochures on patient care, rehabilitation programs and exercises are distributed to victims and others.

A large volume of telephone and mail inquiries from researchers and doctors here and

abroad is handled by the Parkinson Information Center, located in another part of the Black Building. The Center is a part of the Neurological Information Network, established six years ago by the National Institute of Neurological Diseases and Stroke. The Center publishes a bi-weekly "current-awareness" bulletin and reviews of progress, as well as several volumes incorporating papers presented at the Foundation-supported symposia.

The Center, PIC for short, also services physicians and scientists with translations from foreign journals and with selected bibliographies retrieved by a computer from an electronic data bank dedicated to parkinsonism. In operation since last May, the bank now contains more than 30,000 citations of works dealing with parkinsonism and related neurological disorders. The information retrieval system was displayed by PIC for the first time at the New York Hilton. There the PIC information booth had set up a typewriter terminal, inviting all congress participants to use the system by requesting a check-list of latest papers in their fields. Information requests that took weeks to answer before computerization were handled by the distant electronic brain in a matter of seconds.

## DENTISTS . . .

years of college.

One of the students had been a professional actor before applying, one was captain of his college chess team, one a sculptor and six were musicians.

grandfather was the Mayor of Yonkers, his father the corporation counsel of that city and a noted trial lawyer. Like his father, he attended Cornell University. An indefatigable worker, he is often the first physician to arrive in the morning, and his office lights can be seen late into the evening.

Dr. Laragh combines his research activities with an active clinical practice in internal medicine. In fact he believes the two activities are mutually interdependent. He states, "Patients expose and define the physiological problems for which research can provide a solution."

Dr. Laragh is deeply concerned about the problem of delivering medical care of increasing complexity to an expanding population. In addition to increasing the number of physicians, he believes that the medical man must learn to work with technical assistants, each trained in his own special skill. In January 1968 in a cover story in *Modern Medi-*

School of Dental and Oral Surgery: faculty and new students getting acquainted.

cine, Dr. Laragh said, "It is more important than ever before to preserve time for thinking and for learning in depth as well as for applying that precious quality of human compassion to those who need it. To accomplish this, the internist will have to multiply his capacity to provide routine

services. He will have to accept, as surgeons do, the help of many other trained assistants, and he will have to apply automation and screening procedures whenever possible. If he does not, the alternative may be a world of uncoordinated and often task-oriented specialists."

## TWO HORWITZ PRIZE WINNERS

Two men for all seasons will share this year's Louisa Gross Horwitz Prize, the prestigious \$25,000 award for outstanding work in biology or biochemistry.

The winners, announced this week by President Andrew Cordier of Columbia University, are Dr. Max Delbrück and Dr. Salvador Edward Luria. The award is as much an acknowledgement of the prominent niche both men occupy in the history of biology as a commendation for their present contributions in the field.

Dr. Delbrück is a graduate physicist and a former physics professor, but for the last 22 years he has been in the forefront of biological research as Professor of Biology at the California Institute of Technology. As Professor and Chairman of Microbiology at M.I.T., Dr. Luria is in the vanguard of microbial genetics and of work on biological effects of radiation.

The presentation of the award is scheduled to take place October 8 in the Rotunda of the Low Library of Columbia University. Columbia University administers the Prize, established with a bequest to Columbia by the late S. Gross Horwitz in honor of his mother, Louisa Gross Horwitz. She was the daughter of Dr. Samuel David Gross, a prominent Philadelphia surgeon and a pioneer in the development of surgical methods.

With this historical background in mind, it is appropriate that the prize this year should have gone to two pioneers also—founders, in fact, of a new scientific discipline, genetic molecular biology.

The original members of the "phage group," Dr. Delbrück and Luria were responsible for the genesis of an international school of microbial geneticists, thus providing a firm foundation and impetus for the spectacular growth of genetic molecular biology.

The "phage group" discovered and studied genetic influences exerted by bacteria-infecting viruses upon bacterial cells. Research on the genetics of viruses and bacteria yielded important fundamental information about the nature of genetic material, its self-duplicating properties and its biological function. One of the many lines of thought stimulated by the research of the two award winners is the theory that cellular diseases, such as cancer, may have a viral origin.

Since this pioneering period, both Dr. Delbrück and Dr. Luria have continued as leaders of biological thought. Luria has been centering his attention on microbial genetics and has made distinguished contributions to the problem of lysogeny, transduction, host-controlled modifications, and

the nature of the bacterial surface. Delbrück has been absorbed in the study of sensory transducers and has focused most of his attention on the light-sensitive mold *Phycomyces*.

A native of Italy, Professor Luria received his M.D. at the University of Turin in 1935. He did research at the Curie Laboratory of the Institute of Radium in Paris until 1940, when he came to the United States. He worked and taught at Columbia, Vanderbilt and Princeton Universities and at the Universities of Indiana and Illinois before coming to M.I.T. He has lectured and written on a broad range of scientific topics, from biophysics to zoology.

Dr. Delbrück received his Ph.D. in physics from the University of Göttingen. His appointments include Rockefeller Foundation Fellowships in physics and biology at Copenhagen, Zurich, and Pasadena, a teaching assignment in physics at Vanderbilt University, and several honorary professorships. His dual specialization has enabled him to study relationships between biological processes and the laws of physics.

This is the second time in the three-year history of the Horwitz Prize that the award is shared by two scientists. Last year's winners were Drs. Har Gobind Khorana and Marshall Nirenberg. They subsequently won the Nobel Prize for their contributions to genetics.

Dr. S. E. Luria

Dr. Max Delbrück

## Mrs. Ericson Discusses Disposable Materials

Future historians will probably not include the paper plate in their lists of man's great inventions, but several million housewives almost certainly would. In the past twenty years, disposable items ranging from band-aids to beer cans and even clothing have become a part of daily life. The use of disposable items at Columbia-Presbyterian Medical Center has become a vital aspect of patient care, and no one understands this better than Mary Ericson, R.N., Research and Development Supervisor for the Office of the Assistant Vice-President for Vanderbilt Clinic and Other Services.

Mrs. Ericson worked at Neurological Institute for 28 years before taking her present position. "When I learned that someone was needed to conduct research into ways and means of improving patient care, I agreed to take the job for six months until a permanent person could be found. That was seven years ago." During those years Mrs. Ericson's responsibilities have

"A sense of security comes to the patient who has his own equipment."

—Mrs. Mary Ericson

expanded to include nearly every aspect of patient care that involves equipment, materials, and techniques for using them.

A complete description of Mrs. Ericson's duties would require a separate issue of *The Stethoscope*. Coordinating the needs of the patient and hospital with available equipment designs involves her in the whole process of a product's development and use, and frequently she must be one step ahead of the manufacturer in suggesting improvements and innovations. Sometimes, a manufacturer's "improvement" turns out to be a problem for the hospital, as when the company that makes Vacutainer tubes decided to change their packaging. Instead of the convenient coffee-can sized container, which fitted neatly on a dressing tray and could be re-used, the company began sending their product in large cardboard boxes holding several hundred tubes. "What this means, of course," relates Mrs. Ericson, "is that someone has to unpack the boxes and transfer the tubes to smaller containers before we can use them. Unfortunately, since the old container was discontinued, we have to live with this problem."

Disposable items such as Vacutainers, sterile dressings, diapers, and catheterization and enema sets comprise one of Mrs. Ericson's major concerns. Each product must be evaluated in terms of its economy and convenience to the hospital and its adaptability to

Mrs. Ericson demonstrates one of the many items she is responsible for—a prepackaged formula bottle with a plastic nipple.

practical use. An important factor in the final selection of an item is patient safety, comfort, and convenience. Many of the disposables are designed for "one-patient" use; that is, they can be re-used several times by the same patient and discarded when he leaves the hospital. One such item is a plastic water jug, similar to those manufactured for home use, and in fact the patient is encouraged to take it home with him. Leftover jugs can be used by the nursing staff to discard used needles, which are pushed through the hole in the top and sealed inside with tape to protect handlers. Another item is a volume enema kit made of plastic, which can be used as many as eight times and is stored in its own container by the patient's bedside. "Personalized" equipment of this type is a source of reassurance to the patient as well as a safeguard against infection.

Small differences in construction between different brands of the same product can have important consequences for the overall efficiency of the hospital. For example, Mrs. Ericson recalls the problem caused by the introduction of a particular kind of disposable incontinence pad. The pads had a waterproof vinyl backing, and although they were designed to be thrown out after use, several of them found their way into the hospital laundry. The vinyl melted and adhered to the hot metal drums of the driers; after futile attempts to remove it with electric drills and various commercial solvents, a man with a blowtorch had to climb inside the drums after they cooled to melt the plastic and scrape it off. Subsequently, a different kind of pad with a heat-resistant backing was found, and the problem was solved.

The advent of prepackaged, disposable dressings and instruments also had an impact on dressing techniques and sterilization processes. When Mrs. Ericson started her research, she recalls, "We were

still using sterile drums supplied from a central area for towels and for combination dressing supplies and we were still boiling equipment to sterilize it on most floors." A container for individually packaged sterile supplies had to be found, and a different method of sterilization. After numerous trial runs, demonstrations of new techniques and equipment, and revisions in methods of storage, the new items became standard throughout the hospital. The process took a year and a half, but at the end of that time most patient floors had autoclaves for sterilization and the old sterile dressing drums were replaced by individually packaged dressings conveniently arranged in small metal display cases.

During Mrs. Ericson's seven years on the job, the advent of disposable materials has had an impact on nearly every department in the hospital complex. But the greatest effect, described in Mrs. Ericson's own words, is felt by that "department" known as the patient: "There is a certain intangibility in the use of disposable and of one-patient use articles that is almost impossible to tabulate. The sense of security which comes to the patient when she has her 'own' equipment cannot be reckoned in terms of money alone. And the equally significant sense of security which comes to the nurse who knows she is supplying the patient with materials from which cross infection cannot occur is even more important..."

These days, Mrs. Ericson divides her attention between disposable and non-disposable items. A deodorizing machine, an intermittent suction device, and flotation mattresses are some of the non-disposable articles currently under investigation.

Commenting on her experiences, Mrs. Ericson smiles as she remembers the man with the blowtorch. "It can be a frustrating job at times," she says. "But always fascinating."

# Day-Night Cameras On Duty In New Cardiac Intensive Care Unit

TV cameras that "see" in total darkness were the major technical innovation as the new Cardiac Intensive Care Unit of Columbia-Presbyterian Medical Center received its first patients late last month.

The eight-bed Cardiac Unit achieved this ultimate step in patient surveillance with a special monitoring system installed by Picker X-ray. The system includes ceiling-mounted infra-red light sources and specially modified TV cameras in each of the ten rooms in the unit, as well as a set of ten TV monitors for staff doctors and nurses. In addition to the eight regular beds, there is a bed in the unit's "special procedure room," but it is not designed for routine use.

The special TV cameras have been equipped to record light waves both in the visible and the infra-red, or invisible, part of the spectrum. Although the concept of total patient surveillance is not new, the use of one camera for both day and night time monitoring is a first in hospital patient care, according to a Picker spokesman.

"When you are dealing with serious cardiac conditions and irregular heart rhythms, it is most important to be instantly aware of the patient's state and to detect signs of discomfort early," said Carole Beaudette, Head Nurse of the Unit, in discussing the need for around-the-clock patient observation. The infra-red monitoring system enables the staff to watch patients at night without turning on their room lights. Patients are, of course, allowed to "go off the air" upon request.

The modern Unit is entirely heart-oriented. Each of the patient rooms has, in addition to the closed-circuit TV and the ubiquitous suction and oxygen devices, a detector for possible electrical hazards and a defibrillator for cases of cardiac arrest. Each room further has a bedside monitoring unit to record the heart's electrical activity and blood pressure. These devices are connected with ECG screens in the nurses' station and in the "special procedure room." Individually preset, automatic alarm devices warn personnel of unwelcome changes in a patient's heart beat or blood pressure. The cardiac Unit also uses these devices to monitor patients with newly implanted pacemakers. A fluoroscope and a special radiolucent, or x-ray transparent, bed are present in the special procedure room to allow for rapid insertion of pacemaker electrodes or cardiac sampling catheters in the Unit. This way patients requiring such special procedures don't have to be moved to the Cardiac

The central monitoring console in nurses' station of the new Cardiac Intensive Care Unit will show patient in his room and his cardiac signs at the same time.

Catheterization Laboratory elsewhere in the Presbyterian Hospital.

The three kinds of data obtained with the Unit's monitoring devices—electrocardiographic, intravascular pressures, and pacemaker activity—can be fed into a multiple-channel research recorder, located in the Unit's special procedure room. Matching amplifiers there adapt the signals for storage on magnetic tape in the cardiac memory bank. When a need for them arises, the signals can be retrieved automatically and fed back into an oscilloscope for review and analysis.

The Unit's cardiologists have the option of dataphoning the signals directly from the bedside units to a computer. The computer in question is located in the Advanced Systems Development Division (ASDD) of IBM in Mohansic,

New York. The communication is part of a collaborative effort between Dr. Raymond Bonner of ASDD and Dr. J. Thomas Bigger, Jr., of the Cardiac Intensive Care Unit. An endeavor that began with the development of a monitoring philosophy, the program has taught an IBM computer to "recognize" ECG waveforms and to analyze arrhythmias and other abnormalities. Establishment in the new facility of a direct, uninterrupted communications link between the computer and the electrodes taped on a patient's chest in the Unit enables Presbyterian's cardiologists to test the computer's performance for prolonged periods of time and to assess its practical value to nurses and physicians working under stress with critically ill patients.

Still to be completed in the Unit's elaborate communica-

tions network are TV and oscilloscope outlets in the office of Dr. Bigger and in other parts of the Medical Center. Dr. Bigger or other cardiology staff members and trainees will often be consulted by staff nurses about changes in a patient's condition. When the connection is completed, communication between a patient's bedside and doctors' office will be instantaneous.

The adequate space and the technological hardware that went into the Cardiac Unit will facilitate its emergence, according to Dr. Bigger, as an effective research and training institution within the Medical Center. While continuing to train young doctors in cardiology under an N.I.H. grant, the Unit plans to train nurses in the intensive care of heart patients under a sophisticated program using the latest educational tools, such as films,

filmstrips and audiotapes.

The Unit's research efforts will be oriented to take advantage of its new monitoring equipment and will center on such problems as the pharmacological properties and the electrophysiological effect of antiarrhythmic drugs. The changes wrought in the heart's electrical activity by these drugs will be subject to computer analysis. Presbyterian's cardiologists hope that research in this direction will lead to the development of new drugs or of new electrophysical means of therapy for certain abnormalities in heart function.

Further projects on the Unit's schedule include improvements in patient monitoring, such as prompt and precise interpretation of blood pressure measurements at various points in the patient's body, particularly in the blood vessels servicing the kidneys, and the liver and intestine. The latter auxiliary systems of blood vessels will be singled out to test the theory that the body, in anticipation of a heart attack, diminishes blood supply to these organs. Man's kidneys and viscera thus could be said to "stand sentinel" in cardiac patients, at the ready to shut off their own blood supply in favor of the much more vital coronary circulation. Keeping track of the blood circulation in the kidneys and the intestine could give clues to an impending seizure.

Still another goal in the Cardiac Unit's future is the development of effective new devices to give mechanical assistance to the impaired circulatory system. Such devices, for one, would seek to alleviate intractable, severe congestive cardiac failure, or cardiogenic shock, following myocardial infarction.

## School of Dental and Oral Surgery Opens New 'Space-Age' Clinic

The School of Dental and Oral Surgery launched its new multi-purpose dental clinic here September 12, after a million dollar renovation that gave it a space-age look. A

large crowd came to witness the ribbon-cutting and to inspect the refurbished eighth-floor facility.

With the countdown near zero that afternoon, workmen

were hurriedly removing ladders and tools in front of the human avalanche coming down from the opening exercises for the 1969-70 academic year in a ninth floor amphitheater.

The renovated clinic includes such improvements as automated reclining chairs, closed circuit television cameras, raised floors and low ceilings with special lighting equipment in the treatment areas.

Also included in the modernization were two teaching laboratories for individual technical training, with a total capacity of more than 90 students.

More than 100,000 patients—mostly from the Upper West Side of Manhattan—were given general dental care here in the last seven years. This number is expected to increase at a higher rate because the new clinic will permit more efficient patient processing and better utilization of space and equipment.

Ribbon-cutting—student and faculty cooperation.

Gleaming new equipment for "space-age" dentistry.

Dr. Equinn W. Munnell

Dr. Charles M. Steer

The College of Physicians and Surgeons, Columbia University, announces the 9th annual Post-Graduate Course in RECENT ADVANCES IN OBSTETRICS AND GYNECOLOGY, November 10 through 14, under the direction of Dr. Charles M. Steer, Dr. Equinn W. Munnell and Dr. Ralph M. Richart, and under the auspices of the Department of Obstetrics and Gynecology at Columbia-Presbyterian Medical Center. It will be held in the Alumni Auditorium of the Black Building.

The five-day course will cover the following specialties within Obstetrics and Gynecology: Monday, November 10—Gynecologic Cancer; Tuesday, November 11—Obstetrics; Wednesday, November 12—Perinatal Physiology; Thursday, November 13—Gynecology; and Friday, November 14—Endocrine Disorders. A question and answer period will follow each morning and afternoon session.

The P&S Faculty from Obstetrics and Gynecology are: Dr. Charles M. Steer, Dr. Equinn W. Munnell, Dr. Karlis Adamsons, Dr. Edward T. Bowe, Dr. D. Anthony D'Esopo, Dr. Vincent J. Freda, Dr. Henry Clay Frick, II, Dr. Orlando J. Miller, Dr. Robert Neuwirth, Dr. W. Duane Todd, Dr. Raymond L. Vande Wiele, and Dr. Ralph M. Richart, Pathology; Dr. Hugh Auchincloss, Surgery; Dr. John M.

Bedford, Anatomy; Dr. Andrew Frantz, Medicine; and Dr. L. Stanley James, Pediatrics.

The guest Faculty are Dr. Saul B. Gusberg, Professor and Chairman, Department of Obstetrics and Gynecology, Mount Sinai School of Medicine, New York City; Dr. Robert S. Hotchkiss, Professor and Chairman, Department of Urology, New York University Medical Center, New York City; Dr. Robert B. Jaffe, Associate Professor and Head Steroid Research Unit, Department of Obstetrics and Gynecology, University of Michigan Medical Center, Ann Arbor, Michigan; Dr. John L. Lewis, Jr., Chief Gynecology Service, Memorial Hospital, New York City; Dr. William J. Mulligan, Harvard Medical School, Free Hospital for Women, Brookline, Mass.; and Dr. Chester M. Southam, Sloan-Kettering Institute for Cancer Research, New York City.

This same course in 1968 was enthusiastically attended by 175 graduate students. It is expected that an equal number will attend this 1969 course.

Fee for the course is \$150 and persons desirous of attending may write Dr. Melvin D. Yahr, Associate Dean, College of Physicians and Surgeons, Columbia University, 630 W. 168th Street, New York, N. Y. 10032, for application.

## Wives of House Staff Members Are Invited to Join

The House Staff Wives' Club, now in its second year, is busy with meaningful endeavors, according to its president, Mrs. Susan Blabey. The Welcoming Committee helps house staff newcomers and their families to settle in the New York area, and the cooperative baby-sitting service follows its slogan, "You work for us and we work for you." A book club and a bridge club are also in full swing. A directory of house staff members will be available early this fall.

All wives of house staff members are invited to join the House Staff Wives' Club. Contact Mrs. Susan Blabey, president, (212) 568-8350.

Officers of the Club are shown in the photo above, left to right: Susan Blabey, Tish Bingham, Francine Isaacs, Jane Zorn, Carol Oberhand, Betsy Krant.

## THESE PERSONS ARE RETIRING

### Mrs. Florence Norcross

Mrs. Florence Norcross, Nurses' Aide, Babies Hospital, retired in July, completing 22 years of employment at the Medical Center.

Mrs. Norcross, according to her supervisors, brought much to her job. She was particularly adept with infants and toddlers, loving them, cuddling them, coaxing them to eat. One supervisor remarked, "Florence, what are we going to do without you?"

Mrs. Norcross spoke of

Mrs. Florence Norcross

changes in Babies Hospital since she arrived in 1947. "It has been amazing what the doctors have accomplished. I can remember, for instance, when meningitis was absolutely fatal. Now it can be cured."

Her favorite pastime is reading—particularly mysteries and science fiction. She was born and brought up in New York City and still makes her home here. She has three children and eight grandchildren. A trip to California to visit her daughter has "top priority" now that she has the time.

On July 29 a reception was given to honor Mrs. Norcross. Her friends, co-workers, supervisors and several administrators came to bid her farewell.

## Opportunity for Dental Assistant Courses

Dr. David Kaplan

An expanded Dental Assistant Utilization Program now functioning in the School of Dental and Oral Surgery was created by a new and unique training course available to high-school drop-outs interested in a career as dental assistants. This program is under the direction of Dr. David Kaplan, Assistant Professor of Dentistry, DOS, and Director, Dental Auxiliary Utilization Program. Dr. Kaplan, formerly affiliated with New York University, was appointed to this position in May.

Manpower Careers Development Agency (a subsidiary of the Human Resources Administration) recruits these young people through the offices of Mr. Donald Williams, who interviews each applicant to make certain they meet the following requirements: they must have a high reading level (10th grade); they must not have a high school diploma; they must come from an underprivileged area and they must have been initially

screened by any of several local social agencies in the New York metropolitan area.

After they are accepted by "Manpower" and elect to participate in the DAU program, they are referred to Dr. Kaplan. The course offered them here is the precursor of a course they may later pursue if they are interested in becoming certified dental assistants.

Dr. Kaplan explained further, "Our primary function is to train dental students to work sitting down at the dental chair, with an assistant who is also seated."

The students receive a small weekly stipend (from governmental sources) while training, and participate, concurrently, in a high school equivalency program. Students are given basic education three hours or more a week in DAU, one hour in counseling (for any problem that may arise), and the balance of their time is spent in the clinic where they are trained and function as chair-side dental assistants.

After their training is completed and they receive their high school equivalency certificates, they are eligible to take the course leading to certification as dental assistants.

The current program is very limited. Dr. Kaplan stated that only replacements are being accepted now. It is expected that future classes will be smaller than the ten now enrolled.

Interested individuals are requested to call Mr. Donald Williams at 433-6710.

Mrs. Isabella Jeselson

### Mrs. Isabella Jeselson

Mrs. Isabella Jeselson, Receptionist, Vanderbilt Clinic, retired in July.

Mrs. Jeselson, a soft-spoken, cheerful lady, revealed that she came to apply for a part-time job at the Hospital in 1952. All that was available was a full-time job. She accepted it, "for a few months," and like Topsy, "it just grew" into a 17-year stay.

She became uniquely devoted to her job, a devotion that evolved from the different clinics in which she worked and the realization that two of these clinics especially—Hematology and Arthritis—were concerned with caring for seriously ill patients. Mrs. Jeselson got to know and love these patients over the years, giving them encouragement and cheer.

"The doctors, the nurses, the patients, the other people I worked with—all of them are wonderful," she said.

Mrs. Jeselson is married, has two sons and three grandchildren. She and her husband live in Washington Heights and her retirement years will offer her an opportunity to spend more time with her family, especially her grandchildren. She enjoys sewing and is an amateur painter.

On July 15 a reception was given to honor Mrs. Jeselson and it was well attended by many doctors, nurses, co-workers, and administrators who came to wish her a fond farewell.

# News of Nursing—Neonatal Intensive Care Conference

A Conference on Neonatal Intensive Care Nursing—"Developing Educational Objectives"—was held on September 29 and 30 in Harkness Hall Recreation Room.

The aim of the all-day Conference was to establish

Marilyn Stein

educational objectives for neonatal intensive care nursing, to lead to the development of a suitable training curriculum.

Marilyn Stein, Educational Coordinator of Neonatal Intensive Care Nursing, Babies Hospital, member of the Program Planning Committee and Chairman of the Conference, said, "We are desirous of attracting and interesting prominent individuals in nursing education and service, with an interest in intensive care of the newborn, to review what other centers have been doing to gain acceptance of neonatal intensive care techniques by the medical profession, and to train and provide adequate, competent personnel to produce its full potential as a major technical advance in the treatment of high-risk newborns."

Miss Stein stressed the point

Mary I. Crawford

that a more concentrated and definitive effort in training personnel is needed.

By soliciting suggestions and ideas on such relevant problems as recruitment and training of required, specialized personnel, it was her hope that a suitable curriculum in neonatal intensive care in coordination with established training programs in nursing will evolve.

Speakers at the Conference were Kathleen Dougherty, Children's Hospital, San Francisco, California; Mary Neal, University of Maryland, Baltimore, Md.; Ann Godfrey, Western Reserve University, Cleveland, Ohio; Mrs. Mary Herkner, Babies & Children's Hospital, Cleveland, Ohio; Jo-eldyn Rose, Children's Hospital, Denver, Colorado; and Eleanor Lambertson, Teachers College, Columbia University. The welcoming address was given by Mary I. Crawford, Director of Nursing, PH, Associate Dean (Nursing), Faculty of Medicine, Columbia University.

The two-day program was attended by Dr. John Sinclair, Assistant Attending Pediatrician, BH, Assistant Professor of Pediatrics, P&S; Dr. Katherine Kendall, Chief of Nursing Section and Nancy Goulet, Regional Nursing Consultant, U. S. Children's Bureau; and by representatives of nursing from both the Medical Center and several hospitals in the New York metropolitan area. It was also well-attended, on a national basis, by nursing representatives from California, Washington, Texas, Iowa, Maryland, North Carolina, Colorado, Vermont and Illinois.

The Conference was sponsored by the Neonatal Intensive Care Unit of Columbia-Presbyterian Medical Center with funds from the United States Children's Bureau, Washington, D. C.

Jane F. McConville

Members of the Program Planning Committee were Marilyn Stein, Dr. John Sinclair, Nancy Goulet, Mary I. Crawford, Jane F. McConville, Assistant Director of Nursing, BH; Mrs. Ardis Lewis, Research Assistant, BH; Sonja Loir, Division Maternal and Child Health Nursing, American Nurses Association; Priscilla Parke, Supervisor, BH; and Miriam Mangan, Maternal and Newborn Nursing Consultant, New York City Department of Health.

## A SMALL GIFT FROM YOU WILL HELP

Please bring your gold and silver—those cast-off cuff links—those never-again earrings—those obsolete glasses frames—any bits and dabs of gold and silver, shelved and forgotten.

Bring those items which mean nothing to you but mean so much to New Eyes for the Needy, Inc., Short Hills, New Jersey. This organization is a volunteer social service founded in 1932.

New Eyes for the Needy has been a constant source of funds for this Hospital for patients who need glasses but cannot afford to buy them. According to Dr. Joseph E. Snyder, Assistant Vice President, Vanderbilt Clinic and Other Services, gifts to The Presbyterian Hospital from New Eyes for the Needy have totaled, over the years, more than \$35,000.

This year another gift has come to Presbyterian from

two adorable granddaughters."

On July 11 a reception was given for Mrs. Casey and although she was obviously thrilled by the turnout of friends, co-workers and administrators who came to say farewell, she was overwhelmed when presented with several gifts, among them a lovely gold bracelet and a portable color-TV.

Leave your contributions at any of these five stations: The Presbyterian Hospital Information Desk, or the front desk of Babies Hospital, Harkness Pavilion, Eye Institute, or Dana W. Atchley Pavilion. Contributions will be forwarded to Mrs. Sidman I. Barber, Distribution Chairman, New Eyes for the Needy, Inc.

Please act today!

Give those dresser drawers a shakedown and come up with something—new or old—silver or gold! You'll feel better for doing this small favor. Thank you.

## Exchange-Visitor Nurses Given Farewell Reception

On September 10 a farewell reception was held on the 4th floor of Presbyterian Hospital for the Exchange-Visitor nurses who completed their one-year training period from October 1, 1968, through September 30, 1969. This year there were 15 nurses representing 11 countries: England, Taiwan, Korea, Norway, Switzerland, Spain, Denmark, India, Austria, Israel and Japan. Most of these young nurses will be returning to their native countries to work; a few will spend another year in this country in similar programs elsewhere in the U. S.

Said Ruth Rayner, Exchange-Visitor Program Coordinator, "I hate to see them go!" The girls themselves have mixed emotions about leaving. They seem to be happy about returning home, but they will miss "life at Presbyterian."

The nurses in photo above are (1st row, seated) Kyung Ah Park, Priska Heid, Karen Bogesvang, Mrs. Prema Peerappa; (2nd row, standing) Celia Forster, Florence Yun Fu Chia, Miss Rayner, Bonnie Jones (instructor), Yang Ja Baik, Audrey Borgvall, Song Mong Lee, Doris Schulthess and Maria Marrón. Not shown: Erika Weber, Mira Weiss, Helen Steiner, Sayoka Karashima.

## RETIREMENTS...

### Mrs. Edna Casey

Mrs. Edna Casey, Secretary, Vanderbilt Clinic Administration Office, retired in July after an 18-year association with the Medical Center. Her first job was Receptionist in the Department of Radiology. She began her secretarial job in Dr. Snyder's office in 1953.

"I loved every minute of it and I will miss all the girls," said Edna. She further stated that "Dr. Snyder was a wonderful man to work for."

Edna was born in New York City and has lived here all her life, but she will be starting a new "career as a suburbanite"—as she puts it—when she moves to Thiells, New York, near her married son. This will afford her a better opportunity to pursue her favorite hobby—"baby sitting for my

Mrs. Edna Casey

two adorable granddaughters."

On July 11 a reception was given for Mrs. Casey and although she was obviously thrilled by the turnout of friends, co-workers and administrators who came to say farewell, she was overwhelmed when presented with several gifts, among them a lovely gold bracelet and a portable color-TV.

One of the things we are all involved in is PATIENT CARE. Whether we work in the wards, in laboratories, or in offices, PATIENT CARE is at the heart of our efforts. Such is the message of the present bulletin board display in the Presbyterian corridor, near the cafeteria.

Aaron Naimark, shown in photo, contributed the art work. As a Volunteer, Mr. Naimark works quietly among thousands of file cards in the Office of Public Interest. When the extra creative touch is needed—painting, layout, or photo-matting—he is quick with the warm response, "It's my pleasure." The results of his work are our pleasure.

## From the Mailbag

On behalf of my husband and myself I wish to extend my deep appreciation and thanks to the doctors and nurses of Babies Hospital for the wonderful care given our daughter.

Our special thanks go to Dr. James Wolff, a vital human being and a dedicated doctor, also, Dr. Speck, Dr. Driscoll, Dr. Heffer, and Dr. Rubin. We would also like to thank the following nurses whom we thought were particularly outstanding: Miss Zyshing, Miss Alexander, Miss Eustice, Mrs. Colier, Miss Moody, Mrs. Kaminsky and Mrs. Belmont. Mrs. Belmont is an angel among nurses.

While my "thank you" is a little belated, neither my husband nor I will ever forget the wonderful care given our daughter.

Sincerely,  
(The mother of a recent patient at Babies Hospital.)

# THE HOSPITAL AT NIGHT

PART 5

## The Psychiatric Institute

The scene is the Fourth Floor of the Psychiatric Institute—the Children's Floor. Night has fallen.

The time is 8:30 p.m.—nearly bedtime.

In a cozy, well-lighted room a nurse is reading a book to two very young patients, a boy and a girl, who are snuggled close beside her.

In the nearby corridor, a work table is spread with colored papers; two staff members have been helping youthful patients to cut out valentines, but the interest has waned. A few boys drift toward their bedroom, a spacious, gleaming, clean-smelling dormitory, which is "home" for these youngsters during their months of stay.

At night this floor, high above the Hudson River and the traffic ways, seems a world of its own, enclosed not only by soundproof walls but also by the screen of darkness.

Some of the boys are not yet inclined to go to bed. The manner of the nurses and attendants is pleasant and friendly, not strict.

"Don't force him, Jimmy," a staff member advises one of the older patients who has offered to help a young boy to bed. The young one, silent and reticent, has been gaining ground slowly during his several days at this hospital; at first, he would neither speak nor eat. To have a family of children around him, however, is helpful, and tonight he is responding quietly to his companion's assistance.

This night has turned out to be much less tense than some of the daytime staff had predicted. Earlier in the day there had been some sort of crisis—something about a lost key—and the privileges of all fourteen children on this floor had been threatened. However, by now the problem has been solved, and the tension which has been communicated almost electrically from one patient to another has faded. The valentine cutouts have helped; that tireless baby-sitter, TV, has done its share, and the casual friendliness of the night staff, as always, has lent its magic.

"Night people are different from day people," was the way

it had been explained to *The Stethoscope* reporter earlier in the day by Dr. S. H. Frazier, Deputy Director of the Psychiatric Institute. "Night people don't get as disturbed as day people do. There's more relaxation of rules at night."

Nevertheless, Dr. Frazier had noted, the night has its emergencies; in fact, most of them occur between dusk and midnight. A day-time staff member had stated, "Children are most disorganized at bedtime. We use many volunteers, and we specify to those who want to volunteer that our most important time is bedtime."

It is now growing late—after nine—nevertheless, some of the boys are invited to hear a space ship story. Five of them crowd together in a dimly lighted room and listen, as attentively as any group of school students, while the visitor talks with them. They ask interested questions, and when the story-telling is over, they give their guest a courteous, "Thank you and good-night."

Thus, bedtime has been postponed a little longer, but at last the day must come to an end. Retiring, each child retreats into his private world of dreams or wakeful thoughts. The scene changes.

We are now on the Fifth Floor, the tentative home of more than 50 adolescents and adults.

Tomorrow will be February 14, and a Valentine Party is in the air. Two neatly groomed teen-age girls—patients—have just breezed back from an errand on nearby Broadway, bearing armloads of candy in paper sacks, and with quick cordiality they offer samples to guests whom they have never seen before.

The long straight Fifth Floor corridor is a hall of sociability. The evening's formal activities have ended; TV sets and a small record player are sounding at low volume. "It's a quiet night," one of the nurses comments. Many types of teen-agers make up this Fifth Floor community. There are those who are wan and apparently depressed, and others who bear no outward signs of illness. It is noted that each of those who are sitting around in pajamas and robes has a staff friend nearby, not necessarily in uniform, to be alert to any hint of danger, for this type of patient might try to hurt himself. Through the night he will sleep in a private room with the door open, and a nurse will sit nearby, constantly keeping guard through the silent hours to protect the patient.

Bedtime has come for this hospital family of adolescent mental patients—"time to go to your own rooms." The suggestion bears no resemblance to a disciplinary order but has the sound of a friendly reminder—given by a nurse who

Left to right, night staff members David Rodriguez, Attendant; Colette Swietnicki, R.N., and Gailord Seamon, Attendant, at P.I.

has worked here for twenty years. Gradually the little groups break up and the boys and girls drift toward their separate dormitories. A few continue to linger around the small record player, and the promoters of the Valentine Party stand by at the nursing station, completing their preparations for the new day.

"A quiet night."

The phrase is repeated by night nurses on other floors. Patients are retiring. Some are still sitting around, watching TV. On one floor, all patients have gone to bed except one—a handsome, brilliant young man who is doing art work with the zeal and skill of a professional.

In another area, where five or six adult patients are watching a late show on TV,

"... At night there is anxiety, fear, worry . . . A reassuring nurse is better than any sleeping medication . . ."

—Dr. S. H. Frazier

the night nurse works within view in her glass-enclosed station, recording for each patient, at 30-minute intervals, five items of information. These patients are quite aware of the cycles of their illness and are cooperating voluntarily in a doctor's research project. Throughout this night, whether they are sleeping or sleepless, the nurse will continue to record on her charts her regular half-hourly observations.

"A quiet night."

Each ward area has its own character, its personality, its ever changing moods—moods which may be sensed instantly by the doctor when he comes on the floor.

"The physician is first of all an observer," Dr. Frazier said in discussing the hospital's moods at night. "He observes not only the patient's condition, but also the environment . . . the morale . . . the tone . . ."

"At night the charisma of the staff is so much greater. People are worried more at night. And greater concern means more faith and trust in the helper."

"You see fear at night. Only firm treatment is reassuring."

At night there is always lots of anticipation over tomorrow—anxiety, fear, worry over that test or that conference.

"A reassuring nurse is better than any sleeping medication," Dr. Frazier said. "The nurse will probably not say,

meetings," said Dr. Frazier. "There's a rule that the doctor must see a patient before he is admitted, so, in case of emergency, the doctors are on call. We have a senior staff call system."

Mr. Edward Wray, Director of Nursing, spoke of the early morning anxieties that can come when no doctors are at hand. The nurse or attendant is the crucial person to give reassurance. Sometimes only the sound of a voice is needed, or the touch of a hand, to take away the haunting loneliness. Late in the night there are only a few nurses, and much depends upon the attendants.

"I've seen maids, electricians and other personnel, at such times, answering the needs. At this hour there is no need for medicine—it's people needing people."

In the Psychiatric Institute booklet, *We Are The Bridge*, Winifred Winikus, Head of Social Service Department, has written of the patient, taking steps toward recovery. "He is not alone in his journey. . . . With the patient and close to him every step of the way is the entire staff of the Psychiatric Institute, trained to help wherever help is desirable."

Through the day there are distractions to take the patient's mind off the possible dangers, but at night "things go bump." The shirt that has hung on the chair unnoticed through the day becomes a lurking robber in the darkness of night.

Patients shouldn't be embarrassed over being frightened. There's greater hyper-alertness at night. The child will say, "I can't sleep. I feel terrible." But he won't pour out the whole story, and no one can know all. And in the geriatric ward, where the older people tend to experience the invasion of loneliness at dusk, many an organic brain syndrome that goes through the day becomes active at night.

It is then that the sound of a human voice and the touch of a hand can do much toward holding the world together.

Four members of the Psychiatric Institute evening staff, from left, Attendant Gailord Seamon, Nursing Supervisor Arthur Cochrane, and Attendants Mrs. Gwendolyn Piggott and Jesse Day.

From left, Mrs. Elizabeth Bohan, Margot Honig and Mrs. Delia White, staff members of the Psychiatric Institute, pause for a photo on a quiet night.

## "Sharpus Sharpus" Does He Scheme to Gouge, Sting, Slash?

With this item, *The Stethoscope* initiates a series of thumbnail exposes of Presbyterian Hospital's enemies that try to do harm to its guests and employees.

Robert Benchley's theory that inanimate objects conspire against humans will find many supporters in hospitals, where accidents result from seemingly purposive acts by things. The most abundant species of these evil-doers is the sharp, *Sharpus sharpus*. A short scientific treatise of this form is given below.

**Common Names:** Ouch! That \* \* ! Yikes, glass!

**Description:** The sharp is adept at camouflage and appears in various shapes. All sharps, however, have a point or edge, often hidden from view, which they use indiscriminately to sting or slash. Often a sharp is recognized only after it has done its dirty work of penetrating the human skin. The most common shape of this form is a discarded hypodermic needle, but other shapes, such as glass shards and lids from tin cans, are not infrequent.

**Distribution:** Hospital-wide, but tends to congregate in places favoring sneak attacks on humans.

**Habitat:** Many sharps are fond of lurking near the edges

of trash disposal bags, ready to attack upon the slightest pressure on the bag. Other sharps hang out among innocent-looking papers in desk drawers and in equipment boxes, where they mingle with legitimate instruments.

**Behavior:** Sharps appear to have no volition of their own, yet they somehow manage to position themselves in such a way that a person touching them receives a slash or a puncture.

**Importance to man:** Only negative. The wounds inflicted by sharps can easily become infected, since sharps and germs are known to be symbiotic, or have a cooperative relationship.

**Breeding:** The sharp's breeding habits are unknown, but its numbers seem to be directly proportional to human carelessness.

**Longevity:** Limited only by

## Dominick Reda and His Landscaping Team Perform Magic Arts of Instant Gardening

"Mary, Mary, how does your garden grow?"

"Fast!" according to Dominick Reda, head gardener at Presbyterian Hospital.

Additions to existing buildings, and new buildings being added to the Medical Center complex, have resulted in a constant change in its profile. Dominick described how these changes have, on occasion, necessitated "instant gardening."

Removal of the wood shell surrounding the newly-built addition to the Eye Institute, while it was under construc-

tioned. Perennials — gailardia (asters), lily of the valley, lythrum (a variety of herbs and shrubs of the loosestrife genus) — were planted. The results of these preparations are obvious. Year-round maintenance is required to keep this landscaping handsome.

Dominick became a gardener by chance when he successfully cultivated a pair of potted begonias in a window box in his apartment. This led to a series of extra-curricular gardening jobs. At that time he was employed as an electroplater in a factory.

Left to right: Morris Visotsky, Dominick Reda, Frank Vaccarelli.

tion, left a large, unattractive void in the garden. In much the same manner as vinyl-plastic floor covering is laid on a kitchen floor, grass sod squares were artfully placed, so that "seams" were barely perceptible, instantly covering the void with a blanket of lush green "velvet" — "Green side up!" quipped Frank Vaccarelli, Assistant Gardener. Of course it's not quite as instantaneous as that. Several days are needed to prepare the soil and grade it.

Abacadabra—one morning a beautiful bed of flaming red geraniums appeared, near the Eye Institute addition, to match the existing bed near the center of the garden and one adjoining the PH ramp.

Preparations for the handsome landscaping around the new Dana W. Atchley Pavilion began some time before the building was opened for occupancy. Late in the fall of 1968, seeding of the lawn was

alertness of persons dealing with sharps.

**Natural Enemies:** As most anything in nature, sharps have their own enemies. These include caution, carefulness and thoroughness. At some point of its life cycle, the sharp is seen or recognized by its potential victim, a human being, and can be neutralized at that juncture by being placed in a hard container designated for it. If that is not done, the sharp disappears to assume its harmful ways.

In 1960 he became a gardener by choice when he heard of an opening at the Hospital for a gardener, applied for, and got the job.

Dominick is married; he and his wife have a son and daughter, both married, and three grandchildren. They live in the Sheepshead Bay section of Brooklyn.

"But, I'd much rather talk about my 'boys,'" he stated. His boys are Morris Visotsky and Frank Vaccarelli, Assistant Gardeners.

Morris worked as an electrician in the same factory where Dominick was an electroplater. Their friendship dates back forty years. Morris has been with Presbyterian for ten years. He lives in the Bronx, and is a bachelor. "I was never caught," he explained.

Frank Vaccarelli has been working at the Hospital for eight years; the first year spent working in the Pharmacy. Frank is married and lives in Iselin, New Jersey.

These three cheerful, enthusiastic fellows, with a crew of able helpers, have really kept the Hospital garden and surrounding landscapes in beautiful order through the years; a lovely and colorful sight to behold.

New projects in the planning stage include renovation of the landscaping around the Babies Hospital and Eye Institute areas. Maxwell Hall will undergo a complete "face-lift" when the addition to its existing building is completed.

## "Our Obligation Is To Prevent Dental Diseases," Says Dr. Mandel, Research Council Award Winner

"The young men now studying at the Dental School must learn that the main thrust of their education is toward an understanding of the nature of dental diseases and how to prevent them. Even though they are being taught the best way possible to treat dental diseases, they recognize that necessity to treat represents professional failure. Our primary obligation is to prevent dental disease."

Those were the words of Dr. Irwin D. Mandel, formerly Clinical Professor of Dentistry, Division of Stomatology, who on July 1 was appointed Professor of Dentistry and Director, Division of Preventive Dentistry and Community Health.

He was interviewed with respect to his own recent promotion and his association with newly appointed Dr. Harold M. Applewhite (see story in a coming issue of *The Stethoscope*.)

Said Dr. Mandel, "Ours is a dual responsibility. Dr. Applewhite is concerned with the delivery of effective dental care to a maximum number of people, and I am concerned that this dental care will be preventive in nature."

He continued, "We feel that dental health problems would be most practically served by prevention of dental disease rather than by continued treatment and re-treatment of dental disease."

As part of their research in Preventive Dentistry, Dr.

Dr. Irwin D. Mandel

Mandel and his associates are engaged in the study of saliva and its relation to calculus. Calculus is an important factor in the production of disease of the gums (periodontal disease).

Dental calculus forms in three phases. Initially, organic matter attaches to the tooth surface forming the calculus matrix; then, as microorganisms accumulate, plaque forms. In the third state, the plaque mineralizes, producing calculus.

The researchers felt that an understanding of the dynamics of dental calculus formation will not only help prevent gum disease, but may lead to ways of controlling unwanted calcification that also occurs in other body sites.

Dr. Mandel has just recently received a Career Scientists Award from the Health Research Council in the City of New York.

## Vacation Echoes: Tornado Clouds, Huge Mosquitos, Leaping Lawns, Record Rains From A Weeping Moon

*The Stethoscope* is a frequent eavesdropper in the Cafeteria, in the Coffee Shop, and in the corridors of the various units of Presbyterian Hospital. During the past months, more employees seem to have been more obsessed by the peculiarities of the weather than by any other factor in their daily lives.

A nurse, just back from a vacation in Kansas, was heard to say, "I was threatened by so many funnel-shaped tornado clouds that I've taken a dislike to ice cream cones. . ."

A member of the *Stethoscope* team described the mosquitoes of Lake Ripley, Wisconsin, as, "Large as barnswallows and just as voracious. I heard them talking as they flew over my fishing boat just at dusk one evening. The leader suddenly asked if they should eat that one here, or take him over to the swamp. One of the others said, 'Let's eat him here; if we take him over there the big ones will get him away from us.'"

It has been reported by reliable observers that lawns in Bergen, Westchester and Rockland Counties have grown

so rapidly that one loses his constant battle to keep even with it unless he changes his mower from a 21" blade to a 36" blade.

A technician at P&S, who recently bought a cottage on the Passaic River, now finds himself anchored out in the Jersey Meadows and is offering a "house boat" for sale.

A physician who asks to remain anonymous, is convinced that his wife, a frequent visitor to a spiritualist medium, has made contact with a golf-hating spirit, because it has rained four out of the five days he has taken off for golf.

In an effort to find an answer to the unusual weather picture, *Stethoscope* went to one of its old friends, Dr. Frank Field, who has filmed many medical features at the Medical Center and who is the weather expert at NBC-TV, asking for a scientific explanation. Dr. Field said that in his opinion Diana, the moon goddess, has been so saddened by man's invasion of her sacred spheroid that she started to weep about a month ago and may be out to wash away Cape Kennedy.

# Stethoscopia

## • ENGAGEMENTS

**Tobé Anne Miller** and **Dr. Stephen Malawista** are engaged. Dr. Malawista is a graduate of the College of Physicians and Surgeons, and is an Associate Professor of Medicine at Yale University.

**Jane Hart**, a secretary in the Department of Physical and Occupational Therapy, is engaged to **Michael Psaroudis**.

**Marcia Sirotkin** and **Dr. Allen Roses** plan a January wedding. Dr. Roses is Senior Resident at the Neurological Institute, and Miss Sirotkin is a Physical Therapist at Presbyterian Hospital.

## • MARRIAGES

**Ada Croasdaile** and **Luis Santos** were married on August 16. Mrs. Santos is a technician in the Blood Bank.

**Emily Brooks** and **Ted Wilcher** were married on September 27. Mrs. Wilcher is the daughter of Mrs. Fredrica Brooks, Managing Editor of the P&S Quarterly.

**Dr. Anne Moore** and **Dr. Arnold Lisio** were married on September 6. Dr. Moore is a '69 graduate of P&S. Dr. Lisio is an Assistant Attending Physician, PH, and an Instructor of Medicine, P&S.

**Elizabeth Truslow** and **William Russell** were married on September 5. Mrs. Russell is a graduate of the School of Nursing.

**Maria Cannistrick** and **Aldo Armati** were married on September 7. Mr. Armati is a member of the Maintenance and Construction Department. The couple are spending their honeymoon in Hawaii.

**Patricia Rhein**, Out-Patient Accounts, Accounting Department, and **Michael Barry**, PH Accounting Department, were married on September 13.

## • BIRTHS

**Dr. and Mrs. John G. Gorman** welcomed their second child, a son, **John William Rutgers Gorman**, on August 18. Dr. Gorman is Director of the Blood Bank. Mrs. Gorman is the former Carol Rutgers, Pathology Resident.

A son, **Kenneth Todd De Wolfe**, was born to **Mr. and Mrs. Donald De Wolfe** on September 17. Mrs. De Wolfe is the former Carol Pino, School of Nursing '68, and the daughter of Dr. Daniel Pino, Assistant Attending Anesthesiologist, PH, and Assistant Professor of Anesthesiology, P&S.

## • WELCOME

To **Mrs. Madeline Irene Hess**, new secretary in the EEG Department.

## • FAREWELL

To **Mrs. Mary Ledwith**, Assistant Supervisor in the Medical Information Department, and her husband, who have left the United States to make their home in Australia. We all wish them well in their new venture.

## • CONGRATULATIONS

To **Oliver Lermund**, assistant supervisor, nursing attendants, Nursing Department, who has been promoted to supervisor by **Myra L. Crawford**, Director of Nursing. Mrs. Lermund, who has been with the Nursing Department over 10 years, replaces the late William De Wald who was supervisor from 1950 to 1969.

To **Adelo Murphy**, technologist at the Blood Bank, on being appointed Exhorter (minister) of the Spanish Pentecostal Church of Passaic, New Jersey.

## • NOTES OF INTEREST

**Lydia Liguoria**, Medical Secretary in the Medical Information Department, has returned from a most enjoyable vacation in Italy.

**Helen Blasdell** of the Volunteer Department is taking a November cruise to South America for 19 days.

**Mrs. Margaret Reynolds**, technician in the Blood Bank, is visiting and vacationing with her grandchildren in England. Her daughter, Mrs. Sheila Munnely, gave birth to twins (Debra and David) in July.

# DOINGS OF DOCTORS

"Rehabilitation and Cancer" will be the subject of a symposium, the first of its kind, sponsored by The American Cancer Society's New York City Division. It will be held on Thursday, November 20, at the Hotel Biltmore in New York City. **Dr. JOSEPH E. SNYDER**, Assistant Vice President, Vanderbilt Clinic and Other Services, Chairman of Patient Service Committee, New York City Division, and **Roberta Klein**, Chairman, Symposium Planning Committee, have announced that the program will focus on physical and emotional disabilities related to cancer and its treatment. Surgeons, physicians, nurses and others in allied health fields will attend. Dr. Snyder emphasized that "Rehabilitation for the patient who has been treated for cancer is an area needing our immediate concern and is a major responsibility for all health professionals."

**Dr. DAVID H. BAKER**, Director of Radiology, Babies Hospital, and Professor of Radiology, P&S, and **Dr. WALTER E. BERDON**, Attending Radiologist, PH, and Associate Professor of Radiology, P&S, presented a joint paper on "Giant Hydronephrosis in Infants and Children—Value of High Dosage Excretory Urography in Predicting Renal Salvageability" at the American Roentgen Ray Meeting in Washington, D. C., September 30-October 3. Dr. Berdon also presented a scientific exhibit at this meeting, entitled *Giant Hydro-Nephrosis in Infants and Children*. He has been elected to Honorary Membership in the Pacific Northwest Radiological Society. Dr. Baker also presented a paper entitled "Dystonic Torticollis and Gastroesophageal Reflux" at the meeting of the Pediatric Radiological Society on September 29. Dr. Baker is the President of this Society.

## Medical Training Grants

A Medical Scientist Training Program has been instituted at the College of Physicians and Surgeons. The National Institutes of General Medical Sciences has awarded the College a grant effective July 1, 1969. The amount of the award for the first year is approximately \$50,000. The College has also received donations of \$19,000 from private donors to supplement this program.

Four students have been accepted by the Admissions Committee and are now in training. They are: **Mr. Peter L. Friedman**—2nd year; **Mr. Jerry I. Gliklich**—1st year; **Mr. Peter R. Hoffmann**—1st year; **Mr. John G. Palfrey**—2nd year.

Admissions are expected at the rate of six students a year in subsequent years.

The goal of the Medical Scientist Training Program is to train superior scientists for research and teaching careers in the basic biological and health-related sciences where shortages of trained scientific manpower exist.

This program is under the

**Dr. ROBERT S. JAMPPEL**, Assistant Professor of Clinical Ophthalmology, gave three lectures in neuro-ophthalmology at the North and South Carolina Ophthalmological Association in Myrtle Beach, South Carolina, September 14-17.

**Dr. ROBERT H. E. ELLIOTT, JR.**, Assistant Vice President, PH, and Associate Dean, P&S, gave the Commencement Address to the graduating class of the School of Practical Nursing at the Hospital for Special Surgery on September 11.

Dr. Elliott

Dr. Miller

**Dr. ORLANDO J. MILLER**, Associate Attending Obstetrician and Gynecologist, PH, and Associate Professor of Obstetrics and Gynecology and of Human Genetics and Developmental Biology, P&S, returned on September 15 from Oxford, England, after a one-year absence on sabbatical leave. Dr. Miller was working with Dr. H. Harris at the Sir William Dunn School of Pathology, Oxford University. His research involved the use of cell-hybridization techniques in the study of the genetic basis of malignancy, histocompatibility, and enzyme synthesis.

## Dr. Kety To Give First Waelsch Lecture

The **Heinrich Waelsch Lecture** in Neuroscience is a memorial lecture for Dr. Waelsch who served the Columbia-Presbyterian community for almost 30 years, reaching the position of Professor of Biochemistry in 1954. He died in 1966. He made far reaching contributions in the area of biochemistry, in particular in the application of such studies to the brain. He was a pioneer in emphasizing the importance of brain biochemistry and in gaining recognition for this enterprise by designating it as Neurochemistry. He was one of the founders of the Journal of Neurochemistry.

**Dr. Seymour S. Kety**, Professor of Psychiatry at Harvard University and Director of Psychiatric Research at Massachusetts General Hospital, will give the first Heinrich

direction of **Dr. Brian F. Hoffman**, David Hosack Professor of Pharmacology and Chairman of the Department of Pharmacology.

**Waelsch Lecture** on Friday, October 10, at 4:00 p.m. in the Auditorium of the Psychiatric Institute (8th floor). The title of his work will be *Protein and Amine Metabolism in the Brain: The Basis of Some Speculations Regarding Learning*. Dr. Kety is an international authority on biochemical aspects of mental disorders and a long time friend of Dr. Waelsch. His early work involved studies of energy metabolism in the brain of human subjects.

**Dr. Waelsch** originally started his work in the Department of Biochemistry at the Psychiatric Institute with **Dr. Sperry** as his chief. He was eventually given his own department, which was designated as Pharmacology. With the recent retirement of Dr. Sperry, the departments of Pharmacology, Biochemistry, and Microbiology at the Psychiatric Institute have been combined to form a new division, the Division of Neuroscience. **Dr. Maurice M. Rapport**, Professor of Biochemistry, has been appointed chief of this new division.

VOLUME XXIV, NUMBER 11

NOVEMBER, 1969

## New Blood Test Guards Against Post-Transfusion Hepatitis

A diagnostic test recently introduced at the Presbyterian Hospital Blood Bank is expected to achieve a significant reduction in post-transfusion hepatitis among blood recipients.

The new test, now in routine use, is the outgrowth of immunological detective work of Dr. David J. Gocke, Assistant Professor of Clinical Medicine at the College of Physicians and Surgeons and an Assistant Attending Physician, Presbyterian Hospital.

hepatitis may be "the harbinger of the greatest breakthrough in virology since the development of measles vaccines," according to Dr. Gocke.

Dr. Gocke emphasized, however, that the presently available two-dimensional immunodiffusion test requires 24 hours to produce a reaction. The test is thus of no value for surgical procedures which require freshly donated blood. The immunodiffusion test, furthermore, appears to lack the sensitivity needed to screen

Dr. David J. Gocke, with research assistant June Panick, R.N.

Dr. Gocke was able to show that a virus-like protein substance in the blood is associated with viral hepatitis. The existence of this substance—possibly a virus fragment—was discovered elsewhere in 1963, but it was then thought to be a genetic factor in the blood. The hepatitis virus itself has not been isolated.

Dr. Gocke's work demonstrated the appearance of this foreign substance, or antigen, in 80 per cent of patients suffering from viral hepatitis.

Researchers now know that the hepatitis antigen can be found in the bloods of apparently healthy donors. One in every 150 donors can be expected to have this blood factor, according to Presbyterian Hospital Blood Bank statistics.

The value of Dr. Gocke's work was to establish the danger from this factor.

The discovery of the relationship of this factor to viral

out all donors with the hepatitis antigen, since 4 out of 69 patients in one study developed post-transfusion hepatitis after receiving supposedly antigen-free blood.

The immunodiffusion test uses the blood serums of patients who are known to have antibodies against hepatitis. A droplet of such a serum, deposited in a small round well, or hole, cut in gelatinous agar, is surrounded by droplets of donors' serums, each in a separate identical well, about a half inch from the center hole.

After a 24-hour incubation period, a white reaction line develops between the center well and any well containing the hepatitis antigen.

Dr. Gocke and his associates are studying other approaches to develop a sensitive and rapid test for the antigen. Of these, the slide agglutination method seems to have several advantages.

## Dr. Yahr Reports L-Dopa Can Alter Progressive Course of Parkinsonism

There are suggestions from the studies to date that L-Dopa may be altering the course of Parkinson's Disease, in addition to being an effective therapeutic agent.

This disclosure was made by Dr. Melvin D. Yahr, Executive Director of Parkinson's Disease Foundation, in connection with the recent world Neurological Congresses in New York City.

Dr. Yahr appeared on NBC's program "Research Project," hosted by Dr. Frank Field, and at a press conference during the Congress proceedings.

Dr. Yahr based his opinion on the results of prolonged trial administration of the new drug to a representative series

of patients. An encouraging aspect of the trial was that "patients receiving treatment for from six months to two years have not shown evidence of new symptoms of parkinsonism," he said.

Of the almost 400 parkinsonism patients treated at the Columbia - Presbyterian Medical Center, 116 received treatment from six to 18 months. In the latter group, more than half were able to reduce by 50 per cent or more the characteristic signs of the affliction—muscle rigidity, immobility and the shaking spasms. About one third reduced these signs by 80 per cent or more, with L-Dopa.

The report on these cases to

the neurological congresses was co-authored, in addition to Dr. Yahr, by Drs. Roger Duvoisin, Myrna Scheer, Margaret Hoehn, and Robert Barrett.

The Parkinson Research Program at Columbia-Presbyterian Medical Center, Dr. Yahr said, is directed toward the development of a more specific kind of L-Dopa to reduce the unwelcome side effects of the present drug, which primarily include vomiting and irregular movements of facial muscles and limbs. "But, more importantly," Dr. Yahr emphasized, "the research seeks to find the cause of this disease and methods of its prevention and cure."

## P&S Scientist Reviews Disputed Drug

"The reputation of lithium—one of the most specific psychopharmacologic agents for treating major mental illness—will be in danger if an indiscriminate use of the drug is authorized in the United States next year."

This is the warning of Dr. Ronald Fieve, Chief of Psychiatric Research, Department of Internal Medicine, New York State Psychiatric Institute and Assistant Professor of Psychiatry, College of Physicians and Surgeons, Columbia University. Dr. Fieve appraised lithium's growing role in controlling affective, or mood, disorders and spoke of the drug's future

in an exclusive interview with *The Stethoscope*.

In his opinion, lithium will "in all probability" be marketed in 1970, either to all physicians "on a completely unrestricted basis, or preferably on a restricted basis under a new status for drugs." It is the former possibility that causes concern among this country's lithium watchers, aware as they are of the alkaline metal's low safety threshold and toxic potential, factors which strongly militate against its indiscriminate use. About 250 researchers now hold individual government permits to administer lithium in its carbonate, or salt, form.

Dr. Fieve opposes a lifting of all restrictions on lithium by the Food and Drug Administration at this time and cautions against the free sale of this element.

The future of lithium is not all that dark, however. Dr. Fieve sees a substantial silver lining on the drug's horizon. "As we learn more about the effects of lithium and gain an understanding of its physiological mechanism, its range of applications may increase," he says. Such applications may include treatment of manic features in a variety of psychiatric conditions and the prevention of manic-depressive psychosis, in addition to its presently well established capacity as a therapeutic agent for this condition.

"In all likelihood," the P&S Please turn to page five

Dr. Ronald R. Fieve in his Medical Center office.

## Weinberg Plan Shows Growth In Enrollment

The number of employees studying under the Weinberg Plan has grown by one third, as compared with last fall's figures, the Personnel Department reported last month. The increase, according to Lillian Oring, coordinator of the plan, reflects "the rising importance of this educational aid fund to our employees" in an age when "academic credits and career advancement are more closely linked than ever."

The Sidney J. Weinberg Employees Educational Aid Reimbursement Plan came into being eight years ago, when the many friends of Sidney Weinberg, a prominent PH Trustee, each gave \$70 to the hospital to commemorate his 70th birthday. The total \$22,000, was more than matched by Mr. Weinberg's contribution of \$24,000. Mr. Weinberg asked that the sum be used to set up an endowment fund to further the education of PH employees. Mr. Weinberg died last July, but his deeds continue to benefit PH.

Forty-four applications for tuition assistance were approved this fall; of these 34 are degree candidates, including one doctorate and seven Master's degrees.

The 44 successful applicants and their departments are: Romulo Arbas, Console Operator in Pediatric Chemistry; Robert Bechner, Special Officer, Protective Department; Alphanso Brown and Neville Carey, Nursing Attendants; Charles Casamento, Pharmacist; Richard Collias, Office Assistant in Accounting; Laforest Collins, Housekeeping; Cecilio Concepcion, Nursing Attendant; Ellen Connolly, Technician Trainee in Clinical Chemistry; Joseph Corcoran, Internal Auditor in the Assistant Secretary-Treasurer's Office; Patricia DePompei, Administrative Trainee, Front Office; Ernestine Gore, Radiotherapy Aide; Vera Grant, Nursing Aide; Carroll Greece, Physical Therapist; Judith Hogan, Chief Physical Therapist; Charles Kordula, Medical Technologist, Clinical Pathology; Reeva Kravet, L.P.N.; Lorraine Lazarus, Receptionist in Vanderbilt Clinic; Kenneth Loforte, Supervisor of Out-patient Billing; Joseph Lyons, Wage Analyst in Personnel; John McKinney, Assistant Supervisor, Protective Department; Lavonia McRae, L.P.N.; Paul Manchess, Account Representative in Out-patient Department; Patrick Meehan, Credit Supervisor, Credit & Collection; Harry Morelli, Pharmacist; Letty Munz, Psychometrist, Pediatric Psychiatry; John J. Murphy, Statistical Accounting Clerk; Kath-

## This Lady Keeps Her Cool

Mrs. May Bowman at her desk.

Mrs. May Bowman, who mans the Babies Hospital Information Office in the afternoon and evening, renders a double service to the Hospital. A 16-year veteran at this post, Mrs. Bowman applies her experience to some of her duties of an administrative nature.

leen O'Halloran, Medical Secretary in Neurology; Maureen O'Neill, Physical Therapist; Joan Palmer, Secretary-Technician, Cardiology; Joan Pfizemaier, Coordinator of Clinical Education in Physical Therapy; Kathleen Piekarz, Physical Therapist; Margaret Plantz, Statistical Typist in Comptroller's Office; Julia Poyhonen, Clerk-Typist in Private Duty Nurses Registry; Pamela Reiss, Physical Therapy Aide; Josefina Roque, Receptionist-Typist, P.H. Admitting Office; Judith Rothstein, Secretary, Blood Bank; Marcia Sirotkin, Physical Therapist; Anthony Spiesman, Clerk, Neuro Front Office; Clarence Swanston, Special Officer, Protective Department; Luis Villegas, Accounting Clerk; Valerie Vivian, Physical Therapist; Roberta Wolfe, Supervisor in Physical Therapy; and Tina Zamerinsky, Junior Secretary in Pediatric Bacteriology.

The Weinberg Aid Plan reimburses one half of the employee's tuition for one to six academic credits a semester. A student must have at least six months of uninterrupted PH employment at the time he applies for aid, and the subjects must be related to his work or to career development at the hospital. Miss Oring pointed out that employees who qualify for aid receive it upon satisfactory completion of the course that semester and upon presentation of their bursar's receipt. Eligible employees are invited to apply during the month of January for financial aid for the spring semester. Applications must be made through Miss Oring (H.P. 1-163, Extension 3215) no later than January 30, 1970 to be considered for that period of study.

She proves her value to the Hospital in emergencies. These arise mostly in connection with patients; frequently a critically ill child has to be transported and received here. Occasionally, a patient transfer involves another country, as when a youngster is brought here to receive the specialized surgical or medical care that BH is known for abroad.

Mrs. Bowman's activities do not free her from her regular chores of handling all private and semi-private admissions during her duty hours of 3:30 p.m. to 11 p.m. and of contributing the Babies Hospital night summary to the hospital census.

Mrs. Bowman's other duties are of a public relations type, as she represents the Hospital to the many patients' relatives who come to her window or telephone the Information Office. She brings much kindness, patience, tact and good judgment to this part of her job. Occasionally good-natured firmness is needed, as in the case of "alleged" relatives from far distant points who insist on visiting after hours.

Mrs. Bowman also recalls how one late evening a father of twelve, on his way home from a party, attempted to see his daughter on the surgical floor.

Mrs. Bowman, realizing that it would not be wise for him to go to the ward, suggested that he go home first to see his other children—whereupon he replied, "but lady, you don't understand, 'tis the bonny one who is upstairs."

Not surprisingly, Mrs. Bowman handles this type of situation with aplomb, as she does the complex emergencies involving administrative details. The Babies Hospital is in good hands in the evening.

Mrs. Bowman and the night visitors

## New Dental Faculty Member Endorses Satellite Clinics

In keeping with the current trend toward community-gated health services offered by medical centers in urban areas, Columbia University has appointed Dr. Harold L. Applewhite Associate Professor of Dentistry, Head of Section of Community Health.

This program is under the direction of Dr. Irwin D. Mandel, Professor of Dentistry and Director, Division of Preventive Dentistry and Community Health, Columbia University.

Dr. Applewhite is optimistic about the future of dental health in the community in spite of the fact that the limited number of dental students at Columbia will hardly make a dent in meeting the clinical needs of the community. He explained, "They will have a greater role to play, with the background provided by the preventive dentistry and community health programs to bring informed pressure to bear politically and educationally to produce necessary changes."

He continued, "I am very much interested in the development of new systems for the improvement of dental care to the community. I feel that the setback we have had with Medicaid has made even more glaring the present demands for dental care, especially in the depressed areas."

"To meet this crisis we must begin now to develop more effective systems for the delivery of dental care, while still maintaining acceptable standards. There is urgent need for more programs in educational and job opportunities in the dental health careers for the disadvantaged. More emphasis should be placed on teaching the preventive aspect of dental care."

"Neighborhood satellite dental clinics should be established with this as one of their major objectives. The expanded use of dental auxiliaries will be a significant step in

solving the dental health crisis."

Dr. Applewhite was born in Trinidad, B.W.I., in 1913. He came to the United States in 1934 and received his elementary education in New York City's public schools. He attended City College of New York and Yale University for pre-dental studies and received his D.D.S. from Howard University College of Dentistry, Washington, D. C., 1948. He earned the M.P.H. from Columbia University's School of Public Health and Administrative Medicine in 1967, and

Dr. Harold L. Applewhite

served his residency in dental public health, State of New Jersey Public Health Department, 1967-68. He organized and chaired the Department of Community Dentistry at Howard University, Washington, D. C., in 1968.

He is married to the former Icylda Thompson and they have two sons—Allen, 25, a computer-programmer, and David, 20, a premedical student at Howard University. Mrs. Applewhite, who received her B.A. from Brooklyn College is a librarian at Catholic University, Washington, D. C. The couple live in Beechhurst, New York.

## Elusive "Mirror" in the Mouth Sought as a Diagnostic Tool

Relatively new and fascinating research is in progress concerning saliva and its relation to systemic disease. This research is being carried out by Dr. Stephen Wotman, Assistant Clinical Professor of Dentistry, Division of Preventive Dentistry and Community Health, School of Dental and Oral Surgery, in collaboration with physicians at the Medical Center.

Dr. Wotman's research interest is specifically concerned with the composition of saliva and systemic disease. He explained, "We are interested for several reasons. We feel that by investigating the composition of saliva in various disease states we will understand more about how salivary glands themselves operate. Secondly, which may be firstly from the patient's point of view, we hope to learn about differences, in the composition of saliva in these diseases, which may be of assistance to the physician and dentist in establishing diagnoses and prognoses."

Disease areas in which he has been involved are cystic fibrosis with Dr. Carolyn Denning, Assistant Professor of Pediatrics, P&S, and Director of Pediatric Pulmonary Disease Center, and hypertension and primary aldosteronism with Dr. John H. Laragh, Professor of Clinical Medicine, P&S, and Associate Attending Physician, PH. Referring to the latter subject, Dr. Wotman said, "Our work with Dr. Laragh is providing new evidence of hormonal influence on the salivary secretions."

An article concerning this research is currently appearing in the journal *Archives of Internal Medicine* and the same subject will be used as the basis for an editorial in the *Journal of the American Medical Association*.

Dr. Wotman is also vitally interested in various disease states exhibiting salivary gland enlargement, and he has a growing curiosity about diseases such as diabetes and cirrhosis.

He was the recipient of a three-year grant from the National Institutes of Health, awarded on June 1, 1968, for research on "Salivary Neurohumoral Relationships."

When asked if any definite relationship between saliva

Dr. Stephen Wotman

and systemic disease does exist, Dr. Wotman said, "The mouth has always been described as a mirror of the body. Until now we have not had objective criteria available to make this mirror helpful in diagnosis and prognosis. The large body of information concerning the composition of the saliva of normal individuals developed at this and other institutions, while studying the dental diseases, provides a basis for exploring the utilization of this fluid as another aid to both the physician and dentist."

Dr. Wotman, who has been associated with the Medical Center since 1962, received his D.D.S. degree from the University of Pennsylvania Dental School. He is married to the former Joyce Greenberg. They have two young sons and live in New City, New York.

## ACCOLADES FOR DR. BROWN

The Academy Medal of the New York Academy of Medicine, which has been awarded to a distinguished series of scientists and teachers, was awarded, this year, to Dr. Harold W. Brown, Professor of Parasitology at Columbia University's College of Physicians and Surgeons.

The following paragraphs are quoted from the presentation address by James E. McCormack, Director, The New York Academy of Medicine, at the meeting of April 10, 1969:

"Harold W. Brown deserves honor as a scientist, a teacher, an administrator, and an innovator. As for the vital statistics: Dr. Brown received his A.B. degree at Kalamazoo College, his M.S. degree at Kansas State, his Doctor of Science at Johns Hopkins, his M.D. at Vanderbilt, and his Doctor of Public Health at Harvard. These are only his earned degrees; he also has the honorary degree of L.D.H. and L.L.D.

"First, his scientific accomplishments.

"We have read a good deal lately about unsatisfactory nutrition in certain parts of this country; careful reading discloses that much of the trouble relates more to parasitic infestation than to diet. It is in the area of parasitology that Dr. Brown has made his scientific contribution. He participated in the development of tetrachloroethylene for treatment of hookworm; the drug has been used in perhaps 100,000,000 infestations. He developed (with P. D. Lamson) the use of hexylresorcinol, the drug of choice in treatment of roundworm for 30 years. Not surprisingly, he participated in the development of piperazine which is the current drug of choice for the condition."

"His publications in tropical and preventive medicine total 120 and he is a contributor to five major textbooks.

"Next, Dr. Brown's record as a teacher. He taught at the University of North Carolina and at Duke University before coming to Columbia University in 1943. Anyone who has been within speaking distance of a student at the College of Physicians and Surgeons during the past quarter century knows that Dr. Brown has been regularly on the list of great teachers. Indeed he received 'outstanding teacher' awards both at Duke and at Columbia. He also served for 10 years as member of the Board of Medical Examiners of the University of the State of New York, the last part of that decade as chairman of the board.

"As an administrator, he served as dean of the school of Public Health at the University of North Carolina and as director of the School of

Public Health at Columbia University. He served as acting dean of the University of Puerto Rico after personally accomplishing the conversion of an institute of tropical medicine to a full-fledged medical school.

"As if a solid reputation of accomplishment as a scientist, teacher, and administrator were not enough for one man, Dr. Brown wants to be remembered for something else. Some years ago he started at the College of Physicians and Surgeons a program under which he made arrangements for a few medical students to spend a few vacation months in underdeveloped areas of the world—indeed, in South American jungles. This was long before the concept of the Peace Corps was born.

"His program has grown in scope and popularity over the years, and in the current academic year 30 fourth-year medical students are spending an elective two-month period as interns in hospitals in Africa, South America, Taiwan, and Thailand. A number of the students are accompanied by their wives. Forty students have already elected the program for the next academic year.

"There are already more than two hundred alumni of this program. These former students (many of whom have subsequently served in the

Dr. Harold W. Brown

Peace Corps) have contributed with others to a fund to build and endow, at a hospital in Liberia, a building able to accommodate 12 married couples each year for a two months' program. The building appropriately is named the Harold Brown Hall of Columbia University. At the small air-conditioned hospital there are four board-qualified American doctors. You can imagine what an unrivaled opportunity this affords the medical students for clinical and cultural experience.

"This is one man's 'One World.' Dr. Brown: The Academy is proud to award to you its medal, fully aware that in so doing it honors itself."

The new and enlarged Emergency Facilities of Vanderbilt Clinic will be located on this spot in the northeastern quadrant of the Medical Center.

## COURTESY-OF-THE-MONTH CITATION

On Monday, October 13, *The Stethoscope* witnessed an act of kindness and thoughtfulness on the part of an employee that deserves commendation.

One of your editors was going through the breakfast line in the cafeteria when he observed an elderly, partially blind gentleman, who was having difficulty managing his tray and appeared confused and nervous.

Mr. Walter Swaby, a dining room attendant, working at his post behind the counter, noticed his actions. He came out to greet him and carry his tray to the cashier, helped him sort out his money, carried the tray to a table for him and

then brought him a glass of water.

Walter Swaby

To *The Stethoscope* editor who observed this action, he was doing his job . . . above and beyond the call of duty.

*Stethoscope* salutes you, Walter, for your warm and courteous action.

## YOUNG GIRL'S MIDNIGHT SNACKS GAVE HER APPETITE FOR MEDICINE

Some people are born with a talent. Others acquire a special interest and turn it into a talent. Tod Dee Craig was born with a talent for drawing and she acquired a special interest in science. But she didn't stop there. She pooled her talent and her interest and came up with a distinctive career as a medical illustrator.

Miss Craig was born at Fort Sill, Oklahoma, and by the time she was about four years old, it became obvious that she had a talent for drawing. When she was not much older than this, she began sneaking downstairs at night, when she was supposed to be asleep, to pore through her father's textbooks and surgical journals. And as soon as she was old enough to read, she cultivated a keen interest in science and medicine. When she was ten years old, her father gave her a book, *Atlas of Surgical Techniques*. This served to intensify her desire to become a medical illustrator. All through school and in college she was encouraged to pursue this career.

After obtaining her B.A. from Smith College, she went on to graduate school at Columbia University's School of Painting and Sculpture, and the College of Physicians and Surgeons, where she studied anatomy and completed a two-year course in medical illustration in the Department of Pathology.

For six and one-half years she was Staff Artist, Department of Pathology, Francis Delafield Hospital.

She is now a free-lance medical artist at Columbia-Presbyterian Medical Center and has illustrated many books, exhibits, lectures and articles for scientific journals in collaboration with Medical Center physicians.

Available space permits only a tiny sampling of illustrations

from the considerable work done by this artist.

Miss Craig is the daughter of Frederick S. Craig, M.D., Associate Professor of Clinical Orthopaedic Surgery, P&S, and Assistant Attending Surgeon (Orthopaedic), PH.

Her sister, Dr. Hope Perry, who incidentally was an accomplice in those night-raids to their father's library, is a P&S graduate, class of 1954. She is married, has two children, and is on the staff at Cornell University, Ithaca, New York, as a pediatrician, specializing in adolescent pediatricians.

Tod Dee Craig

Said Miss Craig, a charming and vivacious young woman, "Being a medical artist is a wonderful career. I am always learning something new. It is a challenging field, especially in this era when new approaches to surgery are constantly being devised and must be illustrated. I feel I am really contributing something."

"Of course," she went on to say, "you must understand the anatomy of the human body before you can attempt

this method of illustrating. And, it is a marvelous career if you are married because you can always work at home." (In private life Miss Craig is Mrs. Peter Charles Macaulay).

Since 1964 Miss Craig has also been working as a volunteer at PH, for the New York Junior League, in the X-ray Department, where she spends one day each week.

In 1964 she was listed in "Who's Who in the East."

In addition to her busy career as a medical artist, she has studied classical ballet and modern dance. She has done figure skating and designed and made her own skating outfits. Her current "love" is French cooking "à la Julia Child."

Miss Craig's husband is a native Briton—born in Wiltshire, England—and works for BOAC, so that the couple have done much globe-trotting to such exotic places as the Fiji Islands, Australia, Malta, South America and to England and Scotland.

Cross section of heart showing diseased valve leaflets removed and artificial ball valve replacing them, in place. For Dr. James R. Malm, Attending Surgeon, PH, and Professor of Clinical Surgery, P&S (for lecture purposes).

## DRESS A DOLL FOR YULE

Christmas and the annual doll's tea party are once again approaching rapidly. Jane McConville, Assistant Director of Nursing, Babies Hospital, appeals for volunteers to "dress a doll."

Dolls may be picked up at the Babies Hospital Nursing Office, Room 221, Second Floor, Monday through Friday, 8:30 a.m. to 5:00 p.m. They should be returned to the same office no later than December 15.

The date of the Doll's Tea Party will be announced in the *Stethoscope's* Christmas issue in the "Calendar of Events."

## United Hospital Fund Drive Continues To Gain Momentum

Guided by the truism that no hospital is an island, the Presbyterian Hospital in the City of New York continued its campaign on behalf of the United Hospital Fund last month. The chairmen and captains of the campaign teams look forward to a productive continuation of the drive in November to reach this year's goal of \$5 million citywide—a "birthday present to the fund," in the words of one campaign worker. The United Hospital Fund celebrates its 90th birthday this fall. In these nine decades of helping the hospitals of New York improve their services, \$93 million has been raised. Contributions to the United Hospital Fund are sought among the professional staff and the Trustees. Members of auxiliaries and the Hospital's Trustees solicit funds from their friends and associates to meet the PH quota for 1969. Last year the goal for this hospital was set at \$246,300, of which \$118,600 was direct benefit. Direct benefit means that this amount is returned directly to the hospital before the general distribution is made.

The Fund's 59 voluntary

member hospitals have been "beset with many financial problems," in the last two years, said Douglas T. Yates, president of the Fund and its 1969 campaign general chairman. This is so because last year's cuts in Medicaid funds were followed by further cuts this year, resulting in the removal of "more thousands of patients" from the Medicaid rolls. These patients have received the best care, nonetheless, thanks to belt-tightening measures by the member hospitals.

The benefits of the Fund for PH are too numerous to mention here, but they are equitably assigned to the basic hospital triad of health and patient care, education, and research. Fund-supported activities in education, for example, include the recruiting and training of hospital volunteers through movies and booklets, training hospital and nursing home personnel in all areas of care and management, helping member hospitals to avail themselves of industrial engineering services, and establishing health careers training centers for member hospitals.

## FOOD ADDITIVES, ACTING, ADD SPICE TO COURSE ON EMERGENCY CARE

"Get away from me! Don't touch me! I want to die!" screamed a young girl, her wrists and arms bleeding from self-inflicted wounds. She cried and fought as two strong men, members of an emergency rescue squad, held her and applied bandages. A few feet away, an accident victim moaned as her rescuers bound her cuts, "My leg, my leg, can't you do something about my leg?" These realistic situations, achieved with food coloring and acting skill, were staged as part of a course on "Emergency Care and Transportation of the Sick and Injured" held at the Medical Center from October 9 to 11.

The 250 registrants for the course included nurses, emergency squad members, Civil Defense personnel, firemen, and policemen, representing 12 eastern states and Canada. During the three-day course they commuted from classes on theory in the Alumni Auditorium to demonstrations and practice sessions in the State Armory and the Bard Hall pool.

This is the fourth consecutive year that the course, spon-

sored by the American Academy of Orthopaedic Surgeons, has been held at the Medical Center. The faculty and advisors for the event included Drs. David L. Andrews, course

Dr. David Andrews

chairman; Frank Boschenstein, David Bradford, Leonard Brand, Raymond Cole, Harold Dick, Alexander Garcia, Burton Grebin, Olaf Haroldson, Frederick Hoffman, John Hutchinson, Hugo Keim, Conrad Lattes, William Lovejoy, George Merriam, Charles Ryder, Charles Steer, and Francis Symonds.

Transventricular dilatation of mitral valve. For Dr. James R. Malm, Surgical Repair of Mitral Valve Disease, Annals New York Academy of Science, 1965.

# On The Metabolic Ward At P.I.— Exploring Psychiatry's New Frontier

Mind over body? Body over mind? An answer to these questions would constitute a major milestone in psychiatry.

An eight-bed ward in the New York Psychiatric Institute at the Columbia-Presbyterian Medical Center seeks the answer to these questions every day. This ward serves a new discipline, biological psychiatry.

Biopsychiatry, as it might be abbreviated, investigates relationships between mental illness and irregularities of various metabolic body processes. Its most crucial task, of course, is to study whether these irregularities are mere physical manifestations of disturbed mental states or whether they actually cause such states.

This atomic absorption spectrophotometer is just a small part of the metabolic unit's rich technological panoply. Here Mrs. Suham Kassir, assistant research scientist, measures level of lithium ions in patient's urine sample.

Mrs. Susan Gluckman, head nurse of metabolic research unit, contemplates position of model in whole body counter, thought to be the only such device at the Medical Center. The counter is used to monitor potassium levels in patients.

A P&S team of researchers is concentrating its efforts in the study of manic-depressive disease on the metabolic ward because behavioral and metabolic correlations are more apt to be detected between opposite extremes of mood—abject depression and frantic elation—than in an apparently static psychosis, such as catatonia.

A more important reason for the selection of manic depressive psychosis, of course, was the need to study lithium, a drug with very specific action in combating mania. The effect of lithium on this phase can be closely traced on the ward.

The metabolic ward, which opened in the summer of 1965, is in effect a modern laboratory for monitoring the patients' body chemistry and for making detailed observations of their behavior. These separate sets of data, the scientists hope, will combine to produce a meaningful picture and help elucidate the mechanism of action of lithium and other mind

drugs during depression or mania.

The psychiatric metabolism ward, one of only two such units in the country, is headed by Dr. Ronald Fieve. After

finishing Harvard Medical School, Dr. Fieve took his residency in medicine at New York Hospital from 1956 to 1957 and his psychiatric residency at PH from 1957 to 1960. Encouraged by Dr. Lawrence C. Kolb, Chairman of Department of Psychiatry, P&S, Dr. Fieve organized the metabolic unit over the next five years. Dr. Kolb and Dr. Fieve were members of the first group of medical scientists in this country to study lithium in controlled trials. They began to treat manic patients with lithium salts in 1959.

The present metabolic unit's multidisciplinary research team includes two clinical psychiatrists, Dr. Fieve and Dr. Alexander Glassman; an electrolyte physiologist, Dr. Leslie Baer; a nuclear chemist, Kenneth Lieberman, Ph.D.; a psychologist-statistician, Frank Stallone, Ph.D.; and a large supporting staff. Their work is supported by grants from the National Institute of Mental Health, Psychopharmacology Branch.

Julia Wong, metabolic research dietitian, prepares patient's butter ration. A predetermined, scientific diet on the ward is a must for the unit's metabolic studies.

## Review of Disputed Drug . . .

*Continued from page one*

scientist predicts, "lithium will largely replace electroshock within the next decade, at many of the major medical centers as the preferred treatment for manic-depressive psychosis"—alone or in combination with antidepressants.

The question of whether lithium can keep people from having manic or depressive episodes and, particularly, whether it can forestall the depressive phase is generating much heat. Dr. Fieve sees lithium as effective against the manic phase but as only mildly effective in preventing recurrence of the depressive phase, which often requires supplementary doses of antidepressants.

His suggested use of lithium to screen out manic features from other psychiatric symptoms and to nullify them may very well reveal the true nature of a number of currently misdiagnosed disease entities. Dr. Fieve suspects that a number of cases classified as schizophrenia, reactive depression, senile depression, and some forms of neurosis—will be revealed as basically manic-depressive conditions, thanks to lithium.

How does this bright outlook square with the prospect of untoward reactions following the administration of lithium?

Superficially not very well, and Dr. Fieve draws upon the image of what he calls a "Lithium Paradox" to explain the apparent contradiction.

Lithium was outlawed in this country by the F.D.A. in 1949, following several fatalities and many poisonings with it by patients who used it as a salt substitute. Since that year, the use of lithium to control manias has made great headway abroad.

In America, however, lithium is still held by the F.D.A. to be an I.N.D. or an "investigational new drug." Several pharmaceutical firms and a number of psychiatrists are urging that lithium be approved for unrestricted commercial distribution as a maintenance drug for manic-depressive illness.

Pressure is building up on the F.D.A. to make lithium commercially available because of its efficacy in controlling mania.

"Unfortunately," Dr. Fieve points out, "the F.D.A. does not provide for a drug classification in its licensing setup that is midway between experimental and commercial-sale status. Such a category has long been needed, and never more so than for lithium today."

A real fear exists, says Dr. Fieve, that lithium "may be marketed as a new psychiatric panacea,—which it emphatically is not. Quite to the contrary, the drug is potentially

dangerous because of its high toxicity and its low margin of safety in excessive dosages. The drug must not be used with a low salt diet or with diuretics. Furthermore, its therapeutic role in depressions has not been adequately studied."

Here, then, is the nub of the paradox as seen by Dr. Fieve: lithium is much needed, and a lack of it may contribute to death by suicide on the part of certain manic-depressive patients. On the other hand, there is the danger of serious reactions, and possibly death, if it is administered indiscriminately.

A leading researcher of the drug, Dr. Fieve proposes to guide the lithium cargo ship along a middle course between the Scylla of uncontrolled distribution and the Charybdis of little or no distribution at all.

He counsels that lithium, in 1970 at least, should be restricted to those psychiatrists who are experienced in its use in a university or private outpatient hospital setting. In such a setting, the possibility exists for performing the required tests and for the vital monitoring of serum lithium levels.

## Scoliosis Patient Target of Course

"The Care and Management of the Scoliosis Patient" was the title of a course sponsored by the New York Orthopaedic Hospital and held in the Alumni Auditorium on October 2-4. The course was offered "in an attempt to spread information and the latest in techniques to orthopaedic surgeons all over the United States," according to Dr. Hugo A. Keim, Assistant Attending Orthopaedic Surgeon, PH, and Director of the Scoliosis Clinic at the Medical Center. Dr. Keim directed the three-day course, which was attended by over 100 orthopaedic surgeons. Among the subjects discussed were new techniques in nursing care, physiotherapy, brace construction and surgery.

The faculty for the event included leading authorities on scoliosis from various cities throughout the United States: Drs. Walter P. Blount, Marquette University; William F. Donaldson, University of Pittsburgh; David B. Levine, The Hospital for Special Surgery, New York City; Louis A. Goldstein, University of Rochester Medical School; G. Dean MacEwen, Director of the DuPont Institute of the Nemours Foundation; John H. Moe, University of Minnesota; Joseph C. Risser, University of California; and Robert B. Winter, Gilette State of Minnesota Crippled Children's Hospital.

# News of Nursing

Mary I. Crawford, Director of Nursing, P.H., and Associate Dean of Nursing, Department of Nursing, Faculty of Medicine, Columbia University, moderated a panel on Continuing Education-Inservice Education, at the New York State Nurses Association Convention held at the Statler Hilton Hotel in New York City on October 6.

Miss Crawford also participated in a panel discussion of the preparation and utilization of various types of nursing practitioners at the New Jersey State Nurses Association Convention held in Atlantic City, N. J. on October 17.

Rose Angelo, assistant head nurse, N.I., has returned to Columbia University, School of General Study, to obtain her baccalaureate degree. She has taken a leave of absence from her nursing post.

Betty Sanford, head nurse in the operating room for the past three years, has been appointed instructor in the School of Operating Room Technology. She will be helping Mrs. Gilda Gehm with the new class of ten students who started their program on September 29.

Glenna Gilbert, Leonie Symonds, Audrey Bartash, Ann Teter and Nancy Harris attended a symposium on "Nursing with the Patient" at the Loeb Center for Nursing and Rehabilitation, Montefiore Hospital and Medical Center, Bronx, N. Y., on October 2.

Mary E. Windrow, Dean Calvert, Mrs. Virginia B. Smith,

Mrs. Virginia B. Smith

James Kiernan and G. R. Masten attended a conference on "Current Concepts in Patient Unit Management" sponsored by the University Hospital, University of Michigan Medical Center, Ann Arbor, Michigan, October 9-10.

Edith J. Ankers, Director of

## NOTICE OF MEETING

The Presbyterian Hospital School of Nursing Alumnae Association, Inc., will hold a meeting on Thursday, November 20 in the Sturges Auditorium, Maxwell Hall, at 8:15 p.m.

The topic of the meeting will be *Nursing Practice in Cardiac Intensive Care*. Presentation and discussion by alumnae practicing in the metropolitan New York area.

School of Practical Nursing, attended the National Federation for Licensed Practical Nurses Convention in Chicago, Ill. from September 30 through October 3.

Mary J. Lomanto of the Medical-Surgical Department attended a seminar on Recovery Room Personnel in Orlando, Florida, from October 31-November 1. This seminar was sponsored by the Florida Society of Anaesthesiology.

Mrs. Barbara Ayers attended the Association of Operating Room Nurses Convention (AORN) October 30-31 at the Roosevelt Hotel in New York City.

## Promotion for Miss Trebilcock

Yvonne A. Trebilcock has been appointed Assistant Director of Nursing, Medical-Surgical Service, replacing Mary Windrow.

Miss Trebilcock attended Barnard College from 1942 to 1945. She received her B.S. in Nursing from the Department of Nursing, Faculty of Medicine, Columbia University, in 1948 and her Master's degree in nursing supervision from New York University in 1955.

She was supervisor-instructor on the Urology service from 1952 to 1964 and senior supervisor of the Medical-Surgical Nursing Service from 1964 to 1969.

Miss Trebilcock brings to her new post equal parts of know-how, administrative ability and dedication. She will be "running the store," so to speak, and in this important position hopes to implement many new and broadened programs, including further improvement in patient care and expanded utilization and education of personnel. She hopes also to be able to develop new

and improved methods of providing nursing education.

Yvonne A. Trebilcock

She is enthusiastic and excited about her new job and the challenge offered by the day-to-day operation of her unit.

Miss Trebilcock will be working in close collaboration with Constance Cleary, Coordinator of Patient Care, Medical-Surgical Service.

## MORE WORK FOR MISS CLEARY

Constance Cleary, Associate Professor of Medical-Surgical Nursing in the Department of Nursing, Faculty of Medicine, Columbia University, has accepted a position as Coordinator of patient care in the medical-surgical services. The position is a dual one and Miss Cleary will retain her teaching responsibilities in medical-surgical nursing. She will be working in collaboration with Yvonne A. Trebilcock, Assistant Director of Nursing, Medical-Surgical Service.

Miss Cleary has been associated with the Medical Center almost continuously since 1958. She is a graduate of Bellevue Hospital School of Nursing. She received her bachelor's degree from New York University and her master's degree from Teachers College, Columbia University. She is a candidate for the Ed.D. degree in Nursing at Teachers College.

Following initial experience in the City Hospital system she joined the staff of the Visiting Nurse Service of New York and attained the position of supervisor.

After receiving her Master's degree Miss Cleary joined the nursing faculty here at Pres-

byterian in 1958. She was instrumental in establishing the course and concurrent field work in public health nursing and in its official accreditation.

Constance Cleary

In 1966 she accepted the position as head of the Medical-Surgical Nursing Faculty. During her tenure she was successful in implementing a new curriculum, updating the practice role of the faculty, establishing "team nursing" and setting up seminars for faculty and supervisors in job definition and responsibilities in teaching.

Miss Cleary brings to this position her expertise with nursing problems as they relate to the Department of Nursing and her unique understanding of these problems as they affect the Medical Center.

## Mail Room 27th in U. S. by Volume

With a population of over 6,000, including patients and employees, Columbia-Presbyterian Medical Center can be compared to a small city. To the staff of the Mail Room, that comparison is an understatement. "According to U.S. Post Office statistics, only 26 cities in the United States handle more mail than we do," announces Joseph Rivera, Assistant Supervisor of the Mail Room. "That's 46,000 pieces of mail a week, or 2,400,000 a year."

Keeping up with the constant flow of mail is a full time job for the 13 members of the Mail Room staff under the supervision of Thomas Freeman. Each out-going piece of mail must be sorted into its proper category (pre-stamped, internal, local, foreign, to mention only a few); mail containing Hospital business is fed through a special stamping machine that accounts for \$140,000 worth of postage every year. Mail carriers are responsible for all the mail coming in to their particular route, and a good part of their time is spent organizing it according to departments and individuals before each delivery. Mail is distributed to the Hospital twice a day.

Some pieces of mail require special treatment. Letters addressed simply to "The Presbyterian Hospital" must be opened and read by the supervisor or the assistant supervisor in order to determine to which department they should be directed. Bulk mailing jobs like *The Stethoscope* must be stamped, sealed, and bundled before leaving the Hospital. In addition to its regular

tasks, the Mail Room stocks telephone books for departmental use, distributes special bulletins, and handles a large number of phone calls from the Hospital staff. Typical queries are "When will my mail be delivered?" and "How much is an Air Mail stamp to California?" Typical answers are "The mail delivery is begun approximately one hour after it is received from the Post Office. The Hospital distribution is delayed only when the Post Office is delayed" and "Air Mail postage to California or any of the other 49 states, Puerto Rico, Canada, and Mexico is 10¢ per ounce."

Mr. Freeman suggests the following pointers for good mail service:

- 1) Request persons or companies who regularly write to you at the Hospital to include your name or department and location in the mailing address.

- 2) Do not send Christmas cards, post cards or other mail of a personal nature to your friends at the Hospital or through the Hospital's internal mail. Stamped out-going personal mail should be dropped in street mail boxes and not left in Hospital pick-up boxes.

- 3) Out-going Hospital business mail should include the department name in the return address. Large mailings should be sorted face up with overlapping flaps and foreign or Air Mail items segregated.

- 4) The Mail Room is open from 6:00 a.m. to 6:00 p.m. Monday through Friday and from 7:30 a.m. to 11:00 a.m. on Saturday. Closed Sunday.

## In Memoriam

It was with a deep sense of personal loss that the staff and personnel at the Medical Center learned of the death of Marjorie Peto, age 65, on September 30 in Harkness Pavilion.

Miss Peto retired in July from her position as assistant professor of nursing, faculty of medicine at Columbia University, and assistant director of nursing at Babies Hospital (see article in July 1969 *Stethoscope*).

Miss Peto is survived by her mother, Mrs. Florence Peto of Tenafly, N. J., and a brother, John H. Peto of Nutley, N. J.

Services were conducted at the Barrett Funeral Home on October 3 and burial was in Cedar Hill Cemetery, Port Jefferson, New York.

A memorial service for Miss Peto was held in the Pauline A. Hartford Memorial Chapel on October 29. Dr. David V. Habib delivered the memorial tribute.

## P.H. Fashion Show Big Success

The posh St. Regis Roof and Penthouse was the setting for a viewing of the latest creations by noted fashion designer Donald Brooks on October 22, at a gala luncheon sponsored by the Presbyterian

Mrs. Jean Eddy, fashion director for Saks Fifth Avenue, was the narrator. The fashions shown ran the gamut from daytime apparel to formal evening wear and the styling was not only incredibly beau-

Mrs. W. Duane Todd presents an award of appreciation to fashion designer Donald Brooks.

Hospital Women's Auxiliary of the Columbia-Presbyterian Medical Center to benefit the Stuyvesant Square Thrift Shop at 81st Street and Lexington Avenue.

The New York Mets are, without a doubt, #1 in baseball, but Mr. Brooks, equally without a doubt, is #1 in the world of creative fashion. Several of his designs sported his "#1" buttons, and "#1" buckles adorned a pair of shoes designed by Mr. Brooks and made by Pallizzio.

Wow.

tiful but completely wearable. One of the principles of the "Brooks look" is that clothes are far less important than the woman wearing them. These magnificent styles were simple and uncluttered, and the colors were pure.

Mrs. Richard Simmons was the Chairman of the Luncheon Committee, and Mrs. Hamilton Southworth was the Ticket Chairman and in charge of seating arrangements. Five guests were the lucky door-prize winners. One fabulous prize was a Donald Brooks original with a \$185 retail value at Saks Fifth Avenue.

Mrs. W. Duane Todd, Chairman of the Presbyterian Hospital Women's Auxiliary, presented Mr. Brooks with an award in appreciation of his time and talent donated to the Hospital.

To attend this luncheon and fashion show, guests were required to donate \$25 worth of thrift for the Thrift Shop which, of course, benefits the Presbyterian Hospital. Further donations of thrift are welcome and a pick-up service is available by telephoning SW 5-3638, if you are unable to bring or send the thrift to the shop yourself.

## Dental Symposium

Dental caries—that grimlin of confectionery nations—was the target of a symposium sponsored by the Columbia University School of Dental and Oral Surgery. The September 11 conference, attracted speakers from Boston, Buffalo and Bethesda, in addition to participants from Columbia University.

The symposium was one of a series of academic events sponsored by the Dental School to continue the in-service education of its staff and to expose its students to the most recent advances in dental research.

## PRECOG?

Dr. Max Delbrück of California Institute of Technology and Dr. Salvador Luria of MIT, cointerwinners of the 1969 Louisa Gross Horwitz Prize, awarded annually by Columbia University (see October Stethoscope), subsequently won the 1969 Nobel Prize in medicine. This development marked the second straight year in the history of the Horwitz award that its recipients were then chosen for the Nobel. Last year's Horwitz Prize winners, Drs. Har Gobind Khorana and Marshall Nirenberg, were later honored in Stockholm.

A spokesman for the Horwitz award committee declined to speculate about any possible precognitive talents of its members. He also refused to involve the committee in predictions about the 1970 season of the New York Mets, a National League baseball team.

## INTERNATIONAL CONGRESSES OF NEUROLOGY, NEUROSURGERY HEADED BY OUR PHYSICIANS

Dr. Melvin D. Yahr

Dr. J. Lawrence Pool

Dr. H. Houston Merritt

The Ninth International Congress of Neurology and the Fourth International Congress of Neurosurgery combined in 1969 to form the World Congress of Neurological Sciences. The joint meeting was held in the New York Hilton Hotel, New York City, September 20-27. Columbia-Presbyterian physicians played major roles in organizing and conducting this important international meeting, and many of the visiting physicians were guests at the Medical Center while in New York.

Dr. H. HOUSTON MERRITT, Dean of the College of Physicians and Surgeons and Vice President for Medical Affairs, Columbia University, and Dr. MELVIN D. YAHR, Associate Dean of the College of Physicians and Surgeons and Professor of Neurology, served as President and Secretary-General, respectively, of the 9th International Congress of Neurology; Dr. J. LAWRENCE POOL, Professor and Chairman, Department of Neurosurgery, College of Physicians and Surgeons, was Secretary of the 4th International Congress of Neurosurgery.

Many Medical Center physicians were active in making this joint meeting a success and the following presented

papers:

Dr. EDGAR M. HOUSEPIAN and Dr. CHU H. CHANG: *Operative Staging as an Index to Survival in Cerebellar Medulloblastoma.*

Dr. EDWARD B. SCHLESINGER: *The Role of the Anger Camera and Computers in the Radioisotopic Diagnosis of Brain Tumors.*

Dr. JAMES W. CORRELL, Dr. FRANK K. BOSCHENSTEIN and Dr. E. H. WOOD: *Recurrent Cerebral Ischemia Following Successful Surgery on the Extracranial Arteries.*

Dr. BENNETT M. STEIN, Dr. RICHARD A. R. FRASER, Dr. ROBERT E. BARRETT and Dr. J. LAWRENCE POOL: *Experimental Vasospasm: Induction, Pharmacology and Cate-*

*cholamine Morphology in the Laboratory Animal.*

Dr. ROGER DUVOISIN, Dr. MELVIN D. YAHR, Dr. MYRNA SHEAR, Dr. MARGARET HOEHN and Dr. ROBERT E. BARRETT: *The Present Status of L-Dopa in the Treatment of Parkinsonism.* (See separate article in this issue of Stethoscope.)

Dr. JAMES R. MILLER: *The Neurological Sequela of Systemic Circulatory Arrest.*

Dr. BERNARD M. PATTEN: *Hemorrhage-Induced Neuro-pathy.*

Dr. FLOREY PROCTER-BOWEN: *Perpetual-Motor Alterations in Parkinsonian Patients.*

Dr. YAHR and Dr. DUVOISIN: *The Treatment of Parkinsonism with L-Dopa.*

## Postgraduate Course on Uropathology

The College of Physicians and Surgeons announces the tenth Postgraduate Course on Uropathology, to be given under the direction of Drs. Meyer M. Melicow and Myron Tanenbaum. Sessions will be held Mondays and Thursdays from 3:00 to 7:00 P.M. over a period of 5 weeks, from January 5 to February 5, 1969.

The course will include gross, light and electron microscopic pathology of the uri-

nary tract, including the adrenal gland and the retroperitoneum in adults and children. The fee for the course is \$150.00, and persons wishing to enroll should write to Melvin Yahr, M.D., Assoc. Dean, P&S, 620 West 168th St., New York, N. Y. 10032, for applications. The course is open to all urologists, pathologists and students interested in the subjects mentioned above.

## RECENT RETIREMENTS

### Mrs. Rose Lenart

Mrs. Rose Lenart, Tracer, Record Room, retired in May, after nine years of employment at PH.

She spoke very warmly about her years at the Hospital and said, "I think working in a hospital brings out the best in people."

Rose was born in England and lives now in New York City. She has one daughter and three grandchildren.

### Clarence Woodring

Clarence Woodring, Electrician, Maintenance and Construction, completed 18 years of employment here when he retired in August.

He was born in Albany, Indiana, and now lives in Lodi, New Jersey, with his wife and foster-daughter.

When asked what he planned to do with his time, he responded, with a chuckle, "I'm going to do a little home

research on how tax money is used to combat water and air pollution."

### Laura Marie Orth

Laura Marie Orth, Secretary to Miss Callahan, Unit Manager, Babies Hospital, chose early retirement in July after a 20-year association with the Medical Center.

Miss Orth will be moving shortly to North Cape May where she will be making her home with her father.

### Mrs. Louise Herron

Mrs. Louise Herron, Compensation Clerk, Accounting Department, retired in August after a six-year stay.

Mrs. Herron had been a secretary for the National Geographic Society for 16 years, and secretary to several attorneys before coming to work at PH. She described her job in the Accounting Department as "different" and "hectic."

She was born in New York

Mrs. Louise Herron

City and has lived here all her life. She has one daughter.

Her hobbies are painting (water-color) and sewing. Some of her artistic talent must have rubbed off on her daughter, who is a textile designer. Louise's retirement plans include traveling—to Nantucket, R. I., California and Ireland, and working part-time for an attorney.

On August 27 a tea was given to honor Mrs. Herron and many friends and co-workers came to wish her a fond farewell.

## DOINGS OF DOCTORS

### • ENGAGEMENTS

*Norma Windle*, Staff Nurse in Orthopedics, PH, is engaged to *James Nicholls*. They plan to be married in June.

*Mary Morris*, Staff Nurse on PH 12, is engaged to *Richard Camisa*.

*Harriet Vardakis* of Out-Patient Department, Accounting, is engaged to *Chris Parras*. A January wedding is planned.

*Kathleen Mullin*, a nurse on the 4th Floor of Neurological Institute, is engaged to *Gus Hartig*. The couple plan to be married on April 25.

### • MARRIAGES

*Susan Cheski* and *James Hawthorne* were married on September 20. Mr. Hawthorne is a Programmer in the Medical Data Processing Department.

*Susan Ford* of Out-Patient Department, Accounting, was married to *John O'Shea* on October 4.

*Ellen Treanor* and *William Pelcer* were married on September 20. Mr. Pelcer is a member of the Engineering Department. The couple spent a three-week honeymoon in Europe.

*Helen Bazley* and *William Smith* were married in the Pauline A. Hartford Memorial Chapel on October 18. Mr. Smith is a member of the Class of '71, College of Physicians and Surgeons.

*Beryl Murrell* and *Dr. Peter LaMotte* were married on October 18. Dr. LaMotte is Assistant Clinical Professor of Surgery, P&S, at the Roosevelt Hospital affiliation, and team physician for the New York Mets.

*Naomi Wollins* and *Dr. Mark Goldberg* were married on October 19. Mrs. Goldberg is a former member of the Public Interest Department; Dr. Goldberg is Assistant Professor of Neurology, P&S, and Assistant Attending Neurologist, Neurological Institute.

*Marilyn Larson*, former Supervisor of Babies Hospital Operating Rooms, was married to *William Vestigo* on October 4.

### • BIRTHS

Mr. and Mrs. *Hector Medina* welcomed a daughter, *Dagmar Eileen*, on October 17. Mr. Medina is a member of the Maintenance and Construction Department; Mrs. Medina was formerly employed in the Eye Institute Optical Shop.

Mr. and Mrs. *Harold Stone* welcomed a son, *Michael Kendall*, on August 25. Mrs. Stone is the former *Pam Widinick*, School of Nursing '68.

### • CONGRATULATIONS

To *William Bramble*, who has been promoted from Porter in the Dana Atchley Pavilion to Head Porter in the Edward S. Harkness Research Building.

To *John Cobb*, who has been promoted from the Housekeeping Department to the Protective Service.

To *Raul Rodriguez*, Special Officer in the Protective Service, who has been promoted to Sergeant.

### • WELCOME

To Mrs. *Kate Miller*, secretary in the Department of Nursing, Faculty of Medicine, Columbia University.

To *George Taub* and *John San Pietro*, new Programmers in the Medical Data Processing Department.

### • FAREWELL

To *Abe Yellen*, Programming Supervisor in the Medical Data Processing Department, who has resigned after 3½ years to accept a position as Systems Analyst with Memorial Sloan Hospital.

### • NOTES OF INTEREST

*Glenna McKay*, Head Nurse on the 12th Floor of Neurological Institute, recently enjoyed a 3-week European holiday.

*Helen Blasdell* of the Volunteer Department is leaving on November 7 for a 19-day cruise to South America.

DR. VINCENT J. FRED, Assistant Professor of Obstetrics and Gynecology, P&S, Assistant Attending Obstetrician and Gynecologist, PH, spoke on "Prevention of Rh Sensitization" at a meeting of the American College of Surgeons in San Francisco, California, on October 7.

DR. FRED, DR. JOHN G. GORMAN, Director of the Blood Bank, and DR. WILLIAM POLLACK, Assistant Professor of Pathology, P&S, will be the recipients of the 1969 Karl Lansteiner Award in November. This award will be presented to them by the American Association of Blood Banks at the Association's annual meeting in Houston, Texas, for their Rh vaccine, *RhoGAM*.

DR. GUY D. POTTER, Associate Attending Radiologist, PH, and Associate Professor of Radiology, P&S, will speak on "Pathological Conditions Involving the Pterygopalatine Fossa and Canal" on December 4, at the 55th Annual Meeting of the Radiological Society of North America in Chicago, Illinois.

DR. LANDRUM B. SHETTLES, Assistant Attending Obstetrician and Gynecologist, PH, and Assistant Professor of Clinical Obstetrics and Gynecology, P&S, has been invited by The National Aeronautics and Space Administration to attend the launching on November 14, of the U. S. second manned lunar landing mission, Kennedy Space Center, Florida.

DR. EDWARD V. ZEGARELLI, Professor of Dentistry, P&S, and Attending Dental Surgeon, PH, has recently conducted a course consisting of 14 hours of lectures on the subject of "Diagnosis of Tumors of the Mouth and Jaw" before members of the Eleventh District Dental Society in Queens County. The course was sponsored by the American Cancer Society and Catholic Medical Center in addition to the district dental society.

DR. WILLIAM B. SEAMAN, Professor and Chairman, Department of Radiology, attended the meeting of the American Roentgen Ray Society in Washington, D. C. recently, and presented a paper entitled "Prolapsed Gastric Mucosa through a Gastro-jejunostomy." Dr. Seaman was also elected Chairman of the Executive Council of the American Roentgen Ray Society.

DR. RALPH SCHLAEGER, Associate Attending Radiologist, PH, and Associate Professor of Radiology, P&S, attended the Second International Symposium on Gastrointestinal Motility in Rome, Italy, September 10-14. He presented a paper on "Radiology of the Hypergas-

trinema Syndromes" at the Second Medical Clinic, University of Rome, on September 16. Dr. Schlaeger also visited the Evangelismos Hospital, Athens, Greece, delivering a paper on the same topic on September 20.

DR. FRANCIS A. L'ESPERANCE, JR., Assistant Ophthalmologist, PH, and Associate in Ophthalmology, P&S, attended the 17th annual symposium of Clinical Society-New York Diabetes Association, Barbizon-Plaza Hotel, New York City, on October 11. He presented a paper on "Photocoagulation in Diabetic Retinopathy."

DR. J. LAWRENCE POOL, Professor of Neurological Surgery, presented "Microsurgery of Intracranial Aneurysms and Acoustic Neuromas" in Montreal, Canada, September 29-30 at the Micro-neurosurgical Course given jointly by the Universities of Montreal and Vermont; he presented "Surgery of Spinal Cord Tumors" before the Congress of Neurological Surgeons, Boston, Massachusetts, September 17; he was moderator of a panel on brain tumors for the World Federation of Neurological Surgeons, New York, September 21, on closed-circuit television. Dr. Pool was also re-elected Treasurer of the World Federation of Neurological Surgeons for another four year term.

DR. FRANK E. STINCHFIELD, Professor of Orthopaedic Surgery, P&S, and Director, Department of Orthopaedic Surgery, recently returned from a meeting of the American College of Surgeons, held in San Francisco, California. He attended in his capacity as a member of the Board of Regents and during the meeting moderated a panel on "The Lower Extremity Amputee in the Ischemic Leg." While in San Francisco, Dr. Stinchfield also flew to Mexico City to address the International Society of Orthopaedics and Traumatology on "Indications for Spine Fusion—With and Without Disc Removal."

DR. GEORGE H. HUMPHREYS, II, Emeritus Valentine Mott Professor of Surgery, attended the meeting of the Pan Pacific Surgical Society in Honolulu, October 14-18, taking part in a panel on *Thoracic Trauma*. Beginning October 20 Dr. Humphreys will begin serving as Visiting Professor at the National Taiwan University Medical School in Taipei, under the auspices of the China Medical Board. The assignment is for one year and will include visiting medical schools in Thailand and the Philippines in 1970.

## Pediatric Urology Draws 400 Experts

A Pediatric Urology Symposium, part of a Commonwealth Fund Pilot Project to Advance Urological Education, was held September 20, 1969 in the P&S Alumni Auditorium. The project director was Dr. Stanford Pulrang, and the Moderator was Dr. John K. Latimer, Director of Urology. More than 400 urologists, pediatricians, pathologists and

other specialists from many hospitals and medical schools attended. Among them were a number of Directors of Urology, including Dr. H. Brendler, Mt. Sinai; Dr. Victor Marshall, New York Hospital; and Dr. George Nagamatsu, New York Medical College.

More than two dozen topics were presented by various members of the Departments

of Urology, Radiology and Pediatrics. Dr. Robert Fisher, Given Pediatric Fellow, was Chairman of the Symposium Scientific Committee. Many subjects were discussed such as the Cryptorchid Testis (Moshe Markewitz), Radiography in Children (Walter Berdon), Ureteral Implantation (John Grant, Aurelio Usón). Dr. John K. Latimer talked on the History of Pediatric Urology, Orchiopexy Techniques, Ureteral Reimplantation and Exstrophy of

Bladder. Dr. Robert Fisher presented an inexpensive, rapid and practical procedure for office bacteriology. Dr. Aurelio C. Usón discussed the Ileal Conduit, and Dr. Grant took on Urological Problems of the Imperforate Anus. Drs. James Wolff and Myron Tannenbaum discussed Wilms' Tumor and Neuroblastoma. Mrs. Katherine Jeter presented the "Management of the Urinary Stoma." Others who participated were: Drs. David Baker, Ralph B. Dell, Louis Dough-

erty, Richard Ehrlich, Warren Garitano, Meyer M. Melicow, and Gilbert Simon.

*This Is What The Presbyterian Hospital Is All About*

## These Former Patients Send Christmas Greetings To All Who Helped Make Their "Miracles" Possible

The most rewarding extra dividend for those who choose to work in hospitals and those who support their work with their philanthropy is firsthand knowledge of benefits that have resulted from their contributions. Almost 40,000 patients pass through this hospital each year, thousands of them to undergo surgery. That nothing further is heard from a majority of such patients is proof of the success of treatment. Among the most dramatic triumphs of modern surgery are the complex operations that correct crippling defects that may be inborn or are a result of injury or disease. Such operations are being performed on most parts of the body, including the heart. The pioneer research that led to successful open-heart surgery was carried out by two Medical Center physicians, for which they received the Nobel Prize in Medicine.

This Christmas, the editors of STETHOSCOPE thought it would be interesting and appropriate to the Season to check up on several of the early patients who received open-heart surgery at The Presbyterian Hospital. We believe their present activities are an affirmation of the value of our work and the humanity of those who support it with their gifts.

### Merry Christmas

This Yuletide as before, illness won't adjourn for the holiday and hospitals will remain open around the clock. But nurses, doctors, aides, attendants and others laboring here will again try to share with patients the serenity and the good-will of this holiday season.

On sunny days this past Indian Summer, Paul Cafone played football at the Hackensack, New Jersey, High School. Gifted with speed and deceptive moves, he made himself useful as a pass receiver.

As Paul snared a pass and raced for a long gainer, Janice Wilmar, 20 miles away in Montville, brushed back her long blonde hair and darted to her right to intercept a soccer pass.

In the meantime, Jane Curtin was conducting an interview for the *Otch Gazette*, 15 miles farther west.

Playing table tennis in a basement game room on Long Island, Danny Spandau slammed into the wall to return a vicious drive with a chop.

In a laboratory in Rochester, New York, that same day, Elliot Hertzberg was single-mindedly recording data from a biochemical experiment.

These real-life glimpses of young, active Americans at work and at play would have remained the wistful daydreams of their parents but for the memorable achievements of Dr. Dickinson W. Richards and Dr. Andre Courmand of the Columbia-Presbyterian Medical Center in charting the heart's interior and in measuring the effects of its ac-

tion. By developing a simple method of cardiac catheterization, the two medical scientists not only advanced basic cardiac research, but also paved the way to effective diagnosis of congenital and acquired heart abnormalities.

This pioneering work, for which the two doctors shared the Nobel Prize, laid the groundwork for the development of Presbyterian Hospital's open-heart surgery program. The first open-heart operation was carried out at the Presbyterian Hospital on September 25, 1956, after many months of rehearsals in teamwork by surgeons, cardiologists, anesthesiologists and Blood Bank personnel.

In the subsequent years, the Presbyterian Hospital's surgeons made substantial contributions to the development of superior operative and technical procedures that are now restoring functions in many previously inoperable heart conditions.

One result of these improvements has been the steadily growing rate of open-heart operations at the Presbyterian Hospital. Since the appointment in 1960 of Dr. James R. Malm as Director of the open-heart program, the number of such operations has more than quadrupled, from 54 in

1960 to 250 in 1969. The Presbyterian Hospital's cardiac surgery team has carried out more than 1,500 open heart operations in this decade, achieving some of the best post-operative results in the nation.

Fifteen years ago, Paul, Janice and thousands like them would have faced a life of invalidism, if not early death, without the operation they had at The Presbyterian Hospital.

Dr. James R. Malm with Paul Cafone at the time of Paul's operation.

Before birth they were all victims of nature's ruthless whimsy, born with structural defects of the heart that made for disorganized and therefore inefficient circulation of blood.

## George S. Dillon Joins P.H. Board of Trustees

George S. Dillon, President and Chief Executive Officer of Airco Reduction Company (Airco), has been elected to the Board of Trustees of Presbyterian Hospital, according to an announcement by Augustus C. Long, President of the Board.

The new Board member ascended to the presidency of the manufacturing company in 1964, after brief terms as Vice President in 1962 and Executive Vice President from 1963 to 1964. A complex network of 120 plants and annual sales of over \$500 million, Air Reduction Company produces indus-

George S. Dillon

trial and medical gases, cryogenic fluids, hospital equipment, ferroalloys and metals,

chemicals, molded plastics, electronics components, high vacuum electron beam systems, and a variety of other products.

For 16 years prior to joining Airco, Mr. Dillon was with the law firm of Shearman & Sterling, last six as a partner.

Mr. Dillon, who is 52 years old, was graduated in 1939 with a Bachelor of Science degree from Syracuse University. He holds an LL.B. from Cornell University and is a member of the New York City Bar Association. He became a member of the Presbyterian Hospital Corporation in 1966.

# THIS IS WHAT THE PRESBYTERIA

## Former Patients Send Christmas Greetings . . .

*Continued from page one*

Its consequences could range from clubbing of fingers and toes to heart enlargement, growth retardation, and, later, more serious complications.

The operations these young people underwent here gave them the assurance of practically normal lives and the potential of contributing to society.

Although still a student, Elliot Hertzberg has already started making his contribution. A senior majoring in biology, Elliot works as teaching assistant in an introductory course on biology at the University of Rochester. He hopes to continue his education in graduate school next fall and to teach on a college level after getting his Ph.D. Fascinated by what he calls "the great chemical complexity of living systems," Elliot spends much of his time in the lab—most of the afternoons and a short time each morning except Tuesday, before the start of classes.

Elliot Hertzberg in laboratory.

As business manager of "U R Journal," he spends Tuesday mornings at the printer's, putting together the campus newspaper's business sections. Despite this journalistic chore, his teaching assistantship and the demanding academic schedule, Elliot manages to find time for going out on dates and for jogging occasionally. He dropped handball in favor of expanded lab time.

Elliot was involved before the word became fashionable. At Brooklyn's Peter Stuyvesant High School, from where he was graduated in 1966, he was president of his class and secretary of the General Organization, the overall governing body of students. In the summer of 1965, Elliot served in the Presbyterian Hospital operating rooms as part of the

Mrs. Emilie Hopkins and family, enjoying a warm fall day in nearby park.

American Heart Association's summer science program. Since coming to the University, Elliot has coordinated the Kennedy and O'Dwyer political campaigns and has tutored inner-city high school students of Rochester for the College Admissions Preparatory program (C.A.P.).

Of his open-heart operation nine years ago, Elliot, now 21, remembers "the recovery room with the ice cream and potato chips that they always said they were not supposed to give us but gave anyway."

Elliot Hertzberg has chosen to make his contribution to society in the biological sciences, but there is more than one way of being a useful citizen. Emilie Jones Hopkins of New York City chose the natural way by becoming a mother. Emilie was born 31 years ago with a severe type of cyanotic heart defect. She underwent partial corrections of her condition at the ages of nine and eleven, but she had to wait for total correction until the development of a suitable technique. In 1962, a wall separating the venous blood chamber from the arterial blood chamber was constructed in her heart at the Presbyterian Hospital. "I really had no choice," she recalls. "It was either to work, get married and have kids or live like a vegetable." She became Mrs. Hopkins a year after the operation and mother one year after that. Her first born, a girl, is now five years old and attends kindergarten. The Hopkinses also have a four-year-old son. Mrs. Hopkins' decision to have open-heart surgery at the age of 23 gave her father hope of becoming a grandfather. His hope was fulfilled following his daughter's total correction of the heart defect. Many evenings in the life of the Hopkins family are pre-empted with frequent visits by grandfather or trips to visit

him at his apartment in another part of New York. Mrs. Hopkins furthermore participates in P.T.A. activities and goes to movies and plays. The

John Curtin, Jr., and daughter, Jane, get ample exercise jogging up steep incline from Lake Hopatcong to their house and up another incline from the house to road level.

couple regularly attends dances, whose pace and duration demand top physical condition from their devotees. Although returning late from the ball room, Mrs. Hopkins can be seen the next day getting her children involved in the organized social activities of a nearby park, or doing the family groceries.

The hectic pace of "open-heart patients" residing in the city contrasts sharply with the lives of former patients living away from it. Mr. John Curtin, Jr., and his daughter, Jane, who both had open-heart surgery for congenital defects at The Presbyterian Hospital eight years ago, live, along with Mrs. Curtin, near River Styx, on the shores of Lake Hopatcong in northern New Jersey. The precarious access to their house—down a very

steep slope—discourages late homecomings, and the social activities of the nearby parkland are bound to be conducted by deer, raccoons, opossums and muskrat. The winter nights can be long in the Styx Cove of Lake Hopatcong.

The relative isolation had perhaps something to do with Jane's desire to write. "I've always had this itchy feeling in my fingers," she says of her writing urge. She prefers to do light satire, such as humorous take-offs or skits.

A 1968 graduate of the regional Sparta High School, Jane is now associated with the Occupational Training Center for the Handicapped, of Morris County. In addition to her regular assignments there, she serves as Assistant Editor of the center's quarterly publication, *OTCH Gazette*, to which she contributes a society column called *Otch Potch*.

Jane has been singled out for her compassion and patience, virtues considered most

her duties at the Training Center so much that she, in her father's words, literally gambols up the long steep slope each morning on the way to the Center. She recalls with pleasure summer stints in 1966 and 1967 as counselor at the Happy Day Camp for Retarded Children at Madison, New Jersey.

Both father and daughter were operated on here in 1961 for openings in the heart partition that separates the two upper chambers. Mr. Curtin's defect was so small that it had not given the then 54-year-old plant superintendent much trouble. Mr. Curtin's complaints, which gradually increased over a period of four years, were caused, it turned out, by a tumor that occupied much of the upper left chamber of the heart. Today Mr. Curtin—minus the tumor and with the heart wall patched—still works as a plant superintendent and enjoys his hobbies of boating, fishing and photography. A similar patching procedure, carried out on Jane, has resulted in the addition of a willing and eager worker to the understaffed retarded-care field.

Jane's brother, John, also had a heart defect repaired at the Presbyterian Hospital as a boy. As a U. S. Army sergeant doing his tour of duty in Vietnam, he died near Tay-Ninh.

It is not uncharacteristic that youths who underwent total correction of cardiac defects earlier in this decade are for the most part active types. They are not restricted in any way because of the operation.

Take Daniel Spandau of Plainview, Long Island, for instance. As a Boy Scout a couple of years ago, Danny logged 80 miles of hiking with a heavy back pack, in quest of a merit badge. He likes soccer most of all, "because it has the most action." A freshman in John F. Kennedy High School in Plainview, Danny missed the reporting time for

# HOSPITAL IS REALLY ALL ABOUT

the school's varsity soccer team but hopes to come out for the sport next year. Last year in junior high school, Danny played the halfback position in gym. The 15-year-old also enjoys skiing. He scorns baseball as "too dead." He played in Little League four years ago but gave up his participation because there was "too much standing around."

Danny's hobbies are stamp and coin collecting, wood cutting, radio electronics and mechanics. He hopes later to specialize in mechanical engineering.

He frequently plays table tennis—which is not a static game—in the basement of his parents' suburban home. The finished basement is partly Danny's handiwork—he laid the floor tile and the mosaic tile on the walls.

Danny says he was not at all afraid for himself when the time came almost nine years ago to do the final correction of his tetralogy of Fallot, a combination of two cardiac defects with two resultant malformations. Danny was cheered on the day before his operation by the arrival of a letter with good luck wishes

called, "she couldn't run more than 20 feet without turning blue. She did not participate in all the things normal children participate in, but she found her interest in books. As a result she has become an excellent student. She applies herself and she shows a great deal of interest in her studies." Janice has not sloughed off her habit of persistent scholarship although now she devotes time to sports. Her grades are better than those of typical American students, with 10 A's and 4 B's...

Still another member of Presbyterian's "open-heart all Stars," revisited by *The Stethoscope* five or more years after surgery, is young Timothy Sullivan of Carmel, New York. When Tim was five years of age, he was written up in *The Stethoscope* (March 1965) because a relatively new technique was used earlier that year to fully correct the transposition of his great vessels. The meaning of this grave congenital abnormality is that blood with waste materials is again distributed through the body without going to the lungs for cleansing and oxygen pickup.

Timothy Sullivan in 1965.

Hackensack High School. Paul was also the subject of a *Stethoscope* feature when he underwent a total repair of his tetralogy here nine years ago.

Paul appears to have been sports-minded since he began to walk, despite the fact that his multiple heart defect had been corrected only partially in 1954. At five, *The Stethoscope* reported in 1960, Paul was a fine baseball player. With continued normal growth, however, his body's metabolic requirements were placing greater and greater demands on his limited circulatory capacity. When Paul was eight, the time had come to eliminate the tetralogy once and for all. The operation enabled Paul to develop his many sports interests.

At 17, Paul is a veteran of nine years in organized ball in Hackensack, including Little League and Babe Ruth League. He tries to do his homework at school so that he can spend a few hours each day in athletic pursuits. This time of year it's tackle football. Paul finds that his studies, which are "not too tough," do not interfere with his athletic interests. When winter arrives in a few weeks, Paul will spend three nights a week shooting baskets in the high school gymnasium. There are no medical restrictions on his athletic or any other activities. Paul and his twin brother, Peter, go to dances and are quite popular around the high school.

The above visits with former open-heart patients forcefully illustrate what the open-heart unit is really about. The work of Dr. James R. Malm and Dr. Frederick O. Bowman, Jr., and others, has reduced the operative risk of tetralogy of Fallot and other anomalies to a minimum. As a result of their innovations, hundreds of young patients, like those described here, have assumed healthy, productive lives. The long surgical experience of these two surgeons with congenital anomalies of the heart has helped them to establish guidelines for fitting the right patient with the right surgical approach.

Urgent tasks remain, however, since not all of cardiac defects are now correctible with

Timmy Sullivan in 1969, arms akimbo in mock resignation, waits as sister, Nancy, tastes pigskin.

surgery. Other important areas of cardiovascular surgery beckon, and the Hospital's cardiac surgeons are absorbed in several projects that promise to benefit seriously ill patients. Following the development by Dr. Malm of a new method of preparing and storing aortic valve specimens, the Hospital's surgeons are adapting the use of aortic homografts to previously inoperable conditions of the aortic valve and the pulmonary artery. They are studying the use of homografts from donors for mitral

and tricuspid valve replacement as well.

In collaboration with Dr. Gerald Kaiser, other projects are concerned with coronary artery surgery—an exciting area of great potential boon to many heart patients—and with cardiac transplantation.

Funds are urgently needed to speed the development of techniques to help patients with untreatable heart conditions. Financial support by Friends of the Presbyterian Hospital will help these and other lines of investigation.

Janice Wilmar outpaced her parents in an exploration of Grand Canyon during a recent vacation trip.

from President John F. Kennedy. The President was replying to a letter from Danny congratulating him on his election.

Janice Wilmar, who chases soccer balls on Riley Field in Montville, New Jersey, resembles Danny in her attitudes toward sports and school. The 7th grader likes physical activity—the soccer games that are part of her school's physical education program, the hikes with her parents, and the daily swimming that is a popular summer activity in their part of New Jersey. She learned to swim and ski last year, and this summer accompanied her parents on a walk into the Grand Canyon as part of an extended vacation out west.

Janice, too, had a tetralogy of Fallot corrected at the Presbyterian Hospital. Before the correction was performed on her in 1965, her father re-

Timmy celebrated his tenth birthday last September with friends and school mates. A slim, athletic-looking boy, Timmy has played organized ball in his age category, as well as sandlot ball. This still being the gridiron season, Timmy discusses recent New York Giant games and displays a New York Jets uniform. Tim's ambition is to become a sports writer and specialize in football. He also plays dodge ball, flag ball, and tends the goal during soccer games conducted as part of the regular physical education program at the Kent Elementary School. He finds homework "a little easy" in the fourth grade. His parents are quite proud that he did not miss one day of school because of illness in 1967 and, that he missed only a few last year.

One of the first members of the "open-heart all-Stars" is Paul Cafone, now a senior in

A blur of motion, Paul Cafone kicks off in game on Hackensack High School field. Nine years after open-heart surgery at Presbyterian Hospital, this popular high school senior leads an active athletic life, which includes tackle football and basketball.

Your Gift to the Hospital may be used for general purposes, or, if you prefer, you may mark it for the use of one hospital or for an individual project in the Presbyterian Hospital's Development Program.

Funds may also be marked for the Emergency Nursing Funds at the Babies Hospital unit and The Neurological Institute unit. Such funds provide nursing care for acutely-ill patients who may not be able to pay for such needed services.

Those projects in most urgent need of funds at present are the Babies Hospital unit and the new Emergency Facilities at Vanderbilt Clinic unit.

On behalf of the patients who will benefit from your gift—thank you.

# ADVANCES SEEN IN DIAGNOSIS AND CARE OF HEART PATIENTS

While the heart surgeons of Presbyterian Hospital are minimizing the risks of open-heart surgery and are seeking new surgical approaches to inoperable conditions, the Hospital's cardiologists improve drug therapy and refine applications of mechanical devices to help the ailing heart.

Forming the nucleus of a loosely knit team that includes surgeons, pharmacologists, electronics engineers and even a dentist, these specialists appear to be on the threshold of exciting cardiologic advances exactly because of this melding of scientific specialties.

The cardiologists are working in association with the Cardiac Intensive Care Unit, opened recently through the generosity of Friends of the Hospital. The Unit's facilities on the ninth floor allow Presbyterian Hospital's scientists to push on with their important efforts to perfect drugs for cardiac arrhythmias, these tell-tale changes in the heart's normal pumping rhythm.

Rhythm changes of the electrical impulse accompany many heart conditions, such as complications following open-heart surgery, damage to the heart muscle following coronary occlusion, rheumatic heart disease, and overdoses of heart drugs. Despite the frequency of cardiac arrhythmias, scientists understand the exact mechanism of only a few of these electrical abnormalities.

While endeavoring to pinpoint the precise causes of these electrical disturbances, the P.H. cardiologists are testing the effects on the heart of a number of drugs, both new and old, that show promise in controlling arrhythmias. This work entails studying drug absorption rates and relating the blood plasma levels of these drugs to changes in the electrocardiogram readings of the heart tissue under study.

Some examples of what changes the heart researchers look for include electrical conductivity at key spots along the impulse route in the heart, duration of the muscle contraction, and the rate at which the heart returns to neutral before the next electrical impulse comes along.

These painstaking studies have enabled the hospital's physicians to identify and to put into being a whole new class of anti-arrhythmic drugs. Presbyterian's cardiologists have contributed to the knowledge about the effects of Dilantin and lidocaine and are now investigating other new and promising substances.

The exhaustive studies on the above-mentioned two drugs, undertaken here with the support of Friends of the Hospital, permit cardiologists to select the best-suited drug to counter many specific effects

Dr. J. Thomas Bigger, Jr. (left), and his associate Dr. James Coyne check equipment in Cardiac Intensive Care Unit.

of cardiac arrhythmias. Much work remains to be done, however, in understanding the total biochemical effect of these drugs and their safe levels, as well as in new-drug research.

In their quest for effective drugs to control rhythm disturbances, the P.H. medical scientists logically investigated problems occurring with accepted pharmacological agents. Their inquiries into the applications of foxglove may prove to be of great boon in the treatment of heart disease worldwide.

Foxglove, universally known as digitalis, is the most widely used drug in the treatment of many cardiac conditions, including arrhythmias and heart failure. Many patients are taking it on a long-term basis in all parts of the world. Digitalis is potentially quite toxic, both as a large overdose or in small overdoses given over an extended period of time. The major medical manifestation of digitalis poisoning is arrhythmia. Unfortunately, what is a safe dosage level one day may prove toxic the next. The safe level of digitalis depends on the level of calcium or of potassium in the patient's system. Many heart patients, for example, have to take diuretics to relieve swelling from moderate cardiac failure, and diuretics are known to facilitate the elimination of potassium by the kidneys. A reduction of potassium in the blood may cause a previously safe dose of digitalis to become harmful. The number of patients on digitalis who are being admitted to the nation's hospitals with arrhythmias every week is substantial. At this point it is very difficult to establish whether the rhythm defect is caused by a digitalis overdose or by the heart condition itself. If the latter is the case, one might decide to increase digitalis.

As yet, there is no specific test for digitalis poisoning, but the clinical work being conducted at the Cardiac Intensive Care Unit is on the way to establish safe guidelines for this ubiquitous medication.

"at first blush," according to Dr. Bigger.

Potentially of great benefit to general practitioners as well as to physicians at community hospitals all over the country, the test would eliminate much of "the headscratching, interviews with the patient's druggist and his relatives that are a part of every diagnosis involving a suspected digitalis overdose," said Dr. Bigger.

In the area of mechanical assistance to incapacitated hearts, exciting improvements have appeared on the horizon as a result of work done recently. The most significant of these will be an effective membrane oxygenator pump, which can function as a circulatory assist long enough to allow the heart to rest and heal from a heart attack. This pump will not have the drawbacks of previous membrane oxygenators and various "heart-lung"

machines. The present models cannot be used more than six hours because they hemolyze, or break down red corpuscles, at unacceptably high rates. The oxygenator now in sight may be used for as long as a week without harmful side effects. The Cardiac Intensive Care Unit also hopes to acquire a small special-purpose computer to monitor blood circulation in patients on temporary mechanical assistance.

The development of new apparatus demands a high level of education of the personnel using them. In Dr. Bigger's words, "in the latter half of the 20th century, patient care is only as good as the technological training of personnel." The Presbyterian Hospital's continued search for perfection in patient care and for new ways of treating disease deserves the support of its many friends.

Technologist Adolf Fecci takes out a deposit from cardiac memory bank as Dr. J. Thomas Bigger, Jr., looks on.

## CALENDAR OF CHRISTMAS EVENTS

**Monday, December 8**  
9:00 a.m.-4:30 p.m.

PAINT SUPPLIES become available for two weeks, for use in window decorations.

**Monday, December 15**  
\* 11:00 a.m.

CHRISTMAS MUSIC On Daily Radio.

1:00 p.m.  
3:00-4:30 p.m.  
Broadcasts until December 31.

**Tuesday, December 16**  
7:00 p.m.

CHILDREN'S PAGEANT OF BABIES HOSPITAL UNIT on PH 5E.

7:30 p.m.  
CHILDREN'S PAGEANT OF BABIES HOSPITAL UNIT on PH 5C.

**Wednesday, December 17**  
\* 5:10 p.m.  
CANDELIGHT VESPER SERVICE in The

Pauline A. Hartford Memorial Chapel.

**Thursday, December 18**

\* 11:00 a.m.  
BOGOTA HIGH SCHOOL CHORUS in The Pauline A. Hartford Memorial Chapel.

2:30 p.m.  
MELODY QUARTETTE caroling on the wards.

7:30 p.m.  
NURSES' AND DOCTORS' traditional caroling procession through the hospital.

**Friday, December 19**

4:30 p.m.  
VESPER CAROLERS on the wards.

**Sunday, December 21**

\* 3:00 p.m.  
STUDIO RECITAL: SPECIAL CHRISTMAS BROADCAST.

**Tuesday, December 23**  
2:30 p.m.

CHILDREN'S CHRISTMAS PARTY, given by the House Staff Wives Club, on fourth floor of Vanderbilt Clinic unit.

\* 6:00 p.m.  
EQUITABLE LIFE CHORUS in The Pauline A. Hartford Memorial Chapel.

**Thursday, December 25**  
CHRISTMAS DAY SERVICES in The Pauline A. Hartford Memorial Chapel.

\* 7:00 a.m.  
ROMAN CATHOLIC MASS.

\* 10:30 a.m.  
PROTESTANT HOLY COMMUNION.

\* Broadcast over BEDSIDE Broadcasting System—Channel 1.

VOLUME XXV, NUMBER 1

## Two Millionth Patient

At approximately 1:00 p.m., on Thursday, December 4, 1969, Mr. Richard Mulvaney was admitted to the Neurological Institute unit of the Columbia-Presbyterian Medical Center. There is certainly nothing very remarkable about that statement. However, that admission caused Mr. Mulvaney to take a historic place in the annals of the Presbyterian Hospital admission records, for he became the two millionth patient to be admitted to the Columbia-Presbyterian Medical Center.

Mr. Mulvaney is an extremely affable young man with great confidence in his physician, Dr. J. Lawrence Pool, Professor and Chairman, Department of Neurosurgery. He told us, "It was a lucky day for me when my pharmacist gave me Dr. Pool's name. I had been to many doctors without much satisfaction, but he has changed everything."

His attractive wife, Carol, added, "This is a wonderful hospital. Everyone has been so nice to us." She was particularly pleased that she had been able to obtain a room in Maxwell Hall, the student nurses' residence, for the duration of her husband's hospitalization.

The Mulvaneys live at 20 Sagebrush Lane, South Haverpauge, Long Island, with their four sons, Richard, 7; Scott, 6; Keith, 3½ and Darren, 1. Mr. Mulvaney is a service foreman employed by the New York Telephone Company and builds racing cars as a hobby. He also raced them at Westhampton before his illness.

When asked how he felt to be the two millionth patient admitted here, he said, "Wonders never cease. Overnight I have become famous."

Richard Mulvaney

## New Grants For Important Research

The John A. Hartford Foundation, Inc., has announced that a grant of \$122,376 has been awarded to Professor Abraham Spector of the Department of Ophthalmology at P&S for study of cataracts and the molecular structure of lens proteins. The announcement was made jointly by Mr. Harry B. George, President of the foundation and by Dr. H. Houston Merritt, Dean of the Faculty of Medicine.

A condition frequently associated with old age, cataracts are becoming a serious health problem as more and more Americans live longer thanks to advances in medical science. The two-year grant from the John Hartford Foundation will permit Dr. Spector and his group to continue their studies of the structure of lens proteins and the changes which occur in these proteins in cataracts. An understanding of such differences would, of course, be crucial in developing preventive measures of chemotherapy for cataracts.

The lens of the eye is a unique tissue. More than 35 per cent of its total weight is composed of components other than water and approximately 95 per cent of the dry weight is protein. In spite of this high concentration of protein, the lens is a surprisingly transparent tissue.

Working under a previous grant from the Hartford Foundation, the P&S group has purified one of the major proteins of the lens, alpha crystallin. Alpha crystallin is of particular interest since studies suggest that it may be involved in the development of certain types of cataracts. This large macromolecule represents about 20 per cent of the total soluble protein. It is a huge macromolecule with a molecular weight of approximately one million. It contains about 40 to 50 subunits. Some of the subunits have now been purified.

In addition to Dr. Spector, the P&S cataract team includes Drs. Lu-ku Li, Robert C. Augusteyn, Arthur Schneider, Mary Moller, Thomas S.

Freund and Faith Hughes, Dianne Meretsky and Roy Kidwell.

The next stage of the study will be to determine the amino acid sequence of the subunits. These studies should aid in understanding the chemistry of these macromolecules and perhaps reveal fundamental differences between material isolated from normal and cataractous lens. In the normal lens alpha crystallin is found

*In this period of belt-tightening and cutbacks in government funds for medical research, it is encouraging to note that support has continued for many important scientific undertakings at the Columbia-Presbyterian Medical Center. Several examples of this continued support — affirming the practical importance of our Medical Center's research — are highlighted in this issue.*

predominantly in the soluble fraction while in cataractous lens a significant fraction of this protein has become insoluble. The P&S investigators

hope to be able to explain why this occurs. This in turn should give scientists a greater insight into the overall process of cataract.

Members of the P&S cataract team, from left, include Roy Kidwell, Dr. Lu-ku Li, Dianne Meretsky, Dr. Mary Moller, Dr. Arthur Schneider, Dr. Robert Augusteyn, Mrs. Faith Hughes, and Dr. Abraham Spector.

## Target: Warning Signs In Multiple Sclerosis

A grant of \$124,366 from the National Multiple Sclerosis Society will enable two physicians of the Neurological Institute unit to investigate any possible immunologic alterations in multiple sclerosis. The three-year grant to Dr. Stuart Cook and Dr. Peter Dowling, who are both Assistant Attending Neurologists, P.H., is supported in part by a bequest from the estate of the late Peter F. Amrhein of Hudson, New York, and has therefore been named the Peter F. Amrhein Memorial Grant for Research in Multiple Sclerosis.

## First Organ Transplant By P&S Surgeons Performed At Francis Delafield Hospital

On Saturday, November 15, two teams of Columbia-Presbyterian Medical Center's surgeons successfully carried out the first renal transplantation operation ever undertaken here. This was also the first human organ transplantation procedure carried out at this medical center, and it represented the combined efforts and skills of a large number of physicians, nurses and para medical personnel from the Neurological Institute unit, the Francis Delafield Hospital. The removal of the kidney took place at Neurological Institute and the transplantation operation was performed at Francis Delafield Hospital.

The physicians directly in-

involved in the transplantation were: Joseph A. Buda, Associate Attending Surgeon, PH, and Associate Professor of Clinical Surgery, P&S; John B. Price, Associate Attending Surgeon, PH, and Associate Professor of Surgery, P&S; Dr. Robert J. Hoehn, Assistant Attending Surgeon, PH, and Assistant Professor of Clinical Surgery, P&S; Dr. Richard Weil, III, Assistant Attending Surgeon, PH, and Assistant Professor of Surgery, P&S; Dr. John P. Grant, Jr., Assistant Urologist, PH, and Instructor in Urology, P&S; and Dr. Conrad Lattes, Instructor in Surgery, P&S.

The 31-year-old recipient of the kidney, Dreana Winfield, developed manifestations of lupus erythematosus, a con-

Dreana Winfield

nective-tissue disorder, during childhood and has been treated for this condition in the Presbyterian Hospital and the Vanderbilt Arthritis Clinic since that time. She was able to continue her education in spite of her chronic illness and

## This Is The Way It Was The Last Christmas In The 60's

Christmas has once again come and gone, but its mystical aura seems sadly to linger, as do memories of the last Christmas in the sixties.

The weeks of busy preparation in anticipation of the big day flew by. At the Medical Center most people could not help being caught up in the spirit of the holiday season. Dolls and stuffed animals were seen peeking above the rims of shopping bags carried by lunch-hour Christmas shoppers.

Windows and doors were artistically decorated in corridors, halls and nurses' stations throughout the Hospital. Holly, sugar canes and wreaths appeared suddenly; Christmas trees and bright decorations were distributed to all departments by Santa's helpers from Housekeeping.

On December 17 the outdoor Christmas trees were lighted, bringing their incandescent message of cheer to the Hospital and the community.

The annual Doll's tea party on December 19 brought joy to the little girls in Babies Hospital unit. The dolls, donated by the Ladies' Auxiliary and beautifully dressed by staff and employees, were given to the children at the end of the party. Have no fear, little boys received presents too.

Traditional caroling on the wards was again carried on by the doctors and nurses, the P&S Vesper carolers and the Physical Therapy carolers.

On Christmas Day, Santa Claus made grand rounds to all children, one to 100.

Babies Hospital patients, under the watchful guidance of the nursing staff and volunteers, had their Christmas

party on December 16. Mr. Herman Tutelman, principal of PS 401 X (Babies Hospital public school), played Christmas carols and songs on the piano, and Mr. Sam Ulano contributed to the fun with his unique method of story-telling with drum accompaniment. The kids had a grand time when he distributed bongo drums, muraches, cow bells and other percussion instruments, making them part of an "orchestra." Mr. Ulano has been doing this for the Babies Hospital patients for the past 15 years.

The volunteer ladies presented a puppet show in which one of the patients, Richard Bohan, age 13, was the voice of many of the puppets.

The final event of the party was the long awaited arrival of Santa Claus, who miraculously produced a gift for each child.

Then the youngsters had a well-earned rest before again participating in the annual Christmas pageant on Presbyterian Hospital 5 center and east, in the early evening. The ageless story of the Nativity was beautifully narrated and

The guest of honor (center) at the B.H. Christmas party.

## BH Patients Entertained At Chanukah Party

The Pauline A. Hartford Memorial Chapel was the scene of the annual Chanukah party on Friday, December 4, at 4:00 p.m., for 35 young patients in Babies Hospital, their parents, volunteers and guests.

Mrs. Joseph A. Silverman, the wife of Dr. Joseph A. Silverman, Assistant Attending

Pediatrician, BH, and Assistant Clinical Professor of Pediatrics, P&S, arranged the entertainment and presentation.

The entertainers—all from New Jersey—were: Joyce Goldklang of Teaneck, folk singer; Brad Hatchfield of Englewood, organist, guitarist and banjoist; and Joy Mor-

genstein of Englewood Cliffs, singer, guitarist and dancer. Miss Morgenstein was recently a patient in Babies Hospital.

Assisted by Babies Hospital patient Levi Shem Tov and Mrs. Silverman's son, Teddy, 5, Rabbi Marvin A. Goldfine, Jewish Chaplain, lit the candles on the traditional Menorah. Mrs. Silverman, with the aid of her daughter, Carol, 9, told the age-old story of Chanukah.

Mrs. Silverman stated, "This was an exceptionally happy party because of the entertainment, the candle-lighting ceremony, the songs and the presents distributed to the children." She especially praised Mrs. Mona Segal of the Jewish Community Center in Englewood for her cooperation in making this such a happy occasion for the children in Babies Hospital.

Student nurse Sherry Barker, pianist, provided Christmas carols, and comfortable little groups of nurses scattered around the room added to the joyful spirit of the occasion.

December 23 was the date of the Children's Christmas party on the 4th floor of Vanderbilt Clinic unit. This party is sponsored by the House Staff Wives' Club, in conjunction with the staffs of the Pediatric Clinic and Social Service. The co-chairmen are Mrs. Thomas Johnson and Mrs. Gerald Hamilton.

The ladies of the Bronx League for Cerebral Palsy

sponsored their annual Christmas party in the Attending Doctors' Dining Room on December 14.

There were many other parties given throughout the Hospital, but limited space permits the inclusion of only a few.

Religious services were held in the Pauline A. Hartford Memorial Chapel on Christmas morning, and broadcast via bedside broadcasting system. Roman Catholic Mass was celebrated at 7:00 a.m., and Protestant Worship was held at 10:30 a.m. Holy Communion was given at both services.

A scene from the Chanukah party for BH patients.

## Warning Signs...

Continued from page one

who are also Assistant Professors of Neurology at P&S, plan to look for meaningful immunological changes in the blood cells and serum of human and animal subjects with multiple sclerosis and other nervous system diseases which may give some insight into the causative mechanism of this disease. Each subject will also be given a neurological examination whenever a blood sample is taken. By comparing clinical symptoms with laboratory results, the two scientists hope to detect immunological abnormalities which consistently anticipate the different levels of disease.

The search for such immunological correlates will be carried out in three ways.

First, as an index of immune

multiple sclerosis. The demyelinating potentials of these samples will be tested in test tube cultures of nerve tissue.

Third, where samples of blood taken directly from the subjects are found to possess this anti-myelin activity they will be analyzed to determine what classes of antibodies are present.

This type of study must necessarily be conducted on a long-term basis, so that Drs. Cook and Dowling can analyze samples from all stages of illness in each subject. It is generally agreed, however, that only such painstaking research can eventually succeed in pinning down the events, probably of an immunological nature, that first signal the oncoming wave of nerve tissue damage and/or crippling symptoms characteristic of an acute multiple sclerosis attack.

Multiple sclerosis is a chron-

Dr. Peter Dowling (left) and Dr. Stuart Cook.

stimulation, Doctors Cook and Dowling plan to check blood samples for alterations in the structure and number of the white blood cells that manufacture antibodies to protect the body against invading substances. This determination is important because there is evidence that multiple sclerosis may result from a so-called "autoimmune" response by such cells against nerve tissue. Also, there is evidence, uncovered by these two investigators, that the white blood cells which manufacture antibodies against nerve tissue in experimental allergic encephalomyelitis, the laboratory-induced disease often used as possible model for multiple sclerosis, proliferate rapidly during the presymptomatic period of this condition. Samples taken after the animals get sick thus reveal far less information about the immunologic pattern of this disease than do samples taken earlier.

Second, samples of these white blood cells will be grown in the test tube to see if they are manufacturing antibodies to myelin, the nerve fiber insulation whose loss is believed to result in the disruption of nerve impulse transmission along de-insulated nerves. This disruption of impulse transmission can block off sensory input to the brain and the output of instructions from the brain to different muscles, thus producing the varied and crippling symptoms of mul-

ic, crippling disease of the brain and spinal cord. It usually strikes between the ages of 20 and 40—the critical career and family-building years. At present, an estimated total of 500,000 Americans suffer from multiple sclerosis and related disease. The National Multiple Sclerosis Society has granted over \$12.2 million since its inception in 1946 to support promising research and advanced training related to multiple sclerosis.

## Plastic Surgery Course To Be Given This Month

The College of Physicians and Surgeons, Columbia University, announces its first annual postgraduate course in plastic and reconstructive surgery, January 19 through 21.

The course will be held at St. Luke's Hospital Center, Amsterdam Avenue and 113th Street in New York City, and will be given by the plastic-surgical and surgical staffs of that hospital, for those exclusively in the practice of plastic surgery or those training in this surgical specialty.

The course will be divided into six half-day sessions, each dealing with the larger areas covered by this specialty: congenital malformations, trauma, head and neck malignancy, surgery of the hand, and cosmetic surgery. Anatomy, embryology, and pathology will be stressed along with surgi-

## RESEARCH GRANT TO PAVE THE WAY FOR ADVANCES IN STUDY OF GENES

Dr. Orlando J. Miller, Associate Attending Obstetrician and Gynecologist, PH, and Associate Professor of Obstetrics and Gynecology, P&S, has received a grant of \$79,249 to determine how irregularities in the structure or number of chromosomes cause congenital malformations and mental retardation in children, or infertility, spontaneous abortions, and other types of reproductive failure. The award of the one-year continuation grant to Dr. Miller and four fellow scientists was announced by the National Institute of Child Health and Human Development. The grant enables the cytogenetics team to complete the 10th year of its work on cytogenetics of reproductive failure.

It is known that some congenital malformations such as hermaphroditism are related to abnormalities of chromosomes. Chromosomes, which resemble short pieces of microscopic thread, are the genetic material of the nucleus. They become microscopically visible just prior to cell division, during which each chromosome splits lengthwise.

The research of Dr. Miller and his group has identified certain chromosome abnormalities and has established a cause - and - effect relationship between them and clinical disease. Many chromosomal abnormalities remain to be identified, especially as causes of spontaneous abortion.

But an even more pressing problem is the improvement in the means of identifying specific chromosomes and recognizing small changes in their size, reflecting, for example, a deletion of a part of a chro-

Messeret Taddesse (left) and Mrs. Lillian Adams are members of Dr. Miller's group.

mosome. Dr. Miller and his associates are using autoradiographic analyses of DNA synthesis—the process of duplication of the genetic material—to study this problem cytologically. Studies of the gene content of individual chromosomes are also being carried out, primarily in somatic cell hybrids between human cells and mouse cells. Somatic cell hybridization involves fusing two body cells into an artificial cell which may have properties quite different from those of its "parents." Hy-

brids between cells from mice and men lose most of the human chromosomes and are thus extremely useful in studies of the genes carried by individual human chromosomes. These and other hybrids may shed light on the way chromosomes are lost or gained by otherwise normal cells.

Dr. Miller's team includes researchers in obstetrics and gynecology, Drs. Dorothy Warburton, Dorothy Miller, Penelope Allderice, and a researcher in psychiatry, Dr. Syed Abdullah.

## A Tribute To Santa's Helpers

Christmas was brighter and merrier for the youngsters in Babies Hospital because of Mr. Louis Marx, Chairman of the Board, Marx Toys; the WOR Children's Christmas Fund; American Legion Post #1674, of the Chase Manhattan Bank; Kohner Brothers; Lions Club of upper Manhattan; all those who dressed the dolls so beautifully for the

Dolls' Tea Party; plus countless thoughtful individuals who sent gifts to fill Santa's pack for his Christmas morning visit.

The wonder and delight mirrored in the faces of these children, as is evident in the photographs below, reflect their unspoken gratitude to these generous donors.

cal technique, pre- and post-operative care, as well as management of complications. The monthly cleft palate and maxillo-facial clinics will be conducted for the benefit of those enrolled in the course.

Participating physicians will be Drs. Richard B. Stark, Clayton R. De Haan, Russel W. Lavengood, Jr., Joshua Kaplan, Hiroshi Washio, Charles F. Bigg, Charles F. Schetlin, Carl S. Oakman, Stanley Whitfield and Ennio Gallozzi.

Registration is limited and closes January 10. Fee is \$100.

To receive an application blank, contact Dr. Melvin D. Yahr, Associate Dean, College of Physicians and Surgeons, Columbia University, 630 West 168th Street, New York, N. Y. 10032.

# First Human Organ Transplantation...

Continued from page one

was graduated from the City College of New York in 1958 with a BS Degree in Education. Since then she has been employed by the Social Service Department of the City of New York.

During the spring of 1969, her chronic renal failure became more severe and it could no longer be controlled with diet and medications. It was apparent that dialysis was needed. In June 1969 she transferred to the Dialysis-Transplantation Unit, located at Francis Delafield Hospital. This unit was started with one patient in September 1968 under the guidance of Dr. Frederic P. Herter, Acting Director of Surgery, Columbia-Presbyterian Medical Center and Dr. Buda, who also serves as Director of Surgery at Francis Delafield. At present, 12 patients are maintained on hemodialysis. Assisting Karin Goeris, head nurse of the unit, are four staff nurses, Angela Cirone, Deborah Lyon, Maureen McCarthy, Mrs. Virginia Russell, and two aides, Blanche Baker and Deborah Davis.

Miss Winfield was maintained on intermittent hemodialysis from June until mid-November. She, as well as all the other patients on dialysis, was tissue-typed. Tissue typing of all the patients on dialysis is done as a cooperative effort with 30 other hospitals in New York City and the surrounding vicinity. Tissue typing is done in the laboratories of Dr. Felix Rappaport at New York University Medical Center.

In November a dying patient was admitted to the Neurological Institute unit and the transplantation team was alerted to the possibility of availability of a kidney for transplantation. Several days after the patient became comatose, following extensive testing and attempts at therapy by the staff of the Neurological Institute, it was clear that there was no hope of recovery. Brain death was diagnosed by Dr. Richard Masland, Director of Neurology, and Dr. Lawrence Pool, Director of Neurosurgery, on the morning of Saturday, November 15, 1969. Drs. Masland and Pool represented the Transplantation Committee at Columbia University College of Physicians and Surgeons. The patient's family gave permission for the removal of the kidneys for transplantation, which was carried out in the operating room at the Neurological Institute unit by Drs. Grant, Hoehn and Lattes. At the same time that the donor nephrectomy was being carried out, Miss Winfield was being taken to the Francis Delafield operating room and prepared for operation. Her

diseased and non-functioning kidneys were removed and she was prepared for the transplantation procedure. The kidney from the deceased patient at the Neurological Institute was transported to Francis Delafield Hospital after appropriate perfusion and cooling. The transplantation of the kidney into Miss Winfield was carried out by Drs. Buda, Weil, Grant and Price. The transplanted kidney func-

no major rejection episodes. The transplanted kidney is functioning adequately and her blood chemistries are in good order. Prior to the transplantation procedure Miss Winfield had been closely followed by the dialysis transplantation group, which includes Drs. John Laragh, Jay Meltzer and Paul Cannon from the Department of Medicine, as well as Dr. Elliott Osserman from the Department of

Dr. Joseph Buda with his patient.

tioned almost immediately and the immediate post operative course was quite good.

Miss Winfield's post-operative course at the time of writing—four weeks following the transplantation procedure—has been excellent. She is on a course of immunosuppressive therapy and has had

Pathology, Dr. Eugene Klink and Dr. Robert Winters from the Department of Pediatrics and Dr. Sol Spiegelman, Director of the Institute of Cancer Research. This group meets weekly with representatives from various services for discussion of problems which arise in the patients on

A view of the Dialysis-Transplantation Unit.

the chronic dialysis and those awaiting transplantation.

Miss Winfield's post-operative management is being directed by Drs. Buda, Lattes, Meltzer, Price, Grant and Osserman. This group meets daily to make decisions concerning the levels of immunosuppression drugs to be used and to discuss other problems which may arise.

Miss Winfield's care, starting with chronic hemodialysis and then transplantation, has clearly been a joint effort by many people from many parts of the medical center. Drs. Bernard Wagner, Raymond Gambino and Myron Tannenbaum from the Department of Pathology provided the necessary means for bio-chemical testing after operation, as well as preoperative evaluation. Miss Esther Austin, Deputy Commissioner of the Department of Hospitals of the City of New York and Administrator for Francis Delafield Hospital, provided the necessary administrative assistance which made possible the start of the hemodialysis transplant patient unit and ultimately the first transplantation procedure. As well, Alice Gartman, Director of

Nursing, provided the necessary bedside nursing help and nursing help in the operating room for the care of dialysis patients and for the care of Miss Winfield before and after the transplant operation.

Renal transplantation is indeed a well-established and effective clinical procedure and a form of therapy for a patient with chronic irreversible renal failure. It has been demonstrated that it is now possible to provide this method of treatment for patients at this medical center. This treatment, in addition to rehabilitating chronically ill patients, may also provide information leading to the solution of the problem of graft rejection, which is a major unsolved problem in the field of organ transplantation.

Future plans include expansion of the unit with acceptance of additional patients for chronic hemodialysis. Additional renal transplantation procedures using both living donors and cadaver donors are also planned. Ultimately the transplantation program will be expanded to include liver transplantations and eventually the transplantation of other organs.

## The Heinrich Waelsch Lectures

The seventh annual Heinrich Waelsch Memorial Christmas lectures were scheduled to be presented at the Alumni Auditorium, P&S, on December 29 and 30. More than 150 selected high school seniors from the New York metropolitan, Westchester County and New Jersey's Bergen County areas were invited to hear the lectures, organized by Dr. John D. Rainer, Chief of Psychiatric Research, Department of Medical Genetics, New York State Psychiatric Institute.

The origin of these Christmas lectures dates back to the 19th century when Michael Faraday, famed physicist who pioneered the first dynamo, the battery and the basic laws of electrolysis which bear his name, initiated a series of lectures in physics, known formally as Christmas Courses of Lectures Adapted to a Juvenile Auditory, of which he himself gave 19 courses. Many years later, in 1963, Dr. Heinrich Waelsch, then Professor of Biochemistry, Columbia University, College of Physicians and Surgeons, and Chief of Psychiatric Research (Pharmacology), New York State Psychiatric Institute, reinstituted these lectures, in the field of psychiatry. Dr. Waelsch

died in 1966 and Psychiatric Institute has continued them in his memory.

The purpose of these lectures is to arouse an interest in the basic sciences as applied to psychiatry. The lectures are geared toward the role of the laboratory disciplines and the psychological and social sciences in human motivation and behavior.

Following each lecture there is a question-and-answer period during which the students can discuss such widely diversified and provocative subjects as drug addiction, hypnotism, psychoanalysis, conditioned reflexes, biochemistry, homosexuality, marijuana and alcoholism.

Refreshments—cookies, soda and milk—are served during this period.

The program for this year was as follows: December 29: *Genetics in Psychiatry*, DR. RAINER; *Sociology and Human Behavior*, DR. LEO SROLE, Professor of Psychiatry (Social Sciences); December 30: *Biochemistry and the Nervous System*, DR. MAURICE RAPPORT, Chief of Psychiatric Research, Neurosciences; *Motivation and Mental Health*, DR. SHERVERT FRAZIER, Deputy Director of Psychiatric Institute.

## Organ Preservation Laboratory Made Possible By Gift

Columbia-Presbyterian Medical Center's research on organ preservation has benefited from two gifts to the Department of Surgery made by Mr. Thayer Lindsley.

The gifts, totaling \$125,000, will be used to initiate the "Thayer Lindsley Laboratory for Organ Preservation," according to an announcement by Dr. Frederic Herter, Acting Chairman of the Department. The Laboratory will be located at Francis Delafield Hospital.

Mr. Lindsley, an international developer of mining interests, attended Columbia's School of Mines in 1910. He is 86 years old, lives in Manhattan, and is a member of the American Institute of Mining and Metallurgical Engineers.

The research program to study various means of prolonged preservation of organs is being developed by Dr. Joseph Buda, Associate Attending Surgeon, P.H., and Associate Professor of Clinical Surgery, P&S, in conjunction with Dr. Edward Leonard, Director of Artificial Organs Research Laboratory of Columbia University and Professor of Chemical Engineering in the School of Engineering and Applied Science, as well as with Dr. John P. Grant, Jr., Assistant Urologist, PH, and Instructor in Urology, P&S. At present, the research will be centered on the preservation of kidneys and the liver.

A prototype of preservation equipment has been supplied by Travenol Laboratories. "It is indeed hoped that methods can be developed here to increase the time that organs can be kept viable outside the body," Dr. Buda said.

# News of Nursing

Mary I. Crawford, Director of Nursing, P.H., and Associate Dean of Nursing, P&S, attended a meeting of the Council of Baccalaureate and Higher Degree Programs, November 11-14, at the Denver Hilton Hotel in Denver.

This meeting focused on "The Preparation and Roles of the Functional Specialist." This was the final program in a two-year series planned by the Program Committee on the topic, "Extending the Boundaries of Nursing Education."

Doris Knappenberger, Kathleen Mullin, Irene McLeon, Kristen Vander Veer and Joyce Greene represented P.H. November 7 at a conference for nurses on "Stroke-Regrouping for Action," sponsored by the New York Heart Association at the Waldorf-Astoria.

Barbara Tucker, Joan Williams and Doreen Elizabeth Lolly attended a seminar on "Drug Addiction and Abuse:

The Role of the LPN in the Drug Dependency Problem," sponsored on October 29 by the National Association for Practical Nurse Education and Service, Inc. (ANPNES) at the Statler-Hilton Hotel in New York City.

Barbara Gooden, Kathleen Maiorana and Irene Gasior attended a conference, "Institute of Nursing Care of the Advanced Cancer Patient," sponsored by and held at Calvary Hospital, Bronx, New York, November 19-20.

Kathryn Liva and Margaret Breiter attended a meeting on "Comprehensive Care of the Patient Undergoing Cardiac Surgery," sponsored by and held at the Mount Sinai Hospital on November 19.

Ruth Helmich, Director, Nurse-midwifery Service, attended a conference sponsored by the American Public Health Association, at its annual meeting in Philadelphia last November.

day will be Dr. George Ensworth, assistant professor of pastoral psychology, Gordon Divinity School.

The seminar is sponsored by Nurses Christian Fellowship. Registration is limited to 100. For further information contact Presbyterian Hospital staff nurses Faith Voelker, Janet Johnson, Liz Thompson, or Cynthia White, Staff Development Coordinator, Nursing Service, Presbyterian Hospital.

## Private Duty Nurses Feted

Harkness Hall was the setting for a buffet supper for the day private duty nurses on December 2, from 3:30 to 6:00 p.m. On the following morning, from 8:30 to 10:00 a.m., the night private duty nurses were feted in a similar manner.

The ladies who plan these festivities are too numerous to list separately, but Mary I. Crawford, Director of Nursing, P.H., and Associate Dean of Nursing, Faculty of Medicine, Columbia University, speaking for the department, stated, "The purpose of these

gatherings is to express, in small measure, the department's appreciation to the private duty nurses for their loyalty and continued interest in the Columbia-Presbyterian Medical Center."

Mr. Eugene Cleary, Administrative Assistant, Projects, spoke to the nurses about the Hospital's building program, bringing them up to date on current and projected plans.

Miss Crawford also spoke extemporaneously on future plans for nursing, particularly about the new programs for continuing education.

At the buffet supper for private duty nurses.

Ruth Helmich

Patricia Putnam and Margaret Fruehan attended a symposium on Intensive Respiratory Care at the Beth Israel Hospital of Boston on November 18.

Lois Miles and Beverly Jones attended a nursing program focused on simplifying clerical and administrative tasks of nursing, sponsored last November by the United Hospital Fund of New York and Greater New York Hospital Association.

## Miss Spagnola Equipped For Post

Roberta Spagnola, director of Maxwell Hall and acting director of student affairs since August, is a graduate of Trenton State College and has an M.A. in student personnel administration in higher education from Teachers College. She was graduated from Columbia University in 1968.

Roberta Spagnola

Miss Spagnola was assistant to the director of residence and advisor on student affairs at Sarah Lawrence College in Bronxville before coming to the Medical Center.

## Nurses In Space?

A joint meeting of the Columbia University-Presbyterian Hospital School of Nursing Alumnae Association, Inc. and the Sigma Theta Tau, Alpha Zeta Chapter, will be held on February 19 in Maxwell Hall. The meeting will discuss "Roles of nursing in the space program."

## P.H. Receiving Area Draws Heavy Trucks Ad Infinitum

"Where do you want it?" the man in the blue overalls asked Carlos Olivieri, dragging a ten-foot long, narrow box out of a panel truck.

"Just hold it a minute," Mr. Olivieri said. "You are standing it up and you're not supposed to," he reproached the man, pointing to the warnings stenciled on the sides of the box. Mr. Olivieri retreated to his office and obtained explicit clearance on the phone from the addressee, Dr. Francis A. L'Esperance, to accept the box and its delicate contents, a laser tube.

Mr. Olivieri's sharp-eyed vigilance is typical of the PH Receiving Department, of which he is Supervisor. Every few minutes from 7:30 a.m. to 3:30 p.m., heavily loaded vehicles zero in on the Department's truck entrance in the Service Building, like pollen-laden bumble bees converging on their underground hive.

The Receiving staff has to individually handle, inspect and accept the delivered materials and make sure that the

curate documentation by the Receiving Department, vendors would not receive prompt payment on invoices to the Hospital and Purchasing Department would not have a delivery record of items ordered. All this means that Mr. Olivieri has to have his men working at a frantic pace at times to keep up with the seemingly infinite number of trucks. The other members of the Receiving team are Lionel Crosley, Assistant Supervisor; Cornelius Alvarado, and Robert Esposito.

"The amount of merchandise coming in is really staggering," said Mr. Olivieri, resignedly eyeing another truck queue up at the 165th Street entrance. One "more or less typical" Friday, he recalled, 550 cartons of ceramic dishes arrived, as well as 350 cartons of paper goods. In addition to the other deliveries, well over 1,000 cartons were left in Receiving's care that day. The task of the Department's staff on heavy days is complicated by the fact that one of the

Traffic on 165th Street often has to wait while trailer trucks back up to Receiving Department's unloading platform.

item delivered conforms to purchase order specification and quantity requested on the purchase order issued by the Purchasing Department. Then the staff must relay it to the store room for distribution throughout the Hospital.

Because there is usually a pressing need for items ordered, prompt attention must be provided each item delivered. The numerous returns to suppliers must also be packed, documented and returned by the Receiving Department. Unless there is ac-

foursome has to provide daily coverage to receive Food and Solutions at the Fort Washington Avenue Receiving Platform. Thus only three men regularly handle the unending flow of materials, drugs, and all types of equipment in the Service Building Receiving Area.

There is no doubt that a breakdown in the smooth operation of the Receiving Department would cause breakdowns of essential services to patients and a slowing of medical research for their benefit.

Wide windows of their office permit Carlos Olivieri (left) and Lionel Crosley to follow operations on the unloading platform as they stay abreast of the paper work involved in processing merchandise.

# These Persons Are Retiring From Presbyterian Hospital

## Mrs. Mary Minsky

Mrs. Mary Minsky, Forelady, Laundry, retired in September after completing 39 years with the Medical Center.

May recalls her rewarding experiences working with many young men who took part-time jobs in the Laundry as truckmen to help pay college tuition and went on to become successful businessmen, many of them lawyers and administrators. Our own John Campbell also worked with her in the Laundry when he was a youngster.

May is a member of Presbyterian Hospital's 25-year Club and way back in 1946, when STETHOSCOPE was "but a pup," she was a departmental reporter.

She was born in South Wales and came to live in New York City when she was a very young girl. Now that she is retired, she and her husband are going to live in Treasure Island, Florida.

Mary Minsky

Margaret Devine

## Mrs. Margaret Devine

Mrs. Margaret Devine, Aide, Sterile Supply, retired in September. She had been employed at PH since 1960.

There are two things specifically "devine" about Mrs. Devine—her quick Irish repartee and her marvelous brogue.

"Did you like your job here?" she was asked. "If I didn't like it I'd have left it. I don't stick anyplace I don't like!"

Mrs. Devine has three children and six grandchildren. She is planning a visit to Albuquerque, New Mexico, to visit her son and his family and a trip to the "auld sod," which she left in 1929 when she came to New York from County Fermanagh, Ireland. "Then," she said, "I'm going to sit back and enjoy my grandchildren."

## Lorraine Chapman

Lorraine E. Chapman, Receptionist, VC, retired in September, ending a 28-year term of employment at PH.

Miss Chapman took the job "temporarily" and stayed on because she became involved in her work and grew to love it. She had been in the Orthopaedic, Neurology, and Eye Clinics before her assignment

to the Physical Medicine and Rehabilitation Clinic.

Dr. John M. Miller, III, Chief of Rehabilitation Clinic, who has been one of Miss Chapman's supervisors over the years said, "One of my first encounters with Miss Chapman was to assure that an accidental sip of her African Violet food would not be lethal and probably make her 'bloom.' Since none of us could believe she was due to retire for at least 20 years, it may be that Miss Chapman has her own secret formula for keeping her ready smile, sparkling wit and cheerful helpfulness in the Clinic, brighter by far than the flowers she keeps in perpetual bloom in the windows. We will miss her, and wish her well."

## Basile Mocuta

Basile Mocuta, Ice Cream and Pastry Man, Food Service, retired last October after 13 years of employment here.

He was born in Rumania and came to the United States in 1957. He mastered the art of pastry and ice cream making in France.

Mr. Mocuta has traveled all around the world and has been to such far-away places as Taiwan, China, Japan, and many countries in Europe.

His only "enemy" is idleness, and now that he is "unemployed," as he puts it, he intends to do some more continent-hopping, and will stop off at various countries in Europe to help his friends with their pastry shops.

On October 24 Mr. Mocuta was honored with a reception in P.H. 1-50. Guess what? His own pastry was served.

## Dorothy Robinson

Dorothy E. M. Robinson, Supervisor, Labor Room, PH, and Clinical Instructor, Department of Nursing, Faculty of Medicine, CU, retired in October, ending a 35-year tenure of service to the Medical Center.

She received her R.N. from PH in 1934, her B.S. from Teachers College, CU, in 1942 and her Master's Degree in Maternity Nursing in 1958. She also received her degree as a nurse-midwife at this time.

During the World War II years she held the rank of Captain, United States Army, ANC, and was with the 2nd General Hospital in France from 1942-1945. She was recalled to active duty in Germany by the U. S. Army, ANC, 1951-1953.

She is eagerly looking forward to retirement and is planning an apartment in Riverdale (having lived in Harkness Hall for many years).

Mrs. Anderson

Tom Duffy

## Mrs. Stella Anderson

Mrs. Stella Anderson, LPN, retired in November, after 21 years of service to Sloane Hospital.

Chairman of the Practical Nurses of Presbyterian Hospital Club, Mrs. Anderson pioneered in establishing "a mark of distinction" for practical nurses. In the early days they did not wear white uniforms and were not really considered nurses by some. Mrs. Anderson praised Bernice Derby, Margaret Wells, Margaret Peters, and many others, for their understanding and cooperative endeavors on behalf of promoting improvement in the growth and recognition of the practical nurse.

"They helped me," Mrs. Anderson recalled, "they helped all of us over the early rough spots. And they were openminded about our problems. I think the crowning achievement is the opening of our own School of Practical Nursing."

Mrs. Anderson received her LPN diploma from the Harlem YWCA School of Practical Nursing, and is currently serving her second term as President of the Business and Professional Women's Club of Hackensack, her home town.

She has three children and 12 grandchildren.

G. Sterling

B. Mocuta

## George Sterling

George Sterling, Attendant, Food Service, retired last November having completed a 20-year span of employment.

Mr. Sterling "rode the pony express" (nickname given the food-conveying trucks) transporting the individual patient trays from the kitchen complex, through the tunnel, to Neurological Institute and the Eye Institute.

Mr. Sterling was born in Jamaica, B.W.I., and is returning there to live. He is also looking forward to trips to England and France.

## Tom Duffy

Tom Duffy, plumber, Maintenance and Construction, retired in October, after 15 years of employment. Before he took his job here, Tom did a stint as a "sand hog" for a construction company when the tunnel under Harkness Hall was being constructed.

Don't let Tom's Irish brogue fool you—he was born in Brooklyn! He and his wife live in Dumont, New Jersey. They have two sons and one granddaughter.

## Mrs. Ellen McGovern

Mrs. Ellen McGovern, Assistant Forelady, Laundry, retired in August. She worked here for approximately 10 years before she married and returned, 25 years later, after her husband died.

She was born in South Wales but has been a Manhattanite for many years. Mrs. McGovern has a married daughter and two grandchildren. Now that retirement has come, her greatest joy will be having plenty of time for her grandchildren.

## NEW CHAPLAIN AT CPMC

The Rev. Bernard McGorry, of the Graymoor Fathers, has been appointed Associate Roman Catholic Chaplain at Columbia-Presbyterian Medical Center.

The Rev. Bernard McGorry

Father McGorry was born and raised in Allentown, Pennsylvania, and was ordained to the priesthood on June 2, 1951.

For two and a half years he

served as chaplain at the New York State Tuberculosis Hospital in Raybrook, New York and, immediately prior to his appointment here, was serving at Our Lady of Atonement parish in Kinston, North Carolina.

The Rev. George N. Gilligan, of the Maryknoll Fathers, has left the Medical Center after serving for nine years as Associate Roman Catholic chaplain.

His new assignment is to the parish at St. Monica's church on East 79th Street and he will also serve as chaplain to the patients at the DeWitt Nursing Home in the same area.

## Collagenase Symposium Scheduled

The First Interdisciplinary Symposium on Collagenase, sponsored by the College of Physicians and Surgeons, will be held in Alumni Auditorium on February 5, starting at 9:00 a.m. The two morning sessions of the symposium will

deal with laboratory and experimental uses of collagenase, whereas the two afternoon sessions, beginning respectively at 2:00 p.m. and 3:45 p.m., will discuss collagenase in burn therapy and in the treatment of dermal lesions.

## Lectures On Computers

Dr. William A. Bauman, Director, Medical Data Processing, announces two short courses for Columbia-Presbyterian Medical Center personnel, sponsored jointly by Presbyterian Hospital and the Columbia University Computer Center.

The first course, *Introduction to Computers*, begins on Monday, January 12, and will consist of five one-hour lectures; the second, *The 12th Fortran IV Course*, begins on Monday, January 26, and will consist of 18 one-hour lectures.

All lectures will be held in the Armory (168th Street entrance), first floor, Room 5, 4:00 to 5:00 p.m., except for one demonstration lecture, which will be held on the second floor of Service Building. Classes are limited to 50 students.

Registration forms may be obtained from the receptionist in Medical Data Processing Department, Room 33, on the 4th floor of P.H. Forms should be completed and returned to Dr. Bauman promptly.

## PIC Holds A Peck Of Linguists

The staff members of the Parkinson Information Center would do equally well at the United Nations or at the State Department. The majority of employees manning the Center's office on the 20th floor of Black Building has knowledge of at least two foreign languages; several staffers speak as many as five. The Slavic language group is well represented among the PIC staffers with six: Czech, Latvian, Polish, Russian, Slovak and Ukrainian. Other languages with which the PIC people are conversant include Arabic, French, German, Hebrew, Italian, Japanese, Portuguese and Spanish. Four members of the Center even have knowledge of Latin.

(See also page eight.)

Robbin Clark (left) and Alison Stier await donation from visitor to P&S for special Christmas fund for the evacuated Biafran children in the MERCY Medical Camps in Ivory Coast Republic. The two-day appeal by nursing and medical students netted more than \$1,080. MERCY is an activity of the P&S Club.

## 61 "Graphic" Pictures Adjudged Best Part Of Book On Human Reproduction

*Conception, Birth and Contraception*, by Robert J. Demarest, Medical Illustrator, Department of Anatomy at P&S, and Dr. John J. Sciarra, Professor and Head of Obstetrics and Gynecology at the University of Minnesota Medical School, was published by McGraw-Hill Book Company in September.

It has also appeared in a British edition and will be published in Germany and Brazil this year.

The illustrations are large and done with great professional skill—so well done, in fact, that Bob Demarest has received from the Association of Medical Illustrators their annual award for "The Outstanding Illustrated Medical Book of 1969," and well he might, because reviewers are saying, "The sixty-one beau-

tiful, graphic, full-color illustrations are an outstanding feature of this book. They are exceptional in their clear indication of the realities of conception, the dramatic wonder of birth, and the practical measures of contraception. The approach may seem revolutionary to some, not for its simplicity and scientific candor, but for the manner in which the text consistently directs the reader back to the illustrations."

The book sells for \$8.95, but when you see the large-size format, full-color illustrations and fine binding, you will understand why.

*The Stethoscope* salutes Mr. Demarest and Dr. Sciarra on a beautiful and useful book. We understand Mr. Demarest is supplying a copy of his book to our Milbank Library.

## N. I. Film Exhibit Wins Prize

A film exhibit presented by Vincent L. Marco, staff technologist in the Neurological Institute X-Ray Department, was awarded first prize at the Twenty-Fourth Annual Convention of the Radiologic Technologists Society of New York State, held last October. The presentation consisted of a detailed account of the technique of autotomography and its value in demonstrating midline structures of the brain.

Commenting on his achievement, Mr. Marco urged all Radiologic Technologists to take part in activities, such as

film exhibits, through their local and national societies. "I feel that the quality of one's work as well as his pride in his work will be substantially elevated," he said.

Vincent Marco

## In Memoriam

### Dr. Thomas Sullivan

Dr. Thomas J. Sullivan, Associate Professor of Clinical Urology, P&S, and Associate Attending Urologist, P.H. and B.H. units, died on December 15 in Harkness Pavilion, after a long illness. He was 62 years of age.

Dr. Sullivan was graduated from the College of the City

of New York, attended the University of Maryland Medical School and served his urological residency at the Presbyterian Hospital.

He is survived by his widow, the former Evelyn Leahy; two sons, Thomas, Jr., and Michael; two daughters, Kathleen and Theresa; a brother, Daniel A. Sullivan, and a sister, Helen A. Sullivan.

for Ophthalmology and Otolaryngology on October 16 in Chicago. From October 19 to 22, Dr. Cardona participated in a panel discussion at the Inter-American Symposium on Corneal and External Diseases of the Eye, at Gainesville, Florida. The discussion was on artificial corneas and Dr. Cardona presented the film "Prosthokeratoplasty: The Latest Technique and Results." This is the film that won first prize at the National Scientific Film Festival in San Sebastian, Spain (see *Stethoscope*, August, 1969). On October 18, 1969, Dr. Cardona appeared on *Research Project*, a TV program on Channel 4, where he discussed his "mushroom prosthesis" (nut and bolt).

Dr. FRANK B. HOEFLE, Assistant in Ophthalmology, PH, presented a paper entitled "Epikeratoprosthesis—Annual Evaluation" at the Inter-American Symposium on Corneal and External Diseases of the Eye, in Gainesville, Florida, October 19 and 20. Dr. Hoefle also presented a paper for DR. R. LINSY FARIS, Instructor in Ophthalmology, entitled "Glued-on Contact Lenses—a Clinical Study."

Dr. PHILIP M. JOHNSON, Associate Attending Radiologist, PH, and Dr. JAMES A. REILLY, Assistant Radiologist, recently presented several scientific papers at meetings in Chicago. At the Annual Meeting of the Radiological Society of North America, Dr. Johnson presented, "A Real-Time Isoactivity Contour Plotter for Rectilinear Scanners," and a Refresher Course, "Clinical Applications of the Perfusion Lung Scan." Dr. Reilly's presentation was titled "Unilateral Pulmonary Ischemia (The Non-Perfused Lung)." At a preceding Symposium on the Digital Autofluoroscope, Dr. Johnson presented "Visualization of Skeletal Metastases with Radiostrontium" and "Serial Scintigraphic Study of the Normal and Diseased Kidney."

Dr. S. RAYMOND GAMBINO, Professor of Pathology, P&S, and Director of Clinical Chemistry, PH, gave the keynote address "Is the Machine Medicine" at the International Technicon Symposium on Automation in Analytical Chemistry. The meeting was held in London, England, between November 18 and 20.

A number of lectures were given by members of the Department of Medical Genetics last fall. DRS. JOHN D. RAINER, LISSY F. JARVIN, SYED ABDULLAH, and TAKASHI KATO presented "XXX Karyotype in Identical Twins with Episodic Dyscontrol" at the Annual Meeting of the American Society of Human Genetics in San Francisco, October 1-4. Dr. Abdullah also spoke on "Dependency Pattern in the Deaf" at the New York Society for the Deaf in New York, October 17; and on "Insight Through Behavior Modification" to the staff of Rockland State Hospital in Orangeburg, New York, October 8. Dr. Rainer, with Dr. P. WENDER, also spoke on "The Use of Adoptees to Evaluate the Role of Genetic Factors in the Etiology of Schizophrenic Disorders" at the Third Conference on Life History Research in Psychopathology at Hillside Hospital, Glen Oaks, New York, October 11. Dr. Rainer spoke on "Genetics in Psychiatry: Basic and Applied" at the Academy of Psychosomatic Medicine in Shreveport, Louisiana, on October 24; and with Drs. KENNETH ALTSHULER and Abdullah, on "Deafness and Hallucinations" at the Eastern Psychiatric Research Association Inc., 14th Annual Meeting, in New York on November 14-15. Dr. Altshuler spoke on "Psychiatric Needs of the Deaf" in Austin, Texas, on October 3. The talk was sponsored by the Mental Health Association of Austin, The Hogg Foundation for Mental Health, The Texas Department of Mental Health and Mental

Retardation and the Texas Rehabilitation Commission.

Dr. EQUINN WILLIAM MUNNELL, Attending Obstetrician and Gynecologist, PH, and Clinical Professor of Obstetrics and Gynecology, P&S, attended a meeting of Investigators for the diagnosis and treatment of ovarian carcinoma in Geneva, Switzerland, from October 27 to 31 at the invitation of the Cancer Section of the World Health Organization. The purpose of this meeting was to set up international reference centers for the investigation of methods of diagnosis and treatment of ovarian cancer throughout the world. The Presbyterian Hospital has been selected as one of these centers. There will be others in Australia, Brazil, U.S.S.R., Sweden, France, England, Switzerland and other places.

Dr. WALTER E. BERDON, Attending Radiologist, Babies Hospital, and Associate Professor of Radiology, P&S, gave the Carman Lecture on "Changing Concepts of Urinary Tract Disease in Children" on October 21 at the St. Louis Medical Society, cosponsored with the St. Louis Medical Society of Radiologists. Dr. Berdon also presented an essay on "Midgut Malrotation and Volvulus—Review of Clinical and Radiographic Problems in Diagnosis" at the 55th Scientific Assembly and Annual Meeting of the Radiologic Society of North America on November 30 at the Palmer House, Chicago, Illinois.

Dr. CARL T. NELSON, Director of the Dermatology Service, visited Israel in October to deliver the Wershaw Lectures sponsored by the American Academy of Dermatology. Dr. Nelson lectured at various teaching centers including Beilinson and Tel-Hashomer Hospitals, Tel-Aviv, the Hebrew University—Hadassah Medical School, Jerusalem, and the Ramban Government Hospital, Haifa.

Dr. HAROLD F. SPALTER, Associate in Ophthalmology, PH, lectured in October at the University of Rome Eye Clinic in Rome, Italy. He also spoke at the Department of Ophthalmology, Athens, Greece. The subject of his lectures was photocoagulation treatment of diabetic retinopathy and retinal inflammatory disease.

Dr. ARTHUR GERARD DEVOE, Director, Institute of Ophthalmology, presented "An Assessment of Current Corneal Therapeutics" at the Annual Fall Meeting of the New Jersey Academy of Ophthalmology and Otolaryngology on November 12. On November 24, Dr. DeVoe presented "The Non-Surgical Management of Common Corneal Problems" at a Joint Meeting of the Long Island Ophthalmological Society and the Section on Ophthalmology of the Nassau Academy of Medicine.

Dr. Santulli also participated with DR. JAMES A. WOLFF of the Pediatric Staff and DR. PATRICIA TRETTER of the Radiology Staff in a "Symposium on the Diagnosis and Treatment of Neuroblastoma in Children" at the Academy of Medicine of New Jersey, Section on Pediatrics, and the American Cancer Society. The symposium was presented at the Morristown Memorial Hospital in Morristown, New Jersey, on November 13th.

Dr. Veenema also presented "Combined Radiotherapy, Surgery, and Chemotherapy in Carcinoma of the Bladder" and moderated a panel on "Bladder Carcinoma" at the Pan-Pacific Surgical Association Meeting in Hawaii, October 14-22.

# Stethoscopia

## DOINGS OF DOCTORS

### • ENGAGEMENTS

Susan Leavy and Alan Malitz are engaged. Mr. Malitz is a member of the Class of 1972, P&S, and the son of Dr. Sidney Malitz, Associate Attending Psychiatrist, PH, and Professor of Clinical Psychiatry, P&S. An August wedding is planned.

Linda Petterson, a Nurse in the Pediatric Orthopedic Service on BH-5, is engaged to Kevin Jennings. Mr. Jennings is a nephew of Mary Prizeman of the Development Fund. A June wedding is planned.

Susan Mains and Loren Southern are engaged. Mr. Southern is a member of the Class of 1971, P&S. They plan a June wedding.

Patricia Nelson of the Record Department is engaged to Charles Wentz. They plan to marry on June 13.

Bernadette Gorman of the Record Department is engaged to Francis Callahan. They will be married on January 24.

Teresa Sperl is engaged to Richard Bach, a member of the Class of 1973, School of Dental and Oral Surgery. A June wedding is planned.

Carmen Cote and Dr. Robert Gollance are engaged. Dr. Gollance is a graduate of P&S.

Naomi Schwartz and Allen Whittman are engaged. Miss Schwartz is on the staff of the Machine Room, and Mr. Whittman is a member of the elevator operator staff.

### • MARRIAGES

Olivia Cabo, Reservation Clerk in the front office of Harkness Eye Institute unit, left the department in mid-December to marry Pvt. James Erving.

Constance Casey and Dr. Harold Varmus were married on October 25. Dr. Varmus is a '66 graduate of P&S.

Elida Rosado of the Accounting Department and Angelo Alvarado, formerly of the Billing and Collection Unit, were married on November 22. Mr. Alvarado is the son of Carlos Alvarado of the Maintenance and Construction Department.

Pamela Mendelsohn and Dr. George Herr were married on November 23. Dr. Herr is a second-year resident in anesthesiology at PH.

### • BIRTHS

Mr. & Mrs. L. Galanter proudly announce the birth of their first grandchild, Jill Alys Radsken, on November 1. Mrs. Galanter is a secretary in the Nursing office of Babies Hospital unit of P. H.

Mr. & Mrs. Samuel Singer welcomed their first child, a girl, Sandi Allyn, on December 3. Mrs. Singer (formerly Rochelle Wasserman) used to work with Dr. L'Esperance in the laser laboratory.

Mr. & Mrs. William Kaplan welcomed their first child, a daughter, Ilyssa Nicole, on November 24. Mrs. Kaplan was formerly an account representative, Out-Patient Collection Department.

### • CONGRATULATIONS

John Wazny, Programmer Analyst, Medical Data Processing, has been promoted to Data Processing Manager in the office of the Comptroller, Mr. John McCullough.

### • FAREWELL

Best wishes to Florence Dunbar, R.N., who retired from the Harkness Pavilion unit nursing staff on November 1.

### • CONDOLENCES

To the friends and family of Lila Finlay, formerly of the Harkness Physiotherapy Department, who died on November 13.

To the family and friends of Elizabeth Barclay, nurses' aide on the 14th floor of PH for 30 years and associated with the Hospital for 47 years, who died on November 28.

To the family and friends of John Faulkner, retired Account Representative, Credit Department, Accounting Department, who died on September 23 here at the Hospital. Mr. Faulkner, who chose early retirement in 1966, had been employed at the Hospital for 20 years.

### • WELCOME

The Corneal Center is happy to welcome its new virologist, Dr. Tadasu Tokumaru, Assistant Professor of Ophthalmology, formerly of the Children's Hospital of Philadelphia.

### • NOTES OF INTEREST

Michael Granato, Foreman of the Electrical and Electronics Unit, Maintenance Department, bagged a bull moose weighing 750 pounds during his vacation in Ontario, Canada, last October.

DR. GEORGE R. MERRIAM, JR., Associate Professor of Clinical Ophthalmology, attended the 20th Annual Post-Graduate Course in Ophthalmology held at Syracuse University on December 5 and 6. He presented four papers: "The Management of Superficial Ocular Lesions," "Radiation vs. Surgery in the Treatment of Tumors of the Lids," and "The Treatment of Tumors of the Eye and Orbit, Parts I and II."

DR. ROBERT HOEHN, Assistant Professor of Clinical Surgery, presented his paper "Maintenance of ALS-Induced Immunosuppression by Corticosteroids and Other Immunosuppressive Agents" at the May 3 meeting of the American Association of Plastic Surgeons in San Francisco. During October, Dr. Hoehn attended the American Society of Plastic and Reconstructive Surgeons meetings in St. Louis where he presented a paper, "Human Skin Allografts in Epidermolysis Bullosa Dystrophica." Co-authors of this paper were DR. GEORGE F. CRIKELAIR, Professor of Clinical Surgery and Director of the Plastic Surgery Service, and DR. ANTHONY N. DOMONKOS, Clinical Professor of Dermatology, P&S.

DR. DAVID B. SPRINSON, Professor of Biochemistry, P&S, and Career Investigator of the American Heart Association, delivered the Brown-Hazen lectures on "The Pathway of Aromatic Biosynthesis and its Regulation" at the Division of Laboratories and Research, New York State Department of Health, Albany.

DR. RALPH J. VEENEMA, Attending Urologist, PH, Chief of Urology, Delafield Hospital, and Professor of Clinical Urology, P&S, participated in an international workshop on prostatic carcinoma held in Berlin, Germany, November 12-15. Dr. Veenema presented the Department of Urology's experience with radical retropubic prostatectomies for cancer of the prostate, biopsy technique for diagnosis, effects of cryproterone acetate (SH 714) on prostatic carcinoma and on the testes; the role of radiotherapy in prostatic cancer, and RNA & DNA synthesis in prostatic cancer cells.

A paper by DR. DANIEL M. PHILBIN, Assistant Attending Anesthesiologist, PH, on "Post-operative Hypoxemia: The Contribution of the Cardiac Output," won the first prize in the 1969 Residents' Research Essay Contest, sponsored by the American Society of Anesthesiologists. Dr. Philbin presented the paper to the Society's Annual Meeting last October 28 at the San Francisco Hilton.

On October 6, 1969, DR. DONALD WEST KING, Delafield Professor of Pathology and Chairman of the Department of Pathology, P&S, delivered the 1969 Rudolf Virchow Lecture, entitled "The Concept of Pathobiology" at the Academy of Medicine. On this occasion, he was awarded the annual Rudolf Virchow Medal and a scroll commemorating the event. The lecture was preceded by a dinner at which Dr. and Mrs. King were the guests of honor.

DR. BERNARD S. MOSKOW, Associate Clinical Professor, Division of Periodontics, D&O, presented "The Histology and Histopathology of Periodontal Structures" to the Cercle Du Parodontie, Paris, France, on September 6-8. He also lectured on "Integrating Periodontal Therapy Into a Plan of Total Oral Health

Care" at the Maryland State Dental Society Meeting in Silver Springs, Maryland, on September 29.

DR. JOHN K. LATTIMER, Director of the Urological Service, PH, and a Governor of the American College of Surgeons, participated in the annual meeting of the College at San Francisco during the first week in October as a panelist on "Congenital Abnormalities of the Genito-Urinary Tract and Their Treatment." He also served on the College's Committee on Undergraduate Education. During the second week in October, Dr. Lattimer attended the meetings of the Society for Pediatric Urology of the American Academy of Pediatrics in Chicago. He presented papers on undescended testes, exstrophy of the bladder, and in conjunction with Drs. TANNENBAUM, MELICOW, VEENEMA, and PRIESTLY, showed time-lapse motion pictures of Wilms' tumor cells growing in tissue culture.

DR. MOSHE MARKEWITZ, Assistant Urologist in the Urology Service, PH, presented a paper entitled "Germ Cell Kinetics in the Undescended Testis" on October 18 at the 38th Annual Meeting of the American Academy of Pediatrics' Committee on Urology in Chicago.

DR. THOMAS V. SANTULLI, Attending Surgeon, PH, and Professor of Surgery, P&S, presented "The Management of Intestinal Obstruction in the First Few Days of Life" at the American College of Surgeons Meeting—Postgraduate Course in Gastrointestinal Diseases on October 7 in San Francisco. Dr. Santulli also attended the 11th Congress of the Pan-Pacific Surgical Association in Honolulu, Hawaii, on October 20. He spoke on "Necrotizing Enterocolitis" and "Treatment of High Imperforate Anus," and participated in a panel on "Pediatric Surgery."

DR. HERNANDO CARDONA, Assistant Professor of Ophthalmology, P&S, was a special guest at the Venezuela Ophthalmological Society in Caracas, Venezuela, on July 26. He spoke on "A New Meshroom Keratoprosthesis." Dr. Cardona was also a guest speaker and delivered the opening lecture of the International Course of Ophthalmology at the Barraquer Institute, Barcelona, Spain, on October 7. His speech was entitled "Evolution of Prosthokeratoplasty." He was a panel participant at the Joint Post-Graduate Optometry-Ophthalmology Scientific Meetings, held in Madrid, Spain, and on October 9 he presented a paper on "Physiopathology of the Cornea where Keratoprosthesis is indicated." He also gave a course on artificial corneas at the American Association

MEDICAL LIBRARY

## All Alumni of Medical Center Invited to the 4th Joint Reunion

Alumni from the various units of Columbia-Presbyterian Medical Center are being invited to participate in the Fourth Joint Alumni Reunion, to be held at the Medical Center on May 1, 1970.

Plans for both professional and social activities promise to make this one of the most interesting and rewarding reunions ever. Invitations will be mailed shortly, and the Chairman of the Joint Meeting asks alumni from all units within the Medical Center to begin planning now to join old friends and classmates at the Joint Reunion, which will be followed, on May 2, by the annual P&S Alumni Day.

The reunion coincides with the 200th anniversary of the conferment of the first M.D. degree in America. The first graduate medical degree in the New World was awarded Robert Tucker in May 1770 by King's College Medical School, predecessor of Columbia University's College of Physicians and Surgeons.

The Medical Center, now entering its fifth decade, has

sent alumni from its various services, specialties and units, to all parts of the nation and, indeed, to remote corners of the world. More than a dozen independent institutions, some with roots and traditions dating back a century or more, were joined to create Columbia-Presbyterian Medical Center, and each has contributed to the creation of a single institution that has proved far more effective than the sum total of its parts. Thus, alumni from all of the institutions have reason to be proud of the Medical Center today and to share in a joint Medical Center reunion, to renew social and professional ties.

The concept of a Joint Reunion dates back to the late 1950's, when members of the Society of the Alumni of The Presbyterian Hospital—largest single alumni organization next to the College of Physicians and Surgeons—saw the need for bringing together alumni from the various groups which had met individually, year after year, decade after decade, in a chrono-

## Dr. Damrosch Appointed Medical Center Director

Dr. Douglas S. Damrosch

### Responsible for Problems Common to the Hospital and to the College

The Trustees of Columbia University and the Trustees of Presbyterian Hospital have created a new post at the Columbia-Presbyterian Medical Center—Director of the Medical Center.

The establishment of the new office and the appointment of Dr. Douglas S. Damrosch as its first incumbent were jointly announced January 11th, by Augustus C. Long, president of Presbyterian Hospital and Dr. Andrew W. Cordier, president of Columbia University. The appointment becomes effective immediately.

Dr. Damrosch had served previously as associate dean of the University's College of Physicians and Surgeons. He also served at one time as assistant vice president of P. H.

"The Director of the Medical Center shall have responsibility for such problems that are common to both Presbyterian Hospital and the College of Physicians and Surgeons, for the problems of each institution that may impinge upon the other institution, and for short- and long-range planning," it was announced.

Dr. Damrosch, in this new post, will be responsible to the Joint Administrative Board of the Columbia-Presbyterian Medical Center and will receive his instructions from the

board. Three Trustees of Presbyterian Hospital and three Trustees of Columbia University, in addition to the president of the Hospital and the president of the University, make up this board. Dr. Damrosch will serve ex officio as a member of the board.

The joint presidential announcement pointed out that the action represents the first dual medical school-hospital administrative arrangement—aside from the Joint Administrative Board—in the 49-year history of the Medical Center.

The newly created administrative arrangement, the announcement added, will not effect the corporate separateness of the two institutions.

Mr. Long and Dr. Cordier, in their announcement, also said: "In addition to past practice whereby the Executive Vice President of the Hospital conferred with the President of the Hospital, the Dean of the Medical Faculty with the President of the University, the Director of the Medical Center may confer with both presidents. Such consultations, insofar as they relate to matters involving both the Hospital and the College of Physicians and Surgeons, shall take place to promote smooth working relationships, a solution

## First Operating Room Technologists Graduated

In a brief but meaningful ceremony on January 9, four young women graduated from the first class of the Columbia-

Presbyterian School of Operating Room Technology, in Room 1-50, Presbyterian Hospital. Mrs. Gilda Gehm, In-

structor, addressed the students.

"... You have had many months of learning and doing, but you have only scratched the surface. There is so much more for you to accomplish. There will be new techniques to learn, you will have greater responsibility and you can go on to a career in nursing."

Mary I. Crawford, Director of Nursing, PH, and Associate Dean of Nursing, Department of Nursing, Faculty of Medicine, Columbia University, issued certificates to the graduates. She then invited the students, their families, members of the faculty and guests to enjoy the reception that had been planned.

The graduating students were Mrs. Joan Hawkins, Mrs. Shirley Newkirk, Mrs. Lorraine Livingston and Mrs. Juanita Stocks. Three of these students have already accepted

*Please turn to page two*

Posing for an informal class photo, the first four graduates of the School of OR Technology flank Mrs. Gilda Gehm, Instructor, (3rd from right). The graduates are, from right, Mrs. Joan Hawkins, Mrs. Shirley Newkirk, Mrs. Juanita Stocks, and Mrs. Lorraine Livingston (1st from left). Dr. Robert H. E. Elliott, Jr., Associate Dean (background), and Beatrice Langmuir, Assistant Director of Nursing for O.R. (2nd from left), also played a role in organizing the course.

CAN SPRING BE FAR BEHIND? Appearing small and open to the glance, the tennis courts and the children's playground await the coming of spring next month. This grayish scene of desolation was photographed from Neurological Institute on January 22, in five-degree weather.

## Building A Bridge of Books...

Used medical books don't fade away at the Columbia-Presbyterian Medical Center; they are carted off by the Overseas Book Committee of P&S. Stan Link (left) and Lawrence Johnson, both second-year students, are preparing medical texts for shipment to schools in developing countries.

## BLOOD BANK DONATES \$93 TO HELP BIAFRAN CHILDREN

"It was really Nancy Treacy, research assistant to Dr. Vincent Freda, Obstetrics and Gynecology, who started it all," said Mrs. June Rutkowski of the Blood Bank staff.

Mrs. Treacy wanted to do something to help the Biafran children and passed this thought on to Erika Awer and the Blood Bank staff. They, in turn, decided to use a sizeable portion of the monies collected for their annual Christmas

party to help these children.

As a result, \$93 was obtained and given to Mr. Edwin M. Barton, Director of Student Activities, P&S, who is in charge of a program to treat and rehabilitate Biafran children. Mr. Barton's secretary was delighted to receive this money and hoped it might spark an interest in others who might want "to do their own thing" to help these youngsters.

## Dr. Donald King To Help Evaluate Manpower Needs For NIH Committee

Dr. Donald West King, Delfield Professor and Chairman of the Department of Pathology, P&S, has been appointed to the Research Career Award Committee of the National Institute of General Medical Sciences, a component of the National Institutes of Health.

Research career development awards support promising investigators for careers in independent research. Dr. King, with other members of the Committee, will review applications for career development awards and advise the Institute on manpower needs in health sciences.

## Dr. Masland Given Advisory Position

Dr. Richard L. Masland, Professor and Chairman, Department of Neurology, P&S, and Director of Neurology Service, PH, has been appointed Chairman of the Public Health Service Advisory Committee on the Epilepsies,

under the Department of Health, Education and Welfare. The Committee advises HEW on research training and organized services in the field as an aid to the development of programs on epilepsy.

## Technologists Graduated

*Continued from page one*

positions at Presbyterian Hospital. The fourth, Mrs. Stocks, will return soon after the birth of her first child.

These four young women were unanimous in their praise of and affection for Mrs. Gehm (pronounced gem): "Mrs. Gehm is this course." They declared that whatever they had accomplished, they owed to Mrs. Gehm's warmth and understanding.

One of the girls summed it up by saying, "Mrs. Gehm is producing little gems!"

## Benefit Dinner

The President of Columbia University, Andrew W. Cordier, and Mrs. Cordier were the guests of honor at the 15th Annual Viennese Opera Ball at the Waldorf Astoria on January 23. The dinner-dance was a benefit for the Margit Bokor-Norman Scott Memorial Fund for Cancer Research at Columbia University.

Among the patrons of the event were Dr. H. Houston Merritt, Dean of the College of Physicians and Surgeons, and Mrs. Merritt.

## Dr. Taylor Gets Award At Albany

Dr. Howard C. Taylor, Jr., Director of the International Institute for the Study of Human Reproduction, and former Professor and Chairman, Department of Obstetrics and Gynecology, was honored recently by the Albany Medical College. He received the 13th Annual Honorary Lecture Award and presented a paper on November 6.

The award was presented by Dr. Harold C. Martin, Chancellor of Union University. Dr. Taylor was introduced by Dr. Theodore King, Chairman of the Department of Obstetrics and Gynecology, Albany Medical College, and former Chief Resident at Sloane Hospital, and delivered a paper entitled "The Physician and the Population Problem."

Dr. Howard Taylor

It will be of interest that the late Dr. Allen O. Whipple, former Professor of Surgery at P&S, received this honorary lecture award in 1962.

## Shade McGee Lives On

Shade McGee worked as a porter in the Babies Hospital unit of Presbyterian Hospital for about eight years. During those eight years he became known to patients, doctors, nurses and employees for his gentle and kindly manner. He was especially loved by the young cardiac patients.

Shade died suddenly in August. His friends collected money to buy some flowers for his funeral, but they found they had collected much more than they expected. It was resolved to use that money to purchase a portable television set for the enjoyment of the youngsters he cared so much about... the cardiac patients.

Nine-year-old Tracy Mitchell, recuperating from cardiac surgery, is shown enjoying the Shade McGee Memorial Television Set.

## Evening Lectures Sponsored By Anesthesiology Department

The Department of Anesthesiology is sponsoring a series of evening lectures held in the 4th floor amphitheatre, Babies Hospital, January 26 through February 19, from 5:00 to 6:00 p.m.

The five lectures already given were: January 26, *Neurophysiology of Neuromuscular Transmission*, Joannes H. Karis, M.D., Associate Professor of Anesthesiology; January 27, *Clinical Conference*; January 29, *Pharmacokinetics of Neuromuscular Blocking Agents*, R. Wiklund, M.D., Assistant Resident in Anesthesiology; February 2, *Types of Neuromuscular Block*, Douglas Waud, M.D., Assistant Professor of Pharmacology, Harvard

Medical School; February 3, *Clinical Conference*.

The remaining seven lectures of the series, to be given in February, are: February 5, *Cholinesterases*, Eugene Pantuck, M.D., Assistant Professor of Anesthesiology; February 9, *Clinical Use of Muscle Relaxants—Part 1*, Ronald L. Katz, M.D., Associate Professor of Anesthesiology; February 10, *Clinical Conference*; February 12, *Clinical Use of Muscle Relaxants—Part 2*, Dr. Katz; February 16, *Myasthenia Gravis and Other Neuromuscular Diseases*, Dr. Karis and Peter Horowitz, M.D., Assistant Resident in Anesthesiology; February 17, *Clinical Conference*; February 19, *Panel Discussion*.

## Benefit Card Party Scheduled

The 12th Annual Benefit Card Party for Nursing Students' Scholarships Fund will take place on Wednesday, April 22, 1970 at 1:30 p.m. in Maxwell Hall. Mrs. Cyrus Vance is this year's Honorary Chairman.

Mrs. Alfred Steiner, Chairman of the Benefit, will be assisted by Mrs. R. H. E. Elliott, Vice Chairman; Mrs. Russell N. Carhart, Secretary; Mrs. Stanley Bysshe, Treasurer; Mrs. Arthur L. B. Richardson, Corresponding Secretary.

Committee Chairmen include: Miss Cecile Covell, Sponsors; Mrs. Charles S. Neer II, Mrs. Edwin Cox, and Mrs. Milton Phillips, Prizes; Mrs. T. D. Orr, Printing; Mrs. Everett Bragg, Louisa Kent, and Laurie Verdisco, Publicity; Roberta Spagnola, Hospitality.

Faculty representatives are Dr. Mary Crawford and Miss Helen Pettit. Barbara Browning and Madelyn Maniscalco will represent the students.

Over the past eleven years, financial assistance for as many as two hundred students has been made possible by the proceeds of the card party.

The committee is requesting contributions of trading-stamp books and stamps of any brand. The books may be sent to: Benefit Bridge, c/o Miss Roberta Spagnola, Maxwell Hall, 179 Fort Washington Avenue, New York, N. Y. 10032, or they may be left at the Nursing Office, Harkness Main Floor. Any contributions you can send will be greatly appreciated by the Committee and ultimately by the students.

## PH Dietitian Elected

Donna Lu Johnson, Chief Dietitian, Food Service, has been elected President for 1970-71 of the Greater New York Dietetic Association, a member organization of the American Dietetic Association. Approximately 25 staff dietitians at Presbyterian Hospi-

tal belong to these organizations.

Miss Johnson received her B.S. from the University of Nebraska in 1950 and went on to serve her internship in dietetics at Presbyterian Hospital in 1951. She has been on the staff ever since. She received her Master's degree from Teachers College, Columbia University, in 1954.

# Efficiency of Paraplegics Increased by Measured Stride of S.C.R.A.M.

Should paraplegics be trained to crutch-walk and how much bracing should they have?

Simple though they sound, these questions have been the source of much controversy in rehabilitation medicine.

Now the controversial issues may be settled on a scientific basis, thanks to a device developed at Columbia-Presbyterian Medical Center by two rehabilitation specialists.

The inventors of the apparatus, Dr. Paul Corcoran, Assistant Attending Physician of Rehabilitation Medicine at P.H., and Dr. Hyman Dubo, then Chief Resident in Rehabilitation Medicine here, designed it for measuring the energy cost both of crutch-walking and wheel chairing at constant speeds. Dr. Dubo has since moved to Winnipeg to assume an assistant professorship at the University of Manitoba.

Described as Speed Controlled Respirometer for Ambulation Measurement and affectionately known as S.C.R.A.M., the device trundles along at the patient's side at a steady, preset rate of progress while collecting the air exhaled by him and measuring its volume. The present model of SCRAM requires the presence of an operator, who serves as its human motor and also regulates its speed. One of SCRAM's wheels is equipped with a clicking device connected to one of the operator's two earphones. He can keep the speed of the apparatus at a constant rate by synchronizing the clicks of the wheel with the clicking of an electronic signal generator heard in his other earphone.

As can be seen in the illustration, the subject of the test is "connected" to the SCRAM with lightweight plastic tubes for inspired and expired air. The expired air can be diverted to one of several large balloons located at the front of the apparatus. Gas samples can be easily transferred from the balloon to a mercury flask for later oxygen analysis. The amount of oxygen used up by the subject accurately reflects the energy required for various types of locomotion.

The SCRAM method was initially tested on a group of paraplegic students at the Joseph Bulova School of Watchmaking in Queens. The results of the study have so far provided a scientific explanation why most paraplegics prefer the wheel chair to crutches. The latter require two and a half times more energy. The energy cost of wheel chair propulsion, according to the results obtained by SCRAM, is very close to the energy out-

Dr. Corcoran's Speed Controlled Respirometer for Ambulation Measurement in a demonstration walk.

put of persons without handicaps, walking at the same speed.

These findings, favoring the wheel chair as the more efficient means of locomotion, should not relegate the crutches to the closet, Dr. Corcoran emphasized. "Being on your feet is synonymous with good health. If teaching a paraplegic to crutch-walk allows him to say to himself, 'I made a comeback!' the effort is well worth it."

"Furthermore," Dr. Corcoran added, "crutch-walking, by building up a paraplegic's arms and shoulders, makes him a better wheel chair user—for instance, when the wheel chair has to be taken in or out of the car."

The long-range benefit of SCRAM, Dr. Corcoran said, will be in scientifically and precisely evaluating improvements in mechanical aids for the paraplegics, ranging from modifications in wheel chair design to a variety of new ideas for braces. These include plastic components for long-leg braces and hydraulic assistance to hip flexion.

The increasing cooperation of engineering sciences and medicine that characterized the 1960's holds out the promise of further improvements for paraplegics in this decade. It will be SCRAM's function to express these improvements in terms of reduced energy cost and to assist in further bettering their design.

## Former Detective Joins P. H. Security Force

Mr. Adam Lang was appointed Assistant Security Supervisor, Protective Department, effective January 1, 1970. He is supervisory assistant to Mr. James Sheridan, Security Supervisor.

Mr. Lang's background would appear to make him uniquely qualified for his post.

He served with the U. S. Army overseas from 1941 to 1945, holding the rank of Sergeant.

Shortly after the end of World War II, he joined the New York City Police Department and walked the beat for several years. For about two

Adam Lang

years he served with the mounted police. He then was advanced to plain-clothes detective and had varying assignments in the missing persons bureau and the narcotics division.

## P&S Man Featured In Art Show

Erik Stephenson, a laboratory technician at P&S, was one of twelve artists who participated in an exhibition at Columbia University's Low Library last November. The show, entitled "New Black Artists," was organized by the Harlem Cultural Council in cooperation with The School of the Arts and The Urban Center of Columbia University. More than 50 works of art, including oil paintings, sculpture, and mixed media, were displayed.

Mr. Stephenson attended the Jamaica School of Art, the Art Students League of New York, and the Edinburgh College of Art in Scotland. His works were presented in a

Erik Stephenson

one-man show at Bard Hall in October, 1968. "New Black Artists" included three of his oil paintings: *To Phyllo-Changes; Self-Portrait, Mezzatendencias; and To Ave—Come Tripping as We Go on Light Fantastic Toe.*

## National Thyroid Group Bestows Award On Dr. Werner For His Gland Research

Dr. Sidney C. Werner, Professor of Clinical Medicine, P&S, and Attending Physician, P.H. was presented with the distinguished service award of the American Thyroid Association at its annual meeting in Chicago, Illinois, in November, 1969.

The award is bestowed annually by the Association on a distinguished scientist in North America who has contributed significantly to the knowledge of the physiology and diseases of the thyroid gland. And Dr. Werner has indeed contributed significantly.

In the area of Graves' disease (exophthalmic goiter), he challenged and disproved the pituitary theory of pathogenesis of the disease, and suggested the disorder might be intrinsic to the thyroid. This latter view is now generally under serious renewed consideration. He provided a specific test for the disease, the T3 suppression test; he also introduced the 24-hour T3-4 uptake test (with Dr. E. H. Quimby), and described a previously unrecognized variant of the disease (Euthyroid Graves' disease with active changes).

Dr. Werner reported elevation of triiodothyronine (T3) concentration serum (as well as increased T4 concentration) in the disease (with Dr. J. Nauman), but also described the phenomenon of increased concentration of T3 in plasma without increase in T4 concentration in patients with autonomous nodules of the thyroid. These latter patients have a borderline clinical picture of hyperthyroidism.

Dr. Sidney Werner

He provided an effective medical therapy, with immunosuppressive doses of prednisone, for the emergency state created by the advanced eye changes of Graves' disease, and observed therefrom that prednisone caused increased formation of thyroxine binding prealbumin (TBPA) and decreased formation of thyroxine binding globulin (TBG) (with Dr. J. Oppenheimer).

He pointed out the marked biologic variation in sensitivity of the hyperthyroid gland to radiation effect from T3-4 treatment, and described the phenomenon of late hypothyroidism consequent to T3-4 therapy, and devised a classification of the eye changes of Graves' disease that permits different patient series to be compared on an objective basis.

Dr. Werner's published works include *The Thyroid* (Harper and Row), third edition in press, *Thyrotropin*, published in 1963, and 138 articles.

## New Computer System Helps Process Patients

Presbyterian Hospital's new computer system, ABCD, has made substantial progress since eight patients were admitted via the system last October 28. ABCD stands for Admitting, Bed Control, and Discharge. The ABCD System is the first of three related systems planned for use throughout the Medical Center by 1971.

The new computer, currently in use at Babies Hospital unit, is busy compiling information about each patient, which will be stored in a Patient Master File. This information, corresponding to entries on the first page of the Admission and Discharge Sheet, reflects the status of the in-patient population. Data on new patients as well as those already in the Hospital is being stored. The computer also keeps a record of each Hospital bed: its location, characteristics, and availability. An Activity Report File summarizes the Admissions, Transfers and Discharges for each day. This file is used to prepare a daily report and then updated as it accumulates the next day's history.

Ann Cavanaugh, Unit Manager of Neurological Institute, admits a patient via the new ABCD computer system.

"This system has greatly increased the speed and accuracy with which patient information is processed," explains Dr. William A. Bauman, Director of Medical Data Processing. Through terminals in the Babies Admitting Office, nursing stations, and the addressograph room, patient information is immediately available to authorized personnel.

When completed, the computer network will include storage and retrieval of medical data and laboratory reports on each patient, releasing skilled technicians, nurses, and doctors from messenger and clerking duties. Equally important is the possibility of shortening Hospital stays for those patients awaiting laboratory test results.

## A Wealth of Information On Process of Learning Made Heinrich Waelsch Lecture Memorable Event

Most of us have wondered exactly how the human brain retains learning and why some students seem to learn faster than others. Some stimulating thoughts on these questions were shared with an overflow audience at Columbia-Presbyterian Medical Center by Dr. Seymour S. Kety, Professor of Psychiatry at Harvard University. Dr. Kety's hypothesis about learning, presented as the First Heinrich Waelsch Lecture in Neuroscience, is so interesting that it is summarized here some months after Dr. Kety explained it in the Psychiatric Institute Auditorium last fall.

His presentation on "Protein and amine metabolism in the brain: the basis of some speculations regarding learning" dealt mostly with research conducted with animals. The insights and conclusions from these studies are applicable to man as well.

Dr. Kety's overall theme was that the mechanism of the learning process is related to survival. For example, the more an animal needs certain information to survive, the better the animal will learn it. To explain this relationship, Dr. Kety first marshaled many lines of evidence, now almost compelling, that norepinephrine, a hormone secreted by certain neurons in the brain, plays an important role in the central nervous system by promoting activa-

tion or arousal. Norepinephrine is secreted when a threatened animal prepares for "fight or flight" or, in non-threatening situations, for behavior requiring exertion or concentration.

To link norepinephrine to learning processes, Dr. Kety reminded his audience that psychologists have long been aware of the essential role that emotional states play in the process of learning. The intensity of feeling associated with an experience determines both the acquisition and retention of this experience in memory. It may thus be assumed that an inter-play exists between the activity of the biogenic amines, such as norepinephrine, serotonin, and dopamine, (or similar trophic substances) and the reinforcement and consolidation phases of a learning experience. For learning to have survival value, Dr. Kety pointed out, it is necessary to eliminate myriad experiences that are of no consequence, those that are recognizable as familiar and not deleterious. When a new event occurs, it must first be classified. According to Dr. Kety's hypothesis, this new event can be held temporarily by electrical mechanisms, but its consolidation into a learning experience requires the participation of biogenic amines. These are released when the animal is aroused.

It is well established that learning in animals involves both short-term and long-term phases, and that only long-term learning is affected by interference with such processes as biosynthesis of protein or nucleic acid.

Dr. Kety stated that this theoretical model of learning process is supported by recent anatomical discoveries, for example, the detection of non-specific afferents, or nerve supply lines, to the gray matter of the brain. These afferents encircle and wrap around apical dendrites, hairlike appendages of brain cells that receive specific messages from outlying nerve endings. According to the theoretical model of the learning mechanism, it would be the function of these nonspecific afferents to secrete biogenic amines (or other trophic substances) that would serve to consolidate memory of the experience once the animal had properly classified its importance through its emotional reaction. This could come about through the influence of these biogenic amines on the processes of protein synthesis and nucleic acid synthesis, which form the biochemical basis of learning. Dr. Kety concluded that the metabolism of amines and proteins deserves continued careful scrutiny for the role it plays in the process of learning.

## DR. DAMROSCH . . .

*Continued from page one*

of problems pending between the Hospital and the College of Physicians and Surgeons and shall be in conformity with actions taken by the Board."

Dr. Damrosch, the new director, was born February 9, 1915, in New York City. He attended Columbia College, receiving the B.A. degree in 1937. He was graduated from the College of Physicians and Surgeons with the M.D. degree in 1940. He became associated with Presbyterian Hospital in 1941 when he was named as assistant resident in pediatrics at Babies Hospital. During World War II he was on active duty with the U. S. Navy.

From 1965 to 1966 Dr. Damrosch served as assistant vice president of Presbyterian Hospital. In 1966 he was director general of the Mary Imogene Bassett Hospital in Coopers-town, N. Y.

Since 1947 Dr. Damrosch has held numerous appointments in the Department of Pediatrics at the College of Physicians and Surgeons. In

1967 he was named associate professor of pediatrics, a post he still holds. From October 10, 1967, to December 31, 1968, he served as assistant dean of the medical school. He was named associate dean on January 1, 1969.

Dr. Damrosch is a member of numerous medical societies. In 1965-66 he was a consultant to the Office of the Commissioner, Welfare Administration, Department of Health, Education and Welfare. In 1965 he was appointed a consultant to the Division of Medical Care Administration, United States Public Health Service, a position he still holds.

The new director is also a member of the new Columbia University Senate, and serves with the Senate's executive committee.

He is married to Eleanor Southern Damrosch. They have three daughters, Mrs. William W. Kerrigan III, Mrs. Frank MacMurray, Jr., and Mrs. Andrew S. Krottinger, and one grandson. Dr. and Mrs. Damrosch live in Fort Lee, N. J., and Sherman, Conn.

## Interview With Dr. Lythcott Broadcast To Africa By VOA

Dr. George I. Lythcott, Associate Dean of the College of Physicians and Surgeons, was interviewed by The Voice of America for a broadcast heard in Africa on December 2. The occasion was the 100-millionth vaccination, administered in Bourbon, Niger, on November 30, in a three-year campaign to eliminate smallpox in 20 West and Central African countries. The program, supported by the United States and coordinated with the World Health Organization, is a part of that agency's plan to eradicate smallpox from the world by 1977.

As the first Field Director of the African program, Dr. Lythcott stated that prior to 1966, when the program began, several thousand cases of smallpox per year had

Dr. George Lythcott

been reported in West and Central Africa. But, he continued, "According to the most recent WHO reports of disease incidence in this area, there have been no new cases since September 13." More than 80 per cent of the area's residents have now been vaccinated.

## Assistant Comptroller For PH

Philip E. Reville, Chief Accountant of The Presbyterian Hospital, was promoted to Assistant Comptroller effective November 1, 1969.

Philip Reville

Mr. Reville was graduated from Syracuse University's School of Business Administration and became a Certified Public Accountant in 1954. Before coming to the Medical Center he was employed by Haskins and Sells, a New York City firm of Certified Public Accountants, and by the Nestle Company in White Plains, New York. He joined the Hospital staff as Chief Accountant in 1964.

Mr. Reville lives in Riverdale, New York, with his wife and four children.

# News of Nursing

Margaret Tappen, R.N., was voted "Miss Surgical Service" at the Surgical Staff Christmas Party on December 17. Dr. John F. Prudden, Associate Attending Surgeon, P.H., and Associate Professor of Clinical Surgery, P&S, made the announcement, and Dr. Frederic P. Herter, Acting Director, Department of Surgery, awarded the "crown."

Margaret Tappen

Miss Tappen is a graduate

of the Long Island College Hospital (now Downstate Medical Center). She said, "I worked in just about every hospital in New York before coming here. When I arrived 26 years ago in 1943, I knew this was the place for me."

She originally came to the Medical Center to help out for one day. "That day never ended," Miss Tappen stated. "I have been here ever since."

\* \* \*

Fern Kummer participated as group discussion leader in an inter-disciplinary workshop sponsored by Teachers College, Columbia University, December 12 and 13. Her topic was "Identifying Suicide Potential."

\* \* \*

The Nursing Department of Neurological Institute unit, in conjunction with the Medical, Social Service and Physical Therapy Departments, will present a workshop on the

care of the Parkinson patient, March 5, from 8:00 to 5:00, in the Black Auditorium. The emphasis of this workshop will be on newer concepts of treatment and care.

Staff members of the Hospital are cordially invited to attend. There is no fee. Please bring your I.D. card.

\* \* \*

Dr. Ann M. Earle, Assistant Professor of Nursing, Department of Nursing, Faculty of Medicine, Columbia University, and Director of Graduate Program, Psychiatric Community Mental Health Nursing, participated in a conference on "The Responses of Nursing to Emerging Patterns of Psychiatric Care." This conference, sponsored by the Department of Mental Hygiene, New York State, was held on January 15-16, at the McAlpin Hotel.

Dr. Earle's discussion was titled "The Nurses' Preparation for Functions in Community Mental Health Centers."

## Helen Henry Appointed to Executive Post

Helen D. Henry, R.N., Administrative Assistant in the Nursing Service, was appointed to succeed Margaret Wells as Assistant Director of Nursing, Personnel Services, effective January 1, 1970.

Miss Henry was born in Chattanooga, Tennessee, and received her diploma in nursing from Jackson Memorial Hospital School of Nursing, Miami, Florida, in 1952. She received her B.S. (Nursing) from the University of Miami, Coral Gables, Florida, in 1959 and her M.A. (nursing service administration) from Teachers College, Columbia University, in 1964.

She held various posts in nursing before coming to Presbyterian Hospital in 1959. She told us that one of her most interesting jobs was at

the Homestead Air Force Base, with the Strategic Air Command, in Homestead, Florida, from 1956 to 1957, where she served as a civilian nurse.

She joined the Department of Nursing at Columbia-Presbyterian Medical Center as staff nurse, Vanderbilt Clinic, advanced to head nurse, Admitting Emergency, in 1960, and in 1961 was appointed to the position of Administrative Assistant.

Miss Henry brings to her new post her years of experience relating to various needs and skills necessary to specialized patient care.

Helen Henry

## Communication Non Stop Launched By R.N.

Mrs. Rosemary Maynard, R.N., decided single-handedly to fill the communication gap.

As Administrative Assistant (Nursing), at the Neurological Institute unit, she had accumulated a variety of complaints. They came from doctors, nurses, laboratories and services and stemmed from a breakdown within the hospital complex in communications of one sort or another.

She resolved to undertake a program to improve communications. She was convinced that, in the end, the patient would really be the one to suffer from any communication gap.

And so "Communication Non Stop" was launched.

A concentrated effort was made to get people to *listen, write it down, and pass it on.*

A series of three posters, in a humorous vein, was issued for appropriate posting, and colorful buttons reading "I Communicate" were given out for all to wear.

Mrs. Maynard visited each department on a pre-arranged basis and gave a series of nine talks, individualized for each of the services involved: Neurology, Neuro-surgery, Laboratories, Nursing, Social Service, Maintenance, X-ray, Laundry and Housekeeping.

"Everyone I spoke with was most cooperative and, as a representative of the Nursing De-

partment, I had an opportunity to 'see the other side of the coin,'" said Mrs. Maynard.

She is also convinced that a follow-up program should be initiated, perhaps on a monthly basis, to stimulate continued interest and to perhaps solicit further suggestions or opinions for further interchange of ideas.

Concluded Mrs. Maynard: "If this program does nothing else, it is at least one small step toward the ultimate goal of better patient care. Perhaps other units of the Hospital will be encouraged by my efforts on behalf of Neurological Institute to start similar projects of their own."

## Margaret Wells Completes 41-Year Service to Nursing

Margaret Wells, assistant director of nursing personnel service, retired in January, completing a 41-year career of distinguished service to the Columbia-Presbyterian Medical Center.

The daughter of a Presbyterian missionary, Miss Wells was born in Chefoo, Shantung Province, China. She came to the United States when she was 12 years old.

She received her B.A. in anatomy, with minors in education and language, from the College of Wooster, Wooster, Ohio, in 1926. She received her R.N. degree from the Presbyterian Hospital School of Nursing in 1929, and her M.A. in guidance and personnel from Teachers College, Columbia University, in 1936.

Her career at the Hospital was interrupted by World War II, when she served the U. S. Army on an Army troop ship, plying the Atlantic from the European Theater to the United States, from 1943 to 1945. She retired from the Army Reserve Corps in 1965, holding the rank of Major.

Miss Wells's professional memberships include American Nurses Association, N. Y. State Nursing Association, N.Y. City Nursing Association, National League of Nursing and American Red Cross Nursing Service. She was assistant treasurer of the Alumnae Association of the School of Nursing from 1934 to 1967, and Treasurer from 1967 to the present.

Her colleagues in the Department of Nursing are of one voice when describing the kind of person Miss Wells is ... "a gregarious person ... her friendships are international in scope; people from all over the world seem to relate to her, and she to them ... she has the true Christian spirit, if she has anything to

say about anyone, it is good; she has never sought, or found, anything to criticize."

Miss Wells's early career was as a head nurse on the second division, surgical, under the leadership of Dr. Hugh Auchincloss, Sr., and Dr. John M. Hanford, and in association with many fine nurses and doctors of that division.

One of Miss Wells's most enduring relationships was her friendship with the late Helen Young, director of Nursing from 1921 until her retirement in 1942. When Miss Young died in 1967 at the age of 93, Miss Wells wrote a memorial tribute.

She has served as a deacon and is a very active member of the Madison Avenue Presbyterian Church. She has always enjoyed traveling and has traveled abroad and throughout the United States. She has a brother, one niece, two nephews, and one great-nephew, to whom she is very devoted.

Retirement plans? If you guessed traveling you guessed correctly. Miss Wells is planning a trip to the Far East which will include stops in Tokyo, Hong Kong and Taipei.

She will make her home in Fort Lee, N. J., near her family in Leonia, and she hopes to find new and challenging adventures.

On January 8, Miss Wells was honored at a reception, held in Presbyterian Hospital, 1-50. Administrators, colleagues, friends and family, all gathered to wish her every happiness in the coming years. She wishes to thank everyone in every department at the Hospital for their untold thoughtfulness and cooperation, and the Board of Trustees for their wise and generous planning for each of us in this great hospital family.

Framed by nurses bearing coffee cups, Margaret Wells accepts wishes for a happy future at her reception.

# These Persons Are Retiring From Presbyterian Hospital

## Mrs. Dorothy Dahn

Mrs. Dorothy Dahn, Admitting and Information Clerk, HP Front Office, retired in September, completing 12 years of employment at the Medical Center.

Apparently Mrs. Dahn doesn't take kindly to inactivity. When asked how she liked her job she said, "I've enjoyed being here and hate to leave. It's so busy!"

Although born in Indiana, Mrs. Dahn has lived in New York City for the past 16 years. She has a son and daughter, both married, and three grandchildren.

## Mrs. Virginia Richardson

Mrs. Virginia Richardson, Maid, Housekeeping Department, retired in June, after 22 years at the Medical Center. The Seneca, South Carolina, native has one daughter, three grandchildren and two great-grandchildren. Many years ago she had an unusual hobby—glassblowing. She was also a den mother for the Cub Scouts.

Mrs. Richardson enjoyed her many years at the Hospital

and spoke warmly of her relationship with her supervisors and the staff of Housekeeping.

## Mrs. Jennie Cuniff

Mrs. Jennie Cuniff, Nursing Aide, Sloane Hospital, retired in October, completing 33 years of employment at the Medical Center.

When she came to work in 1936, Jennie was assigned to the nursery and worked on the 15th and 16th floors of Sloane for 16 years. In 1946 she dressed the 100,000th baby born in the Sloane Hospital.

She very obviously enjoyed her work and, although she has no children of her own, she has a very kindly and motherly way, especially when she speaks of "her babies."

For the past 17 years, she has been working the other end; tending the new mothers on HP 8. "I have seen many celebrities and their babies in my day," she added.

Jennie was born in County Mayo, Ireland, came to the United States in 1926 and has lived in New York City since that time.

## Robert Zoettlein

Robert Zoettlein, painter, Maintenance and Construction, retired last November, completing 23 years of employment at the Medical Center.

Mr. Zoettlein has two daughters, nine grandchildren, and one great-granddaughter. His immediate post-retirement plans include a trip to California to see his great granddaughter for the first time. He will then journey to Canada, Alaska and probably Europe.

Robert Zoettlein Lizzie Simpson

## Lizzie Simpson

Lizzie Simpson, maid, Housekeeping Department, PH 12, retired in October, completing 15 years at a job she really loved—serving people. "As long as I am helping someone I am happy," said Mrs. Simpson.

Retirement plans include getting involved in church-community work with her daughter—again serving people. Her daughter also hopes to launch her on a traveling stint, either to Puerto Rico or the "Islands" for a bit of a vacation.

## Mrs. Gertrude Purdy

Mrs. Gertrude Purdy, receptionist, Maxwell Hall, retired in October, completing a 13-year period of employment.

Mrs. Purdy was born in upstate Monroe, New York, and now lives in New York City. She loves to read and walk and added, "I'll also be catching up on some sleep now that I don't have to get up at 6:00 a.m." Her future plans include a trip to California, and then she hopes to go to Europe.

## Mrs. Henrietta Ames

Mrs. Henrietta Ames, Administrative Assistant in the Department of Rehabilitation Medicine, retired in December, completing a 20-year association with Columbia-Presbyterian Medical Center.

She found it particularly rewarding to see the Department of Rehabilitation Medicine grow and develop, under the direction of Dr. Robert C. Darling, from its inception as a separate department in 1952, to its current status as an active, fruitful service.

Mrs. Ames said, "I've enjoyed these years at the Hospital immensely, but I am looking forward to retiring."

Mrs. Ames has two children and three grandchildren.

Mrs. Ames and Mrs. Purcell

Her successor is Mrs. Mary Purcell, a very attractive young woman, who has been with the Medical Center for three years. Mrs. Purcell worked as a secretary in the School of Public Health before becoming assistant to Mrs. Ames.

## Mrs. Florence Schnurr

Mrs. Florence Schnurr of Housekeeping Service retired in December, after completing 31 years of service as maid in the Eye Institute unit.

Mrs. Schnurr lives in Washington Heights. She has two daughters and seven grandchildren. Her sister, Lillian Austin, works in the Record Room.

In her leisure hours she enjoys reading and is looking forward to spending whole summers at Greenwood Lake, N. Y., where she has a summer home, instead of "just a couple of weeks."

Mrs. Purdy Mrs. Schnurr

## Mrs. Anna Kelly

Mrs. Anna Kelly, assembly clerk in the Record Room, retired in December after 23 years of employment at Presbyterian Hospital.

Mrs. Kelly stated, "It was 23 years of rewarding work and a friendly atmosphere. You know, there's a famous TV comedian who always says, 'the Miami Beach audience is the greatest audience in the world,' but believe me these people here in the Record Room are, in my opinion, the greatest audience in the world."

Mrs. Kelly and her husband live in Washington Heights. They have five children and eight grandchildren.

Mrs. Kelly Mrs. Hanford

## Mrs. Mary Hanford

Mrs. Mary Hanford, chest survey technician in the P.H. X-ray Department, retired in December. She completed 18 years of employment.

Mrs. Hanford has been very happy in her job and one of her co-workers volunteered, "Mary gets along with everybody."

She lives in Manhattan and has three children and 11 grandchildren.

Mrs. Hanford is quite active in her community, and is currently president of the Ladies' Auxiliary of the Inwood-Manhattan Little League, vice president of Public School 52 Adult Council, and Chairlady of the March of Dimes, 34th Precinct Community Council.

## Mrs. Jessie Henry

Mrs. Jessie Henry, attendant, Food Service, retired in January, completing a 13-year tenure of employment at Presbyterian Hospital.

Mrs. Henry likes to play bridge and sew in her leisure time.

Retirement plans include a European jaunt, with her husband, in the summer.

Mrs. Henry Mrs. Fleischman

## Mrs. Elsie Fleischman

Mrs. Elsie Fleischman, a Department of Urology technologist, retired in January after a 28-year association with Columbia-Presbyterian Medical Center that began when she was a Red Cross volunteer here in 1941. In 1945 she was employed as a technician in Basal Metabolism and subsequently worked in several other laboratories prior to coming to the Department of Urology.

Mrs. Fleischman was born in Germany but has lived in New York City for many years. She has one son and three grandsons.

She is rather unhappy that she must retire and will probably take a job at Columbia University because "I couldn't think of staying home and just sitting."

Other retirement plans include traveling to England, to visit her 90-year-old mother-in-law, and to California, Colorado and Connecticut; the latter to visit her grandchildren.

## Miss Sneden Records 35th Anniversary

Pearl E. Sneden, Secretary to Mr. John G. McCullough, Comptroller, recently completed 35 years of service to P.H.

Miss Sneden, who lives in Manhattan, writes poetry. Her poem "Service," which reviews her 35 years at the Medical Center, appears below.

Pearl Sneden

## "Service"

a poem  
by Pearl Sneden

Thirty-five years of service,  
well, really that's quite a few.  
I've seen some things and I've  
learned some things about  
things I never knew.

Is hospital work appalling  
because we witness pain and  
strife?

I have never found it so, it has  
been a way of life.

I have come to know each  
building, the tunnels and the  
halls,

In the beauty of the garden  
I have heard the birds' sweet  
calls.

I have thrilled to the flag on  
our building, flying free and  
gay,  
But I wept when I saw it lowered  
that one November day.  
I have knelt alone in the  
chapel, there many a prayer  
I've said.

And I found peace and comfort  
there, my heart has  
bowed its head.  
I have seen us grow and pros-

per, watched us lead the way,  
For I've typed reams of state-  
ments and I'm aware of what  
they say.

I've watched as we built new  
buildings, saw us grow in  
space and size,  
Now we've installed com-  
puters, automation's our latest  
prize.

Do I fear all this progress,  
will we be all we ought to be?  
I never expect perfection,  
there's precious little perfec-  
tion in me.

The real pride of this place is  
its people, many have called  
me, "Friend."

And I ache when I think of  
those I've loved who won't  
walk this way again.  
Some who came here as mere  
children now have children of  
their own,  
Some of them call me "Auntie,"  
Dear Lord, how the years have  
flown.

Thirty-five years, now time  
moves swiftly, why repine  
over my unguined goals,  
For I've learned that in earn-  
ing our daily bread, we may  
sanctify our souls.

# Study of Audiovisual Facilities Scheduled; Staff Members May Consult Specialists

An in-depth study of the audiovisual teaching facilities of the Columbia-Presbyterian Medical Center will be conducted from March 2 to 13, 1970 by four experts from the National Medical Audiovisual Center. The Center is run by the Department of Health, Education and Welfare, U. S. Public Health Service, in Atlanta, Georgia.

The visiting foursome will be comprised of specialists in curriculum, photography and graphics, television, and educational space utilization. Their purpose will be to coordinate

the audiovisual facilities in the Medical Center in order to increase the teaching efficiency of the faculty members and of the service personnel. The Government is offering this service at a relatively low cost to help medical institutions around the country.

The Subcommittee on Audiovisual Facilities of the Curriculum Committee at The College of Physicians and Surgeons is coordinating the study. The subcommittee has faculty, student and administrative representation from the

areas of Dentistry, Library, Medicine, Nursing and Hospital Administration.

For further information regarding this study please contact Miss Susan Maines, Assistant Professor of Nursing, Chairman of the Subcommittee on Audiovisual Facilities—Ext. 2802 or Dr. Robert H. E. Elliott, Jr., Associate Dean, P&S. All staff members of the Medical Center who have legitimate questions about audiovisual teaching are welcome to discuss them with the visiting experts.

## LECTURE SERIES SLATED AT DELAFIELD AUDITORIUM

The Institute of Cancer Research, College of Physicians and Surgeons, Columbia University, announces a science program to be held in the auditorium of the Francis Delafield Hospital.

The lectures will be given on Fridays, from 4:00 to 5:00 p.m. and are as follows: February 6, *Serum Complement and Hypersensitivity*, Peter M. Burkholder, M.D., Duke University Medical Center; February 13, *Initiation of RNA Synthesis*, Ekkehard K. Bautz, Ph.D., Rutgers State University; February 20, *Ultrastructure of the Gene*, Dr. O. L. Miller, Oak Ridge National Laboratory; February 27,

*New Mechanisms Controlling Development of Lambda Virus*, Wacław Szybalski, D.Sc., Mc Ardle University of Wisconsin.

### Third OR Tech Class

The second class of the Columbia - Presbyterian School of Operating Room Technology, that started on September 29, is now in session. A third class will start May 1. Interested individuals should contact Mrs. Gilda Gehm, PH 4-132, Ext. 6191, for an application.

## IN MEMORIAM

### Henry Alexander

The Presbyterian Hospital lost a valued member of its Board of Trustees with the death on December 14, 1969 of Henry Clay Alexander, former Chairman of the Morgan Guaranty Trust Company and one of America's leading bankers.

Born in Tennessee, Mr. Alexander obtained his A.B. degree from Vanderbilt University. He was later graduated from Yale Law School and joined a New York law firm. Assigned to work as counsel for J. P. Morgan 2nd, Mr. Alexander stayed on with the House of Morgan. He was subsequently credited with revitalizing the banking concern.

Mr. Alexander served as director of many large companies and was active in public service. He served on the Presbyterian Hospital Board of Trustees from 1942 until his death. During most of this time he was a Vice President of the Hospital, a member of the Executive Committee, and also the Joint Administrative Board of the Columbia-Presbyterian Medical Center. Among other activities, he was on the Nursing Committee, campaigned for the Medical Center Development Program which commenced in 1960 and raised over \$50,000,000 for the Medical School and the Hospital, and was also a member of the Finance Committee which manages the investment of the Hospital's endowment funds.

Mr. Alexander is survived by his widow, three sons, a daughter and two grandchildren.

### Dr. Hilary Holmes

Dr. Hilary H. Holmes, Associate, Department of Medicine, P&S, and Assistant Attending Physician, P.H., died on January 3 in a shooting accident while duck hunting near

Larchmont, New York. He was 51 years old and lived in Riverdale, New York.

Dr. Holmes was also on the staffs of St. Luke's and Doctors' Hospitals. He was medical director of the House of the Holy Comforter, and a member of the Board of Governors of the New York Chapter of the Arthritis Foundation.

He is survived by his widow, the former Joan Halsted; a son, Hilary H.; three daughters, Marilyn, Diana and Margaret; and two sisters.

### Dr. Harrison McLaughlin

Harrison Lloyd McLaughlin, M.D., Professor of Clinical Orthopaedic Surgery, P&S, and Attending Orthopaedic Surgeon, New York Orthopaedic-Presbyterian Hospital, died in Harkness Pavilion, on January 4. He was 63 years of age.

Dr. McLaughlin was born in Cumberland, Ontario, Canada on October 22, 1906 and became a naturalized citizen of the United States in 1940. He received his C.M. (M.D.) from Queen's University Medical College, Kingston, Ontario, Canada, in 1933 and an honorary LL.D. in 1961.

Following a one-year rotating internship at the Ottawa General and Ottawa Civic Hospitals, he came to New York in 1934, and joined the residency staff on the fracture service at Columbia-Presbyterian Medical Center. Upon completion of his residency, he became a member of the Attending Staff of this service and a member of the P&S faculty.

Dr. McLaughlin served as consulting surgeon at several hospitals in the New York area.

His professional memberships included the American Association for the Surgery of Trauma; he served as

recorder, vice president, president and chairman of the board of managers. He was also a fellow of the American College of Surgeons, serving as a member of the board of governors, the nominating committee of the board of governors, the New York and Brooklyn Regional Committee on Trauma, and as a member of the subcommittee on medical care of the President's Committee on Traffic Safety.

Dr. McLaughlin was an honorary member of the American Orthopaedic Association,

Dr. McLaughlin

the American Fracture Association, the George J. Curry Surgical Society and the Società Italiana di Ortopedia e Traumatologia, Rome, Italy.

He was a member of the American Medical Association, the Medical Societies of the State and County of New York, the Medical Society of the County of Westchester, N. Y., the New York Academy of Medicine and the New York Surgical Society.

Dr. McLaughlin's primary research interest was in musculoskeletal disorders, particularly of the shoulder, and he had published over 60 articles, and made 30 contributions to books on a wide variety of subjects with particular emphasis on basic principles. The culmination of these writings

is his textbook, *Trauma*, published in 1959 by W. B. Saunders Company, and dedicated to his preceptors, the late William Darrach, M.D., and the late Clay Ray Murray, M.D.

Medicine, and particularly the surgery of trauma, had been Dr. McLaughlin's life. His principal hobby was also closely allied with his interest in medicine. He was a fine artist and draftsman, and personally illustrated all his articles and his book with drawings of unusual clarity and grace.

In 1964, the Surgeon's Award for Distinguished Service to Safety, given annually by the National Safety Council, was presented to Dr. McLaughlin, with this inscription: "A master surgeon respected by his colleagues, a teacher revered by his students and a gentleman loved by all who knew him."

Dr. McLaughlin will be posthumously awarded an honorary fellowship in the American Academy of Orthopaedic Surgery, in January, for his distinguished contributions to orthopaedic surgery.

He is survived by his wife, the former Aimee Virginia Bisgood, and their three children, Mrs. Patricia Mora, Susan McLaughlin and Thomas Harrison McLaughlin; by his mother, Mrs. Robert P. McLaughlin, and two sisters, Mrs. Norman Gillies and Mrs. Sydney McMorran.

Funeral services were held at the Walter B. Cooke Funeral Home in New York City on Thursday, January 8.

### Dr. Gabrielle Ehrlich

Dr. Gabrielle Ehrlich (Loewy), Research Associate in the Department of Ophthalmology, P&S, died on December 26 in Vienna, Austria. She was 64 years old.

Dr. Ehrlich gained recogni-

tion in the field of tissue culture in ophthalmology. She was associated with Columbia-Presbyterian Medical Center since 1943 and was research chemist with the late Dr. Heinrich Waelisch of N. Y. State Psychiatric Institute from 1943 to 1950. From 1950 to 1957 she was research chemist with Dr. Algernon Reese, Department of Ophthalmology, and from 1957 until the present, she was engaged in the Department's research on the effects of antiocular antibodies upon cultures of various ocular tissues, antigens and mechanisms involved in cytotoxicity.

Born in Vienna, Dr. Ehrlich received her Ph.D. in Biochemistry from the University of Vienna in 1928. From 1930 to 1932 she was engaged in research in the clinical laboratories of the Institute of Physiology, University Medical School, Vienna. From 1933 to 1938 she was clinical chemist at the Children's Hospital and Research Institute in Vienna. She came to the United States following the invasion of Austria by Hitler.

She was a member of the Virchow Society and the Perquet Circle.

Dr. Ehrlich was married to the late Paul Loewy, M.D., staff psychiatrist, New York State Psychiatric Institute, Columbia - Presbyterian Medical Center. Her brother, George Ehrlich, was a noted London sculptor.

She is survived by a sister, Susanne Ehrlich Rosenberg, of Amsterdam, and a sister-in-law, Bettina Bauer Ehrlich, of London.

Dr. Ehrlich's body was flown to the United States and funeral services were held on Sunday, January 11, at the Frank E. Campbell funeral home on Madison Avenue and 81st Street.

# Stethoscopia

## • ENGAGEMENTS

*Susan Greenberg* and *Dr. Arnold Gordon* are engaged. Miss Greenberg is a graduate of the School of Nursing and an Associate in Nursing at Columbia; Dr. Gordon is an assistant professor of oceanography in the geology department of Columbia. The couple plan a wedding in April.

*Patricia Grossano* of the Blood Bank became engaged to *John Janeczko* during her Christmas vacation.

*Vivian Davis*, a Practical Nurse on Neurological 3 East, became engaged to *Ralph Teavy* on December 25.

*Fran Eshleman*, Night Nurse at Vanderbilt Clinic, is engaged to *Harry D. Borbe*. Mr. Borbe is Executive Director of the New York Diabetes Association.

*Margaret Irwin*, Medical Secretary in the Medical Information Department, became engaged to *Donald R. Anderson* at Christmastime. They plan a spring wedding in 1971.

*Karen Thorn*, a graduate of the School of Nursing, is engaged to *Lester Penner*. They plan to be married in June.

## • MARRIAGES

*Louise Hui* and *Philip Yoh* were married on December 27 in The Pauline A. Hartford Memorial Chapel. Mrs. Yoh is an Operating Room Nurse at Presbyterian Hospital.

*Susan Wilson*, a Senior in the School of Occupational Therapy, and *Guy Favreau* were married in The Pauline A. Hartford Memorial Chapel on December 20.

*Patricia Harmon* and *Walter Kucaba* were married on December 28. Mrs. Kucaba is Staff Nurse on Neurological 9 West.

*Judy Hasbrouck* was married to *Eli Yardeni* on December 26. Mrs. Yardeni is a Staff Nurse in the Operating Room, PH.

*Dr. Ethelann Murray*, a graduate of P&S, and *Dr. Peter Savage* were married on January 11.

*Diane Tietjen* and *Gerard Dericks, Jr.*, were married on December 31. Mr. Dericks is a member of the Class of '73, P&S.

## • BIRTHS

*Dr. & Mrs. Michael Gelfand* have a new son, John, born on December 10. Dr. Gelfand is Chief Resident of General Surgery, PH.

*Dr. & Mrs. Richard Thurer* are the parents of a daughter, Margaret Anne, born on November 23. Dr. Thurer is Chief Resident in thoracic and cardiac surgery at PH.

*Mr. & Mrs. Stan Becchetti* have a daughter, Meredith Leigh, born on December 27. Rita Becchetti is an Assistant Head Nurse on Neurological 4 East.

*Mr. & Mrs. Joseph McNally* have a new daughter, Jane Marie, born in December. Rosemary McNally is a Staff Nurse on Neurological 4 West.

*Mr. & Mrs. Blaise Perrone* are the parents of a daughter, Tara, born on December 24. Joyce Perrone is a Staff Nurse on Neurological 3 East.

## • CONGRATULATIONS

To *Iris Monaster*, who has been promoted to Vanderbilt Clinic Night Supervisor.

To *George Sinclair*, who has been named Employee of the Month at Delafeld Hospital. Mr. Sinclair, an employee of P&S, is a technician working under Dr. Robert DeBellis. He is the first P&S employee to be so honored by Delafeld.

## • WELCOME

To *Mrs. Gladys Natoli*, Secretary to Miss Lillian Oring, Personnel Development Program.

To *Mrs. Lois Augustus*, who has returned to Neurological Institute Nursing Staff as Clinical Supervisor.

## • CONDOLENCES

To the family and friends of *Norma Pannochia*, Technician in Vanderbilt Clinic 2, whose mother, Mrs. Louisa Gomez, passed away on January 6.

## • NOTES OF INTEREST

*Margild Blank*, Technician in the Blood Bank, flew home to Bochum, Germany, to visit her parents and family over Christmas.

## Goofs Dept.

The *Stethoscope* editors apologize to Naomi Schwartz and Allen Whittman, who were victims of our carelessness and a cruel hoax. A written announcement of their engagement was sent to us and it appeared in

"Stethoscopia" as a routine item in the January issue. In the future, we will check with both parties before making such announcements.

The person who sent this false announcement to us should not be proud of his joke.

# DOINGS OF DOCTORS

Several members of the Department of Anesthesiology, P&S, lectured at the 1969 Annual Meeting of the American Society of Anesthesiologists, held at the Hilton Hotel in San Francisco last fall.

*DR. RONALD KATZ* presented "*Clinical Use of Muscle Relaxants.*"

*DR. S. H. NGAI* and *SONJA LOFSTRANDH, B.S.*, presented "*CNS Toxicity of Hyperbaric Oxygen and Brain Biogenic Amines.*"

*DRS. M. FINSTER, O. MORISHIMA, R. N. BOYES*, and *B. G. COVINO* presented "*Distribution of Lidocaine in Maternal and Fetal Tissues.*"

*DRS. ROBERT M. EPSTEIN* and *ATSUO FUKUNAGA* presented "*Effects of Cyclopropane and Ganglionic Blockade on Hepatic Blood Flow in the Decerebrate Cat.*"

*DRS. ROBERT A. BARATZ, DANIEL M. PHILBIN*, and *RICHARD W. PATTERSON* presented "*Urinary Output and Plasma Levels of Antidiuretic Hormone During Intermittent Positive Pressure Breathing.*"

*DRS. RALPH A. EPSTEIN* and *STEPHEN H. JACKSON* (Stanford University) presented "*An Effect of Depth of Anesthesia on the Neuromuscular Junction in Man.*"

*DRS. ALLEN I. HYMAN, LAWRENCE J. KAGAN* (Medicine) and *JOHN F. RYAN* presented "*Myoglobinemia Following a Single Injection of Succinylcholine.*"

*DRS. W. L. NASTUK* (Physiology), *J. H. KARIS*, and *L. GROSSBARD* (Medicine) presented "*The Action of Neostigmine and a Diethyl Analogue at the Neuromuscular Junction.*"

*DRS. A. J. GISSEN* and *W. L. NASTUK* (Physiology) presented "*Succinylcholine and Decamethonium, Comparison of Depolarization and Desensitization.*"

*DR. LEONARD BRAND, DR. HYMAN, MIGUEL A. LANDRAU, B.S.*, *DR. LESTER C. MARK*, and *DR. JAMES M. PEREL* (Psychiatry) presented "*Effects of Environmental Temperature on Uptake of Thiopental by Brown Adipose Tissue and Brain.*"

*DR. ROBERT M. EPSTEIN*, Associate Professor of Anesthesiology, P&S, also participated in a panel discussion, "Tools of the Trade."

*DR. SEYMOUR L. ROISTACHER*, Clinical Professor of Dentistry at D&O has been elected President of the Medical Board of Queens Hospital Center. He has been the director of dentistry at the hospital center since 1964, and an attending dentist at the Long Island Jewish Medical Center since 1960.

*DR. EMANUEL PAPPER*, former Professor and Chairman, Department of Anesthesiology, P&S, and Director of the Anesthesiology Service, PH, has assumed his new post as Dean and Vice President for Medical Affairs at the University of Miami in Florida. This past fall he made a round-the-world trip of lectures and presentations.

During October, Dr. Papper held Visiting Professorships at the Departments of Anesthesiology at the Universities of Rome, Naples, Catania, and Turin. The University of Turin also awarded him an "Honoris Causa" degree. He lectured at the All India Institute of Medical Sciences in New Delhi. In November, he was a guest speaker at the annual meeting of the Australian Society of Anesthesiologists, and was elected honorary member of the Society. He also spent a month as Visiting Professor at the University of Sydney, where he gave lectures, seminars, instruction in operating rooms, and conducted informal discussions. While there, he taught in the Departments of Medicine and Pharmacology, and saw his first renal transplant.

Dr. Papper

Dr. Blank

A former Associate Professor of Dermatology at P&S (1951-55) has received one of the medical profession's most esteemed honors, the *Modern Medicine Distinguished Achievement Award*, for 1970. *DR. HARVEY BLANK*, Professor and Chairman of the Department of Dermatology at the University of Miami, is among ten men nominated by the medical profession to receive the awards this year. He received national recognition in the January 12 issue of *Modern Medicine*, in which the announcement appears, and a certificate signed by Dr. Irvine H. Page, editor of the journal and one of the world's foremost heart specialists. Dr. Blank was cited for his development of a new systemic treatment of fungal skin disease.

In recognition of his pioneering work in the field of pediatric urology, a memorial lectureship has been established by the American Academy of Pediatrics in honor of *DR. JOHN K. LATTIMER*, Professor and Chairman, Department of Urology, Squier Urological Clinic. The lectureship also provides for awards for outstanding service in the specialty.

# All Alumni Invited to 4th Reunion...

Continued from page one

a common Medical Center Alumni Meeting would truly recreate the original situation of student days and reunite old friends from all units, services and specialties.

The idea of holding such a meeting began to spread, and the first Joint Reunion was held in 1960, the second in 1963, and the third in 1966. All who attended those meetings were enthusiastic about

their visits back to the Medical Center, where they had an opportunity for individual as well as common scientific and social gatherings. Those meetings, as the one coming up, were jointly sponsored and supported by the Hospital and Medical School Administrations.

The Fourth Joint Alumni Reunion has the same objectives as in years past, but with a single common meeting

of Alumni of the entire Columbia-Presbyterian Medical Center.

There will be morning and afternoon programs in the new Alumni Auditorium, designed on a broad spectrum to raise points of interest to all, with paramedical and perhaps non-medical topics to be included.

Lunch will be provided for all, and a cocktail reception will follow the final afternoon program.

MARCH, 1970

## "Quick Action" By City Police At Last Summer's Emergency Being Reviewed For Citations

Among the first to go into action when fire broke out on the second floor of Babies Hospital in the early hours of August 5, 1969, were Patrolmen Joseph Gersosimo and Robert Henderson, of the 34th Precinct, who had come to Vanderbilt Clinic Emergency Service on another call. Patricia De Pompei, R.N. and supervisor of the Emergency Service at the time, immediately mustered the two patrolmen into service, and they were among the first to take the emergency measures that, in the opinion of the Fire Marshal, averted a major fire. Patrolman John Mulitz and Sergeant Robert Brennan of the 30th Precinct were also on the scene in the early hours of the fire and rendered great service in helping evacuate the infants from the Neonatal Intensive Care Nursery, which

was only a short distance from the fire.

Because of the quick action of Patricia De Pompei, the police, firemen and our other employees on duty at Babies Hospital, all of the babies were evacuated and then returned days later to the intensive care unit without serious ill effects.

The photograph below was taken at the police station on Wadsworth Avenue, on February 12, when Miss De Pompei was asked to tell her story at a hearing to learn the circumstances of police participation in dealing with the fire, for possible citations.

The *Stethoscope* hopes that all of the policemen who gave us a hand during the fire are cited, because without them we might have suffered a major tragedy.

FLANKED BY THE FINEST: Patricia De Pompei, R.N., poses with patrolmen (from left) Joseph Gersosimo, Robert Henderson, John Mulitz, and Sergeant Robert Brennan.

## Support For Family Planning Facilities

A neighborhood community service agency has entered into a working relationship with Columbia University's International Institute for the Study of Human Reproduction.

The Community League of 159th Street has recently signed an agreement with Columbia University for the partial support of its Family Planning Program. This agency is community-based and community-operated and

has been in existence since 1952. It is dedicated to the betterment of community residents and has a broad general program which includes dealing with problems related to housing, employment, drug addiction, welfare, education and health. In September 1968, their family planning program was opened.

The arrangement provides a "communications channel" between Columbia University

## P. H. Restores To Health Two Patients Infected With Deadly African Fever

Attacks on two Americans by an exotic killer virus were foiled last year by physicians and nurses at the Presbyterian Hospital. Therefore unknown, the virus has killed at least three other Americans elsewhere in this country and Africa.

These are the salient facts of the Lassa story—a scientific detective thriller that reads like a combination of *The Microbe Hunters* and the annals of Interpol. But this is also a story of personal tragedy—the bereavement of the relatives and friends of the three victims of Lassa virus.

As a result of the chain of incidents that began in Lassa, Nigeria, in February 1969, Lassa Fever will be added to the list of known diseases. Our current knowledge about this virulent disease will be presented in a virological description by Drs. Jordi Casals and Sonja Buckley of the Arbovirus Research Unit at Yale Medical Center and in clinical descriptions by physicians at the Columbia-Pres-

byterian Medical Center, John M. Baldwin, Jr., Associate Attending Physician, P.H.; Edgar Leifer, Associate Attending Physician, P.H.; John D. Frame, Adjunct Assistant Professor of Tropical Medicine at the School of Public Health; David J. Gocke, Assistant Attending Physician, P.H., and by Henry Bourne, former assistant resident in medicine. The discovery of this severe illness, which appears to be endemic in West Africa, is an important contribution to virology. The story of the discovery of this virus was brought to the attention of the world's press only a few weeks ago.

The new disease syndrome begins manifesting itself after an incubation period of about a week with a high fever which may rise to 107°, accompanied by muscle pains and pharyngitis. The disease leads to multisystemic complications, including inflammations of the brain, heart muscle, the kidneys and the liver, with subsequent damage to

these organs. Encephalitis constitutes an especially significant element in the syndrome. The virus isolated from these patients has been shown to be a new agent because it is immunologically distinct from other viruses. In contrast with most viral infections, Lassa Fever causes a persistent infection lasting two to three weeks or longer. Viremia, or the presence of the virus in the patient's blood, which is short-lived in most virus diseases, persists as long as two weeks in persons suffering from Lassa Fever. Lassa virus may be present in the patient's urine and nasopharyngeal washings much longer.

The first American to be involved in the chain of infections with the virus was Laura Wine, a missionary nurse serving in Lassa, a large village in the northeastern part of the country. Seriously ill, she was flown to the Bingham Memorial Hospital at Jos, Nigeria, where she died the next day.

Charlotte Shaw, one of the nurses who had taken care of Miss Wine, came down with a fever about a week later and died within two weeks of a generalized, multi-focal infection. The next nurse to fall prey to the virus was Lily Pinneo. She had been exposed to both Miss Wine and Miss Shaw.

Because of this fact, and because of the identical incubation period, doctors feared that Miss Pinneo was also suffering from the undiagnosed infection. After a brief stay in Lagos, the capital of Nigeria, Miss Pinneo was flown to the United States.

As the mysterious illness was striking down American missionary nurses one after the other in Nigeria, a tropical-disease specialist in New York City was viewing the tragic sequence with mounting concern. That specialist was Dr. Frame, who has been medical consultant to many U.S. missionary societies for 17 years, in addition to his teaching appointment at P&S.

## Tours Of Eye Institute Addition Draw Many Distinguished Friends

An informal open house to inspect the new addition to the Edward S. Harkness Eye Institute was held on Tuesday, February 10.

The wind and chilling rain that marked the day did not seem to dampen the spirits of the many friends and distinguished visitors who came

to inspect the new quarters that now house the relocated Eye Clinic and laboratories for research in ophthalmology.

Informal tours of the building were conducted, and following this, refreshments were served in the lobby of the new building.

Father and son: Drs. Maynard Wheeler and Maynard Wheeler, Jr.

Mr. Augustus C. Long, President of Presbyterian Hospital (center), and Mr. A. J. Binkert, Executive Vice President, inspect new building with Mrs. Maynard Wheeler. Dr. Wheeler is consultant in ophthalmology to P.H.

# Symposium On Collagenase Documents Versatility Of Enzyme

On Thursday, February 5th, 1970, 300 registrants from all over the United States gathered at the Alumni Auditorium to hear 27 invited speakers discuss properties and uses of collagenase at the First Interdisciplinary Symposium on this specific enzyme.

The meeting was organized and chaired by Dr. Ines Mandl, Assistant Professor of Biochemistry in the Department of Obstetrics and Gynecology and director of the Gynecological Research Laboratories at Francis Delafield Hospital, and it was cosponsored by five departments of the College of Physicians & Surgeons: Biochemistry, Microbiology, Surgery, Pathology and Obstetrics & Gynecology.

Both the extensive clinical results reported at the meeting and the exploration of more specialized potentially valuable uses by clinical investigators at the Presbyterian Hospital and elsewhere have become possible through the relatively recent emergence of collagenase from a laboratory curiosity to an easily available drug. Many of the massive clinical reports came from Germany where good therapeutic effects were observed in more than 1500 patients who were given topical applications of collagenase in an ointment base for debridement of second and third degree burns prior to skin grafting and for the treatment of dermal ulcers. These results bore out the promising results obtained in our Surgical Service, where this enzyme underwent first studies more than 15 years ago. In all cases collagenase acted in its characteristic manner, digesting all the necrotic tissue and none of the healthy tissue, thus setting the stage for successful healing. This behavior had been predicted by Dr. Mandl from the specificity of the enzyme and was observed by Dr. Edward L. Howes in the Department of Surgery of this institution in the 1950's.

## Wound Contraction Absent

Several investigators from different institutions reported that bed sores, stasis and vascular ulcers that had been refractory to all other treatments for up to 15 years responded with granulation and epithelization after a maximum of three weeks. Dr. W. Zimmermann from the University of Freiburg, Germany, pointed out that in almost 400 burn cases not a single keloid was formed and none of the wounds contracted in contrast to the known relatively high incidence of both in the absence of treatment or with other treatments. Dr. Jose Ferrer, Professor of Surgery and Chief of Surgery at the Harlem Hospital Center,

stressed the potential of collagenase in the armamentarium of a modern burn center such as the one now being developed at Harlem Hospital. Dr. Charles Fox, Professor of Microbiology in the Department of Surgery, who has in recent years introduced silver sulfadiazine for the treatment of major burns to prevent often fatal infections, pointed out that the use of antibacterial agents eliminated proteolytic enzymes which mediate sloughing of lesions and elimination of the eschar, so that use of an enzyme like collagenase becomes of paramount importance. He advocated combined treatment of burns with collagenase and silver sulfadiazine, although so far he has tested the combination in animals only.

## Collagenase in Suspensions

Another interesting report in this session was presented by Dr. E. Lasfargues. When he worked in the laboratory of Dr. Margaret Murray of this institution 12 years ago, Dr. Lasfargues, at the suggestion of members of our Surgical Service, prepared human skin dispersed by collagenase for use as a multiple graft system to speed up repair of large burns. The cell suspension was spread evenly on the wound and skin regeneration started a few hours later from a number of foci which gradually became confluent.

In an earlier session Dr. Lasfargues also reviewed the many uses of collagenase as a laboratory tool for cell dispersion, in virology and in tissue culture. Since collagenase, unlike trypsin, does not damage living cells, its use is less limited with respect to time and concentrations, and organs with heavy collagen substrates can be incubated without loss of viability of the cells. Three mammary cell lines were developed by Dr. Lasfargues when he was a member of this institution and are now used for studies of mouse mammary tumor virus. Primary cultures of human mammary carcinoma have been obtained by the method. The use of collagenase may be specially indicated in the investigation of membrane budding viruses and immunotests in which cell membrane receptors are involved.

## Use in Tooth Transplants

Another experimental use of collagenase for the dispersion of tumor cells was reported by Dr. Carlton E. Blackwood, research associate in Obstetrics & Gynecology, who in Dr. Mandl's laboratory succeeded in serially transplanting an ovarian papillary serous cyst adenocarcinoma beyond 40 transfer generations. Serial transplants of the het-

erologous tumor in rats or hamster cheek pouches fail by the third or fourth transfer generation as increasing amounts of connective tissue accumulate between tumor nodules. Removal of the collagen renders the tumor transplantable indefinitely. A similar rationale underlies an interesting use of collagenase to prolong survival of tooth transplants. Dr. L. B. Shulman and his associates at Harvard University School of Dental Medicine were able to dissolve the collagen fibers in the periodontal ligament by pretreating the tooth with collagenase, thus countering early rejection caused by the immunogenicity of the periodontum without damaging the tooth cement. Transplants conducted this way were successful in rhesus monkeys and are now being extended to human patients at the Massachusetts General Hospital.

## Help for Slipped Discs

Two of the most fascinating experimental uses of collagenase were reported in this same session. In an effort to find a nonsurgical method of eliminating the pressure of the protruding cartilage on the nerve root which results in the pain associated with herniation of the intervertebral disc—the condition commonly referred to as slipped disc—Dr. Bernard Sussman injected collagenase directly into the *nucleus pulposus* of dogs. The enzyme dissolved the offending cartilage without disturbing the surrounding tissues; all dogs walked immediately after recovery from anesthesia and there was no dysfunction of any sort. Dr. Sussman is now at Howard University but was formerly associated with the Neurological Institute of this Hospital and was trained by Dr. Lawrence Pool.

## Collagenase in Urology

The other new use of collagenase was reported by Drs. Frank Longo and John K. Lattimer of the Squier Urological Clinic in this Hospital. They pointed out that the most frequent surgical problem which confronts the urologist today concerns obstruction of the bladder by benign or malignant enlargement of the prostate gland. Dr. Lattimer and his coworkers have successfully applied cryogenic surgery to 62 living patients and 73 laboratory animals. They found that the single most frustrating complication of cryoprostectomy has been retention of slough which plugs up urinary passages and prevents elimination. Direct injection of collagenase into the prostate gland of 15 sepa-

rate dogs before freezing gave the desired result of removing the slough and retaining normal urinary function.

## Other Promising Uses

Other potential uses were outlined by Medical Center physicians. Dr. Michael Levi of the Department of Obstetrics & Gynecology reported the use of collagenase ointment to enhance healing after vulvectomy and potential uses after hot or cold cauterization of the cervix. Dr. Hans Zinsner of the Department of Urology discussed possible applications in the care of geriatric patients. The successful uses of collagenase depend on its specific action, digestion of connective tissue elements without damage to the adjoining healthy tissue. Dr. Bernard Wagner, Professor of Pathology, speculated about the possible control mechanisms of collagen breakdown. He pointed out that *in vivo* collagen appears to be protected by a closely adherent mucopolysaccharide sheath, which determines its histochemical properties in tissue sections and may be responsible for the physiological integrity of collagen. Based on corneal studies carried out in his laboratory and reported in his presentation, Dr. Wagner feels that alterations of the mucopolysaccharide-protein complex are a primary requisite before collagen is vulnerable to collagenase.

## Collagenase Reviewed

The early studies of this important enzyme were summarized by Dr. Edward L. Howes. Work was started at the Medical Center in 1949 when the late Dr. John D. MacLennan brought over 80 strains of *Clostridium histolyticum*, the bacterium which elaborates collagenase, to the Department of Surgery of this Institution. Dr. Ines Mandl, chairman of the symposium, then began the arduous task of screening for optimum yield with minimal toxicity,

Dr. Ines Mandl, chairman, and Dr. Bernard Wagner, Professor of Pathology, effect microphone transfer during symposium on collagenase.

isolating, characterizing and purifying the collagenase and controlling its activity. Dr. Howes performed the first tests of the enzyme's efficacy against third degree burns in animals and eventually in human patients. This was 21 years ago and, as Dr. Mandl pointed out, collagenase has come of age in more ways than one.

## TEACHER SOUGHT

The Medical Center Nursery School is looking for a new Teacher-Director to replace Mrs. Dorothy Jones, who is retiring after filling this position with dedication and affection for three years. The Nursery School is scheduled to move into new quarters this September, in one of the new residences now being built on Haven Avenue by Columbia University. Consequently, the new Teacher-Director will have the opportunity of organizing an exciting new adventure within the framework of an established school. A New York City certificate and two year's prior experience are prerequisites for this position. Interested parties should contact Mrs. Jones at 928-0400, or write: Medical Center Nursery School, 626 West 165 Street, New York, New York 10032.

## Laboratory Opened For Periodontal, Salivary Research

A new laboratory for the study of the biologic relationships between teeth and their supporting bone and of the chemistry of saliva has opened in Columbia University's School of Dental and Oral Surgery at Columbia-Presbyterian Medical Center.

In announcing the opening of the laboratory, Dental School Dean Melvin L. Moss has emphasized its role in the general fight against disease and the potential impact of its findings on community health.

The new research unit will be known as the Laboratory for Periodontal and Salivary Research. It is supported largely by the Rogosin Foundation and recently supplemented by further awards from the Sam H. Shubert Foundation and the Sergei Zlinkoff Fund for Medical Research.

Dental School officials believe that the knowledge gained in the laboratory will lead to a better understanding of the causes of the bone destruction that eventually loosens teeth. This in turn, would lead to better methods of prevention and treatment of periodontal disease, which is one of the two major causes of tooth loss and is a massive public health problem.

## Family Planning...

*Continued from page one*

and the community, said Dr. Elizabeth B. Connell, Division Director.

On February 16, the Washington Heights Family Planning Clinic was also opened. It is financed by New York City Department of Health, Maternal and Infant Care Project. Physician coverage is being provided by the Department of Obstetrics and Gynecology.

A third family planning facility will be operating very soon at the Medical Center. With the opening of this clinic there will be three separate contraceptive services available for patient care.

"The development of family planning projects has always been consonant with the Institute's goals," according to Dr. Howard C. Taylor, Institute Director. "Our objective is not to staff family planning units, however, but to evaluate their work to determine which approaches are the most effective in given situations." The Institute's goal has been defined as the promotion of human welfare through the study of all aspects of human reproduction.

Dr. Connell will be assisted by Mrs. Linbania Jacobson, who will be in charge of Family Planning Community Relations. Mrs. Jacobson, R.N., also holds a teaching appointment in the Graduate School of Nursing.

## APPOINTMENT OF DR. NGAI

Dr. Shih-Hsun Ngai, Attending Anaesthesiologist, PH, and Professor of Anaesthesiology, P&S, has been appointed Acting Director of the Anaesthesiology Service and Acting Chairman of the Department.

Dr. Ngai was born in Wuchang, China and received his M.D. from the National Central University Medical School in China in 1944. He served his internship at Toronto East General Hospital in Canada, 1946-47, and a one-year residency in anaesthesiology at the Michael Reese Hospital, Chicago, Illinois, from 1947 to 48.

Dr. Shih-Hsun Ngai

He came to the Presbyterian Hospital to serve his second-year residency in anaesthesiology from 1948-49 and has been on the staff at Columbia-Presbyterian Medical Center since 1949.

From 1955-56 he was Chief, Anaesthesia and Operative Section, Rodriguez Army Hospital, Puerto Rico, and Anaesthesiologist, Walter Reed Army Institute of Research, 1956-57, in the United States Army Reserves, holding the rank of Major.

Dr. Ngai holds many professional memberships and has contributed significantly to the literature.

He is married to Dr. Hsueh-Hwa Wang, Assistant Professor of Pharmacology, P&S and has three children: Mae, 18, a Chinese literature major at New York University; Janet, 15, a student at Teaneck High; and John, 11, a grade-schooler. Dr. Ngai and his family live in Teaneck, New Jersey.

## P. H.-P&S Pair Completes Rhodesia Assignment

Constance Moeller Nichols (P.H. '40) and Frederick Lewis Nichols (P&S '42) have recently returned from Africa, where they worked for four months as volunteers at Mt. Silinda Mission Hospital, Rhodesia, under the auspices of the United Church Board for Foreign Ministries.

Fred covered the medical and pediatric services of the 150-bed hospital and Connie supervised the male wards and instructed the students who are to become "medical assistants" after three years of training. The mission is

## Deadly African Fever...

*Continued from page one*

Already that many years ago, Dr. Frame had noticed that viral infections in Africa did not match their textbook descriptions, which are based on clinical data gathered in temperate zones. Since these differences would be of great significance to virology, Dr. Frame had made an arrangement with Dr. Casals four years ago to send to the Arbovirus Research Unit specimens of sera containing African pathogens.

On the basis of their initial findings, implicating viruses in many fevers, Dr. Frame in the summer of 1968 suggested to his associate at Bingham Memorial Hospital, Dr. Jeanette Troup, the collecting of blood samples from missionaries ill with fevers. The samples would be frozen and sent to the U. S. for virological studies. Dr. Troup did precisely that with the ailing nurses at Jos.

As Miss Pinneo was being flown across the Atlantic, Dr. Frame was making preparations to receive this courageous American. Because of his teaching appointment at Columbia-Presbyterian Medical Center, he knew of the excellent isolation facilities available at the Presbyterian Hospital. He asked Dr. John M. Baldwin, Jr., to admit Miss Pinneo. Straight from JFK Airport, the critically ill nurse was taken to PH by ambulance and immediately isolated in the Hospital's maximum security contagious-disease unit on the seventh floor. Meanwhile, her blood sample, along with those of the two nurses she had cared for, was being sent to Dr. Casals.

Miss Pinneo's admission to Presbyterian Hospital took place early in March 1969. She stayed in the Hospital nine weeks, fighting the stubborn infection with the aid of round-the-clock intensive care.

Upon her arrival, Dr. Baldwin, in collaboration with Dr. Gocke, drawn in on the case as consultant in infectious

Photographed in a cell with an electron microscope, this cluster of Lassa Fever virus has been magnified 115,000 times.

diseases, considered and ruled out malaria and sleeping sickness as possible diagnoses of her condition. Their conviction that they were dealing with a new disease entity was confirmed as the laboratory report arrived from the Yale Arbovirus Research Unit.

Miss Pinneo did not start producing antibodies until March 20. The late appearance of antibodies seems to be another characteristic of

out to be Dr. Casals, who had worked with Miss Pinneo's blood samples at New Haven. His first symptoms were a high fever and aching thigh muscles. Dr. Edgar Leifer, an Associate Attending Physician at Presbyterian Hospital and Associate Professor of Clinical Medicine, P&S, arranged for his admission to the Presbyterian Hospital isolation unit.

As convincing signs of Lassa Fever developed in Dr. Casals, Miss Pinneo was flown here from Rochester to give her blood serum to help Dr. Casals fight the infection. The antibody-containing plasma was removed by centrifuging and then injected into Dr. Casals' circulatory system. The injection seemed to abort the disease. The antibodies contained in the plasma may have helped Dr. Casals overcome Lassa Fever, and he was released from the Hospital after a stay of one month.

Tests of blood samples of personnel involved with Miss Pinneo and Dr. Casals while they were patients here show that no one developed antibodies to the Lassa virus, proving that no transmission of the virus took place at Presbyterian Hospital.

Similar blood tests carried out in Nigeria show that two other missionaries were carrying antibodies that reacted to Lassa virus. Clinical records show that one of them survived a prolonged severe illness similar to Lassa Fever in December 1952. The other lost her hearing in a bout with what may now be presumed to have been Lassa Fever in Kissidougou, Guinea, in 1965. Kissidougou is about 1,500 miles west of Lassa.

More recent developments have overshadowed these isolated cases. Twenty more persons infected with Lassa Fever have been admitted to the hospital at Jos in recent weeks, of whom 11, including Dr. Troup, have died.

Dr. John M. Baldwin, Jr.

Lassa Fever. Miss Pinneo's major clinical problem was difficulty in swallowing, and she had to be fed intravenously for five weeks of her nine-week stay. She was released after a full recovery; her blood plasma showed that her antibody level had remained the same.

Presbyterian Hospital's second Lassa Fever case turned

standards.

The hospital staff is becoming more African in its personnel, but to date there are no African doctors available.

The more frequent diseases seen were malaria, bilharzia, hookworm, tuberculosis and respiratory diseases, and the predominant types of cancer were esophagus, liver and cervix.

The nursing staff and students were involved in an increasing amount of patient care responsibilities, i.e. doing procedures often allotted to house staff in the States.

# Radiological Technologists And Supporting Sta

A progressive yearly increase in the work volume due to new instrumentation, better nuclides, and growing appreciation of the diagnostic value of scans. This has been the story of nuclear medicine at Presbyterian Hospital.

Nuclear medicine's story is also the story of the Columbia-Presbyterian Medical Center in the second half of the 20th century: a chain-reaction growth of knowledge leads to new and better approaches in diagnosis and treatment, necessitating expensive machinery and highly skilled technologists.

Beginning the third decade of nuclear medicine this year, Dr. Philip M. Johnson, Director of the Nuclear Medicine Division in the Radiology Department of P.H., and his assistant, Dr. James Reilly, looked back briefly at the progress made in their field at Presbyterian Hospital.

The early interest in radioisotopes at Columbia-Presbyterian Medical Center was largely inspired by the presence of two giants in the field of nuclear physics, Professors Gioacchino Failla and Edith

Quimby. Dr. Quimby, who is still active, served as director of the Radioisotope Laboratory and was in charge of dispensing radioactive materials to various researchers and clinicians at the Medical Center. Because of its close association with these research facilities, Presbyterian Hospital was in the vanguard of healing institutions in its use of radioisotopes for therapy and for diagnosis.

The acquisition in 1960 of rectilinear scanning equipment gave the Radiology Department a great boost. This capital outlay made possible the start of several clinical research studies. The number of isotope tests increased also. Among the new tests were new liver-imaging procedures with both radioactive gold and rose bengal. The other new tests included the Schilling test with cobalt 60-tagged vitamin B 12 and Chromium 51 studies to determine survival of red blood cells.

That year, Dr. Harold Atkins, who joined the department in 1959, was already using radioactive-label paramino hippuric acid to study kidney

function. The most frequent procedure in 1960 was thyroid scanning with 329 tests; other typical figures for that year include liver scans, 9, and 27 red cell survival studies with chromium 51.

Dr. Atkins developed new diagnostic procedures for scanning the liver and the kidneys in 1961, widening the scope of the radioisotope laboratory. The laboratory also introduced spleen scanning that year.

A 1951 graduate of P&S and a P.H. resident in 1952 through 1956, Dr. Johnson returned to the Department in 1963 to become the head of a "division of radioisotopes for diagnosis and therapy." In 1964 the Division reorganized into a section that came to be known as "Nuclear Medicine," undertaking responsibility for all radioisotope procedures involving patients.

The growth that the Division of Nuclear Medicine experienced in the following six years was not growth for the sake of growth but reflected a real need for new approaches in the diagnosis of pathological changes often deep in the organs being scanned. Most

Harriet Singer, secretary to Dr. Philip M. Johnson, Director of Nuclear Medicine, handles his correspondence and types his research papers.

of nuclear medicine's visualizations are of the so-called soft organs, like liver and spleen, which are almost invisible on x-ray film.

Emma Garcia does much of the paperwork involved in processing the Division's diagnostic procedures.

From the patient's point of view, the advantages offered by nuclear medicine are the painless simplicity of the tests and, more importantly with the newer radioactive drugs, the minimal radiation exposure. The radiation in an organ scan is usually less than that received in a standard x-ray examination.

Throughout these years of growth, the technologists have been the backbone of the Division. The knowledge required of a radiologic technologist working in nuclear medicine is

quite specific and centers on 1) understanding the physical properties of nuclides (this term is preferred to "isotope," a word which does not indicate radioactivity); 2) ability to handle nuclides, such as measuring the precise amount of their radioactivity in millicuries or microcuries; 3) maintaining sterility while preparing the material for intravenous administration by the physician; 4) ability to understand complicated new machinery; 5) familiarity with the regional anatomy of the organs being scanned, and 6) understanding the psychology of very sick patients.

Of the dozen or so different types of scans performed in Nuclear Medicine's quarters on the second floor of Harkness Pavilion, the liver scan was the most frequent scan in 1969 with 1,130. A liver visualization enables the doctor to judge the position and the size of the liver, to establish abnormal liver enlargement, to select a site for a closed liver biopsy, and to detect any mass lesions such as tumors, abscesses or cysts. During the past few years, technetium-99m sulfur colloid has been used almost exclusively for imaging the liver and the spleen. Technetium has a reasonable half-life—six hours—and a large range

## NUCLEAR MEDICINE DEFINED

Nuclear medicine can be considered one of the more beneficial branches of the tree of evolution of nuclear physics that led to the Manhattan Project, thermonuclear fusion, and atomic submarines.

Defined in 100 words or less, the primary function of nuclear medicine is to diagnose and treat disease through the administration of radioactive elements. The principal method of this specialty is to introduce into the patient—either orally or parenterally—a gamma-photon emitting, sterile, pyrogen-free, non-toxic substance, which will be taken up by an organ or abnormal tissue in that organ and which, because of its short actual or biological half life, will not give any significant amount of radiation to the organ or to the body of the patient.

The basic scientific phenomena that are at work in nuclear medicine were known before the proliferation of applied nuclear science in the post-World War II period. It was known early in this century, for example, that radioactive emissions produce light flashes in sodium iodide crystals.

One of the factors in the delayed growth of nuclear medicine as a distinct branch of radiology was the late development of a practical measuring device for gamma emissions. Of the three types of radioactive emanations—alpha, beta, and gamma—only

the last-named fitted in with nuclear medicine's evolutionary purpose: to provide a safe and effective visualization of man's internal organs which are almost invisible on an ordinary x-ray. In the 1940's the Geiger-Mueller tube was an ever-present measuring device, but it could not pick up most of the gamma rays. The first scintillation scanner designed to absorb gamma radiations was built at U.C.L.A. in 1950 and used that year for the first time on patients to obtain visualizations of thyroid glands. During the next year, large sodium iodide crystals became available for use in scintillation cameras. Supplied with large crystals, biomedical engineers could build focused and collimated multi-channel scanners for undistorted visualizations of whole internal organs. Collimation means simply restricting radiation from the periphery from reaching the crystal matrix.

The surge of advances in the engineering end of nuclear medicine was more than matched by the development of new radioactive tracers. Many radioactive elements yield gamma emissions, but few of these are suitable for clinical use.

Radioactive elements have unstable nuclei which "decay" by emitting alpha or charged beta particles with or without gamma rays. These particles are capable of causing tissue changes.

Certain photons have the capacity of traversing tissue without affecting it. As they emerge, they can be detected with a scintillation camera whose basic component is a sodium iodide crystal. The crystal converts gamma rays into light flashes which in turn are transformed into electrical impulses. Highly amplified, these impulses are registered mechanically as dots on paper, as developed areas on an x-ray film, or on an oscilloscope.

The main value of scintillation scanning comes from its unique capacity to visualize an ever-growing number of internal organs and to localize lesions within such organs on the basis of their rejection or concentration of radio pharmaceuticals. Thus radioactive elements, or nuclides, must have another property to be of use in nuclear medicine: they must have a tendency to concentrate in the target organ. In most organs, they permeate normal tissue; diseased areas then do not appear on the scan. The reverse is true of bone lesions and brain lesions, as well as metastases from thyroid cancers.

While routine x-ray films are based on physical differences in transmission of x-rays by tissues of different density, scan images depend on physiological factors which determine the accumulation and distribution of a gamma-emitting agent.

Cecilia McRae, Nuclear Medicine Supervisor (left), poses with fellow staff members from VC-II, Francisca Cantillano (center) and Anne Maloney, behind the Division's Picker kidney probe.

# Form Backbone Of Nuclear Medicine Division

of applications in its various forms. This nuclide can be used, for example, in thyroid visualization and for brain-scanning; for the latter procedure, please see article on "Open House" in *The Stethoscope*, May 1969.

Radioactive indium is used in the imaging of placenta which are suspected to be blocking the birth canal. The nuclide is bound to proteins in the maternal blood, which keep it from entering the fetal blood stream. The test is almost 100 per cent accurate, as seen in the 67 expectant mothers scanned last year.

"The accuracy of the scan depends greatly on positioning the patient correctly and marking on the film the important maternal anatomical landmarks," explained Supervisor of Nuclear Medicine, Cecilia McRae, R.T.

Cecilia McRae

Miss McRae works closely with the two technologists assigned to the second floor facility at the Harkness Pavilion unit of PH. Mrs. Maya Watson and Nestor Fonken. Anne Maloney, R.T., is in charge of the Radioisotope Laboratory, located on the 11th floor of the Vanderbilt Clinic unit. All four technologists in Nuclear Medicine are specially trained for their work with radioisotopes and scintillation counters.

About a half of the Division's 8,249 diagnostic procedures in 1969 were carried

Mrs. Maya Watson, R.T., discusses a scan with one of the radiology residents assigned to Nuclear Medicine.

Technologist Nestor Fonken performs lung scan with Ohio Nuclear scintillator. The Lima, Peru native, who came to this country nine years ago, studied radioisotopes at New York University.

out on the 11th floor of Vanderbilt. The tests logged by Miss Maloney and her assistant, licensed pharmacist Francisca Cantillano, are all "in vitro" and thus take much less time than imaging with a rectilinear scanner, where the scanner moves slowly back and forth over the patient's body.

A bone scan using a strontium isotope, for example, takes as much as an hour and a half. The test is done five to seven days after the strontium is administered intravenously. The division recorded 63 bone scans last year. Miss Maloney and Miss Cantillano do about 15 T-3, or thyroid function, tests a day; in comparison, the other tests crop up infrequently. The only exception is the Schilling test for pernicious anemia, carried out once every two days on the average.

The actual imaging of the thyroid is the function of Miss McRae, Mrs. Watson and Mr. Fonken on the second floor of H.P. and is often ordered to corroborate the findings of the T-3 test.

Mrs. Watson mentioned that the nuclear technologist must take care to avoid scan distortions caused by placing the patient too close or too far from the scanner. Born in Germany, Mrs. Watson was graduated from a laboratory and x-ray

technologists' school in Frankfurt on the Main. She joined the Division two years ago.

With 639 tests, the third most numerous scan carried out by the Division in 1969 was lung imaging. This procedure utilizes human serum albumin labeled with radioactive iodine. Statistically this amounts to about two and a half scans each working day. This particular lung visualization enables the physician to detect pulmonary artery blood clots or other causes of pulmonary artery occlusion. The test is also helpful in studies of blood circulation in the lungs of patients suffering

the Division will continue its three-pronged effort to serve humanity by helping patients, by educating residents, and by trying to improve nuclear medicine through research. Each resident in radiology spends two months in nuclear medicine, learning the practical aspects of imaging and becoming more adept in interpreting the scans.

The obsolescence factor is not insignificant in a relatively new and rapidly developing scientific discipline such as nuclear medicine. Each year some of the established procedures undergo modifications and new ones are added. One can expect more precise imaging of organs as new, improved scintillating devices are designed in the near future. The development of new tracers will allow the scanning of organs not readily imaged at present.

In general terms, members of the Division expect that research in nuclear medicine will de-emphasize static representations of pathological lesions and will instead strive to represent physiological defects, such as abnormal blood flow rates and impaired lung performance. This tendency toward the dynamic representations means a growing involvement of computers in nuclear medicine.

It is expected that angio-

graphy and scintillation scanning will soon be parts of the same clinical procedure. The angiographer can deliver a nuclide at the right time to the right organ in concentrated form. The performance of the organ or of a physiological system could then be expressed in numbers and the result fed to a computer for analysis. At present, the Nuclear Medicine Division uses the computer on the main campus of Columbia University, as well as the Medical Center's computers.

## P. H. Women's Auxiliary Schedules Tea In Honor Of House Staff Wives

The Women's Auxiliary of the Presbyterian Hospital is having a tea in honor of the house staff wives and Lillian Brown, Unit Manager of Presbyterian Hospital, on Wednesday, March 18, from 4:00 to 6:00 p.m., at the home of Mrs. Howard G. Bruenn in Riverdale.

Mrs. Robert G. Blabey, Jr., is president of the House Staff Wives' Club, an informal group eager to welcome new members during their husbands' various tours of duty at Columbia-Presbyterian Medical Center. The group promotes social activities and shares general information to assist in making hospital life more appealing.

Mrs. Maynard C. Wheeler, Mrs. A. Gerard DeVoe, Mrs. John M. Kinney and Mrs. Virgil G. Damon are in charge of arrangements. They hope that every house staff wife received, in the mail, the warm invitation. In case anyone was missed—please do come anyway.

If transportation is needed, please contact Lillian Brown, 579-2233, by March 16. A few cars will be provided to shuttle between the Atchley Pavilion and Mrs. Bruenn's home between 3:30 and 5:30 p.m.

## Gibson Lecture Slated April 2

The 23rd John G. Gibson, II, Lecture, sponsored by Fenwall Laboratories, Morton Grove, Ill., and presented by the Department of Surgery and the Blood Bank, will be given in the Alumni Auditorium Thursday, April 2 at 4:00 p.m. by Dr. C. Robert Valeri, Commander, Medical Corps, U.S. Naval Reserve and Officer in Charge, National Blood Research Laboratory, Chelsea, Mass., on "The Viability and Function of Preserved Red Cells". A reception in Harkness Hall will follow from 5:00 to 6:30 p.m.

Technologist Anne Maloney (left) and Francisca Cantillano admire the new Picker liquid scintillation counter in their laboratory on the 11th floor of Vanderbilt Clinic.

from emphysema, fibrosis, lung cancer and other lung conditions. This scan is quite efficient in showing up areas with diminished blood supply such as might result from a clot or from diseased tissue. "Of all our emergency scans last year, nearly all were suspected pulmonary embolism cases," Miss McRae recalled. For real emergencies, the Division's technologists may use the Autofluoroscope acquired last year. This device can complete a lung scan in ten minutes.

What's in store for 1970? As in other teaching hospitals,

Mrs. Florence Rodgers serves the switchboard, arranges appointments for patients and takes care of their files. Her daughter, Evelyn, works in cardiology on the 9th floor of PH.

# News of Nursing

Martha E. Haber, Assistant Professor, Department of Nursing, Faculty of Medicine, Columbia University, and Director of Nursing, Neurolog-

ical Institute, has been appointed to the Executive Board of the Joint Committee for Stroke Facilities.

This committee, under the American Neurological Association, is setting up study groups to undertake the many facets of the problems of stroke patient care throughout the country.

Karen Winans, Grace MacKay, Helen Henry, Marion Thompson and Marjorie Quaife attended a conference, sponsored by the United Hospital Fund of New York and

Greater New York Hospital Association, entitled "Skill Development Program - Improving Interviewing Skills," January 8-9.

Mary E. Windrow, Assistant Professor, Department of Nursing, Faculty of Medicine, Columbia University and Director of Nursing Service, Presbyterian Hospital, attended "Commission on Nursing Services Education Conferences," sponsored by American Nurses' Association, December 11-12.

Martha E. Haber

## LPN Capping Ceremony, A Memorable Event, Specially Memorable To Hard-Working Student

A capping ceremony for the Columbia-Presbyterian School of Practical Nursing was held on January 23 in the Pauline A. Hartford Memorial Chapel. Following the processional, Father Bernard McGorry, Chaplain, delivered the invocation.

Mary I. Crawford, Associate Dean (Nursing), Faculty of Medicine, Columbia University, welcomed the students . . . "This is a milestone for you all . . . we and your families share your pride."

Dr. Robert H. E. Elliott, Jr., Associate Dean, P&S, and Assistant Vice President, P.H., affectionately introduced as the "guardian angel" of the School of Practical Nursing, drew a chuckle from the audience when he commented, "This is the first time I've been called an angel."

Edith Ankers, Director of the Columbia-Presbyterian School of Practical Nursing, assisted by instructors Annie Laurie Bryant and Mrs. Jane Jewell, capped the students in

an impressive, candle-lighting ceremony, following which they recited the practical nursing pledge led by senior class president, Shirley Viglione. As they stood, newly capped, the candles held by each student seemed to reflect in their faces the pride, satisfaction and joy of fulfillment that marked this event.

Following the benediction by Father McGorry the chapel lights were dimmed and the candle-lit recessional concluded the ceremony.

The students are: Marion Albertie, Linda Alexander, Judith Anderson, Mrs. Lily Cattouse, Linda Gripenberg, Kathleen Healy, Diane Harrell, Mrs. Mary Johnson, Rosetta Jordan, Mrs. Doris Koons, Mary Murphy, Antonia Perez, Mrs. Margaret Podraza, Mrs. Deloise Rapelyea, Mrs. Deborah Rieser, Michael Thompson, Flor Valentin and Mrs. Patricia Warren.

This day was memorable for each student, but for one, Mrs. Patricia Warren, it was particularly memorable.

Mrs. Warren, who had worked as a medical secretary in the Hospital for several years, told us that nursing was a tradition in her family. Her mother is a nurse and her 15-year-old daughter is planning to become a nurse.

Pat's experience working in the Hospital, with doctors, plus her natural affinity for people, led her to believe nursing should also be her chosen career.

But Pat's story doesn't end there. Besides working full-time at the Hospital, then entering the School of Practical Nursing, she managed to raise five children: Donald, 17, Patricia, 15, Michael, 13, Kevin, 10 and Christopher, 6.

To the inevitable question, "How did you do it?" Pat laughingly replied, "Hard work never was known to hurt anyone!"

REFLECTIONS OF FULFILLMENT: Mrs. Patricia Warren is being capped by Edith Ankers in candle-lighting ceremony at the Pauline A. Hartford Memorial Chapel.

Mrs. Warren, newly capped, poses with her five children.

## Recent Retirements From P. H.

James O'Flaherty

Mrs. Mary White

James O'Flaherty, porter in Housekeeping Department, retired in January, completing almost 27 years of employment at Presbyterian Hospital.

Mr. O'Flaherty laughingly recalled his first night on duty, back in 1943, when he was hopelessly lost in the maze of corridors and stairwells of the Hospital, searching for the locker room. One of the nurses, coming to his rescue, told him "he was in the right church but the wrong pew."

A native of Dundalk County, Louth, Ireland, Mr. O'Flaherty lives in Riverdale with his wife. They have six children, all married, and 12 grandchildren. His hobby is sports, from the vantage of a spectator.

Retirement plans include relaxation, more time to indulge his hobby and more time with his large family.

Mrs. Mary White, Maid, Housekeeping Department, Neurological Institute unit, retired in December, having completed 22 years of employment at the Medical Center.

She said, "I hope I have contributed something of service to the Hospital, to the patients, and to my department."

She is very happy that she and her husband will now be able to return to their home in North Carolina, although her son and four grandchildren will remain in New York.

She plans to be a full-time housewife and will also enjoy her favorite hobbies, knitting and crocheting.

On December 19, a reception was held in PH 1-50, to honor Mrs. White, and a large number of co-workers and friends were present to bid her bon voyage.

## Dr. Clement C. Clay Retires From School of Public Health

Dr. Clement C. Clay, Professor of Administrative Medicine and Director of the Graduate Program in Hospital Administration at Columbia University School of Public Health and Administrative Medicine, retired in January. He was associated with the Columbia-Presbyterian Medical Center since 1954.

Dr. Clay was born in Birmingham, Alabama. He received his B.A. from Columbia University in 1927, and his M.D. from McGill University, Montreal, Canada, in 1932. He served his internship at St. John's Riverside Hospital, Yonkers, New York, 1932-33, and was Julius Rosenwald fellow in hospital administration, University of Chicago, 1935-36.

Dr. Clay is well known in the field of hospital administration, as well as in the broader area of health care administration, and has held many administrative posts through the years.

He served with the United States Navy, during World War II, from 1941 to 1946,

Dr. Clement C. Clay

being discharged holding the rank of Commander.

He holds many professional memberships and has made important contributions to the literature.

Dr. Clay and his wife, Alice, live in Scarsdale, New York. They plan to travel extensively throughout Europe and the United States between May and September and when they return, to take up permanent residence in Durham, North Carolina.

Dr. Clay was feted by alumni of the Program at a dinner at the Belmont Plaza on January 2, and at a cocktail party by members of the faculty at the School of Public Health and Administrative Medicine, on January 29.

## Mother Goose Ball All Set

Final plans have been formulated for the Mother Goose Ball, to be held Saturday, March 14, at Ferris Booth Hall, Columbia University, from 9:00 p.m. to 1:00 a.m.

This annual gala is a benefit for the Medical Center Nursing School which serves the children of medical students and others in the Hospital community.

It is hoped that everyone will be able to come. Ticket information may be obtained

from the ticket chairman, Mrs. Roberta Rosen, LO 8-3023. Tickets will also be available at the door (\$10 per couple, \$5 per couple for P&S medical students). Parking will be free!

There will be raffle, balloon and door prizes. Dancing to the music of Stanley Worth and his orchestra, everyone attending the ball should have a ball!

Black tie or dark suit, please.

# Forty P.H. Employees Study Under Weinberg Plan This Semester

Forty employees of Presbyterian Hospital have been granted tuition assistance under the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan for the spring semester, C. Douglas Auty, Assistant Vice President for Personnel, announced last week. All but four of this number are degree candidates. They include 16 candidates for an A.A.S. degree, 12 for a Bachelor's degree, 7 for a Master's degree, and one for Ph.D.

The candidates and their departments are:

Joseph Adderley, Radio Mechanic, Maintenance Department; Romulo Arbas, Console Operator, Pediatric Chemistry; Walter Barton, Ward Clerk, Nursing; Robert Bechner, Security Officer, Protective Department; Ida Buford, L.P.N., Nursing; Audrey Calafiore, L.P.N., Nursing; Neville Carey, Nursing Attendant, Nursing; Richard Collias, Statistical Clerk, Accounting; La-

forest Collins, Porter, Housekeeping; Ellen Connolly, Technologist Trainee, Clinical Chemistry; Lenore Cuomo, L.P.N., Nursing; Patricia De Pompei, Administrative Trainee, Unit Manager's Office; Michael Drillings, Technologist, Clinical Pathology; William Fearn, Admitting Clerk, Unit Manager's Office; Dina Fine, Physical Therapist, Physical Therapy; John Galvin, Account Representative, Out-Patient Department; Ernestine Gore, Ward Clerk, Nursing; Carroll Anne Grece, Supervisor, Physical Therapy; Joseph Infantino, X-Ray Technologist, Harkness X-Ray; Barbara Johnson, Ward Clerk, Nursing; Susan Kaplan, Social Service; Joseph Lyons, Wage Analyst, Personnel Office; John Mc Kinney, Assistant Supervisor, Protective Department; Lavonia Mc Rae, L.P.N., Nursing; Paul Manchess, Account Representative, Out-Patient Department; Patrick Meehan,

Credit Supervisor, Credit and Collection; William Moakler, X-Ray Technologist, Radiology; Harry Morelli, Pharmacist, Pharmacy; Letty Munz, Psychometrist, Pediatric Psychiatry; Kathleen O'Halloran, Medical Secretary, Neurology; James Parson, Supervisor, Out-Patient Collection; Angel Perez, Elevator Operator, Elevators; Joan Pfizenmaier, Supervisor, Clinical Education, Physical Therapy; Margaret Plantz, Statistical Typist, Comptroller's Office; Julia Poyhonen, Clerk-typist, Nurses' Registry; Josefine Roque, Receptionist-typist, Ward Admitting; Doreen Sachs, Laboratory Technologist, Hematology; Clarence Swanston, Security Officer, Protective Department; Raymond Vazquez, Nursing Attendant, Nursing; Tina Zamerinsky, Junior Secretary, Bacteriology.

They are attending the following universities and

schools:

Announcer Training Studio, Apex Technical School, Bergen Community College, Bronx Community College, City College, Columbia University, Edward Williams College, Fairleigh Dickinson University, Fordham University, Hunter College, Iona College, Luther College, Manhattan College, Manhattan Community College, New School, New York City Community College, New York University, RCA Institute, State University at Farmingdale, St. John's University.

The Weinberg Aid Plan is available to full-time employees who have completed at

least six months employment with the Hospital previous to making application. The plan offers to those who receive approval a refund of 50 per cent of the tuition fee for one to six credits per semester, or the equivalent for non-credit courses upon satisfactory completion of courses.

The selected subjects or courses must be job-related or allied to career development with future job responsibilities in the Hospital.

For further information and application, contact Lillian Oring, Personnel Assistant, P.H. 1-44, Ext. 3215.

## Radiology Department Schedules Postgraduate Angiography Course

A postgraduate course in Angiography: Techniques, Instrumentation and Room Design, will be held in the Alumni Auditorium under the sponsorship of Department of Radiology, P&S, from March 18 to 20.

The course is under the direction of Dr. Sadek K. Hilal, Professor of Radiology, P&S, and Dr. Kent Ellis, Professor of Radiology, P&S.

This course is intended for radiologists and other physicians conducting angiography. The guidelines for the selection of the various radiographic equipment will be discussed. The course will cover the practical aspects of catheter design, guide wires, contrast media, injectors, and the various safety measures in an angiographic room.

There will be a panel discussion of the architectural design of various types of angiographic units and their supporting facilities.

Participating faculty from P&S will be: Dr. William B. Seaman, Professor and Chairman, Department of Radiology; Dr. Ellis; Dr. Paul Goodwin, Assistant Professor of Radiological Physics; Dr. Hilal; Dr. Bentley A. Hollander, Fellow in Diagnostic Radiology; Dr. Ira E. Kanter, Assistant Professor of Radiology; Arnold St. J. Lee, B.A., Assistant Professor of Anaesthesiology; and Dr. Ernest H. Wood, Professor of Radiology and Director of Section of Neuroradiology.

Participating guest faculty will consist of 14 specialists.

Fee for the course is \$100 (\$75 for residents and fellows). The fee covers tuition, materials, coffee breaks and the reception for registrants and their wives.

A limited number of rooms has been reserved at the Waldorf-Astoria Hotel, and bus transportation from the hotel

to the Alumni Auditorium will be provided.

For further information contact Dr. Melvin D. Yahr, Associate Dean, College of Physicians and Surgeons, 622 West 168th Street, New York, N. Y., 10032.

## Dr. Müller Visits

Dr. Maurice E. Müller, Professor of Orthopaedics at the University of Bern, Switzerland, will be the Visiting Professor in Orthopaedic Surgery during the week of March 8 through 14. He will conduct all activities of the service including grand rounds and service rounds, instruct in the operating rooms, and talk to the resident staff on several subjects. His major area of interest in surgery has been in the use of compression plates in bone healing. He is also involved in the development of prosthetic joint replacements.

## Two P.H. Men Elected

Gedney R. Masten, Assistant Vice President, PH, was elected president of the Cresskill, New Jersey Board of Health at a recent reorganization meeting.

At the same meeting, Dr. Harlow D. Duntun, Associate Attending Psychiatrist (Pediatrics), PH and Associate Clinical Professor of Psychiatry, P&S, was elected vice-president.

Mr. Masten was elected to replace Mrs. Lillian Robbins who served as president for eight years and brought about many changes to improve the public health services in Cresskill and surrounding Bergen County communities.

## In Memoriam

### Dr. B. Lewis Grossman

The untimely death of Dr. B. Lewis Grossman on January 27 shocked his many friends. Dr. Grossman, who had been a member of the Radiology Service attending staff since 1963, was 38 years old.

A native of Utica, New York, Dr. Grossman attended Utica College and the State University College of Medicine in Syracuse, from which he received his M.D. in 1957.

After an internship and radiology residency at Genesee and Strong Memorial Hospitals in Rochester, N. Y., he entered military service and served in the Medical Corps of the United States Army in Japan, holding the rank of Captain.

Dr. Grossman was appointed Assistant Attending Radiologist, PH, following his discharge from the armed forces and, at the time of his death, was also Assistant Professor of Radiology, P&S. During the last few years, Dr. Grossman practiced in the subspecialty of Neuroradiology and was head of the Ultrasound Laboratory at the Neurological Institute.

Dr. Bernard L. Grossman

Dr. Grossman applied his life-long special interest in electronics to neuroradiologic problems in the areas of cere-

bral angiography and ultrasonics. He contributed several innovations in angiographic instrumentation, most of which were designed to make angiography safer. His major work and publications were in the field of ultrasonics where his classic descriptions of the use of Doppler ultra-sound for the detection of carotid and subclavian arterial disease won him national recognition.

In response to numerous requests from colleagues and friends, and in keeping with the wishes of Dr. Grossman's two surviving sisters, Mrs. Albert Hill and Mrs. Shirley Pernel, both of Utica, a fund is being established at the Presbyterian Hospital. Commemorative gifts may be sent to the Hospital for the B. L. Grossman Fund to help organize an intra-departmental memorial library and foster his research interests in ultrasonics.

A memorial service for Dr. Grossman will be held in the Pauline A. Hartford Memorial Chapel on Friday, March 13, at 5:15 p.m.

### Dr. David Rittenberg

Dr. David Rittenberg, Chairman, Department of Biochemistry, PH, and Professor of Biochemistry, P&S, died on January 24 at his home. He was 63 years old and lived at 560 Riverside Drive.

Dr. Rittenberg was born in New York City on November 11, 1906. He received his B.A. from the College of the City of New York in 1929, and his Ph.D. from Columbia University in 1934. He joined the Department of Biochemistry at the Columbia-Presbyterian Medical Center in 1934.

He was one of the pioneers

in the study of isotopes, long before radioactive tracers were available, and an associate of Dr. Rittenberg stated, "The techniques invented and the basic ideas developed during those years helped change the whole face of biochemical and biomedical experimentation in the period following World War II."

Dr. David Rittenberg

In 1934 Dr. Rittenberg won the Eli Lilly Award in biological chemistry, presented by the American Chemical Society.

He was a member of the Board of Governors and the Planning Board of the Weizmann Institute of Science in Rehovot, Israel, and was made an honorary fellow in 1967. He also served on the medical advisory board of the Hadassah Medical School and, for several years, was also director of the scientists' section of the United Jewish Appeal.

Dr. Rittenberg was a member of the Executive Committee, Faculty of Medicine, Columbia University, and the Medical Board of The Presbyterian Hospital.

He is survived by his widow, Sara; a son, Dr. Stephen Rittenberg; two brothers, Harry and Morris; and two grandchildren.

## • ENGAGEMENTS

Patricia Amy Johnson is engaged to Dr. John A. Wood, Assistant Clinical Professor of Medicine, P&S and Assistant Attending Physician, PH. A March wedding is planned.

Diane Melvin, staff nurse, Sloane Clinic, V.C., and Robert Driscoll, West Point cadet, became engaged in December.

Ernestine Lambert, staff nurse, PH, and George Jefferson, Jr., are engaged. A June wedding is planned.

Honey Weiss and Kenneth Janowitz, P&S '71, are engaged. An early September wedding is planned.

Nancy Kowa, head nurse, BH, and Salvatore R. Boccuzzi are engaged. Mr. Boccuzzi is an engineer at General Electric.

Stephanie Jones, night head nurse, BH, and Sp-5 John R. Cavanagh are engaged. Sgt. Cavanagh is currently serving in Vietnam.

Margery Rosen and Dr. Stewart M. Chodosch are engaged. Dr. Chodosch is a graduate of the School of Dental and Oral Surgery. A March wedding is planned.

Dr. Rosina Berry and Richard W. Dixon are engaged. Dr. Berry is a graduate of the College of Physicians and Surgeons. A July wedding is planned.

## • WEDDINGS

Mrs. Carmen Pietri Tracy and Lloyd A. Nelson, Jr., were married on February 1. Mrs. Nelson's father is Dr. Raul Pietri, Assistant Attending Neurologist, PH.

Dr. Mary J. Kreek and Dr. Robert A. Schaefer were married on January 25. Dr. Schaefer and his bride are both graduates of the College of Physicians and Surgeons.

Althea Ceballos, staff nurse, HP 7, and Jose Q. Alto, medical technician, VC, were married on December 6.

Enocencia Robinson, medical technician, VC, and Jose Abreu were married on January 30.

Jessie Doyle, assistant head nurse, BH, and Capt. Hamilton C. Sherman, Jr., of Honolulu, Hawaii, were married on February 26.

Bernadette Gorman and Frank Callahan were married on January 24. They honeymooned in Puerto Rico. Mrs. Callahan is from the Record Department.

Juanita Smith, staff nurse, N.I., and Ernest Lee were married on January 24.

Frances Reynolds and Philip Carter were married on February 9. Mrs. Carter is with the Medical Service Order Unit of Social Service, V.C.

## • BIRTHS

Mr. and Mrs. Carmine Dolce welcomed their third child, a son, Carmine Christopher, on February 13. Mr. Dolce is mason foreman, Maintenance & Construction.

Mr. and Mrs. George Holmes welcomed their first child, a son, Omarr Anthony, on February 12. Mr. Holmes works in Maintenance & Construction.

Mr. and Mrs. Patrick Welsh welcomed their first child, a son, Scott Patrick, on January 9. Mrs. Welsh is medical secretary, Department of Obstetrics and Gynecology.

Mrs. Anne Buglar Maxwell and her husband welcomed a daughter, Nancy Ellen, on January 24. Mrs. Maxwell was from the Machine Room.

## • CONDOLENCES

to Diane Levy, medical technician, special hematology, whose father died in January.

to the family and friends of Mrs. Patricia Egelhofer, who died on February 1. Mrs. Egelhofer was secretary to Dr. Philip Knapp (Ophthalmology).

## • CONGRATULATIONS

to Percy Chaney, who is promoted from Main Kitchen Attendant to Cook's Helper.

to Harvey Cheeseboro, who is promoted from Central Food Service Attendant to Bake Shop Attendant.

to Adolph Johnson, who is promoted from Main Kitchen Attendant to Assistant Cook.

to Willie Johnson, who is promoted from Central Food Service Attendant to Assistant Belt Supervisor.

to Adelean Jones, who is promoted from Central Food Service Attendant to Diet Aide.

to Charles Leerdam, who is promoted from Dishwasher, Main Kitchen, to Food Storeroom clerk.

to Franklin York, who is promoted from Soda Fountain Dishwasher to Soda Fountain Attendant.

# DOINGS OF DOCTORS

DR. ROBERT H. E. ELLIOTT, JR., Associate Dean, has been elected to take the place of DR. DOUGLAS S. DAMROSCH, Professor of Pediatrics and Director of Medical Center, as Secretary of the Executive Committee of the Faculty of Medicine, Columbia University's College of Physicians and Surgeons.

At the 164th annual convention of the Medical Society of the State of New York, the session on Data Processing in Medicine was chaired by DR. WILLIAM BAUMAN, Director of Medical Data Processing at Columbia-Presbyterian Medical Center. At this session, DR. CHARLES T. RYDER, Professor of Clinical Orthopaedic Surgery, explained a system of "Orthopaedic Admission-Discharge in Support System," co-authored by DR. VICTOR SHULMAN, Visiting Fellow, Department of Pediatrics, P&S. Another P&S staff member, DR. NATHAN S. KLINE, delivered a paper on "Computer Use by the Physician in Private Practice." Dr. Kline is Assistant Clinical Professor of Psychiatry, P&S.

DR. FREDERICK P. HERTER, Acting Director, Department of Surgery, served as vice chairman of the Section on Surgery at the Convention, which took place at the Hotel Americana last month.

In the Pediatric Section, chaired by DR. JOSEPH A. SILVERMAN, Assistant Clinical Professor of Pediatrics, P&S, DR. FREDERICK G. HOFMANN, Professor of Pharmacology, P&S, led off a symposium on "Juveniles and Drug Abuse" with a discussion of "Pharmacologic Aspects of Drug Abuse."

Dr. Kline also read a paper on the use of "Pharmacopsychiatry in Relation to Anxiety and Depression."

DR. DAVID J. GOCKE, Assistant Professor of Clinical Medicine, P&S, addressed himself to "Correlation of Hepatitis Antigen with Disease and Infectivity of Blood Donors."

"The Problems of Lung Transplantation" was the topic of the New York State Trudeau Society lecture, given by DR. DAVID A. BLUMENSTOCK, Clinical Professor of Surgery, P&S.

DR. JOHN R. EDSALL, Assistant Clinical Professor of Medicine, P&S, participated in a panel discussion about the "Etiology of Asthma."

Columbia-Presbyterian Medical Center was also well represented in the area of scientific exhibits. A display on the "Tomography of the Optic Canal" was shown by DR. GUY D. POTTER and STEPHEN L. TROKEL, respectively, the Departments of Radiology and Ophthalmology. An exhibit on "Physical Therapy in Medical Practice" was staged by DR. PAUL J. CORCORAN, Assistant Professor of Rehabilitation Medicine, P&S and DR. JOHN M. MILLER, III, Assistant Professor of Rehabilitation Medicine.

A presentation of "Automated Patient Management" was co-prepared by Dr. Bauman, featuring Presbyterian Hospital's ABCD system (see page 4, *The Stethoscope*, February 1970).

During the week of January 27-28, DR. MEYER M. MELICOW and DR. MYRON TANNENBAUM visited the Armed Forces Institute of Pathology in Washington, D.C., to take part in the Course of Postgraduate Uropathology. Each gave several lectures.

Dr. Melicow also won first prize for his acrylic painting titled "A Cubistic Ablution,"

at the 35th annual exhibit of the New York Physicians' Art Club, February 2 to February 7, at the New York Academy of Medicine.

On January 13, DR. JOHN K. LATTIMER, Professor and Chairman, Department of Urology, participated in the formation of a National Coordinating Council for Urology, under the auspices of the American Urological Association, Baltimore, Md. Dr. Lattimer is a member of their Executive Committee. He also reported on a study of the capability of American urology to cope with the impending population explosion.

On January 23, Dr. Lattimer participated in the Training Grants Committee on Urology and Renal Diseases at the National Institutes of Health in Bethesda, Md., and on January 28, he presented a paper on "Renal Tuberculosis in 1970", before the TB Chemotherapy Conference of the U.S. Veterans Administration Army and Navy at Cincinnati. Dr. Lattimer has coordinated the government's pilot studies on kidney tuberculosis for the past 24 years.

DR. ROBERT GOTTSEGEN, Professor of Dentistry and Director of Division of Periodontics, presented two lectures in February at the annual Chicago Midwinter Dental Meeting. He was also one of the four panelists in an all-day symposium entitled "Periodontics, 1970; past, present and future."

During the week of January 11, DR. ELLIOT F. OSSERMAN, Professor of Pathology (Immunology and Oncology), was John Winans Visiting Professor of Medicine at Southwestern Medical School in Dallas, Texas, as the guest of Dr. Donald Seldin, Chairman of the Department of Medicine. During this period, Dr. Osserman delivered the Annual Winans Memorial Lecture on "Plasmacytic and Monocytic Dyscrasias: Current Clinical and Biochemical Concepts." Dr. Osserman also lectured at the Baylor Hospital.

Dr. Osserman

Dr. Elliott

For the third consecutive year, members of the Ophthalmology Research Department gave a course in basic sciences for the residents in Ophthalmology at the University of Puerto Rico, and for 16 residents from many Latin American countries. From January 12 through February 18, staff members spent from one to six days each in this teaching program which consists of 20 hours per week of lectures and laboratory demonstration.

DR. GEORGE K. SMELSER and his associate VICTORIA OZANICS, started off the course with their six-day lecture and laboratory sessions on "Anatomy and Embryology of the Eye." They were followed by DR. PAUL WITKOVSKY, "Physiology of Vision"; LASZLO BITO, "Physiology"; STEPHEN TROKEL, "Radiological Anatomy"; IRENE LOEWENFELD, "Neuroanatomy and Pupulography"; ABRAHAM SPECTOR, "Biochemistry" and WLADYSLAW MANSKI, "Immunology."

## Five Reasons Why Presbyterian Hospital Can Be Proud

The Columbia-Presbyterian Medical Center was the setting in recent weeks for one of the top news stories in the nation this year—the birth of quintuplets. Wire services and radio broadcasts spread the story around the world, and newsmen from the U.S. and from abroad converged upon Presbyterian Hospital.

According to available records, the event was the first delivery of live quintuplets in New York City. The only other surviving quint in the country have been the Fischer quint of Aberdeen, South Dakota, born in the fall of 1963. In several other quintuplet pregnancies in the U.S., an infant was stillborn or one or more infants died shortly after birth.

Presbyterian Hospital's five babies—three girls and two boys—arrived late in the eve-

ning of February 24, a damp, cold but snowless winter night. A Caesarean section had been contemplated but this was found not to be necessary. Their mother, Mrs. Margaret Kienast, of Liberty Corner, New Jersey, had entered Presbyterian Hospital's Harkness Pavilion in January for better prenatal management. A patient of Dr. Raphael Jewelewicz, Assistant Professor of Obstetrics and Gynecology, P&S, Mrs. Kienast had received from him a fertility drug, Perganol, for this pregnancy. Dr. Jewelewicz has been centering his attention on gynecological endocrinology in the Division of Clinical Endocrinology of Obstetrics-Gynecology Service under Dr. Raymond Vande Wiele since joining the Medical Center in 1968.

Mrs. Kienast received fer-

tility drugs also for two previous pregnancies, which resulted in the births of a girl and a boy, now four, and one and a half years old.

Mrs. Kienast introduces the quints to her other children, John, 1½, and Meg, 4.

Dr. Jewelewicz and his colleagues had known for some time that Mrs. Kienast would deliver quintuplets, and a flexible "battle plan" had been

drawn up by the Hospital's anesthesiologists, obstetricians and pediatricians to cope with the complicated event, as well as with all possible exigencies. The plan had the approval of the Hospital's Anesthesiology Service, headed by Dr. Shih-Hsun Ngai, the Obstetrics and Gynecology Service, headed by Dr. Charles M. Steer, and Pediatrics Service, under Dr. Gilbert W. Mellin.

"The people and the equipment were there, and we knew exactly who was going to do what," summed up Dr. Mieczyslaw (Mike) Finster, Assistant Professor of Anesthesiology. Dr. Finster supervised the administration of anesthetics to Mrs. Kienast.

A similar comment was heard from Dr. Paul Poppers, Assistant Professor of Anesthesiology, who worked with Dr. Finster: "It's amazing that such a complex and unique situation was handled so routinely—everything was anticipated and prepared."

The machinery of the battle plan was set in motion by Dr. Stuart B. Arm, Chief Resident on duty on the Obstetrics-Gynecology service that night. Dr. Arm called Dr. Jewelewicz around 8:30 p.m. and Dr. Jewelewicz immediately returned to the hospital.

Having taken stock of the situation, Dr. Jewelewicz had an associate telephone Dr. Finster and Dr. Stanley James, Attending Pediatrician, P.H. The two specialists were responsible for organizing the teams to provide anesthesiological and resuscitation care in the delivery room and pediatric care in the Babies Hospital Neonatal Intensive Care Unit.

While Drs. Finster and James were at home that eve-

ning, Dr. Paul Poppers had kept in touch with the hospital from a neighborhood lecture hall.

Meanwhile, Dr. Jewelewicz called Dr. W. Duane Todd, Assistant Professor of Clinical Obstetrics and Gynecology, P&S, as a consultant. By the time Dr. Todd arrived, however, the dramatic delivery was history.

Dr. Raphael Jewelewicz

As these physicians were rushing to the hospital from various directions, preparations were being made there by Drs. Jewelewicz and Arm to perform a Caesarean section to deliver the quints. But then Mrs. Kienast went into "beautiful" labor just before Dr. Finster and Dr. Poppers arrived. Teams of resident anesthesiological and obstetrical residents were organized quickly in accordance with the "battle plan." Because labor progressed so rapidly, however, there was not enough time to call in the Fellows who also had assignments in the plan. At the Sloane Hospital for Women on the night of February 24, Obstetrics-Gynecology residents were being almost literally "pulled in" for the resuscitation team. The quick selection of qualified

## Conventions of Obstetricians and Gynecologists To Reflect Eminence of P&S Ob-Gyn Department

A mammoth convocation of the world's and American gynecologists and obstetricians will take place next week in New York City.

Scheduled for Hotel Americana in midtown Manhattan starting April 12 are the Sixth World Congress of Gynaecology and Obstetrics, sponsored by the International Federation of Gynaecology and Obstetrics, and the Eighteenth Annual Clinical Meeting of the American College of Obstetricians and Gynecologists.

The program of the twin meetings is so ambitious that some of the events will spill over to the neighboring New York Hilton Hotel and the City Squire Hotel.

The scientific program includes plenary sessions, seminars, specialty meetings, free communications, and reports on current investigation, motion pictures and closed circuit surgical color television. About twelve hundred presentations are listed, with contributions from 49 different countries.

The position of eminence that the Department of Obstetrics and Gynecology, P&S, and the Obstetrical-Gynecological Service of P.H. enjoy both on an international scale and nationally is reflected in the number of contributors of papers who are now members of the department or who specialized here as fellows or residents.

Dr. Howard C. Taylor, Jr., presently Director of the International Institute for the Study of Human Reproduction, is the President of the Sixth World Congress of Gynaecology and Obstetrics. Previously, Dr. Taylor has served terms as president of each of the sponsoring organizations of this month's meetings.

Other congress participants who are now members of the Department of Obstetrics and Gynecology at the Columbia-Presbyterian Medical Center include these physicians: Karlis Adamsons, Edward T. Bowe, Solan Chao, Arnold N. Fenton, Vincent J. Freda, Henry Clay Frick, II, Robert

# Sloane Alumni Have Annual Event, Sponsored By Ob-Gyn Department

The Department of Obstetrics and Gynecology hosted the annual Sloane Hospital Alumni Day on March 6, 1970.

Dr. E. Stewart Taylor, Professor and Chairman, Department of Obstetrics and Gynecology, University of Colorado School of Medicine in Denver, was visiting professor for the week preceding. Daily clinical sessions with the staff and students were held during the week, and Dr. Taylor presented formal talks at Harlem Hospital and at Columbia-Presbyterian.

About seventy-five Alumni returned for the day, which ended with dinner at The Jagger House. The morning scientific session consisted of presentations by faculty members, and their subjects were: Dr. Edward T. Bowe, Assistant Attending Obstetrician and Gynecologist, PH, and Assistant Professor of Obstetrics and Gynecology, P&S, *The High Risk Clinic*; Dr. Solan Chao, Assistant Attending Obstetrician and Gynecologist, PH, and Assistant Clinical Professor of Obstetrics and Gynecology, P&S, *The Cone*

Dr. E. Stewart Taylor, Chairman of the Department of Obstetrics and Gynecology at the University of Colorado School of Medicine, was welcomed to the Sloane Hospital Alumni Day by Dr. Charles M. Steer, Acting Director of Obstetrics and Gynecology at Columbia-Presbyterian Medical Center, and by Dr. W. Duane Todd, President of Sloane Hospital Alumni.

*Biopsy*; Dr. Orlando J. Miller, Associate Attending Obstetrician and Gynecologist, PH, and Associate Professor of Obstetrics and Gynecology, P&S, *Cell Fusion and Control of Malignant Growth*; Dr. Leon Speroff, Assistant Attending Obstetrician and Gynecologist, P&S, *Relationships of Prostaglandins to Reproductive Function*.

In the afternoon a panel discussion of Pediatric Gynecology was held. The members of the panel and their areas of

discussion were: Dr. E. Stewart Taylor, *Diagnosis and Management of Surgical Problems*; Dr. Albert Altchek, Assistant Clinical Professor, Obstetrics and Gynecology, Mount Sinai School of Medicine, *Diagnosis and Management of Office Problems*; Dr. Maria I. New, Associate Professor of Pediatrics, Cornell University Medical College, *Endocrinological Disorders*; and Dr. Jerry M. Wiener, Instructor, Department of Psychiatry, P&S, *Psychological Disturbances*.

## Conventions of Obstetricians and Gynecologists . . .

*Continued from page one*

E. Hall, Raphael Jewelewicz, Orlando J. Miller, Equinn W. Munnell, Ralph M. Richart, Acting Department Chairman Charles M. Steer, Harold Speert, Kotaro Suzuki, Donald P. Swartz, W. Duane Todd, Harold M. M. Tovell, Raymond L. Vande Wiele.

Papers will be presented at the meetings also by Dr. Stanley James, Attending Pediatrician, PH, and former mem-

bers of the Department of Obstetrics and Gynecology here, Drs. N. A. Janovski, and John L. Lewis, Jr.

The program of events for the twin meetings lists four former research fellows as contributors of papers: Ella Bergher de Bacalao, Ichiro Taki, Michel Thiery, R. Nuran Turksoy.

Another category of physicians who will participate in discussions or have authored monographs for the meeting

consists of former residents in obstetrics and gynecology at the Columbia-Presbyterian Medical Center. According to preliminary program listings, they are: Jack N. Blechner, C. D. Christian, David N. Danforth, Leo J. Dunn, Stewart A. Fish, Mary Jane Gray, Stanley J. Gross, Saul B. Gusberg, Jerome S. Harris, Jerry Hulka, Donald L. Hutchinson, Robert S. Neuirth, John T. Sciarra, Morton A. Stenchever, Carlo Valenti.

## Open Heart Surgery For Brothers

Todd and Brett Lyndaker were discharged from Babies Hospital on March 7, feeling fit as two fiddles. Todd, 9, and Brett, 7½, both underwent open heart surgery on February 19.

Their surgeon, Dr. James R. Malm, Attending Surgeon, PH; Professor of Clinical Surgery, P&S and Director of the Open Heart Unit, said, "The boys have done very well and I am very optimistic about their future."

Both youngsters were born with congenital heart defects. Brett had tetralogy of Fallot, a combination of two cardiac defects, and has never been able to run, play ball, ride a bike or do any of the things a boy his age ordinarily does.

Todd's less disabling problem was a ventricular septal defect. He was able to ride a bike and could run and play a little. His overall condition, however, was no less serious.

Both children attended public school regularly. While they were patients in the Hospital, they attended Babies Hospital Public School 401-X.

The brothers proudly displayed to a reporter over 130 get-well cards that lined the walls of the two-bed room they shared in the Hospital. They had also collected over \$56 from friends, which, Todd hastened to explain, will be used to buy a bicycle "so that Brett can learn to ride."

To compensate for the inability forced upon him by

Todd and Brett Lyndaker look forward to an active summer this year.

his illness, Brett does a lot of reading. His mom said, "He's not too interested in sports yet." Todd, on the other hand, is an avid football fan and watches the game in person or on TV whenever he can. He has attempted to get into the game but has found he has a little growing to do first!

The parents of these youngsters, Nancy and Warren Lyndaker, run a dairy farm, with 43 milkers, in Watertown, New York. Mrs. Lyndaker, an attractive young woman, stated that Todd performs routine chores on the farm, but that Brett had never been able to—"He'd get too tired."

Mrs. Lyndaker said the boys' surgical care and long hospitalization have caused no alarming financial strain. "We are lucky to have sufficient insurance and many wonderful friends."

Happy running, jumping and bike riding, Todd and Brett—you've got a lot of living to catch up with.

## A Call To Medical Center Artists

Medical Center artists are reminded that the Art Show will be held this year from Tuesday, April 28, through Friday, May 8. Art in any form, including painting, sculpture, photography and crafts is sought. As in previous years, the show will be housed on the 20th floor of Presbyterian Hospital, adjacent to the Milbank Library.

This traditional annual event, arranged jointly by the Art Show Committee, under the chairmanship of Chaplain

Robert B. Reeves, Jr., and the Office of Public Interest, depends on your participation for its success.

All Medical Center staff and personnel are urged to submit their art or craft.

For information and entry blanks, please call the Office of Public Interest, Extension 1911.

Remember, a successful art show is up to you. And we would like very much to make the 1970 art show a great success.

## Stevie Wonder Visits Children In Eye Clinic

The youngsters in the Children's Eye Clinic at The Ed-

ward S. Harkness Eye Institute, had a wondrous afternoon

on February 24, when Stevie Wonder, blind recording and concert artist, visited the clinic.

Stevie is the recipient of the Fight for Sight Show Business Inspiration award of 1969 for his "compelling achievements in the world of entertainment."

The Eye Clinic, which is affiliated with the Fight for Sight in New York, examines and treats thousands of youngsters with eye problems, without regard to race or religion.

Stevie chatted with the children who surrounded him and gave each child one of his record albums. It was difficult to tell who enjoyed the visit more—Stevie or the kids. But an exciting time was had by all.

Stevie Wonder is surrounded by happy youngsters in the eye clinic.

# "Difficult" Interviews On T. V. Used In New Teaching Technique

Other services may have some difficult patients, but none can match one on whom the students practice in the Department of Urology. He can bring out more interesting symptoms, pose more confusing problems and end up letting you figure out how you could have done it better, more times in a single hour than you can imagine. The students take turns breaking the news to him that he has cancer, will need a serious operation and help him cope with the family problems which arise, with varying degrees of skill. Sometimes things go wrong and need correcting. When it is over, the student can watch himself interview this difficult patient, watch himself make mistakes, and deduce how he could have done it better, with plenty of helpful discussion from his classmates in the group.

All of these things happen in the library of the Squier Urological Clinic, when Dr. John K. Lattimer, Professor of Urology and Director of the Squier Clinic, assumes the role of the patient, lets the student tell him about his trouble and how the student proposes to correct it. All of this is done under the penetrating eye of a television camera, so that immediately upon completion of each 15-minute episode, the student can watch himself perform, criticize his own performance and figure out how he could have done each thing better than he did.

Doctor Lattimer explains that in this way, many more problems can be brought up in a much shorter span of time than was possible when actual patients were used, where no particularly interesting problems seemed to

come along just at the very moment when they were set up to televise. "We are able to give these students experience in handling a multiplicity of different interesting problems and to learn the compassion and directness which are so necessary, especially in the emotion-ridden field of urology. We can demonstrate that the doctor must appreciate the impact of the patient's illness upon the rest of the family, in a way that rarely becomes obvious with regular patients. Another great advantage of this technique for the beginning student is that no patient is harmed by any blunders the novice interviewer may make. If you shock or hurt this simulated patient, he does not hesitate to let you know about it. This adds to the excitement."

On other occasions, Mrs. Katherine Jeter, the energetic "stoma specialist" of the department, (who commutes

from West Point every day) plays the role of a distraught mother whose infant is about to undergo a severe operation, with the creation of a "stoma" to transfer the urinary opening onto the abdomen. She displays all of the anxieties and confusions of the real-life mothers with whom the Department deals, and enables both the students and the residents, through actual "experience", to learn how to soften the impact of this devastating news upon young parents.

This advanced teaching technique is always a popular session with the student groups, and urological academicians from many other medical schools in this and other countries have come to sit in on these sessions, to see how it is done. Some go away stunned, but all agree that it is a powerful teaching instrument in an area not previously sufficiently emphasized.

Presbyterian Hospital's most difficult patient is having his diagnosis explained by a student in the Department of Urology. The student will be able to see his index finger in action minutes later during a playback critique of his televised performance.

## Miguel Camacho Credits Wife With Promotion

It has been said that behind every successful man, there is a woman. And if this is true, Miguel Camacho is no exception.

A native of Lima, Peru, and an attendant on the Food Service since 1954, Miguel was recently promoted to the Data Processing Unit of the Accounting Department.

"My wife is a wonderful woman and I could never have done this without her," was the initial statement he made when *Stethoscope* talked to him.

Her constant encouragement and willingness to forego any social life for the duration of his schooling and training periods was a real inspiration.

With great determination Miguel pursued the study of

computer programming by attending school at a skill center beginning in 1967. He attended classes from 6:00 to 10:00 p.m., and worked at the Hospital from 5:30 to 2:00 p.m. He then got a job at Aileen, Inc., manufacturer of ladies wear in New York City, as a key punch operator to perfect his newly acquired skill. He worked there from 4:00 p.m. to 12:00 midnight, maintaining the same 5:30 a.m. to 2:00 p.m. shift at the Hospital. His true grit paid off.

Miguel is very happy with his new job and is extremely grateful for the wonderful opportunity given him by the Hospital. He has already made new friends on the job but is especially indebted to John Wazny, Manager of the

Miguel Camacho

Unit; Peter Toronto, his supervisor; and Joseph Lyons, Wage Analyst, Personnel Department.

Miguel, his wife, Laura, and their two children, Martin, 7, and Rosanna, 5, live in the Bronx.

## Parkinson Workshop Program

Dr. Roger Duvoisin and Mrs. Beverly Jones played major roles in organizing a Parkinson workshop program on new concepts in treatment and care.

reads:

"Some turn this sickness yet might take,

Even yet. But he:

"What drug can make a wither'd palsy cease to shake."

Dr. Robert Barrett, Assistant Professor of Neurology, P&S and Assistant Attending Neurologist, NI, spoke on *Parkinson's Disease: New Concepts of Pathology*.

Following lunch, the program continued with lectures by Mrs. Marcia Roses, R.P.T., and Kathy Pieckarz, R.P.T., on *the Role of Physical Therapy in Parkinsonism*.

The final presentation was *Comprehensive Team Approach to the Care of Patients with Parkinson's Disease*. Representatives on the team were Miss J. Wintermute, Nursing; Dr. R. Duvoisin, Medicine; Mrs. Roses and Miss Pieckarz, Physical Therapy; Mrs. G. Saferstein, Social Services; Dr. R. Wharton, Psychiatry; and Mrs. G. Shelly, Occupational Therapy.

A question-and-answer period followed each lecture, and at the conclusion of the program, tours were conducted through the Rehabilitation Unit for those interested.

## Dr. Gilbert Mellin Appointed Acting Chairman of Pediatrics

Dr. Gilbert W. Mellin has been appointed Acting Chairman of the Department of Pediatrics and Acting Director of Pediatric Service. He has been associated with the Columbia-Presbyterian Medical Center since 1955.

Dr. Mellin was born in Manorville, Pennsylvania, received his B.S. from Bethany College in 1945 and his M.D. from Johns Hopkins University Medical School in 1949.

He interned at the University of Pittsburgh Medical Center and served his residency in pediatrics at Bellevue Hospital, New York City, 1950 to 1953.

Dr. Mellin's chief area of interest has been the newborn. He has been Director of the Fetal Life Study and in charge

Dr. Gilbert W. Mellin

of the newborn nurseries.

He is married to the former Suzanne Seeds and has two daughters (both "Sloane babies"), Deborah, 13 and Sarah, 10. Dr. Mellin and his family live in Leonia, New Jersey.

# Five Reasons...

Continued from page one  
personnel on a moment's notice testifies to the advantages of "bench strength" at large medical centers, said Dr. James.

In personally recalling the hectic minutes of preparations before the delivery of the Hospital's first quintuplets, the anesthesiologists attending Mrs. Kienast mentioned the apprehension they felt about her supper, which she'd had shortly before onset of labor. There was a real danger that Mrs. Kienast might choke on some food particles. Another danger that concerned the physicians attending Mrs. Kienast was the unusually large volume and weight in the mother's abdomen that the quintuplets represented. It was feared that the voluminous uterus would compress vital blood vessels of the mother.

Dr. Finster and Dr. Poppers worked closely with the two obstetricians, Dr. Jewelewicz and Dr. Arm. Under the supervision of the two attending anesthesiologists, Drs. Robert Gasway and Brian Broom administered nitrous oxide to Mrs. Kienast.

After the second baby was born, complete and immediate relaxation of the uterus was called for. Dr. Finster decided upon halothane, the safest and the most rapid agent available for this purpose.

Upon being born, each of the quintuplets became the responsibility of physicians on the resuscitating team. They were: Robert Auburn, Robert Di Giacinto, Saad El-Hawary, Lewis Feder, Irving Karten and Theodore Stanley. If needed, the resuscitation of the newborn is the responsibility of the anesthesiology service at the Presbyterian Hospital. Thus Drs. Finster and Poppers supervised the resuscitation of the quintuplets.

The physicians were greatly aided by Mrs. Diana Grennell, Mrs. Mildred Abbott, Miss Norma Carlson, nurses; and Mrs. Barbara Key, nursing aide.

Norma Carlson

The historic procedure took place in a span of ten minutes, from 10:08 p.m. to 10:18 p.m. The first baby to arrive was a girl; she weighed approximately 3 pounds, 3 ounces. The second baby was a girl also. She was born at 10:09 and weighed about 3 pounds 12

ounces. The third child to be born was a boy. He weighed about 4 pounds and 6½ ounces. His time of birth was 10:13. The fourth baby, a girl, was timed in at 10:16 at a weight of about 3 pounds 14 ounces. The last child was a boy, arriving at a weight of about 3 pounds 8 ounces.

Following each birth, the resuscitating team administered suction and oxygen. Great care was taken not to allow the infants to cool off.

Only after the babies were breathing spontaneously and appeared vigorous, they were rushed to Babies Hospital in warm enclosures heated with resistance coils. Dr. James, who seemed to have timed his arrival with that of the quintuplets, began supervising the expert care being given the infants in the Neonatal Intensive Care Unit.

The simultaneous arrival of five premature infants made demands upon the nursery's staff of about 30 nurses and nursing aides. Additional physicians closely involved with the quintuplets included Dr. Gabriel V. Duc, Assistant Professor of Pediatrics, P&S; Dr. John M. Driscoll, Jr., Instructor in Pediatrics; Dr. Myron M. Sokal, Visiting Fellow; assistant residents Dr. Robert A. Hands, Dr. Arthur L. Levin, Dr. Henry M. Purow, Dr. W. Byron Smith and interns Dr. Beth Anne Jenks and Dr. Sheila Shanahan.

Within minutes following the historic delivery, the Hospital's switchboard lit up with scores of telephone calls from newspapers, wire services, and radio and television stations. The calls came from as close as the Bronx and from as far as Los Angeles and Buenos Aires. Newsmen with cameras, tape recorders and writing pads beat a path to the Medical Center. The Babies Hospital Board room was opened for impromptu press conferences during the night and the next day. The father of the quintuplets, William Kienast, as well as Drs. Finster, James and Jewelewicz, was a star at a crowded press conference in the early afternoon of February 25. More than 150 representatives of newspapers and broadcast media took part. Following the news conference, seven TV networks and all major news services and newspapers were allowed to photograph the babies through glass within the Neonatal Nursery. These pictures were distributed throughout the world that same day.

Dr. James described the condition of the quintuplets as good after the first 12 hours of life and later, that afternoon, as good to excellent. Initially restricted to a diet of glucose and water, the famous five were being gradually intro-

duced to formula that day. Three of the quintuplets—born first, second and last—had some breathing difficulties. All five babies were in incubators equipped with special pump and filter systems to deliver clean air or air mixed with oxygen. The incubators allowed the quintuplets to grow and thrive in a protected environment until their own defense mechanisms against infection had fully developed.

Later that week, the names of the first four quintuplets became available to the press. They were named, in the order of birth, Amy Struthers, Sara Mosley, William Gordon, and Abigail Lee.

Sara, one of three quintuplets with initial breathing difficulties, redeveloped her problem in the early morning hours of Friday. She was given supportive therapy, including oxygen added to her filtered air, and began to improve. Sara was also treated with antibiotics to combat the presence of an intestinal bacterium, *E. coli*, which was cultured from earlier urine samples. After antibiotics were given, the "bug" was absent from later samples.

All five infants had a slight degree of "jaundice of the newborn." This type of jaundice normally occurs to some extent in the majority of newborn infants. The quintuplets' weight loss, which is also normal in the majority of newborn infants, began to even out on the weekend following their birth. Amy even started to gain some weight.

Mrs. Kienast was discharged from Harkness Pavilion soon after she, her husband and six of the physicians connected with her case appeared at a press conference in the Alumni Auditorium on Monday, March 2. She disclosed that the fifth-born quintuplet had been named Edward Pierce.

In the meantime, Edward, his brother and their sisters were continuing to improve in

their incubators in the Intensive Care Unit, although William Gordon, not gaining weight as he should be, had to be started on intravenous feeding for a while.

Nine days after they were born, the Kienast quintuplets were moved from the intensive care facility to the regular nursery across the hall. Their jaundice had been completely eliminated with the aid of phototherapy. The young Kienasts were all getting concentrated formula and were tolerating it well.

About three weeks after their arrival here, all five of the infants weighed more than they did at birth. Their weight gains ranged from one to five ounces over their original weights. They were gaining from 1½ to 2½ ounces each per day. Their sucking and swallowing reflexes were becoming stronger, and none of them required additional help with feedings.

When they became stronger the quintuplets were submitted to a variety of special tests. The babies' blood tests, neurological examinations, eye tests and electroencephalograms were all normal for infants of their age and indicated that even those infants who had had breathing difficulties and jaundice were progressing normally.

In a world of electrodes, pump and filter systems, and apnea monitors, tender loving care still remained a most important prescription for the well-being of the Kienast quintuplets.

"T.L.C. is dispensed freely at the Neonatal Intensive Care Unit by our nurses," said Priscilla Parke, head nurse.

While the infants are handled frequently by experienced nurses and in consequence, have frequent human contact, it is nevertheless important from the mother's point of view that she also frequently handle the children because this enables her to establish a physical contact with the infants and develop her maternal instinct for them.

The response of the quintuplets

## HELPED DELIVER TWO SETS OF QUINTUPLETS

Dr. Mieczyslaw Finster

It is worthy of note that Dr. Mieczyslaw Finster, Assistant Professor of Anesthesiology, P&S, and Assistant Attending Anesthesiologist, P.H., has taken part in the delivery of two sets of quintuplets. Dr. Finster, who completed his residency in anesthesiology here from 1958 to 1961 after obtaining his M.D. from the University of Geneva, supervised the administration of anesthetics to Mrs. Margaret Kienast. On February 1, 1967, he administered anesthetics to Mrs. Hildarene Harris at Jewish Hospital in Brooklyn as she delivered a set of quintuplets. According to newspaper reports, one of the five babies was stillborn, however, and another died about a week later.

to this attention marked them as individuals, each with a different set of preferences and habits. Dr. James emphasized that the physicians and nurses of the Neonatal Intensive Care Unit respect these differences and have treated each baby as an individual, not as an "organization baby" dependent on the preferences of the other four. All infants, for example, have different sleep patterns and their interest in their surroundings and feeding varies.

The quintuplets are expected to leave the hospital this month.

Mr. and Mrs. William Kienast answer questions of newsmen at March 2 press conference. Sharing the spotlight with them are, from left, Drs. Paul Poppers, Mieczyslaw Finster, Raphael Jewelewicz, Stanley James, and Raymond Vande Wiele.

## Columbia-Presbyterian Active In Research On Unborn Children

The precision delivery of the five Kienasts was a result of many years of research at the Columbia-Presbyterian Medical Center by a group of doctors studying the most neglected patient in medicine—the unborn child.

"It's almost axiomatic," in the words of Dr. Stanley James, "that a medical institution's patient care is as good as its research." Although a pediatrician by training, Dr. James has been a member of the Departments of Pediatrics and Anesthesiology for many years. This should properly be so in the case of physicians specializing in the care of children, for we know now that a child faces its most critical moments immediately before and during birth.

The Columbia-Presbyterian Medical Center has long been in the forefront of research on the unborn child. This research was initiated by the famed Dr. Virginia Apgar, who developed the Apgar scoring system, and carried on by Dr. James. One of the most important contributions of Dr. James was to assail the belief that the fetus thrives and develops in a low-oxygen environment. Prior to the work of Dr. James, it was thought that no harm came to an infant when he experienced oxygen deprivation at birth.

Dr. James proved that the

Mrs. Margaret Kienast and the quintts' physician, Dr. Stanley James. This photo, as well as all other photos of the quintts and the nurses caring for them, was taken by Mrs. Elizabeth Wilcox.

blood of the fetus normally neither lacks oxygen nor is too acid from too much carbon dioxide. The scientific contributions by obstetrical anesthesiologists at Columbia-Presbyterian Medical Center led to an appreciation of the potentially harmful effect of too much anesthetic on the baby during the period of biochemical asphyxia that accompanies birth.

These investigations, which revolutionized medical thinking in pediatrics and obstetrics, were made possible by new sophisticated machines, among them devices to measure oxygen, carbon dioxide and acidity levels from a tiny droplet of blood, withdrawn

from a pinprick in an infant's ear or even from the scalp of the unborn fetus.

The Columbia-Presbyterian Medical Center was the first in this country to use this method, known as blood microchemistry, to continually monitor the blood gases of both fetuses and the newborn.

The Presbyterian Hospital's obstetrical anesthesia division is one of the few in the country where round-the-clock coverage is provided by specialists in this discipline. All obstetrical residents study under experienced anesthesiologists. The Hospital's obstetrical anesthesiologists have made important research contributions to their field of spe-

cialization. For example, the placental transfer and uptake in the fetal tissues of two of the anesthetic agents administered to Mrs. Kienast, halothane and thiopental, were recently studied by Drs. Mieczyslaw Finster and Paul Poppers, two members of the anesthesiology team that attended the birth of the quintuplets.

These were some of the elements in the tradition of excellence that preceded the team effort by the Medical Center's anesthesiologists, obstetricians and pediatricians to deliver and care for Mrs. Kienast's five babies six weeks before term.

For this tradition to continue, changes will have to take place to take into account insights gained about the newborn.

The Presbyterian Hospital's plans, which hinge upon the receipt of adequate funds, call for the construction of a new neonatal intensive care unit on the 12th floor of the Babies Hospital. This unit is urgently needed to shorten the trip the newborn must now make from the 17th floor to second floor. A transitional care unit for the newborn is being designed within the obstetrical suite. Such a facility would provide immediate intensive care for the infants, until they are "stabilized."

# News of Nursing

On February 24, Dr. Anne M. Earle, Assistant Professor of Nursing and Director of Graduate Program, Psychiatric Community Mental Health Nursing, spoke on the topic of Community Mental Health before a group of para-medical personnel from the Veterans' Administration Hospital, Northport, L. I.

Dr. Earle also chaired a symposium on nursing management for the acute schizophrenic in New Orleans, Louisiana, March 14.

Dr. Mary I. Crawford, Director of Nursing, PH and Associate Dean (Nursing), Faculty of Medicine, CU, attended a meeting of the American Association of Deans of Colleges and University Schools of Nursing at Catholic Uni-

versity, Washington, D. C., February 16-17, and at the National Library of Medicine, Washington, D. C., February 18.

Miss Crawford also attended a meeting of Directors and of Assistant Administrators for Nursing, March 19-20, at University Hospitals of Cleveland, Ohio, sponsored by the Council of Teaching Hospitals.

Claire Bickham has been appointed Administrative Assistant (Personnel Service), Nursing Service, PH.

Miss Bickham received her education as Radiologic Technologist and R.N. from Mercy Hospital in Urbana, Illinois. Upon completion of the programs she was employed there as an operating room nurse.

She later attended and graduated from the University of Illinois with a B.S. in psychology and subsequently received her Master's in hospital administration from St. Louis University. She served her residency in hospital administration at the De Paul Hospital in St. Louis.

Claire Bickham

Miss Bickham stated she will be working with Helen Henry, Assistant Director of Nursing, Personnel Services.

## Mrs. Carol Hardingham In Recruiting Post

The Department of Nursing has announced the appointment of Mrs. Carol Hardingham as Coordinator of Nursing Recruitment.

Mrs. Hardingham, a very attractive and personable lady, brings her own expertise to this post. For six and a half years she was Director of Volunteers at United Hospital in Port Chester, N. Y., directing over 600 volunteers in 35 different hospital services. She did all publicity and public relations for the department. She did considerable public speaking in her field and acted in an advisory capacity in the formation of volunteer departments throughout the United States and abroad. Prior to the above position, she was editor of a technical house organ.

Said Mrs. Hardingham, "My

Mrs. Carol Hardingham

job is new and I am new and we are both feeling our way along."

In her job here she will work primarily in the field, on campuses, speaking and, hopefully, recruiting. She will be visiting degree programs in

colleges and universities throughout the nation.

"I will be doing public relations, advertisements, new nursing brochures and writing releases for magazines and other news media — anything that I think will stimulate recruitment. There is a tremendous shortage of nurses everywhere."

Mrs. Hardingham attended courses in writing and psychology at Iona College, Columbia University and at the American Hospital Association.

She has also managed to find time to devote to her avocation — acting — having done both professional and community theater work.

She is married to a radio-TV advertising man and has a son, Kim, a sophomore at Duke University.

## Reception For Exchange Visitor Graduate Nurses

Seven nurses from three different countries completed their one-year course at Presbyterian Hospital in the exchange-visitor graduate nurses program coordinated by Ruth Rayner, who directs the course.

During their one-year stint the nurses acquired clinical experience in various departments of the Hospital and attended classes in nursing, medicine and also spent some time learning about American culture.

One of the nurses, Mrs. Hedy Folkersma, attended the course for only two months after which, as a result of an unfortunate accident, she was unable to participate for the remaining 10 months.

One of the nurses, Jilliam Fuller, is returning to Australia to be married. Mrs. Folkersma will remain with her husband in Hartford, Connecticut until August when his experience as an exchange-visitor will be completed. The other five, Indra James, Mrs. Thankamma Ayykara and Lily Dahn from India; Olinda Noronha from Goa (India) and Ayako Tachikawa from Japan, are going to spend another year in this country assigned to various hospitals in the United States.

Exchange-visitor graduate nurses pose for a photograph at a reception in their honor. With the group are Dr. Mary I. Crawford, Associate Dean (Nursing) of the Faculty of Medicine (4th from left) and Ruth Rayner, director of the course (3rd from right).

## Recent Retirements From P. H.

Mrs. Mona Yocum

Mrs. Mona Yocum, receptionist, Sloane Clinic, Vanderbilt Clinic, retired in February, completing 24 years of employment. Actually, her association with the Hospital dates back to 1928, but she left in 1930 to raise her family and returned in 1945.

When she was a little girl of 10, Mrs. Yocum was a fashion model, and her pictures appeared in such magazines as the Saturday Evening Post and the Butterick Fashion Catalog.

She was born in Brooklyn and now lives in Englewood, N. J., with her husband who is also retired. The couple have two sons and two grandchildren.

Miss Vrooman

Mrs. Yocum

Adelaide Vrooman

Adelaide Vrooman, Social Service Caseworker, Babies Hospital, retired in January, completing a 34-year career of devoted service to Presbyterian Hospital.

Miss Vrooman is a registered nurse and was graduated in the field of public health. For several years she was actively engaged in the research division of tuberculosis in the New York City Department of Health, with Dr. William Park.

## Volunteers Cited

According to Mrs. Dorothy Diamond, Director of Volunteers, 100 hours of service were completed at the end of 1969 by the following volunteers: Mrs. Edith Ahlfeld, Mrs. Lucy Bragers, Mrs. Margaret Brewington, Olive Clancy, Mrs. Marie Doran, Mrs. Ilse Engel, Mrs. Eva Flores, Gail Freedman, Mrs. James Fulton, Mrs. Paula Glass, Mrs. C. P. Guercken, Mrs. Edith Haas, Mrs. Constance Hamilton, Mrs. Lottie Herzfeld, Mrs. Robert V. Jackson, Mrs. Nora Keller, Mr. Theodore Levine, Mrs. Olga Licht, Mrs. Sitta Loewenthal, Mrs. Marion Mayer, Mrs. Helen Mooney, Helen Naimark, Mrs. Margaret Ratcliffe, Mrs. Stayman Reed, Mrs. Nelly Rollman, Mrs. Antonia Ruiz, Lore Schloss, Ruth Snodgrass, Mr. Norman Summerfield, Mrs. Carmen Temmert, Mrs. Ann Van Wyck, Mrs. Virgil Watson, Mrs. Hannah Weinhaus and Mrs. Frida Wolf.

Since then she has been interested in research and believes that her early work in that area contributed to her enthusiasm for the specialty clinics. She has worked in the general pediatric clinics, and in the urological, surgical and medical wards and clinics. She was the first and only social worker with Drs. Dorothy Anderson and Paul de Santagene in the study of cystic fibrosis, and later with Dr. Carolyn Denning. For several years she worked with the cerebral palsy children.

Miss Vrooman was also actively involved in the area of mental retardation and was affectionately referred to as "the mentally retarded social worker."

Mrs. Catherine Osterman

Mrs. Catherine Osterman, Social Service Caseworker, Dermatology Service, retired in February, completing 18 years of service to Presbyterian Hospital.

Mrs. Osterman was born in Dunscombe, Iowa, studied at the University of Iowa and attended the George Warren Brown School of Social Work in St. Louis, Missouri.

She engaged in welfare and social work in Iowa for about four years, worked in two state hospitals in Michigan for another four years, and was associated with the American Red Cross for about five years before coming to PH.

Mrs. Osterman has traveled through 43 of the 50 states, and plans to visit four others soon. She is not particularly receptive to being retired and will seek some work in the field of social service.

## Mrs. Bruenn's Home Is Setting For Tea

The lovely home of Mrs. Howard G. Bruenn, in the Fieldston area of Riverdale, was the setting for a tea given in honor of Lillian Brown, Unit Manager, PH and the house staff wives, on March 18.

The atmosphere was relaxed and informal; the refreshments were delicious. Mrs. Bruenn was a gracious hostess and everyone seemed to have a delightful time.

Mrs. Dorothy Diamond, Director of Volunteers, chats with Lillian Brown, Unit Manager, P.H., who was guest of honor, and with Mrs. Robert H. E. Eliott, Jr.

# Dental Hygienists Capped In Solemn Ceremony

## Lecture Series Slated For April

The Pauline A. Hartford Memorial Chapel was the setting for a capping exercise for 14 student dental hygienists of the School of Dental and Oral Surgery on Sunday, March 1.

Academic processional included: Mrs. Patricia McLean, R.D.H., M.S., Associate Professor in Dental Hygiene and Director of Dental Hygiene; Melvin L. Moss, D.D.S., Ph.D., Dean of Faculty of Dental and Oral Surgery; Julie Wehrle, R.D.H., M.S., Assistant Professor in Dental Hygiene; George L. O'Grady, D.D.S., Assistant Dean of Faculty; M. Diane Curl, R.D.H., M.S., Assistant Professor in Dental Hygiene; Harold L. Applewhite, D.D.S., M.P.H., Associate Professor of Dentistry; Kathleen Silko, R.D.H., M.S.; and Mrs. Janet McLean, R.D.H., M.S., Instructors in Dental Hygiene.

Following the processional,

Chaplain David B. Maxwell gave the invocation.

Dean Melvin L. Moss and Assistant Dean George L. O'Grady brought greetings to parents and extended congratulations to the students.

Dr. Harold L. Applewhite, D.D.S., M.P.H., Associate Professor of Dentistry, DOS, delivered the capping address. He stressed the lack of manpower in the dental profession and the need to bring more auxiliary help, such as dental hygienists, into the field. This would enable the profession to realize the day when good dental care would be the right of all, instead of the privilege of a few.

Mrs. Patricia McLean spoke briefly on the origin of capping in the nursing profession. She said, "The ladies of the 17th and 18th centuries regarded a cap as a status symbol." When ladies entered the

Mrs. Janet McLean, left, and Diane Curl adjust cap on Jane Sexson.

field of nursing, the cap was adopted to maintain aseptic conditions in operating rooms and other hospital areas. Of course, the cap completely covered the head in those days.

Gradually, as ladies began bobbing their hair, the nursing cap was also bobbed, and became a status symbol of the school from which a nurse graduated. When the first school of dental hygiene was founded in 1915, dentists agreed that these ladies should also wear caps as a symbol of their professional status.

The cap of the dental hy-

gienist is banded in lavender, the professional color of dentistry.

Barbara Hyatt, president, Junior American Dental Hygienists' Association, administered the code of ethics practiced by dental hygienists.

Clinical instructors Mrs. Janet McLean and M. Diane Curl capped the students.

Newly capped dental hygienists, left to right, Barbara Hyatt, Jane Yee and Carole Themann.

Junior students, Misses Susan Connelly, Ellen Cuttita, Linda Draper and Therese Trujillo were capped, and senior students, Leona Boutin, Dorothy Currie, Anne M. Flette, Mrs. Ulla Goldsmith, Barbara Hyatt, Mrs. Smiljana Kucar, Betty Hsianglin Ma, Jane Sexson, Carole Themann and Jane Yee received blue ribbons for their caps.

Following benediction, given by Chaplain Maxwell, a reception was held in Bard Hall for the students, their families and friends.

The Institute of Cancer Research of Columbia University's College of Physicians and Surgeons will present a scientific program at the Francis Delafeld Hospital auditorium in April on Fridays from four to five p.m.

The program is as follows: April 2, *Replication of the RNA Genome*, J. Thomas August, M.D., Albert Einstein College of Medicine; April 10, *Macromolecular Structure by Dark Field Electron Microscopy*, F. Peter Ottensmeyer, Ph.D., University of Toronto; April 24, *Studies with Leukemia-sarcoma Viruses in Mammalian Cell Cultures*, Timothy E. O'Connor, Ph.D., National Cancer Institute. On April 17 there will be a federation meeting and no conference will be scheduled.

## In Memoriam

John W. Hornor

John West Hornor, a member of the Boards of Trustees of Babies Hospital and of Presbyterian Hospital for 28 years and an Honorary Trustee since 1956, died in his sleep on March 9, 1970, after a productive life of ninety-four years.

Mr. Hornor was a bright and observant lad of 16 when he began his career on Wall Street. The year was 1891, part of the era of gas lights, cobble-stoned streets, and horse-drawn trolleys in New York and four years after Babies Hospital was founded as the first hospital in America devoted exclusively to the care of infants.

Mr. Hornor stayed and grew with the firm that gave him a start, Vermilye & Company, and was himself instrumental in its growth. He witnessed the evolution of Vermilye & Company to William A. Read & Company and, later, to Dillon Read & Company.

In 1909, 18 years after his employment on Wall Street, Mr. Hornor rose to partnership in his chosen firm. When he decided to retire from his first career as a broker in 1927, he was a managing partner in the firm of Dillon Read. His marriage to Grace M. DeWitt had been blessed with three sons, DeWitt, John, and Townsend.

Mr. Hornor had been a Trustee of Five Points House and a Trustee, as well as Treasurer and Chairman of the Investments Committee, of St. John's Guild since 1912, but his full-time commitment to public

service did not begin until 1928, one year following his retirement from Wall Street.

A vigorous 53 years of age, Mr. Hornor that year began his service as secretary of the Board of Managers of Babies Hospital. A year later he was appointed Trustee, a post he held until 1933 when Babies Hospital became a part of the new Presbyterian Hospital. Mr. Hornor became a member of The Presbyterian Hospital Corporation and a member of the Hospital's Board of Trustees at that time. He was elected Assistant Secretary and served the Board in that capacity until 1944. Mr. Hornor's active membership on Presbyterian Hospital's Board of Trustees encompassed 23 years, from 1933 to 1956. So great were his interest and devotion that he continued to attend Board Meetings after becoming an Honorary Trustee in 1956.

During his service to Babies Hospital and The Presbyterian Hospital, and, in fact, throughout most of this century, Mr. Hornor gave an incalculable amount of time and counsel as well as financial support, to further the welfare of his fellow man.

Throughout these decades of service, Mr. Hornor found serenity in communing with nature in its open spaces—on the golf course the year round and sailing on the open sea. He spent many a happy moment at his summer home, "Tween Waters," at Osterville, Massachusetts, where he was the commodore of the Wianco Yacht Club.

## Dr. Blumenthal And Dr. Jesse Move To Miami

Dr. Sidney Blumenthal, Attending Pediatrician, PH; Professor of Clinical Pediatrics, P&S; member, Executive Committee, Faculty of Medicine, CU and Director of Pediatric Cardiology, has resigned his post to accept a new position as Associate Dean, University of Miami College of Medicine, Miami, Florida.

Dr. Blumenthal, a pediatric cardiologist who has a major interest in heart surgery in infants, pioneered a training program for Fellows in Cardiology here at the Medical Center, under the sponsorship of the National Institutes of Health, which came to be one of national eminence. Since the program was established in 1959, Dr. Blumenthal has trained 20 Fellows in pediatric cardiology.

Dr. Mary Jane Jesse, Assistant Attending Pediatrician, PH and Assistant Professor of Clinical Pediatrics, P&S, has also resigned her position here to accept a position at the University of Miami College of Medicine, to work as a pediatric cardiologist. Dr. Jesse was one of Dr. Blumenthal's Fellows and has done research on cardiovascular hemodynamics, with a special interest in comparative physiology. She was associated with Dr. Blumenthal in cardiology practice in the Department of Pediatrics and also established the medical intensive care unit in Babies Hospital.

## Pediatric Cardiology Appointments

With the departure of Drs. Sidney Blumenthal and Mary Jane Jesse, the pediatric cardiology program will be continued by Dr. Blumenthal's former trainees and associates.

Dr. O. Robert Levine, Assistant Attending Pediatrician, BH and Assistant Professor of Pediatrics, P&S, has been appointed director.

Dr. O. Robert Levine

Dr. Welton Gersony, Assistant Attending Pediatrician, BH and Assistant Professor of Pediatrics, P&S, will act as co-director for clinical cardiology and Dr. Robert B. Melins, Assistant Pediatrician, BH and Assistant Professor of Pediatrics, P&S, will be director of the pediatric medical intensive care unit. Dr. Sylvia P. Griffiths, Assistant

Attending Pediatrician, BH and Assistant Professor of Pediatrics, P&S, will direct out-patient services.

Dr. Levine received his B.S. from City College of New York in 1948 and his M.D. from Western Reserve University in 1954. He served a rotating internship from 1954-55 and a pediatric residency from 1955-57 at the State University of New York Upstate Medical Center in Syracuse.

In 1959 he joined the staff at Columbia-Presbyterian Medical Center as a United States Public Health Service trainee in pediatric cardiology, under Dr. Blumenthal, for a period from 1959 to 1961, and was a National Institutes of Health postdoctoral Fellow in cardiorespiratory physiology, under Dr. Alfred P. Fishman, from 1961 to 1962.

Dr. Levine was the recipient of a Career Scientist Award from the Health Research Council of the City of New York in 1962 and has co-authored 15 articles in the literature.

He is married to the former Alice Magarian, a pediatrician practicing in a Staten Island medical group.

Dr. and Mrs. Levine live in Staten Island with their two sons, Fred, 12 and Jeff, 11.

# Stethoscopia

## • ENGAGEMENTS

Marilyn Stein, educational coordinator for neonatal intensive care nursing, BH, is engaged to Javier del Aguila. Mr. del Aguila is a chemist with Squibb Pharmaceuticals.

Donna MacFarlane, PH staff nurse, PH intensive care unit, and John Galvin, account representative, Out-patient Collection Department, are engaged. A September wedding is planned.

Edith Forrest, infant care technician, Sloane nursery, is engaged to Frank Maxwell. An August wedding in London, England is planned.

Kathleen Nelson, staff nurse, NI, is engaged to Raymond Reinhold. They will be married in Minnesota in April.

## • MARRIAGES

Harriet Verdakis, Out-patient Collection Department, and Chris Parras were married on January 25. The couple had a Bermuda honeymoon. Mr. Parras is with General Motors.

Margaret Bergmann, secretary to Dr. Chu H. Chang, Radiotherapy, was married to Ronald E. O'Neill on March 28.

Norma Guthrie, nursing aide, NI, was married to Ronald Ivey on February 28.

## • BIRTHS

Mr. & Mrs. Joseph Fenwick welcomed their first-born, a son, William Joseph, on March 11. Mrs. Fenwick, the former Theresa Mahoney, is a staff nurse, NI, and is the daughter of Mrs. Noreen Mahoney, secretary to Dr. C. R. Wise.

A son, Mark Christopher, was born to Mr. & Mrs. Jan C. Brown, on February 12. Mrs. Brown, the former Jean Linder, is a graduate of the '62 nursing class of PH. Mr. Brown is with the John Hancock Life Insurance Company.

Mr. & Mrs. John O'Shea welcomed their first child, a daughter, Carolyn, on February 17. Mrs. O'Shea (Susan) was formerly with Out-patient Collection Department. Mr. O'Shea is a New York City policeman.

Mr. & Mrs. Barry Kreiling welcomed their first child, a son, Jeffrey William, on February 7. Mr. Kreiling is radiation safety officer in the Department of Radiation Safety.

## • CONGRATULATIONS TO

Mrs. Kathleen Thompson, Office of Public Interest, who has been promoted to secretary.

Marlene Grushoff, medical secretary, Medical Information Department, who has been promoted to Assistant Supervisor, replacing Mrs. Margaret O'Connor, who is on maternity leave of absence.

Mrs. Eileen Clayton and Mrs. Angela Plaven, who have been promoted from receptionists, VC, to Assistant Supervisors. Mrs. Clayton is assistant supervisor, VC 3 and Mrs. Plaven is assistant supervisor, VC 4, in the Obstetrical & Gynecological clinic.

Mrs. Grace Young, who has been promoted to head nurse, NI 4. Nancy Harris and Mrs. Ann Teter, who have been promoted to assistant head nurses on NI 3 and 4 respectively.

## • CONDOLENCES TO

The family and friends of Dr. William V. Cavanagh (Obstetrics and Gynecology), whose son, Robert Vincent, died on March 7. Mr. Cavanagh was also the brother of Ann Cavanagh, Unit Manager, NI.

The family and friends of Mrs. Betty Shaw, formerly secretary to Dr. David B. Moore (Obstetrics & Gynecology) who died in February after a long illness.

## A Reminder On Elevator Etiquette

A reminder is needed by a few members of our Medical Center community that the carrying of open containers of liquids into elevators is strictly contrary to good safety practices. All are requested to drink their beverages before boarding a Medical Center elevator, or cap them securely against spillage.

A bouquet, on the other hand, is hereby offered personnel and visitors who are conscientiously observing the rules forbidding smoking or the carrying of lighted cigarettes, cigars or pipes in Medi-

cal Center elevators.

SAFETY IS EVERYONE'S BUSINESS. Remember, an empty elevator can quickly become a very crowded one.!!

## BOOK SALE

The Milbank Library, PH 20, is having a book sale, April 27 through May 8.

Generous contributions from many friends enable the Library to offer a good selection of books—fiction and non-fiction.

Further contributions will be gratefully received.

## DOINGS OF DOCTORS

On January 17, Dr. HUGH AUCHINCLOSS, Assistant Clinical Professor of Surgery, P&S, presented a paper, *Modified Radical Mastectomy for Carcinoma of the Breast*, at a symposium on contemporary surgery sponsored by the Southeastern Texas Chapter of the American College of Surgeons, Houston, Texas.

Dr. WILLIAM A. BLANC, Professor of Pathology, P&S and director of pathology, BH, has been elected a Trustee of the American-Swiss Foundation of Scientific Exchange, Inc.

At its 164th annual convention in February, the Medical Society of the State of New York awarded a citation to Dr. LEO SCHWEICH, Attending Dermatologist, V.C. (inactive), commemorating his 50 years of medical practice. Dr. Schweich has been a member of the staff of the Department of Dermatology since 1934.

Dr. GEORGE R. MERRIAM, Associate Professor of Clinical Ophthalmology, P&S, is a member of a committee of the National Academy of Sciences that acts as consultant to the National Aeronautics and Space Administration (NASA) on the effects of radiation on man. This group was responsible for setting the radiation protection standards for the Apollo missions.

The purpose of the February 27-28 meeting in Houston was primarily to set protection standards for the proposed space stations, space shuttles and interplanetary missions. Also discussed was the phenomenon, first observed by Colonel Aldrin on the Apollo 11 Mission, of intermittent flashes and spots of light. These were seen only when fully dark adapted, and it was believed to be the result of the interaction of heavy particle (galactic radiation) with the retina. Colonel Aldrin described the light flashes and answered questions for the committee.

The results of this meeting and the standards proposed will be published as a supplement to the book, written by the committee, on "The Radiobiologic Effects in Manned Space Flight."

Dr. ROBERT S. JAMPPEL, Assistant Professor of Clinical Ophthalmology, was visiting professor of neuro-ophthalmology at the University of Mississippi Medical Center in Jackson, Miss. He was a guest of Dr. Robert Currier, chairman of the Department of Neurology, from February 11 to 14. Dr. Jamppele gave two lectures—*The Eye Signs and Pituitary Tumors* and *The Differential Diagnosis of Lesions of the Oculomotor Nerve*.

Dr. Jamppele also attended on the Neurological Service at the University of Mississippi Hospital.

Dr. ARTHUR G. DEVOE, Professor and Chairman of the Department of Ophthalmology, presented a paper on *The Management of Keratomycosis* at the 21st International Congress of Ophthalmology in Mexico City, March 12. He also made two presentations at a meeting of the Ophthalmic Microsurgery Study Group in Merida, Yucatan, Mexico, on March 7.

Dr. LAWRENCE C. KOLB, Professor and Chairman of the Department of Psychiatry, has been named chairman of the Medical Advisory Board of the National Association for the Prevention of Addiction to Narcotics.

Dr. RALPH J. VEENEMA, Professor of Clinical Urology, P&S, presented *Triple Contrast Studies of Bladder Lesions* at the University of Cincinnati Medical School and was a member of a pyelogram conference, January 22-24.

Dr. FREDERIC P. HERTER, Acting Director, Department of Surgery, moderated a symposium on *The Sociological and Ethical Problems of Tissue Transplantation* under the auspices of the P&S Club. The symposium was held in the Alumni Auditorium, March 4.

Dr. LOWELL M. GREENBAUM, Associate Professor of Pharmacology, P&S, participated in a panel discussion on the WNBC-TV, Channel 4, show "For Women Only," televised March 30 and 31. The subject discussed was *The Treatment of Animals* (in research laboratories).

Other panel members were Dr. Adrian Kantrowitz, Professor of Surgery, Maimonides Hospital; Dr. Howard Schneider, veterinarian; Cleveland Amory and Pegeen Fitzgerald.

Mrs. Greenbaum, Kantrowitz and Schneider debated Mr. Amory and Mrs. Fitzgerald why animals are necessary for medical research.

Dr. SOL SPIEGELMAN, Director, Institute of Cancer Research and Professor of Human Genetics and Development, CU, delivered the Penn Lecture at the University of Pennsylvania in January.

In February he gave the Walter R. Bloor Lecture at the University of Rochester and in March, the Annual Lecture at the Downstate Medical Center Chapter of the Society of Sigma Xi.

Dr. Merriam

Dr. Spiegelman

Dr. BERNARD M. WAGNER, Professor of Pathology, P&S and Director of Laboratories at Delafeld Hospital, and Dr. LEWIS SHAPIRO, Associate Clinical Professor of Dermatology, P&S, lectured on *Connective Tissue and Diseases of Connective Tissue* at the International Academy of Pathology in St. Louis, March 14.

At the same meeting, Dr. HENRY AZAR, Associate Professor of Pathology, P&S, spoke on *Myeloma in Plasma Cell Dyscrasias*.

These lectures are attended by pathologists, residents and students interested in Pathology from the United States and other countries.

Dr. ARNOLD ROSENBERG, Associate Clinical Professor of Dentistry (Division of Pedodontics) conducted a half-day seminar at the Allegheny General Hospital, Pittsburgh, Pa., March 11. His topic, *Guidance of the Developing Occlusion in the Primary and Mixed Dentitions*, was presented to the Western Pennsylvania Unit of the American Society of Dentistry for Children, and to the hospital staff.

Dr. RUDOLPH H. FRIEDRICH attended a five week research training Conference-Institute, in Denver and Estes Park, Colorado, during July and August, 1969. Supported by a two-year grant of \$76,845 from the Division of Dental Health, National Institutes of Health, United States Public Health Service, the University of Colorado and the University of Pittsburgh organized the program aimed at stimulating research in dental education and improving the teaching efficiency of dental educators.

## Trustees Elect Vance and Aldrich To Presbyterian Hospital's Board

Cyrus R. Vance, former Deputy Secretary of Defense, and Hulbert Stratton Aldrich, vice-chairman of the Board of Directors of the Chemical Bank of New York, have been elected to the Board of Trustees of Presbyterian Hospital, Board President Augustus C. Long has announced.

Cyrus R. Vance

Hulbert S. Aldrich

Mr. Vance returned last year to a full-time practice of law here as partner in the firm of Simpson, Thacher & Bartlett, following a decade of government service in Washington and Paris. He began his career with Simpson, Thacher & Bartlett in 1947, immediately following his admission to the New York Bar. In 1957, while he was partner of the firm, Mr. Vance accepted an invitation from the Senate Armed Services Committee to become Special Counsel on its preparedness investigation subcommittee. After a full-time assignment as General Counsel for the Department of Defense, Mr. Vance was appointed Secretary of the Army in 1962. He served as Deputy Secretary of Defense from 1964 to 1967 and was one of the two U.S. negotiators at the Paris Peace talks in 1968. He has been a member of the Presbyterian Hospital Corporation since 1957.

Mr. Aldrich, who began his banking career with the then New York Trust Company 40 years ago, rose to the presidency and directorship of the firm in 1952. In 1959, when New York Trust merged with Chemical Bank of New York, he became the organization's vice chairman and director. Mr. Aldrich, as director or trustee, has freely shared his experience and counsel with more than a score of widely known organizations, including the National Fund for Medical Education, Child Welfare League of America, National Industrial Conference Board, IBM World Trade Corporation, National Distillers and Chemical Corporation, and the National Sugar Refining Company. His brother, Malcolm P. Aldrich, Honorary Chairman of the Board of the Commonwealth Fund, is also a Trustee of the Presbyterian Hospital.

## Presbyterian Operating Deficit Reaches All-Time High In 1969

The final 1969 operating figures for The Presbyterian Hospital present a distressing picture to all who support its work and to all who benefit from its services.

The Hospital's operating loss for ward and clinic patient care in 1969 was \$6,585,000, of which \$4,030,000 was incurred for outpatient services at Vanderbilt Clinic and \$2,555,000 for hospitalized ward patients within the various units. The net deficit, after applying income from contributions, investments and other sources, totalled \$3,581,258, largest in the Hospital's 101-year history.

A total of 38,500 patients were admitted to the Hospital in 1969 for 456,000 days of care, of which 208,000 days were for ward patients. There was a total of 618,577 outpatient visits to Vanderbilt Clinic and Doctors' Private Offices. The average loss for each day of inpatient care given ward patients was \$12.24 and the average loss per visit at Vanderbilt Clinic was \$10.32. Annual operating costs increased by \$9,528,146, compared with 1968, to an all time high of \$63,356,381, of which \$40,450,108 was for payroll and employee fringe benefits. The personnel roster rose by 221, to a total of 4,996 employees.

### Changing Patterns of Hospital Care

The Presbyterian Hospital in the City of New York is a unique institution with roots

extending back for more than 100 years. Since joining with Columbia University's College of Physicians and Surgeons to open Columbia-Presbyterian Medical Center in 1928, it has continued to use its facilities at a high level of occupancy, and if one is to understand the present deficit, one must also understand the changing patterns of medical need and medical treatment.

The total number of patients admitted annually to the Hospital rose by 40 per cent between 1945 and 1969. However, the number of patient care days provided rose by only 10 per cent, and more patients were helped only because modern medicine was shortening the length of stay of each patient. The number of ambulatory patients seen at Vanderbilt Clinic and in the Doctors' Private Offices increased by 50 per cent during this same period. Thus, more and more people were be-

ing served within the Hospital community.

During this period of expanding community services, the capabilities of physicians were increasing at a rate unprecedented in all the preceding centuries of civilization. As research made possible new and improved diagnostic and treatment techniques, more advanced equipment and more skilled technicians were required. As a result, more and more services have been provided for each patient, and the cost of providing such services has continued to rise, with dramatic increases during the past five years.

### The Price of Progress is Obsolescence

The results of medical progress are dual: many patients who might have died or been doomed to invalidism only a few years ago are now being

*Please turn to page three*

## Quints Stage Exodus from B. H.

April 27 was E (for Exit) Day at Columbia-Presbyterian Medical Center as Babies Hospital's most famous five patients left its second floor nursery for a trip home to Liberty Corner, New Jersey. Their weights, released by the nursery to the assembled 60

newsmen, were that day: Amy, 6 lbs, 3 ozs; Sara, 7 lbs, 6 ozs; William Gordon, 8 lbs, 10 ozs; Abigail, 7 lbs, 6 ozs; and Edward, 7 lbs, 1/2 oz. Dr. Stanley James, the quint's pediatrician, described them as "pudgy, strong" babies.

Held by nurses (from left) Loretta De Lellis, Patricia Morris, Mrs. Patricia Duffy, Mrs. Elka Wyck, and Lucy Blatty, the quintuplets are being photographed in the lobby of Babies Hospital Addition. They are aligned in the order of their birth. Thus, they are (from right) Amy, Sara, William Gordon, Abigail, and Edward. Mrs. Kienast is in the background.

## A Timely \$1 Million Gift from Mellon Foundation

The Andrew W. Mellon Foundation, through its Trustees, has made a gift of \$1,000,000 to The Presbyterian Hospital in the City of New York for the construction phases of its Development Program, it has been jointly announced by General Lucius D. Clay, Chairman of the Program, and by Mr. Charles S. Hamilton, Jr., President of the Foundation.

"This generous gift, made by the Trustees of The Andrew W. Mellon Foundation after a careful study of the Hospital Development Program plans, comes at a time when it was most urgently needed to carry on construction now underway," General Clay said. "The long-range benefits from such a gift for the people of New York, and medicine everywhere, is in-

calculable."

The Andrew W. Mellon Foundation resulted from a merger of Avalon Foundation and Old Dominion Foundation, both of New York, in June, 1969. Avalon was the surviving foundation, but its name was changed to The Andrew W. Mellon Foundation.

The merger combined two philanthropic institutions with

## Farm Hand to Lab Director: The Story of Dr. Carl Strande

Dr. Carl Strande has been appointed Director of Microchemistry Laboratory, Babies Hospital, and Associate in Pediatrics, P&S. He replaces Dr. Knud Engel.

Dr. Strande was born in Vestervig, Denmark, the ninth child in a family of 11. His father was a mechanic.

When only 11 years old, Dr. Strande went to work as a farmer's helper. At age 14, he quit school and, at 19, migrated to Copenhagen, where he got a job as an orderly in the university hospital—the Rigshospital.

He wanted to return to school and complete his education but it wasn't until he went to work in the hospital that he became aware of two facts that would make this possible. Firstly, he read in the newspapers that a high school equivalency certificate was obtainable by attending evening classes and, secondly, he found that in his job as an orderly, his evenings were free. (Working on a farm was practically a 24-hour job.)

He completed high school, went on to attend evening college and earned the Danish equivalent of a bachelor of science degree.

Standing helplessly by while his sister was chronically ill and seeing one of his teachers badly crippled with rheumatoid arthritis inspired Dr. Strande to become a physician. He attended the University of Copenhagen, receiving his M.D. in 1956.

He interned at Sonderberg Hospital, near the German

Dr. Carl Strande

border of Denmark, returning to Copenhagen to complete his internship and residency in medicine, neurology, clinical physiology and four years of clinical chemistry.

Dr. Strande's special field of interest has been, since 1958, research in the physiology of creatinine. He is continuing these studies here, working closely with Dr. Robert W. Winters, Attending Pediatrician, BH and Professor of Pediatrics, P&S.

Asked about future plans for clinical chemistry, Dr. Strande said simply, "We plan to make the best clinical chemistry laboratories in the United States."

He came to the United States in 1969 with his wife, Ebba. Mrs. Strande was born in Denmark but is an American citizen and met her husband while visiting their native country.

Dr. Strande has two daughters, Minna, 16, and Hanne, 14, in Denmark.

He and his wife live in Yonkers, New York.

## Puerto Rican Teachers Make B.H. "Field Trip"

A group of 14 public school teachers from New York City and an equal number from Puerto Rico are presently engaged in an exchange-visitor program sponsored by the New York City Board of Education.

While in this country, the teachers from Puerto Rico are assigned to different schools in the New York metropolitan area, including Manhattan, Brooklyn, Bronx and Queens. They are also given the opportunity to make "field trips" to various hospitals and institu-

Rosalie Castagnetta (right) poses with exchange visitors from Puerto Rico.

tions to observe how children are able to continue their education while hospitalized or institutionalized. Their first such trip was to Babies Hospital on February 25.

Rosalie Castagnetta, public school teacher assigned to Babies Hospital public school 401-X, received the Puerto Rican visitors and explained our public school program. Cynthia Lepore, director of Recreational Therapy, BH, showed them the recreational area and they were also taken on a tour of various other sections in Babies Hospital.

## Dr. Rudolph Friedrich Assumes New Regional Responsibilities

Dr. Rudolph H. Friedrich, Director of the Division of Oral Surgery, Columbia University School of Dental and Oral Surgery, has been appointed vice chairman of the Committee on Planning, Priorities and Evaluation of the New York Metropolitan Regional Medical Program. This is the steering body of the Regional Advisory Group to plan for the region and review applications for programs to fit the needs of the area. It is a representative body including providers and consumers of health services in the nine-county area encompassed in the New York Metropolitan Regional Medical Program, a program for improved care for patients with heart disease,

cancer, stroke and related diseases.

Dr. Friedrich is also chairman of the technical consulting panel for dentistry—a consultant group of specialists who aid in the development of programs for RMP. The position paper, entitled Dentistry in the Regional Medical Program, was written by Dr. Friedrich and reprinted in the Journal of the American Dental Society and the New Information Data of the Division of Regional Medical Programs.

Dr. Friedrich is participating in the preparation of a community dental program in the Harlem area to tie in with a community health services program being developed at Harlem Hospital.

## This Group of Young Students Equates Community Action With Working to Help Others

The sophomore class at Yeshiva Rabbi Samson Raphael Hirsch high school in the Inwood section of Upper Manhattan discussed with their teacher ways and means of volunteering their services to the community. Their teacher, attractive brunette Batya Kempinski, said the girls were quite receptive from the outset to the idea of volunteering in a hospital.

When the opportunity arose at Presbyterian Hospital, two orientation groups of 24 students each received their basic instruction from nurse Sophie Pasternack, senior supervisor, Orthopedic Service, in Febru-

ary. The girls will work on the pediatric and adult orthopedic wards in groups of four, three days a week, from now until school recesses in June.

Mrs. Dorothy Diamond, Director of Volunteers, stated that at least one of the girls plans to work straight through the summer. It is hoped that more will follow suit. She also said it was hoped that some of the girls may be inspired to go on to careers in nursing.

The young students will make beds, help feed pediatric and geriatric patients, and are also prepared to give generous doses of tender loving care.

## Dr. Wagner to Deliver Lecture on Space Medicine

The College of Pathologists of Great Britain has announced that Dr. Bernard M. Wagner, Attending Pathologist, PH; Professor of Pathology, P&S and Director of Laboratories at Delafeld Hospital, will deliver the 1970 Annual Sir Roy Cameron Lecture on May 6, in London. This distinguished lecture is given by an "outstanding pathologist who has made significant contributions to science." Selection of the lecturer by the Awards Committee of the College is made on an international basis. In 1969 the lecture was given by Sir MacFarlane Burnett, Nobel prize winner of Australia.

The title of Dr. Wagner's lecture is "Beyond the Moon—Some Problems in Space Medicine." Dr. Wagner is uniquely prepared to discuss this subject. From 1960 to 1965 Dr. Wagner was a member of the Scientific Advisory Board to the Chief of Staff, United States Air Force, concerned with the manned space program. With his associates, Dr. Wagner studied the ability of the chimpanzee to withstand

certain space stresses, especially rapid pressure changes and responses to gravitational forces. He also investigated the role of cardiac connective tissue in maintaining normal heart function during weightlessness. In 1962, Dr. Wagner

Dr. Bernard M. Wagner

became the first American scientist invited to the Soviet Union for exchange of information on the role of man in space. Professor V. Parin, head of the U.S.S.R. cosmonaut program, invited Dr. Wagner to Moscow to visit his laboratories. Dr. Wagner returned to Russia, under similar auspices, in 1963 and 1964. For these and other services, Dr.

Wagner was awarded the U.S. Air Force Silver Medal for meritorious civilian achievement by the Chief of Staff.

Dr. Wagner served as a member of the Life Sciences Committee, American Institute of Aeronautics and Astronautics, and as an advisor to the Space Science Board of the National Academy of Sciences. He is currently an ad hoc consultant to the various governmental agencies concerned with the post-Apollo and Manned Orbital Laboratory programs. He is the author of numerous papers on bioastronautics. With Dr. Martin Freudlich, he edited the AAAS monograph on "Exobiology—The Search for Extra-terrestrial Life," published last year.

Dr. Wagner held the Robert L. King Chair for Cardiovascular Research at the University of Washington in Seattle from 1958 to 1960. In 1960 he was appointed professor and chairman, Department of Pathology, New York Medical College, and remained in this post until joining the Columbia University faculty in 1967.

## The Stethoscope

Mr. Eugene T. Cleary, Administrative Assistant, has announced the appointment of Frank Bernard as Supervisor of Engineering. Mr. Bernard replaces Daniel Stevens, who retired in June 1969. He will be directly responsible to Mr. Cleary.

Mr. Bernard did engineering and field work for the Carrier Corporation and had supervised several large installations of air-conditioning equipment here at the Medical Center before his appointment.

Frank Bernard

He graduated from the United States Merchant Marine Academy, receiving his B.S. in marine engineering in 1957. He is a Lieutenant Commander in the U. S. Naval Reserve. During the recent mail strike, when *The Stethoscope* called to make an appointment with Mr. Bernard, we were informed that he had been called to active duty at the main post office.

When the postal strike ended and we did sit down with Mr. Bernard, he said, "I am just feeling my way around these first few weeks." But he was definitely not feeling his way around when he spoke, with obvious pride, about the massive and complex equipment that is his responsibility.

"The boiler plant is a newly engineered power plant with the most up-to-date equipment and its capacity has been doubled in the last couple of years."

He also explained that the central air-conditioning plant, along with the pump house, is completely automatic. This plant serves many areas of the Medical Center now and will be extended to all areas of the Center in the future.

The main plant presently consists of 3,000 tons of air-conditioning but its eventual capacity will be in excess of 25,000 tons.

Mr. Bernard declared, "We have a unique system in that the cooling comes from the Hudson River and the pump plant designed for this purpose won the New York Association of Consulting Engineers award for excellence in mechanical engineering. Incidentally, the original design of the pump station was based on an idea conceived by Mr. Cleary."

In addition to supervising operation and maintenance of

the boiler plant and air-conditioning plant (including all refrigeration equipment, Mr. Bernard is responsible for the operation and maintenance of 44 elevators throughout the Hospital, including those at the Georgian Apartments.

He is concerned with fire and safety rules and regulations within the Medical Center and works in liaison with Wallace D. Wheat, Department of Buildings and Grounds, P&S, to operate and maintain some areas in the College of Physicians and Surgeons, Black Building and Bard Hall.

Mr. Bernard also oversees operation and maintenance of the power plant that provides all steam distribution and heating; sterilization, vacuum, oxygen and nitrous oxide systems.

He disclosed that the Medical Center is currently going on to a central control system which will enable his department to monitor and control conditions in any building or outlying area. It is planned to eventually extend these central system facilities throughout the Medical Center.

He is married to the former Barbara Hildebrand. Mr. and Mrs. Bernard live in West Hempstead, New York, with their three daughters, Michelle, 6; Christine, 4; and Noelle, 1.

Running a hospital is a round-the-clock proposition; important services are performed by employees throughout the night.

## A Timely Gift . . .

*Continued from page one*  
consolidated assets of \$272,936,934, at market value, at the beginning of 1969. Since the founding of Avalon in 1940 and of Old Dominion in 1941, the two foundations had appropriated a total of \$153,465,640 for philanthropic purposes.

The late Ailsa Mellon Bruce was the founder of Avalon Foundation and her brother, Paul Mellon, was the founder of Old Dominion Foundation. They were the children of Andrew W. Mellon, noted financier and philanthropist, who served as Secretary of the Treasury from 1921 to 1932 and subsequently was Ambassador to the Court of

# 1969 Hospital Deficit . . .

*Continued from page one*

saved, but the Hospital's costs for labor, materials and needed new facilities continue to be pushed upward.

An increasing shortage of nurses and skilled paramedical personnel has resulted in great competition for the services of those who are available. We at Presbyterian are extremely proud of our organization and we have tried to keep our salaries and wages reasonably competitive.

To accomplish this, two major increases besides many merit increases were given in 1969. Retirement and other fringe benefits have also been improved.

## Payroll Increases And Hospital Costs

A common question asked of hospital personnel is, "why have hospital costs gone up so much higher than other things?" An honest answer to that question would be that hospital costs have not gone up more than many personal services, if all of the facts are considered.

In business and industry, employees work an average of 2,000 hours a year, and if additional shifts are added, production and profits usually go up proportionately. Hospitals

The rising number of ambulatory patients necessitates an expansion of clinic facilities.

must function around the clock, including weekends and holidays, operating 8,760 hours a year, during which they must be staffed and equipped to properly deal with any type of medical emergency that is presented. Hospital income is determined by the number of beds in service, which remains fairly constant, by the number of tests and treatment services ordered by the physicians for each patient, and by the total number of patients who pay for all services provided.

As a result of increased patient services, rising costs for drugs, food, and for the new treatment facilities needed, patient care costs at The Presbyterian Hospital have risen from \$39.47 a day for inpatient care in 1960 to \$100.68 a day in 1969, and from \$7.62 a visit for outpatient visits in 1960 to \$24.11 a visit in 1969.

Of the Hospital's total income today, 75 per cent is from third-party health agencies, such as Blue Cross-Blue Shield, Medicare, Medicaid, and private insurance carriers. As a result, the balance between income and costs depends upon how adequately such agencies reimburse and upon the number of patients they approve for financial assistance. If indigent patients have no coverage, the Hospital must absorb the costs. This factor is responsible for the current \$3,581,258 deficit.

## Hospitals Victims of Medicaid Freeze

The administrative staff of Presbyterian Hospital is concerned with keeping income and operating costs in balance. To do this, expenses must be forecast and rate

schedules for patients established on the basis of anticipated costs.

When Medicare and Medicaid programs became effective in 1966 and 1967, respectively, hospitals seemed assured of adequate payment for thousands of patients who had previously been treated free or for only a portion of actual costs. Both programs have exceeded governmental estimates of costs. As a result, New York State froze rates of payment for care of Medicaid patients and also changed qualifying income levels for Medicaid coverage. Not only have hospital costs continued to rise while Medicaid payments remain frozen, but the State has continued to change methods and systems for arriving at the cost it is willing to pay. Consequently, payments are due Presbyterian Hospital, and others, for services provided as far back as 1967, and many patients once covered by Medicaid must now be subsidized by the Hospital. The State plans relief for this underpayment since 1967, but no payments have been received to date. It should also be pointed out that the fantastic increase in record keeping and other paperwork required by third-party health agencies has increased payroll and is adding substantially to operating costs.

Under New York Cost Control Legislation passed in 1969, the State will pay for "efficient production of hospital health services" for Medicaid patients. Current forecasts point to a continuing deficit in 1970, under this new set of rules, which more than ever call for diligence and efficiency on the part of all who serve the Hospital.

Expensive computers are adding substantially to operating costs.

# Preventive Dentistry a Hit With Area's Youngsters at Fair

A "Dental Health Fair" for the youngsters of the Washington Heights community, sponsored by the School of Dental and Oral Surgery under the direction of Dean Melvin L. Moss, was held from March 23 through March 26.

This community-oriented program was co-directed by Dr. Harold L. Applewhite, Associate Professor of Dentistry, DOS, and Dr. Irwin D. Mandel, Professor of Dentistry, DOS, who are co-directors of the Division of Preventive Dentistry and Community Health. The dental students and faculty volunteered to participate in this Fair during their Easter vacation.

A group of neighborhood youngsters receives basic instructions in good dental hygiene.

Practical preventive dentistry sometimes involves "opening wide."

Dr. Irwin Mandel (left) and Dr. Harold Applewhite.

The children were greeted by Dr. Applewhite, who briefly explained the program that had been planned so that they might have a better understanding of why healthy teeth are so important to overall general health. A short film was shown, at which time the dental students discussed methods of dealing with the prevention of dental disease.

The classes were then broken up into small groups of approximately six to eight youngsters, who were taken

on a tour of the dental clinic, where table exhibitions had been set up covering a variety of dental health problems, their prevention and treatment.

These exhibits included orthodontics, showing how malocclusion can result from poor dental hygiene — the children were shown the proper method of brushing; caries (cavities), graphically illustrating the process of decay; an exhibit on endodontia showing how, with

proper care and treatment, even an abscessed tooth may be saved; and finally an operative chart on periodontics showing the complete treatment of tooth decay, before treatment and right through to final restoration.

The youngsters were then reassembled and invited to participate in a question-and-answer session.

Before dismissal, each youngster was given a toothbrush and booklets on maintaining good dental health.

The community was well represented with children from all local parochial and public schools, including Harlem Prep. The boys and girls — fourth, fifth and sixth graders — were attentive and responsive and appeared to be enjoying themselves.

Approximately 50 adult community residents also attended; some accompanied the children and others repre-

## Donations to Thrift Shops Seen as "Bridge" to Important Goals

If you are about to throw it away — stop! Don't! Your rummage can be turned into money.

The Womens' Auxiliaries of the Babies Hospital unit and Neurological Institute unit are two of the thirteen charitable organizations that operate Everybody's Thrift Shop at 330 East 59th Street in New York City. The Presbyterian Hospital Auxiliary operates the Stuyvesant Square Thrift Shop at 1430 Third Avenue on the northeast corner of 81st Street in Manhattan.

Profits from these thrift shops give urgently needed help to send needy children to summer camp, aid student nurses through scholarships, benefit the library, the Volunteer Department, the Social Service Department, and offer a helping hand to many needy patients.

Mrs. Royall G. Cannaday,

Chairman of the Thrift Shop Committee of the Neurological Institute's Women's Auxiliary, who was located by telephone hard at work at the Everybody's Thrift Shop, said, "We desperately need your donations and the support of all our friends, board members and their friends. We put all the money we earn to work helping Social Service, aiding needy children and adult patients from our clinics by providing summer camp for the youngsters and home help where it is needed."

Used (but good) clothing, shoes, household furnishings, glassware, records, costume jewelry and other miscellaneous items, donated by YOU, are the bridge between the thrift shops and all the goals to be accomplished.

Mrs. Robert S. Grinnell, Chairman of the Thrift Shop Committee of the Presbyterian Hospital Auxiliary, said,

"We urge you to visit the Stuyvesant Square Thrift Shop, where seven organizations earn money for their good work. You will find bargains of all sorts — fashionable clothing, pictures, furniture, books, china, jewelry and even antiques! It is a large, spacious place with pleasant volunteers to help you.

"If you can bring us saleable articles, we will give you an honest tax deduction and even invite you to our annual fashion show if your donations are up-to-date and of good quality."

Of course, none of this is accomplished by waving a magic wand. It takes hard work, and members of the three auxiliaries work tirelessly and give unstintingly of their time and effort to serve in this project.

Mrs. K. Herluf Trudso, Chairman of the Babies Hospital Auxiliary's Thrift Shop Committee, and her co-chairman, Miss Hope Kingsley, made a special appeal to *Stethoscope* readers, stating, "Babies Hospital urgently needs rummage, and this is the time of year when everyone is cleaning out closets. And if you have anything we can use we would be so grateful. All monies earned at Everybody's Thrift Shop, from items clearly marked for Babies Hospital, go to support the Babies Hospital Social Service Department and the emergency nursing fund for babies who need emer-

gency round-the-clock nursing care.

"There is also a great need for volunteers to work in the thrift shop for selling and pricing. Anyone interested in volunteering her time for this may leave their name with Miss Agnes Dilworth, Babies Hospital Social Service, BH 1-117, Ext. 3026."

Elizabeth R. Callahan, Unit Manager of Babies Hospital, told us that help received through the thrift shop for the emergency nursing fund has been immeasurable. "Many families," said Miss Callahan, "with children requiring round-the-clock nursing care have been aided through the efforts of our thrift shop volunteers."

Elizabeth R. Prichard, Director of Social Service, said: "The importance of the contribution of the thrift shops to all branches of the Social Service Department cannot be emphasized enough."

Proceeds from the shops help support Social Service in many ways and meet special care needs for which there are no other community resources. These needs are diversified and include special appliances and equipment, homemaker services, camp and emergency needs.

In 1969 a total of \$64,511 was realized from sales at the thrift shops but stock is now rapidly becoming depleted and your donations are solicited NOW.

Contributions may be deliv-

Children were constantly seen gathering around the exhibits at the Dental Health Fair.

tered various community groups.

Both faculty and students agreed that this first "Dental Health Fair" was quite successful and expressed the hope that similar community-involved functions aimed at prevention of dental disease by good dental hygiene may be forthcoming.

ered in person or they may be brought to the Unit Managers' offices in Presbyterian Hospital, Neurological Institute and Babies Hospital. *Be sure to designate which auxiliary you wish to benefit from your gift.* Contributions to the Babies Hospital Auxiliary or Neurological Institute Auxiliary go to: Everybody's Thrift Shop. Donations to the Presbyterian Hospital Auxiliary go to: Stuyvesant Square Thrift Shop. A receipt will be sent for the sale value of the items, which is tax deductible as a contribution.

Mrs. Royall G. Cannaday at work in the thrift shop.

# Sky Diving Club Organized at Presbyterian Hospital

"How safe is sky diving?"

Without a moment's hesitation, Hugh Daly, registrar in Vanderbilt Clinic, replied, "It's so safe you can use Master Charge for the whole thing!"

Mr. Daly, with Gary Wilson, operating room technologist, PH X-ray, organized the Sky Diving Club of Presbyterian Hospital.

To be sure, it is a fledgling club, having only five members at this writing, but Mr. Daly is so enthused about the whole idea that he is hoping many more interested individuals will get "sky diving fever."

Mr. Daly and Mr. Wilson had been long-time admirers of this exciting sport and had discussed the possibility of trying it many times. "Finally," said Mr. Daly, "almost as a dare, we decided to just up and do it."

And so, on September 27, at the Lakewood Sport Parachuting Center in Lakewood, New Jersey, they accomplished their first sky-jump from a single-engine piper cub, at an altitude of 3,000 feet.

Prior to the actual jump, there is a three and a half hour instruction course that teaches among other things, how to exit from the plane and how to land.

When Mr. Daly and Mr. Wilson were being strapped into their jumpsuits, the thought of what they were doing really got through to them. Their nervousness did not improve as they gained altitude in the plane. And when the moment arrived and the jump-director commanded, "Jump," Mr. Daly said, "We felt unreal."

The cost of this sport is not prohibitive. The first jump, including plane, pilot and all gear, is \$45. Subsequent jumps cost about \$16. If you buy your own jumpsuit and parachute, they cost about \$23, and the price for each jump is \$3.50.

Other members of the Presbyterian Hospital Sky Diving Club are Cathy Grozalis, radiologic technologist, PH; Walter Donovan, chief technologist, PH; and Dr. Robert Kuhn, orthopaedic resident.

Sky diving anyone?

In a change of appearance worthy of Clark Kent, mild-mannered Vanderbilt Clinic registrar Hugh Daly (left in the inset) and Gary Wilson, operating room technologist in P.H. Radiology Department, appear ready to zoom off in quest of adventure in the larger photo.

## Hugh Daly: Magician, Actor, Sky Diver, Cinematographer . . .

A look underneath the jump suit of Hugh Daly reveals other qualities besides his apparent bent for adventure.

He is an accomplished magician and has performed for the youngsters in Babies Hospital many times. On April 8 he entertained the youngsters at a spring party. A note from Cynthia Lepore, Director of Recreational Therapy, BH, reads in part: "I've never seen the children so enthusiastic. They're still trying to figure out your tricks." A

Hugh Daly amazing his BH audience.

thank you note from one of the youngsters. . . . "I think you're a very funny magician which made the tricks even better."

Mr. Daly's interest in magic has also served as therapy for some youngsters who undergo a period of depression. In 1968, Jimmy Ulman, age 14, was in the terminal phase of leukemia. Mr. Daly taught Jimmy some magic tricks that not only brought him out of his depression but inspired

him to put on a magic show of his own. Following the boy's death, his parents organized residents of their community and church in Yorktown Heights, N. Y., and recently presented Mr. Daly with a substantial sum for the Hematology and Allied Blood Disorders Research Fund in memory of their son. One of Mr. Daly's prized possessions is a letter he received from Jimmy's parents: "Your visit each morning and night brought assurance that you cared, but your magic brought an interest when he needed it; challenged his mind but didn't overtax his energy."

Mr. Daly has been working at Presbyterian Hospital since 1964. While working in the X-ray Departments of Harkness Pavilion and Babies Hospital, he attended school nights to study cinematography.

A tragic accident occurred that year which resulted in the loss of one eye of Mr. Daly. While he was rehearsing a magic show, some flash powder accidentally spilled onto a lighted cigarette being used as a prop. Sparks from the ensuing explosion damaged his eye so badly that it could not be saved. This mishap left him without depth-perception, and he was forced to abandon his plans for a career in motion picture production. However, Mr. Daly was able to correct this deficiency and returned to New York University to pursue his studies. He is frequently called upon by doctors to reassure other youngsters requiring a prosthetic eye.

In 1968, Dr. William Silverman, then a member of the staff at Babies Hospital, asked Mr. Daly to do a teaching film on work being done in the Neonatal Intensive Care Unit. He had previously made films for the Cerebral Palsy Foundation and for Babies Hospital X-ray Department. Mr. Daly shot some 13,000 feet of film for Dr. Silverman. The film

Hugh Daly working behind the lens of his movie camera.

became Dr. Silverman's parting gift to Babies Hospital when he went to San Francisco and is still used as a teaching aid, primarily for nurses.

Mr. Daly hopes some day to see an audio-visual center at Presbyterian Hospital.

In his job as registrar, Mr. Daly interviews patients coming to Vanderbilt Clinic for treatment. He concerns himself with their financial status and ability to pay. His associates told *The Stethoscope* he brings warmth and under-

standing to all patients and is truly concerned about their welfare.

You might think Mr. Daly couldn't possibly have any more talents, but you would be wrong. A few years ago he was awarded an imposing trophy for outstanding achievement in dramatic art. The presentation came at the final curtain of an original musical comedy sponsored by PAL (Police Athletic League). Mr. Daly, who won a Catholic Youth Organization medal for acting in 1960, played the leading role.

## Dr. Cardona Receives Award At Fight for Sight Benefit

Dr. Hernando Cardona, Assistant Attending Ophthalmologist, PH, and Assistant Professor of Ophthalmology, P&S, was presented with the FIGHT FOR SIGHT Scientific Achievement Award at "LIGHTS ON," the annual all-star benefit for FIGHT FOR SIGHT INC., Sunday evening, April 12 at Philharmonic Hall. The presentation was made before a capacity audience of 3,000 people by Mildred Weisenfeld, Founder and Executive Director of the organization, and George C. Scott, who had flown from California to participate in the program.

With Mrs. Cardona at his side, Dr. Cardona was accorded a most enthusiastic ovation.

As stated in the award cer-

## Computer Course Announced Here

Dr. William A. Bauman, Director, Medical Data Processing, announces a short course for Columbia-Presbyterian Medical Center personnel, sponsored jointly by Presbyterian Hospital and the Columbia University Computer Center.

The course, *Introduction to Computers*, begins on Monday, June 15, and will consist of five one-hour lectures, Mondays, Wednesdays and Fridays—June 15, 17, 19, 22 and 24.

All lectures will be held in the Armory (168th Street entrance), first floor, Room 5, 4:00 to 5:00 p.m., except for one demonstration lecture, which will be held on the second floor of Service Building. Classes are limited to 50 students.

Registration forms may be obtained from the receptionist in Medical Data Processing Department, Room 33, on the 4th floor of P.H. Forms should be completed and returned to Dr. Bauman promptly.

The Fortran IV Course will be given in the fall, and will be announced at a later date.

## P&S Alumni Day

An interesting program was prepared for this year's P&S Alumni Day, which was scheduled to be held May 2, 1970. The program's opening feature was a clinical session in the Alumni Auditorium in the morning. Clinical papers were presented by the following alumni: C. Lockard Conley and Fred M. Davenport, P&S '40; Mack L. Clayton and Albert J. Stunkard, P&S '45; Lee E. Bartholomew and Michael Hume, P&S '50; Andrew G. Frantz and Harriet S. Gilbert, P&S '55; and James D. MacLowry and Joost J. Oppenheim, P&S '60.

tificate, "The FIGHT FOR SIGHT selected Hernando Cardona, M.D., as the recipient of this award in recognition of his outstanding accomplishment in developing a plastic implant which has helped to restore sight to many who could not benefit from the transplant of a human cornea. This noteworthy achievement, aided by FIGHT FOR SIGHT grants from 1961 to 1967, is a most significant contribution in the effort to conquer blindness."

Columbia-Presbyterian Medical Center has received FIGHT FOR SIGHT assistance amounting to \$436,000 for research awards and toward the initial establishment and annual maintenance of the Children's Eye Clinic.

# News of Nursing

Christine Schubele and Ann Garrard, Babies Hospital Nursing Staff, attended a conference on *Psychological Aspects of Patient Care* at Montefiore Hospital, March 5.

Teresita Maxwell and Edith Livingston, Medical and Surgical Nursing, were delegates at a seminar on *Course in Intensive Respiratory Care Nursing*, sponsored by St. Vincent's Hospital, March 9-13.

The following delegates of the nursing staff attended the *Workshop Staffing for Hospitals* symposium at Holiday Inn, New York, March 16-17: Mrs. Marguerite Peters, Lillian Vahey, Helen Henry and Grace Mackay. The workshop was sponsored by the National League for Nursing.

Mary I. Crawford, Director of Nursing, PH and Associate Dean (Nursing), Faculty of Medicine, CU, and Mary E. Windrow, Director of Nursing

Service, PH, attended a meeting of directors and/or assistant administrators for nursing in Cleveland, Ohio, March 18-20. The meeting was sponsored by the Council of Teaching Hospitals.

Regina Buehler, BH Nursing Staff, was delegate at the NAPNES Convention at the Chalfonte-Haddon Hall, Atlantic City, N. J., April 6-9.

Bernice Derby, Sloane Hospital nursing staff, attended the conference *An Abstract for Action*, sponsored by The National Commission for the Study of Nursing and Nursing Education in Boston, April 7.

A conference on *The Experiment in Nursing* was sponsored by the Case Western Reserve University in Cleveland, and held there on April 17. The delegates were Bernice Derby and Constance Cleary.

Miss Cleary and Jane Mc-

Conville attended the meeting of the Council of Baccalaureate and Higher Degree Programs held in Kansas City at the Muehlebach Hotel, March 11-13.

Jane McConville

This was the first program in the two-year series planned by the present program committee. The meetings will be on the development of the theme for 1970-71, *Challenge to Nursing Education: What, Why, How*.

## Quints Bow to Women Managers

One of the highlights of the Annual Luncheon Meeting of the Board of Women Managers of Babies Hospital on April 13 was a visit to the Neonatal Intensive Care Nursery, where the Kienast quintuplets were

then housed in open bassinets.

Dr. L. Stanley James, Attending Pediatrician, BH, lifted each baby individually, enabling the ladies to have their first through-the-window glimpse of the famous five.

Dr. James prepares to lift one of the quintuplets to show to Miss Hope Kingsley, Mrs. Frederic F. deRham, Mrs. Leo C. Fennelly and Mrs. R. Peter Rose in foreground, from left.

## These Persons Have Retired From Presbyterian Hospital

### Jesse Singletary

Jesse Singletary, attendant, Admitting Emergency, Vanderbilt Clinic, retired in March. He had been employed at Presbyterian since 1955.

He chose night work, where he dispensed tender loving care to all patients with whom he had contact, so that he could devote his daytime hours to officiate in his role as Bishop of the Church of God in Christ Jesus, Brooklyn, New York.

Jesse Singletary

Bishop Singletary conducts all-day services in his church on Sundays and holds Tuesday and Friday evening services. He officiates at weddings and funerals; visits parishioners in hospitals, including mental hospitals, where he helps rehabilitate newly discharged patients; and runs a church dining room, which is open all day, and an employment agency for former patients, or anyone in the community who is seeking a job. He contacts the Welfare Department on behalf of needy families and spends time at the police precincts in Brooklyn working with youngsters who are in trouble with the law, trying to show them the foolishness

of their ways. (The 77th Precinct, for example, has made him its youth advisor). He is frequently on the telephone with the district attorney's office for the same reason.

Bishop Singletary has the assistance of seven clergymen and of his wife in these projects, and his official ecclesiastical day starts at two in the afternoon.

Although born in Quincy, Florida, he lives in Brooklyn with his wife. The Singletarys have seven children and eight grandchildren.

Despite a full program of daily activities, he thoroughly enjoyed his 15 years at the Hospital and told *Stethoscope* that retirement will simply mean more time to devote to his wonderful family and to his parishioners.

Bishop Singletary disclosed that he has purchased a large revival tent. He intends to hold revival meetings in Brooklyn during the warm months and in Florida in the fall. The Bishop's assistant will carry on with the parish work in Brooklyn during this period.

### Katherine Downing

Katherine Downing, Supervisor of Housekeeping for Personnel and Harkness Pavilion, retired in March completing a 22-year period of employment at Presbyterian Hospital.

Said Miss Downing, "My years at the Hospital were gratifying and I was very happy here. I made many friends through the years and my association with Mrs. Virginia Smith, Unit Manager of Harkness Pavilion and Mrs. Marjorie Wilkens, Supervisor, Housekeeping Department,

Katherine Downing

was very rewarding."

From 1952 to 1969 Miss Downing served as corresponding secretary for the National Executive Housekeepers Association.

Her plans for the future are not complete but do include a trip to Ireland to visit her sister.

### Mrs. Violet Maurer

Mrs. Violet Maurer, Floor Secretary, HP 5, retired in March completing 21 years at Presbyterian Hospital.

Violet Maurer

She said, "I enjoyed every minute of it. I worked with a wonderful group of people."

Dr. John M. Baldwin, Jr., Personnel Medical Department, has predicted she will return in a "pink smock" to volunteer and Mrs. Maurer laughingly agreed, "He's probably right."

In her leisure hours Mrs. Maurer "knits up a storm" as she put it. She has knitted

lovely things for her family, friends and co-workers.

Mrs. Maurer, who is a native of Devonshire, England, and her husband, will shortly move from their Manhattan apartment to Long Island so that they may be closer to their son and three grandchildren.

### Frank Quigley

Frank Quigley, Supervisor of Housekeeping, PH and VC, retired in April. His employment at Presbyterian Hospital spanned 35 years and Mr. Quigley said, "They were 35 good years. I really liked working here and have seen many people come and go."

Frank Quigley

He told *Stethoscope* his free time is occupied by watching sports on TV. Any particular favorites? "No, I like them all, from baseball to ice hockey."

Born in County Donegal, Ireland, Mr. Quigley and his wife live in the west Bronx with their 13-year-old daughter, Frances. The family will visit Ireland when school is out for the summer.

When they return to New York, Mr. Quigley will probably seek part-time employment. "Complete inactivity is not my cup of tea," he declared.

### Mrs. Elizabeth Connolly

Mrs. Elizabeth Connolly, nursing aide, retired in April, completing a 13-year period of employment at Presbyterian Hospital.

Mrs. Connolly looks back fondly at her years here and told *Stethoscope* "I was very happy here and have some pleasant memories."

She was born in County Monaghan, Ireland, and now makes her home in New Milford, New Jersey. She has two children and two grandchildren.

Elizabeth Connolly

### Mrs. Ethel Hoss

Mrs. Ethel Hoss, clerk-typist, PH Social Service, retired in April after a 21-year period of employment at Presbyterian Hospital.

She enjoyed her long association with the Hospital and has mixed emotions about retiring. "I'm sure I will take at least a part-time job. I couldn't possibly just sit."

Mrs. Hoss and her husband make their home in Jackson Heights, New York.

Ethel Hoss and husband.

# Squier's Stoma Specialist Does Not Walk Alone

UNITED FUND  
BEGINS HERE

Mrs. Katherine Jeter has an unusual job for which she is uniquely qualified. Working in the Department of Urology under the direction of Dr. John K. Lattimer, Professor and Chairman of the Squier Urological Clinic, she is a "stoma specialist." Her work is to prepare the parents of those children who require surgery for urinary diversion resulting in a stoma.

She explains the whys and wherefores of the operation—how it will be for the child and for his parents after the operation—and she marks the stoma site for the surgeon.

Comparatively new to the medical scene, stoma specialists are struggling to become a profession. Presently there are approximately 35 such specialists in this field. Most of these became interested when they or a member of their family acquired a stoma; as a result they gained valuable first-hand knowledge about the care of the stoma and the appliance.

When Mrs. Jeter's son John was a tiny infant, he failed to thrive normally. He ate voraciously, promptly vomited the food and was just plain sick. His physician discovered that he had an obstruction in his bladder, a condition which required surgery for urinary diversion. This abnormality, generally congenital, can also be present in the tubes that lead to the bladder. Such conditions cause the urine to back up into the kidneys, causing great damage and threatening the life of the child. Surgery may also be called for in the case of a bladder defect, which may not damage the kidneys or threaten life, but in itself may be a socially debilitating condition.

In adults, the need for surgery is usually the result of cancer of the bladder, or disease or injury to the spinal cord that causes bladder dysfunction.

Mrs. Jeter outlined the pri-

mary functions of her job: 1) to rehabilitate the patient and his family; 2) to help select a suitable appliance for collection of the urine; 3) to teach the patient or his family how to use it; 4) to teach the urology staff how to care for the patient post-operatively; 5) to teach the urological residents how to handle the situation; and 6) to maintain a follow-up relationship with family, patient and surgeon.

And how did all this start?

"I suppose you could say it started when Dr. Lattimer first got hold of a little book we had written, entitled *Count Your Blessings*," said Mrs. Jeter, "and to our delight, requested one hundred more."

The book, at first published privately by Mrs. Jeter and her husband in 1965, grew out of their own anguish when they were first confronted with the difficulty, their gradual adjustment, and their desire to share the experiences with other parents faced with the same problem.

*Count Your Blessings* might be described as a bible in this field. The book, now supported in part by a Commonwealth Fund grant to Columbia University, is at present in its fourth printing. It is essential reading for the parent whose child needs an "ileal conduit"—the medical term for the operation in which the surgeon uses a small segment of the small intestine to create the urinary diversion which will convey urine to the outside of the abdomen, with a stoma, for collection in an appliance worn by the patient.

Mrs. Jeter, an attractive, personable and friendly young woman, also conducts closed circuit televised interviews with the urological residents. As an exercise, she requires them to inform her that her child needs a stoma. Playing the game of wanting an explanation, she asks all sorts of questions. On the immediate playback, they reexamine the

answers they have given and thus are able to refine them.

But she doesn't walk alone! Mrs. Jeter's entire family is involved in the project. Her husband, an Army Lieutenant Colonel stationed at the U. S. Military Academy at West Point, did all the illustrations for "*Count Your Blessings*." Their three children, Sally, 11, John, 9 (the child who was subjected to the operation at the age of 3), and Stephen, 8, frequently take part in demonstrations for the urological staff, and Col. Jeter plays the father when his wife performs on the televised interviews.

Colonel and Mrs. Jeter with their children, John, 9, Stephen, 8 (center), and Sally, 11.

In addition to her regular duties, Mrs. Jeter is engaged in research to discover why some urinary diversions do not function as they are expected to, and why they require surgical revision. She is also concerned with efforts to find a device for urinary collection for the patient who has not had urinary diversion but is incontinent.

Despite her busy work schedule, Mrs. Jeter leads an active

social life. She commutes daily from the Jeter home at West Point to the Hospital. Her husband described her as a woman of boundless energy. "And she is a good cook," he added. "We have a full house every weekend."

Mrs. Jeter's brother, an orthopedic surgeon, is also stationed at West Point.

The three youngsters, including John, are happy, vigorous "army brats." There doesn't seem to be much doubt that life can be quite normal in spite of the handicaps imposed by the stoma. As the closing paragraph of Mrs. Je-

ter's book, *Count Your Blessings*, expresses it: "... *It is our hope that you and your child will benefit by our ideas and comments. And do count your blessings! We feel so deeply that the added years this surgery has given your child (and ours) can, and should be, normal happy years. With courage, team work and a sense of humor, they will be!*"

## 61 Qualify for 25-Year Club; Annual Banquet Set for May 7

Sixty-one persons attained membership in the 25-Year Club this year: Mrs. Lillie B. Armstrong, Mrs. Florence Babington, Mary Balbi, Edward C. Bench, James Blue, Everett C. Bragg, M.D., Emily C. Brearley, Mrs. Robert Brooke, Harold W. Brown, M.D., Lillian Brown, Jack Budowsky, D.D.S., Elizabeth Burritt, Mary E. Callahan, Dorothy Cockshaw, Mrs. Ellen M. Collins, Joseph A. Costa, M.D., Kourken A. Daglian, D.D.S., Mrs. Rose M. Deegan, Mrs. Marion Dixon, Mrs. Lillian H. Durling, Samuel Dvoskin, M.D., Olga Frankel, M.D., Sawnie Gaston, M.D., George L. Greenway, Ida Guerin, Charles B. Harding, Ruth C. Harris, M.D., George W. Hindels, D.D.S., Leonard Hirschfeld, D.D.S., Clarence Hutcherson, Charles Johnson, Ruth E. Johnson, Richard N. Kerst, Raffaele Lattes, M.D., Mrs.

Alice Lindsay, Luis Lugo, Ferdinand F. McAllister, M.D., Anna McElroy, Herbert C. Maier, M.D., Saul Misheloff, D.D.S., William L. Nastuk, Ph.D., Betty Neilson, Mrs. Mary S. Nugent, Mrs. Gloria Oliver, Mrs. Martha Osnos, Thomas W. Patrick, Jr., M.D., Norman L. Peters, Harry R. Potter, M.D., John F. Prudden, M.D., Bayard Read, Mrs. John H. Reynolds, Mrs. Rosa Z. Ross, Louis A. Rottenberg, M.D., Harry P. Smith, M.D., John P. Stevens, Jr., Mrs. Charles E. Stroud, Mrs. Alice Tomaino, Dorothea Vail, William A. Verlin, D.D.S., William J. Wardall, Mrs. Mona Yocum.

The new members represent staff, administration, trustees, women's auxiliaries and employees. The annual 25-Year Club banquet will be held on May 7th at 6:00 p.m. in Bard Hall.

## In Memoriam

### Mrs. Eleanor Birge

With deep regret we inform you of the death, on April 13, of Mrs. Eleanor Birge, Supervisor of Reception, Vanderbilt Clinic.

Ella, as she was known to all, came to this country as a war-bride from England and had been associated with Presbyterian Hospital since 1946.

She carried out her job in an outstanding manner and her warmth and kindness toward her fellow employees earned for her great respect from physicians, nurses and clerical personnel.

Mrs. Birge was an active member of Trinity-Episcopal Church in Cliffside Park, New

Jersey, where she also sang in the choir.

We salute the memory of Eleanor Birge. Vanderbilt Clinic has improved immeasurably under her capable guidance.

Mrs. Birge is survived by her husband, and her mother and brother in England.

### Alfred Feinberg

Alfred Feinberg, anatomical illustrator and member of the Department of Pathology from 1911 until his retirement in 1955, died in Harkness Pavilion, April 5. He was 87 years old and lived at 270 Riverside Drive.

The United Fund of Greater New York has launched its second annual city-wide appeal following last year's premiere campaign which proved to be a huge success thanks to the response of companies, unions, government agencies and their employees.

The Presbyterian Hospital's campaign on behalf of the United Fund will begin this month.

The initial drive was recognized as a major step forward in New York fund-raising history and of great benefit to contributors because of its united appeal and organized approach. The new philanthropic organization merged the fund-raising activities of the Greater New York Fund and the American Red Cross in Greater New York in the business community.

During 1970 the United Fund will strive, along with the Red Cross and the Greater New York Fund's 425 agencies, to raise \$96 million.

This sum, called the required contributor support, is the amount that must be collected from the public if Greater New York Fund agencies and the Red Cross are to continue their vital services to residents and commuters. Last year these services helped nearly four million people of all races and religions.

The monies raised by the United Fund will help to support agencies meeting the pertinent problems relevant to and affecting New Yorkers daily—drug addiction, foster care, adoption, day care, heart disease and cancer.

Contributions help to support hospitals, the aged, blood collection, disaster relief, servicemen, the handicapped, the blind, emotionally disturbed, family counseling and the retarded.

The campaign co-chairmen for the Presbyterian Hospital are Mr. G. R. Masten and Dr. C. R. Wise. They will be assisted by a team of captains and solicitors numbering approximately 350 employees.

### • MARRIAGES

Paul Cardillo, Staff Pharmacist, was married to Lillian Riso at Holy Family Church, Brooklyn, on April 12. The couple honeymooned in Paradise Island, Nassau.

Dr. John A. Wood, Assistant Clinical Professor of Medicine, P&S and Assistant Attending Physician, PH, was married to Patricia Amy Johnson in Englewood, New Jersey. Dr. and Mrs. Wood went to the Bahamas for their wedding trip.

### • CONGRATULATIONS

To Peter Robertson who graduated from the Police Academy in ceremonies at the 7th Regiment Armory, April 9. Patrolman Robertson is the son of Mrs. Ethel Robertson, supervisor of technicians, EEG laboratories, N.I.

To Pauline Murray, who has been appointed Assistant Head Nurse, BH 8.

To Mrs. Judith Albrow, who has been appointed Assistant Head Nurse (evenings), intensive care unit, PH 8.

To Kathryn Chapin, appointed Head Nurse, PH 9 west.

### • WELCOME

To Millie Vargas, clerk-typist in Projects Office.

To Connie Alfonso, clerk-typist in Office of Public Interest.

To Michael Skaredoff, laboratory technician, urology laboratories.

To Paula Williamson, laboratory technician, Harkness laboratories.

Maria Semiglia, laboratory technician, hematology laboratory, PH 14.

Mrs. Grace Ma, clinical pathology messenger.

To Iris Jesurum, Felix Rodriguez Tolentino and Parnell St. Louis, laboratory technicians who man the Hematology laboratory evenings and for night emergencies.

### • CONDOLENCES TO

Carmine Dolce, mason foreman, Maintenance and Construction, whose father died recently.

The family and friends of John Hardiman, Protective Department, who died March 31.

## Department of Anesthesiology Sponsors Wide-Range Lectures

The Department of Anesthesiology is sponsoring a series of evening lectures in the fourth floor amphitheater of Babies Hospital unit, May 4 through June 1, from 5:00 to 6:00 p.m.

The lectures to be given are: May 4, *Fluid Balance*, Robert A. Baratz, M.D., Assistant Professor of Anesthesiology; May 5, *Clinical Conference*; May 7, *Anesthesiology at Columbia-Presbyterian Medical Center, 1938-1955*, Virginia Apgar, M.D., Medical Director, National Foundation; May 11, *Bank Blood*, John G. Gorman, M.D., Director, Blood Bank and Screening for Serum Hepatitis, David J. Gocke, M.D., Assistant Professor of Clinical Medicine; May 12, *Clinical Conference*; May 14, *Massive Blood Transfusion*, William S. Howland, M.D., Director, Department of Anesthesiology, Memorial Hospital; May 18, *Laryngeal and Tracheal Effects of Prolonged Endotracheal Intubation*, Carl-Eric Lindholm, M.D., Assistant Professor of Otolaryngology, Uppsala University, Sweden; May 19, *Clinical Conference*; May 21, *Hypnosis*, Herbert

Spiegel, M.D., Assistant Clinical Professor of Psychiatry; May 25, *Neuroleptanalgesia*, Lynne T. Greene, M.D., Assistant Professor of Anesthesiology; May 26, *Clinical Conference*; May 28, *Catecholamines and Clinical Anesthesia*, S. H. Ngai, M.D., Professor and Chairman, Department of Anesthesiology; June 1, *Mortality Conference*, Vance Lauderdale, Jr., M.D., Assistant Professor of Anesthesiology.

### NEW SERIES OF LECTURES

A paper on "Drug-Induced Parkinsonism—A Pharmacological Disease Model" will be delivered by Professor Arvid Carlsson of Sweden as The First Annual James Parkinson Lecture at the Columbia-Presbyterian Medical Center. The scheduled speaker is Professor of Pharmacology at the University of Göteborg. The lecture, sponsored by the Parkinson's Disease Foundation, will take place at the P&S Alumni Auditorium at 4:30 p.m., May 7.

DR. RALPH J. VEENEMA, Professor of Clinical Urology, P&S and Chief of Urology, Delafield Hospital, presented a paper on *Cancer of the Prostate: A Multidiscipline Clinical Problem* at the Annual Hepburn Memorial Lecture at Hartford Hospital, Hartford, Connecticut, on April 3.

Dr. Veenema was also elected president of the New York Section of the American Urological Association in March.

DR. MICHAEL HEIDELBERGER, Emeritus Professor of Immunochimistry and presently Adjunct Professor of Pathology (Immunology), New York University School of Medicine, spent three weeks in Mexico in March under the auspices of the Pan-American Health Organization, a division of the World Health Organization. He participated in a graduate course on the immunochemistry of polysaccharides at the School of Biological Sciences in Mexico City, addressed the city-wide Immunology Club there and inaugurated the first graduate course in immunology given at the University of Guadalajara.

Dr. Heidelberg was also made an honorary member of the Mexican Society for Allergy and Immunology, an honorary member of the Faculty of Graduate Studies, University of Guadalajara, and was awarded an honorary doctorate by the University.

DR. GEORGE K. SMELSER, Director of Eye Research, P&S, and DR. HAJIME INOMATA, Fight for Sight Fellow, were among the group of international scientists invited to participate in the 1970 Glaucoma Research Conference at La Costa, California, March 4-7.

Dr. Smelser presented a paper, *Histopathology of the Cornea as seen through Electron Microscopy*, at the XXI International Congress of Ophthalmology in Mexico City, March 8-14. Dr. Smelser and Dr. Inomata also had an exhibit demonstrating corneal graft rejection at this Congress.

DR. WILLIAM A. BLANC, Professor of Pathology, P&S and Director of Pathology, Babies Hospital, was the chairman of a symposium, *The Fibroblast: Its Cultivation and Diagnostic Value*, held at the Annual Pediatric Pathology Club meeting in St. Louis, Missouri, March 6-14, in conjunction with the American Association of Pathologists and Bacteriologists. Dr. Jacqueline Bartman, formerly a trainee in pediatric pathology, and Dr. Blanc presented a paper on the ultrastructure of cultivated fibroblasts in metabolic disorders.

Dr. Blanc co-authored, with Dr. Richard L. Naeye, Chairman, Department of Pathology, Milton S. Hershey Medical Center, Hershey, Pennsylvania, a presentation on abnormal renal development in anencephaly and one on the effect of poverty and race on prenatal nutrition and growth.

Dr. Blanc also gave a course on the morphologic examination of the placenta at the meeting of the International Academy of Pathology.

DR. HAROLD F. SPALTER, Assistant Ophthalmologist, Eye Institute, presented a paper at the 21st International Congress of Ophthalmology in Mexico City on March 10. The title of his presentation was *Photocoagulation of Macular Lesions in Diabetic Retinopathy*.

DR. FREDERIC P. HERTER, Acting Director, Surgical Service, spoke on *Current Thoughts on the Management of Colorectal Cancer* and *What Price Radical Surgery for Cancer*, at the Salt Lake Surgical Society in Salt Lake City, the College of Medicine at the University of Utah and at the 30th anniversary of the founding of the Wenatchee Valley Clinic in Wenatchee, Washington.

DR. THOMAS V. SANTULLI, Professor of Surgery, P&S and Chief, Pediatric Surgical Service, attended the Pediatric Surgical Congress at the Royal Children's Hospital, Melbourne, Australia. On March 17 Dr. Santulli spoke on *Clinical Assessment of Anorectal Malformations*. On March 18 he participated in a symposium on *International Classification and Terminology of Anorectal Malformations*.

The Prize Essay Contest of the New York Section of the American Urological Association, Inc. was held on March 25 at the New York Academy of Medicine. Medical students, residents and Fellows from the greater New York medical centers participated. The following residents of the Squier Urological Clinic were awarded prizes: a prize for clinical research was won by DR. RICHARD BARD for his presentation *Renal and Peripheral Renin Determinations in Renal Artery Stenosis*. DR. JOSEPH B. PRIESTLEY won a prize for laboratory research for his presentation of *The Effect of Actinomycin D on Wilm's Tumor*. DR. PETER PUCHNER won the door prize—a cystoscopy presented by American Cystoscope Makers, Inc.

DR. GUY D. POTTER, Associate Professor of Radiology, P&S, was visiting lecturer at the Johns Hopkins School of Medicine in Baltimore, Maryland on March 26. He spoke on *The Ear, The Surgeon, and The Radiologist: A Clinical Pathological Correlation*.

Dr. Potter was also visiting professor at the University of North Carolina at Chapel Hill and Duke University, April 20-21. He delivered a series of lectures on the *Radiologic-clinical Correlation of Pathological Conditions of the Ear and the Orbit*.

DR. IRWIN D. MANDEL, Professor of Dentistry, DOS, addressed the George A. Bates Society at Tufts University School of Dental Medicine on April 6. His topic was *The Role of Saliva in Health and Disease*.

DR. MARGARET R. SEIDEN, Associate in Neurology, P&S, participated in a panel discussion on Cerebral Vascular Insufficiency at the second annual teaching day sponsored by the Suffolk County Heart Association, Inc., Bluepoint, New York on April 8.

Dr. Margaret Seiden

Dr. Thomas Santulli

Dr. Seiden's presentation was *Clinical Evaluation of Patients with Cerebrovascular Insufficiency and Results of Medical Management*.

JUNE, 1970

## Homecoming 1970

### NASA Astronaut Here For Lecture; Five Distinct Reunions Take Place

The fourth Joint Medical Center Reunion and P&S Alumni Day were held in the Alumni Auditorium, P&S, on May 1 and 2. These events brought back many distinguished alumni of the Medical Center to renew social and professional ties.

The idea for a joint alumni reunion was conceived in the late 1950's when members of the Society of the Alumni of The Presbyterian Hospital saw the need for bringing together alumni from various groups within the Medical Center which meet yearly on an individual basis. These meetings did not truly reunite Medical Center alumni since acquaintances were formed on all levels during student, intern and residency days.

The unique feature of the alumni reunion is that the majority of speakers, including NASA astronaut Dr. Story Musgrave, are P&S graduates.

On May 1, the alumni reunion began with greetings from Dr. Douglas S. Damosch, Director of the Medical Center, followed by a scientific session. A panel discussion

on *Changing Medical and Dental Curricula* by Medical Center staff was moderated by Dr. Donald F. Tapley, Associate Professor of Medicine. Participating panelists were Dr. Frederick G. Hofmann, Professor of Pharmacology; Dr. Richard A. Rifkind, Associate Professor of Medicine;

Dr. Douglas S. Damosch greets the alumni.

Dr. Herbert J. Bartelstone (Ph.D. and D.D.S.), Professor of Pharmacology, and Henry M. Kronenberg, P&S '70. Dr. Irving H. London, Professor of Medicine, Albert Einstein College of Medicine, spoke on *Reflections on Education for Health and Medicine*.

## Dr. Marks Chosen as Head of P&S; Appointment Ends a Year of Search

Dr. Paul A. Marks, hematologist and authority on human genetics, will become Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs at Columbia University on July 1, it was announced on May 17.

Dr. H. Houston Merritt, who has held the dual office for the last 12 of his 26 years at the University, will retire June 30 and become Dean Emeritus, Vice President Emeritus in Charge of Medical Affairs and the Henry L. and Lucy Moses Professor Emeritus of Neurology.

The announcement was made by Dr. Andrew Cordier, President of Columbia, after approval by the University Trustees.

Dr. Marks will become the 17th head of Columbia's 203-year-old College of Physicians & Surgeons, the second oldest medical school in the nation. He will head a faculty of 1,967 who teach in ten hospitals at the Columbia-Presbyterian Medical Center in addition to four affiliated hospitals. There are 1,096 students earning degrees under Columbia's Faculty of Medi-

cine, of whom 515 are candidates for the M.D. degree at P&S. In addition to the medical school, the Columbia-Presbyterian Medical Center includes the School of Dental and Oral Surgery, School of Nursing and the School of Public Health and Administrative Medicine, and offers extensive courses in public health and administrative medicine as well as a number of paramedical areas.

In announcing the appointment, President Cordier said: "Columbia University has indeed been fortunate in finding physicians of distinction and dedication to lead its Faculty of Medicine and occupy the post of Vice President in Charge of Medical Affairs. For the past 26 years, Dr. Merritt has been a vital force at the Columbia-Presbyterian Medical Center. Since 1958, when he became acting dean of the College of Physicians & Surgeons, he has not only maintained its reputation as one of the finest medical schools in the country, but has led it to establish pioneer teaching and research units in the expanding world of medical science. His tenure will be

Dr. Paul A. Marks

remembered as a period of excellence and progress.

"In Dr. Marks, who has been selected after a year of careful search by students, faculty and Trustees, the University is confident that it has chosen the most capable man for this dual position. Dr. Marks, a Professor of Medicine at the College, is also chairman of the Department of Human Genetics and Development, which was established last year at the College. Under Dr. Marks's direction, the Department has instituted a broad program of instruction, research and related patient services to make Columbia a leading center for the study of human genetics, development, and reproductive biology."

Dr. Marks, 43, received his A.B. degree from Columbia College in 1945, and his M.D. degree from P&S in 1949. He became an instructor in medicine at Columbia in 1955 and was appointed Professor of Medicine and Attending Physician in P.H. in 1967. He became director of the hematology program at the Medical Center in 1961. He has made numerous and important research contributions in the areas of protein synthesis, genetic and developmental aspects of blood cell formation and diseases affecting blood cells and has published extensively in these areas. He has been editor-in-chief of the *Journal of Clinical Investigation* since 1967 and has served as a consultant to the National Institutes of Health, the National Science Founda-

## Second Graduation Ceremony for School of Practical Nursing

The second class of the Columbia-Presbyterian School of Practical Nursing graduated May 8, 1970.

The ceremony took place in the Pauline A. Hartford Memorial Chapel. The new nurses wore their white uniforms and white organdy caps, banded in

blue velveteen, for the first time.

Following the invocation by Chaplain Robert B. Reeves, Jr., the graduation address was delivered by Kathleen Downey, R.N., M.S., Director, Jane Addams School of Practical Nursing.

Dr. Robert H. E. Elliott, Jr., Assistant Vice President, Special Projects (Nursing), greeted the class and Edith J. Ankers, Director of the Columbia-Presbyterian School of Practical Nursing presented the graduates with their diplomas and pins, assisted by faculty members, Mrs. Jane A. Jewell and Annie Laurie Bryant.

Following benediction by Chaplain Reeves, the graduates walked up the chapel aisle for the recessional, their smiling faces reflecting their pride and happiness.

Shirley Viglione, Class President, received an award for the highest scholastic average and addressed the audience briefly.

The other ten graduates are: Clara Antenucci, Lillian Galante (Honor Roll), Mrs. Exie Jones, formerly a student at

Shirley Viglione

Texas Southern University, Johnnie May King, Dorothy Kramer, a graduate of the New York Foundling Hospital as an infant care technician; Mrs. Joyce O'Loughlin (Honor Roll); Mrs. Socorro Romanelli, Joyce Seidner (Honor Roll); Erma Syarto (Honor Roll) and Elizabeth Thompson.

Nine of the eleven graduates are planning to remain on the staff and several are contemplating going on to become R.N.'s.

The second class of the School of Practical Nursing poses in the garden prior to graduation.

# Orthoptics Beckons to Collegians

A new career opportunity is available at Presbyterian Hospital for qualified young candidates in the Columbia-Presbyterian School for Orthoptists and Ophthalmic Assistants.

Orthoptics is the clinical science of ocular motility and related disorders of the eyes. In addition to diagnosing and treating defects in eye coordination, the orthoptist and ophthalmic assistant aid the physician with other professional tasks related to glaucoma, visual fields and contact lenses.

In a statement to *Stethoscope*, Sally Moore, supervisor of the Orthoptic Department and Instructor in Ophthalmology, P&S, said, "The demand for qualified orthoptists and ophthalmic assistants is rapidly increasing and is greater than the number that can be trained."

Miss Moore stated further that one of the most rewarding aspects of the orthoptist's job is the opportunity to work with children.

The Children's Eye Clinic, located in the basement of the new addition to the Edward S. Harkness Eye Institute, is under the direction of Dr. Philip Knapp, Associate Attending Ophthalmologist, PH and Associate Professor of Ophthalmology, P&S, and is affiliated with Fight for Sight, Inc.

Here, thousands of youngsters, ranging in age from birth to 13 years, are treated annually.

A very important part of the diagnostic and therapeutic

work in children with ocular motor disturbance is undertaken by the orthoptist.

To qualify for admission to the Columbia-Presbyterian School for Orthoptists and Ophthalmic Assistants, candidates must have at least two years of college although preference is given to college graduates.

Training consists of two parts:

1. a two-month basic lecture course in optics, neurology and eye anatomy, given by the American Orthoptic Council. These lectures are given during the summer at various universities around the country.

2. Sixteen months of lectures and clinical training are given in the Department of

The only student in class, Barbara Jennings (left) is the object of much helpful attention from Instructor in Ophthalmology Sally Moore and her assistant, Lynn Stockbridge (seated). Orthoptics classes are kept small on purpose.

Ophthalmology at the Eye Institute.

Necessary facilities are provided the student by the Hospital without charge. These include access to the Wheeler Library, located in the Eye Institute, uniforms and certain study outlines. Students may be asked to purchase other publications important to their studies. Scholarships are also available to qualifying students.

Upon successful completion of the 18-month training course, students are certified by the Hospital, and by the American Orthoptic Council, after passing written, oral and practical examinations given by the Council.

Once certified, the orthoptist is eligible for employment in a private office, a private hospital or a university (teaching) hospital.

Tuition for the clinical training course is \$300, and tuition for the two-month basic course is approximately \$300. There is a \$50 examination fee for the American Orthoptic Council's certification.

The first 18-month course at PH began April 1 with one student. The next semester will commence September 1 with an enrollment of one to three students. Classes are kept very small in an endeavor to maintain individualized instruction.

For further information contact Miss Moore at the Columbia-Presbyterian School for Orthoptists and Ophthalmic Assistants, Edward S. Harkness Eye Institute, Columbia-Presbyterian Medical Center, 635 West 165 Street, New York, New York 10032.

## LECTURES ON PROGRAMMING TO BE GIVEN

Dr. William A. Bauman, Director of Medical Data Processing, has announced there will be a series of lectures on *Introduction to PL/1 Programming* for those who have had a Fortran course or equivalent programming experience. The lectures will be given to medical and administrative personnel starting Monday, June 15. The course will consist of 12 one-hour lectures.

The lectures will be held in the Armory, 168th Street entrance, on the first floor, Room 5, 9:15 to 10:15 a.m.

The schedule of lectures is as follows: Mondays: June 15, June 22, June 29 and July 6; Wednesdays: June 17, June 24, July 1 and July 8; Fridays: June 19, June 26, July 3 and July 10.

Registration cards may be obtained on PH 4-33 and should be returned by June 8th.

# Mrs. Gloria Martin Appointed Clinic Reception Supervisor; Rose Through the Ranks at VC

Dr. Joseph E. Snyder, Assistant Vice President, has announced the appointment of Mrs. Gloria Martin as Clinic Reception Supervisor.

Mrs. Gloria Martin

Mrs. Martin came to PH in 1959 and rose through the ranks from receptionist at the Vanderbilt Clinic information desk to her current position.

She is delighted with her appointment but regrets that it had to come about as a result of the untimely death of Eleanor Birge.

Mrs. Martin has under her supervision 80 persons, including receptionists, medical clerks and secretaries.

"Our main purpose is to see that the clinics run smoothly. We try to get the doctors, the patients and the charts together as quickly and efficiently as possible," said Mrs. Martin.

She is quite enthused about the many changes in the foreseeable future, especially with relation to present plans for expansion, new IBM systems and the relocation and refurbishing of the clinics, which will afford greater privacy and more efficient service to both patients and physicians.

"I am especially excited about the new appointment system, now in the experimental stage, which will hopefully eliminate the old method of telling all patients to arrive at 9:00 a.m. or 1:00 p.m."

The new system will stagger appointments every 15 minutes or a half hour, thus creating a more efficient and satisfying situation for the patient and his physician.

Mrs. Martin said that perhaps we may compete with the department store slogan which says "the customer is always right" and alter it to say "the patient is always right."

Her most important goal is better patient service.

Her job is a difficult one but she told *Stethoscope* "No matter how frustrated or tired we are, something happens almost every day that is funny or whimsical and makes it all worthwhile. She told of one particularly comical incident that happened recently when one receptionist had "about 800 people around her desk" toward the end of a harassing day. An administrator approached with an elderly gentleman in tow. "This man has been here since 8:00 a.m." The receptionist shook hands with the man and said, "Nice to have you with us."

Assisting Mrs. Martin in her new job will be Mrs. Catherine McCormick, who has been with PH since 1964.

## PROMOTION FOR MRS. V. GAINES

Mrs. Viola Gaines

The Food Service Department is proud to announce the appointment of Mrs. Viola Gaines to Dining Rooms Manager.

In 1955, Mrs. Gaines was employed in the Maxwell Hall cafeteria. Since then several promotions have prepared her for this very important position.

# Hartford Foundation Supports Contour Mapping of Organs

Contour mapping of internal organs with radioisotopes will be further developed at the Presbyterian Hospital under a grant from the John A. Hartford Foundation. The extension grant, totaling \$63,430 for a 12-month period, was announced jointly by Mr. Harry B. George, President of the philanthropic foundation, and by Mr. Augustus C. Long, President of the Presbyterian Hospital.

The purpose of the mapping project, being carried out by the Hospital's Nuclear Medicine Division under the direction of Dr. Philip M. Johnson, is not so much to chart human internal organs as it is to measure the amount and distribution of radioactive tracers in those organs.

Nuclear medicine is concerned mostly with diagnosing disease through the administration of radioactive molecules. These molecules, labeled with one of several types of radioactive nuclides, are rejected or concentrated by diseased tissue of a specific organ. The quantity and dis-

position of nuclides in internal organs are then detected by sensitive scanning cameras. This information is then displayed two-dimensionally—in the format of a scintillation photograph, for example.

Presbyterian Hospital's radiologists are seeking to perfect a rapid-display method that would utilize contour lines to produce a three-dimensional picture of radiation levels within the organ, somewhat like the representation of a mountain on a topographic map.

The prototype instrument system will include a small digital computer and color television display. The method is expected to improve and refine the diagnoses made possible by radioisotope scanning.

The John A. Hartford Foundation had previously granted \$126,424 to nuclear medicine specialists at the Columbia-Presbyterian Medical Center to perfect magnetic recorders and playback equipment for plotting contour lines of data obtained by scanning.

# Members of 25-Year Club Strengthen Bonds at Annual Dinner

While unusually cool weather prevailed outside, a select group of Presbyterian Hospital's employees warmed each other with bonhomie and affection inside Bard Hall.

The occasion for their togetherness was the annual dinner of the 25-Year Club of the Columbia-Presbyterian Medical Center on May 7. The prospect of exchanging reminiscences and sharing views, as well as the well-planned program, attracted an estimated total of 300 Club members and guests. The only qualification for becoming a member of the Club is 25 years of continuous service to the Medical Center. Sixty-two employees and elected officials of the Medical Center qualified for membership this year by virtue of their continuous service and received their membership certificates.

The new members included Honorary Trustees Edward C. Bench, George Lauder Greenway, Charles Barney Harding, John P. Stevens, Jr.; the following members of the Board of Women Managers of Babies Hospital, Mrs. Robert Brooke, Miss Dorothy Cockshaw, Miss Ida Guerin, Mrs. John H. Reynolds; also Mrs. Charles E. Stroud of the Board of Women Managers of Neurological Institute; Miss Lillian Brown, Unit Manager, P.H.; Richard N. Kerst, Assistant Vice President, P.H.; and N. L. Peters, Assistant Comptroller.

As the established club members and members-to-be arrived, they were received by Mrs. Florence V. Moore, Dr. Robert C. Darling, and their associates on the reception

Dr. Howard G. Bruenn appears to be immersed in a serious conversation with Mrs. Virginia B. Smith and Dr. John M. Baldwin, Jr. (right.)

The punchline seems imminent in the funny story Dr. Milton R. Porter is sharing with Dr. Douglas S. Damrosch (right).

committee. Following cocktails in the Bard Hall lounge, the old and the new members gathered in the Bard Hall dining room. Mrs. Rena Brown and Dr. Joseph A. Cuttita were responsible for the detailed arrangements, while Dr. William S. Langford had planned the entertainment.

Dr. Charles M. Steer, President of the 25-Year Club for 1970, served as toastmaster throughout the proceedings and put the new members at ease with his informal, humorous approach. He introduced all the participants in the pro-

gram. A standing ovation was given to Dr. John M. Hanford, Professor Emeritus of Surgery, the Club's oldest member in age and service.

As the members were served after-dinner coffee, Dr. Douglas Greer, four years out of med school (P&S, of course), gave a country style rendition of a song he wrote called "Medical School Talkin' Blues." He also sang "Worry Box" for an encore.

Dr. Douglas Damrosch, the recently appointed Director of the Medical Center, jocularly described the trials and tribulations of his post.

"I have an office where Frank Stinchfield used to be," he recounted. "Two or three hundred times a day his patients come looking for him, and I direct them..."

For those members of the 25-Year Club who wish to "get ahead in the organization," Dr. Damrosch's advice, taken from the punchline of a joke, was, "Look busy."

Following Dr. Damrosch's greetings to the audience, and the presentation of certificates by Miss Inez E. Klinck, Treasurer, and Dr. Gilbert P. Smith, Vice-President, Dr. Steer introduced Mr. Kerst.

Richard N. Kerst, Assistant Vice President, P.H., addresses the gathering on behalf of the new members.

Representing the new members, Mr. Kerst said they "gratefully accept membership in this very distinguished body." He painted a word picture of the Medical Center 25 years ago and ventured predictions about its future—25 years from now.

The final report was given by Dr. John V. B. Dean, chairman of the nominating committee, on behalf of the other committee members, Mrs. Mary Ann Greene, Mr. Albert S. Saker and Dr. Daniel C. Baker, Jr.

The nominating committee proposed and the audience elected the following officers for next year: for President, Dr. John M. Baldwin, for Vice Presidents, Mr. A. J. Binkert and Miss Helen F. Pettit, for Secretary, Miss Jane Smelser, for Assistant Secretary, Mrs. Virginia B. Smith, and for Treasurer, Miss Mary J. Sullivan.

Dr. Charles M. Steer, President of the 25-Year Club (standing), served as Toastmaster throughout the proceedings.

Mrs. Rosa Z. Ross, Housekeeping, was one of 62 Medical Center employees who qualified to receive a membership certificate from Miss Inez E. Klinck, Treasurer. Dr. Gilbert P. Smith looks on.

## Dr. Greer: The Singin' Medic

In 1966, when Dr. Douglas F. Greer was a senior medical student at P&S, he composed a song *Medical School Talkin' Blues*. It was well received at the P&S Christmas party that year, and friends and colleagues encouraged him to record it professionally.

A recording was made on the Reprise label and the record enjoyed modest popularity.

Dr. Greer has composed other songs, including a lively little number called *Worry Box*.

Accompanying himself on the guitar, Dr. Greer sang these two songs when he entertained audiences at both the Volunteer Tea on April 29 and the 25-Year Club Banquet on May 7. The Volunteer Tea audience was also privileged to hear Dr. Greer sing *Summertime* from *Porgy and Bess*.

Dr. Greer derives pleasure and relaxation from his avocation and enjoys contacts with recording executives and music publishers, but all this is strictly an after-office-hours, side-line activity.

He was born in Charleston, South Carolina, because his father, a career army man, was stationed there. He grew up in the suburbs of Washington, D.C., and in Japan and France.

He received his B.A. degree

from Princeton University in 1961, his M.D. from P&S in 1966 and served his internship at Roosevelt Hospital. Following a two-year stint in the U. S. Navy, where he held the rank of Lt. S.G., he began his residency in ophthalmology at PH in 1969.

Dr. Greer, a talented and personable young man, is collaborating on the script of a low-budget movie, which may be produced in the fall.

He is also planning to write a modern, musical comedy about medicine but said, "This is still in the drawing-board stage."

Dr. Douglas F. Greer

Dr. Lawrence Cotter (left), Mr. Richard N. Kerst (center) and Dr. William Gardner formed one of many informal discussion groups at the reception preceding the 25-Year Club dinner at Bard Hall.

Mr. N. L. Peters is emphatically making a point during cocktails in Bard Hall lounge.

# Homecoming 1970: Our People Sometimes Go Aw

Dr. Herbert B. Wilcox, Jr., exchanges thoughts with NASA astronaut Dr. Story Musgrave (left).

Dr. Harriet S. Gilbert discourses on the use of computers in studying polycythemia vera.

Dr. Charles Houston

Dr. Aura Severinghaus and Dr. H. Houston Merritt at the P&S Alumni luncheon.

A view of the luncheon on P&S Alumni Day.

Continued from page one  
The Stevenson Memorial Lecture on Medical Malpractice Insurance was delivered by William B. Smith, Office of the General Counsel, American Medical Association. Dean H. Houston Merritt, Vice President in Charge of Medical Affairs, made the closing remarks.

After lunch in Bard Hall, Mr. A. J. Binkert, Executive Vice President, PH, welcomed the alumni and opened the afternoon session. Dr. DeWitt Stetten, Dean, Rutgers Medical School, spoke on *A New Medical School—Conception, Parturition and Dystocia*. Dr. Story Musgrave, NASA astronaut, delivered a talk on *Medical and Physiological Aspects of Future Manned Space Flights*. Dr. Charles Houston, Professor and Chairman, Department of Community Medicine, University of Vermont, concluded the afternoon program with a lecture on *Fun and Games at 17,500 Feet on Mt. Logan*. The Joint Alumni Day concluded with a cocktail party at Bard Hall.

Simultaneously on May 1, Babies Hospital Alumni Day was held. A morning scientific session in the 4th floor amphitheatre of Babies Hospital was followed by a luncheon and business meeting in Harkness Hall. Dr. Rustin McIntosh, President of the Babies Hospital Alumni and Professor Emeritus and Chairman, Department of Pediatrics, was a distinguished guest.

The Association of Dental Alumni, School of Dental and Oral Surgery, also chose May 1 for their combined session of Medical Center Alumni in the Alumni Auditorium in the morning.

After lunch, the Fred Birnberg Alumni Research Medal was awarded to Dr. Melvin L. Moss, Dean, Dental and Oral Surgery. After accepting the award, Dr. Moss spoke extemporaneously.

P&S Alumni Day on May 2 was the final event on the Alumni Reunion calendar.

The morning clinical session featured: *Hemoglobin C: From the Gene to the Spleen*, Dr. C. Lockard Conley, Professor of Medicine, Johns Hopkins University; *Polycythemia Vera: Computer Applications in a Cooperative Clinical Study*, Dr. Harriet S. Gilbert, Associate Professor of Medicine, Mount Sinai School of Medicine; *Routine Serial Dilution Antimicrobial Susceptibility Testing in the Clinical Laboratory*, Dr. James D. MacLowry, National Institutes of Health; *Recent Studies on Influenza*, Dr. Fred M. Davenport, Professor and Chairman, Department of Epidemiology, School of Public Health, Uni-

versity of Michigan, and *In Vitro Assays of Lymphocyte Functions*, Dr. Joost J. Oppenheim, National Institutes of Health.

Following intermission, the clinical session continued with *Etiology of Rheumatoid Arthritis*, Dr. Lee E. Bartholomew, Associate Professor of Medicine, University of Michigan; *Treatment for Obesity, Self-Help and Medical Management*, Dr. Albert J. Stunkard, Hospital of the University of Pennsylvania; *Growth Hormone in Blood*, Dr. Andrew G. Frantz, Associate Professor of Medicine, P&S; *Streptokinase for Chronic Arterial Occlusion*, Dr. Michael Hume, Professor and Chief of Surgery, Tufts University School of Medicine and *Ski Injuries—Emphasis on Prevention, or The Leg You Save May Be Your Own*, Dr. Mack L. Clayton, Associate Clinical Professor, Orthopedic Surgery, University of Colorado Medical School.

After lunch and the annual business meeting, Dr. Robert P. Masland, Jr., Harvard Medical School, Children's Hospital Medical Center, spoke on *Adolescent Medicine, Doctors for Characters*.

A dinner dance at the Hotel Pierre brought the two-day meeting to a festive close.

All who attended the Joint Alumni meetings were enthusiastic in proclaiming this one of the most interesting and informative meetings in recent years. The talk and colorful slides shown by Dr. Musgrave gave the future of medical studies in space and showed mock-ups of equipment that has not yet been shown to the general public.

Dr. Herbert B. Wilcox, Jr., Associate Clinical Professor of Medicine, P&S, served as Chairman of the Fourth Reunion of Alumni Associations and Dr. Robert H. E. Elliott, Jr., arranged the program for May 1.

P&S Alumni Day, May 2,

was chaired and arranged by Dr. Dorothy Estes (Turino), Associate in Medicine, P&S, and her committee.

Mrs. Jeanette Smith, Assistant Secretary-Treasurer's Office, who served as Executive Secretary for the reunion programs, and her staff, Ann Stevens, Nancy Garon and Theresa Maugar, are to be especially commended for their tireless efforts in mailing thousands of announcements, invitations and programs.

A special thank-you is also in order for mail room personnel, volunteers and staff members.

Another very important alumni function was the annual Alumnae Day of the School of Nursing, held on April 30 in the Alumni Auditorium. This date was selected so that the Nursing School Alumnae, who came from all over the United States, could remain in New York to attend the scientific sessions and social festivities planned for the other alumni.

Grace Davidson, president, School of Nursing Alumnae Association and Director of Nursing, University Hospital, New York, extended greetings to the Alumnae. A full day of renewing old acquaintances, touring the Medical Center, exchanging ideas, reminiscences and opinions followed.

Dr. Charles Houston (left) and Dr. Robert H. E. Elliott, Jr.

Dr. Robert P. Masland, Jr., addresses the luncheon and annual business meeting on P&S Alumni Day.

# But Those Who Leave Often Come Back To Visit

Dr. Robert H. E. Elliott, Jr., addresses the P&S Alumni Day luncheon.

Elizabeth Callahan, Unit Manager, B.H., is flanked in this photo of the B.H. Alumni luncheon by Dr. Elinor F. Downs, Associate Professor of Preventive and Administrative Medicine, P&S (left) and by Dr. Olga Frankel, Associate Attending Psychiatrist (Pediatric Psychiatry).

The 1920 class of the School of Nursing celebrated its 50th reunion on Alumnae Day, held April 30. Representing the class this year were, from left, Harriet B. Wright, Elizabeth Ashmun Norris, Clarissa Gibson, Nellie L. Estey, Louise Ayres Rowan, Ellen R. Wheeler, Margaret E. Conrad, and Priscilla Barrows Sheldon.

## Columbia-Presbyterian Medical Center Is People...

### "Our People" Has Real Meaning

*In this time of alumni reunions, it is worthwhile to reflect on the definition of such phrases as "our people" and "Presbyterian Hospital family." The following true, unsolicited story, submitted by Mrs. Elizabeth Gutierrez of the Eye Institute, shows that these phrases are not merely convenient locutions but have a real meaning:*

I was called to Albany because of the critical illness of my granddaughter who had been admitted to Albany Medical Center. When our family was called in consultation, Dr. T. M. King, head of the department of Obstetrics and Gynecology, asked, "Where is the lady from Presbyterian?" He told us that he had spent six years in Presbyterian Hospital, and he named various doctors, and at once I felt at home. The warmth of Dr. King's personality and his interest, not only in his patient but in the members of her family, gave a feeling of trust and security. The surgery that followed involved many complications, but he handled it masterfully.

I write this letter to say how proud I am of Presbyterian Hospital for training a man of Dr. King's capabilities.

## Symposium Shows Potential of Audiovisual Aids

Persons being honored at public meetings are expected to stand up and give a speech. Dr. H. Houston Merritt, Dean of the Faculty of Medicine, P&S, was asked to do much more before an SRO audience gathered to honor him at Alumni Auditorium on April 22.

Billed as a "clinicopathological experimental symposium in honor of H. Houston Merritt," the event featured the presentation of a serious neurological condition in a 48-year-old woman. It was Dr. Merritt's task in the symposium to arrive at a diagnosis of the illness with the aid of computerized data and slides. The manner and method with which he arrived at a diagnosis—with small asides of wry humor—were an audiovisual treat to physicians and students alike.

Introduced by Dr. Donald King, Professor and Chairman of the Department of Pathology, Dr. Merritt began his inquiry by eliciting the basic history of the patient, "Madge," from the computer.

The picture that Dr. Merritt obtained was of a woman who had been complaining of vomiting, stiffness in her neck, and severe headaches for about

a month. The rapid, though subacute, progression of her condition had left her depressed and uncommunicative at first and later unable to move, approaching unconsciousness.

Relying on the computer, Dr. Merritt proceeded with the history and physical examination of the patient. This case was then used as a medium to exhibit the potential of newly developed and perhaps little known audiovisual systems. Dr. Merritt was given the pertinent x-ray and laboratory data by some of his colleagues at the College of Physicians and Surgeons. This information was given by a projection system which utilizes a tape-recorded message and slide projection, inseparably combined on a single disc. Under this system, developed by 3M, the contributors' pictures were projected on a large screen. They described two other images, projected simultaneously by two other projectors.

Once the initial problem of the patient had been elucidated, it was further expanded upon through the use of a film and also through a video tape made by Dr. Ralph Richart, Professor of Pathol-

ogy, and his group.

The patient's course was further pursued by Dr. Merritt with the aid of the computer. Finally the anatomic data were presented in the same manner as the laboratory data had been.

The list of contributors to this audiovisual experimental symposium for Dr. Merritt included Drs. Thomas Bigger, Jr., Associate Professor of Medicine; David Cowen, Professor of Neuropathology; Richard Defendini, Assistant Professor of Neuropathology; Philip Duffy, Professor of Neuropathology; Paul Ellner, Associate Professor of Microbiology; Raymond Gambino, Professor of Pathology; Eli Goldensohn, Professor of Neurology; Jacob Furth, Professor Emeritus of Pathology; George Hyman, Assistant Clinical Professor of Medicine; Dr. King, who is also Delafield Professor of Pathology; Dr. Abbie Knowlton, Assistant Professor of Medicine; Dr. Nathan Lane, Professor of Surgical Pathology; Drs. Richart, Leon Roizin, Professor of Neuropathology; William Seaman, Professor of Radiology; Sigmund Wilens, Professor of Pathology; Abner

Wolf, Professor Emeritus of Neuropathology; Harry Zimmerman, Professor of Pathology in the Albert Einstein College of Medicine.

It was the intention of the Department of Pathology to illustrate how these visual-aid and computer systems could be introduced into the teaching of a medical student. The horizons that tools such as these open, in terms of self-instruction of the student, are vast.

The symposium concluded with the presentation by Dr. King of a plaque to Dr. Merritt. Dr. Merritt received a warm, spontaneous ovation from the audience.

The symposium was organized by Dr. King. Dr. William Harless, Assistant Professor of Preventive Medicine at the University of Illinois, was responsible for the computer system. He and his group aided Dr. Defendini, who, armed with the patient's chart, programmed the computer for the occasion.

Many more members of the Columbia-Presbyterian Medical Center and the University of Illinois contributed of their time and talents to make this event possible.

Sharing the spotlight at the B.H. Alumni meeting were, from left, Dr. Gilbert W. Mellin, Acting Chairman of the Department of Pediatrics; Dr. David Stiles, President of B.H. Alumni, '71; Dr. Rustin MacIntosh, President of B.H. Alumni, '70; Dr. Joseph Silverman, and Dr. William Bauman, Director of Medical Data Processing.

Grace Davidson

# Nursing Alumnae Attend Recruitment Workshop

The Recruitment Office of the Department of Nursing sponsored a two-day Alumnae Representative Workshop, April 28 and 29, in Maxwell Hall. The purpose of the workshop was to get alumnae all over the country to encourage high school students in their communities to consider baccalaureate nursing as a possible career choice.

Eleven alumnae representatives from 10 states attended the workshop to discuss recruitment problems and to exchange ideas and suggestions.

On April 28, Dr. Mary I. Crawford, Director of Nursing, PH and Associate Dean of Nursing, Faculty of Medicine, Columbia University, welcomed the group and spoke on the "Need for Nursing Recruitment."

Helen F. Pettit, Professor of Nursing and Director of Nursing Education, presented

rosch, Director of the Medical Center.

Dr. Damrosch spoke about "Present and Future Development of Columbia-Presbyterian Medical Center," touching on some of the new facilities including the medical intensive care unit, the cardiac intensive care unit and the new emergency facilities in Vanderbilt Clinic, now under construction. "Our Staff and personnel are doing a fantastic job with the critically ill and injured under present conditions," Dr. Damrosch said. He noted the need for trained paramedical personnel to take over some of the lesser tasks of the physician and nurse and how the Medical Center is fulfilling some of these needs with the School of Practical Nursing, the School of Operating Room Technologists, the School of Radiologic Technologists and the School

Helen F. Pettit (at opposite end of table, on the right), addresses alumnae workshop.

an informal talk on "Present Program, Overview and Philosophy."

Bernice Derby, Assistant Professor of Nursing and Director of Maternity Nursing Program, and Dr. Ann Earle, Associate Professor of Nursing and Director of Psychiatric and Community Health Program, spoke briefly about their respective programs.

Following a coffee break, Mrs. Constance M. Ort, Assistant Professor of Nursing and Chairman of Committee on Instruction, addressed the group on "Object of Baccalaureate Nursing."

Mary U. Brady, Associate in Nursing and acting coordinator of the Psychiatric Social Program, Mrs. Ila S. Cox, Associate in Nursing (Nutrition), and Susan M. Kun, Assistant Professor of Nursing (Biological and Physical Sciences), participated in a group discussion.

After lunch the group toured the Medical Center, giving particular attention to the new cardiac intensive care unit.

The first day of the program concluded with an informal talk by Dr. Douglas S. Dam-

rosch of Orthoptics.

The second day of the workshop began with a talk by John Wellington, Director of Admissions of Columbia College, on "Introduction of Concept of Alumnae Representation."

Helen Henry, Director of Nursing Personnel Service, and Mrs. Claire Hardingham, Director of Recruitment (Nursing), addressed the group on the "Need for Nursing Recruitment at Columbia-Presbyterian Medical Center."

## Give Us Your Tired Shirts, Stockings...

Babies Hospital Recreational Therapy is making an urgent appeal to readers of *Stethoscope* for men's shirts, for use as protective smocks on young artists, and for washed nylon stockings, used for stuffing toys. If you have either of these items to donate, they may be left at the Volunteer Office, V.C. 10, or at Babies Hospital Recreational Therapy, B.H. 7.

Thank you.

## An Electrician's View of United Fund

# Mike Granato Explains Why He Became Captain: "You Never Know When You'll Need This Care"

"They don't realize how much money it takes to care for someone who can't afford it, and you never know when you or one of your family will need this care."

With these words, Mike Granato, electrician foreman and a captain for the United Fund of Greater New York for the duration of our Employee Campaign, summarized his reasons for volunteering his time and efforts on behalf of the Fund.

Mr. Granato's spontaneous expression of his motives sounded, in the view of one Fund contributor, like John Donne's "no man is an island." By the same token, no hospital is an island in New York: by helping the United Fund, the contribution of a single employee will also help the Presbyterian Hospital.

The Presbyterian Hospital's Employee Campaign was announced in a letter to all employees of the Hospital on May 11 by Mr. A. J. Binkert, Executive Vice President. Mr. G. R. Masten and Dr. C. R. Wise serve as Campaign Co-Chairmen for the Fund this year.

Mr. Binkert's appeal to his fellow employees emphasized a year-round payroll deduction plan as a convenient and efficient way of helping the

Mr. G. R. Masten discusses United Fund with fellow employees at kick-off rally in Maxwell Hall.

Hospital and the people it serves.

At a kick-off rally for the Fund in Sturges Auditorium, Mr. Masten disclosed figures that have a bearing on the "no hospital is an island" theme. The Presbyterian Hospital received \$179,000 from the United Fund last year. The Hospital's contribution to the Fund was \$13,100 that year. In the group of 59 contribut-

ing hospitals in the Greater New York metropolitan area, this amount gave the Presbyterian Hospital 21st place—an unaccustomed position for a medical center with a tradition of being a leader in the health field. Mr. Masten explained the relevancy of the Greater New York Fund to the Presbyterian Hospital's goals to his co-workers assembled in a common cause.

# 1,600 Visitors See Medical Center Art Show; Annual Exhibit Described as "Very Successful"

The 20th annual Columbia-Presbyterian Medical Center art exhibit has come and gone. Sixty-six artists contributed 135 art objects, including photographs, oils, water colors, sculpture and crafts.

Several of the exhibits and their titles were provocative, but all were well-received. A total attendance of approximately 1,600 visitors attests to the interest aroused by the display.

Edward H. Holmes, painter, Maintenance and Construction, submitted three oil paintings, and *The Stethoscope* felt there might be an interesting story behind a young man who spends his working hours painting walls and his leisure hours dabbling at a canvas.

Mr. Holmes comes by his trade via his father who was a housepainter. His interest in painting as an art began when he was a youngster. In high school biology class he had a real good thing going. He did biology drawings for his classmates, who in turn gave him all the answers in biology.

Formal art training consisted of a two or three-year correspondence-school course.

Mr. Edward H. Holmes at art show.

He has never exhibited his work formally, but has sold well over 100 paintings to friends and acquaintances.

Mr. Holmes told *Stethoscope* his wife and seven children are his most enthusiastic supporters.

Mr. William Fleck, Supervisor of Maintenance, Maintenance and Construction, has asked Mr. Holmes to touch up the murals that decorate the walls on the second floor of the Edward S. Harkness Eye Institute and Ed feels this is quite a feather in his cap.

Chaplain Robert B. Reeves, chairman of the art show committee, thought the art exhibit, held from April 28 through May 8 in the annex of the Milbank Library, PH 20, was very successful. He expressed his thanks to all those who worked behind the scenes to make the show the success it was.

If you didn't enter anything this year, sharpen those pencils and shake those brushes into action. You've got a whole year to get ready for the 1971 exhibit.

"Togetherness," an oil painting by Don Wilcox, brought smiles or frowns of recognition from many art show visitors.

# Parkinson Disease Foundation Honors Three Men Following First Annual James Parkinson Lecture

Dr. Arvid Carlsson, Professor of Pharmacology, University of Göteborg, Sweden, gave the First Annual James Parkinson Lecture at Columbia-Presbyterian Medical Center on May 7. This lectureship, established by the Parkinson Foundation, will be given annually by an outstanding investigator in this field.

Later that day, Dr. Carlsson, Senator Lister Hill and Mr. William Black were presented citations by the Parkinson's Disease Foundation at a dinner at the "21" Club.

Professor Carlsson's lecture at the Alumni Auditorium emphasized the usefulness of "Drug-Induced Parkinsonism—A Pharmacological Disease Model" in understanding the mechanism of Parkinson's disease. Dr. Carlsson urged medical scientists to investigate "other similar pharmacological disease models, such as reserpine-induced mental depression and the paranoid schizophrenic psychosis caused by amphetamine."

At the "21" Club, Dr. Carlsson was honored as "a pioneer

Mr. William Black (left) and Dr. H. Houston Merritt.

ate and the House of Representatives.

The citation for Mr. William Black, founder and president of the Chock Full O'Nuts Corporation, read in part:

*"Throughout the years of your outstandingly successful business career, you have recognized the need for and devoted your efforts to improving the nation's health. Your sensitivity to the suffering of your fellow man led you to organize and endow this Foundation dedicated to conquering the tragedy of Parkinson's disease. Your benefactions to medical research and education testify to your dedication to and involvement in alleviating the ills of mankind."*

Mr. Black contributed \$5,000,000 to Columbia University in 1962 toward the construction of a new building to provide space for medical research. This was the largest single gift ever made by a graduate of Columbia University. The 20-story William Black Research Building was dedicated in 1966, and now provides facilities for more than 600 medical research projects. At the dedication exercises, Mr. Black said, "You give but little when you give of your possessions. All you have shall someday be given. Therefore, give now that the season of giving may be yours . . . I urge the Government to push ahead in medical research in spite of such heavy expenses as the war in Vietnam and the exploration of space. I, for one, would not hang my head in shame if Russia were to put a man on the moon while we were discovering a cure for cancer. . ."

In 1964, the National Institute of Neurological Diseases and Blindness made a grant of \$3,000,000 to Columbia University to establish and maintain a Parkinson's Disease Research and Information Center. This grant under the direction of Dr. Melvin Yahr has recently been renewed for an additional five years. It is matched by private funds from the Parkinson's Disease Foundation, which is housed in the William

Black Research Building at Columbia-Presbyterian Medical Center. This facility has been the center for the most extensive attack ever made upon parkinsonism, which afflicts about 1,500,000 Americans.

The Foundation has been under the guidance of Dr. H. Houston Merritt, Dean of the Faculty of Medicine, Columbia University, and Dr. Melvin Yahr, Associate Dean and Professor of Neurology. Under their guidance, the Parkinson's Disease Foundation has become a world center for research and information. Here specialized laboratories, occupying an entire floor of the Black Building, accommodate 55 scientists and technologists working on a variety of approaches to parkinsonism. The Foundation's staff includes pathologists, pharmacologists, chemists, physiologists and virologists. In addition, a special clinic for treating parkinsonism is held twice a week at Vanderbilt Clinic.

The Foundation's research has been aided through the establishment of a Brain Bank nine years ago. The Foundation's medical scientists have studied more than 100 brains willed to the Foundation by former patients. The knowledge gained from these studies has been helpful to other investigators over the years. The results of research conducted in the Foundation's laboratories are published in international medical journals and are regularly presented at worldwide scientific congresses.

## Dr. Marks Chosen . . .

*Continued from page one*

tion, the Veterans Administration and other governmental and private foundations in the health area. Dr. Marks has been the recipient of a number of awards, including the Bicentennial Medal from the College of Physicians & Surgeons in 1968. He is married and father of three children.

In a recent interview, Dr. Marks said: "Medical schools in this country are faced with unprecedented challenges to provide leadership in meeting the health needs of our nation and the world. With this challenge comes the opportunity and responsibility of medical schools to create—through our educational and research activities—a quality and availability of health care responsive to these needs. At this time, Columbia University's College of Physicians & Surgeons has a unique opportunity to provide a leadership in American medicine which will carry on the school's great tradition."

Dr. Merritt, one of this country's leading authorities in the field of neurology, was named acting dean of the Faculty of Medicine and acting vice president in charge of medical affairs in July 1958, and he became dean and vice president the following year. He had been Professor of Neurology at P&S and Director of the service of Neurology in the Neurological Institute and Presbyterian Hospital since 1948. In 1963 Dr. Merritt was named the first holder of a new professorship, the Henry L. and Lucy Moses Chair of Neurology at P&S.

Dean Merritt, born in Wilmington, North Carolina, January 12, 1902, was graduated from Vanderbilt University and The Johns Hopkins University Medical School. He taught at the Harvard Medical School before coming to Columbia in 1944. He has been awarded honorary degrees by Harvard and the New York Medical College.

Columbia's medical school, the first in New York, was created by the Governors of King's College (as Columbia was then known) in 1767. The College awarded America's first medical degree to Robert Tucker, just 200 years ago, May 15, 1770. In 1813 the medical faculty of Columbia College merged with a rival medical school named the College of Physicians & Surgeons, which had been established in 1807. The existence of a strong medical department became a key element in the eventual development of Columbia College into a university in 1896.

In 1921, the medical school and the Presbyterian Hospital became affiliated and soon began building together on Washington Heights. The first units were completed in 1928. The Columbia-Presbyterian Medical Center became the nation's prototype of the medical center concept of medical teaching, research and patient care.

In the past 200 years, Columbia has graduated 13,771 medical doctors. More than 5,000 are now living. Thousands of other physicians have received postgraduate training in their specialties at the school.

Dr. Arvid Carlsson (right) and Dr. Melvin Yahr.

and a leading investigator in the field of biogenic amines, whose research has led the way to an understanding of the pathophysiology of Parkinson's disease."

Senator Hill, now retired, came specially to New York from his home in Montgomery, Alabama to receive his citation. He was cited for his "ex-

Senator Lister Hill, Dr. H. Houston Merritt, and Mrs. William Black.

traordinary concern for the welfare of our nation's people," demonstrated during the 47 years of his "superb" career in the United States Sen-

## Annual Awards Tea for Volunteers Held

Three hundred and seventy-three volunteers who have served Presbyterian Hospital from five to 30 years and others who have served less years but with no less devotion were honored at the Annual Awards Tea for Volunteers on April 29 at Maxwell Hall.

Mrs. George A. Perera, Chairman, Volunteer Tea, presided.

Dr. C. R. Wise, Vice President of Presbyterian Hospital, extended greetings and presented the volunteers.

Honor volunteers who gave more than 1,000 hours in 1969 are: Mrs. Anne Kingsford, 1,400 hours; Mrs. Ida Rosch, 1,363 hours and Mrs. Helen Harris, 1,126 hours.

United Hospital Fund honor awardees who served more than a total of 10,000 hours are: Mrs. Stella Brown, Mrs. Royall G. Cannady, Mrs. Harris, Mrs. Katalin Kallay, Mrs. Kingsford, Mrs. Rosch and Mrs. Charles Stroud.

Several hundred volunteers

and guests chatted and enjoyed refreshments in the Maxwell Hall lounge before gathering in Sturges Auditorium for the highlight of the tea—a program of entertainment.

Mrs. Edna Husband, receptionist in Babies Hospital,

Mrs. Dorothy Diamond, director of volunteers, is among hundreds of volunteers enjoying entertainment at Sturges Auditorium.

sang two songs. She was accompanied at the piano by Mrs. Frieda Dankwerth, volunteer.

Mrs. Husband, whose lovely soprano voice has entertained audiences at several Hospital functions, was born in New Orleans, the birthplace of jazz and the blues. But she was more interested in classical music and opera, taking inspiration from Roberta Peters, Leontyne Price and other opera stars. She sang at many school affairs and in church in her native state before coming to New York seven years ago. She has been employed at the Hospital for six years.

Further entertainment was provided by Dr. Douglas F. Greer, assistant resident in ophthalmology. He sang "Medical School Talkin' Blues" and "Worry Box," accompanying himself on the guitar. Both numbers were composed by Dr. Greer, the first in 1966 when he was a senior medical student at P&S.

## • ENGAGEMENTS

Mary Anne Giere, head nurse, Vanderbilt Clinic, is engaged to Mr. Frederick Baldus.

Constance Knapp, head nurse, Vanderbilt Clinic, is engaged to Dr. John S. Edelen. Dr. Edelen is an intern in the Department of Medicine.

## • MARRIAGES

Helen M. Byrne, a research worker in Dr. Elliott Osserman's laboratory, Delafield Hospital, was married to Mr. Francis P. Dooley, instructor in Mexican history at Monmouth College, N. J., on March 21. The couple honeymooned in Rome.

Kathryn Parias, staff nurse, N.I., was married to Mr. Theodore Rieper on May 30.

## • BIRTHS

Mrs. Rita Baez and her husband welcomed their first child, a daughter, Charlene, on May 13. Mrs. Baez was research secretary in the Development Fund Office.

## • FAREWELL TO

Mrs. Ann Dunn, Purchasing Department, Mrs. Dunn and her husband are going to live in Florida.

## • WELCOME TO

Anita Cassals, replacing Mrs. Dunn in Purchasing Department.

## • CONGRATULATIONS TO

Mrs. Rita Engstrom who has been promoted from clinic receptionist to assistant supervisor in the Eye Clinic, V.C.

Mr. and Mrs. Elmer Logan who celebrated their 50th wedding anniversary on May 17. Mr. Logan is a volunteer.

## • NOTES OF INTEREST

Kenneth Rothman, Ph.D., has been appointed chairman of the Department of Sociology and Anthropology at Chatham College in Pittsburgh, effective September 1. Dr. Rothman is the son of Mrs. Dorothy Rothman, Office of Public Interest.

## • CONDOLENCES TO

Mrs. Blanche Anderson Stone, retired chief food cashier, whose husband, Gordon, died April 20. Funeral services were conducted by Chaplain Robert B. Reeves, Jr., on April 22.

## New Uniforms for Nursing Students

The Columbia University School of Nursing class of 1971 will be the last to wear the traditional blue-striped, long-sleeved uniform with bustle-back, detachable white collar and back-buttoned bib and apron.

This will be replaced by an updated version with short sleeves, bib and apron that button at the shoulder and an attached collar of the same material—a lighter blue-striped, wash-and-wear dacron polyester.

The new uniform will greatly lessen the burden of the laundry and the student nurses

will enjoy the comfort of a cooler, lighter uniform.

NEW IS RIGHT—Debbie Mull (right) models the new uniform, while Sharon Trumbley displays the old one for comparison.

## College Spanish at P.H.? Yes!

A course in conversational Spanish will be given at The Presbyterian Hospital by the Borough of Manhattan Community College, the Hospital's Personnel Department has announced.

The course will begin this coming fall and is tentatively planned for Tuesday evenings. Lillian Oring, Personnel Assistant, said the instruction will be for the benefit of Presbyterian Hospital employees who require a knowledge of Spanish in their work. Their tuition will be covered under the provisions of the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan.

If there is enough interest, a course in sociology may also be given next fall. Employees who are interested in either of the two courses are invited to telephone Miss Oring at extension 3215 for an appointment to discuss their educational goals.

## DOINGS OF DOCTORS

DR. MORTON S. BROD, Assistant Clinical Professor of Dentistry, DOS, has recently returned from a three-week dental mission to the island of Anguilla. He was accompanied by his wife, Anne Bigelow Brod, a 1952 graduate of the Columbia University nursing school. Once again, Dr. Brod attempted to care for as many of the island's 6,000 people as was possible from a mobile dental unit and with the instruments and limited supplies he brought with him. The island has had no permanent medical or dental care until the return of the British this past year.

The Royal Commissioner to Anguilla informed Dr. Brod that his plan for Dental Health Care, submitted upon his return from last year's mission, is to be adopted by the island's government.

DR. KARLIS ADAMSONS, Professor of Obstetrics and Gynecology, P&S, presented a paper on *Intrapartum Evaluation of the Fetus* at the International Symposium on Functional Pathology of the Fetus and Neonate, sponsored by the New York Medical Society on February 26.

He was guest speaker at the 100th meeting of the Western Pediatric Society in Vancouver, Canada, March 4 and 5.

Dr. Adamsons also addressed the Caribbean Conference on Diagnostic Medicine in San Juan, Puerto Rico, March 9-10, on *Effects of Drugs on the Fetus and Neonate and on Management of Gynecologic Malignancies*.

Members of the Department of Pediatrics were guest speakers at a scientific session sponsored by the Pediatric Section of the Medical Society of the County of Kings and the Academy of Medicine of Brooklyn, at the State University of New York, March 11. DR. EDWARD C. CURNEN, JR., Professor of Pediatrics, P&S, was chairman of the session and introduced the other speakers: DR. KATHERINE SPRUNT, Associate Professor of Pediatrics, P&S, who discussed *Effects of Antibiotics on Oropharyngeal Flora*; DR. JOHN C. SINCLAIR, Assistant Professor of Pediatrics, P&S, who spoke on *Temperature Regulation in the Newborn* and DR. WELTON M. GERSONY, Assistant Professor of Pediatrics, P&S, who reviewed *Evaluation of Cyanosis in the Newborn*.

On March 13, Dr. Curnen visited the Department of Pediatrics at Howard University, Washington, D. C., where he addressed the students and staff on *Diagnostic Virology and Viral Infections of the Central Nervous System*.

DR. DAVID H. BAKER, Professor of Radiology, P&S and Director of Radiology, Babies Hospital, attended and participated in the annual meeting of the Eastern Radiological Society of Portugal, April 11-26.

Dr. Baker also presented a lecture on *Pediatric Radiology* at the Children's Hospital in Madrid, Spain.

DR. WALTER E. BERDON, Associate Professor of Radiology, P&S, presented a course on *The Infant Abdomen* at the postgraduate course in radiology of the gastrointestinal tract in the Alumni Auditorium, P&S, May 6.

Dr. Berdon was visiting professor at the University of Kentucky in Lexington, from May 28 to 29 and spoke on *Adrenal Disease in Children*.

Dr. Baker and Dr. Berdon presented courses on *Hyaline Membrane Disease and Surgical Lesions Mimicking Pulmonary Disease* at a

post-graduate course at Cornell University, May 19.

At a meeting of the American College of Physicians in Philadelphia on April 16, DR. RALPH W. RICHTER, Assistant Professor of Neurology and Director of Neurology at Harlem Hospital, lectured on *The Clinical and Neuropathological Correlates of Heroin Addiction*.

Dr. Richter also attended the 22nd annual meeting of the American Academy of Neurology in Bal Harbour, Florida, April 27-May 2. His presentation at this meeting was *The Social Implications of Neurological Care in a Municipal Teaching Hospital*. DR. RICHARD L. MASLAND, Professor and Chairman, Department of Neurology, was the discussant.

Dr. Sol Spiegelman

Dr. Ralph W. Richter

DR. SOL SPIEGELMAN, Professor of Genetics, P&S and Director, Institute of Cancer Research, was the Natural Sciences Distinguished Lecturer at Washington State University in Pullman, March 23. The same week he gave the Battelle Memorial Lecture at the Medical School of the University of Washington in Seattle.

Dr. Spiegelman also participated in a symposium during the annual meeting of the National Academy of Sciences, National Research Council, held in Washington, D. C., April 27-29. The title of his presentation was *Virus Genome Effects in Normal and Cancer Cells*.

On April 6, Dr. Spiegelman conducted a seminar at New York University, and on May 15 he was the Karl August Forster Lecturer at the Johannes Gutenberg-Universität, Mainz, Germany.

DR. S. H. NGAI, Professor and Chairman, Department of Anesthesiology, participated in a postgraduate course sponsored by the Emory University, Atlanta, as a member of the visiting faculty. The course, entitled *Pharmacology for the Anesthesiologist*, was held from April 6 to 8. Dr. Ngai lectured on *Clinical Significance of Ganglionic Blockade and Anesthesia and The Sympathetic Nerve System*.

DR. PAUL J. POPPERS, Assistant Professor of Anesthesiology, P&S, journeyed to Mexico City to deliver a series of lectures.

On April 1 he discussed *Teaching Methods in Anesthesiology Training* with service chiefs and members of several of the major hospitals in Mexico.

On April 2 he addressed a combined meeting of the Departments of Anesthesiology and Obstetrics & Gynecology, University of Mexico, on *Complications Related to the Use of Local Anesthetics in Obstetrics*.

On April 3, Dr. Poppers gave a paper entitled *Causes, Effects and Treatment of Methemoglobinemia in Pregnancy* at a special meeting of the Mexican Society of Anesthesiology at the Centro Medico, Mexico City.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXV, NUMBER 7

JULY, 1970

## Graduation Week: 240 Leave Prepared to Help Society

This garden path from the entrance to P.H. bore heavy traffic on the afternoon of June 2.

Within the span of a few days early in June, the Columbia-Presbyterian Medical Center sent out yet another generation of doctors, nurses and technicians to help mankind.

Two hundred and thirty seniors at the College of Physicians and Surgeons, the School of Dental and Oral Surgery, the School of Nursing, and the School of Public Health and Administrative Medicine, as well as five technicians, received their passports to philanthropy in five separate graduation exercises.

Diverging from the traditional extensive rhetoric of decades past, the speeches at the graduation ceremonies tended to be brief—in step with the accelerating pace of the times.

Gathered in the Medical Center's garden on June 2, the graduating class of P&S and guests were greeted by Dr. George A. Perera, Associate Dean of the Faculty of Medicine, and heard a brief graduation address by Dr. H. Houston Merritt, retiring Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs at Columbia University.

Dr. Merritt surveyed the career opportunities open in medicine and dwelt briefly on general practice, the specialties, on teaching and on community medicine. He urged the young physicians not to neglect research, for without it, general practice and community medicine "would suffer greatly."

Dr. Merritt concluded his address by counseling the graduates to keep their cool—not for a summer but for life. "The way of life I would like to recommend to you," he said, "is expressed in the word equanimity—not the peaceful contentment of Mr. Borden's famous cow, Elsie, but the ability to critically evaluate every situation and the readiness to cope with and adapt to life's situations."

Dr. Merritt then awarded prizes and diplomas. The prize winners and the prizes were: Donald Oliver Quest, Walter Winchester Prize; Henry Melville Sondheimer, Alumni Association Senior Student Award and the William Perry

Dr. H. Houston Merritt, retiring Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs at Columbia University, was warmly applauded in tacit recognition of his fruitful years of service.

Watson Prize in pediatrics; Edward Zinsser Walworth, Joseph Garrison Parker Award; Robert Milton Schmidt, Borden Undergraduate Research Award; and Zvetan Nicholas Zakov, Alvin Behrens Memorial Prize in Ophthalmology. Robert Milton Schmidt, Anthony Dunster Whittemore, Keith A. Wrigley, Jr., shared the Urology Prize.

In addition to the 117 young men and women who became

MDs, five physicians received the Doctor of Medical Science degree (Med. Sc.D.). They were: Mahlon V. Freeman, M.D.; Peter Carmel, M.D.; Abbott Kreizer, M.D.; Myles M. Behrens, M.D. and Bhuvaneshwar P. Ja Ju, M.D.

While this ceremony was taking place in the Medical Center's garden, the School of Nursing presented diplomas, certificates and pins to seniors

## Three New Trustees Join Board

Mrs. George A. Rentschler

Mrs. George A. Rentschler, Sidney J. Weinberg, Jr., and Dr. Douglas S. Damrosch have been elected to the Board of Trustees of The Presbyterian Hospital, it was announced by Augustus C. Long, president.

Mrs. Rentschler, known for her work as National Council Chairman of The Women's National Republican Club, 1963-1965, is a native of New York City. She received the B.A. degree from the University of Cincinnati; the M.A. degree in political science from Columbia University Graduate School and a certificate from the Russian Institute, Columbia University, in 1962.

Mrs. Rentschler, the former Rita Rend Mitchell, married George Adam Rentschler, board chairman of the Baldwin Locomotive Works, in 1936. Mr. Rentschler is a member of the boards of Armour and Company, Baldwin-Lima-Hamilton Corporation, Fifth Union Trust Co., Philip Carey Manufacturing Company, U.S. Lines Co., U.S. Lines Operations, Inc., and William Powell Co.

Mrs. Rentschler was active in political and community affairs in Cincinnati, Ohio, before moving to New York City in 1956.

She was co-chairman of the national finance committee, Volunteers for Nixon-Lodge, in 1960; co-chairman of finance, Republican City Committee, in

Dr. Douglas S. Damrosch

## Rockefeller Foundation Supports Studies in Reproductive Biology

The Rockefeller Foundation has made a grant of \$500,000 to the College of Physicians and Surgeons of Columbia University for research in reproductive biology. The studies will be carried out in the Department of Human Genetics and Development under the direction of Dr. Paul A. Marks, department chairman. Dr. Marks became Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs at Columbia on July 1, but he will remain active in directing this program.

The sum, made available by the officers of the Foundation for a period of five years, will be used for the support of new faculty members in the department as well as for the purchase of permanent laboratory equipment.

The University's announcement of the grant comes at a time of rapidly growing scien-

tific interest in reproductive biology as an approach to problems related to population stabilization. Columbia University assumed a leading role in this field a year ago with the establishment of the Department of Human Genetics and Development under the chairmanship of Dr. Marks. The department's programs include not only research and instruction but also in-patient and out-patient consultation services for genetic disorders.

Dr. Marks announced that the first of the new faculty members to receive support from the Rockefeller grant will be Dr. Robert S. Krooth, currently a professor in the Department of Human Genetics at the University of Michigan. When Dr. Krooth begins his new assignment here in October, his attention will be centered on somatic cell genetics and cellular reproduction.

# Graduation Week...

A view of the 76th graduation exercise of the School of Nursing.

*Continued from page one*  
receiving June degrees, on the lawn in front of Maxwell Hall. Seventeen nurses received the Baccalaureate Degree and four were graduated with the Master of Science Degree in Psychiatric Community Mental Health Nursing. The seventy-sixth graduation exercise began with a welcome to the graduates, their parents and friends from Mary I. Crawford, Associate Dean (Nursing), P&S. After the meditation and remembrances, presented by members of the graduating class, S. Robbin Clark, representing the Group "A" students, and Sue E. Slevin, speaking for the graduate students, delivered a dual commencement address.

Mrs. Gordon, president of the Alpha Zeta Chapter of Sigma Sigma Theta Tau, presented medals of excellence to Mrs. Merle F. Brock and Nora E. Barrett.

The diplomas, certificates and the pins were presented to the graduates by Helen F.

Pettit, Director of Nursing Education, and by Dr. Ann M. Earle, Director of the Psychiatric - Community Mental Health Nursing program.

In still another part of the Medical Center that day, Columbia University's School of Public Health and Administrative Medicine held a ceremony for its graduating class of 59 students. Gathered in the spacious Bard Hall Lounge, the students, their parents, relatives and friends heard brief addresses by Dr. Herman E. Hilleboe, DeLamar Professor of Public Health Practice, and by Z. Drescher Kripke, representing the students. Dr. Milton C. Maloney, Acting Director of the School, presented 27 graduates with Master of Public Health degrees, and awarded 32 Master of Sciences degrees in five specialties, including administrative medicine, biostatistics, epidemiology, and hospital administration.

A day later, on June 3, the School of Dental and Oral Sur-

gey graduated its senior class of 32 men and one woman. A considerable portion of the program was taken up with the presentation of achievement awards to members of the graduating class by the faculty and distinguished dental scientists. The graduates so honored and the prizes they received were: Frank Paul Petronella—Rowe-Wiberg Medal and Prize for Excellence in Operative Dentistry; Dennis Nicholas Morea—Van Woert Award and Alpha Omega Fraternity Prize; Leonard Joseph Gellella, Jr.—Certificate for Excellence in Pedodontics; William Beyer Foster—Ella Marie Ewell Medal; Gordon Palmer Huntress—Psi Omega Fraternity Award; Lawrence Charles Restieri, Jr.—William Bailey Dunning Medal; and Roger Philip Santise—Award of the International College of Dentists—United States Section. Omicron Kappa Upsilon Keys were awarded to Drs. Foster, Morea, Petronella and Restieri.

After the presentation of diplomas by Dr. Melvin Moss, Dean of the School, Dr. Donald W. King, Delafield Professor and Chairman of the Department of Pathology, delivered the graduation address.

Dr. Donald King addresses the new dentists.

The concluding event in graduation week at Columbia-Presbyterian Medical Center was the presentation in P.H. 1-50 of diplomas to the graduating class of the School for Operating Room Technology on June 5. This was the second group of young women to graduate from the school since its inception in April 1969. After brief but heartfelt remarks by Mary E. Windrow, Director of Nursing Service, and by Mrs. Gilda Gehm, Instructor for the course, Beatrice Langmuir, Assistant Director of Presbyterian Hospital's operating rooms, awarded the diplomas. There were five students in this year's class, of whom three have chosen to be employed by Presbyterian Hospital.

The next O.R.T. class "audited" the graduation.

A solemn moment in the graduation ceremony of the School of Dental and Oral Surgery was the recitation of the Dentist's Code.

Mrs. Sylvia Milton is "pinned" by Mrs. Gilda Gehm, Instructor for the O.R. technicians' course, as graduates Judith Andrews and Rita Santini look on.

Beatrice Langmuir, Assistant Director of Presbyterian Hospital's operating rooms, congratulates Eugenia Ricciardi. The fifth member of the graduating class, Ellen Sidlar, could not attend ceremony because of illness.

This group of graduating nurses waves a greeting to the photographers in particular and to the world in general.

The four young women receiving the Master of Science degree in Psychiatric Community Health Nursing were, from left, Sue Ellen Slevin, Mary Susan Macdonald, Mrs. Gail Herbert Bohler, and Joanne Elizabeth Sweeney.

## Dr. Fox Develops Ointment To Combat Burn Infections

Dr. Charles L. Fox, Jr., shows how to "tie knots in DNA with silver."

Dr. Charles L. Fox, Jr., Professor of Microbiology (in Surgery), P&S, has developed a new and very promising topical antibiotic agent for the treatment of burns—silver sulfadiazine.

A recent article in *Medical World News* (April 3, 1970) stated that the use of new topical antibiotics to fight burn wound sepsis has dramatically reduced the mortality rate by better than two-thirds.

A "burn" is an area of skin where tissue is severely damaged by heat. This causes bacteria to flourish. Ordinarily, intact skin is a protective barrier, but when it is damaged by a burn, this barrier is broken down. When the skin is injured by heat it cannot withstand infection and one of the most common and most dangerous infections is caused by *Pseudomonas aeruginosa*, a gram-negative organism.

Dr. Fox set about to improve on sulfamylon, a non-toxic, penetrating antibiotic, developed at Brooke Army Medical Center laboratories in San Antonio, and silver nitrate, developed by researchers at Washington University's School of Medicine in St. Louis.

While both these agents are widely used and very effective, burn physicians acknowledge that each has its faults. Silver nitrate therapy requires frequent changes of dressings and careful watch against dilution of body electrolytes. The silver nitrate solution blackens the patient, the room, the linens and hospital personnel. Sulfamylon, while simpler and neater to apply, can produce adverse reactions, is often painful to the patient and may cause hyperventilation and acidosis.

Dr. Fox combined silver nitrate and sodium sulfadiazine to produce silver sulfadiazine, which is then made into an ointment exhibiting greater antibacterial action than either silver nitrate or sulfamylon.

The results with the new drug have been excellent (and just short of miraculous). This drug binds the two strands of DNA with silver and prevents

bacteria from multiplying (see photo).

In Detroit, Dr. James R. Lloyd, director of the burn unit at Children's Hospital of Michigan, started using silver sulfadiazine in 1968. His report, in part, stated, "Last year was the first time in the history of the burn unit that we didn't have a death for an entire year... Silver sulfadiazine gives better bacterial control than any other agent we've ever used."

Dr. A. Richard Grossman, a surgeon and plastic surgeon in Encino, California, set up a satellite burn unit at Sherman Oaks Community Hospital near Los Angeles, and, like Dr. Lloyd, favors silver sulfadiazine. He feels the argument is clinched by the prevention of pain. "If you apply sulfamylon on one arm and silver sulfadiazine on the other, the patient will never let you use sulfamylon on him again."

A letter from Dr. George H. Humphreys, II, Emeritus Valentine Mott Professor of Surgery, now in Taiwan, indicates that silver sulfadiazine treatment has been initiated on a three-year-old child suffering 30 per cent scald injuries of the lower extremities. Dr. Humphreys writes, "It is predominantly apparently deep second degree, the kind that, if infected, becomes third degree—if not, heals kindly... Infection is a big problem here, as in all countries where meticulous care is impossible."

Dr. Fox eagerly awaits the result of this pioneer treatment in Taiwan.

He had a very personal experience with silver sulfadiazine when visiting and working at the hospital of the University of Kingston in Jamaica, BWI, with a very young child who had been severely burned. The youngster was in pain and extremely apprehensive. Dr. Fox applied silver sulfadiazine to one arm and the child immediately extended the other.

According to Dr. Fox, silver sulfadiazine is being tested extensively in hospitals all over the world, including Australia. In the United States, approximately 30 investigators

## Met Watching is no Game to Orthopedic Surgeon

Dr. Peter LaMotte has to be the envy of every New York Met fan in the city—young or old.

He has an office at Shea Stadium, accompanies the Mets to spring training in St. Petersburg, Florida, and attends approximately 80 games at Shea during the baseball season.

How did he get so lucky?

Dr. LaMotte is the official attending physician of the New York Mets and, in this capacity, automatically becomes the attending physician to any other National League team playing in New York.

Dr. LaMotte, Attending Orthopedic Surgeon, Roosevelt Hospital, and Assistant Clinical Professor of Orthopedic Surgery, P&S, was chosen for the job by the Chairman of the Board of the New York Mets.

*Stethoscope* asked Dr. LaMotte how he reconciles his teaching job at P&S with his job with the Mets. "Suppose you were teaching at P&S and got a call that Tommy Agee broke his leg sliding into third base. Would you continue teaching or rush off to Tommy?"

His immediate reply was, "I would rush off to Tommy." He explained that sometimes people forget that an emergency patient is just that—an emergency patient. "And a patient comes before anything else—whether he's a baseball player, an executive or an elevator operator."

Dr. LaMotte said most injuries in baseball involve the upper extremities and occur during pitching, reaching for a ball and sliding into base. "One of the most dangerous plays," he said, "is a double play at second base, but fortunately there aren't many injuries incurred during a play of this kind."

"How do you manage to squeeze the Mets into your very busy schedule?" was *Stethoscope's* next question.

This brought a chuckle from

are using it in all major burn centers, including Harlem and Bellevue Hospitals in New York City.

The ointment is manufactured by Marion Laboratories, Inc., in Kansas City, Missouri, and royalties from the product go to Columbia University and are allocated by Dr. H. Houston Merritt for the Department of Surgery.

Dr. Fox is a career investigator of the Health Research Council of the City of New York, and his research concerned with the development of silver sulfadiazine has been supported, to the present time, by grants from the United States Department of Health, Education and Welfare, National Institutes of Health and the Health Research Council of the City of New York.

Dr. LaMotte. "Well, it's not always easy. I have a full day of practice, operating and teaching but I attend all night and most weekend games at Shea and still have time for my hobbies."

"What are your hobbies?"

"Skiing, boating, golfing and fishing!"

Spring training in St. Petersburg for two weeks in the spring is a fringe benefit. He explained it is a combination of work and vacation and he takes his wife along. One of the orthopedic residents and his family also get a chance to go with Dr. LaMotte and enjoy the same work and vacation stint, plus an opportunity to gain valuable clinical experience in handling orthopedic emergencies.

Two final questions followed inevitably.

"Do you think the Mets will repeat this year?"

Apparently he did not wish to go out on a limb as he said, "We hope so. We're the team to beat and our toughest competition will come from Pittsburgh, St. Louis and Chicago."

When asked if the Mets were his favorite team, there was no hesitation as he answered, "Yes."

Dr. Peter LaMotte

Dr. LaMotte, a warm, gracious gentleman, whose eyes twinkle merrily when he speaks of the Mets, told *Stethoscope* he played baseball when he was a youngster, for fun.

He attended Landon School in Bethesda and Trinity College in Hartford. He received his M.D. from George Washington University in 1955, served his internship and a two-year surgical residency at Roosevelt Hospital and a three-year residency in orthopedic surgery at PH.

He recently married the former Beryl E. A. Murrell and lives in Pelham Manor, New York.

## Dr. Suzuki Wins for the U. S. A.

Dr. Kotaro Suzuki, Assistant Professor of Obstetrics and Gynecology, P&S, was the recipient of an award for his scientific exhibit, *Radioangiography of the Intrauterine Fetal Circulation in the Rhesus Monkey*, at the combined meeting of the Sixth World Congress of Gynaecology and Obstetrics and the Eighteenth Annual Clinical Meeting of the American College of Obstetricians and Gynecologists. The combined meeting was held at the Americana Hotel, April 12-18 in New York City.

Dr. Kotaro Suzuki

Fifty-six exhibits were shown and three awards were given; the United States and Dr. Suzuki capturing second prize. First and third prizes went to physicians from Switzerland and Japan respectively. Co-exhibitors with Dr. Suzuki were Dr. Terusada Horiguchi and Dr. Karlis Adamsons, also of the Department of Obstetrics and Gynecology, P&S.

At the same meeting, Dr. Suzuki chaired a luncheon conference on April 13. The topic discussed at the conference was *Amniotic Fluid Metabolism*. On April 14 he presented a paper on *Pharmacological Effects and Distribution of Nicotine in the Pregnant Rhesus Monkey*.

Dr. Suzuki attended Keio University in Tokyo and received his M.D. from Keio University Medical School in 1960. He served his rotating internship at Nakano International Hospital, Tokyo, and his surgical internship at Albert Einstein College of Medicine (Bronx Municipal Hospital Center). He served residencies in obstetrics and gynecology at Keio University Hospital, Albert Einstein College of Medicine and Lincoln Hospital, Bronx, N. Y. and St. Mary's Hospital, Brooklyn, N. Y.

He was a U. S. Public Health Service trainee Fellow in physiology of reproduction in the Department of Obstetrics and Gynecology at P&S from July 1966 to June 1969. On July 1, 1969 he was appointed to his present position. In 1969 he also received his Ph.D. from Keio University.

His major area of scientific interest is in the field of fetal physiology and in the broader area of the physiology of reproduction.

Dr. Suzuki is married to the former Bridget Kennedy. They have a son, Kenneth, 16 months old, and live in Riverdale, New York.

## P.S. 128 Kids Send Gift to P.H.; Hospital Reciprocates, With Love

Elizabeth Callahan, Unit Manager of Babies Hospital, visiting with kindergarten class at P.S. 128, 68 Audubon Avenue, across the street from CPMC.

When four-year-old Meg and two-year-old John Kienast were presented with not one but five baby sisters and brothers on February 24, they were overjoyed. The kindergartners at P.S. 128, many of whom may have also wished for at least one baby brother or sister of their own, wanted to share in that joy.

And so they carefully prepared a book of drawings depicting the hospital, the babies and the doctors. A random selection of captions read in part: "...at the big hospital across the street one mother had five babies... five babies need five cribs and five bottles... five dresses, five pants and five boots..."

The book was presented to Elizabeth Callahan, unit manager of Babies Hospital unit, to be shared with all those who had some part in the care of the quintuplets. The Hospital wanted to return the compliment and so a collage of photographs of each quintup-

let—Amy, Abigail, William Gordon, Sara and Edward—with their parents, grandparents and their pediatrician, Dr. Stanley James, was placed on a large poster. Dr. James autographed the poster and Miss Callahan presented it to the kindergartners in the presence of their teachers, Mrs. Sue Friedberg and Mrs. Augusta Grubb; school principal, Jack Frank and assistant principal, Beatrice Mantell.

The principal then took Miss Callahan on a tour of the school kitchens and cafeteria, where some 1,000 children are served a hot luncheon every day between 11:00 a.m. and 1:00 p.m. Mr. Frank praised the team efforts of the teachers and employees who assist him in running the school. Miss Callahan returned to the Hospital feeling that the Washington Heights community should be proud of P.S. 128.

Stethoscope salutes the kindergartners "at the big school across the street."

## nurses don folk costumes for party

On May 26, in a relaxed and informal atmosphere in Harkness Hall lounge, a welcoming party was given for new staff nurses to help them meet and become acquainted with members of the nursing department and administrative staff.

A delightful touch was added to the gathering with the arrival of several exchange-visitor nurses dressed in the

charming costumes of their native countries. The girls are, from left to right, Le Cy Huang, Republic of China; Ok Soo Choi, Korea; Eun Sook Yoon, Korea and Toshiko Yamamoto, Japan.

Refreshments were served and the nurses had an opportunity to meet new friends and renew old ties.

# PH Anesthesiology Service Ca

Shortly after an article on the appointment of Dr. Shih-Hsun Ngai as acting director of the Anesthesiology Service appeared in these pages in March of this year, it was announced jointly by Augustus C. Long, President, The Presbyterian Hospital, and Dr. H. Houston Merritt, Dean of the Faculty of Medicine, that Dr. Ngai had been appointed Professor and Chairman of the Department of Anesthesiology, P&S and Director of Anesthesiology Service, PH.

In honor of Dr. Ngai's appointment and in view of recent tributes to anesthesiology in national magazines, it seems appropriate to give an account of some of the accomplishments of the department since it achieved independent departmental status in 1952.

As was stated in an article on anesthesiology in Family Health and in Reader's Digest last March, "Only a handful of medical centers offer anesthesiology research and training, or give anesthesiologists full recognition for all they can do."

Two recent examples of their contributions are the first organ transplant at the Columbia-Presbyterian Medical Center last November and the remarkable teamwork displayed by these dedicated physicians when the Kienast quintuplets were born on February 24 (see *Stethoscope*, April, 1970).

The Department of Anesthesiology has come a long way since the appointment of one nurse-anesthetist in 1911. The department was guided through a vital transition phase by Dr. Virginia Apgar from 1938, when she was appointed director of the Division of Anesthesiology, until 1949, when Dr. Emanuel M. Papper was appointed Attending Anesthesiologist, Professor and Executive Officer. Dr. Apgar is currently medical director of the National Foundation, a voluntary organization primarily concerned with research and clinical service in congenital malformation and poliomyelitis.

### A VIGOROUS PROGRAM

In 1949 the department had 14 staff anesthesiologists, 24 residents and four nurse-anesthetists. Dr. Papper, with the support of the institution and Dr. George H. Humphreys II, then Professor and Chairman, Department of Surgery, P&S, recruited additional staff and began to develop a vigorous program for anesthesia research and training. Under his leadership the department at the Medical Center became one of the major departments of anesthesiology in the world. It has been designated by the National Institutes of Health as one of the five centers for

anesthesia research and training and a national resource of academic and clinical anesthesiologists. Dr. Papper, after a distinguished career at the Medical Center, resigned at the end of 1969 to become the vice president for medical affairs and dean of the School of Medicine, University of Miami.

Today, the department has a staff of 86, including 33 attending anesthesiologists with clinical and faculty appointments; three with faculty appointments and assignments at Delafield Hospital; six full-time research scientists; one professor of pediatrics assigned to anesthesiology (Dr. L. Stanley James, the pediatrician who cared for the Kienast quintuplets); 35 full-time residents in anesthesiology who also rotate on the anesthesiology services at Delafield and Roosevelt Hospitals, and 12 Fellows assigned to clinical and research work.

Anesthetics are administered to patients from a few hours to over 100 years of age. Each year, anesthetics are administered to over 20,000 patients.

During the past two decades over 300 physicians have been trained in anesthesiology at the Columbia-Presbyterian Medical Center. More than 40 per cent of these physicians now teach here or at other hospitals throughout the nation.

Columbia-Presbyterian was the first to provide anesthesiological care by physicians for obstetrical patients in 1949 and is one of the very few in the United States doing so even at present.

### A SCORE FOR DR. APGAR

In 1938, when research in anesthesiology was virtually non-existent, one of the pioneers in this area was Dr. Virginia Apgar. The first paper published by the service was *Experience with Pontocaine Spinal Anesthesia* by Dr. Apgar in 1939.

A study of the physiology of the newborn, initiated by Dr. Apgar in 1952, led to understanding alterations in the

newborn during the birth process and after the administration of anesthetic and sedative drugs. The basic physiology of respiration, circulation, metabolism and thermal regulation was studied in animals and in man under the leadership of Dr. James in collaboration with Dr. Apgar and many others.

In 1953 Dr. Apgar devised an objective scoring system to evaluate the clinical status of the newborn at birth. This system, known as the Apgar score, has had worldwide acceptance as the standard method of evaluation of the newborn and has had a profound impact on the development of improved anesthetic practices in obstetrics.

### MONITORING THE FETUS

Dr. Mieczyslaw Finster and Dr. Paul J. Poppers, Assistant Professors of Anesthesiology, P&S, are currently in charge of the obstetrical anesthesiology service. They have been conducting laboratory and human investigation of placental transfer of anesthetics and their distribution in the fetus.

Dr. Finster described the instrument used in the labor room for continuous monitoring of the frequency of the fetal heart beat when a mother is in labor. If the instrument, a two-channel recorder for fetal electrocardiogram and intrauterine pressure, shows abnormal fetal heart changes, a blood sample is taken from the fetal scalp to determine the pH. Should the pH be abnormally low, indicating that the fetus is being deprived of oxygen, delivery is accomplished as rapidly as possible, either vaginally or by Caesarean section.

This is just one small part of the continuous coverage maintained by the obstetrical anesthesiology division in collaboration with the Department of Obstetrics and Gynecology and of Pediatrics.

During the past 10 years a team of anesthesiologists consisting of Dr. Stuart F. Sullivan, Associate Professor

Mrs. Anna Da Silva, technician, using Astrup apparatus for determination of pH in sample of fetal blood.

# ises Different Worlds, Peopled By Dedicated Workers

Elizabeth Lewis, pulmonary function technician, seated at computer terminal which processes pulmonary function data.

of Anesthesiology, P&S; Dr. Richard W. Patterson, Associate Professor of Anesthesiology, P&S; and Dr. Daniel Philbin, Assistant Professor of Anesthesiology, P&S, have been responsible for the anesthetic management of patients undergoing open heart surgery.

In addition, they have investigated the effects of anesthesia and open heart surgery on pulmonary function. They also perform standard pulmonary function tests for preoperative evaluation and preparation of patients with significant pulmonary disease and evaluate the effectiveness of inhalation therapy and operative procedures. Data processing is being facilitated by the use of the General Electric computer time-sharing service with a computer terminal in the laboratory. The measured and computed values are compared with accepted norms predicted for the patient's sex, age, height and weight. Within minutes, results are available for the physician's interpretation.

## OXYGEN RESEARCH

During the past year Dr. Roger S. Wilson, research Fellow in anesthesiology, and Dr. Sullivan measured the oxygen cost of breathing in the post-cardiotomy patient. A large part of the total oxygen consumption of the body may be required by the respiratory muscles during the immediate postoperative period and this in turn may lead to hypoxemia. Measurements of this kind require considerable instrumentation. The development of the Clinical Investigation Unit equipped with a respiratory gas mass spectrometer and appropriate recording apparatus, has made this investigation possible. A principal collaborator in this continuing investigation is Dr. James R. Malm, director of the Open Heart Program. The Clinical Investigation Unit which adjoins the open-heart recovery room represents a significant advance in research capabilities, permitting meas-

urement of physiologic disturbances without interfering in any way with the routine care of the post-cardiotomy patient. Representatives from the Departments of Anesthesiology, Pharmacology, Pediatrics and Surgery are now investigating a variety of physiologic disturbances in open heart surgery.

Dr. Stuart F. Sullivan and Dr. Roger S. Wilson stand beside respiratory mass spectrometer. Exhaled air sampled from patient in open-heart recovery room is measured and computed.

Pediatric anesthesiology is a completely different world. Dr. Herbert Rackow, Associate Professor of Anesthesiology, P&S, in collaboration with Dr. Ernest Salanitre, Associate Professor of Clinical Anesthesiology, P&S, supervises administration of anesthetics to children in the Babies Hospital operating rooms on the 9th

floor. Two-thirds of all pediatric surgery is done here; the remaining one-third is done in Neurological Institute, Eye Institute and in Orthopedics.

According to Dr. Rackow, one of the biggest problems in administering anesthetics to youngsters is that children do not understand what is happening and it is very difficult to reach them. Adults understand and accept. Children who are old enough only to understand that they are away from home are very frightened and are, therefore, the most difficult to manage. These are the children from two to five years of age.

"We prefer to have a child reach the operating room sound asleep," said Dr. Rackow, "but in order to maintain the amount of preoperative sedation at a safe level, this is not always possible. About three to five per cent come to the operating room crying."

Newborn babies are difficult to manage because size and

Dr. Ralph Bailey, visiting Fellow, administering anesthesia with assistance from nurse Mrs. Patricia Elkins in Babies Hospital operating room.

many, especially preemies and neonates under five pounds, must be placed in incubators.

When undergoing surgery, children lose heat more rapidly than adults, so that special precautions to continuously monitor body temperature are necessary.

The Babies Hospital operating rooms have specially equipped mattresses that circulate hot water to give extra heat. Occasionally the additional heat from these mattresses is insufficient and so there is a special heating system that can bring the room temperature to 85 degrees in a matter of minutes. Dr. Rackow added, "The surgeons, anesthesiologist and nurses may be

sweating, but the baby's temperature remains at 98.6 degrees."

Children absorb an anesthetic more rapidly than adults, but they also excrete it more rapidly. Adult absorption and excretion are more stable. To find some of the answers to this problem, gases are analyzed by means of highly specialized equipment for gas chromatography.

Some children react to drugs as adults, while some are more sensitive to drugs and others are more resistant.

Studies in these two areas are a small part of the extensive research being conducted by Dr. Rackow and his associates.

## Three New Trustees . . .

*Continued from page one*

1961, and active in Republican fund raising until 1965.

Mr. and Mrs. Rentschler reside in New York City and have three sons: George A. Rentschler, Jr., Charles E. M. Rentschler and Frederick Rentschler II.

Sidney J. Weinberg, Jr., attended Deerfield Academy and graduated from Princeton University, cum laude, receiving the B.A. degree in 1945. He received the M.B.A. degree from Harvard Business School in 1949.

Mr. Weinberg was vice president of the textile division of Owens-Corning Fiberglas Corporation from 1949 to 1965. He became a partner in Goldman, Sachs & Co. in 1965.

He is a trustee of the Carnegie Foundation for the Advancement of Teaching; The Committee for Economic Development, The Foundation Center; is on the committee for Corporate Support of American Universities; director of J. P. Stevens & Co., Inc., and member of the consultant panel of the Comptroller General of the United States.

Mr. Weinberg, a native of New York, is the son of the late Sidney J. Weinberg, a partner in Goldman, Sachs & Co. since 1927 and a trustee of The Presbyterian Hospital from 1946 until his death on July 23, 1969. The late Mr. Weinberg had been a household name at the Medical Center

because of an educational aid plan, endowed in his name in 1962, for employees of the Hospital.

Mr. Weinberg is married to the former Elizabeth Houghton. They live in Rye, New York, and have six children: James, Alan, Laura, Elizabeth, Sydney and Peter.

His wife is an active member of the Neurological Institute Women's Auxiliary and his sister-in-law, Mrs. John L. Weinberg, is chairman of that auxiliary.

Mr. Weinberg's mother, Helen Livingston Weinberg (Mrs. Sidney J. Weinberg, Sr.), who died in 1967, had been a member of the Corporation since 1955 and gave unremitting effort to the Neurological Institute Auxiliary, which she joined in that year, serving terms as its vice chairman and chairman from 1958 to 1965.

Dr. Douglas S. Damosch was appointed director of the Medical Center in January of this year. A biographical profile of Dr. Damosch was presented in *The Stethoscope* in February.

Dr. Damosch had served previously as associate dean of Columbia University's College of Physicians and Surgeons and as assistant vice president of Presbyterian Hospital.

He has held numerous appointments in the Department of Pediatrics. In 1964 he was named associate professor of pediatrics, P&S, a post he still holds.

# Suggestions Welcomed For Computer

Nursing stations in Presbyterian Hospital will soon be recipients of new equipment: computer terminals which will allow them to use the facilities of the ABCD system now being used in Babies Hospital. ABCD is the computer-oriented Admitting, Bed Control and Discharge system. Babies Hospital has been the testing ground for this system since November 1969. This innovative approach to the hospital record-keeping problems was designed and implemented by the Medical Data Processing Department. The department, headed by Dr. William A. Bauman, used the skills of doctors, nurses, Front Office personnel and computer professionals to plan and install ABCD.

The ABCD system consists of the computer (IBM 360/Model 40) in the basement of Babies Hospital and the typewriter-like terminals at each nursing station, Front Office, Admitting areas and the Addressograph Room. These machines are hooked together using telephone wires. Typing on the terminal sends information over the wires to the computer; this is referred to as "input to the computer." For information that is often entered, a set of buttons is available with the terminal to help speed input.

As patients are admitted, staff at the Front Office uses the terminal to enter information about the patient to the computer. As soon as the information is entered, a message is automatically sent to the nursing station that will be responsible for the patient; the Addressograph Room also receives pertinent information so that it can make an addressograph plate for the patient. During the patient's stay, the nursing station is responsible for keeping the information about the patient up-to-date. Whenever a staff member is interested in knowing about the patient, he may use the nearest terminal to recover this information. Whenever a patient is transferred, and when he is discharged, nursing stations enter the necessary information and a message is automatically sent to the Front Office. This provides communication between nursing stations and the Front Office without the need for messengers or tied up telephone lines.

Each evening the computer prints a Census Report and a Memo to the Front Office. The census report lists the capacity of each floor and the number of occupied beds. The Memo to the Front Office gives a summary of all patients admitted, transferred or discharged during the day. These computer-produced summaries will replace similar reports which were previously made by hand.

Mrs. Janet Monroe, a nurse, has been in charge of training personnel to operate the terminals. A minimal amount of training is necessary, since the computer recognizes mistakes and responds with a description of the correct form of input.

The computer system was deemed necessary because the hospital must keep track of a tremendous amount of information about patients. In small communities, hospitals can keep track of patients using uncomplicated record keeping. In a large, urban community, however, manual systems become overly complicated, confusing and inaccurate. Since the major function of a computer is to catalog and rearrange large quantities of information, it is ideally suited to the record keeping problems created by an urban environment. The computer can take over the tedious tasks and free people to do more creative work.

The computer, however, is not without problems of its own. Since it is a tool to be used by the staff, it is only functional if it provides the information needed by the user with a minimum of effort. Although people have ideas of how they would like a system to react and what they want it to do, many ideas are developed only after using the system.

"If people realized the potential of this computer, they would ask more questions about it and would thus be able to get more out of it—not only by exploring its present capabilities but by suggesting new ones," said Dr. Burton Grebin, Chief Pediatric Resident here from July 1969 to June 1970 and presently Fellow in Clinical Nephrology.

In order to build an optimum system, then, changes must be continually suggested and implemented. This, combined with the fact that certain problems always develop in new machines, makes communication between users and the Medical Data Processing staff imperative.

As personnel learn to depend on the computer, the hospital must also deal with the problem of what to do when it is not functioning. Just as malfunctioning telephones are currently a considerable nuisance, so the failure of a computer could become an equivalent problem.

One of the positive side effects of installing a computer system is that analysis is necessary to understand the needs of the hospital. Even if computers are not installed, people are forced to think about what they are doing and whether they are using the most efficient method.

Thus, the potential of the computer system, in the view of Dr. Gilbert W. Mellin, Acting Director of Pediatric Service, "could be to give us an overall view of how our hospital is being used and to show areas where its utilization could be improved."

The use of computers cannot be regarded as the single solution to all the problems faced by large, urban hospitals. Efficient usage of staff and facilities, combined with a real desire to help the patient, will eventually provide optimal health care. However, computers provide powerful tools to help the staff in their efforts to improve the hospital.

## Winners of Student Research Competition

This year's winners of the Student Research Competition, presented at the Dean's Meeting for the Presentation of Student Research, were: Matthew J. Guy, for "Functional Asymmetry of Sugar Carriers in Human Erythrocytes"; I. Craig Henderson, for "Fall in Liver DNA Polymerase Activity in Cortisone Treated Rats"; Geoffrey P. Redmond, "Induction of Liver Aldehyde Dehydrogenase: Possible Role in Ethanol-Tolerance after Exposure to Barbiturates"; George G. Spellman, Jr., for "Anticoagulant Activity of Dog Hookworm"; and Andrew W. Zimmerman, for "Detection and Separation of Fetal Lymphocytes in Maternal Gestational Blood."

## United Fund \$\$ Are Well Spent

The administrative budget of the United Fund of Greater New York was among the lowest in the country last year. Of each dollar contributed to the Fund, ninety cents went to hospitals and other humanitarian services supported by it.

## - the lament of a record player -

I am a three-speed record player, red-and-cream in hue. Two months ago I was happily playing tunes for patients in Neuro-3 East. Then a red-haired man who said he was a doctor borrowed me and took my records, too. Now I sadly wait for someone to take me back. I guess the patients, too, are sad, for they miss their favorite tunes. Could someone please leave me somewhere and dial 3358 to let my friends know where I am?

# Additional Duties for Mr. Kerst

Richard N. Kerst, Assistant Vice President and Assistant Secretary Treasurer of Presbyterian Hospital, has been elected to two key hospital-management positions on metropolitan and state levels.

On May 19, Mr. Kerst's fellow hospital administrators in the House of Delegates of the New York State Hospital Association elected him to the association's Board of Trustees. A policy-making body, the board guides the association's efforts to help member hospitals through improved financing and legislation, in addition to many educational and other activities. The board, to which Mr. Kerst was elected for a three-year period, meets four times a year and in special sessions. The association represents 311 hospitals with a total of more than 82,000 beds. It is governed by 65 members of the House of Delegates, elected for two years by nine regional organizations, including the Greater New York Hospital Association.

In an earlier election, Mr. Kerst was chosen to serve as Treasurer of the Greater New

Richard N. Kerst

York Hospital Association at its annual membership meeting. He has been a member of its Board of Governors for four years. The association represents 121 of the metropolitan area's non-profit and municipal hospitals and nursing homes, with a total of almost 51,000 beds.

Mr. Kerst joined the hospital as assistant comptroller a quarter of a century ago. He was appointed comptroller four years later and became an assistant vice president in 1953.

# Grandma Has A Way With Cards

Mrs. B. DeWitt Bleecker seems to hold a good hand at the 12th annual benefit card party. Or is she bluffing?

The 12th annual benefit card party for the Student Nurses Scholarship Fund, held in Maxwell Hall on April 22, was a very successful venture. Approximately \$13,500 was earned for the fund.

One of the honorary sponsors of this year's party, Mrs. B. DeWitt Bleecker, is affectionately referred to as the "grandma" of these benefit card parties.

In 1958, Mrs. Bleecker, whose daughter, Mary DeWitt Bleecker (now Mrs. Richard deL. Simmons) was then a student nurse, proposed the idea of starting a bridge party benefit to create a scholarship fund for young women who could not otherwise go into training.

Mrs. Bleecker recalled, "I gathered together a committee—a splendid one—and we were on our way."

The first honorary chairman, in 1958, was Mrs. Dwight D. Eisenhower.

Through the years these affairs have grown in popularity and have tremendously benefited the scholarship fund.

Officers of this year's bridge

were Mrs. Alfred Steiner, chairman; Mrs. Robert H. E. Elliott, Jr., vice-chairman; Mrs. Russell N. Carhart, recording secretary; Mrs. Arthur L. B. Richardson, corresponding secretary; Mrs. Stanley M. Bysshe, treasurer. Honorary chairman was Mrs. Cyrus R. Vance.

Lucky ticket holders of the fabulous array of prizes for 1970 were: Mrs. John Schullinger, trip to Bermuda for two; Lucille McKevitt, G.E. portable color TV; Kitty C. Hart, broadtail jacket with mink collar; Astrid Kaaling (Blood Bank), \$100 Lord & Taylor gift certificate; Don Sichler (Clinical Chemistry), Persian lamb shim; Paula DomDomek, Steuben glass bud vase; Lucille Manning, (night director, nursing), cassette tape recorder; K. Geraghty (Harkness Pavilion), Lark men's luggage; Rena Levy, black cross mink capelet; Wanda H. Piekarski, Loungee robe; Mildred Levenberg, electric blanket; Ethel Fields, Salton hot tray; and J. Carney (nursing student), G.E. portable hair dryer.

# Professor's Idea and Initiative Open a New Scientific Area

Because a dentistry professor faced a basic fact of human existence, a major symposium will take place here next fall.

The professor, Dr. Austin H. Kutscher of the School of Dental and Oral Surgery, found himself hospitalized following an operation in March 1966, a few weeks after the passing of his wife Helene from cancer.

In the silence of his hospital room, Dr. Kutscher tried to understand the meaning of life and accept the fact of human mortality. He sought the writings of specialists to help him recover from his grief. Dr. Kutscher found numerous isolated articles and some books for professional counselors, but discovered to his astonishment that the whole area of bereavement had not been covered in any systematic way.

Dr. Austin H. Kutscher

An editor as well as a scientist, Dr. Kutscher saw the need for a volume that would deal with the gamut of emotional and practical problems arising from human mortality and bereavement. Having edited three multicontributor scientific textbooks, Dr. Kutscher, who is an Associate Professor in the Division of Stomatology, DOS, naturally thought of a collective approach for the volume that was taking shape in his mind. Because of the many kinds of specialists involved in this area, the book, he thought, would also have to be multidisciplinary.

The coincidence of Dr. Kutscher's hospitalization and of his bereavement was important to the genesis of the book and to the subsequent birth of a new organization. His confinement to a bed in P.H. enabled his colleagues to visit him frequently and to console him with bits of philosophy and professional insights.

As Dr. Kutscher analyzed his grief and discussed the book idea with his friends and associates, a seed was sown in that room in P.H. that was to outgrow the confines of a one-shot publishing venture and develop later that year into a national service organization to help the bereaved.

"The outline for the book emerged from my own reflections, recorded minute by minute, day by day, and from conversations with my colleagues," he recalled.

Dr. Kutscher's idea to compile a definitive volume on bereavement found an intellectually stimulating reception at the Medical Center. The Reverend Robert B. Reeves, Jr., Chaplain of the Presbyterian Hospital, offered his encouragement and support, and Dr. Lawrence C. Kolb, Chairman of the Department of Psychiatry, P&S, gave departmental sanction for the cooperation of his staff members in Dr. Kutscher's project. He also suggested a number of experts outside the medical center as possible contributors to the volume.

Even as he was revising the outline for the book, Dr. Kutscher began to solicit writers who could discuss bereavement from various points of view. Thanks to the assistance of Dr. Kolb and Chaplain Reeves, among others, he soon had a listing of more than 100 writers. As contributions from the many experts were coming in, he soon saw that the material lent itself to a natural division into two books—one for the layman and the other with a more academic orientation.

The absorbing work of planning and writing these volumes cemented a close professional relationship between Dr. Kutscher and three members of the Department of Psychiatry who had been most helpful to him in his hours of despair following the loss of his young wife. The three members were Dr. Arthur C. Carr, Associate Professor (Medical Psychology); Dr. David Peretz, Associate; and Dr. Bernard Schoenberg, Assistant Professor.

In the months of progress on the books, it became clear to Dr. Kutscher, his second wife, Lillian (a widow herself), and to his three associates that there was a great need for a national organization to stimulate and coordinate research and practical programs on human mortality and the management of grief.

"It seemed to us that a well-coordinated, humanistic approach was needed to serve professionals and the laity as they treated and lived with this emotion-laden aspect of human existence," Dr. Kutscher said.

The four doctors conceived of a new nonprofit, educational organization, The Foundation of Thanatology, to promote scientific and humanistic inquiry into death, loss, grief, bereavement and recovery from bereavement. The Foundation would develop educational and publications programs to pass on the benefits

of its studies to the laity and to workers in the fields of the health professions, theology, psychology, the social sciences and other fields.

The seed that began to sprout on a patient floor in the Presbyterian Hospital is now a tree about to grow a crown. The Foundation recently announced a most important event in its brief history: a two-day multidisciplinary symposium on the "Psychosocial Aspects of Terminal Care," to be held at Maxwell Hall on November 6 and 7 of this year with 175 active participants. The book which will result from this symposium is to be published by Columbia University Press.

Plans for a number of additional symposia to be held over the next three years have also been largely completed.

The Foundation of Thanatology was incorporated in New York City in 1968 and thereafter was granted tax exempt status. Those Columbia-Presbyterian Medical Center psychiatrists, surgeons, internists and chaplains who had contributed to the two books were invited to join the Foundation Board.

A listing of Medical Center's professional staff named either to the Editorial Board of the Foundation's two periodicals or to its Professional Advisory Board is an impressive one and includes Drs. Kolb, Schoenberg, Carr, Kutscher, Peretz, Chaplain Reeves, Miss Helen Pettit, Thomas P. Fleming, and Drs. Viola W. Bernard, John Buchanan, James P. Cattell, Ann Earle, Shervert H. Frazier, Ivan K. Goldberg, Gurston Golden, Frederic Herter, Howard Hunt, George A. Hyman, Walter R. Kessler, Leon Lefer, Martin I. Lifschitz, Sidney Malitz, Lester C. Mark, Alfred H. Markowitz, Robert Michels, Melvin L. Moss, Winfred Overholser, Jr., Arnold G. Simmel, Jerome Steiner, Richard J. Stock, Robert Thompson, Patricia Tretter, Sarah Sheets and Elizabeth Prichard.

As befits the organization's national scope, its administrative and advisory bodies are represented by experts from many parts of the country, such as the District of Columbia, Connecticut, California, Florida, Illinois, Kansas, Massachusetts, Michigan, Missouri, Minnesota, New Mexico, Ohio and Pennsylvania. Three foreign countries are represented on the Professional Advisory Board as well, Australia, France and Wales.

Since thanatology is a science involving not only medical and psychological but also social and religious aspects, specialists from many diverse disciplines — documentation and nursing, education and philosophy, humanities and

theology, statistics and radiotherapy—can be found working together as board members of the Foundation.

"We hope, in addition, to have the active participation of more anthropologists, economists, geriatricians, guidance counselors, legal advisers and psychopharmacologists," Dr. Kutscher said.

The two books that started it all were finally published last year. One of the two, brought out by Frederick Fell under the title *But Not To Lose*, deals with approaches to the many problems of the bereaved. *Death and Bereavement*, published by C. C. Thomas Company, deals with similar topics but has a more academic slant. Both volumes will appear in Braille under the auspices of The Library of Congress. Articles in the two books and in other publications will be excerpted for distribution as tape recordings to the lay public.

*Loss and Grief: Psychological Management in Medical Practice*, a professional book to be published next month, is to serve as a textbook for students and practitioners in the health professions. Edited by Drs. Schoenberg, Carr, Peretz and Kutscher, it will be published by Columbia University Press.

"The royalties from the sale of these books and other materials will help us finance our research activities," according to Dr. Kutscher. The other sources of income are contributions and bequests, annual membership dues and sub-

scriptions to the Foundation's periodicals, the quarterly Archives of the Foundation of Thanatology, the bimonthly Journal of Thanatology, and Bereavement, a publication for the laity.

The Foundation's publishing program is even more ambitious for the future. More than 15 volumes are being prepared for publication by the Columbia University Press, Health Sciences Publishing Corporation, and by other publishers.

The Foundation's educational and research activities at present include, among others, studies dealing with anticipatory grief, surveys of what is being taught about grief and bereavement in medical, dental, nursing and divinity schools, as well as in internship and residency training programs. Another group of surveys being planned will study how thanatological subjects are treated in newspapers and other mass media. Still other research projects are evaluating the effectiveness of psychopharmacologic drugs from the viewpoint of thanatology and are investigating the responses of physicians, psychiatrists and clergymen to grief and the recovery from grief by the bereaved.

Any readers of *The Stethoscope* wishing further information about the Foundation and its activities should address their inquiries to Dr. Austin Kutscher at the Foundation of Thanatology, 630 West 168th Street, New York, New York, 10032.

## Chaplain Training Program in Full Swing

A quip from Alfred Beck of Lutheran School of Theology in Chicago (seated, right) draws smiles from Chaplain Robert B. Reeves, Jr., and from fellow trainees (standing, from left) Victor Hunter, Union Theological Seminary; Phillips Kerr and Jerre Feagin; and from Gregory Richards (seated, center). The last-named three are students at the General Theological Seminary, N.Y.C.

Five theological students are serving P.H. ward patients of Protestant faith as full-time but temporary chaplains under the supervision of Chaplain Robert B. Reeves, Jr.

The five, Messrs. Alfred Beck, Jerre Feagin, Victor Hunter, Phillips Kerr, and Gregory Richards, are participants in the 12-week chaplaincy training program being conducted here under the auspices

of the Association for Clinical Pastoral Education, the national body that accredits hospitals as training grounds on behalf of theological schools.

As part of their ministry, the five students confer with doctors, nurses and patients' relatives, and take part in conferences and seminars related to patient care. The program will end August 21.

# Stethoscopia

## • ENGAGEMENTS

Doreen Sachs, medical technician, PH hematology laboratory, is engaged to Louis Kramer. Mr. Kramer is a medical student at the New Jersey College of Medicine and Dentistry.

## • MARRIAGES

Eve Polak, technician in Neurology laboratory, was married to Mr. James Spinelli on June 14. Mr. Spinelli was formerly a laboratory technician in Vanderbilt Clinic.

Mary Anne Giese, head nurse in Vanderbilt Clinic, was married to Mr. Frederick Baldus on May 23.

## • BIRTHS

Mr. & Mrs. Wilfred Fung became the parents of their first child, a son, Kenneth, on May 27. Mrs. Fung, a research assistant in Dr. Elliott Osserman's laboratory in Delafield Hospital, is currently on a maternity leave of absence.

## • FAREWELL TO:

Joy Sperry of the Neurological Institute hematology laboratory.

William Hertelendy, supervisor of Harkness laboratory. Mr. Hertelendy has accepted an administrative position at the Brooklyn Jewish Hospital.

Jack Patch, who resigned to accept an administrative position at the Hospital for Special Surgery in New York City.

## • CONGRATULATIONS TO:

Donald Jennings, who has been promoted to Dining Rooms supervisor.

Eddie L. Brown, who has been promoted to assistant supervisor; Mose McNeill, who has been promoted to supervisor; Roosevelt Brown and Rufus Phelps, who have been promoted to head porters in the Housekeeping Department.

## • NOTES OF INTEREST:

Charles Lubrecht was named outstanding president in the state, Anchorage Chapter of the Alaska Jaycees at the State Jaycee Convention in Fairbanks recently. He was also elected second national director of the Alaska State Jaycees, Inc. Mr. Lubrecht is the son of Mrs. Anne Lubrecht, Office of Public Interest.

## In Memoriam

### Dr. William Savoy

Dr. William J. Savoy, 62, one of the nation's pioneer oral surgeons, long associated with Columbia-Presbyterian Medical Center, died June 10 in Boca Raton, Florida.

Dr. Savoy, Attending Oral Surgeon at The Presbyterian Hospital and Professor and former Director of the Division of Oral Surgery at Columbia University's School of Dental and Oral Surgery, was a co-founder of the Maxillo-Facial Surgery Unit at Presbyterian Hospital, where many modern techniques in oral surgery were developed. In addition to his teaching activities, he carried on a private practice at the Medical Center; many of his patients were members of the professional and administrative staffs.

Dr. Savoy graduated from Manhattan College in 1931, and received the D.D.S. degree from Columbia's School of Dental and Oral Surgery in 1935, following which he served a dental internship at Presbyterian Hospital. Starting as clinical assistant in Oral Surgery, he rose to head the section. In 1942, he went overseas with The Presbyterian Hospital unit, which became the U. S. Army's 2nd General Hospital; he headed

the dental section and was discharged with the rank of Major.

Dr. Louis J. Loscalzo, a former student and now Clinical Professor of Oral Surgery, summed up the feelings of the Medical Center's professional staff: "Dr. Savoy was a very competent oral surgeon whose warmth and unaffected ways contributed much to postgraduate clinical education. His quiet, unassuming manner inspired the type of confidence required in a complex outpatient oral surgery clinic."

Dr. Savoy is survived by his wife, Mary; two sons, William, Jr., and Dennis; a daughter, Suzanne, who will graduate from Columbia University's School of Nursing in August; and a brother, Marius, who resides in Florida.

### Dr. Henry Marks

Dr. Henry E. Marks, associate emeritus in medicine, P&S, died on May 31. He was 79 years of age and lived at 145 East 84 Street.

Dr. Marks attended the University of Rochester and received his M.D. from Syracuse University in 1915.

Surviving are his widow, Dorothy; a daughter, Mrs. John R. Loeb; a brother, Donald, and two grandchildren.

## DOINGS OF DOCTORS

DR. RONALD L. KATZ, Associate Professor of Anesthesiology, P&S, has been appointed to the Anesthesiology Training Committee of the National Institute of General Medical Sciences. This committee advises the Institute on research and clinical training programs pertaining to the specialty.

DR. ANTHONY DONN, Assistant Professor of Clinical Ophthalmology, P&S, spoke on *Physiology of Contact Lenses* before the Section on Ophthalmology at the New York Academy of Medicine, April 27.

At the Proceedings of the XXI International Congress of Ophthalmology in Mexico City in March, DR. HERNANDO CARDONA, Assistant Professor of Ophthalmology, P&S, presented a paper on *Brief Review of Prosthokeratoplasty Thickness*.

At this same meeting Dr. Cardona's exhibits on *Keratoprosthesis Techniques (Nut and Bolt)*, received first honorable mention.

DR. R. LINSY FARRIS, Assistant in Ophthalmology, P&S, also attended the meeting in Mexico City. He presented *The Tear Flow Dynamics in Normal and Keratoconjunctivitis Sicca Cases* on behalf of himself and Drs. Saiichi Mishima and Zen-Ichi Kubota. Drs. Mishima and Kubota are former members of the Department of Ophthalmology who have now returned to Japan.

DR. ARTHUR G. DEVOE, Professor and Chairman, Department of Ophthalmology, lectured on *Marginal Dystrophies of the Cornea* at the 43rd Annual Clinical Conference of the New York Eye and Ear Infirmary, held at the Biltmore Hotel, May 7.

DR. H. B. VAN DYKE, Hosack Professor Emeritus of Pharmacology, P&S, has been awarded the Dale Medal for 1970 by the Society for Endocrinology. This is the highest honor of the Society and was presented to Dr. Van Dyke at the Annual Meeting of the Society in London, May 21. At the meeting, Dr. Van Dyke delivered the Sir Henry Dale Lecture for 1970. His paper was entitled *Studies in Neurohypophysial Endocrinology*.

DR. SHELDON ZIMBERG, Director, Harlem Hospital Alcoholism Unit and Instructor in Psychiatry, P&S, spoke on *Socio-Psychiatric Treatment of Alcoholism in an Urban Ghetto*, at the American Orthopsychiatric Association meeting in San Francisco, March 26. Co-authors of the paper were Dr. Elizabeth B. Davis, Director, Department of Psychiatry, Harlem Hospital Center, and Henry Lipscomb, M.S.W., Clinical Coordinator, Harlem Hospital Alcoholism Unit.

DR. HOWARD C. TAYLOR, JR., Director, International Institute for the Study of Human Reproduction, P&S, moderated a panel on *Family Planning and the Population Explosion* at the 4th Tokyo/New York Medical Congress at the Hotel Americana on May 11. Other P&S faculty who participated as members of the panel were: DR. ELIZABETH B. CONNELL, Director of Research and Development, Family Planning Services, International Institute for the Study of Human Reproduction, who spoke on *Contraception*, and DR. ROBERT E. HALL, Associate Professor of Clinical Obstetrics & Gynecology, who spoke on *Abortion*.

DR. GEORGE F. CRICKLAIR, Professor of Clinical Surgery, P&S, and Director of Plastic

Surgery, recently was first visiting professor on the Plastic Surgery Service at Walter Reed General Hospital, Washington, D. C.

He also lectured at the Evangelismo Hospital in Athens, Greece, and, on official business, conferred with plastic surgeons in Iran concerning the establishment of the Queen's Hospital for plastic surgery. His host for this series of meetings in Teheran was Dr. Cyrus Ossanlou.

DR. CRICKLAIR attended the meeting of the American Board of Plastic Surgery in Denver and participated in the examinations of the Board at the University of Colorado. He also attended the meeting of the American Association of Plastic Surgeons in Colorado Springs and attended the meeting of the chiefs of training services in plastic surgery, held in Indianapolis, Indiana. The chiefs of services or their representatives from all the plastic surgery training centers in the United States were present for this meeting, which was held under the auspices of the American Association of Plastic Surgeons. While in Indianapolis, he also attended the Plastic Surgery Research Council meeting. His travels concluded with a lecture to the Ohio State Medical Society on *The Causative Factors and Therapy of Chronic Sores, Specifically Decubitus Ulcers and Chronic Leg Ulcers*.

DR. GURSTON D. GOLDIN, Associate Attending Psychiatrist, V.C., has been appointed by Mayor John Lindsay to the Advisory Board of the New York City Department of Mental Health and Mental Retardation Services. Dr. Goldin is the only psychiatrist on the nine-man statutory Board. He was recently sworn in by Mayor Lindsay at a City Hall ceremony.

DR. ANDREW DEROETH, JR., Assistant Professor of Clinical Ophthalmology, P&S, lectured on *Surgery for Chronic Simple Glaucoma* at the eastern sectional meeting of the American College of Surgeons, Washington, D. C. March 17.

Dr. deRoeth also presented a lecture entitled *Cryoextraction of Cataracts in Glaucomatous Eyes* at the annual meeting of the American Ophthalmological Society in Hot Springs, Va., May 28.

Dr. Andrew deRoeth

Dr. Daniel Baker

DR. DANIEL C. BAKER, JR., Professor and Chairman, Department of Otolaryngology, was guest speaker at the West Virginia Academy of Ophthalmology and Otolaryngology. He presented two papers, *Management of Severe Polyposis of the Nose and Paranasal Sinuses and Benign Tumors of the Pharynx, Larynx and Trachea*, at the Academy's meeting in White Sulphur Springs, West Virginia, April 16.

Dr. Baker was also elected to the Council of the American Laryngological, Rhinological and Otolological Society at the annual meeting recently held in Hollywood, Florida.

## Quints Get PH Godparents

On June 28, Presbyterian's famous five—the Kienast quintuplets: Amy, Abigail, William Gordon, Jr., Sara and Edward—were baptized at the Church of Saint John on the Mountain, Bernardsville, New Jersey.

Dr. Stanley James, Attending Pediatrician, BH, who cared for the quintuplets from the time of their birth on February 24 until their discharge on April 27, became godfather to the boys, William and Edward.

Lucy Blatty, staff nurse in the neonatal intensive care unit, became godmother to Amy, the first-born.

Mrs. Margaret Kienast,

mother of the quintuplets, said, "This was inevitable. I didn't expect to find Amy in her crib on the day we came to take our babies home. Lucy's devotion to her was steadfast and I surely expected to find that she had been 'kidnapped.'"

Dr. James revealed that, quite remarkably, the babies' personalities have remained exactly as he described them shortly after their birth. Amy is the most wide awake and active . . . Sara is more relaxed . . . William is the sleepest of the five . . . Abigail is placid and, like William, tends to be sleepy . . . Edward is the most aggressive.

## Peters and Corcoran Promoted To Fiscal Management Posts

Mr. Norman L. Peters has been appointed Comptroller of The Presbyterian Hospital and Mr. Joseph Corcoran has been made Assistant Comptroller. The Hospital's Board of Trustees announced both appointments effective July 1.

Mr. Peters joined the Hospital staff in 1945 after completing his military service overseas as Captain in the U. S. Army field artillery.

He was graduated from Pace College, where he majored in business administration and accounting. Prior to the war he had been comptroller of the Pawling Preparatory School in Pawling, New York.

He served as accountant and assistant comptroller under Mr. Alvin J. Binkert, Mr. Richard N. Kerst and Mr. John G. McCullough during their respective assignments as comptrollers.

Mr. Peters and his wife, Vivian, have four children—

Patricia, Sharon, Norman, Jr., and Owen. There is also one grandchild. The Peters live in Nanuet, New York.

Mr. Corcoran was associated with Haskins & Sells, certified public accountants, for three years before joining the Hospital staff in 1968.

He received the B.S. in accounting from St. Peter's College in Jersey City in 1964; the M.B.A. in business administration from Pace Graduate School in 1965 and is a certified public accountant in the State of New York.

Mr. Corcoran and his wife, Judith, live in Rutherford, New Jersey.

Philip E. Reville, also assistant comptroller, is the third member of this team. Mr. Reville, who has been with the Hospital since 1964, was appointed assistant comptroller on November 1, 1969 (see *The Stethoscope*, February, 1970).

## Vanderbilt Clinic Gets \$1,000,000—Gift to be Used for Development

The late Harold Stirling Vanderbilt, long-time friend of The Presbyterian Hospital, who died on July 4, 1970, left a gift of \$1 million to Vanderbilt Clinic of the Columbia-Presbyterian Medical Center.

The provisions of Mr. Vanderbilt's will were announced early last month by Hoyt Ammidon, chairman of the board of trustees of the U. S. Trust Company of New York, and James J. Beha, senior member of the law firm of Gasser & Hayes, New York.

Mr. Vanderbilt's gift could not have come at a more opportune time. The Vanderbilt Clinic at the Medical Center, when opened in 1928, was one of the largest and most modern out-patient facilities in the nation and was staffed and equipped to serve about 600 patients a day, a number almost unheard of at that time. At present, as many as 3,000 patients are seen in a single day. That is why approximately \$35 million is being raised by the Trustees of Presbyterian Hospital to completely modernize and enlarge Vanderbilt Clinic to meet public needs. The initial phase of this, the emergency facilities, is now being carried out. Mr. Vanderbilt's gift will be used in this development program.

The Vanderbilt family, railway heirs, have made gifts to

The construction of Vanderbilt Clinic's Emergency Facilities is expected to derive a boost from Mr. Vanderbilt's generous gift.

hospitals since the 1880's when they established the Sloane Hospital for Women and the Vanderbilt Clinic. These two hospitals became a part of the Columbia-Presbyterian Medical Center when it was formed in the 1920's.

The late Mr. Vanderbilt, great-grandson of Commodore Cornelius Vanderbilt, founder of Vanderbilt University in 1873, was an internationally known sportsman, famed as the yachtsman who three times successfully defended the America's Cup. He was the inventor of contract bridge.

It was his request that the details of his will be revealed as soon as possible after his

death. He left almost \$50 million to charities, universities and hospitals. One of the largest of his gifts was forty-one million dollars to Vanderbilt University in Nashville.

In the 1880's a William H. Vanderbilt donation of half a million dollars was given to the College of Physicians and Surgeons. Later, four sons of William H., son of Cornelius Vanderbilt, gave the original \$250,000 to build the Vanderbilt Clinic in memory of their father.

When the Columbia-Presbyterian Medical Center was planned, it was understood that Vanderbilt Clinic would become a part of this complex.

## Lucy G. Moses Prizes Awarded Drs. Harter, Berl For Virus Studies, Discovery of Neurostenin

At an informal tea in the Conference Room at Neurological Institute on May 26, the Lucy G. Moses prizes in basic neurology and clinical neurology—two \$500 prizes—were awarded to Drs. Donald H. Harter and Soll Berl.

Dean H. Houston Merritt, Moses Professor Emeritus, spoke to the guests and introduced Dr. Richard L. Masland, Professor and Chairman of Neurology, who succeeds Dr. Merritt as Moses Professor.

After a brief talk, Dr. Masland turned the mike over to Mrs. Lucy G. Moses, who pre-

sented the awards to the two physicians for their outstanding contributions in neurological research.

Dr. Harter, who was born in Breslau, Germany, 37 years ago, received the B.A. degree from the University of Pennsylvania in 1953 and the M.D. from Columbia University's College of Physicians & Surgeons in 1957. He served his internship at Yale-New Haven Medical Center from 1957 to 1958.

He has been associated with the Neurological Institute since 1958. He received his training here as a resident, then, after

his military service, obtained special training in neurovirology at the Rockefeller University. He returned to the Medical Center in 1966 and now holds the rank of Associate Professor of Neurology, P&S.

The work for which he received his award deals with the visna virus—an agent which produces in sheep a disease showing many resemblances to human multiple sclerosis. It is hoped that his studies of the way in which this virus acts will lead us to an understanding of the cause of multiple sclerosis and other

## Princess Shows NBC Producer She's Still A Kid At Heart

Some of our readers may remember Princess, the goat, who was brought into the world by Dr. Stanley James, Professor of Pediatrics, P&S and Attending Pediatrician, PH. At birth she could not breathe because of a respiratory distress syndrome but Dr. James, who was doing research with the genus *Capra* at the time, succeeded in reviving her.

Dr. James was thrust into national prominence when he became attending pediatrician for the Kienast quintuplets in February, and Princess, in typical female fashion, decided that she, too, would get into the act.

Princess and her son, Prince, had their day before the television cameras when NBC producer June Reig came to the Presbyterian garden area in June to film some scenes for an upcoming Children's Theater special, called "Pets Allowed." This show, to be shown in the fall, will spotlight pets of all kinds in natural, unstaged situations, and accent the remarkable similarities exhibited between children and animals in a given

NBC producer June Reig and Dr. Ross Grey, Curator of Animal Husbandry, talk to Princess and Prince about the show.

situation. "For instance," said Miss Reig, "animals tend to react in exactly the same way as children when they are undergoing a physical examination, getting a 'shot' or taking a bath."

Princess is rewarded by Dr. Grey with a cool drink of water.

Princess and her son ham it up for the benefit of an NBC cameraman in the Presbyterian Hospital's garden.

## Urology Residents' Library Named After Dr. Meyer Melicow, "A Lover of Books"

Dr. Meyer M. Melicow, Given Foundation Professor Emeritus, who is celebrating his 50th anniversary as a P&S graduate, was the guest of honor at an Alumni Association lunch of the Squier Urological Clinic, held in Philadelphia on May 12. Fifty-one attended the lunch, scheduled

during the annual meeting of the American Urological Association.

Dr. Melicow was among Dr. Squier's first appointees to the Clinic. Although retired from practice, he is in his office in the medical school every day, engaged in educational work.

It was announced at the meeting that a fund was being established to start the "Meyer Melicow Urology Residents' Library." The library will be dedicated to Dr. Melicow, the announcement said, in recognition of his pioneering work and leadership in uropathology and because he is a lover of books and a strong believer in them as working tools for the physician.

The library will be an important part of the educational program in the Department of Urology at Columbia University.

Dr. Meyer Melicow

## The Ward Managers are Coming to PH

For some time the Nursing Service of the Presbyterian Hospital has felt that the utilization of ward managers—professional business personnel in the nursing units—would improve the delivery of patient services and contribute to raising the standards of patient care in the Medical Center.

Before making the final decision to initiate such a pilot project within the Nursing Service, Mary Windrow, director of Nursing Service, and three Hospital administrators, attended a conference on ward management programs at the University of Michigan last fall.

After extensive research and evaluation of the needs and long-term goals of such a project, an exploring committee in nursing determined the philosophy and objectives of the program. Each of the units in nursing contributed to the identification of "non-nursing functions," which became the basis for the job description of Ward Manager. The finalizing and coordination of the orientation program and the pilot study were then assumed by Mrs. Barbara Torstenson, supervisor of projects (nursing).

Four people began the orientation program in April and will develop the role of ward manager within a six-month pilot study. The four, Mrs. Dolores Dekovich, Messrs. Joseph Donegan, George Sarno and Summitt Wilson, have a wide variety of backgrounds and business experience. The qualifications for a ward manager include a college degree or its equivalent, preferably in business administration; two years of business experience, including the development of managerial and supervisory skills. In this position one must have an interest in promoting patient welfare and an ability to maintain a good working relationship with staff, ancillary department heads and administrators. The ward manager must have the ability to plan, implement and evaluate the indirect services provided to patients.

The orientation program lasted eight weeks and was divided into three parts. First was an introduction to the Medical Center and to the Nursing Service—including the physical characteristics, the nature of the organization and seminars on leadership. There were also periods of clinical observation, with the development of an awareness of patient care needs. The 2nd part consisted of an introduction to the ancillary service departments within the Medical Center, established to provide patient care services. The primary goal here was to develop a working knowledge of

Photographed in a discussion of ward management problems are, from left, Mrs. Dolores Dekovich, George Sarno, Mrs. Rosemary Maynard, Administrative Assistant (Nursing) at Neuro, Summitt Wilson, Martha Haber, Assistant Director of Nursing, Neuro, and Joseph Donegan.

what each service contributes to the patient care area, to learn the procedures and policies of working with them, and to acknowledge any current problems and plans for change. Most often the introduction included a tour of the department and observation of its operations.

The third part was an introduction and supervised experience in the activities of each of the personnel now to be supervised by the ward managers. These include ward clerks, floor clerks and auxiliary personnel performing indirect patient care services, such as tray room and errand aides. The classes were conducted by nursing supervisors and administrators, department heads and supervisors of the ancillary services and by Hospital administrators.

Concurrently, a program was developed to introduce and relate the concepts of ward management to all the nursing staffs involved in the pilot study areas. These groups are continuing to meet throughout the study to explore and define new activities and goals in direct patient care services (bedside nursing). This program is under the direction of the nursing staff development personnel in the units.

Mrs. Torstenson remains as the overall coordinator of the program; the line of authority for the ward managers is to the senior supervisor in the patient care unit.

The program has been established to make the ward

manager administratively responsible for the management, organization and coordination of indirect patient care services in the units. He will supervise personnel performing the clerical and receptionist duties and be responsible for ordering all supplies and equipment for the unit. He will be responsible for maintaining the unit environment according to the standards for good patient care, will communicate needs to ancillary service departments, and act as a liaison for the Nursing Service. He is responsible for the effective utilization of all levels of personnel involved in indirect patient care services, and for the management of the unit in the most economical and efficient manner possible. It is anticipated that the ward manager will work in cooperation with the medical and nursing staffs of the unit, and with the ancillary service departments and Hospital administration in performing these functions.

In the patient care units the ward manager will function at the level of the head nurse, administering all indirect services. The head nurse will reassume leadership for direct nursing care and participate in the improvement of the standards in patient care.

Mrs. Torstenson stated that the projected overall goal of the program is to have ward management in every nursing unit, with ward managers functioning in their own realm, separate from the individual nursing units.

## Presbyterian Alumni Attend Party Hosted by Dr. Humphreys at Taipei

The next time anyone tells you it's a small world you'd better believe it.

Dr. George H. Humphreys II, Valentine Mott Professor Emeritus of Surgery, P&S, recently in Taiwan on a busman's holiday as visiting professor of surgery at the National Taiwan University Medical School, and his wife hosted a party at their home to welcome Dr. Chiou-Chiang Chen back to Taiwan. Dr. Chen had spent a year as visiting Fellow in pediatric surgery at Presbyterian, working with Dr. Thomas V. Santulli, Professor of Surgery, P&S. Dr. Chen is instructor in surgery at the National Taiwan University Medical School in Taipei, Taiwan (Formosa).

Also present at the party were the following Presbyterian alumni: Major General Ching-Chang Liu, surgeon general of the Chinese army, who was visiting Fellow in surgery, 1959-1960; Dr. Tien-Yu Lin, professor and chairman, department of surgery

National Taiwan University, who was a resident in thoracic surgery from June until November 1951; Dr. Hung-Chi Lue, assistant professor of pediatrics (cardiology) at the National Taiwan University Medical School, visiting Fellow in pediatrics, 1965-1967; Dr. Kuang-Yung Hsu, assistant professor of surgery, National Taiwan University, visiting Fellow in surgery, 1962-1963; Dr. Shen-Hui Chen, instructor in pediatrics, National Taiwan University, who was assistant resident in pediatrics, 1965-1967, and Dr. Chi-Ren Hung, associate professor of surgery and chief of the cardiac surgery unit at the National Taiwan University Medical School, who was visiting Fellow in surgery here, 1963-1965.

Dr. Humphreys was in Taiwan from mid-October until June. He and Mrs. Humphreys are now in Bangkok, where he will lecture at the Siriraj and Ramatipadi Hospitals.

Dr. George Humphreys is surrounded by his guests at a party he and Mrs. Humphreys held at their home on Formosa.

*"... a source of pleasure to discover an institution which never fails in its human approach ..."*

Dear Mr. Long:

I am writing to you in an attempt to accomplish two purposes. The first, to thank you for sending me the Annual Report of the Medical Center for 1969; and the second, to ask if you would do me the favor of expressing to your board and the staff my deep appreciation for the many kindnesses that were shown me during my recent stay at the hospital.

I am the last person to be qualified in judging the technical skills of your professional staff. However, I believe the results in my particular case more than speak for themselves, and I am pleased to report that I am gaining in strength daily. But more importantly, I think that you and your board should know that there is an atmosphere of personal involvement created by the many people who constitute your staff which goes a long way toward helping the patient on the road to recovery. In this day and age when it seems to me there is far too little concern generally with the human condition, it is a source of tremendous satisfaction and pleasure to discover an entire institution which never fails in its human approach toward a medical problem.

In summing up, may I say that there was not one single employee or member of the staff with whom I came in contact who did not fully live up to the highest standards of service and understanding.

My heartfelt thanks to you and to them all.

—From A Grateful Patient

## Awards Luncheon Guests Pay Tribute To Dr. Denning For 15-Year Service

Mrs. Burton Kossoff, President, New York Chapter of the National Cystic Fibrosis Research Foundation, and national trustee, paid tribute to Dr. Carolyn R. Denning, Assistant Attending Pediatrician, BH; Assistant Professor of Pediatrics, P&S; and Director, Cystic Fibrosis and Pediatric Pulmonary Center at Babies Hospital.

In recognition of 15 years of meaningful service, Dr. Denning, who is also New York Chapter Medical Advisor, was surprised with the presentation of a plaque by her patient, Stephanie Kossoff, teenage daughter of Mr. & Mrs. Burton Kossoff. The event took place at the New York Chapter's tenth anniversary awards luncheon at El Morocco on May 26.

Witnessing the honor accorded Dr. Denning were her associates, Dr. Celia Ores, Assistant Attending Pediatrician, BH and Associate in Pediatrics, P&S; Drs. Anbukill Chetty and Puzesa Gaerlan, visiting Fellows in Pediatrics, BH, and Mrs. Nancy Bridges, secretary.

The plaque, presented on behalf of the New York Cystic Fibrosis Chapter by Miss Kossoff, senior at Nightingale-

Dr. Carolyn Denning receives plaque from a patient of hers, Stephanie Kossoff, as Mrs. Kossoff looks on.

Bamford School in New York City, reads as follows:

"Presented as a special expression of esteem and gratitude to Dr. Carolyn R. Denning for her selfless dedication over the past 15 years to the cause of children afflicted with cystic fibrosis and lung-damaging diseases. New York Chapter, National Cystic Fibrosis Research Foundation,

May, 1970."

The tenth anniversary awards luncheon was another in the series of events marking the first decade of volunteer work in the New York area on behalf of cystic fibrosis and lung-damaged children. The Chapter has given to date direct support in excess of \$16,000 to the Babies Hospital Cystic Fibrosis Center.

### Her antibodies hit the spot . . .

## Having Chicken Pox, Miss Jaehne Finds Out, Can be a Rewarding Experience at Presbyterian

Several months ago Susan Jaehne, staff nurse, HP 5, came down with chicken pox from which she recovered, and that presumably was that.

But shortly after Miss Jaehne's bout with chicken pox, an elderly diabetic patient of Dr. Kermit L. Pines, Associate Attending Physician, PH, was admitted with diabetic acidosis. While in the Hospital, the patient developed herpes zoster (an acute inflammatory disease of the cerebral ganglia and ganglia of the posterior nerve roots, caused by the virus of chicken pox, also commonly called shingles). There was no connection, however, between her herpes attack and Miss Jaehne's chicken pox, since the two ladies had never met or been in the same room.

Since the patient was being treated for another disorder with Prednisone (a drug that has the potential to cause the spread of any infectious disease), there was a real risk of spread of the herpes with a possible fatal outcome. Dr. David J. Gocke, Assistant Attending Physician, PH, of the infectious disease service, suggested the use of convalescent serum, but none was available.

Dr. Pines was discussing his patient's problem with a group of nurses, explaining how the plasma of a person who recently had chicken pox or shingles (they are caused by the same virus) can be of great help to such a patient because a person who has recovered from either of these ailments has built up antibodies. These antibodies aid in the recovery of a person afflicted with shingles.

One of the nurses mentioned that Miss Jaehne had recently recovered from chicken pox, and the head nurse said that immediately, "You could almost visualize the lights flashing and hear the bells ringing in Dr. Pines's mind."

Of course Miss Jaehne volunteered to give her blood and donated two units. To protect her from losing any blood cells the plasma for Dr. Pines's patient was syphoned off and the red blood cells were re-injected into Miss Jaehne's blood stream.

Prior to the transfusion Miss Jaehne was fearful of the possibility of the patient developing hepatitis, not because Miss Jaehne had had the disease, but because she surely had been exposed to it in the

Susan Jaehne

course of her work. Accordingly Dr. Gocke screened her blood for hepatitis infection. There was none. Fortunately, both Miss Jaehne and Dr. Pines's patient had Rh positive Group O blood, which made the transfusion even more effective.

Yes, the story had a happy ending. Dr. Pines's patient recovered completely from the herpes zoster and her diabetes was successfully regulated.

And Miss Jaehne had no untoward effects from the transfusion and was delighted to have been able to help a patient above and beyond the call of duty.

# Anesthesiologists Are Getting More Involved

In its previous issue, *The Stethoscope* spotlighted contributions of the Anesthesiology Service of the Presbyterian Hospital to obstetrical anesthesiology, cardiac anesthesiology, and pediatric anesthesiology. The newspaper's report on this specialty concludes with neurological anesthesiology, inhalation therapy, and the supply and maintenance division.

## Removed From The Head

In the Neurological Institute operating room on the 10th floor, the work of the anesthesiologists is something of a challenge. Here they work at a disadvantage and anesthesia is handled in an entirely different manner than in general surgery.

"The anesthesiologist in the neurological operating room," said Dr. Aaron J. Gissen, Associate Attending Anesthesiologist, P.H., "is completely removed from the head of the patient and cannot closely observe the reaction of the pupils, the color of the lips (for any cyanosis), or the status of ventilation. Any method of assessing the patient's condition during surgery must, therefore, be very dependent on monitoring devices."

On the day *Stethoscope* observed the anesthesiologist in action, the patient was undergoing repair of an artery in the brain which, like an inner tube, had a blown-out segment, or aneurysm. The surgeon had to lift the brain to reach the defective artery and clip it off with a stainless steel clip. The clip remains in place permanently. Dr. Gissen explained that this procedure was like tying off the neck of an inflated balloon.

In the accompanying photograph, Dr. Jamie J. Jovenich, assistant resident, is at the controls of the respirator, electrocardiograph and anesthesia machines, where he is con-

Dr. Ronald L. Katz at controls of recording instrument used in the VC third-floor operating rooms.

stantly listening to heart action and respirations by means of an esophageal stethoscope. Not indicated in the picture is the continuous monitoring of blood pressure by a tube in an artery and of the rate of urine formation by a catheter in the bladder.

Collaborating with Dr. Gissen in this difficult area is Dr. Richard S. Matteo, Assistant Attending Anesthesiologist, P.H. "Our job," Dr. Gissen concluded, "is to maintain normal conditions necessary for life during very extensive surgical procedures."

## Not So Temporary Area

Dr. Ronald L. Katz, Attending Anesthesiologist, P.H., together with Dr. Charles E. Wolf, Assistant Attending Anesthesiologist, P.H., supervises anesthesia in the operating rooms on the third floor of Vanderbilt Clinic. These operating rooms are frequently mistaken for an emergency facility because of their proximity to the emergency service.

Dr. Katz explained that the location was chosen as a temporary area for elective urological and plastic surgery but that the urologists and plastic surgeons found the location highly satisfactory and so the

operating rooms have continued to be "temporarily" located there for nine years. Emergency surgery is usually done on PH 18, "but of course," said Dr. Katz, "if it is a case of life or death, an emergency patient is treated here."

Dr. Katz supervises the monitoring of neuromuscular transmission and of the action of relaxant drugs during surgery, which originally started as research and has now become part of routine clinical care.

He spends 50 per cent of his time in the operating room and 50 per cent in his laboratory doing basic research in the above-mentioned areas. He is also extensively involved in research concerning cardiovascular pharmacology and in studies of the eye with researchers in ophthalmology. In addition, he is collaborating in studies related to the research and clinical aspects of myasthenia gravis, malignant hypertension, salivary physiology and Parkinson's disease.

All surgery for pheochromocytomas, an operable adrenal tumor causing hypertension, is done in these operating rooms. Managing the anesthetic for this surgery is difficult, and Dr. Katz is frequently asked to lecture on the subject.

Dr. Katz received his research training under Dr. S. C. Wang, Professor of Pharmacology, P&S, and Dr. Ngai. He was Dr. Ngai's first research Fellow in respiratory neurophysiology in 1959.

## Beyond The O.R.

With the continued emergence of the anesthesiologist as a researcher and his evolution as a highly-skilled specialist, the scope of the anesthesiologist is no longer confined to the operating room.

He is found at the patient's bedside in pre- and post-operative consultation, he spends a greater percentage of his time in the research laboratory and aids in the treatment of patients in need of special care, including cardio-respiratory resuscitation and respiratory therapy.

In 1969 the Department of

Anesthesiology assumed the responsibility for the Inhalation Therapy Service under the direction of Dr. Joannes H. Karis, Associate Attending Anesthesiologist, P.H., and Dr. Ralph A. Epstein, Assistant Attending Anesthesiologist, P.H. Such an assignment is not surprising when one realizes that during lung and heart surgery the anesthesiologist has to take control of the respiration of the patient. It was the anesthesiologists who first gained the technical skill necessary to do this and who, at a later date, developed methods to check the adequacy of these efforts. Other physicians soon realized that if artificial respiration was needed, the anesthesiologist was the expert to call upon. It is no wonder therefore that many inhalation therapy services fall under the supervision of the Department.

Dr. Joannes H. Karis, director of Inhalation Therapy Services.

Drs. Karis and Epstein are assisted by a Fellow and a resident in anesthesiology and a technical staff of 13 men. They have initiated an intensive training program in inhalation therapy, not only for the residents in anesthesiology, but for many physicians of other disciplines, as well as for medical and nursing students.

"The field of inhalation therapy is still in its infant stage," Dr. Karis stated. "One of the difficulties we have to cope with is a shortage of well-trained inhalation therapy technicians throughout the country, including this Medi-

Oxygen aide Joe Lazzopina services oxygen equipment in Babies Hospital.

cal Center. We have currently only a fractional staff but are expanding gradually. We hope in the future to establish a School of Inhalation Therapy to train this badly needed type of paramedical personnel."

The Inhalation Therapy Service maintains a close liaison with the Department of Rehabilitation and Physical Medicine. Many patients receiving inhalation therapy need chest physiotherapy, too. Mrs. Marica Rie, a physiotherapist who has gained countrywide recognition for her work in chest physiotherapy, joined the Service last year. Mrs. Rie, Margo Rosenkranz, supervisor of physical therapy in Presbyterian and Babies Hospitals, and five physical therapists provide these treatments throughout the Hospital and, in addition, spend a great deal of time in the education of students in the School of Physical Therapy.

Patients requiring artificial respiration are likely to be found in the Hospital's many intensive care units. In the near future, an intensive care unit, especially designed for surgical patients, will be opened and run as a joint effort by the Departments of Anesthesiology and Surgery. Centralization of these patients will improve their care and save time for all involved paramedical personnel and nurses.

Dr. Karis's interest is not limited to inhalation therapy. Half of his time is spent in

Dr. Jamie J. Jovenich, assistant resident, at the controls of respirator, electrocardiograph and anesthesia machines. He is listening to heart action and respirations by means of esophageal stethoscope. (Not shown in photo is constant monitoring of blood pressure by tube in artery and of rate of urine formation by catheter in bladder.)

Mrs. Marica Rie (left) and Margo Rosenkranz perform modified bronchial drainage for patient in Medical Intensive Care Unit on PH 8. A self-inflating bag is used to provide deep breaths, and vibrations are applied over the lungs to loosen bronchial secretions.

# ved In Research And Patient Care

the laboratory, in investigations of muscle-relaxant drugs used during anesthesia for most operations. Here he hopes to gain a better understanding of the action of these drugs, which perhaps in time may lead to the development of new and better muscle relaxants.

## "Well Supplied And Happy"

Last, but certainly not least, is the work done by Mr. Thaddeus Kraje and his staff. Mr. Kraje, a registered nurse, supervises supplies and maintenance for the Department of Anesthesiology. He has been with the Hospital for 22 years. His assistant, Mrs. Mary Davern, also has 22 years of employment to her credit.

Thaddeus Kraje tests fuses in fuse center.

Working with a staff of 11 aides, Mr. Kraje and Mrs. Davern have responsibility for a total of 29 anesthesia rooms in all areas of the Medical Center that must be cleaned and stocked daily and 71 pieces of anesthesia equipment to be kept clean and functioning.

Two new pieces of special equipment have recently been added: an aeration cabinet (Steri-Vac), whose automatic eight-hour cycle removes sterilant residues from material that otherwise might require up to seven days of aeration after being sterilized by ethylene oxide gas, and special gold-coated fuses and patient electrocardiogram cables invented by Arnold Lee, director

Mrs. Mary Davern places articles in aeration cabinet after removing them from gas sterilizer.

of Department of Electronics and Instrumentation at PH. These fuses blow at 40 milliamperes, thus holding back 3,000 volts from electrocardiograph machines, which would either burn or severely injure a patient.

In addition, more than 100 endotracheal tubes are washed, tested and sterilized daily; about 70 caudal sets are set up daily, and approximately 100 spinal sets are used monthly.

In the pencil and paper department, Mrs. Viola Grollmund, the office manager, has been with the Hospital for 37 years. Assisting her in her work are secretaries Mrs. Janet Schipp and Joan Hill.

"Our job," said Mr. Kraje, "is to keep over 80 attending and resident anesthesiologists well-supplied and happy."

Mrs. Lorraine Brown packs tubes before placing them in gas sterilizer.

## Medical Center

## Is People . . .

## "Attention, please . . . This is a test drill . . . Emergency Plan Number One is in effect . . ."

The emergency which occurred on the evening of May 28 was all imaginary—but highly useful. In the thick of battle, Dr. David L. Andrews revealed that some sort of disaster had occurred in the area—"Let's say that a grandstand in the Armory collapsed."

This was an Emergency Test Drill, conducted under the direction of Dr. Andrews, who is Assistant Attending Surgeon of the Orthopedic Surgery Service, PH, Assistant Professor of Clinical Orthopedic Surgery, P&S, and a member of the Executive Committee of the Faculty of Medicine, P&S.

At the beginning, persons waiting in Vanderbilt Clinic moved to one side of the Clinic Lobby to make space for the coming emergency action. This done, the speaker system carried the announcement throughout the Hospital:

"Attention, please. This is a test drill. Emergency Plan Number One is in effect. Assigned doctors take their stations. Unassigned doctors report to Admitting Emergency Clinic. This is a test drill."

A group of thirty men from Housekeeping entered and promptly moved all benches

out of the way to clear the floor. They placed fifteen stretchers to represent the fifteen victims of the disaster. As rapidly as the stretchers were tagged, the men carried out the orders of the doctors to convey them to various destinations—some to a holding area, several to Third Floor Emergency, one who was DOA, to the morgue.

The house staff and nurses had appeared in answer to the call. Present as observers were Dr. Milton R. Porter, Attending Surgeon, PH, and Professor of Clinical Surgery, P&S, who is President of the Medical Board; Dr. John V. B. Dean, Assistant Attending Physician, PH, and Assistant Professor of Clinical Medicine, P&S, who is Director of Emergency Medical Services at Vanderbilt Clinic; and others.

Some "victims" went to X-ray, others to Surgery, and one was rushed to Obstetrics. One "patient" had burns about the face and mouth, another had multiple rib fractures, still another had a spike protruding from his eye. All imaginary patients were swiftly registered by Charles McCarthy, registrar, and staff, and registration sheets were turned

## Dr. David Moore Elected President Of New York State Obstetrics Group

Dr. David Benson Moore was elected president of the New York Obstetrical Society at its annual business meeting on May 12, 1970.

Dr. Moore is Associate Clinical Professor of Obstetrics and Gynecology, P&S, Associate Attending Obstetrician and Gynecologist, PH and Assistant Visiting Gynecologist, Delafield Hospital.

## 100-Hour Veterans Cited by Director Of Volunteers at PH

The following volunteers completed their first 100 hours of service on June 30, according to Mrs. Dorothy Diamond, director of volunteers:

Mrs. Nadia Barson, Mrs. Hilde Blumenfeld, Mrs. Suzanne Dean, Letty Fawns, Michael Feldman, Mrs. Elizabeth Flagler, Irene Flynn, Ethel Goodman, Mrs. Katie Heilbronn, Thomas Henry, Mrs. Lili Kahn, Mrs. Alice Katz, Mrs. Violet Maurer, Esther Ridder, Peter Rosado, Peggy Russell, Mrs. Freda Selicoff, Mrs. Barbara Vossburgh, Mrs. John Warren, Mrs. Alice Weissman, Mrs. Catherine Williams and Albert Wolko.

over to Admitting.

(A glance at the name tags indicated that it was a bad night for people named John Poe, Joe Doaks, and Sally Jones.)

As the patients were borne to their destinations and the scene began to clear, a reporter asked Dr. Andrews whether the test drill was a success. He replied, "Right now my mind is on the flaws. We'll go over the steps tomorrow." He added, "We were fortunate that no real emergency occurred during this drill."

The event required 44 minutes, having begun at 7:42 p.m. At 8:26 the speakers announced: "The Test Drill for Emergency Plan Number One is now over."

"Each time we learn something," said the Chairman of Emergency, Dr. Stuart W. Cosgriff, Associate Attending Physician, Medical Service, PH, and Associate Professor of Clinical Medicine, P&S. "New people helped tonight. No one was asked to stay for this drill. We wanted to see what would happen when the night-time staff with all of its other diverse duties had an emergency thrust upon it."

# News of Nursing

The following persons from the Nursing Department attended the American Nursing Association convention at Miami Beach, Florida, May 3-8: Mary I. Crawford, Associate Dean of Nursing, Faculty of Medicine at Columbia University, and Director of Nursing; Helen Henry, Assistant Director of Nursing, Nursing Personnel Services; Martha Haber, Assistant Professor of Nursing and Assistant Director of Nursing at N.I.; Mrs. Carol Hardingham, Recruitment Officer; Mrs. Constance Ort, Assistant Professor, Medical/Surgical (Nursing); Gloria Gilbert, Instructor, Medical/Surgical (Nursing); Susan M. Kun, Assistant Professor, Science (Nursing); Loretta Verdisco, Assistant Professor, Orthopedics (Nursing), and student nurses Grace Te Velde and Jay Abrams.

## A New Position Created

Mrs. Barbara J. Torstenson has been appointed supervisor of Projects (Nursing), under Mary E. Windrow, Director of Nursing Service.

Mrs. Barbara Torstenson

The purpose of this newly created position is to coordinate the activities of the nursing service within the Medical Center and to represent the individual nursing units as

they relate to the nursing service. In this position Mrs. Torstenson is responsible for the planning, initiation, implementation and evaluation of selected projects to improve nursing care and nursing practice.

In April, Mrs. Torstenson's first project was to establish and coordinate an orientation program for the Ward Managers and to develop the pilot study within the Nursing Service. She is currently involved in expanding this program to all nursing units and in coordinating the steps to be taken by the units and nursing staff development.

A second project being undertaken is the establishment of a patient transportation service, centrally located, to relieve some of the duties of the patient care staffs.

Mrs. Torstenson attended Green Mountain College in Vermont and received the B.S. in nursing from Columbia University in 1965. For one and a half years she worked as a staff nurse in Harkness Pavilion. She then accepted a position in staff development under Mrs. Marion Thompson as an instructor principally in the training of auxiliary personnel. During her two years in staff development Mrs. Torstenson gained valuable experience in nursing administration and expanded her knowledge of each of the nursing care units.

In October, 1968, Mrs. Torstenson became supervisor of the Sloane Clinic and remained in this position until she accepted her new appointment. Working in the clinic with the nursing and medical staff of Sloane Hospital was a rewarding experience and it was here that she gained greater insight into hospital administration and the functions of the Nursing Service.

## Lucy G. Moses Prizes Awarded . . .

*Continued from page one*  
related diseases.

Dr. Harter currently holds a Research Career Development Award from the National Institute of Neurological Diseases and Stroke, and is principal investigator of a grant for studying cellular effects of neurotropic viruses from the same Institute.

Dr. Berl was born in New York City and received the B.S. and Ph.D. in pharmacology and chemistry from St. John's University, New York City, in 1940; the M.S. in biochemistry from the University of Wisconsin in 1943 and the M.D. from Western Reserve University, Cleveland, in 1950. He served his internship at the Long Island College Hospital (now Downstate Medical Cen-

ter of State University of New York) from 1950 to 1951.

He received medals for proficiency in analytical chemistry and scholastic achievement; scholarships for sophomore and senior years and graduated summa cum laude from St. John's University. He received the Borden Undergraduate Research Award for research done while he was a medical student.

He has been associated with Columbia University since 1954 and joined the Medical Center in 1962. He now holds the rank of Associate Professor of Neurology, P&S.

Dr. Berl was trained as a psychiatrist but became interested in the chemistry of the brain and since 1954 has been devoting his efforts to a study

of the amino acids of the brain.

These important compounds—actually the building blocks from which proteins are assembled—not only constitute elements of the brain's structure, but also appear to have a regulatory effect on its activity.

More recently, he joined the Parkinson's Disease Research Center, where the discovery of L-Dopa as a treatment for Parkinsonism has centered attention on the study of other chemicals in the brain which may affect its function.

The award to Dr. Berl is for investigations of a very fundamental nature, the immediate implications of which are still uncertain. He has discovered in the brain a previ-

## Recent Retirements From Presbyterian Hospital

### Mrs. Ann Kiernan

Mrs. Ann Kiernan, cashier, Vanderbilt Clinic, retired in April, completing three and one-half years at Presbyterian Hospital.

She enjoyed working here and accepts retirement but said she will probably seek part-time employment.

Mrs. Kiernan has three children and three grandchildren. She was born in Scotland but now lives in New York City with her husband and their daughter.

Mr. and Mrs. Kiernan hope to visit Scotland in the future.

Her son, James Kiernan, is Superintendent of Services at Presbyterian Hospital.

### Mrs. Emily Leonard

Mrs. Emily Leonard, clerk in the Edward S. Harkness Eye Institute, retired in April, completing 19 years of employment at P.H.

Mrs. Leonard spoke about

her years at the Hospital as very pleasant and happy.

She has two children and six grandchildren. One of her grandchildren is married.

There are no formal plans for retirement. "My husband and I will come and go as the spirit moves us."

Mr. and Mrs. Leonard live in Riverdale, New York.

### Mrs. Kathryn Lynch

Mrs. Kathryn Lynch, receptionist, V.C., retired in July, completing 24 years at Presbyterian Hospital.

She has worked in many different clinics but enjoyed her last assignment the most—the Sloane screening clinic, headed by Dr. Landrum B. Shettles, Assistant Attending Obstetrician and Gynecologist, P.H. This clinic has been in operation only about a year and a half and in that time over 20,000 patients—all gynecologic non-appointment patients and all new ante-partum patients—have been examined there.

During her 24 years on the job Mrs. Lynch recalls one incident that she will never forget. She was working at the information desk in the clinic when a very red-faced woman with a foreign accent appeared. Mrs. Lynch became concerned and asked the woman if she had a temperature. The woman replied, "Yes, 103 degrees, three hours ago." She immediately took the woman to a nurse. Later she asked the nurse if the woman had been admitted and was told, "No, it was her husband, at home in bed, who was the patient and he has been admitted."

"After that," said Mrs. Lynch, "I never forgot to ask everyone 'are you the patient?'"

## Most Recent Addition to Stethoscope Staff Brings Zeal and Energy to New Assignment

Mrs. Lucy Lazzopina of the Public Interest staff has recently been appointed Associate Editor of *The Stethoscope*, a position in which she utilizes her interests in writing and photography as well as the knowledge of the Medical Center she has acquired over the years.

Mrs. Lazzopina first came here as Lucy Brown, a teenager, and was employed as a secretary in Nutrition. She recalls that the Depression had caused her to take a commercial course in high school and that at that time she was forced to forget her dream of becoming a doctor or a nurse, and also to forsake a possible career in music. Her father was a professional musician, and Lucy, a student of piano since she was eight, had re-

ceived a scholarship at the Greenwich House Music School that would have led to Julliard studies. Although she loved the piano, she performed her bread-winning rhapsodies on the typewriter.

Not long after becoming adjusted to her work at the Medical Center, Lucy became Mrs. Joseph Lazzopina. Her husband was on the staff of the printing department here for many years.

When the Hospital decided to publish a newspaper and

asked for suggestions for a name, Mrs. Lazzopina was one of four persons who offered the winner, *The Stethoscope*. She served as one of its regular reporters, assigned to Doctors' Private Offices.

Lucy's employment as administrative secretary for Dr. Saul B. Gusberg, Obstetrics and Gynecology, eventually took her away from the Presbyterian Hospital. Although Dr. Gusberg continued his association with Columbia University from another location, Lucy found that she missed the Medical Center atmosphere. "I kept thinking that I must come back home," she recalls, "—back home to Presbyterian." There was the matter of her own and her husband's health, and furthermore the item of convenience. She and Joe and their son, Joey, live right across the street from a Medical Center entrance. Two years ago she made the decision to return.

This decision led to her secretaryship for Mr. Van Atta, Director of the Public Interest Department. Soon she found herself becoming involved in various phases of the production of *The Stethoscope*. There were occasions when she was needed to assist with the photography as well as with the editorial work. She purchased her own camera, and she credits photographer Elizabeth Wilcox with giving her invaluable instruction. The rest of the staff learned to count on her zeal and energy and ready skills. When the recent big story of the Kienast quintuplets came along, the New York Times used one of her photos.

She and her husband are members of the 25-Year Club.

Mrs. Lucy B. Lazzopina

ously unrecognized compound, neurostenin, which has contractile properties similar to those of a related compound found in muscle. The role of this unusual compound in the brain is still to be worked out.

Mrs. Moses and her late husband, Henry L. Moses, prominent New York City lawyer, banker and philanthropist, established the Henry L. and Lucy Moses Chair of Neurology in 1963 with a \$500,000 gift from Mrs. Moses. Dr. Merritt was the chair's first incumbent.

# Presbyterian Hospital Provides Environment For "A Summer Experience"

On June 22, a group of college students had a one-day orientation session to prepare them for a program called "Summer Experience in Occupational Therapy." This project was organized by the School of Occupational Therapy of the Faculty of Medicine at Columbia University to interest college students in a career in occupational therapy. The school offers professional education programs leading to the B.S. or M.S. degrees.

Students from 30 universities and colleges in New York, New Jersey, Massachusetts, Maryland, Michigan, Connecticut, New Hampshire and Pennsylvania attended the orientation session in the Black Building. Also meeting after the student program were supervisors of occupational therapy clinics from approximately 25 hospitals in the greater New York metropolitan area, Westchester County, New Jersey and Washington, D. C.

Concerned with the tremendous shortage of professionally educated occupational therapists, not only in New York, but all over the country, Professor Marie Louise Francis, O.T.R. (Registered Occupational Therapist), initiated the formation of a public information and recruitment program. Professor Francis is director of courses in occupational therapy at Columbia University. One part of this total effort became the Summer Experience program.

Professor Adelaide Deutsch, O.T.R., associate director of courses in occupational therapy, explained, "A large number of students enrolled in a liberal arts curriculum are not certain about exactly what type of career they wish to pursue. Many are medically oriented and some are service oriented, but they do not know where they fit in vocationally. It is precisely this type of student we recruit for our summer program."

Occupational therapy is the use of purposeful activity as treatment in rehabilitation of persons with physical or emotional disabilities. Among the tools of treatment used by the occupational therapist are creative and manual arts, activities of daily living, prevocational skills and avocational pursuits. The education of the therapist is broad, since he must be able to evaluate the patient's abilities and administer treatment directed toward psychological adjustment, physical restoration and prevocational goals. The therapist must be prepared to work together with all members of the medical team . . . he must be prepared to use treatment activities to stimulate and aid each patient to work toward the highest level of adjustment in terms of specific and real-

istic treatment goals.

Students participating in the Columbia University summer program are selected by their college faculty advisors and recommended to the Columbia program, which refers them for placement in hospitals or institutions. They work as aides, doing jobs which help free the therapists to concentrate on the treatment of patients. Thus they gain invaluable insights into occupational therapy. Some 60 per cent of those taking part in the program have, in the past, gone on to professional education in occupational therapy.

The morning session of the orientation program was launched by Professor Deutsch who spoke on "Your Work as an Occupational Therapy Aide—A Privilege and a Responsibility." She told the students what would be expected of them upon entering a professional environment. She instructed them to take special care of their appearance: "Look nice, look attractive!" This in itself may have a therapeutic effect on a person who might feel blue, being ill and confined to a hospital.

They were told to help as much as possible—to listen and to observe in order to gain insight into the total hospital environment and understanding of the profession.

Adelaide Deutsch introduces Mrs. Ilona Quest to students.

Mrs. Ilona Quest, O.T.R., was introduced and spoke on "The Role of Occupational Therapy in General Medicine and Surgery" and her experience in this area at Presbyterian.

She explained some of the differences in this type of therapy, which is aimed at the rehabilitation of the acutely ill patient—the auto accident victim, the heart attack or stroke patient—and how the approach in this area differs from that in the chronically or congenitally disabled patient.

After lunch, the meeting continued with a talk by Mrs. Hermine Plotnick, O.T.R., director of Occupational Therapy at Creedmoor State Hospital.

Mrs. Plotnick discussed the challenging and rewarding as-

pects of occupational therapy for the psychiatric patient. "There are three tools the occupational therapist has to work with," she said, "therapeutic use of self, therapeutic use of group and therapeutic use of action."

The first two tools are shared by other practitioners including social workers and psychotherapists. But it is in the engagement of the patient with action that the occupational therapist distinguishes his profession.

Through the therapeutic use of self and group, the therapist can bring a patient to a "life laboratory"—the action setting. A task can be planned to provide the therapist with information on strengths and deficits in adaptive behavior which may represent paths to rehabilitation or blocks to the process of recovery of function.

Mrs. Plotnick made reference to "sheltered employment," which allows patients who have been unable to work for many years the opportunity to experience "work hardening" in preparation for work in a competitive setting. A group of geriatric patients who begged to be included in a sheltered workshop program designed for younger patients on their way out of the hospital, unexpectedly derived tremendous therapeutic gain through this program.

The second speaker of the afternoon was Ilga Upmanis, Supervisor of Occupational Therapy at Bird S. Coler Memorial Hospital, Welfare Island.

Miss Upmanis discussed the role of the occupational therapist in pediatrics—the differences in treatment of the adult and of the child. Adults, after their illnesses or accidents, may have lost skills they already had. But the child frequently has never had any skill (depending of course on age and type of illness or accident) and must be taught from scratch.

The pediatric occupational therapist must be familiar with the normal development of a child and must frequently teach very basic skills—eating, drinking, dressing and undressing.

Miss Upmanis spoke of a relatively new area of interest in pediatric occupational therapy—perception. Perception is the process of organizing and interpreting sensations an individual receives from different stimuli. A breakdown in any of these senses can present problems. Thus, sensory input with activities involving touch, smell, taste, hearing and vision is very important in dealing with children.

Children love activity and are encouraged in a wide variety of special projects, includ-

Ilga Upmanis, supervisor of occupational therapy at the Bird S. Coler Memorial Hospital, discusses the role of the occupational therapist in pediatrics.

ing arts and crafts, gardening, participating in and presenting puppet shows, Christmas shows, summer festivals and exhibiting their art work.

The last speaker of the day was Mrs. Ann Goldberg,

Mrs. Ann Goldberg addresses students.

O.T.R., Director of Occupational Therapy at Lubin Rehabilitation Center, Albert Einstein University Hospital, who discussed the role of the occupational therapist in physical medicine and rehabilitation.

Mrs. Goldberg told of her own experiences with hemiplegics and paraplegics and one particular young male paraplegic who learned step-by-step independent self-care.

In the beginning he was flat on his back and an attendant fed him. All he had in his favor physically was shoulder, elbow and wrist-muscle function. Indomitable determination on his part, plus long-term occupational therapy and frequent encouragement by the therapist resulted in this young man going on to complete college, totally independent in a specially designed wheelchair, and finally driving a car which had been equipped to accommodate his handicaps.

Mrs. Goldberg said that his intense desire and determination to drive the car, plus her constant "of course you can do it" attitude were the motivating factor which resulted in this rewarding case history.

A film, entitled *A Way of Life*, which was shown during the orientation session, dealt with some problems patients encounter and demonstrated how they are met and resolved in occupational therapy.

The expressions on the faces of these young women during the program gave a hint that, for many of them, occupational therapy will become "their thing." Even Mrs. Deutsch looked at them a little enviously and remarked, "They make me wonder how I wound up at the teaching end when I could be back in the clinic working with patients."

## Drs. Hoehn to Reside In Denver, Colorado

Dr. Robert J. Hoehn, Assistant Attending Surgeon, PH, has resigned his post to become director of Plastic and Reconstructive Surgery at the University of Colorado in Denver.

The doctors Hoehn.

His wife, Dr. Margaret Maier Hoehn, is also resigning her post as Assistant Attending Neurologist, PH to accompany him to Denver. She will hold an appointment in the Department of Neurology at the University of Colorado and also enter part-time private practice.

The Hoehns have a 19-month-old son, Robert Anthony.

### • ENGAGEMENTS

Rosemarie Bastone of IBM Control is engaged to first class petty officer Arthur Bancroft. The wedding ceremony will be held in the Pauline A. Hartford Memorial Chapel on November 1.

Helen Ashley, medical transcriber, PH X-ray, is engaged to Michael Bruno. Mr. Bruno is with the Francis I. Dupont Company.

### • MARRIAGES

Constance Knapp, head nurse, Pediatric Clinic, V.C., was married on June 27 to Dr. John Stewart Edelen. Dr. Edelen is a resident in Medicine at PH.

Claudette McLeod, staff nurse, PH, was married to Mr. Clive Pitter, chemical research technician, on July 17.

Alfred K. Beck, of the Lutheran School of Theology in Chicago, serving as temporary chaplain at PH, was married to Joan C. Pearson of Rockford, Ill., on July 11.

Nuha Dabbeek, R.N., instructor, Columbia-Presbyterian School of Practical Nursing, was married to Mr. Raja Hababo on June 19 in St. Stephen's church, Pearl River, N. Y.

Martha Grace Welch, medical student, P&S, was married to Dr. Anthony Horan on July 11. Dr. Horan, a P&S graduate, is currently a resident in the Squier Urological Clinic. Mrs. Horan's great-grandfather Dr. Thomas B. Welch was the founder of the Welch Grape Juice Company. Her husband is descended from John Rogers, the sculptor, and from Roger Sherman, a signer of the Declaration of Independence.

### • NEW ARRIVALS

Benito Milan of Maintenance and Construction, and his wife, welcomed their third child, a son, Benito Jr., on June 19. Young Benito was born in Sloane Hospital.

Mr. and Mrs. Vincent Dolan, welcomed their first child, a son, Daniel Joseph, on April 22. Mrs. Dolan, the former Anita Sullivan, was a nurse in the Blood Bank.

### • CONGRATULATIONS TO:

Catherine A. Duffy, who worked in HP front office for over two years and left PH for a teaching position. Miss Duffy has returned to PH, and is stationed in the Edward S. Harkness Eye Institute as secretary and chief clerk to Grace M. Robles, Unit Manager.

John Lahiff, who has been promoted to Operational Supervisor, IBM. Mr. Lahiff was formerly assistant supervisor, IBM.

Mrs. Lisa Jantzen, who has been promoted from secretary, Volunteer Department, to Recreational Therapist, PH 5 (Orthopedics). Mrs. Jantzen served as a volunteer in Babies Hospital from 1967 until she joined the staff in 1968.

### • WELCOME TO:

Earline Wallace, who joined the staff in the Development Fund Office.

Georgene Gaines, who joined the staff in the Office of Public Interest.

Cynthia Moon and Mrs. Anita De Luca, who joined the staff in the Projects' Office of Maintenance and Construction. Mrs. De Luca formerly worked in the Accounting Department.

Mrs. Lisa Jantzen

John Lahiff

Georgene Gaines

### • FAREWELL TO:

Marilyn Stein, educational coordinator, Neonatal Intensive Care Nursery, BH. Miss Stein was married to Mr. Javier del Aguila, a chemist with Squibb Pharmaceuticals, on July 5.

John Vitton, technician, V.C. 2nd floor laboratory, who left on July 24.

Louise Goodman, nurse, Blood Bank.

Mrs. Gloria Torres, Blood Bank laboratory assistant, who joined her husband, a member of the Air Force, in England.

### • NOTES OF INTEREST

Priscilla Parke, supervisor, Neonatal Intensive Care Nursery, BH, and Irene Seymour, Babies Hospital social service caseworker, enjoyed a June vacation in Bermuda. For Miss Parke, this was a particularly welcome respite from the hectic atmosphere surrounding the Kienast quintuplets.

DR. DEGRAAF WOODMAN, Consultant in Otolaryngology, was elected president of the American Laryngological Association at the annual meeting in Hollywood, Florida, April 24-25.

DR. HERBERT RACKOW, Associate Professor of Anesthesiology, P&S, participated in a post-graduate seminar on pediatric anesthesia at the University of Kansas Medical School, April 13-15. His presentation was entitled *Hyperthermia or Cystic Fibrosis Hyperpyrexia*.

Dr. Rackow also demonstrated a Columbia Pediatric Circle Valve at the seminar.

DR. RONALD L. KATZ, Professor of Anesthesiology, P&S, was a visiting professor at UCLA Medical Center, April 6-10. He presented three lectures, titled *Clinical Pharmacology of Neuromuscular Transmission, Different Responses of London and New York patients to succinylcholine and D-Tubocurarine, and Medical Uses of Hypnosis*.

Dr. Katz also lectured at the Fifteenth Post-graduate Assembly in Los Angeles, April 11-12. He spoke on *New Agents in the Treatment of Shock, Mechanisms and Treatment of Cardiac Arrhythmias, Post-operative Delirium—Treatment with Narcotics, Physostigmine or Hypnosis and Cardiovascular Monitoring of Patients with an Intravascular Electromagnetic Flowmeter*.

Dr. Herbert Rackow

Dr. William Blanc

DR. WILLIAM A. BLANC, Professor of Pathology, P&S, and Director of Pathology, Babies Hospital, was an invited speaker at the John S. Fawcett Colloquium on Perinatal Biology at McGill University, Montreal Children's Hospital Research Institute, April 7. His topic was *Immunology of the Newborn*.

He was also an invited speaker at the VI World Congress held at the Americana Hotel and lectured on *Pathology and Pathogenesis of Chorioamnionitis*.

On April 20 Dr. Blanc was a guest speaker at the Hartford Medical Society, where he lectured on *Diagnostic Pediatrics and Your Pathologist*.

Dr. Blanc attended the Nassau County Pathological Society meeting on April 23 and presented a review on *Some Diagnostic Problems in Pediatric Pathology*.

DR. J. LAWRENCE POOL, Professor and Chairman, Department of Neurological Surgery, participated in a panel on *Treatment of Intracranial Aneurysms*, at the annual meeting of the American Association of Neurological Surgery (Harvey Cushing Society) held in Washington, D. C., April 21.

Dr. Pool was also co-author with DR. RICHARD A. R. FRASER, resident, neurosurgery, and DR. BENNETT STEIN, Assistant Professor of Clinical Neurosurgery, P&S, of a paper on *Cerebral Vascular Spasm: Adrenergic Blockade and Catecholamine Morphology*, delivered before the Society of Neurological Surgeons, in Boston, April 18, and before the American Association of Neurological Surgeons, in Washington, D. C., April 20.

DR. BERNARD S. MOSKOW, Associate Clinical Professor, Division of Periodontology, DOS, presented a course entitled *The Scientific Basis for Periodontal Therapy* at the First International Meeting of the Odontologic Society of La Plata, Argentina, April 24-28.

He also lectured on *Healing Potential in Periodontal Lesions* at the University of Sao Paulo School of Dentistry in Brazil, April 20.

DR. MELVIN D. YAHN, Associate Dean, Neurology, P&S, has been elected to serve on the Committee of Revision of the United States Pharmacopoeial Convention, Inc.

The function of this committee is to select those drugs deemed to be the best therapeutic agents and prepare legally enforceable standards for them.

According to a statement issued by Dr. William H. Heller, executive director of the United States Pharmacopeia, election by the elite membership of this biprofessional medicine/pharmacy organization is a noteworthy recognition of Dr. Yahn's ability and accomplishments in his field.

DR. HERNANDO CARDONA, Assistant Professor of Ophthalmology, presented a paper on *Present Status of Prosthokeratoplasty and Epikeratoplasty* at a postgraduate course on Surgery of the Cornea, at Brooklyn Eye and Ear Hospital, April 30.

He also lectured on *Prosthokeratoplasty* at the 43rd annual clinical conference of the New York Eye and Ear Infirmary, May 7.

DR. TADASU TOKUMARU, Assistant Professor of Ophthalmology, P&S, spoke on *Toxicity of Herpes Simplex Virus and its Significance in Ocular Disease* at a meeting of the American Society for Microbiology in Boston, May 5.

At the spring meeting of the Association for Research in Ophthalmology in Sarasota, Florida, May 1-5, DR. GEORGE K. SMELSER, director of eye research at P&S, was co-chairman for the special session on anatomy and pathology. Participants from the Department of Ophthalmology, and the papers they presented, included: DR. HAJIME INOMATA, *Aqueous Humor Pathways and Sites of Outflow Resistance Through the Trabecular Meshwork into the Schlemm's Canal of Cynomolgus Monkey (Macaca Iru)*; An Electron Microscopic Study; DR. JOE G. HOLLYFIELD, *Differential Growth of the Retina in Anuran Larvae*; DR. NOBUHIKO MATSUO, *Electron Microscopic Studies on the Pupillary Membrane*; DR. TAKEO IWAMOTO and DR. ARTHUR G. DEVOE, Professor and Chairman, Department of Ophthalmology, *Electron Microscope Studies on Fuch's Endothelial and Epithelial Dystrophy of the Cornea*.

At the same meeting, DR. FRANK B. HOEFLE, Assistant in Ophthalmology, P&S, gave a paper on *Effect of Intraocular Pressure on the Corneal Stroma*, and DR. ZACHARIAS DISCHE, Professor Emeritus of Biochemistry (in Ophthalmology), P&S, lectured on *Reversible Oxidation of SH Groups of a Structural Glycoprotein of the Lens Capsule*.

DR. RALPH J. VEENEMA, Professor of Clinical Urology, P&S, and Chief of Urology, Delafield Hospital, presented a paper on *Observations of Immunological Responses to Rat Bladder and Mouse Prostatic Tissue* at the annual meeting of Genito-Urinary Surgeons in Williamsburg, Virginia, May 8.

He also spoke on *Nucleic Acid in Bladder Tumors* at the annual meeting of the American Urological Association in Philadelphia, May 11.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXV, NUMBER 9

SEPTEMBER, 1970

## "Choose Excellence" Is Theme of Nurses' Graduation

Bright sunshine in a brilliant blue sky smiled down on the 99 members of the 1970 graduating class of the Department of Nursing of the Faculty of Medicine, Columbia University at The Presby-

terian Hospital, as they marched down the ramp in the garden on August 21 and took their places on the lawn in colorful red and gold chairs. Also marching in the procession were supervisors, head nurses, students in the school and members of the faculty. Parents, relatives, friends and Hospital personnel brought the total number of persons present to approximately 800.

Mary I. Crawford, R.N., Ed.D., Associate Dean (Nursing), Faculty of Medicine, Columbia University, and Director of Nursing, The Presbyterian Hospital, presided.

Following the invocation by the Reverend Robert B. Reeves, Jr., Chaplain, Dr. Crawford introduced Dr. Hildegard Peplau, R.N., Ed.D., Professor of Psychiatric Nursing, Rutgers

University, and President, American Nurses Association, who delivered the commencement address.

Dr. Peplau told the graduates that nursing is at a critical turning point. It is said nursing must choose excellence or obsolescence. Quality health care is the right of all citizens and nursing must offer excellence at all levels. She told

them also that their learning does not end when they graduate . . . nurses are expected to give good nursing care and to continue to improve the quality of this care as the years go by.

She maintained that the faculty is the advocate of the student nurse and that the nurse is the advocate of the patient. Along with her skill, the nurse

must offer competence, compassion, understanding and TLC (tender, loving care). And today's nurse must have a continuing desire to improve her nursing skills.

Nurses have said, "What can nursing do for me?" Dr. Peplau paraphrased the late President John F. Kennedy when she advised nurses to change

### Dr. Aranow Becomes Acting Director of Medicine

Dr. Henry Aranow, Jr.

Dr. Henry Aranow, Jr., has been appointed Acting Director and Acting Chairman, Department of Medicine, effective July 1.

Born in New York City, Dr. Aranow attended the Horace Mann School for Boys and received the A.B. from Harvard University (magna cum laude) in 1935. He received the M.D. from Columbia University in 1938 and the Med. Sc.D., also from Columbia, in 1944.

He served his internship at Presbyterian Hospital, 1938-1940, and was Harlow Brooks Scholar, New York Academy of Medicine, at Johns Hopkins Hospital in Baltimore, 1941-1942. That same year he returned to Presbyterian to complete his residency through 1944.

Dr. Aranow has been associated with the Medical Center since then and in 1967 was appointed Professor of Clinical Medicine, P&S, and in 1969, was appointed Attending Physician, PH.

His major research has been concerned with the study of endocrinological disease and he has contributed over 30 articles and chapters to the literature on this and related subjects.

He is a Fellow of the American Medical Association, and

### KOCH AWARD TO DR. LIEBERMAN

Dr. Seymour Lieberman

Dr. Seymour Lieberman, Professor of Biochemistry, (Obstetrics and Gynecology), P&S, has received the Endocrine Society's highest honor, the Fred Conrad Koch Award.

This prize is given annually for work of special distinction in endocrinology and consists of a medal and an honorarium of \$3,500.

*Please turn to page two*

other professional memberships include the American Thyroid Association, the Endocrine Society, the Harvey Society, and the Association for Research in Nervous and Mental Diseases.

Dr. Aranow is married to the former Doris E. Jones and is the father of four sons: Peter J., Philip T., Michael H. and Robert B. Dr. and Mrs. Aranow and their family live in Hastings-on-Hudson, N. Y.

## John G. McCullough Retires After 28 Years of Service

John G. McCullough, Comptroller of The Presbyterian Hospital, retired in June, completing a career that spanned 28 years of distinguished service.

While having actually been at the Hospital since July, 1941, Mr. McCullough officially became part of the staff in November, 1942. In the 17 months between those years, he had been working for the firm of Haskins & Sells, assigned to the Hospital in his capacity as an auditor. He began by working as an accountant and in the spring of the following year, 1943, became one of two assistants to the Comptroller, a position he held until his appointment as Comptroller in July, 1953.

During his comptrollership, Mr. McCullough saw the Hospital complex change and grow. And as medicine and science advanced and became more sophisticated, so, too, did the accounting department.

He was instrumental in the conversion from a manual op-

John G. McCullough

eration of the bookkeeping system to the latest developments in electronic data processing, which, more simply, may be described as mechanized bookkeeping.

Tireless and dedicated to his work, Mr. McCullough also had a dream. Twenty years ago he began planning for retirement—a step-by-step plan that would fulfill a life-long dream of becoming a rancher.

He acquired property in Canajoharie, New York and built a home there. The farm produces hay, although he originally intended it to become a cattle farm for Black

Angus cattle.

The McCullough home in Hillsdale, New Jersey, will be sold and he and his wife will take up permanent residence on the farm. His son has already built a home on the land and lives there with his wife and child. And he is hopeful that his daughter, recently married, will also make her home near the farm.

Norman Peters described Mr. McCullough. . . "He is not full of surprises. He is a very conservative man—conservative in dress and conservative in his attitudes. He is a good family man and has been looking forward eagerly to retirement."

Mr. Peters also said that despite many pressures, Mr. McCullough was always congenial; his staff was always 100 per cent behind him.

And, as another associate and friend said, "His winning smile and friendly manner endeared him to all who were privileged to meet and work with him."

## KOCH AWARD . . .

*Continued from page one*

The Koch award for 1970 was given to Dr. Lieberman, the youngest person ever to receive it, in recognition of his many contributions, ranging from the technical to the conceptual, in the biochemistry of steroid hormones. The outstanding innovations which have emerged from his laboratories, and the careful development of these ideas have received world-wide recognition by biochemists and biomedical researchers.

Begun in 1941, his scientific efforts have been concerned with all aspects of the biochemistry of the steroid hormones including androgen biochemistry, biochemistry of dehydroisandrosterone and its sulfate, steroid sulfates as biosynthetic intermediates, occurrence and metabolism of cholesterol sulfate, characterization of urinary metabolites of aldosterone, steroid-protein conjugates as antigens, identification of steroids isolated from human urine, studies on the biosynthetic intermediates between cholesterol and pregnenolone, studies on the metabolism of progesterone and estradiol, and methodological advances including gradient elution chromatography for the isolation of urinary 17-ketosteroids, the solvolysis of steroidal sulfates and glucuronosides, and partition chromatography for the resolution of steroid conjugates.

A citation from the Endocrine Society reads, in part, . . . "Important as his contributions are, his principal gift to the scientific community is his skill as a teacher. Since he has been at Columbia he has been the mentor of more than 50 scientists, chemists and physicians from 20 countries. Twenty-five of these men and women now hold professorial rank in the United States and abroad. A unique feature of his laboratory is that it has always welcomed endocrinologists of every possible background: organic chemists, biochemists, physiologists, internists, pediatricians and obstetricians have all contributed to the work of the laboratory and all have gained from it some of Dr. Lieberman's drive toward achievement, excellence, and the acquisition of scientific wisdom. The Endocrine Society expresses its high regard for Seymour Lieberman by presenting to him its highest honor, the Fred Conrad Koch Award."

Dr. Lieberman was born in New York City and received the B.S. from Brooklyn College in 1936, the M.S. from the University of Illinois in 1937 and the Ph.D. from Stanford University in 1941. He also did postdoctoral research at Harvard University, the University of Chicago and the University of Basel in Switzerland. He has been associated

with the Columbia-Presbyterian Medical Center since 1950. In 1952 he was the Endocrine Society's recipient of the Ernst Oppenheimer Memorial Award sponsored by Ciba Pharmaceutical Company.

Dr. Lieberman is married to the former Sandra Spar. Their son, Paul, has just completed his junior year at Harvard University and plans to go on to medical school. The Liebermans live in Flushing, New York.

## Appointment to Mrs. Gilda Gehm

Mrs. Gilda Gehm

Mrs. Gilda Gehm has been appointed Assistant Director of Nursing (Operating Room), replacing Beatrice Langmuir, who recently retired.

Mrs. Gehm received the R.N. from Stamford Hospital in Connecticut, and the B.S. and M.S. from Teachers College of Columbia University.

She joined the staff at Presbyterian in 1948, assigned to the operating room, and rose through the ranks to the position of supervisor. For eight years she held the dual position of supervisor and instructor, teaching student nurses in the operating room.

In 1969, when the School for Operating Room Technicians was conceived, Mrs. Gehm was asked to coordinate and implement this course and from then until her present appointment was the director of courses for operating room technicians.

Her 22 years of experience and her dedication to her chosen branch of nursing uniquely qualify Mrs. Gehm for this new post.

## Cancer Society's September Lectures

The American Cancer Society announces the following Scientific Program for September at the Francis Delafield Hospital, 99 Fort Washington Avenue (at 164th Street). The lectures are on Fridays, 4:00 to 5:00 p.m.

September 18—DNA and the RNA Oncogenic Viruses, Sol Spiegelman, Ph.D., Institute of Cancer Research, Columbia University College of Physicians and Surgeons.

September 25—The Role of Ribosomal Factors in Polypeptide Chain Initiation, Severo Ochoa, Ph.D., NYU School of Medicine.

## Dr. Crikelair Elected Chairman, American Board of Plastic Surgery

Dr. George F. Crikelair, Professor of Clinical Surgery at Columbia University, College of Physicians and Surgeons, and Director of the Plastic Surgery Service at the Columbia-Presbyterian Medical Center, was recently elected Chairman of the American Board of Plastic Surgery, Inc.

The American Board of Plastic Surgery consists of 18 elected members who have been previously certified by the American Board of Plastic Surgery. The members of the Board are from the United States with usually one representative from Canada. The American Board of Plastic Surgery is made up of representatives from the American College of Surgeons, the American Medical Association and several of the national surgical organizations and national plastic surgery organizations. Its purpose is to improve the standards of practice of plastic surgery and to arrange for the examinations of those who voluntarily request a certificate of their ability in the field of plastic surgery. The Board establishes qualification requirements for applicants, and confers certificates upon those

Dr. George F. Crikelair

who meet the standards and pass its examination.

Dr. Crikelair was elected to the American Board of Plastic Surgery five years ago, and as all Board members, serves a term of six years. He was elected from the American Association of Plastic Surgeons, and for the past four years has served as Secretary-Treasurer. He replaces the retiring Chairman, Dr. Joseph Murray from Peter Bent Brigham Hospital, Boston, Mass.

The newly elected Vice-chairman of the Board is Dr. Henry S. Patton from Oakland, Calif., and the new Secretary-Treasurer is Dr. Mar W. McGregor from San Francisco, Calif.

The most recent meeting of the American Board of Plastic Surgery was held at the University of Colorado in Denver, at which time 123 candidates were present for the examination.

## Capping Ceremony for Practical Nurses

In the quiet atmosphere of the Pauline A. Hartford Memorial Chapel, the 23 students of the Columbia-Presbyterian School of Practical Nursing were capped in a simple but impressive ceremony on August 20.

Following the processional, Father John Austin, visiting Chaplain, delivered the invocation.

Dr. Mary I. Crawford, Associate Dean (Nursing), Faculty of Medicine, Columbia University, and Director of Nursing, PH, welcomed the students. Miss Crawford spoke

of the solemnity of this proud moment, for the cap symbolizes their profession. She also congratulated the students on their accomplishments and said everyone was quite proud of them.

Following Miss Crawford's address, Edith Ankers, Director, Columbia-Presbyterian School of Practical Nursing, assisted by instructors Mrs. Jane Jewell and Mrs. Nuha Hababo, capped each student in a beautiful candle-lighting ceremony. The chapel lights were then dimmed and the students recited the practical nursing pledge, led by senior class president, Christine Carden. Standing in a semi-circle in front of the chapel, the newly-capped students reflected the pride and joy in their faces from the individual candles held in their hands.

After benediction by Father Austin, the candle-lit recessional concluded the ceremony.

The students who received their caps were: Mrs. Anne Bernoville, Barbara Bowe, Christine Carden, Bonnie Crossley, Jo-Ann DeSio, Mrs. Ruth Gittens, Arlene Gladu, Joyce Goudy, Marsha Green, Mrs. Seneah Hailey, Vera Key, Mrs. Ella Lucas, Mrs. Theresa Murphy, Doris Nelson, Shielah Nicholas, Lucille Petracca, Mrs. Gwendolyn Ray, Clare Samsonoff, Mrs. Patricia Saunders, Mrs. Dorothy St. Pierre, Mrs. Leonora Thomas, Mrs. Marina Valderrama and Mr. Tony Miller, who received his symbolic stripes in lieu of a cap.

A reception was held for the students and their relatives, friends and classmates in the dining room in PH-50 following the capping ceremony.

## Presbyterian Joins Emergency Network

The Presbyterian Hospital has joined the Hospital Emergency Radio Network, a city network to expedite the furnishing of medical services at a disaster site.

This network is a development of the city's Disaster Medical Plan and is the result of joint efforts on the part of the Greater New York Hospital Association, the Municipal Broadcasting System, and the New York City Health and Hospital Corporation.

Carmin G. Novis, Director of the Office of Emergency Control Board, who announced this development late in July, explained its potential usefulness: by being able to transmit information rapidly, the director at a disaster scene can control medical resources and route casualties rapidly to alerted hospitals.

Presbyterian is one of eleven hospitals which have joined the municipal hospitals in this program.

## NURSES' GRADUATION ...

Continued from page one

that question to "What can I do for nursing?"

Rabbi Marvin J. Goldfine delivered a prayer after which Dr. Crawford greeted the class and presented the awards.

The Alpha Zeta Chapter of Sigma Theta Tau, the national honor society for nursing, presented the medal of excellence to a member of the graduating

Roster of dignitaries on podium at Nurses' graduation exercises, left to right, Bernice Derby, Chaplain Robert B. Reeves, Jr., Dr. Hildegard Peplau, Dr. Mary I. Crawford, Rabbi Marvin J. Goldfine, Helen F. Pettit, Betsy Hay, President, Sigma Theta Tau, Chaplain Bernard McGorry, Mary R. Barone and Dr. Roger County.

class who best exemplified the principles of Sigma Theta Tau and the high ideals of the nursing profession. Because two groups completed the nursing program as members of the same graduating class, two awards were made—to Merle Brock and Nora Elizabeth Barrett.

Deborah Weinstein and Alice Barker Canham were awarded the Margaret Eliot Prize, given in honor of a former director of nursing by her sister, Mrs. William A. Forbes. This award is given to the senior nursing student who most nearly combines professional competence, capacity for leadership, and wholehearted compassion for patients. Two recipients were named because there were two groups finishing in the same class.

The Arlene Meyers award, given in memory of a former head nurse in the labor and delivery room by her family, and by members of the nursing and medical staffs of Sloane Hospital for Women, is awarded to a member of the graduating class who has professional competence and a sincere interest in maternity nursing. The award was

given, this year, to Maureen E. Jordan.

Presentation of certificates and pins was presided over by Helen F. Pettit, R. N., M.A., Professor of Nursing, Mary R. Barone, R.N., M.A., Assistant Professor of Nursing and Faculty Advisor for the undergraduate Senior Class and Bernice R. Derby, Assistant Professor of Nursing and Faculty Advisor for the graduate students in maternity nursing.

The following graduates received their pins from their mothers, former Presbyterian graduates: Susan Abel, (mother—Helen Thomsen, '45); Muriel Anderson, (mother—Muriel Ellis '41); Nora Barrett, (mother—Elizabeth Wallace '41); Jennie Downer, (mother—Joan LeBoeuf '46) and Ann McDonald, (mother—Aino Karna '44). Linda Clark and Ellen Dresdale received their pins from their respective fathers, Dr. Robert F. Clark and Dr. David Dresdale.

Joyce Lauretta Abrams, president, class of 1970, addressed the audience briefly. She initiated a round of applause for Dr. Roger County, a good friend of the nursing class, who was elected an honorary

Graduating nurses form an arch of arms for Miss Crawford and the faculty of nursing at the close of the graduation ceremony.

member. Dr. County was seated with the dignitaries.

Benediction by the Reverend Bernard McGorry, Chaplain, closed the presentation ceremony. The recessional formed

an honor arch for Dr. Crawford with their diplomas.

A reception was held in Maxwell Hall for the class of 1970 following the garden ceremony.

Graduating nurse Susan Abel, right, has just received her pin from her mother, Mrs. Helen Thomsen Abel, a graduate of the class of '45.

## Abortion Suite At Presbyterian

Because of early planning by the professional and administrative staffs at Presbyterian Hospital, construction of one

of the most modern and efficient Abortion Suites in the State began on the east wing of the 16th floor of P.H. on August 31st. When finished, it will provide the community with a complete abortion fa-

cility that is self-sufficient, both in staff and the necessary ancillary services.

Credit for developing the plans for the new suite is shared by the Department of Obstetrics-Gynecology, Nurs-

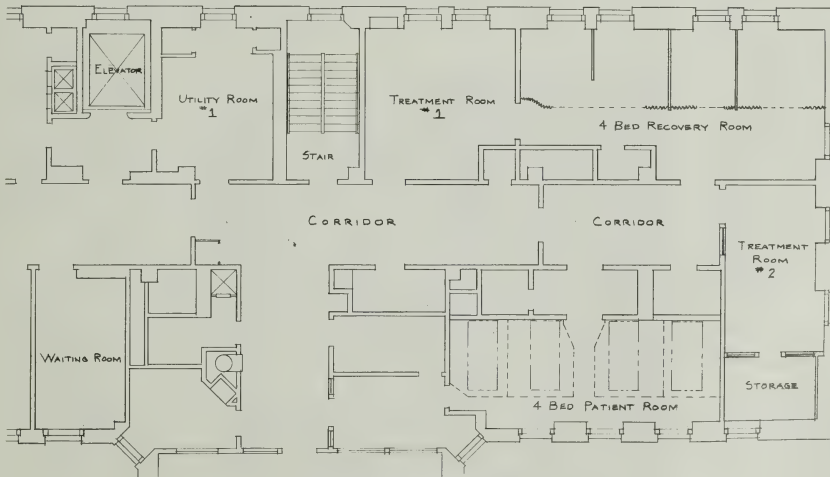

ing, Hospital Administration and the Construction Office. In March and April, when passage of the new Abortion Law seemed likely, members of this group began developing plans for allocation of space, construction, staffing, scheduling, and for the purchase of equipment. Blueprints were completed as soon as the law became effective and the specific requirements for the suite were determined. These blueprints were then sent to the

City and State agencies requiring them for approval, which was not granted until late in August. Thus, early planning is providing a complete new facility that few hospitals in the State will have in service so quickly.

The complete suite which will accommodate patients from all services will consist of a reception room, a treatment room and four beds for pre and post treatment care. Patients will come, as scheduled, to the reception room. After donning hospital clothing, each patient will be escorted to a bed which will be reserved for her during the anticipated six hour stay in the suite. When the patient is ready to go home, a friend or relative will be waiting to accompany her. If there is any medical reason for admission, beds will be available on the obstetric and gynecology service.

In addition to this suite, appropriate facilities have been provided on the second floor of Vanderbilt Clinic for preadmission, interviews, counseling, medical evaluation and scheduling. Patients eligible for treatment in this suite must be early in their pregnancy. Patients in more advanced pregnancy will be admitted as regular in-patients.

Until the new suite is completed, as many abortions as possible are being added to the Hospital's calendar of regularly scheduled operations.

The Presbyterian Hospital Abortion Suite.

A patient, after returning home from Presbyterian Hospital, wrote the following letter to Mr. A. J. Binkert, the Hospital's Executive Vice President:

"Dear Mr. Binkert, I would like to express my appreciation to the kind-hearted men and women who help your library to function so beautifully. . . . I had no visitors. I was lonely, worried and in pain. When the volunteer lady came in with the book cart, I felt like a child let loose in a candy store. There was a nice selection, including books for which we have to wait for weeks at the local public library. Instead of brooding and worrying, I was able to improve my mind, enjoy myself, and even forget my pain sometimes. For which I am sending my heartfelt thanks."

Similar expressions of appreciation have come from many patients. (See excerpts from letters in an adjoining column.) While the depth of their experience cannot be known, it may be partially guessed by the reader in considering the breadth and volume of the library's services.

Last year more than 21,000 books and magazines were circulated to patients of the several hospitals of this Medical Center by Presbyterian's Milbank Library.

Milbank Library occupies two large rooms on the 20th Floor of Presbyterian. In this lobby-like space are soft chairs, reading tables, appropriate lighting, and more than 9,000 books. There are sets of reference works, shelves of foreign language books, a number of large print books, and of course a card catalog for ready reference. Current and recent magazines are here, too—in short, it's a well balanced library for the general reader—bright, up-to-date and convenient.

Most of the users of Milbank Library are physically unable to come personally to these comfortable surroundings because they are confined to their beds in wards, semi-

private and private rooms. A few patients are able to visit, in the company of their nurses or attendants but for the most part the readers of these 9,000 books are served at their bedsides.

If you are a patient at Presbyterian, once or twice a week you will look up to see a book cart coming your way, loaded with books and magazines. If you are hungry to read, no sales talk will be needed from the manager of the cart to make its contents attractive.

If you are not in a ward or a semi-private room, but are a private patient in Harkness Pavilion, the book cart will not come to you; however, you or your nurse may telephone directly to the library and ask

Mrs. Linda McCarthy

for a specific book, or suggest the kind of book you wish, and your wishes will be answered.

The circulation of books to patients last year totaled 17,540; magazines, 3,550.

Talking books—books on record which are lent with record players—had a total circulation of 1,167 last year, of which 1,099 were for patients in the Eye Institute.

Large print books—331 in total—were circulated last year to patients whose reading required large type. Prism glasses and book racks were lent to patients whose reading was facilitated by such equipment.

Loading a cart calls for skill on the part of the librarian, who has learned the varieties of patients' tastes through experience. Choosing books, cruising through the many areas of the Medical Center, assisting patients with selections, keeping records of books lent and returned—these regular chores are a part of the work of a small library staff, assisted by 20 to 25 volunteers. "We simply could not function without the wonderful help which our volunteers give us,"

says Mrs. Flora Gordon, veteran staff member.

For the past seven months Mrs. Gordon has served as Acting Librarian, in the absence of a Librarian. Her Assistant Librarians are Mrs. Linda McCarthy and Mrs. Geraldine Arons, a summer replacement. Mrs. Gordon, who came to the Medical Center as an employee in 1959, has worked continuously for Milbank Library since 1960, and in that time has assisted three different head librarians. A new Librarian will soon be added to the staff.

The Librarian (or Acting Librarian) works under the supervision of the Women's Auxiliaries. The loyalty of the Auxiliaries in raising money and guiding the library's program is of utmost importance to successful operation. The Auxiliaries carry a substantial share of Milbank's annual expenses, and in addition to their vital financial contributions, these groups may perform innumerable special favors. For example, one notes in the Medical Center's Annual Report for 1969 that the Women's Auxiliary of the Presbyterian Hospital "provided the library with a new swivel chair, two metal tables on cushioned wheels and five special earphones to be used with the talking book program, 12 pairs of prism glasses, five small

book holders, 46 books in Spanish and 17 in Hebrew." Another example: a new book cart of modern design, a gift of Mrs. Howard Taylor, came to the library through one of the Auxiliaries.

Mrs. Howard Bruenn is praised in the above-mentioned Annual Report as a "magnificent Milbank Library chairman." She is the liaison officer of the Presbyterian Hospital Auxiliary to Milbank Library and in addition serves as a volunteer.

Each year the Auxiliaries help with the Library's two annual Book Sales—in May and in October—which are both a source of revenue and an assist in the continual reorganization of the bookshelves.

New purchases are made continually—\$1,200 to \$1,500 worth of new books annually. The appearance of new titles including books from the best seller lists gives pleasure to many readers, and from them Milbank has gained a reputation of being an exceptionally up-to-date hospital library. Occasionally the librarians will be amused by the request of an alert reader who sees the announcement of a new book in *The New York Times* in the morning and believes it will surely be on Milbank's shelves by afternoon. No, sorry, we're not quite that swift!

The foreign language section is growing slowly. Presently there are books in French, German, Italian, Greek, Latin, Hebrew, Egyptian, Chinese, Japanese, Lithuanian, Hungarian, Portuguese, and still other languages. There are many shelves of Spanish, for which there is a brisk demand. Many good foreign language books

Mrs. Flora Gordon

come as gifts from grateful patients.

On each of several floors in the Hospital there are boxes for the return of library books, and the volunteers who service them are often pleasantly surprised to find a new book, perhaps an anonymous gift.

"What can I do to show my appreciation to this library?" a patient will ask. And the answer is, "Send us any books that you are willing to part with."

Of the numerous books thus acquired, some are given permanent places on the shelves, while others find new owners through the Library's Book Sales.

Income from the two annual Book Sales runs from \$600 to \$1,000, which, translated in terms of reading benefits, means much added pleasure for the patients and others who use the library.

Members of the Hospital personnel are also patrons of Milbank. In the course of a day, several doctors, nurses and other staff members will drop in to browse for a few minutes or to lose themselves in a book for a leisure hour. Personnel of the Hospital may

## A Letter From A California Patient

To the Presbyterian Hospital:

The process of recovery is a subtle matter. There is need to make the transition from object to person. In my experience, the facility that made all the difference was the library.

I remember telephoning, without much enthusiasm, expecting a perfunctory response and a range of choice limited to best sellers or who-done-its. But the librarian who spoke with me knew books and she knew people. She asked perceptive questions. She picked up the cues of my interests and my tastes, in short order. And soon she was down with an armload of books that were a) new to me, and b) just what I needed to come alive again. This continued until I was discharged. When I was readmitted some months later, the first call I made was to the library.

I should tell you that I am a connoisseur of libraries. I know what constitutes a good collection, and I know what constitutes a high standard of service. I must compliment you on both. I wish, especially to express appreciation for the intelligence, concern, and imagination of Mrs. Flora Gordon—the "Voice of the library" for me. Her skill with patients makes her part of your healing personnel. She is a gifted emissary of that haven in your hospital: the library.

NANCY REEVES  
Los Angeles, California

# Hospital's LIBRARY

take books on loan by paying a small fee. Last year 7,668 books were circulated to staff members, and the rental charges received totaled \$1,028.

Milbank Library was opened on the 20th Floor of Presbyterian in 1945, a gift of Mr. and Mrs. Jeremiah Milbank. It was preceded by a bibliography program that dated from 1928, the year the Medical Center opened, when Mrs. Lloyd Paul Stryker, a member of the Vanderbilt Clinic Auxiliary, was given one thousand books and a cart, and told to go ahead. Her challenge was to service 9 floors—450 beds. This Patients' Library was a voluntary activity entirely until it was taken over by the Administration in 1942 and established as a regular department of the Hospital. Through the years the library service has always depended heavily upon volunteers, whether for planning and financing or for wheeling carts and mending books.

Selecting the ideal book in answer to a patient's request is a matter of pride with Milbank's librarians. When asked, "What guides your choices?" a volunteer replied, "I try to imagine that I am different patients and I think, What book would I like?"

Responding to telephone requests can be a somewhat more complex challenge. As Mrs. Gordon knows, the request may be quite vague, at first, such as, "I would like a good book." Which of the 9,000 good

Mrs. Howard Bruenn

books would fill the bill? By conversing, Mrs. Gordon catches some clues. She knows the shades of difference between "I want a good love story" and "I like a romantic novel." It helps to know something of the patient's experience, cultural background and age. She probes good-humoredly the patient's reading experience over a span of years until she perceives a helpful clue.

Mrs. Gordon herself is a voluminous reader and knows the books that she recommends. She believes that part of her facility in recommending comes from her love of people and her enjoyment in communicating with them. She speaks of certain antennae which reach out, and summarizes her approach in the following fashion:

"Confinement in a hospital generates many fears and anxieties, and escape from them, even if only fleeting, is eagerly sought. We of the library and the books we supply represent the continuing link to the outer world to which the patient seeks to return. We derive keen satisfaction from stimulating the interest and love of books and ideas. We believe in people and enjoy serving them."

Mrs. Gordon came to Milbank Library from employment at Neurological Institute. Earlier, during the World War II years, she had been active in community work in Boston: she helped to found Boston's first cooperative nursery school, with the object of releasing mothers for work in defense industries. Because of her love for books, her career at this Medical Center turned to Milbank Library where she felt completely at home. Working with volunteers, she finds, is especially rewarding.

What are some of the new developments awaited at this library? When Mrs. Gordon was asked this question, she readily described one of the advances which she foresaw for the immediate future:

"We hope to fill some shelves with a whole series of basic studies books—mathematics, English, science and others. We really want to help those members of the Hospital staff who feel the need of such studies. This could mean so much

## Excerpts From Patients' Letters To Presbyterian's Milbank Library

"Milbank Library managed to get me really interested and from then on, although I was unable to walk, I spent many days getting aboard luxury liners, wending my way through art galleries, etc., with the characters in my books."

"These Library services were offered most willingly and graciously."

"The records were an invaluable diversion."

"Thank you for a respite from anxiety provided by your library."

"Thank you for letting me keep this opera book for so many weeks."

"It is indeed a pleasure to be able to call a library, list briefly some titles I'd been reading, and then be presented with a fine assortment from which to choose—every book of which fell well within my interests..."

"Magnifico! Perfect choice for one deep in the doldrums of post-op depression."

"Cannot leave without expressing my appreciation for your service."

"I want to thank you sincerely for the many hours of pleasure afforded me, cheering my

hospital stay, by the wonderful Talking Books."

"Sr. Director o Senores: Gracias a vuestro servicio de libros en dicho Hospital, vuestra estadia en ese se hizo mas llevadera... Saludos amigos."

"I thank you for this most pleasant experience."

"With much gratitude to the Library for the hundreds of hours of escape it has given me."

"Dear Librarians: Thank you all so much for making this time of illness enriched, interesting and entertaining."

"It helps a person who is down through his most trying moments."

"Thank you so much for all your kindness. I should have never lived through this without you."

to their way of life. A staff member will rush in during her lunch hour or coffee break to bone up on some particular subject. We try to assist them. There are many staff members who need help with their English. Soon we'll have a whole reference section of this type of book for basic studies."

In the space of this article we have not been able to describe all of the various functions handled by this library. There are many telephone requests for information, some

of which put the resources of the book shelves to a test. Much might be written, too, about the effectiveness of the Talking Book Program, what it means to patients in the Eye Institute and elsewhere who do their reading through earphones, and how the wives of several doctors have lent their volunteer services to meet this challenge.

All in all, Presbyterian Hospital may well be proud of the many good works of Milbank Library.

## VOLUNTEERS ARE INDISPENSABLE

Volunteers are indispensable. Unlike many people who measure their rewards materially only, these ladies' only criteria are usefulness and service to people.

At present, as from the very beginning, the success of Milbank Library is dependent upon the help of those generous volunteers who give their hours and abilities to assist with all parts of the work.

Currently 25 volunteers are contributing their time and energies. Some of these, making regular rounds with book carts, accustom themselves to certain hospital floors and become personal friends with the patients.

Ten of these volunteers work with the patients at the Eye Institute.

Here is the present roll call of volunteers:

Mrs. Lucile Binkert, Mrs. Alice Bolan, Mrs. Dorothy Bruenn, Miss Eva Daniels, Mrs. Theresa Frazier, Mrs. Elsie Fuhring, Mrs. Alice Glacken, Mrs. Evelyn Hertz, Mrs. Margaret Jacobius, Mrs. Lucille Leroy, Mrs. Jay Maselink, Mrs. Constance Robert, Miss Dorothy Smith, Mrs. Doris Volkhardt, Mrs. Barbara Vosburgh, Mrs. Sylvia Wolf.

At the Eye Institute:

Mrs. Helena DeRoeth, Mrs. Grace Ellsworth, Mrs. Vivian Farris, Mrs. Aronell Forbes, Mrs. Miriam Jones, Mrs. Barbara Kelly, Mrs. Ellen L'Esperance, Mrs. Nancy Lennon, Mrs. Martha Merriam.

Mrs. Margaret Jacobius, one of the 25 volunteers at Milbank Library, is exceptionally versatile and ready to answer any need, whether it be book mending or translations. She gave 695 hours in 1969, the equivalent of four months of full-time work.

## SOME OF THE MANY NEW TITLES OF BOOKS ACQUIRED BY MILBANK LIBRARY RECENTLY

TITLE	AUTHOR
Black & White in American Culture	Chametzky, Jules
Code of Conduct	Arnold, Elliott
Deliverance	Dickey, James
Gandhi's Truth	Erikson, Erik H.
Great Lion of God	Caldwell, Taylor
The Kennedy Women	Buck, Pearl S.
Last Things	Snow, C. P.
The Laughing Policeman	Sjowall, Maj and Wahloo, Per
Losing Battles	Welty, Eudora
Love Story	Segal, Eric
Maigret Hesitates	Simenon, Georges
Mr. Samler's Planet	Bellow, Saul
One Morning in the War: The Tragedy at Son My	Hammer, Richard
The Secret Woman	Holt, Victoria
Sugar Ray	Robinson, Sugar Ray
Travels With My Aunt	Greene, Graham
Zelda	Milford, Nancy

And 75 new titles in Spanish.

## Dr. Margaret Murray Retires After 41 Years

Dr. Herter with Dr. Margaret Murray

On July 1, 1970, Dr. Margaret R. Murray, professor of Anatomy in the Department of Surgery, retired after an association of 41 years. She now assumes the title of Professor Emeritus.

To signify the occasion, the Department of Surgery gave a tea in Dr. Murray's honor on June 10, in the Parkinson Library of the Black Building, and an engraved silver tray was presented to her.

Dr. Murray graduated from Goucher College in 1922, Phi Beta Kappa. She received the

M.S. degree from Washington University, St. Louis, in 1924, and the Ph.D. in zoology from the University of Chicago in 1926, magna cum laude. After two years as a national research Fellow at the University of Chicago and a year as associate professor of Biology and Physiology at Florida State College, Dr. Murray came to Columbia in 1929 as an instructor and research assistant in the Department of Surgery, a post she held until 1946. She was promoted to assistant professor of Surgery in 1947, and in 1953, to associate professor of Anatomy, assigned to Surgery. Her professorship in Anatomy was granted in 1959.

Author of well over 100 scientific papers, recipient of innumerable special awards for her investigative work, and member of numerous scientific bodies, Dr. Murray has pioneered the development of tissue culture as a diagnostic and investigative tool. Her laboratory of tissue culture has become a model of its kind throughout the world.

Dr. Murray will remain active in her laboratory for at least two more years.

## Dr. Harvey, Director Surgical Follow-up, Completes 45 Years

Dr. Harold D. Harvey, Consultant in Surgery, PH, and Professor Emeritus of Clinical Surgery, since his retirement in 1959, made his final appearance in the Surgical Follow-up Clinic on June 25, ending a 45-year association with the clinic. Dr. Harvey has been the director of the Surgical Follow-up Clinic since the late Dr. Fordyce B. St. John retired in 1949.

In 1916, the late Dr. James A. Corncaden and a group of surgeons organized the Surgical Follow-up Clinic at the old Presbyterian Hospital, before it mushroomed into a Medical Center, because, in Dr. Corncaden's words, "The least a surgeon ought to know about his

Dr. Harold D. Harvey

patient is what happened to him after the operation."

Born in New York City, Dr. Harvey graduated from Princeton University in 1916, receiving the Litt.B. He received the M.D. from P&S in 1925 and served his internship and residency at PH from 1925 to 1931.

When he retired from active service in 1959, Dr. Harvey maintained a lively interest in his research and continued to come to the clinic regularly. While the Surgical Follow-up Clinic was established to maintain contact with patients who had undergone general surgery, Dr. Harvey's specific interest was in the patient recovering from gastric surgery.

He has contributed over 82 articles and chapters to the literature on this subject from 1928 through 1968.

In 1963, Dr. Harvey delivered the J. M. T. Finney Fund Lecture at the 166th annual meeting of the Medical and Chirurgical Faculty of the State of Maryland entitled "A Follow-up Study of Surgically Treated Peptic Ulcers Over 46 Years." This study was conducted on 96 percent of patients from the SFU Clinic who had undergone partial gastrectomy for peptic ulcer since 1936 and was supported by the aid of funds from the Dr. Fordyce B. St. John Special Fund.

## Dr. Wheeler Writes Eye Institute Book

The Eye Institute now has a printed history, bound in hard covers, filled with 240 pages of lively chronicles and biographical articles, attractive to anyone interested in the story of this Medical Center and the rise of ophthalmology.

The author is Dr. Maynard C. Wheeler, Consultant in Ophthalmology, Presbyterian Hospital and Clinical Professor Emeritus.

The title of the book is *The Eye Institute in New York*. (At the time it went to press, the official name of the institute, The Edward S. Harkness Eye Institute, had not yet been chosen.) How did the book happen to be written? Dr. Wheeler said, "Dr. DeVoe had the idea, and he was looking straight at me when he thought of it." Cooper Square Publishers, New York, printed the book at the direction of Dr. DeVoe, Director of the Institute.

The text covers the forty years from the opening of the Columbia-Presbyterian Medical Center in 1928, through the opening of the Institute in 1933, to the end of the year 1968. It reaches back to make contact with pre-Medical Center developments in ophthalmology: the first chair estab-

Dr. Maynard C. Wheeler

lished in Paris in 1765, the opening of the New York Eye and Ear Infirmary in 1820, the first journal in the field in the United States started by Herman Knapp in 1868.

"It is impossible to imagine the Eye Institute without Edward S. Harkness," the author wrote, and he retold a memorable story: In 1930 Mr. Harkness was handed a long list of the Medical Center's needs prepared by Dean Sage, then president of the Presbyterian Hospital; he looked over the list "and fixed his attention upon the last item—a separate eye hospital."

It was then that the idea took root. The following year Mr. Harkness pledged \$5,000,000 for construction and endowment; later he would make other supporting gifts.

Dr. Wheeler speaks of the book as a family affair. "I wrote it from that point of view." Friendly and informal, it provides an intimate glimpse of the people involved in the drama of the rapidly growing science of ophthalmology; moreover, it is well supplied with tools for any researcher's convenience—chronologies, appendices and a valuable index.

Eighty-four pages of biographies turn the spotlight upon the professors, the staff, the residents and preresident fellows, and the alumni. In gathering this material, Dr. Wheeler sent a request to each asking for a supplement to the information available in the files; most responded, some with pages of mimeographed data. The files of the library of ophthalmology were also very helpful; it was fortunate, Dr. Wheeler said, that a former librarian, Nora Lock, has been "a terrific squirrel."

He also credited several other persons with giving valuable assistance, and spoke special words of praise for Dr. Thomas Johnson's reminiscences of John M. Wheeler, the first Director of the Institute.

Dr. Wheeler is experienced at writing and editing and has at least two other books to his credit, a 347-page history, *The American Ophthalmological Society: The first hundred years*, published in 1964, and *Introduction to Ocular Motility*, just off the press.

## Dr. Conley, Chairman At Plastic Symposium

The First International Symposium on Plastic and Reconstructive Surgery of the Face and Neck was held at the Waldorf-Astoria in New York City, August 9 through 14. The General Chairman was Dr. John Conley, Attending Otolaryngologist, Presbyterian Hospital, and Clinical Professor of Otolaryngology, Columbia University's College of Physicians and Surgeons.

The Symposium, sponsored by the American Academy of Facial Plastic and Reconstructive Surgery, covered the spectrum of plastic and reconstructive surgery in the region of the face and neck, correction of congenital deformities, management of trauma, tumor surgery of the head and neck, esthetic surgery and research. It provided an opportunity for surgeon specialists to meet with more than 200 of the world's outstanding facial plastic and reconstructive surgeons for lectures, panel discussions, question-and-answer sessions and motion picture demonstrations.

In addition to Dr. Conley, two other Medical Center doctors made presentations at the program: Dr. Robert Eberle, Assistant Attending Otolaryngologist, PH, and Assistant Clinical Professor, P&S, and Dr. Robin Rankow, Associate Attending Otolaryngologist, PH, and Associate Professor of Clinical Otolaryngology, P&S.

## Three-day Course In Pediatric Pulmonary Disease

The Department of Pediatrics, College of P&S, will present a regional training course in chronic pediatric pulmonary disease, to be held in the Alumni Auditorium, P&S, September 23-25.

The course is sponsored by the National Cystic Fibrosis Research Foundation, the New York Metropolitan Regional Medical Program and the American Thoracic Society.

The three-day course will concentrate on the diagnosis and treatment of chronic respiratory diseases of infants and children and is aimed at up-dating the physician's understanding of normal and abnormal pulmonary physiology and the causation and progression of chronic lung disease in children. The ultimate goal is for improved patient care by proper and maximum utilization of modern diagnostic and therapeutic techniques. Emphasis will be placed on a rational and physiological approach to therapy. Case histories will be used to illustrate

most presentations. Lectures will be informal and participants will be encouraged to consult with the faculty on an informal basis.

The directors of the course are Dr. Carolyn R. Denning, Assistant Attending Pediatrician, BH and director of Babies Hospital Cystic Fibrosis and Pulmonary Disease Centers, Director; Dr. Martin I. Lifschitz, Assistant Attending Pediatrician, BH, Program Coordinator; and Barbara L. Neff, Secretary.

Speakers will include members of the Hospital faculty and several guest faculty.

Displays and demonstrations of special respiratory equipment and physical therapy techniques will be set up and available throughout the course.

For further information about registration for this training course, contact Dr. Carolyn R. Denning, Babies Hospital, Box 3, 3975 Broadway, New York, N. Y. 10032.

## In Memoriam

Mrs. Jewel Moberley Fiatti, administrative assistant to Dr. Edward C. Curnen, Jr., former chairman of the Department of Pediatrics, died of cancer on July 14, after a long illness. She was 54 years old and lived in Woodside, Queens.

A native of Illinois, Mrs. Fiatti received the B.S. from the University of Illinois in 1938. First employed at the Medical Center in 1959, she worked as a secretary at the

Neurological Institute until 1962, when she joined the staff of the Department of Pediatrics.

She was a diligent and faithful worker at the Hospital, where she had many devoted friends who admired her for her strong character, lively sense of humor and extraordinary courage in the face of adversity.

Mrs. Fiatti is survived by her husband, Leo.

• CONGRATULATIONS TO

Mrs. Virginia Enright, who has been promoted from receptionist, V.C., to Assistant Supervisor for evening reception services in Vanderbilt Clinic.

Joan Ahlers, who has been appointed head nurse, Rehabilitation Service, N.I.

Laura du Guay, who has been appointed head nurse, pediatric tray room.

Iris Simon, who has been appointed head nurse, PH 17 East.

Linda Moyes, who has been appointed head nurse, evenings, medical/surgical.

Gail Fick, who has been appointed assistant head nurse, cardiac intensive care unit.

Linda Hanson, who has been appointed assistant head nurse, BH 6.

Mrs. Mary La Pierre, who has been appointed assistant head nurse, pediatric surgical intensive care unit.

Mrs. Carol Dabek, who has been appointed assistant head nurse, pediatric medical intensive care unit.

Four students from the Bronx Community College—Rachel Kohn, Maria Torres, Nellie Perez and Mildred Semidei—who are working in the clinical pathology laboratories for the summer.

Hana Melamed, new technician in the laboratory on PH 8.

Mayra Moyens, laboratory assistant, and Cathy Valez, open-heart assistant, in the Blood Bank.

Rosa Leon, who joined the staff in the Volunteer Department.

Kathleen Ryaby, who has been appointed head nurse, PH, 8-west; Liberty Fontecha, who has been appointed head nurse, operating room; Joan Sellars, who has been appointed assistant head nurse, NI 6; Carol-Jo Stoskopf, who has been appointed night head nurse, BH, Edith Richardson, who has been appointed head nurse, PH 16-east and Karen Kneuss, who has been appointed night head nurse, BH.

Frederick Morris and Andre Moussignac on their promotions from porter to head porter in the Housekeeping Department.

• SPEEDY RECOVERY TO

Mrs. June Rutkowsky, open heart coordinator for the Blood Bank, who recently underwent surgery.

• CONDOLENCES TO

Mrs. Theresa Hanley, IBM Department, whose son, William, died August 14.

Mrs. Evelyn Garris, Secretary to Mr. Richard N. Kerst, Assistant Vice President and Assistant Secretary-Treasurer, PH, whose mother, Mrs. Taso Gerakaris, died August 19.

Mrs. Barbara Debowy, technician, Harkness hematology laboratory, whose father died recently in Poland.

Memorial Services for Dr. Savoy

A Memorial Service was held on Thursday afternoon, August 20, for the late Dr. William J. Savoy, Attending Oral Surgeon at The Presbyterian Hospital and Professor and former Director of the Division of Oral Surgery at Columbia University's School of Dental and Oral Surgery, who died on June 10 in Boca Raton, Florida. (See the July 1970 *Stethoscope*.)

Mr. A. J. Binkert, Executive Vice President of The Presbyterian Hospital, presented the Memorial. The service was attended by relatives of Dr. Savoy and many friends.

Computer Course, Fortran IV, Begins Sept. 21

The 13th Fortran IV Course will be given to administrative and medical personnel starting Monday, September 21.

This course, sponsored jointly by the Hospital and the Columbia University Computer Center, will cover applications of computers and principles of computing for the medical and administrative areas. Attendance at the Introduction to Computers Course is the prerequisite.

This course consists of 18 one-hour lectures and problems, held on consecutive Mondays, Wednesdays and Fridays,

September 21 through October 30.

The lectures will be held in the Armory, 168th Street entrance, on the first floor, Room 5, from 9:00 a.m. to 10:00 a.m.

Registration cards should be obtained at P.H. 4-33 and returned by September 14. The class will be limited to 50 students. The book to be used may be purchased at the Columbia University Bookstore in the Black Building.

For further information, call the office of Dr. William A. Bauman, Director, Medical Data Processing, PH 4-33, Extension 2077.

amination? at the same meeting.

At the AUA motion picture showing, Dr. Lattimer and DR. STANFORD PULRANG showed a film, *Patient Care and Understanding Taught by Simulated Patient Interview* (with immediate playback for self-criticism).

He then presented a time-lapse motion picture, *The Action of Actinomycin D on Wilm's Tumor Cells*, with DRS. J. B. PRIESTLEY, JR., M. TANNENBAUM, J. FEMINELLS, JR., J. TODD and V. LERCH.

At the AUA Scientific Session, Dr. Lattimer reviewed the following papers: *The Ileal Sleeve for the Dilated Ureter*, (DRS. CHARLES M. LYNNE, MICHAEL P. SMALL and VICTOR POLITANO); *Reconstructive Surgery of Megaloureters*, (DRS. AMBROSE P. McLAUGHLIN and WYLAND F. LEADBETTER); *Ipsilateral Ureteroureterostomy in the Management of Vesicoureteral Reflux in Duplication of Upper Urinary Tract*, (DRS. BERNARD LYTTON, ROBERT M. WEISS and ROBERT BERNEKE).

At a program of seminars for urological nurses and technicians, Dr. Lattimer and MRS. KATHERINE JETER discussed *Collection Devices for Urine*. The AUA meetings were held in Philadelphia, Pennsylvania.

DR. MYRON TANNENBAUM, Assistant Professor (Pathology), P&S, spoke on *The Ultrastructure of Wilm's Tumors* at the meeting of the Society for Pediatric Urology and at the scientific session of the AUA. Dr. Tannenbaum presented a paper, *Virus-like Particles Appear in a Previously Normal Kidney Transplanted into a Lupus Patient*, co-authored by DRS. K. HSU, J. BUDA, J. P. GRANT, JR. and Dr. Lattimer.

Scientific exhibits were as follows: *Treatment of Urologic Gram Negative Sepsis*, Dr. Grant and DR. A. M. SMITH; *American Urology*

and the Population Explosion—A Statistical Study of our Present and Future Capabilities to Supply the Urological Needs of our Nation, (by the statistical committee of the AUA with the help of Drs. Lattimer, W. L. PARRY, Priestley, Pulrang, M. WECHSLER, R. B. SCHWARTZ, J. W. DORSEY, J. T. GRAYHACK, R. R. LANDES, L. C. ROBERTS and D. B. STEARNS; *Quick Identification of and Drug Susceptibility Pattern of Urinary Pathogens*, DRS. H. SENECA and P. PEER; *Anatomy of Male Perineum and Intrapelvic Structures*, DRS. A. C. USON and S. GILVERNET (by invitation).

At the annual meeting of the Horatio Ferrer Eye Institute in Miami, Florida, in March, DR. FRANCIS L'ESPERANCE presented a paper on *Argon Laser Photocoagulation of Diabetic Retinopathy*. At the 21st International Congress of Ophthalmology in Mexico City that same month, he spoke on *Argon Laser Photocoagulation*. In April, Dr. L'Esperance addressed ophthalmology residents on *Photocoagulation Treatment of Diabetic Retinopathy* at Long Island's Meadowbrook Hospital and, in May, he spoke on *Laser Photocoagulation before the Rochester Ophthalmological Society*.

DR. RONALD L. KATZ, Professor of Anesthesiology, P&S, gave several lectures at the Midwestern Anesthesia Conference in Chicago, May 14-16. The lectures included *Mechanisms of Cardiac Arrhythmias seen During Anesthesia and Operation*, *Diuretic Induced Electrolyte Changes and their Cardiac Effects*, *Physiological Basis for Therapy of Cardiac Arrhythmias*, *Prophylactic Digitalization for Operation: To Be or Not To Be*, *Monitoring of the Circulation During Anesthesia and Operation* and *Anesthetic and Operative Risk in Patients with Coronary Artery Disease and Previous Myocardial Infarcts*.

World Research on Multiple Sclerosis Described by Dr. Merritt

The problem of multiple sclerosis, a disease of the nervous system which affects 500,000 Americans, was analyzed by Dr. H. Houston Merritt, Emeritus Professor of Neurology, and former Dean and Vice President, Columbia University's College of Physicians and Surgeons, in an article in the July 26 issue of *Medical World News*.

Dr. Merritt's review makes clear that in research on the disease there is much unfinished business, but it is heart-

ening news that top dedicated scientific teams are at work all over the world.

The disease is not necessarily progressive. Many patients have remissions that last for years, and some may have only one attack or a series of minor episodes that are not completely disabling.

Dr. Merritt's article has been reprinted by the National Multiple Sclerosis Society, 275 Park Avenue South, New York, N. Y., and can be obtained on request.

Dr. H. Houston Merritt

Continuing Your Education? Apply in Advance for Weinberg Aid

"How did John rate that promotion?"

"He's been studying. He finished his degree on a Weinberg."

John did all right for himself. He heard about the Weinberg Aid Plan through his supervisor, and suddenly life took on a new meaning. The college degree he had always wanted became an immediate goal. He kept his Presbyterian Hospital job, attended night school, and achieved what he wanted. Now he continues to work for the Presbyterian Hospital—on a new level.

The Weinberg Educational Aid Reimbursement Plan is available to full-time employees of The Presbyterian Hospital who have completed at least six months of employment here immediately prior

to applying for aid. The plan offers to the approved applicants a reimbursement of 50% of the tuition fee for one to six credits per semester, or the equivalent for non-credit courses, upon satisfactory completion of the courses.

If John paid \$100 in tuition fees for courses last year, the Weinberg Aid Plan gave him \$50 after he finished the courses. Of course, he had arranged for this in advance by applying for Weinberg Aid. To be eligible for reimbursement, it is necessary for an employee to have the required approval prior to beginning the course.

Here are some items to keep in mind, if you are planning to continue your education:

The Plan applies only to attendance at a school of recog-

nized educational standing. Correspondence courses are not approved. And the Plan does not apply to auditing courses.

The selected subjects or courses must be related to your job or to your future responsibilities at the Hospital.

To receive financial benefit you must receive a passing grade.

If you are receiving aid from other sources, you may not be eligible for aid under this plan.

When do you apply for the 1970 Fall Semester? Now—between Sept. 1 and September 30.

For further information and application, contact Lillian Oring, Personnel Assistant, PH-1-44. Telephone: 3215.

## • ENGAGEMENTS

Janet Cohen, of the 1970 graduating class of the Columbia University-Presbyterian Hospital School of Nursing, is engaged to Dr. Michael A. Friedberg. Dr. Friedberg, a P&S graduate, is serving his residency in surgery at Harlem Hospital. An October wedding is planned.

Donna MacFarlane, former PH staff nurse, is engaged to John Galvin, Account Representative, Out-Patient Department. A September wedding is planned.

Alexandra Pearson Wylie is engaged to Norbert A. Considine III. Miss Wylie is the daughter of Dr. Robert H. Wylie, Attending Surgeon, PH.

## • WEDDINGS

Mary Frances Eshleman, V.C. emergency night nurse, was married to Harry Dane Borbe on July 25.

Charlotte Barry, nursing aide, was married to Marcus Kantz in the Pauline A. Hartford Memorial Chapel on August 30.

Alan Malitz, 3rd year P&S medical student, was married to Susan Leavy on August 29. Mr. Malitz's father is Dr. Sidney Malitz, Associate Attending Psychiatrist, PH.

## • NEW ARRIVALS

Mrs. Patricia M. Duffy, staff nurse, Premature Nursery, BH, and her husband, welcomed their first child, a daughter, Coleen Ann, on July 19. Mrs. Duffy's sister, Mrs. Dorothy Prichard, Assistant Treasurer's Office, is the proud new aunt.

Dr. and Mrs. C. Francis Roe announced the birth of a son, Frederick Paul, on July 9. Dr. Roe completed his surgical residency at PH in 1969 and is now assistant professor of surgery at Yale-New Haven Hospital, New Haven, Connecticut.

Mr. and Mrs. Noel Kaplan welcomed a son, Seth David, on July 23. Mr. Kaplan is with the Medical Data Processing Department.

Mr. and Mrs. Noel Krathe welcomed their first child, a daughter, Kara Elaine, on June 11. Mrs. Krathe, the former Joyce Splann, was a graduate of the 1968 class of the School of Nursing.

## • ITEMS OF INTEREST

Vera Bandurca, assistant supervisor, clinical pathology laboratory, vacationed in Europe recently. Most of her time was spent visiting the Holy Land in Israel.

Mrs. Ires Febles, evening clerk, ESH Eye Institute front office, flew to Puerto Rico recently to attend her sister's wedding. She reported that the weather was wonderful!

It's a small world department: Mrs. Catherine Finnerty, receptionist, nursing office, HP Main, toured the south of Ireland recently and visited County Galway and County Clare. In Dublin's fair city she met Mrs. Mary Duffy, nursing aide from V.C. 10. Mrs. Duffy was visiting County Mayo.

Mrs. Erika Auer, supervisor of the Blood Bank, recently vacationed with her husband in Sweden and Portugal.

Mrs. Astrid Kaaling, secretary in the Blood Bank, and her husband, visited their families in Sweden and Denmark recently.

Mrs. Sylvia Schier, Development Fund Office, just returned from a vacation in Mexico City, Acapulco and other points of interest in Mexico.

The many friends and acquaintances of Adelaide Vrooman, retired Babies Hospital social service caseworker, will be happy to know that Miss Vrooman is back home in Richfield Springs, New York, convalescing after an unfortunate automobile accident.

Henrietta Gumbs, of the Development Fund Office, recently returned from an extensive tour of Europe that included Holland, Germany, Switzerland, Italy, France and England. In all, she visited 27 cities in Europe.

## • FAREWELL TO

Kenny Loforte, supervisor, Out-Patient billing Department, who is leaving in September to serve with the National Guard for six months. He will be stationed in Missouri.

STETHOSCOPIA continued on page seven

# DOINGS OF DOCTORS

DR. D. KEITH McELROY, Assistant Clinical Professor of Orthopedics, P&S, recently went around the world on an orthopedic symposium convention tour. He participated in various programs in Australia, South Africa and in Turkey. At Ankara he was one of 12 American orthopedic surgeons who were invited to participate in the First Mediterranean Orthopedic Meeting. His presentation on *Low Back Problems and Solutions* was simultaneously translated into French, German and Turkish.

DR. O. ROBERT LEVINE, Assistant Professor of Pediatrics, P&S, and director of pediatric cardiology, attended a symposium on Central Hemodynamics and Gas Exchange in Pisa, Italy, recently. The symposium was organized and sponsored by the Laboratorio di Fisiologia del Consiglio Nazionale delle Ricerche, under the auspices of the Societas Europaea Physiologiae Respiratoriae and the International Society of Cardiology. Dr. Levine presented a paper, co-authored by DR. ROBERT B. MELLINS, Assistant Professor of Pediatrics, P&S, entitled *The Assessment of Lung Perfusion by Measurement of Extravascular Lung Water*.

Dr. Levine

Dr. Spector

DR. ABRAHAM SPECTOR, Associate Professor of Ophthalmology, P&S, has been elected a Trustee of the Association for Research in Ophthalmology. Dr. Spector's basic research interest is in biochemistry, specifically in problems related to cataract and protein structure in the lens. He has been associated with the Medical Center since 1965.

DR. ARTHUR G. DEVOE, Professor and Chairman of Ophthalmology, presented a paper, *Sympathetic Ophthalmia—a 10-year Follow-up*, at the annual meeting of the American Ophthalmological Society in Hot Springs, Virginia, May 28.

At the same meeting, DR. ELLEN F. REGAN, Assistant Clinical Professor of Ophthalmology, P&S, and DR. ROBERT M. DAY, Associate Clinical Professor of Ophthalmology, P&S, presented a paper entitled *Cataract Extraction after Filtering Operations for Glaucoma*.

DR. MOSHE MARKIEWITZ, Associate in Urology, P&S, presented *The Morphologic and Kinetic State of the Testis in Patients with Prostatic Carcinoma* at the 10th International Cancer Congress in Houston, Texas, May 28.

DR. AURELIO USON, Assistant Professor of Clinical Urology, P&S, conducted a course on *Transurethral Prostatectomy* at the Madrid Medical School in Spain recently. He also lectured on *Current Concepts of Bladder Carcinogenesis* at the National Academy of Medicine there.

DR. LESTER C. MARK, Professor of Anesthesiology, P&S, presented a paper on the

*Placental Transfer and Fetal Uptake of Halothane-<sup>82</sup> Br in Guinea Pigs* at the annual meeting of the Western Pharmacology Society in San Diego, California. Co-authors of this presentation are: DR. LEONARD BRAND, Associate Professor of Clinical Anesthesiology, P&S; DR. MIECZYSLAW FINSTER, Associate Professor of Anesthesiology, P&S; and DR. IAN C. GEDDES, Senior Lecturer in Anesthesia, University of Liverpool, England.

Dr. Mark also served as chairman of the session on Drug Disposition at the annual meeting of the Federation of American Societies for Experimental Biology in Atlantic City and lectured on the *Pharmacokinetics of Barbiturates* at Presbyterian-St. Luke's Hospital in Chicago.

Dr. Mark was recently appointed to the Executive Committee of the Clinical Pharmacology Division of the American Society for Pharmacology and Experimental Therapeutics.

DR. ROBERT E. HALL, Associate Professor of Obstetrics and Gynecology, P&S, edited *Abortion in a Changing World*, published by the Columbia University Press.

DR. RICHARD W. DARRELL, Instructor in Ophthalmology, P&S, presented a paper on *Experimental Herpetic Keratitis; a Histologic Study Using Silver Stain and the Replica Method of Wolf*, at the Association for Research in Ophthalmology meeting in Sarasota, Florida, May 2. This paper was done in collaboration with DR. FRANTISEK VRABEC, a visiting Fellow, who has returned to Czechoslovakia.

DR. GUY D. POTTER, Associate Professor of Radiology, P&S, addressed a joint meeting of the Sections on Radiology and Otorhinolaryngology and the American Academy of Facial Plastic and Reconstructive Surgery on the subject of *Problems in Radiologic Diagnosis of Temporal Bone Fractures* at the annual convention of the American Medical Association in Chicago, June 24.

DR. ROBERT HOEHN, while Assistant Professor of Clinical Surgery, P&S, delivered two scientific papers. At the Plastic Surgery Research Council meeting in Indianapolis, April 30, he presented *Cholesterol Liquid Crystals, a New Visual Aid to the Study of Circulation in Pedicle Flaps*. In New York on April 6, at the joint meeting of the Plastic Surgery Section of the New York Academy of Medicine with the New York Regional Society of Plastic and Reconstructive Surgery, he presented and discussed *Reconstruction of the Nose by a Scalping Rotation Flap in a case of Malignant Melanoma of the Nasal Tip*.

During the month of May, DR. JOHN K. LATIMER, Professor and Chairman, Squier Urological Clinic, and members of his attending and resident staff attended and participated in several scientific meetings. At the Council on Education of the American Urological Association, Education Committee Program's Panel: *Resident and Intern Problems in the Practice of Urology in Community Hospitals*, Dr. Latimer presented a paper entitled *The Capability of American Urology Residency Programs to Keep Up with the Population Explosion*. He also spoke on *The Nesbit "Dorsal-Hinge" Operation* before the Society for Pediatric Urology. Dr. Latimer moderated a panel discussion on *After How Many Urinary Tract Infections Would You Subject a Child to a Urological Ex-*

*Joyous Reunion at Columbia-Presbyterian Medical Center*

## Homecoming for Open-Heart Patients

A society was born at the Columbia-Presbyterian Medical Center last month that is destined to play an important role in its development program.

Christened the Presbyterian Hospital Heart Club, the new society is limited to former patients—ranging in age from a few weeks to over 80 years—who underwent heart surgery at Presbyterian. More than 2,000 patients are now members of the P.H.H.C., of whom over 1,700 have had an open-heart operation here for congenital or acquired cardiac defects.

The Heart Club held its baptismal meeting on Saturday, September 19, at the Alumni Auditorium of the College of Physicians and Surgeons. The response of former patients to the r.s.v.p. invitations was overwhelming. About 800 former cardiac patients wrote that they would be present for Presbyterian Hospital's Heart Day. Many members of the P.H.H.C. regrettably declined the invitation from distant points in the United States, from Europe, Africa, and Asia.

The first P.H.H.C. meeting had to be scheduled in the P&S Auditorium in two ses-

Dr. George H. Humphreys II, former Director of Surgery, P.H., addresses former open-heart patients, their relatives and friends who filled the P&S Alumni

Auditorium for the first Homecoming of the Presbyterian Hospital Heart Club, September 19.

sions, one in the morning and one in the afternoon, because relatives and guests would swell attendance to 1,800. The

visitors filled the main floor and much of the balcony at both sessions. The club members each received a pin, and

all youngsters received a flashlight.

The Heart Day Homecoming was meant to serve as an appropriate starting point for the Club, which, it is hoped, will become not only a national heart alumni organization but also a source of advice and encouragement to patients about to undergo heart surgery and to their relatives.

The Homecoming further strengthened the warm ties that mutually bind this special group of patients and their doctors.

The reunion of former patients and physicians was an appropriate setting to announce a fund drive for a proposed \$2,200,000 Cardiorespiratory Care Center for chil-

## New School Year Begins at Medical Center

### DENTISTS

Dr. Melvin L. Moss, Dean, School of Dental and Oral Surgery, C.U.; Dr. George L. O'Grady, Assistant Dean, and Dr. Joseph A. Cuttita, Chairman of Admissions, reported that the total number of applicants to the dental school

*Please turn to page three*

### NURSES

In some agricultural societies of yore, people waited for Michaelmas, near the end of September, to change residence. Columbia University's School of Nursing held its Michaelmas about a week ahead of time, on Sunday, September

*Please turn to page three*

### PHYSICIANS

One hundred thirty-seven freshman medical students began their first year of study with an intensive and stimulating orientation week, September 8-14.

More than 10 per cent of the class represent disadvantaged minority groups. The students, from about 30 states in the United States, including New York, came from universities all over the country. Seventeen are women and 10 are sons of P&S alumni.

The orientation program was launched with a special course in emergency medical services, given on September 8 and 9, under the direction of Dr. David L. Andrews, Assist-

ant Attending Orthopedic Surgeon, P.H.

Guided tours of the Medical Center were conducted for the new students, and religious services for the three major faiths were held on Saturday and Sunday, September 12 and 13. Also, on the 12th, a picnic which included games such as softball, was given for the students who were transported by buses to the Nevis State where the picnic is held annually.

On September 13, the an-

*Please turn to page three*

The juniors and their parents had precious little to do as the welcoming committee of nursing students took over the chore of moving the luggage.

Dr. William J. McGill

# NEW P&S FACULTY APPOINTMENTS

Five new faculty appointments at Columbia University's College of Physicians and Surgeons, at the Columbia-Presbyterian Medical Center, were announced recently by Dean Paul A. Marks.

Dr. Frederick G. Hofmann has been appointed Associate Dean of Admissions; Dr. Richard C. Mason, Assistant Dean of Student Affairs; Dr. Councilman Morgan, Associate Dean of Curriculum and Student Affairs; Dr. Frederick B. Putney, Assistant Vice President in Charge of Medical Affairs; and Dr. Donald F. Tapley, Associate Dean.

Dr. Frederick G. Hofmann

Dr. Hofmann, Professor of Pharmacology, P&S, has been associated with the Medical Center since 1953.

Born in Detroit, Michigan, he received the A.B. from the University of Michigan in 1943, and the Ph.D. from Harvard University in 1952. He was a pre-doctoral Fellow, National Institutes of Health (at Harvard University) and a National Research Council Fellow in the Medical Sciences; Research Fellow in endocrinology, Harvard University, 1952-53.

Professional memberships include the American Society for Pharmacology and Experimental Therapeutics, the Endocrine Society, the American Society of Zoologists, the New York Academy of Sciences and the American Association for the Advancement of Science.

He was honored as a John and Mary R. Markle Scholar in Medical Science in 1955.

Dr. Hofmann was editor-in-chief of *Endocrinology*, and has been a consultant in endocrinology for Stedman's Medical Dictionary since 1966.

His major research interest is in the study of the adrenal glands and he has contributed over 40 research communications and abstracts on this subject to the literature.

In collaboration with his wife, who specializes in adolescent medicine, Dr. Hofmann is writing a book on the biomedical aspects of drug abuse, to be published by Oxford University Press.

Dr. Hofmann is married to the former Adele O. Dellenbaugh, and is the father of two children, Peter and Anne. The Hofmanns live in Tenafly, New Jersey.

Dr. Richard C. Mason

Dr. Mason, Assistant Professor of Physiology (Urology), P&S, was born in Indianapolis, Indiana, but reared in Muncie, Indiana.

He received the A.B. from Indiana University in 1948, and the Ph.D., also from Indiana University, in 1952.

From 1952 to 1956, he was research associate and department head, Merck Institute for Therapeutic Research, Rahway, N. J.

Prior to coming to P&S in 1961, Dr. Mason was Assistant Professor of Physiology at Seton Hall College of Medicine and Dentistry.

His major research interests are in the field of renal physiology and bladder physiology, and he has contributed over 20 articles to the scientific literature.

Professional memberships include the American Physiological Society, the American Society of Zoologists, Sigma Xi, the American Association for the Advancement of Science and the Harvey Society.

Dr. Mason is married to the former Eudora Clouser and is the father of two daughters, Jane and Elizabeth. The Masons live in New Brunswick, New Jersey.

Dr. Councilman Morgan

Dr. Morgan, Assistant Attending Physician, PH, and Professor of Microbiology, P&S, has been associated with the Medical Center since 1947.

A native of Cambridge, Massachusetts, Dr. Morgan received the B.S. from Harvard College in 1943, and the M.D. from Columbia University's College of Physicians & Surgeons, in 1946. After serving his internship at Bellevue Hospital, First Medical Division, he spent three years at the National Institutes of Health where he began his research program. He completed his residency in internal medicine at Bellevue Hospital in 1953.

For the past 20 years Dr. Morgan's major research interest has been electron microscopic studies of viral struc-

ture and development.

He is a member of the Board of Editors, The American Journal of Pathology, and his professional memberships include American Association for Clinical Investigation (emeritus), American Association of Immunologists, Electron Microscope Society of America, American Association of Pathologists and Bacteriologists, American Society for Cell Biology and the Societe Francaise de Microscopie Electronique (honorary member).

He has contributed over 75 articles and chapters to the scientific literature.

Dr. Morgan is married to the former Hallee Perkins and is the father of four children, ranging in age from nine to 21 years. The Morgans live in Tenafly, New Jersey.

Dr. Frederick B. Putney

Dr. Putney was born in Missoula, Montana, and received the B.B.A. in Business from the University of Washington, Seattle, in 1961. He attended the Graduate School of Business at Stanford University, where he received the Ph.D. in Business with a major in accounting and information systems in 1968.

He was Assistant Professor of Business at Columbia University's Graduate School of Business, from 1968 until his present appointment.

Dr. Putney served with the United States Navy from 1961 through 1965. He was released from active duty as a Lieutenant after serving a number of years in an audit and advisory capacity on automated information systems.

He is married to the former Donna J. Stewart and has two children, Justin Mary, 3, and Stewart Bates, 17 months. The Putneys live in Tenafly, New Jersey.

Born in Woodstock, New Brunswick, Canada, Dr. Tapley received the B.Sc. from Acadia University, Wolfville, Nova Scotia, in 1948, and the M.D. from the University of Chicago, in 1952.

He served his internship and residency in medicine at the Presbyterian Hospital from 1952-54. From 1954-56, he was Life Insurance Research Fund Fellow, Department of Physiological Chemistry at Johns Hopkins University, and Jane Coffin Childs Fellow, Department of Physiological Chemistry, Oxford University, from 1956-57. He has

Dr. Donald F. Tapley

been on the staff at Presbyterian Hospital since 1956, and is currently Associate Attending Physician, PH, and Associate Professor of Medicine, P&S.

During his tenure here, Dr. Tapley has been in charge of teaching for third year clinical clerks in medicine, and has been director of the endocrinology and metabolism training grant in the Department of Medicine.

He was chairman of the Curriculum Committee, which was responsible for major revisions in the medical school curriculum that have been adopted during the last two years.

Dr. Tapley's research interests have centered on the effects of the thyroid hormones on metabolism at cellular and sub-cellular levels. He was the first to observe that thyroxine has a direct effect on mitochondria, and he is currently studying the effect of thyroid hormones on protein synthesis in mitochondria.

Professional memberships include the American Society for Clinical Investigation, the Endocrine Society, the American Thyroid Association and the Harvey Society.

He is married to the former Caroline R. Southall, and is the father of three daughters — Katherine, Elizabeth and Sarah. The Tapleys make their home in Sneden's Landing, Palisades, New York.

## Dr. Bryant Appointed

Dr. John H. Bryant has been appointed Associate Dean, School of Public Health and Administrative Medicine, CU, and Professor of Administrative Medicine, P&S.

A native of Tucson, Arizona, Dr. Bryant attended the University of Utah from 1942-43, received the B.A. from the

University of Arizona in 1949, and the M.D. from Columbia's College of Physicians & Surgeons in 1953.

He served his internship and residency in the Department of Medicine, Presbyterian Hospital, from 1953-56.

Dr. Bryant was a Fellow in biochemistry, National Institutes of Health, National Institute of Arthritis and Metabolic Diseases, Bethesda, Md., from 1956-57 and in Munich, Germany, from 1957-58; a special research Fellow, from 1958-59 and a special clinical Fellow, from 1959-60.

Dr. John H. Bryant

He was associate professor of medicine and assistant dean (undergraduate educational program), at the University of Vermont College of Medicine, 1964-66.

As staff member of the Rockefeller Foundation, Dr. Bryant is a consultant to the government of Thailand on medical education, and is professor of medicine, Ramathibodi Hospital Faculty of Medicine, Bangkok, Thailand.

His major area of interest is the study of community health problems and the systems of health services intended to meet those problems and designs for change in those systems.

Dr. Bryant has just completed a book, *Health and The Developing World*, published by the Cornell University Press. The book examines health problems in Africa, Latin America and Asia and suggests realistic solutions.

Dr. Bryant is married to the former Nancy Halsted, a graduate of the Presbyterian Hospital School of Nursing, and is the father of three children — Mayche, Peter and Chirawan. The Bryants currently live in Bangkok, Thailand, but will be returning to the New York area shortly.

# THREE SCIENTISTS SHARE \$25,000 HORWITZ PRIZE

Albert Claude, George E. Palade and Keith R. Porter are recipients of Columbia University's 1970 Louisa Gross Horwitz Prize for outstanding research in biology, according to an announcement by William J. McGill, president of Columbia. The three scientists share the Prize's \$25,000 award, which recognizes "their important contributions to our knowledge of the function and fine structure of cells."

The presentation of the Prize was set for October 7, at a formal dinner in Low Memorial Library on the University's Morningside Heights campus, with Dr. Paul A. Marks, Columbia's vice president in charge of medical affairs and dean of its College of Physicians and Surgeons, presiding and Dr. McGill pre-

sending the awards.

Dr. Claude, since 1949, has been professor at the Free University of Brussels, Belgium, and director of the Institut Jules Bordet there. Since 1951, Dr. Palade has been associated with The Rockefeller University and is now head of the Department of Cell Biology there. Dr. Porter is professor and chairman of the Department of Molecular, Cellular and Developmental Biology at the University of Colorado at Boulder.

The Award nomination cites the three nominees for having made "unique and decisive contributions to the development of methods for isolating from cells the various organelles (sub-cellular structures), for characterizing their biological activities, or for de-

tailoring their minute structures under the powerful resolution of the electron microscope." The citation notes that, although the researchers worked "more or less independently," they were in residence at The Rockefeller Institute from 1946 to 1949, "a time for critical interaction among these three extremely talented investigators."

Professor Claude was a pioneer in the introduction into biology of two new and powerful techniques—cell fractionation and electron microscopy. Professor Palade participated in the early cell fractionation studies, but later shifted the emphasis of his work to electron microscopy. However, his observations in mitochondria, and on ribosomes and their relationship to protein synthesis and secretion, are described as "models of a superb blending of biochemical and morphological techniques and understanding." Professor Porter, the award citation states, "recognizing that observations on the fine details of cell organization would necessitate the examination of very thin sections of plastic embedded materials, developed an ultramicrotome which is the model for those employed throughout the world."

"These three workers have provided the pigment, the canvas and the style for a school which has been the most influential in the recent biological renaissance. Their bold strokes will long stand as examples of the finest in the art of cell science."

The Louisa Gross Horwitz Prize, established under the will of the late S. Gross Hor-

Dr. Keith R. Porter

Dr. George E. Palade

Dr. Albert Claude

Medal of the Royal Academy of Medicine.

Dr. Palade, 57, was born in Romania, where he received his B.A. at Buzau in 1930 and the M.D. at Bucharest in 1940. He served at the Institute of Anatomy and Embryology, Faculty of Medicine, in Bucharest until he joined the Rockefeller Institute in 1946. Dr. Palade has been the recipient of the Warren Triennial Prize (1962), the Passano Award (1964), (both shared with Dr. Porter), the Lasker Award (1966), the T. Duckett Jones Award (1966) and the Gairdner Special Award (1967).

Dr. Porter, 58, is a native of Yarmouth, Nova Scotia. He was awarded a B.S. by Acadia University (Nova Scotia) in 1943, and an M.A. in 1935 and a Ph.D. in 1938, both by Harvard University. He was a National Research Fellow at Princeton University for one year before joining The Rockefeller Institute in 1939. In 1961, he became professor of biology at Harvard, a post he retained until he joined the faculty of the University of Colorado this year. Dr. Porter is the recipient of the Warren Triennial Prize (1962), the Passano Award (1964), and the Gairdner Foundation Annual Award (1964).

A joint lecture by Professors Claude and Palade was scheduled for the Alumni Auditorium of the Columbia-Presbyterian Medical Center on Tuesday, October 6, while Dr. Porter's lecture was to be given in the Department of Biological Sciences, 902 Schermerhorn, on Columbia's Morningside Heights campus on October 8, at 4 p.m.

## PHYSICIANS

*Continued from page one*

nal first year reception was held in the Bard Hall Lounge, at which time Dr. Paul A. Marks, Dean and Vice President in charge of Medical Affairs, addressed the new students. Greetings were extended by Dr. Calderon Howe, P&S Club Advisory Board Chairman; Dr. Irving A. Sarot, President, P&S Alumni and Mr. Edwin M. Barton, Director, P&S Club and Student Activities.

Opening exercises were held on September 14 in the Alumni Auditorium at which time Dean Marks presided. Dr. Wil-

liam J. McGill, President, Columbia University, who received a standing ovation, extended greetings.

The opening address was delivered by Dr. Sol Spiegelman, Professor of Genetics and acting chairman, Department of Human Genetics and Development. Dr. Spiegelman spoke on *Molecular Biology*.

The final function of orientation week was the Faculty Reception on September 14 in the Bard Hall lounge, where the new students had an opportunity to meet members of the first year faculty, deans, admissions committee and the P&S Club Advisory Board. Refreshments were served.

## DENTISTS

*Continued from page one*

this year was 534. Of this number, 47 have been chosen to enter the class of 1974.

Of the 47, four are girls, two are black and one is Oriental. The students come from at least nine states in the United States, one is from Israel and one is from the West Indies; they were chosen from universities scattered throughout the country—from as near as Brooklyn to as far away as Wisconsin.

The avocations of the freshman dental students are varied, the largest number being 13 who are musicians. Four are sculptors, two are paint-

ers, three are film makers and two are photographers.

One student is a graduate of the Dental Hygiene Program at Columbia's School of Dental and Oral Surgery; the fathers of three of the new students are dentists.

On Monday, September 14, opening exercises for the incoming freshmen were held in the School of Dental and Oral Surgery.

The program included a welcoming address by Dean O'Grady; a talk on the first-year curriculum, delivered by Professor Irwin Mandel; remarks by Dean Moss and greetings from the University by Dean Ivar E. Berg, Associate Dean of Faculties.

## NURSES

*Continued from page one*

20. An orientation committee of 27 seniors, with Barbara Barone as chairman, welcomed 132 college juniors to Maxwell Hall, where they will be living as they spend the next two years specializing in nursing.

Mrs. Andrea Fisher, Director of Recruitment, stated that of these 132, 34 have baccalaureate degrees; 86 have had two years of college, and 12 are already R.N.'s.

Eight will study psychiatric community health nursing, and 15 maternity nursing, including nurse-midwifery. Each of these 23 students is preparing for advanced, or specialized, nursing practice in patient care and will receive her master's degree upon completion of her studies.

The undergraduate students come from 19 states in the United States and one from Canada. One hundred nine come from the New York, New Jersey, Pennsylvania and Con-

necticut areas. They represent 85 colleges.

Twelve of the students have relatives who have graduated either from P&S or from the School of Nursing.

On September 21, in Maxwell Hall's Sturges Auditorium, the students were welcomed by Dean Mary I. Crawford, Director of Nursing, PH, and Associate Dean (Nursing), Faculty of Medicine, Columbia University; Helen F. Pettit, Director of Nursing Education; Roberta Spagnola, Director of Residence; Mrs. Fisher and Amariyllus Tienor, Director of Recreation.

## Nursery School

The Medical Center Nursery School is still accepting applications for the morning group (three-year-olds) for the month of October.

The school provides a half-day program for three- and four-year-old children.

For information call Mrs. Donald Snider, LO 8-0221.

WELCOMING PICNIC for faculty and students of the School of Dental and Oral Surgery was planned jointly by seniors Tom Finken and Steven Peiser, officers of two fraternities. Finken represented Psi Omega; Peiser, Alpha Omega. The picnic was held on September 27 at the Nevis Estate, Dobbs Ferry, New York, owned by Columbia University. Some future student-faculty sports events will also be jointly sponsored by these two groups, cooperating for the common good of the school. In the photo, Steven Peiser, left, and Tom Finken.

# HEART PATIENTS AND DOCTORS JOIN IN FIRST PR

Mrs. Joseph F. Pesik of Ossining, New York, is pinned by husband following registration in the vestibule of Alumni Auditorium. Her operation took place in 1964.

Members of the Public Interest Department, from left, Mrs. Kathy Thompson, Carl Klotz, and Mrs. Cathy Crovatto, man registration desk prior to morning session of P.H.H.C. Homecoming.

*Continued from page one*

fren and infants, to be constructed on the eighth floor of Babies Hospital and Babies Hospital Addition.

The Homecoming program included a review of the history of cardiac surgery by Dr. George H. Humphreys II, retired Director of Surgery at P.H. He was introduced by P.H.H.C. member Harriet Ha-

berman, who greeted her fellow members on behalf of the Club and served as Mistress of Ceremonies throughout the proceedings. Miss Haberman, whose heart condition was corrected here ten years ago, is now a clinical psychologist at St. Vincent's Hospital on Staten Island.

Dr. Douglas S. Damrosch, who welcomed the P.H.H.C. members in his capacity as Director of the Medical Center, introduced Dr. Sidney Blumenthal, former Director of Pediatric Cardiology here and now Associate Dean at the University of Miami College of Medicine.

Dr. Blumenthal outlined the importance of pediatric cardiology and its training program here and acquainted the audience with his "dream" of the modern Cardiorespiratory Care Center for children.

The new Center, the audience learned, will increase the efficiency of specialists in pediatric cardiology and cardiac surgery by centralizing equipment and personnel. The proposed cardiorespiratory care unit is needed urgently to permit the Hospital's surgeons and cardiologists to take advantage of technological advances in surgery and to provide the most advanced techniques to mechanically assist breathing in the post-operative recovery period.

By creating new opportunities for education and research, the Center will provide a fruitful environment for training programs in pediatric cardiology and cardiac sur-

Many former heart patients who attended the morning session of the P.H. Heart Club Homecoming pose with their doctors in front of the entrance to Columbia University's College of Physicians and Surgeons. The camera lens was not wide enough to encompass all the "heart alumni" who came for the morning session.

Former open-heart patient Harriet Haberman, who presided over the official program, and Dr. Douglas Damrosch, Director of Columbia-Presbyterian Medical Center, exchange possession of microphone during meeting of P.H. Heart Club.

gery and will become a nucleus also for the training of paramedical personnel.

The first stage of the "dream" as proposed by Dr. Blumenthal, will be a Cardiorespiratory Laboratory. It will be equipped with facilities for cardiac catheterization and cinefluorography to make detailed studies of the effectiveness of surgical repairs of complex heart lesions. The laboratory will also have a subunit for lung studies, designed to evaluate lung function in infants before and after heart surgery.

The warmest part of the program was the presentation of several ex-patients, some of whom spoke extemporaneously about the changes in their lives following heart surgery. The Club members so presented included Suzanne Bell, a 14-year-old Bronx student who underwent open-heart surgery here when she was six years old. She was the main subject of a series of slides taken at the time of her hospitalization and presented at the meeting by Dr. James R. Malm, director of open-heart surgery at Presbyterian Hospital. When she got up to be introduced to the audience, she received a hug from Dr. Malm and a spontaneous burst of deafening applause

Dr. James R. Malm, director of open-heart surgery at P.H., with Suzanne Bell, whom he introduced to her fellow Heart Club members.

from everyone in the auditorium.

The applause was no less overpowering for the other "alumni" of Presbyterian's open-heart program who appeared on the stage. They included Debbie Sumstad, last year's Miss Lindenhurst, L. I., who had surgery ten years ago and now intends to become a nurse; Kara Bonnet, all of 20 months old, who was operated on by Dr. Frederick O. Bowman of the open-heart team at the age of two weeks. Kara

waved to the audience and had a wide smile every time a press photographer turned his camera in her direction. Kara skipped at the side of her parents, Mr. and Mrs. Arthur Bonnet, to the lectern on the auditorium stage, where her father recalled his and his wife's anguish over their daughter's life-threatening condition and her rapid improvement after surgery. Quoting Dr. Humphreys, he said that "you have to have confidence and courage—confidence

P.H.H.C. member Debbie Sumstad, who was Miss Lindenhurst, L. I., last year, addresses the meeting.

Dr. Frederick O. Bowman, Jr., with Kara Bonnet.

# BYTERIAN HOSPITAL HEART CLUB HOMECOMING

This group photo shows many former heart patients who attended the afternoon session of the P.H. Heart Club Homecoming.

that it can be done and courage to have it done."

Returnees to the Medical Center on Heart Day also included those athletically inclined young men, Paul Cafone and Tim Sullivan (see December 1969 *Stethoscope*). Herman Brown, 42, represented those patients who had undergone corrective surgery for acquired defects here.

The concluding portion of the meeting featured a fund appeal by Raymond Winkler, a vice president of Standard Oil Company (New Jersey), whose daughter is a member of the Heart Club.

Mr. Winkler announced the establishment of a P.H.H.C.

Fund to finance the construction of the proposed Cardio-respiratory Care Center. The construction of the Center is divided into three phases, he said, giving cost estimates for each of the phases. Phase I will consist of the Cardiorespiratory Research Laboratory, to be finished at a cost of \$300,000. A recovery room and intensive care facilities for young patients comprise Phase II, Mr. Winkler said. He estimated the cost of these facilities at \$400,000. The cost of Phase III, to consist of in-patient areas and a rooming-in area for patients' mothers in the new extension of Babies Hospital was estimated at

With Dr. Gerard A. Kaiser next to him, Herman Brown talks about his experience as a heart patient.

\$1,500,000 by Mr. Winkler. Thus the goal of the P.H.H.C. Fund is \$2,200,000. In asking that contributions be sent to the Heart Club Fund at 622 West 168th Street, New York

Timothy Sullivan is introduced to Heart Club audience by Dr. O. Robert Levine, director of pediatric cardiology, during Homecoming program. Program participants included, seated, from left, Harriet Haberman, Raymond Winkler, who made concluding address, and Dr. George Humphreys, II.

Thomas Yu, eight months old, poses with his mother at Homecoming. Thomas had heart surgery here at the age of two months.

Mrs. Carolyn Davis, who is a nurse, explains the heart-lung machine to her son, Richard, who had his cardiac repair performed on September 18, 1968.

City, Mr. Winkler suggested that each of the patients might conduct an individual fund raising campaign, approaching, for instance, fraternal organizations, church groups or community newspapers.

At the end of the formal program, doctors, nurses and patients continued to greet each other affectionately in the vestibule of the Auditorium and outside the building. Refreshments were served, but many Club members and guest preferred to exchange reminiscences and catch up on news. A number of ex-patients cried out in delight upon meeting other heart veterans who who had inhabited the recovery room and other parts of

the Hospital at the same time as they.

The unique homecoming was covered by a number of television stations and newspapers in the metropolitan area.

Mrs. Allen F. Maulsby of Babies Hospital Women's Auxiliary has presented flashlight to PHHC member Margaret Ciaranella, who underwent open-heart procedure three years ago. Margaret is from Rahway, New Jersey.

The youngsters were seen putting the elegant-looking flashlights to immediate clinical use.

Mr. and Mrs. Marvin D. Frankel and their two sons Dr. Malm, who has just received Mr. Frankel's check for \$1,000 as contribution to the P.H.H.C. Fund. Mr. Frankel's son Lee had open-heart surgery two years ago.

# SUMMER AND FALL RETIREMENTS

## Mrs. Emma Dansby

Mrs. Emma Dansby, maid, Housekeeping Department, retired in May, ending a 22-year period of employment at Presbyterian Hospital.

Mrs. Dansby's bailiwick was on the 2nd floor of Vanderbilt Clinic, where she enjoyed the friendship of many people, especially the folks in the Record Room.

A South Carolinian by birth, Mrs. Dansby and her husband will shortly be moving to Knoxville, Tennessee, to be closer to their family. The Dansbys have one son and three grandchildren.

Mrs. Dansby

Mrs. Gartley

## Mrs. Elizabeth Gartley

Mrs. Elizabeth Gartley, laundry worker, Laundry Department, retired in May, completing a 21-year period of employment at Presbyterian.

Mrs. Gartley worked in linen supplies, filling all requisitions for Presbyterian Hospital. She liked her work very much and enjoyed the camaraderie of all the people with whom she came in contact.

Retirement plans include a trip to Ireland and England for a reunion with her large family — including sisters, brothers, nieces and nephews.

## Mrs. Genevieve McGrath

Mrs. Genevieve McGrath, attendant, Food Service, retired in June completing a long career as "the hostess with the mostest."

Jennie, as she is known by everyone, was involved with more social functions than she can remember — from retirement teas to alumni luncheons, from women's auxiliary luncheons to the annual dolls Christmas party in Babies Hospital. It was Jennie who

saw to it that all guests had enough of everything, that flowers were in place and that other decorations were just so.

On June 11, Jennie was on the receiving end for the first time, when she was honored at a retirement tea. She did manage to pour a cup of coffee for one guest, "just out of habit," said Jennie.

## Mrs. Virginia Richardson

Mrs. Virginia Richardson, Maid, Housekeeping Department, retired in June, thus completing 22 years of employment at the Medical Center.

Mrs. Richardson was born in Seneca, South Carolina and now lives in the Bronx. She has one daughter, three grandchildren and two great-grandchildren.

Many years ago she had an unusual hobby—glassblowing. She was also a den mother for the Cub Scouts.

Mrs. Richardson enjoyed her many years at the Hospital and spoke warmly of her relationship with both her supervisors and the staff of Housekeeping.

On July 3 a reception was held in her honor and a large number of friends and coworkers came to bid her a fond farewell.

Mrs. Lester

## Mrs. Jeanne E. Lester

Mrs. Jeanne E. Lester, perimetrist, department of visual fields, Neurological Institute, chose early retirement in May.

Mrs. Lester has been employed at Presbyterian since 1952, holding a variety of positions. She worked as a technician in the electrocardiography, electroencephalography,

basal metabolism, radioactive uptake laboratories, and in speech and hearing.

The last 13 years of her work as a perimetrist in Neurological Institute were the most interesting, according to Mrs. Lester. She explained that this is exacting work which localizes brain lesions. During the course of her career she instructed first year residents in Neurology in this task and made over 18,000 examinations. "I have examined more patients than anyone else in the country," said Mrs. Lester.

Seeing a patient's sight restored to normal by surgical and radiotherapy treatments after he had lost his sight, because of chiasmal tumors, was most rewarding.

There was never a communication gap between Mrs. Lester and her patients because she is fluent in French, Italian, German, Spanish and Swedish.

Mrs. Lester's husband, William H. Lester, who was resident manager of Harkness Hall and several other apartment buildings maintained by PH for the nursing staff, re-

tired in 1965 after 50 years of service.

The Lesters are planning to travel for a while and then will return to their apartment in New Jersey overlooking the Hudson which gives them a magnificent panoramic view of the Medical Center, George Washington Bridge and Long Island Sound. In this setting, Mrs. Lester will devote much of her time to working on her book, *My 18,000 Visual Fields at Neurological Institute*.

## May Kent

May Kent, receptionist, PH X-ray Department, retired in June, completing 18 years in the employ of Presbyterian Hospital.

Miss Kent was honored by The Girl Scouts of America last year for 50 years of distinguished service to girl scouting.

She is also very active in her church group where she sews dolls for church bazaars and for benefits for St. Luke's Home in New York City. She also visits the elderly shut-ins at the Home.

Her quick response, "Oh, I don't want to leave it," describes how she felt about her

job and she added, "I'll probably return to volunteer."

On June 25, Miss Kent was honored at a tea in PH 1-50 and her happiest moment was the arrival of her spry, 88-year-young mother.

Miss Kent

Miss Castagnetta

## Rosalie Castagnetta

Rosalie Castagnetta, public school teacher in Babies Hospital's PS 401-X for the past 10 years, chose early retirement in June.

Although officially employed by the New York City Board of Education, Miss Castagnetta "really felt like a Hospital employee."

After receiving her B.S. from New York University, Miss Castagnetta undertook specialized postgraduate training at Hunter College and N.Y.U. to learn how to deal with handicapped children.

She said many people might  
*Please turn to page seven*

## "ONE DAY IN THE LIFE"

The physicians and nurses who answered a "stat" call in Vanderbilt Clinic Emergency Admitting one July afternoon last year are the stars of "one of the best TV specials in years."

The Vanderbilt Clinic unit of the Presbyterian Hospital contributed the most dramatic segment to the documentary, which was televised nationally by CBS on September 8, almost 14 months after it was filmed at the Presbyterian Hospital and at other locations in America. Titled "One Day in the Life of the United States," the CBS special was filmed by 43 camera crews all over the United States to record for posterity the pursuits of Americans on July 20, 1969, the day Neil Armstrong's and Edwin Aldrin's "Eagle" landed on the moon. Two of the camera crews were assigned to the Columbia-Presbyterian Medical Center, as one of the best known medical institutions in the land.

On that rainy distant Sunday, they were here as guests of the Presbyterian Hospital's Obstetrics and Gynecology Service and of the Vanderbilt Clinic.

The monumental undertaking was magnificent in concept, but its vast scope lent itself more to a Dos Passos trilogy than to a film of 105-minute duration, time that included commercials. "All we caught were some fragments" of life in America, warned the program's narrator, Charles Kuralt.

As a historical document, "One Day in the Life" supplemented but did not repeat TV news coverage of the silent majority of Americans anxiously following the dramatic voyage of the astronauts on television, or praying for them at Sunday morning services.

It showed, with scenes from a Chicago ghetto and from a rock festival, that besides the prayerful America that everyone took for granted there was another America, composed of people who ignored their country's feat in space. The documentary contrasted the technological level of the Moon voyage with the labors of other Americans—working with a horse or building a house with primitive tools.

Another point the CBS special brought out was that in many occupations Americans had scant time to follow the Moon trip that day.

At Vanderbilt Clinic, for example, it was mostly "business as usual" on the ever-active first and third floors of the Vanderbilt Clinic, as residents of the surrounding communities kept trickling in to present their complaints, punctuated by the arrivals of accident victims and cardiac patients.

One of the patients was a little girl with high fever who went into convulsions shortly after being brought to Vanderbilt Clinic Emergency Admitting by her mother. A CBS camera showed how Presbyterian Hospital's doctors and nurses teamed up to stop the seizure. Closeups of the little

girl emphasized that there were 12 hands on her body, treating her convulsions and easing her discomfort in concerted action. Nurse Sandra Misché, who was later asked to view the film and explain it, provided a running commentary of what was being done to help the little patient. As the little girl came out of her seizure, two of the doctors who had treated her stretched hands above her for a congratulatory handclasp. This may have been the most moving moment of the film. Unfortunately time limitations prevented CBS from showing the little girl happily, if a bit exhaustedly, talking to her mother at the exact moment when the Eagle touched down on the surface of the moon.

The segment, which stood out with its stark drama among the many episodes recorded elsewhere in the country, was seen by Hospital officials as a "most welcome tribute to the professionalism of the Presbyterian Hospital's physicians and nurses." Life magazine called it "one of the best television specials in years."

The other CBS camera crew, positioned in the Hospital's obstetrical suite, shot film showing glimpses of a baby boy, born at Presbyterian and being discharged in the care of his parents, Mr. and Mrs. William Bonny. Mr. Bonny is Supervisor of V.C. Medicare section in P.H. Out-patient Billing and Collection Department.

## In Memoriam

### Katherine V. Downing

Katherine V. Downing, recently retired housekeeper at Harkness Pavilion, died on August 9, suddenly, while vacationing in Ireland.

She had been associated with the Hospital for 22 years before her retirement in March and had served as corresponding secretary for the National Executive Housekeepers Association from 1952 to 1969.

Miss Downing is survived by two brothers — Maurice Downing of Calicoon Center,

N. Y. and Sylvester Downing of London, England. Also surviving are two sisters, Sr. M. Bernden, D.H.G. in Bedford, England and Sheila Buckley of Cork City, Ireland.

Anyone wishing to express sympathy may send cards to Miss Downing's brother, Mr. Maurice Downing, Calicoon Center, Sullivan County, New York, N. Y. 12724.

A memorial Mass of the Resurrection was held for Miss Downing on August 24 in the Pauline A. Hartford Memorial Chapel.

## RETIREMENTS

Continued from page six

not realize that a majority of the children who attend public school in B.H. are not from New York. Babies Hospital is world-renowned and children are admitted there from all over the world. Ambulatory patients come to school in the classroom on the 7th floor. If a patient cannot come to the classroom, he receives bedside schooling.

"Youngsters are youngsters, whether at home or in the hospital. All eager and enthusiastic in September, but by the time June rolls around they are counting the days to summer recess," said Miss Castagnetta.

One of her greatest joys was working with severely handicapped or emotionally disturbed children. Helping them to adjust to illness or hospital life was often just as, or more, rewarding than teaching normal or bright children.

Miss Castagnetta taught children from kindergarten to high school levels. There are two other teachers on the staff—Mrs. Rose Neufeld who teaches on the high school level, and Mrs. Lillian Graham, stationed on the 5th floor, who teaches youngsters in the orthopedic division on all levels.

### Mrs. Ursula Loewinger

Mrs. Ursula Loewinger, staff nurse, retired in June, completing a career that spanned 20 years at Presbyterian Hospital.

Mrs. Loewinger was born in Berlin, fled Hitler's Nazi occupation in 1933 and migrated to England where she worked as a nurse-midwife. During World War II she was engaged

in evacuating maternity patients from hospitals and homes to escape London's blitz.

In 1948 she came to the United States, worked at another hospital until 1950, when she joined the staff here. "I have seen many hospitals here and abroad but have always liked Presbyterian the best," said Mrs. Loewinger.

The Loewingers live in Fort Lee, New Jersey, but will be leaving shortly for England, where they will take up permanent residence.

Mrs. Loewinger Mrs. Rothman

### Mrs. Dorothy Rothman

Mrs. Dorothy Rothman, Office of Public Interest, retired in June, completing 18 years of employment at Presbyterian Hospital.

Mrs. Rothman has two sons, Richard, who is married and lives in Israel, and Kenneth, who is chairman of the Department of Sociology and Anthropology at Chatham College in Pittsburgh.

It is easy for *Stethoscope* to speak about Dorothy, for we have known her well for many years. Her quiet, friendly manner and spontaneous sense of humor made it a joy to work with her. She quietly and efficiently got the job done.

She has mixed emotions about leaving PH and said she may visit her son in Israel and then may look for part-time work.

## Toys Wanted

If you have building blocks, dolls, games, books or other toys you have no further need for, they would be greatly appreciated by the Hospital, the youngsters and the volunteers who man the playroom on the 4th floor of Vanderbilt Clinic.

Please leave your donation with Mrs. Dorothy Diamond, Director of Volunteers, Vanderbilt Clinic, 10th floor.

## Neuro Workshop

It was announced by Martha E. Haber, R.N., Assistant Director of Neurological Institute (Nursing), that the Institute will present a workshop on cerebral aneurysms on October 14, from 8:00 a.m. to 5:00 p.m., in the Alumni Auditorium, P&S.

Employees of the Hospital will be admitted without charge. There will be a \$5.00 admission fee for others, which may be paid at the door.

The workshop will spotlight the latest neurological and neurosurgical advancements.

## Emergency Care Course Announced

The fifth annual course on emergency care and transportation of sick and injured persons, sponsored in New York City by the American Academy of Orthopedic Surgeons, will be held October 8-10 at P&S.

Dr. David L. Andrews, Assistant Attending Orthopedic Surgeon, PH, is chairman of the course.

With faculty members from the Columbia and Cornell University medical colleges, the October sessions will be given in cooperation with the New York City Police Department.

Attending the three-day course of lectures and work practice demonstrations will be volunteer rescue squad members, police officers, ambulance attendants, and others who work with persons requiring emergency attention.

For information and registration forms, those interested may write to Dr. Andrews at 161 Ft. Washington Avenue, New York, N. Y. 10032.

## WOMEN'S AUXILIARY TO HAVE FASHION SHOW

The Women's Auxiliary of The Presbyterian Hospital will present its annual benefit luncheon featuring a "Caravan of Fashion" from Lord and Taylor, on October 28, at the St. Regis Roof and Penthouse, at 12:00 noon.

Among the participating designers at this fabulous fashion show will be Donald Brooks, Vera Maxwell, Anne Fogarty, Pucci, Geoffrey Beane and Chester Weinberg. The guest of honor will be Melvin E. Dawley, Chairman of the Board of Lord and Taylor. Commentary will be by Countess de Veyrac.

The President of the Auxiliary is Mrs. W. Duane Todd

and the Benefit Chairman is Mrs. Thomas A. Burke.

If you would like to judge for yourself the various skirt lengths edited by knowledgeable Lord and Taylor, simply contribute thrift valued at \$25, or more, before October 21. This will entitle you to purchase two tickets for the luncheon at \$10 each.

You may bring or send thrift to the Stuyvesant Square Thrift Shop at 1430 Third Avenue (pick-up service for Manhattan, SW 5-3638). Packages are to be clearly marked for *The Presbyterian Hospital* and should include your name and address. Your receipt is tax deductible.

You will enjoy a memorable

afternoon and will also have the satisfaction of knowing that you have contributed in a meaningful way to the wonderful work accomplished by the Women's Auxiliary. The Thrift Shop helps support the student nurses scholarship fund, the patient's library, the volunteer service, the emergency nursing fund, social service, occupational and recreational therapy, and patient and staff needs.

So—if there is a dish, a piece of furniture, an old fur coat or a stack of last year's dresses that you want to replace, dig them out and send them off to the Thrift Shop now!

## Anesthesia Lectures

The Department of Anesthesiology is sponsoring an evening lecture series in the Babies Hospital fourth floor amphitheater, on Thursdays, from 5:00 to 6:00 p.m., during September, October and November.

The lectures already given were: September 17, Dr. Arthur L. Bassett, Assistant Professor of Pharmacology, P&S, *Electrophysiology of the Heart*; September 24, Dr. J. Thomas Bigger, Jr., Assistant Professor of Medicine, P&S, *Arrhythmias and Antiarrhythmic Drugs*, and October 1, *Clinical Conference* (no lecture).

The lectures slated for October and November are: October 8, Dr. John H. Laragh, Professor of Clinical Medicine, P&S, *Hypertension and Antihypertensive Drugs*; October 15, Dr. Lubos Triner, Assistant Professor of Anesthesiology, P&S, *Research Seminar-Cyclic 3-4 AMP and Smooth Muscle Function*; October 22, ASA meeting week (no lecture); October 29, Dr. Louis R. M. Del Guercio, Professor of Surgery and Director of General Clinical Research Center-Acute, Albert Einstein College of Medicine, *Shock Syndrome and its Management*, and November 5, Dr. Robert H. Heissenbuttel, Instructor in Medicine, P&S, *Heart Failure and Digitalis*.

## Correction

The editorial office of *The Stethoscope* has received some telephone calls on behalf of Dr. Fordyce B. St. John, who was mistakenly referred to in the September issue as "the late" Dr. St. John. We sincerely apologize to Dr. St. John and to our readers for this error; we are pleased to be informed that our reference was—to use Mark Twain's expression—"highly exaggerated." Dr. St. John, who retired from his highly active and useful career at this Medical Center more than 20 years ago, now lives on East 86th Street, New York City.

## Reception for John G. McCullough

As everyone said afterward, it was a great party—the reception for John G. McCullough, retiring Comptroller, bowing out after 28 years of service at The Presbyterian Hospital—"a great party for a great guy."

Over 150 people attended the party and gathered around Mr. McCullough and his lovely, gracious wife, to express their good wishes. The gathering was held in the Reception Room of Harkness Hall on Wednesday evening, September 16, and consisted of a reception, a brief program and a buffet supper.

As Master of Ceremonies, N. L. Peters made the presentations and read a toast in verse written by Pearl Sneden, Mr. McCullough's secretary.

Mr. R. N. Kerst, Assistant Vice President, read a letter to Mr. McCullough from Mr. A. J. Binkert who was attending the Annual Meeting of the American Hospital Association in Houston, Texas, which referred to their early careers together at the Hospital "in a little accounting department and their long and happy association in spite of the occasional grumblings that all comptrollers experience."

Mr. Kerst also briefly referred to Mr. McCullough's early self-made-man career on Wall Street, at the 1939 World's Fair, as manager of a theatre in Brooklyn and in auditing, all of which gave him the versatility needed for his 28 years at Presbyterian Hospital.

The response from the guest of honor was memorable: "I don't know how so many people can do so much for one guy. When I was in the hospital, everyone was so kind to me and now again they shower me with this fine party. I can only say thank you."

The planning of the party, according to Mr. Peters, was participated in by "many of Mr. McCullough's department —Betty Dixon, Betty DePace,

### Socializing at the Party

Joe Corcoran, Ken Tuxbury and many others."

A special issue of *The Stethoscope* was printed for the occasion with a large front-page photo of Mr. McCullough and a banner headline: "Salute to a Great Guy." A copy of this, in plaque form, was presented to him. Another gift was a Seth Thomas mantle clock, which will have a place in the McCullough home in northern New York State, where its chimes will be a constant reminder of his many friends.

# Stethoscopia

## • ENGAGEMENTS

Patricia Quigley is engaged to *Richard Kane*, Assistant to Superintendent of Services, PH. Miss Quigley's mother, *Mrs. Kathleen Quigley*, works in Clinic Administration, V.C., and Mr. Kane's mother, *Mrs. Ruth Kane*, is from the Record Room, V.C.

*Dora Ramos*, technician, hematology laboratory, N.I., is engaged to *Hugo Pena*. The couple will be married in Ecuador on December 26.

## • WEDDINGS

*Honey Weiss*, personnel consultant, PH, and *Ken Janowitz*, 4th year P&S medical student, were married September 7 in Tarrytown, New York.

*Esta J. Milchman* was married to *Frederick A. Rapoport* on August 26. Mr. Rapoport is a 1st year P&S medical student, and his father, *Dr. Morris R. Rapoport*, is Assistant Physician, V.C.

*Patty L. Shipman* was married to *John M. Severinghaus*, a P&S medical student, on August 22.

*Linda Howells* was married to *Daniel Hadrava* on October 3. The bride is the daughter of *Donald Howells*, systems analyst, Medical/Administrative Data Processing, PH.

*Hilary L. Turpan* was married to *Stuart W. Cosgriff, Jr.*, on August 23, in Englewood, N. J. Mr. Cosgriff is the son of *Dr. Stuart W. Cosgriff*, Associate Attending Physician, PH.

*Joan Whalen*, secretary, Development Fund Office, was married to *Michael Farrelly* on September 12. The bride's uncle, the Reverend *Liam Whalen*, came from Ireland to perform the ceremony, a nuptial Mass, at St. Elizabeth's Church in Manhattan.

## • NEW ARRIVALS

*Mrs. Marion Thompson* and her husband, *Dr. Albert Thompson*, welcomed their second child, and first son, *Paul Jonathan*, on July 31. Mrs. Thompson is administrative assistant for nursing personnel.

Mr. & Mrs. *Herbert B. Wilcox III*, welcomed their first child, a son, *Alexander Du Pasquier*, on June 29, in London. Mr. Wilcox is the son of *Dr. & Mrs. Herbert B. Wilcox, Jr.* Dr. Wilcox is Associate Attending Physician, PH, and his wife, *Elizabeth*, is the noted photographer whose work appears regularly in *Stethoscopia*.

*Dr. & Mrs. Peter W. Carmel* welcomed the arrival of a son on September 5. Dr. Carmel is Assistant Attending Neurosurgeon, NI.

*Mrs. Irene Carter*, laboratory technician, PH 14, and her husband, welcomed a daughter on August 27.

Mr. & Mrs. *Harry S. Morelli* welcomed a daughter, *Jacqueline Ann*, on September 19. Mr. Morelli is staff pharmacist, PH.

## • NOTES OF INTEREST

New York student, *Mary Raymond*, attended the Yeats International Summer School in County Sligo, Ireland. Miss Raymond is the daughter of *James Raymond*, Laundry Department, PH, and *Mrs. Ann Raymond*, X-ray Department, AP.

*Mrs. Selene Wyrnick*, technician, V.C. 2, vacationed in her native Surinam, S. A., for six weeks. It was her first visit there after an absence of 10 years.

Anne Duffy

Mrs. Virginia Enright

## • CONGRATULATIONS TO

*Mrs. Virginia Enright*, who has been promoted to assistant supervisor, evening reception services, V.C.

## • WELCOME TO

*Rosa Leon*, who has joined the staff in the Volunteer Department as evening secretary.

*Mrs. Elsa Ortega*, *Mildred Semidi* and *Rick Swartz*, technicians, V.C. laboratory.

*Ann Margaret Duffy*, new addition to the Office of Public Interest.

## • FAREWELL TO

*Charles Kordula*, laboratory technician, HP, who left recently to go to Brussels, where he will enter medical school.

# DOINGS OF DOCTORS

*DR. BARRY G. WOOD*, Assistant in Medicine, P&S, and Assistant Chairman, Department of Medicine, Roosevelt Hospital, was recently ordained an Episcopalian deacon in Newark, New Jersey. Dr. Wood integrates the roles of deacon and physician in a real sense as he has been presenting talks to groups in the hospital on the care and treatment of the dying patient. He is also a lecturer at the Union Theological Seminary in New York.

At the 95th annual meeting of the American Neurological Association in Atlantic City, June 15-17, *DR. MELVIN D. YAHN*, Professor of Neurology and Associate Dean, P&S, and president of the Association, delivered the presidential address, *Prospect and Retrospect in Neurology*.

The following members of the faculty also presented papers at the scientific sessions: *DRS. RICHARD FRASER*, Assistant Resident, Neurosurgery; *BENNETT M. STEIN*, Assistant Professor of Clinical Neurosurgery, P&S; *ROBERT BARRETT*, Assistant Professor of Neurology, P&S; and *J. LAWRENCE POOL*, Professor and Chairman, Neurosurgery, spoke on *Noradrenergic Mediation of Experimental Cerebrovascular Spasm*. *DRS. SARAH A. LUSE*, Professor of Anatomy, P&S; *FREDERICK A. METTLER*, Professor of Anatomy (Neurology), P&S; and *WILLIAM A. BLANC*, Professor of Pathology, P&S, spoke on *An Ultrastructural Study of Lesions Induced by Sodium Azide in the Primate Brain*. *DR. LUCIEN J. COTE*, Assistant Professor of Neurology, P&S, Dr. Yahn; *DRS. ROGER C. DUVOISIN*, Associate Professor of Neurology, P&S, *ABNER WOLF*, Special Lecturer, Neuropathology, P&S; and *W. MARKS-BERRY*, Instructor in Neuropathology, P&S, spoke on *Analysis of Deaths in Parkinson Patients on Longterm Levodopa Therapy*.

*DRS. SANFORD SCHNEIDER*, Visiting Fellow, Neurology, P&S; *JOHN F. NICHOLSON*, Assistant Professor of Pediatrics, P&S, and *ABE M. CHUTORIAN*, Assistant Professor of Clinical Pediatrics spoke on *Sex-linked Hyperammonemia: Response to Reduced Dietary Protein*. *DRS. SIDNEY GILMAN*, Assistant Professor of Neurology, P&S, and *LUIS A. MARCO*, Research Associate, Neurology, P&S, spoke on *Motor Disorders Following Medullary Pyramidal Tract Section in the Monkey*.

*DR. GEORGE F. CRICKLAIR*, Professor of Clinical Surgery and Director, Plastic Surgery Service, appeared with *Dr. Frank Field*, on NBC's *Research Project*. The topic discussed was *Burns and Burn Prevention* with emphasis on flame retardant clothing.

*DR. RICHARD S. RIVLIN*, Assistant Professor of Medicine, Institute of Cancer Research, P&S, presented a paper on *The Role of Riboflavin in Regulating Enzyme Induction by Thyroid Hormone* at the annual meeting of the Endocrine Society in St. Louis, June 12. At the same meeting, *DR. JACOB FURTH*, also of the Institute of Cancer Research, presented a paper entitled *Prolactin (PL) and Growth Hormone Levels in Rat Serum*.

*DR. MARY ANN RADKOWSKI*, visiting Fellow in Radiology, completed her three-year Fellowship in June. This Fellowship was sponsored by a grant received by *DR. DAVID J. BAKER*, Professor of Radiology, P&S, from the Children's Bureau entitled *Career Development in Pediatric Radiology*. Dr. Radkowski is now attending pediatric radiologist at St. Luke's Hospital Medical Center in New York City.

*DR. MEYER M. MELICOW*, Given Foundation Professor Emeritus in Urology, P&S, won third prize for his picture *Impressions of Europe* (pen and ink) at the American Physicians' Art Exhibit held in conjunction with the American Medical Association annual meeting in Chicago, June 21-25.

*DR. WILLIAM A. BAUMAN*, Director, Medical/Administrative Data Processing, participated in the 10th medical symposium sponsored by the International Business Machines Corporation, in Poughkeepsie, N. Y., June 29-July 1. He also participated in a panel devoted to *Ongoing, Trial and Pilot Programs* related to computer applications in community medicine.

Dr. Bauman

Dr. L'Esperance

*DR. FRANCIS A. L'ESPERANCE*, Assistant Ophthalmologist, P.H., discussed three papers concerned with *Laser Photocoagulation of Ophthalmic Vascular Disease* at the American Medical Association section of Ophthalmology at the Association's annual meeting in Chicago, June 22-24. He also presented a paper entitled *Diabetic Retinopathy—Etiology and Treatment*, at groundbreaking ceremonies of the new Diabetic Research Center in Birmingham, Alabama, July 1.

*DR. GUY D. POTTER*, Associate Professor of Radiology, P&S, addressed joint meetings of the sections of Radiology and Otolaryngology, in cooperation with the American Academy of Facial Plastic and Reconstructive Surgery, at the 119th annual American Medical Association convention in Chicago, June 24. Dr. Potter spoke on *Temporal Bone Fractures—Problems in Radiologic Diagnosis*.

*DR. JUERGEN TONNDORF*, Professor of Otolaryngology, P&S, was honored with the Ludwig Haymann Award by the German Otorhinolaryngological Society in June. The award carried a prize of \$2,000 and it was the first time the award was made to an American citizen.

*DR. BERNARD M. WAGNER*, Professor of Pathology, P&S, and Director of Laboratories, Delafield Hospital, has been promoted to Adjunct Professor of Comparative Pathology, it was announced by *Dr. Frederick Seitz*, President of the Rockefeller University. From 1965 until 1970, Dr. Wagner served as a guest investigator at Rockefeller. The appointment as Adjunct Professor is the highest faculty rank that can be given to members of the faculty who are not full-time and hold comparable positions in other recognized institutions.

In June, the University of Chicago conferred the honorary degree of Doctor of Science on *DR. SOL SPIEGELMAN*, director of the Institute of Cancer Research, C.U. He had previously been honored with the Doctor of Science degree by Rensselaer Polytechnic Institute in 1966, Northwestern University in 1966 and St. Louis University in 1968.

# The Stethoscope

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXV, NUMBER 11

NOVEMBER, 1970

## Radiology Service Installs New X-Ray To Benefit Patients Of Vanderbilt Clinic

Patients in Vanderbilt Clinic are benefiting from a new chest x-ray unit that produces a finished x-ray film in less than two minutes.

The Radiology Service at Columbia-Presbyterian Medical Center is one of only two medical services in the nation to have installed the fully automated device, according to Picker X-Ray, the unit's manufacturer.

The new chest unit is cutting down on patient waiting time and has drastically reduced the number of time-consuming manual procedures a technologist has to undertake to obtain a single x-ray film. Chest films form a large percentage of the various x-ray examinations made in a hospital.

All a technologist has to do now to obtain a chest x-ray is  
*Please turn to page five*

## Presbyterian Hospital Board Elects New Officers

Augustus C. Long

Thomas H. Choate

A. J. Binkert

Richard N. Kerst

The Board of Trustees of The Presbyterian Hospital in the City of New York has elected Augustus C. Long, Chairman of the Board of Trustees and chief executive officer; also Thomas H. Choate, Vice Chairman of the Board; A. J. Binkert, President and chief administrative officer, and Richard N. Kerst, Vice President (Administration).

Mr. Long, who has served as President of the Hospital

since April 4, 1961, was recently recalled by Texaco Inc. to serve as its chief executive officer, a position he held prior to his retirement on January 1, 1965. Mr. Long's affiliation with the Hospital began in 1955 when he was elected a member of the Corporation and Trustee. He served as Chairman of the Executive Committee and then President. Mr. Long has directed the Hospital through its greatest

period of development.

Thomas H. Choate, Partner, White, Weld & Co., became a member of the Presbyterian Hospital Corporation and was elected a Trustee in May, 1965. He became a member of the Executive Committee in 1967.

A. J. Binkert has served as Executive Vice President of the Hospital since 1957, following many years of service as Assistant Vice President and Vice President and Gen-

eral Manager. He was elected a member of the Board of Trustees in January, 1969.

Richard N. Kerst came to the Hospital in 1945 and has served as Assistant Vice President and Assistant Secretary-Treasurer. Mr. Kerst is a Trustee of the Hospital Association of New York State and Treasurer and a member of the Board of Governors of the Greater New York Hospital Association.

## School Of Practical Nursing Graduates 17; Most Will Remain At Presbyterian Hospital

The Fall 1970 graduating class of Licensed Practical Nurses poses in front of the Pauline A. Hartford Memorial Chapel, where the graduation ceremony took place.

Wearing their white uniforms and blue-banded orderly caps for the first time, the 17 members of the Columbia-Presbyterian School of Practical Nursing were graduated on October 9, in an impressive but simple ceremony in the Pauline A. Hartford Memorial Chapel.

Following the invocation by Chaplain Robert B. Reeves, Jr., Dean Mary I. Crawford, Associate Dean (Nursing), Columbia University, Faculty of Medicine, and Director of Nursing, Presbyterian Hospital, delivered the commencement address.

Immediately following Dean

Crawford's address, diplomas and pins were awarded by Edith J. Ankers, Director, Columbia-Presbyterian School of Practical Nursing. Assisting Miss Ankers was Mrs. Lea Battiatto, Instructor.

Two special awards were given—one to Mrs. Lily Cat-touse, selected by her classmates as representing the ideal practical nurse, and another to Mrs. Deborah Rieser, for attaining the highest scholastic average.

The graduating nurses are: Marion Albertie, Linda Alexander (honor roll), Mrs. Lily Cat-touse (honor roll), Mrs. Mary Gee, Linda Gripenberg, Diane Harrell, Kathleen Healy, Mrs. Mary Johnson, Rosetta Jordan, Mrs. Doris Koons, Mrs. Antonia Perez, Mrs. Margaret Podraza, Mrs. Deloise Rapel-yea, Mrs. Deborah Rieser (honor roll), Michael Thompson, Flor Valentin and Mrs. Patricia Warren.

All but one of the graduates are remaining on the staff at Presbyterian Hospital.

## New Chair Filled At P&S

A new professorial chair, in honor of Dr. H. Houston Merritt, has been created by Columbia University. Dr. Merritt was Dean of the College of Physicians and Surgeons for 11 years, until his retirement in June.

Dr. Melvin D. Yahr has been appointed the new H. Houston Merritt Professor of Neurology. Dr. Yahr is Associate Dean of Postgraduate Studies, P&S, and Director of the Parkinson's Disease Research Center at the Medical Center.

Dr. Melvin D. Yahr

Columbia has also named Dr. Richard L. Masland, Professor and Chairman of the Department of Neurology, the new Henry and Lucy Moses

Professor of Neurology, the professorship that Dr. Merritt held until his retirement.

The three actions, taken by the Trustees of Columbia University, were announced simultaneously by Dr. William J. McGill, President of Columbia.

The Merritt Professorship was made possible by a gift from Mrs. John H. Harris, of New York City, a long-time supporter of research at the Columbia-Presbyterian Medical Center.

Dr. Yahr is known chiefly for his work in Parkinson's disease and epilepsy. He has been Associate Dean, Faculty of Medicine, P&S, since 1967. He joined the faculty in 1948 and was named Professor of Neurology in 1962.

The Henry and Lucy Moses Chair of Neurology, now held by Dr. Masland, was established in 1963 by a gift from Mrs. Henry L. Moses, widow of the New York lawyer, banker and philanthropist.

Dr. Masland's appointment as Professor of Neurology and Chairman of the Department of Neurology was announced in *The Stethoscope*, July 1968.

## Radiotherapy Headed By Dr. Chang, Hyperbaric-Oxygenation Specialist

Dr. Chu Huai Chang, Attending Radiologist, P.H., and Professor of Radiology, P&S, has been appointed Director of Radiation Therapy, Department of Radiology, effective July 1.

Dr. Chu Chang

Dr. Chang was born in Fengting, Fukien, China, and received the M.D. in 1944 from St. John's University Medical School in China, after completion of a one-year rotating internship at the First Hospital of the Red Cross Society of Shanghai. He received a Fellowship from the Donner Foundation in 1947 and served as a Fellow in therapeutic radiology, University of California Medical Center, San Francisco, 1947-49; resident in radiology, Jersey City Medical Center, New Jersey, 1949-50; and research Fellow in anatomy in the study of radia-

tion and hormonal carcinogenesis under Professor W. U. Gardner at Yale University, 1950-51. From 1951 to 1962 he served on the staff of the Department of Radiology, Yale University.

Prior to coming to Presbyterian Hospital in 1962, Dr. Chang was Assistant Professor of Radiology, Yale University School of Medicine, and chief, Section of Radiation Therapy, Yale-New Haven Medical Center.

He became a diplomate of the American Board of Radiology in 1953.

Dr. Chang's major research interests are: the tolerance of the central nervous system to ionizing radiation; micro-circulation of tumors; homologous and heterologous tumor transplantation; and experimental and clinical radiotherapy under hyperbaric oxygenation. Dr. Chang has contributed widely to the radiological literature on these subjects.

He has been director of a radiation therapy training program supported by the National Cancer Institute, and has been instrumental in the centralization of our new radiation therapy center.

He is married to the former B. Tim Lim and has two children, Iris and Eric. Dr. and Mrs. Chang live in New York City.

## Dr. Bartelstone Named Associate Dean, Will Also Direct Clinical Education

Dr. Herbert J. Bartelstone

Dr. Herbert J. Bartelstone, Professor of Pharmacology, P&S, and Professor of Dentistry, DOS, has been appointed Director of Clinical Education and Associate Dean, Dental and Oral Surgery, it was announced recently by Dean Melvin L. Moss.

Dr. Bartelstone has been associated with Columbia-Presbyterian since 1946. He has been a member of the Department of Pharmacology since 1953.

His major areas of research have been concerned with permeability of teeth, the action of drugs on the venous system, cardiac function, and the coronary circulation.

He joined the staff of the

Dental School to develop and implement curricular changes which stress prevention of both dental caries and periodontal disease. He is convinced that most cases of dental disease could be prevented if dentists understood prevention and then practiced preventive methods.

A native of New York, Dr. Bartelstone received the B.S. from City College of New York in 1942. He attended Columbia University, where he received the D.D.S. in 1945 and the Ph.D. in pharmacology in 1960. From 1945 to 46 he served an internship, and from 1946 to 47, served as research Fellow at Montefiore Hospital.

He was dental consultant, Central Office, Veterans Administration, Washington, D. C., 1949-50, and consultant, Radioisotope Division (for research), Veterans Administration Hospital, Bronx, N. Y., 1949-51. He spent two years in radioisotope research as a member of the National Institutes of Health, United States Public Health Service, 1951-53.

He is the father of two children, a son, John, 14; and a daughter, Jamie, 13. He lives in New York City.

## Weinberg Scholars Grow In Numbers

Almost twice as many employees of Presbyterian Hospital are studying under the Weinberg Plan this semester as did last year, the Personnel Office has announced.

The Sidney J. Weinberg Employees Educational Aid Reimbursement Plan, as it is officially known, was started eight years ago by a group of Mr. Weinberg's many friends. Each of them gave \$70 to the hospital to commemorate his 70th birthday. These presents, which totaled over \$45,000, were supplemented by a contribution from Mr. Weinberg to make a total of \$70,000, and formed the basis for an endowment fund for the education of PH employees. Mr. Weinberg, who was a well-known PH Trustee, died in July 1969, but his education plan grows in popularity.

Eighty-one applications for tuition were approved this fall, according to Lillian Oring, coordinator of the plan. Of these, 51 were those of degree candidates studying at universities and colleges in the metropolitan area.

The 81 successful applicants and their departments are:

Mildred I. Abbott  
Nurse Midwife, Nursing Service  
Norma Alamo  
L.P.N., Nursing Service  
Ursuss F. Alvarez  
Inhalation Therapy Technician, Inhalation Therapy

## Rudin Foundation Helps Alleviate U. S. Shortage Of Physicians And Nurses

On October 6, Dean Paul A. Marks hosted a reception honoring Samuel and Henry Rudin, and the first Rudin Scholars, marking the inception of the Louis and Rachel Rudin Foundation's gift program to the College of Physicians and Surgeons. The Foundation was created at the wish of the late Edward Rudin to provide aid to medical and nursing schools in carrying out their programs in educating and training doctors and nurses.

The gift program established by the Rudin Foundation includes \$30,000 per year for three years, to be used for scholarship support for medical students. An additional gift of \$15,000 per year was designated to be used under the direction of Dr. Jay I. Meltzer for the training of nurses in techniques of renal transplantation.

Dr. Meltzer, long-time family physician to the Rudin family, presented the first Rudin Scholars. In addition to Samuel and Henry Rudin, others present included Jack Rudin, Dr. Daniel C. Baker, Jr., Professor & Chairman of Otolaryngology, also a long-time physician to the Rudin family, Dr. Richard C. Mason, Assistant Dean for Student Affairs and Chairman of the Scholarship Committee, and other members of the P&S administration.

The recipients of the first Rudin scholarships are: Charles Blackinton, a second-year student and graduate of the United States Naval Academy at Annapolis, who is also

aided by the G.I. Bill; Patricia A. Fraser, a second-year student and graduate of Manhattanville College, also supported by a National Medical Fellowship; Charles F. Lovell, Jr., a third-year student from Pilot Mountain, North Carolina, also aided by a National Medical Fellowship; Leslie S. Newton, a third-year student, one of the leaders of his class; Charles H. Roussel, a third-year student, who came to P&S from Kansas by way of a Harvard undergraduate degree; David N. Tornberg, a third-year student and graduate of Annapolis, currently serving on the Dean's Advisory Committee, and Joan C. Walls, a third-year student, said by her peers to show an exceptional degree of motivation toward medicine and especially toward pediatrics.

The nurses working under the supervision of Dr. Joseph A. Buda, Assistant Professor of Clinical Surgery, P&S, in the renal transplantation program, who are the recipients of funds provided for training in this complex and important area, were also present. The nurses are: Marilyn Abate, Louise Blanchet, Mrs. Susan Blum, Mrs. Bette Frey, Kathleen Knight, Deborah Lyon, Mrs. Mary Noonan, Mrs. Maureen Patterson and Mrs. Virginia Russell.

The occasion was a pleasant one for all concerned, and Dean Marks acknowledged his deep appreciation and gratitude to the Rudin family for this very significant gift program.

Posing for group photo following reception are, from left in top row, Joan C. Walls, Patricia Fraser, Samuel Rudin, Henry Rudin, Leslie Newton, and in bottom row, Charles Blackinton, David N. Tornberg, Charles H. Roussel, Charles F. Lovell, Jr.

## Books, Yes: Buy Or Bring Them

The Milbank Library announces its annual book sale, December 7-8. There will be an excellent selection of fiction, biographies, history, humor and much more. Many fine paperback editions will also be offered.

A special feature of this year's sale will be a group of prints, acquired by the Junior League, representing the works of famous impressionists, contemporaries, traditionalists, and many others, featuring

water colors, oils and sketches. The prints, suitable for framing, will be quite inexpensive and will give the purchaser an opportunity to obtain prints of some very famous and sought-after works of art.

The Library welcomes any and all contributions *Stethoscope* readers may wish to make. If you have any books or paperbacks at home that you no longer need, please bring them to the Library on PH 20.

## Orthopedic Surgeon Issues Warning To Parents In Conjunction With Annual Scoliosis Course

The New York Orthopaedic Hospital at the Columbia-Presbyterian Medical Center is sponsoring a postgraduate course on scoliosis to help orthopedic surgeons cope with an increasing incidence of this disease in the nation.

Scoliosis, or a sideways curvature of the spine, is a condition of gradual onset that usually occurs in children—predominantly adolescent girls—and sometimes leads to severe disability, even early death. The tendency to develop scoliosis can be inherited.

The number of scoliosis patients has been rising in the United States, partly because more youngsters are being referred to medical centers by general practitioners, partly because more scoliosis patients, with proper treatment, have been reaching maturity and establishing families.

The three-day course will be conducted in the Alumni Auditorium from Thursday, November 5, to Saturday, November 7, starting at 8:00 a.m. each day. The course faculty is a veritable "who's who" of scoliosis specialists, visiting

professors from various cities in the United States and Canada. They are Drs. Walter P. Blount, Alice L. Garrett, Louis A. Goldstein, Jacob C. Graham, John E. Hall, James H. Hardy, Stanley Hoppenfeld, John H. Moe, Edward J. Riseborough, Theodore R. Waugh, and Robert B. Winter.

There will be 200 orthopedic surgeons attending the three-day conference—the second to be held at the Columbia-Presbyterian Medical Center—and new techniques in nursing care, physiotherapy, brace construction, and surgery will be discussed. The course will be directed by Dr. Hugo A. Keim, Assistant Attending Orthopedic Surgeon and head of Scoliosis Clinics at the Columbia-Presbyterian Medical Center.

Dr. Keim, who will deliver two lectures at the scoliosis course, emphasized the need for early detection of scoliosis.

"An encouraging fact about spinal curvature," Dr. Keim said, "is if scoliosis is detected early it can often be arrested and severe spinal deformity prevented. Many new tech-

niques have been developed in the past thirty years which help orthopedic surgeons to correct most of the deformity."

"Unfortunately," Dr. Keim went on, "our Orthopedic Service still sees many severely deformed youngsters who could have been helped with spinal bracing and proper exercises when their condition first developed."

Advances in surgery and respiratory aids now enable orthopedic surgeons to give better care even to those unfortunate children affected with severe curves that have already gotten out of control.

Dr. Keim warned parents that children can develop their curves early and without any symptoms. He advised parents of adolescent youngsters to have their family physician or pediatrician do a very thorough examination of the spinal column every year. When scoliosis is detected, proper treatment should be started without delay. Procrastination or attempts to correct the condition with exercise alone can only lead to a worsening of the disease.

## Occupational Therapy: Worth Doing

As part of the "Summer Experience in Occupational Therapy" program during the summer, 30 students worked as aides in the occupational therapy departments of 24 area hospitals, including Psychiatric Institute. The August issue of *Stethoscope* reported on the orientation of students from many colleges and universities in the United States to prepare them for participation in this program, organized by the School of Occupational Therapy, Faculty of Medicine, Columbia University.

On September 14, these same young people met in the Department of Occupational Therapy for a discussion of their individual experiences during the summer months. They sat in a comfortable group to share these experiences with Professor Adelaide Deutsch, associate director of courses in occupational therapy, and Rosalee Miller, assistant in occupational therapy.

The students had diversified assignments. Some of them worked with retarded children, some with severely disabled patients, some with youngsters suffering from cerebral palsy, some with stroke victims, and others with psychiatric patients. Each person spoke at length about his own particular experience. One young woman, who worked at a rehabilitation center expressed it this way:

"As I thought more and more about the goals of occu-

Occupational therapy summer aides discuss their individual experiences with Assistant in Occupational Therapy Rosalee Miller and Professor Adelaide Deutsch (background).

pational therapy I began to realize how very important this type of service must be to a disabled person. Teaching a little girl to feed herself when she has two hooks instead of two hands, helping a man get back fine finger coordination so that he can go back to work, or showing a woman in a wheelchair how to organize her tasks so she will save time and energy in the kitchen is, I feel, something worth doing."

Diverse as their experiences were, however, there were personal gains and feelings about the program which seemed to be common to all, and which several expressed in the following way:

"The summer experience program provides one of the most wonderful ways for an individual to acquire an accurate picture of occupational

therapy, while it also increases one's motivation to pursue this career in the future. During this past summer, this program gave me a much deeper insight into the field of occupational therapy, as well as a deeper insight into the world, the people around me, and myself."

Later, Miss Miller expressed her appreciation to the hospitals and occupational therapy departments that participated in this summer's program. She complimented the staff for the inspiration and outstanding supervision they provided these young people. She voiced the hope that more hospitals would find a way to participate in this program which provides such a significant means for channeling young people into the health professions, thus helping to alleviate the great staff shortages in hospitals.

Charles Schnebel

The appointment of Charles Schnebel to the post of foreman of the Engineering Repair Department has been announced by Frank Bernard, Supervisor of Engineering, and John Bolger, Chief Engineer.

Mr. Schnebel is not a newcomer to Presbyterian Hospital. He started here in plumbing and engineering and brings a unique knowhow to his newly created post. Long concerned with the maintenance of the complicated, behind-the-scenes machinery of the engine room, the machine room and the heating system, Mr. Schnebel, working with his crew of 12 men, is now concentrating on a new and more sophisticated approach to his work—preventive maintenance. This program will work in conjunction with a central control system and a computer to maintain the equipment in the Engineering Department.

Mr. Schnebel explained, "We would like to try to anticipate trouble before it happens. As it stands now, we never know what is going to happen next."

He supervises all repairs for the engine room, the machine room, pipe work and care of the tunnel; its cleanliness and upkeep.

With the construction of many new buildings and additions to existing buildings at the Hospital, the work of the repair crew has increased steadily. Keeping up with the many problems presented by these new, modern buildings and additions is something of a challenge.

According to Mr. Schnebel, "We do all the emergency repair work when any of these systems break down. And if we can anticipate what repairs may be needed before they break down, we will have accomplished our goal—preventive maintenance."

Mr. Schnebel lives in Freehold, New Jersey, with his wife and five children—ages three to eleven.

What does he do in his spare time at home? "I do all engineering and plumbing repairs under the supervision of my boss—Mrs. Schnebel."

## Dr. Langford And His Clinic Celebrate 35th Anniversary

October 1 was a day for double celebration.

Dr. William S. Langford, Attending Pediatrician, BH; Attending Psychiatrist, P1 and Professor of Psychiatry, P&S, celebrated his 35th year as Director of the Pediatric Psychiatric Clinic. And the Pediatric Psychiatric Clinic completed its 35th year as an integral part of the Pediatric service of the Presbyterian Hospital.

Immediately after returning from a year's special study at Johns Hopkins Hospital in Baltimore, on October 1, 1935, Dr. Langford set about to organize this clinic, directly affiliated with the Hospital and with the pediatric division of Vanderbilt Clinic.

"It was called 'pediatric' because of the administrative auspices and 'psychiatric' to give it its correct name.

Dr. William S. Langford

In 1935 the budget for this work was contributed entirely by the Commonwealth Fund, and the staff consisted of a psychiatrist, a psychiatric social worker and two secretaries—one full-time and one part-time.

Dr. Langford summarized, in part, the accomplishments of the Pediatric Psychiatric Clinic during its first 13 years: "During the past 25 years a number of pediatric-psychiatric liaison services have been set up in different pediatric teaching centers to acquaint the pediatrician with what psychiatry has to offer in the diagnosis and treatment of the common personality and behavior disturbances of childhood, and what prophylactic measures can be taken. The psychiatrically oriented pediatrician is better able to meet the demands of his practice. The way in which the Pediatric Psychiatric Clinic has developed is an example of orthopsychiatry in action in a pediatric setting."

A far cry from the understaffed, fledgling service begun in 1935, Dr. Langford now has one half-time and 11 full-time pediatric psychiatric residents on his staff. Pediatric residents receive some psychiatric teaching. They may train for two years in pedi-

atric psychiatry after they have had two years of general psychiatry.

The residency program in pediatric psychiatry at Presbyterian is currently one of the largest in the United States.

Dr. Langford also coordinates the work of 31 child psychiatrists, two psychologists here and one in Psychiatric Institute, two social workers here and two in Psychiatric, a music therapist, and occupational and physical therapists.

Dr. Langford was born in Lakewood, New Jersey, and received the A.B. from Harvard College in 1929, and the M.D. from Columbia University's College of Physicians and Surgeons. From 1934-35 he was a Fellow in child psychiatry at Johns Hopkins Medical School. He joined the staff at Columbia-Presbyterian Medical Center in 1935.

He is married to the former Rebecca Beeman, and is the father of two children—Eric and Mary. His son, Eric, is Associate Professor of Mathematics at the University of Maine. Dr. & Mrs. Langford live in Castle Village in Manhattan and maintain a summer residence in Cleveland, New York, in southeast Oswego county.

If Dr. Langford were to appear on the TV show, What's My Line?, the panel would have a hard time guessing his avocation. He is a pickle maker! He came by this most unusual hobby, he stated, "Because I remembered my mother's wonderful home-made pickled green tomatoes for which she never followed any standard recipe. After she died I just kept experimenting until I hit it. And they are delicious."

Out of the kitchen, Dr. Langford paints in oil, makes frames for pictures, keeps tropical fish and collects a wide variety of fern, which he gathers from the countryside and replants in his own garden.

He is the only member of his large family who is a physician. In retrospect, Dr. Langford believes that his interest in medicine started when he was a boy in the eighth grade. At this time he was introduced to debating and was assigned the job of debating against child labor reform. He became acutely aware of the many injustices inflicted upon youngsters in those days and found it very difficult to debate against this much-needed reform.

This led him eventually to develop a great interest in children and in their well-being. He then became vitally interested in medicine and, in turn, in his specialty of pediatric psychiatry.

## Nursing Students "Model" At Superb Fashion Show Of PH Women's Auxiliary

The annual luncheon and fashion gala, sponsored by The Presbyterian Hospital Women's Auxiliary, was held in the gracious setting of the St. Regis Roof and Penthouse, on October 28. This event benefits the Presbyterian Hospital by the sale of your thrift to the Stuyvesant Square Thrift Shop.

The guest of honor was Melvin E. Dawley, Chairman of the Board of Lord & Taylor. Commentary for the Caravan of Fashion was done by Countess de Veyrac.

A scene from the Caravan of Fashion.

Mrs. W. Duane Todd, President of the Auxiliary, presented an award to Mr. Dawley, expressing appreciation for his generous contribution of the Lord & Taylor Caravan of Fashion.

Mrs. Todd pointed out that without the support of institutions like Lord & Taylor, endeavors such as this, to aid the Hospital in its charitable work, would be useless.

The affair was spectacular, and star-studded representationally. The latest and loveliest creations of such noted fashion designers as Geoffrey Beane, Donald Brooks, Anne Fogarty, Vera Maxwell, Pucci and Chester Weinberg, were superbly presented by Lord & Taylor.

Mrs. Thomas A. Burke was chairman of the benefit committee, assisted by Mrs. David Andrews, Mrs. Truman Susman and Mrs. Cornelius J. Tyson. Mrs. Hamilton Southworth and Mrs. George Humphreys were in charge of seating arrangements.

Guerlain's newest perfume, Chamade, in an elegant flacon, was given to each guest at the luncheon, courtesy of Lord & Taylor.

Mrs. H. Houston Merritt,

Melvin E. Dawley with student nurses.

Mrs. A. J. Binkert and Mrs. Paul A. Marks were among the guests.

Four guests were the lucky door-prize winners. And what door prizes they were!—a Russian sable boa by M. W. Kitt Furs, Inc., luncheon for two at Giovanni's, two theater tickets for "Two By Two" and a beautiful pin from Tiffany & Co.

To dramatize the true purpose of the event, the affair ended with a surprising flourish. Six pretty, young student nurses, attired in uniform—one in the latest from the gay nineties, with leg-of-mutton sleeves and ankle-length skirt—appeared on the runway with Mr. Dawley. He commented, "While fashions change from year to year, the nurses' uniform is one I hope never changes or goes out of style."

Guests at the luncheon could attend only if they had contributed \$25 or more of thrift to the Stuyvesant Square Thrift Shop. Sales from the Thrift Shop benefit the Hospital, enabling the Auxiliary to cooperate in supporting many worthy projects.

However, the need for thrift does not begin and end with the luncheon and fashion show. There is a year-round need for your contribution of thrift marked for Presbyterian Hospital, to be left at the Stuyvesant Square Thrift Shop, 1430 Third Avenue (81st Street). If you cannot bring or send your donation to the Thrift Shop, a pick-up service is available by telephoning SW 5-3638.

### Brigadoon Beckons

The P&S Medical Students annual fall musical production urgently needs musicians for its orchestra. This year's production, the musical "Brigadoon," will be presented at Bard Hall, November 19, 20, 21 and 22.

Any musicians interested in participating in this production should call Ed Leahey or Jay Guinther at Bard Hall or Dr. Douglas Greer at the Eye Institute, before November 12. Some instruments can be provided.

## Dr. Altman, Unretired, Rises To New Heights Of Usefulness

For some, retirement at age 65 means just that. But for Dr. Harry Altman it did not mean retirement in any sense of the word. Dr. Altman was Associate Clinical Professor of Pediatrics, P&S, and Associate Attending Pediatrician, PH, until his retirement in 1966.

Dr. Harry Altman

Today, at age 71, he has just begun a brand new, very exciting and challenging career at the Children's Village in Dobbs Ferry, New York, where he has been appointed Pediatric Coordinator of Medical Services.

Children's Village is a residential community for emotionally disturbed children, ages five to 10 years. These youngsters are not mentally retarded or physically handicapped in any way, and remain in the community for six months to two and a half

years, after which they either return to their homes or are transferred to another institution for further care and treatment.

In addition to handling all the pediatric problems that arise at the Village, Dr. Altman works very closely with the other services—psychiatric, psychological, social service, educational, recreational therapy and nutrition—and maintains a close liaison with the various chaplains.

In spite of this active schedule, he manages to spend part of each day in the private practice of pediatrics in New York City. He is also consulting pediatrician at Lincoln, St. Luke's and St. Barnabas Hospitals in New York City, and at the Good Samaritan Hospital in Suffern.

And he still comes to Presbyterian Hospital at regular intervals to attend conferences and clinics and to participate in rounds on the pediatric service.

Dr. Altman is married to the former Gertrude Feuerstein. They have two children: a son, Kenneth, a 1954 P&S graduate, and a daughter, Mrs. Carole Henkoff, who is a psychiatric social service case worker. The Altmans live in Riverdale, New York.

## Radiology Service Installs New X-Ray. . .

*Continued from page one*

to position the adjustable unit at the height of the patient's chest and press a button.

Before the new unit served its first patient on September 8, James J. Welch, radiologic technologist assigned to the Vanderbilt Clinic chest x-ray, had to go through the following steps to obtain one chest film: go to the darkroom and load a cassette with film there; return to the x-ray room and insert the cassette in the wall chest holder; usher the patient to the x-ray unit, position him, position the x-ray tube and then make the exposure. In the second phase of making the radiograph, Mr. Welch would remove the cassette, go back to the darkroom to take out the film for developing and drying.

The new chest unit reduces all the walking and manual procedures to two steps: 1) positioning the adjustable unit at the height of the patient's chest, and 2) making the exposure.

The x-ray tube and the film holder are linked in the new unit, making a separate adjustment unnecessary. The film holder consists of a magazine containing 125 films. Each film is sandwiched between two screens that enclose it in a

James J. Welch, Radiologic Technologist in the Radiology Service, records completed x-ray film in his book.

vacuum. The absence of air near the film makes for sharper impressions.

After the film has been exposed, it is moved from the ejection portion of the magazine, through a light-tight conveyor, to the automatic processor. The processor develops and dries the film, which slides into the receiving tray—ready to be interpreted by the radiologist—less than two minutes after the exposure.

## Be A Doll—Dress One

Christmas and the annual doll's tea party are approaching rapidly, and volunteers are needed to dress a doll.

If you would like to volunteer your services, please call Jane McConville, Assistant Director of Nursing, Babies Hospital, Extension 3223.

The date of the doll's tea party will be announced in *Stethoscope's* Christmas issue in the "Calendar of Events."

## Dr. Carroll Behrhorst Story Told In Book By Edwin Barton

When Edwin Barton first went to Central America, accompanying small groups of P&S students on their assignments, he did not know that he was about to write this book. But when he became acquainted with the work of a certain North American doctor and his Guatemalan staff, Barton felt compelled to tell the story that was being enacted before his eyes.

Readers who know about Dr. Schweitzer in Africa will now have a chance to see what is happening on the American continent in Central American mountains, where disease and death have challenged the energies of Dr. Carroll Behrhorst, a resourceful doctor from Kansas.

The book, published in September, 1970, is called "Physician to the Mayas, the Story of Dr. Carroll Behrhorst, a Schweitzer of the Third

World," by Edwin Barton, Fortress, Price, \$5.95.

Poverty, illiteracy, and high mortality from tuberculosis, measles and infant starvation—these were the conditions which surrounded Dr. Behrhorst as he waited patiently, day after day, in the town of Chimaltenango, hoping to gain the confidence of a suspicious and hostile people. There came a day when he restored life to a dying baby, and the news of what seemed a miracle went out to the scores of surrounding villages.

This happened only eight years ago. Behrhorst's "miracles" were his step-by-step progress in overcoming native superstitions and his phenomenal success in developing a skilled and deeply devoted staff of Indians and Ladinos.

Author Barton, Director of Student Activities at Bard Hall, Columbia University's College of Physicians and Surgeons, lives in a wide world. He has done extensive writing for magazines and newspapers, and he served as director of the Mercy Project to evacuate Biafran children during the Nigerian war. He is a graduate of Duke University and holds a B.D. degree from Yale University Divinity School.

In these 200 closely packed pages, Barton has succeeded in creating a work which will strike fire in every reader concerned with the twentieth century efforts of the human race to rise.

Edwin Barton, with friends

## "Basic Drawing For Biology Students" Is Published

Emil J. Bethke

Emil J. Bethke, B.A., Instructor in Ophthalmology, P&S, and member of the Association of Medical Illustrators, New York, N.Y., recently authored a book, "Basic Drawing for Biology Students," published by The Charles C. Thomas Publishing Co., Springfield, Ill.

Because the biology student had been left so long without adequate assistance in his drawing needs, Mr. Bethke decided to write this text to fill the gap between need and availability, to provide instructors with a source of help for their busy college students, and for those instructors who would like to improve their blackboard diagrams.

Mr. Bethke demonstrates

that biological drawing is not "art" per se, but is representational drawing which can be learned as a craft is learned. He stresses the importance of observation so that the student can learn to visualize and interpret, analyze and relate, and by seeing an object both in its simplicities and complexities, be able to put detail in its proper perspective.

The book—concise, lucid and graphic—is, if a phrase may be borrowed, a do-it-yourself kit. The text is divided into three main headings which are the basic principles: proportion, shading and perspective. Strangely enough, representational drawing consists of only these three principles. No matter what is drawn the princi-

ples are the same, whether the outline of a simple cell or the most complex structures of biological specimens.

As a youngster Mr. Bethke copied comic strip characters, as many children do, but it was soon discovered that he was quite talented.

Following graduation from the University of Iowa, he worked at that institution until 1932 when he came to Presbyterian.

Mr. Bethke had been planning a career as a portrait artist but, while living in a rooming house in Iowa, he met a group of physicians who introduced him to medical illustrating. His first work in this field was in obstetrics and gynecology, but he later switched to ophthalmology. When the opportunity for employment at the Medical Center came his way, he continued in the ophthalmological field.

Mr. Bethke is married to the former Marjorie Quinlan, who is also an artist. Mrs. Bethke worked as a technician in the ESH Eye Institute years ago and then became Mr. Bethke's assistant. "I married her to remove the competition," he quipped.

Mr. and Mrs. Bethke have two children—a son, Steven, and a daughter, Paula, both married. The Bethkes live in Montvale, N.J.

# NEWS OF NURSING

From left, Mary Jane Brooks, Mildred Peterson, and June Weiss.

Three PH nurses participated in a program on Environmental Control in Medical Care Facilities, sponsored by the Program of Continuation Education, School of Public Health and Administrative Medicine, CU, held in Philadelphia, Pennsylvania, September 21-25.

Mary Jane Brooks, supervisor, nursery, PH; Mildred Peterson, supervisor, operating room, PH and June Weiss, instructor, Staff Development (Nursing), PH, discussed *Care of General Nursing Areas, Operating Rooms, Nurseries and Intensive Care Units*.

Dr. Francis C. Lindaman is the director, and Noreen M. Clark is the curriculum coordinator for Columbia's Program of Continuation Education in Public Health.

The program was coordinated by Dr. Walter L. Obold, professor emeritus, Biological Sciences, Drexel University, Philadelphia.

Judith Schlinsock of Neurological Institute, was a panel member for the E.A.C.T. (Educators, Administrators, Counselors and Teachers) Section of the Delaware Nurses' Association, for their program, "The Nurse in an Era of Specialization."

Miss Schlinsock spoke about her activities, functions and educational preparedness as a clinical specialist.

Mrs. Gilda Gehm, Assistant Director of Nursing (Operating Rooms), visited Cleveland

University Hospital in Ohio, in September.

She observed the physical plan, equipment and method of administration of the operating rooms.

Dorothy J. del Bueno, Assistant Director of Nursing (Staff Development), has accepted an appointment as editorial consultant to R.N. magazine for 1971.

Miss del Bueno has published in the *American Journal of Nursing* and has a forthcoming article in *Nursing Outlook*.

Mrs. Mildred Abbott, certified nurse-midwife, Sloane Hospital, PH, attended the annual meeting of District I of the American College of Obstetricians and Gynecologists, held in Hartford, Connecticut, October 6-9.

Mrs. Abbott participated in a panel discussion on the "Use of Allied Health Personnel to Help Meet the Manpower Problem in Obstetrics and Gynecology." She presented *The Certified Nurse-Midwife—A Re-evaluation of Her Role*.

Mrs. Sylvia Delaney, supervisor of nursing, Sloane Clinic, VC, participated in luncheon conferences at the Conference on Obstetrical and Gynecological Nursing, at the District II meeting of the American College of Obstetricians and Gynecologists, held in New York, at the Biltmore Hotel, October 22-23.

Anne Spencer, head nurse, Harkness Pavilion 8 Nursery, also attended this meeting.

## School Of Nursing Co-Sponsors Thanatology-Related Symposium

A major symposium will take place at the Columbia-Presbyterian Medical Center on November 6 and 7.

The symposium, plus an array of ancillary workshops, will keep answers to questions about "Psychosocial Aspects of Terminal Care."

The multi-disciplinary event is sponsored by the Department of Psychiatry and the School of Nursing, Faculty of Medicine of Columbia University, and The Foundation of Thanatology (for article on thanatology, please see July 1970 *Stethoscope*).

Helen F. Pettit, Professor of Nursing in the School of Nursing, Faculty of Medicine at Columbia University, and Dr. Lawrence C. Kolb, Professor of Psychiatry, P&S, have been named chairmen for the proceedings, which are scheduled to begin at 8:00 a.m., November 6, at Maxwell Hall.

## Major Search Among Minorities For Nurses To Be Staged By Recruitment Specialist

Mrs. Darline Bacon has recently been appointed to a newly created post in the nursing department—Associate in Nursing (Recruitment), it was announced by Mrs. Andrea Fisher, Director of Recruitment.

Mrs. Bacon's efforts at recruiting young women to a career in nursing will be directed specifically toward black, Puerto Rican, Oriental and other minority groups.

She explained a three-point plan she has devised to help execute her campaign.

First, she will visit community and professional organizations that have a minority population, or at least have some knowledge of, or contact with, such groups; secondly, she will visit high schools, colleges and universities to attract and stimulate the students toward a nursing career; and thirdly, she will utilize the printed word—in magazines,

newspapers and periodicals—advertising in Afro-American, Spanish and other publications that are widely circulated among minority groups.

Mrs. Darline Bacon

Said Mrs. Bacon, "I am very excited about the whole program. It is a challenge, not only for me, but for these minority groups. There is an

enormous potential within these people and if I can attract many more qualified young black, Puerto Rican and Oriental people into the rewarding and satisfying field of nursing, I will feel that I have accomplished my goal."

A native of St. Louis, Missouri, Mrs. Bacon received the R.N. from Homer Phillips Nursing School in St. Louis and the B.S. from the University of Colorado. She received the M.A. in public health nursing from Teachers College, Columbia University, and for two years before coming to Presbyterian Hospital was a member of the faculty at Columbia University, where she taught public health nursing.

She is married to Dr. Walker J. Bacon, a dentist, who practices in Harlem.

Dr. and Mrs. Bacon live in Riverdale, New York, and have a daughter, Holly, 15 months old.

## Exchange Visitors Complete Study, Saw Much Of America On Vacation

Nineteen nurses from nine different countries were honored at a reception on September 2, in PH 1-50, to celebrate the completion of their one-year course at the Presbyterian Hospital's exchange-visitor graduate nurses program.

Ruth A. Rayner is the program coordinator, assisted by Bonnie Jones, instructor.

The nurses acquire clinical experience four days a week in various departments within the Hospital. The fifth day is devoted to classes in nursing, medicine and acquiring some knowledge of American culture.

Living in Maxwell Hall, the girls really enjoyed getting to know one another—learning our American and each other's diverse international customs. During their vacation period the nurses toured the United States and, as Miss Jones remarked, "They probably saw more of our country in one month than we will see in our whole lifetime."

Several of the nurses will return to their hospital jobs in their native countries. Some plan to continue in other exchange-visitor programs in the United States. Others have decided to teach in their respective countries and one nurse, Annemim Kalf, from Holland, will remain at Presbyterian.

The nurses and the countries they came from are: Anna Aasheim, Kari Ashbjørnsen, Marianne Aulie and Karin Bjerke from Norway; Haruko Abe and Ryuko Fugimura from Japan; Ho Ryun Byun, Sook Ja Choi and Chung Ja Lee from Korea; Liu Fang Chou and Ching-yu Yank from Taiwan; Gunny Hagelberg, Sonja Lofgren and Yvonne Sorensson from Sweden; Annemim Kalf from Netherlands (Holland); Grete Lindegaard and Grete Scharfe from Denmark; Irene Morris from Liberia and Gillian Siggins from Australia.

## Medical Data Processing Being Taught In Course

Dr. William A. Bauman, Director of Medical Data Processing, announced a course in medical data processing, held in Room 30, PH 4, from 4:00 to 5:00 p.m., which began on October 20.

The series of lectures are an introduction to PL/1 programming for those who have had a Fortran course or equivalent programming experience, and are given to administrative and medical personnel.

The lectures given in October were: Tuesday, October 20 and 27; Thursday, October 22 and 29; Friday, October 23 and 30. The lectures to be given in November are: Thursday, November 5 and 12; Friday, November 6 and 13 and Tuesday, November 10 and 17.

## Medical Computing Class To Be Given Next Month

Medical Data Processing also announces that the 14th Introduction to Medical Computing course will be conducted for the benefit of medical and administrative personnel next month. The course will consist of three one-hour lectures and will be given from 4:00 p.m. to 5:00 p.m. on Monday, December 7, Wednesday, December 9, and Friday, December 11.

The lectures will be held in Room 5 on the first floor of the 102nd Engineer Battalion Armory, which may be reached through the 168th Street entrance.

Registration cards can be obtained on P.H. 4-33 and should be returned by December 4.

## Telecon Of Business World Becomes Telelec At Squier

Seated at table in background, Drs. John K. Lattimer and Stanford Pulrang conduct a "telelec" in Squier Library.

On August 24, in the Squier Library, Dr. John K. Lattimer, Professor and Chairman, Department of Urology, and Dr. Stanford Pulrang, Director of the Commonwealth Fund Educational Project for the Department, conducted a live telelecture (telephone TV open-circuit) between the Medical Center and the urological departments at the following medical schools: The branches of the University of Texas at Dallas and San Antonio, Baylor University in Houston, the University of Arkansas in Little Rock, of Alabama in Birmingham, and Tulane in New Orleans.

The topic under discussion was *Management of Extrophy of the Urinary Bladder*.

Dr. Lattimer used 45 slides in a one-hour presentation. Each group had been furnished a set of slides by our Department of Urology and the widely scattered audience saw them simultaneously as they were presented in New

York. Each group was at all times in direct communication with Dr. Lattimer and with each other. There followed a 20-minute question and answer session which was a good, lively discussion.

Dr. Blackwell Evans, Associate Professor of Urology at Tulane University, was the chairman of the conference and introduced and closed it from New Orleans.

Dr. Lattimer's audience in the Squier Library consisted of attending physicians, residents, Fellows, students and nurses.

The technical equipment worked beautifully throughout. According to Dr. Pulrang, the telephone open-circuit conference has been used for some time in the business world and recent improvements in technique give it a vast potential in medical education.

The group in the south, under Dr. Evans's leadership, has been experimenting with it, but as far as we know, this was a first in our area.

## Cerebral Aneurysm Workshop

The panel members were, from left, Judith Schlinsock, Mary Miskimon, and Laurie Pollock.

The Neurological Institute presented its Cerebral Aneurysm Workshop in the Alumni Auditorium on October 14 for nurses from the four-state area of New York, New Jersey, Connecticut and Pennsylvania.

Mrs. Beverly Jones, supervisor, Nursing Staff and Staff Development at Neuro, organized the program with the assistance of Mary Giordano, head nurse, and the entire NI 9th floor nursing staff.

Greetings were extended by Mary Windrow, Director of Nursing Service, PH, and Martha E. Haber, Assistant Director of Nursing, NI.

Mrs. Jones then introduced Dr. J. Lawrence Pool, Professor and Chairman, Neurological Surgery, who spoke on

"Cerebral Aneurysms—Current Concepts and Treatment." A stimulating question-and-answer period followed Dr. Pool's address.

A panel of three nurses spoke on "Adapting Care for Patients with Cerebral Aneurysms." Judith Schlinsock, clinical specialist, spoke on pre-operative care; Mary Miskimon, senior supervisor, operating room, discussed in-surgery techniques and Laurie Pollock, staff nurse, NI Intensive Care Unit, spoke on post-operative care.

There followed patient presentations and care planning sessions in individual groups. The Workshop concluded with the presentation of group reports.

## TOURS, ANYONE?

Mrs. Anne Lubrecht, tour hostess for the Medical Center, is no longer located in the Service Building.

Mrs. Lubrecht's new location is in the Fund Raising Office on the 4th Floor of Presbyterian Hospital, Room 23, Extension 1926.

## Delafield Lectures

The Institute of Cancer Research of the College of Physicians and Surgeons announced a Scientific Program, to be held in the auditorium at the Francis Delafield Hospital on Fridays, from 4:00 to 5:00 p.m., during the month of November. The program is supported by the American Cancer Society, N.Y.C. Division, Inc.

The scheduled lectures are: November 6, *The Biology of Cultured Lymphocytes*, Dr. Kurt Hirschhorn, Mount Sinai School of Medicine; November 13, *Control of Cell Reproduction*, Dr. David M. Prescott, University of Colorado; November 20, *Cell Interaction in Antibody Formation*, Dr. David W. Talmage, University of Colorado.

## Dr. Arthur H. Blakemore

Dr. Arthur Hendley Blakemore, internationally known surgeon and teacher, died on October 8, after a long illness. He was 73 years old and lived in Larchmont, New York.

Before his retirement in 1962, Dr. Blakemore was Attending Surgeon, PH, and Associate Professor of Clinical Surgery, P&S. He joined the staff at Columbia-Presbyterian in 1928.

Dr. Blakemore was a pioneer in vascular surgery and an authority on surgery in liver disease. He was noted for his work on damaged arteries, his techniques for replacing blood vessels and his new procedures for relief of portal hypertension.

Under Dr. Blakemore's direction, the Sengstaken-Blakemore balloon was developed in 1954 for control of variceal hemorrhage in patients with portal hypertension. He pioneered in the development of the portacaval shunt, a surgical procedure used in portal hypertensive patients.

As a teacher, Dr. Blakemore passed along to his students the technique he developed for vascular surgery.

In 1937 he published his first experimental paper on vascular surgery, followed over the years by a long series on that subject.

Born in Lancaster County, Virginia, in 1897, Dr. Blakemore graduated from the College of William and Mary in 1918, and received the M.D. from Johns Hopkins University in 1922. He trained as a

## Realistic Displays Highlight Yearly Accident Course At P&S

Dr. Raymond Cole, Assistant Attending Otolaryngologist, PH, discusses neck and ear injuries in a work-practice demonstration during fifth annual course on emergency care and transportation of sick and injured persons, sponsored by the American Academy of Orthopaedic Surgeons and held at P&S from October 8 to October 10 for the benefit of 300 participating policemen, nurses, ambulance attendants, and other rescue personnel. Dr. Cole was one of a score of Columbia-Presbyterian doctors on the faculty of the course, which took place in the Alumni Auditorium, the 102 Engineers Army on 168th Street, and the Bard Hall swimming pool. The young lady in the photo is one of a bevy of Columbia nursing students who, as "accident victims," lent realism to the practice sessions in the Army by moaning horrendously when touched and squirting "blood" through latex rubber wounds.

## IN MEMORIAM

### Dale K. Tuller

Dale K. Tuller, former Assistant Vice President in charge of Non-Professional Services, from 1953 until his retirement in 1961, died on May 16, it was just recently learned by the Department of Public Interest. He was 74 years of age, and lived in St. Petersburg, Florida.

He joined the staff at Presbyterian Hospital in 1945 as Administrative Assistant, Food Service, and was appointed Assistant Vice President in 1953. During his tenure Mr. Tuller had responsibility for Buildings & Grounds, Personnel and Protective, Housekeeping, Food and Laundry Services, Mail Room and Messenger Services and the Purchasing Department.

Prior to joining the Hospital staff, Mr. Tuller was associated for many years with the Hotels Statler Company, Inc.

Mr. Tuller was Quartermaster, 1st Class, in the United States Navy during World War I and subsequently was appointed 2nd Lieutenant QMC, USAR. During World War II, he saw active duty as 1st Lieutenant, and rose to the rank of Lieutenant Colonel. In 1950 he was promoted to the rank of Colonel.

Following his retirement in 1961, Mr. & Mrs. Tuller made their home in St. Petersburg, but traveled extensively. He died in Birmingham, England, during one of their trips.

He is survived by his widow, Mrs. Anne Tuller, and a brother, H. Herbert Tuller, of Lawrence, Kansas.

### Balbina A. Johnson

Balbina A. Johnson, co-developer of the antibiotic Bacitracin, collapsed and died in Manhattan on the night of October 18. She was 73 years old and lived in Scarsdale, New York.

While on the staff of the Surgical Bacteriology Research Laboratory, which she joined in 1931, Miss Johnson discovered in 1943 that a strain of a harmless bacillus, *Bacillus subtilis*, had powerful antibiotic properties. She purified and concentrated this strain to produce Bacitracin. The antibiotic is still in wide use.

Miss Johnson, a 1917 Barnard graduate, held a number of appointments in her 47-year career at the Columbia-Presbyterian Medical Center. She was a research associate and lecturer in surgery in the Department of Surgery, P&S, at her retirement in 1964.

# Stethoscopia

## • WEDDINGS

Alexandra Pearson Wylie was married to Norbert A. Considine III, on September 24 in the Riverdale Presbyterian Church. Mrs. Considine is the daughter of Dr. and Mrs. Robert H. Wylie. Dr. Wylie is Attending Surgeon, PH, and Professor of Clinical Surgery, P&S.

Frances Stingo, daughter of Frank Stingo, upholsterer foreman, Maintenance & Construction, was married to Richard Kurz on October 24. The couple honeymooned in Hawaii.

James Krueger, staff pharmacist, PH, was married to Eva Urquiza, staff nurse, Beth Israel Medical Center, on September 12. The couple spent their honeymoon in Bermuda.

Margaret-Leigh (Mimi) Spencer was married to Brice Eldridge on October 11, in Bloomfield, Connecticut. Mrs. Eldridge is an occupational therapist for the Children's Service at the Psychiatric Institute, and is a graduate of Columbia University's School of Occupational Therapy.

Nora Maillepaard, Assistant Professor of Nursing, was married to Giorgio Martinis on September 1.

Winifred Woo, dietician, Food Service, PH, was married to James Koo, on October 24, in the Pauline A. Hartford Memorial Chapel.

## • NEW ARRIVALS

Mr. & Mrs. James Hawthorne welcomed their first child, a son, Gerald Robert, on September 17. Mr. Hawthorne is a programmer with Medical Data Processing Department.

## • ITEMS OF INTEREST

Mrs. Joy Silverman, wife of Dr. Joseph Silverman, Assistant Attending Pediatrician, BH, will play the lead role of Kate, in "Kiss Me Kate," a musical production to be presented by Theatre IX, a theatrical group from St. Gabriel's Church, Riverdale, N. Y., November 13, 14, 20 and 21.

Also appearing in the show will be Dr. Irving Abrahams, Assistant Attending Dermatologist, PH, who will play the part of Harrison Howell III, and his wife, Carolyn Abrahams, who will sing and dance.

Curtain time is 8:30 p.m. and price of admission is \$3.00.

Bon voyage to Helen Harris, volunteer, and Helen Blasdel, secretary, Volunteer Office, who will take off on an 11-day cruise to the Caribbean on November 7.

## • WELCOME TO:

Mrs. Margaret Hollings, new addition to the Laundry Department. Mrs. Hollings is the wife of Joe Hollings of Protective.

Vivian Hwa, R.R.L., new Assistant Medical Records Librarian, Record Room, V.C. 2.

Mrs. Lorna Coggan, physicist, who recently joined the staff of the Radiotherapy Department.

Else Trier Pedersen, new chief technician, Microchemistry laboratory, B.H.

Vivian Hwa

Mrs. Lorna Coggan

## • CONGRATULATIONS TO:

Eva Castro, who has been appointed evening head nurse, Orthopedic Service.

Jeanne Gorman, who has been appointed head nurse, surgical intensive care unit.

Sandra Howell, who has been appointed head nurse, N.I. 12.

Lynn Duncan, who has been appointed head nurse, PH 9 East.

Alice Higgins, who has been appointed evening head nurse, B.H.

Delia Forde, who has been appointed head nurse, HP 5.

Carla Jackson, who has been appointed assistant head nurse, N.I. 12.

Susan Infald, who has been appointed assistant head nurse, N.I. 8.

## DOINGS OF DOCTORS

Dr. ARNOLD P. GOLD, Associate Professor of Clinical Neurology (Pediatrics), participated in a symposium on "Children and Youth: Victims of Violence," held recently in Pittsburgh under the auspices of the University of Pittsburgh School of Medicine and the Western Psychiatric Institute & Clinic. Dr. Gold spoke on *Development Failures: Defects, Disease and Disorders*.

Dr. Gold was also Visiting Professor at the University of Hawaii from June 1 through September 1.

At the 21st annual refresher course lectures of the American Society of Anesthesiologists at the Americana Hotel, October 17-18, Dr. HERBERT J. BARTELSTONE, Professor of Pharmacology and Dentistry, P&S and DOS, spoke on *Venous Circulation and its Role in Circulatory Homeostasis*.

At the same meeting, Dr. RONALD KATZ, Professor of Anesthesiology, P&S, spoke on *Clinical Use of Muscle Relaxants*.

Dr. PHILIP POLATIN, Professor of Clinical Psychiatry, P&S, Clinical Director of Psychiatric Institute and Attending Psychiatrist, PH, was an invited speaker at the First International Symposium on Plastic and Reconstructive Surgery of the Face and Neck, at the Waldorf-Astoria, August 10. Dr. Polatin spoke on *The Psychological Aspects of Plastic and Reconstructive Surgery*.

Dr. Polatin also recently published an article, *The Frigid Woman*, which appeared in the August issue of *Medical Aspects of Human Sexuality*.

Dr. NICHOLAS A. DI SALVO, Professor and Director, Division of Orthodontics, DOS, delivered a paper *Evaluation of Unerrupted Teeth* at a joint meeting of the American Society of Oral Surgeons and the American Association of Orthodontists in Chicago in June. He also participated in the Eighth Annual Institute for Advanced Education in Dental Research held in Cincinnati in May. The seminar, held under joint auspices of the American College of Dentists and the U.S. Public Health Service, dealt with the neurobiology of the trigeminal system.

Dr. J. THOMAS BIGGER, JR., Assistant Professor of Medicine, P&S and Director, Cardiac Intensive Care Unit, delivered a paper entitled *Electrophysiologic Effects of Lidocaine on Mammalian Heart Muscle* at the International Symposium on Lignocaine (Lidocaine) in the Treatment of Ventricular Arrhythmias held in Edinburgh in September.

Dr. WILBER H. SAWYER, Professor of Pharmacology, P&S, has co-authored a scientific paper with Dr. Maurice Manning, an associate professor of biochemistry, at the University of Ohio, who successfully synthesized a new and highly potent hormone. The new hormone is believed to be a much improved variation of a natural hormone that causes contractions of the uterus during labor and stimulates the breasts to release milk after childbirth.

The synthetic hormone is the result of four years of work modifying the structure of the natural hormone—oxytocin—which is used by physicians to induce labor in about one out of 10 childbirths.

Dr. Sawyer conducted tests of the new hormone's activity on laboratory animals.

The paper has been accepted for publication in *Nature*, a British scientific journal.

Dr. PAUL A. MARKS, Dean of the Faculty of Medicine and Vice President in charge of Medical Affairs, Columbia University, lectured on *Erythroid Cell Differentiation*, as a principal symposium speaker at the VIII International Congress of Biochemistry, held in Montreux, Switzerland, September 3.

Dr. RAFFAELE LATTES, Professor of Surgery (Pathology), P&S, and Director of Surgical Pathology Service, PH, was on sabbatical leave, January-June, in the Department of Pathology of the Medical School at the University of Geneva, Switzerland.

While there he conducted a post-graduate course in surgical pathology of tumors for the surgeons of Geneva and the surrounding areas. He also lectured to the medical students at the Universities of Geneva and Lausanne, and conducted tumor seminars in Geneva, Lausanne and Basel. Dr. Lattes also did electron microscopic research work on human tumors, in association with Professor Majno, chairman of the Department of Pathology in Geneva.

Dr. Raffaele Lattes

Dr. James A. Wolff

Dr. JAMES A. WOLFF, Professor of Clinical Pediatrics, P&S, lectured at the symposium on Dyserythropoiesis, at the 13th International Congress of Hematology in Munich, Germany, August 6. His topic was *Familial Erythroid Multinuclearity: A Form of Dyserythropoiesis*. Dr. Wolff also presented The Meredith Campbell Memorial Lecture, *Natural History and Current Management of Wilms's Tumor*, at the annual meeting of the Society for Pediatric Urology in Philadelphia, in May.

Dr. FRANCIS L'ESPERANCE, Assistant Attending Ophthalmologist, PH, attended the annual meeting of the Gordon Research Conference and spoke on *Yag and Argon Laser Photocoagulation in Ophthalmic Disease*, held in New London, New Hampshire, in September.

At the annual meeting of the Retinal Society in Chicago, also in September, Dr. L'Esperance presented a paper on *Argon Laser Photocoagulation of Retinal Vascular Disease*.

Dr. THOMAS V. SANTULLI, Professor of Surgery, P&S, Attending Surgeon, PH, and Chief of Pediatric Surgical Service, BH, attended the 17th International Conference of the British Association of Pediatric Surgeons, in Manchester, England, July 21-24.

He lectured on *Anorectal Anomalies—A Suggested International Classification*.

Dr. Santulli is chairman of the Committee on the Imperforate Anus Survey of the American Academy of Pediatrics. Dr. JOHN SCHULLINGER, Assistant Professor of Clinical Surgery, P&S, is also a member of this Committee, which is conducting a study of the problems of malformations of the anus and rectum. All active members of the surgical section of the Academy, and honorary members from abroad, are participating in the survey.

# The Stethoscope

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXV, NUMBER 12

DECEMBER, 1970

## Merry Christmas

The Stethoscope takes great pride in bringing you this Christmas report on the Presbyterian Hospital's five most famous patients, the Kienast Quintuplets, and their family. The babies, born on the evening of February 24, are now almost ten months old and, as you can see, are all thriving. They are, from left, Ted (in father's lap), Sara, Abigail, Amy, and Gordon (in

mother's lap). Mr. Kienast also holds his first-born son, John, while Meg, the oldest daughter, enlivens the background. The Kienasts have asked us to convey to all their friends in the Presbyterian Hospital family their warmest greetings and wishes for a joyous Holiday Season and a happy New Year.

# The Story Of Four Pretty Girls Who Have Much To E

"This Christmas I'll have a ball," said Ramona Ricotta with quiet determination.

This Holiday Season, 15-year-old Ramona is entitled to live it up a bit. So are Nancy, Patricia, and Wendy. Last year around this time, each of the four girls had a share of a total of 60 pounds of plaster, which they wore as snug jackets. They were restricted

Ramona Ricotta models her Surcingle cast, which at this stage of wear could be called an example of modern art.

in their activities in varying degrees.

The four young ladies are just a small sample of the 100 youngsters who last year successfully underwent surgical correction of a serious spine condition at Columbia-Presbyterian Medical Center. No one knows the cause of this condition—a lateral twist in the spine that usually develops in the tenth year of life or in early teens.

The curvature, consisting either of a single curve or several curves, sneaks up on the youngster without any kind of warning. Wendy Weiss, of Stamford, Connecticut, found out about her curve when her back was x-rayed following an ice-skating accident. Ramona's elders chided her about her "bad posture"—thinking that it would go away—until her shoulder and the rib cage started to protrude. When Ramona could not get a bathing suit to fit properly, her mother, Mrs. Ruth Ricotta, decided that she should see a specialist.

If untreated, the curvature

tends to get worse quickly—as much as 40 degrees in a year.

"Patricia was being cared for by a local doctor, and her curve stayed at 45 degrees for about a year," recalls Mrs. Salvatore Marafioti of Montrose, New York. "Then in a matter of weeks, the curve jumped to 70 degrees all of a sudden."

Mr. Marafioti promptly decided to seek out a specialist for his daughter and was referred to Columbia-Presbyterian by a P&S alumnus.

Patricia, as did Nancy, Ramona and Wendy, had a condition with an ominous-sounding name—idiopathic scoliosis. And indeed, in its more pronounced stages scoliosis tests the skills of modern orthopedic surgeons and the endurance of both patients and their parents alike. But, through decades of concerted effort at medical institutions such as Columbia-Presbyterian, as a result of surgical advances and the benefit of experience, even the worst cases of scoliosis can be treated in the young. The treatment is long and arduous,

but its alternative is a grotesquely deformed spine that dooms the individual to the shunned life of a cripple and even to early death.

The word "idiopathic" refers to the mysterious nature of the disease—it arises by itself without being caused by any known mechanism. There are other types of scoliosis—caused by tumors, congenital malformations and formerly by polio—but they are far less frequent.

It is no accident that a discussion of idiopathic scoliosis almost always mentions girl patients. More than 90 per cent of teenage scoliosis sufferers are girls.

It is an irony of nature that the affliction should touch them at a time when they are just becoming aware of the need to be attractive. Not long ago, these girls would become human flotsam; today they have the knowledge that a number of techniques developed by orthopedic surgeons at Columbia-Presbyterian and other institutions can take the "s" out of their spines and keep their backs straight.

Scoliosis is on the upswing in this country; an estimated total of 10,000 scoliosis patients are being treated in the U. S. this year. The rise is attributed to more patients being corrected with the proper techniques, enabling them to reach maturity and establish families. Studies have shown that the tendency to scoliosis can be passed on from generation to generation.

Despite efforts to keep physicians abreast of the latest developments, misconceptions still exist among the nonspecialists about the best treatment for scoliosis.

When Nancy Simpson's curve was detected in a screening x-ray in her school district of Montville, New Jersey, she was advised by one physician "to forget about it." Another doctor warned her that she would be hospitalized three years. Meanwhile her curve was rapidly getting worse and had reached 64 degrees in the upper primary curve and 45 degrees in the compensatory

curve at the time when she came to Columbia-Presbyterian in June, 1969, at the age of 13. Her back was corrected that same month, and she went home in a cast two weeks later. After her cast was removed last March, Nancy enjoyed the summer on the New Jersey shoreline.

The back correction done with and forgotten, Nancy Simpson's nimble form graced a New Jersey beach last August.

Nancy's spine might have looked something like this, or worse, if her developing curve had not been detected in time in her school's x-ray screening program.

Scoliosis specialists are generally agreed that most young patients whose curves do not exceed 40 degrees can be treated with the Milwaukee Brace until their bones reach maturity. The only brace whose efficiency is acknowledged by the world's

## Postgraduate Course On Scoliosis Reflects Tradition Of Excellence Of Presbyterian Orthopedic Service

As 100 orthopedic surgeons from 25 states looked on, a Surcingle cast was applied to a slender girl in a white body-stocking on the stage. This was the visual high point of the second postgraduate course on scoliosis, held last month at the Alumni Auditorium of the College of Physicians and Surgeons.

The three-day course was sponsored by the New York Orthopedic Hospital to acquaint this country's orthopedists with scoliosis and the latest approaches to its treatment.

The New York Orthopedic Hospital moved to the Columbia-Presbyterian Medical Center twenty years ago and became a part of the Presbyterian Hospital in the City of New York.

The choice of Columbia-Presbyterian as the site for the annual course was a logical one: several major advances in the treatment of scoliosis took place at the Orthopedic Hospital unit of the Presbyterian Hospital. Undoubtedly the most important of these was the world's first spinal fusion by Dr. Russell Hibbs in 1911; other orthopedic milestones on the road to better scoliosis treatment were the inventions of the turn-buckle jacket by Dr. Joseph Risser and of the Surcingle cast and table by the late Dr. William von Lackum. Continuing the tradition, Dr. von Lackum's colleague Dr. Hugo

Dr. Hugo A. Keim, director of course on scoliosis (left), shows course participants how surcingle (arrow) exerts pressure against sciotic curve as he and Dr. Mark D. Gladstein, resident in Orthopedic Surgery, apply Surcingle cast. The girl receiving cast lies on table developed by Dr. William von Lackum and modified by Dr. Keim to permit patient to lie face up. Dr. Keim's table also has new surcingle winding devices and facilitates lifting of patient after cast application.

Dr. Walter Blount

Keim, who directed the special course, is designing special curved blades and their attachments to a miniature pneumatic hammer. Once perfected, the device would minimize the time needed to achieve a spine fusion and would thus diminish the risks of surgery.

The course did not only feature lectures and demonstra-

tions on the Surcingle technique but was actually a free forum at which leading U. S. and Canadian authorities on scoliosis discussed their favorite techniques in the care and management of scoliosis patients. One of the speakers, whose renown extends around the world, was Dr. Walter Blount, co-developer in 1943 of the brace "that made Milwaukee famous."

In addition to the nonpareil Milwaukee Brace, the various plaster jackets and rods to maintain the straightened back, the postgraduate course delved into other, less frequently encountered types of scoliosis, such as the neurogenic type and scoliosis due to certain tumors and congenital malformations of the spine.

# Thankful For This Holiday Season

Except for the chin pad, the Milwaukee Brace is not visible in this cheerful demonstration by Wendy Weiss in the winter of 1968. The scene-stealer's name is Lucky.

experts on scoliosis, the Milwaukee Brace features an L-shaped pad that presses against the major curve and a pelvic girdle that keeps the patient's back straight in combination with a plastic throat mold. In some instances, scoliosis can progress so fast that a delay of one month in seeking proper treatment may mean the difference between wearing the brace for 23 hours a day and a major operation.

Sometimes, as in the case of Wendy Weiss, the brace does

against the patient's curve while the cast is being applied with the patient on a special Surcingle table. "We are very pleased with the corrections we are getting," says Dr. Keim about the Surcingle technique. "We believe we can get a better correction with this technique than with any other."

Whether the Surcingle cast or some other body jacket, such as the localizer cast, is used, permanent correction of a scoliosis curve means a long grind for both patients and their loved ones.

Ramona, from whose supine position last year's Christmas tree appeared horizontal, remained flat on her back in the rented hospital bed for four months. When she was asked to sit up and then stand up for a while, she needed the help of nurses. Five months after her spinal fusion in November 1969, Ramona began walking a little longer each day. Her Surcingle cast came off in August of this year.

It is while patients are undergoing the drawn-out "cure" for idiopathic scoliosis that they begin to appreciate the truism "no man is an island." Seventeen-year-old Wendy Weiss, who will be having a

tic," she says with a smile.

The hardship that an extended bed rest in the supine position places on the patient and her family often brings out the best from the neighbors and the surrounding community.

When the Marafioti's home town found out about their period of trial, the town's firemen donated seven pints of blood and four of plasma for Patricia's operation. Upon her return from the Presbyterian Hospital, she found a free hospital bed waiting for her in her bedroom. It had been loaned by the Lions Club from its hospital loan closet. Her schoolmates came to perform a school play in her room.

Patricia, as do other young patients in similar circumstances, received special schooling, lest she fall one year behind in her education because of her condition. She listened to what was going on in her class in school on a two-way intercom between her classroom and her bedroom. Later she would receive private instruction from a teacher assigned to her.

Following the typical pattern of recovery from a spine fusion, Patricia was lying flat on a bed from December 1, 1969—the day of her operation—to sometime in April, 1970. She was allowed to sit up in her bed from April to the middle of May, when she gradually began to walk again.

She is now secretary of the sixth grade Girl Scouts in the

## She Gives As Good As She Gets...

The great psychological uplift that patients experience upon coming out of the cast after surgery is best illustrated by this letter from the mother of 15-year old Jeanne Hewitt of Staten Island, New York, who once had good cause to be unhappy with her back.

Dear Dr. Keim:

I must write and tell you how deeply grateful Jeanne's father and I are.

You not only straightened her back—you straightened her personality. Even her brothers (and she has six) have all commented on this, and the remarks range from delighted approval to pure aggravation.

She had always been introverted and endured them with sisterly martyrdom—but no more. She bubbles—and gives as good as she gets—a beautiful sight when one sees college-type brotherly wit being topped by a former patsy. Life can be beautiful.

The day we brought her home from Columbia-Presbyterian, our pastor saw her and walked across the street to

Jeanne Hewitt

greet her as a huge truck went by. As we went in moments later, she beamed at me happily and said, "Wasn't that nice of him!" I agreed with her and commented, "Just one of the reasons he is a Monsignor!"

She stopped short. "Oh, I didn't mean Monsignor! He's very nice but I meant that truck driver that whistled! That was the first wolf-whistle I ever got in my whole life!"

Our heartfelt thanks, always,

Mrs. Jeanne Hewitt

Almost a year after her "black Christmas" of 1969, when she was flat on her back and not allowed to move, Patricia Marafioti, 11, delights her swimming teacher with her improvement at nearby community pool.

Correcting the disabling cause of scoliosis is just one of the many jobs that Presbyterian Hospital's physicians and surgeons undertake in their total commitment against disease. Their work and the new facilities required to carry it forward are supported by contributions from Friends of the Hospital.

In several areas of the Hospital complex, empty shells of whole floors await funds for completion into modern, vital research or patient-care units.

Your gift toward these ends will be gratefully remembered by medicine and by generations of future patients.

not stop the progression of the curve, and spinal fusion becomes the only possible treatment. This does not mean that any parts of the spine are melted a little and then joined. The vertebrae of the spine causing the curve are prepared and then joined with slices of bone, ideally taken from the patient's pelvis. The patient is operated out of her plaster cast. Frequently a thin metal rod, named after its inventor, Dr. P. R. Harrington, is used to jack up the curve, much like an auto jack lifts up a car. Properly emplaced, the rod rarely causes trouble in later life.

About two weeks following surgery, the patient is outfitted with a plaster body jacket, which stays on for eight to nine months. Dr. Hugo Keim, Director of the scoliosis clinics at the Columbia-Presbyterian Medical Center, has specialized in the Surcingle type of body jacket, developed by his predecessor Dr. William von Lackum.

This cast derives its name from the surcingle—a strap that goes around the body of a horse and holds the saddle in place. In their medical application similar straps pull

bit of "a ball" of her own in Florida this month, found that out during her nine-month confinement to the Surcingle cast from July, 1969 to April, 1970. As her mother held daily "open house," Wendy's friends would keep her busy with card games, checkers, and lift her spirits with their chatty presence. Wendy, who is a student at the Stamford High School, hopes to become a pediatric nurse.

Similarly, Mrs. Marafioti kept an open house for Patricia's friends and classmates from the F. G. Lindsey School. "The cookie bill and the Hawaiian punch bill were fantas-

A year after her operation, Ramona attempts a screen pass in park across the street from her Riverdale home. Tackling is not allowed.

## Spinal Angiography Used To Prevent Complications Of Surgery On Spine

Much research at Columbia-Presbyterian Medical Center is aimed at reducing the complications of surgery, but one project is of particular importance for operations on the spine.

In this undertaking, Dr. Hugo Keim, Assistant Professor of Clinical Orthopedic Surgery, P&S, and Dr. Sadek Hilal, Professor of Neuro-radiology, teamed up to chart the blood supply to the spinal cord of 56 scoliotic children being considered for spinal fusion.

The two researchers and their associates used the technique of angiography to visualize the thin anterior spinal artery that is the sole life line of the spinal cord in the middle chest area. In angiography, the blood vessels are outlined on x-ray film with a harmlessly disappearing dye, which is introduced through a catheter.

The Columbia-Presbyterian team was the first to perform spinal angiography on a whole series of scoliosis patients. Obtained with scrupulous care,

the angiograms resulted in no complications, and the total x-ray exposure was about three minutes for each patient. The children remained conscious throughout the entire procedure.

The serial study discovered that two children in the series had such a precarious blood supply to the spinal cord that operating on them would have risked some degree of paralysis of the extremities. One of the potential trouble spots in spinal fusion is the major supplier to the anterior spinal artery. This major feeder describes a characteristic hairpin turn before it joins the anterior spinal artery. On the basis of the angiograms, which failed to show adequate blood supply to the spinal cord, Dr. Keim and Dr. Hilal—in consultation with several neurosurgeons—decided to cancel the surgery on the two girls in favor of a more conservative course of treatment.

In the other 54 patients, knowing exactly where the arterial supply lines enter the

spinal cord was of great help during the surgical correction of scoliosis. Because the spines of all but three patients were curved in the thoracic, or chest area, it was especially important to know precisely where the supplier of the anterior spinal artery entered the spinal canal. Guided by the angiograms, Dr. Keim and his associates avoided extensive dissection in the area of its entry. Likewise, when inserting the Harrington rods in 54 of the 56 patients, Dr. Keim made sure not to attach them near the arterial inflow point.

Although spinal angiography is, in the words of Dr. Hilal, "still quite new," it has the potential of making spinal surgery safer for the patient. "With further investigation," Dr. Hilal said, "spinal angiography may become a safer, routine technique to aid the surgeon in doing any type of spinal surgery." Once that plateau is reached, the complications of an operative correction of scoliosis will be minimized.

# Dr. Southworth Is New Medical Board President

At the 1970 election of the Presbyterian Hospital Medical Board, Dr. Hamilton Southworth, Attending Physician, P.H. and Professor of Clinical Medicine, P&S, was elected President of the Medical Board. For the past three years he has served as Vice President while Dr. Milton R. Porter, Attending Surgeon, PH and Professor of Clinical Surgery, was President.

The Medical Board carries a load of responsibilities dealing with professional services inside the Hospital: long range planning, staffing and relations with the community. Some insight into the complexities of its work may be gained by reading the history of the Hospital by the late Dr. Albert R. Lamb. When friends of Dr. Southworth offer their congratulations upon his election, he suggests the word should be commiserations.

As President of the Medical Board, Dr. Southworth is also an ex officio member of the Board of Trustees of The Presbyterian Hospital.

to the Surgeon General of the U. S. Army in 1948 and 1949.

At the College of Physicians and Surgeons, he was Assistant Clinical Professor from 1947 to 1952; Associate Clinical Professor, 1952-57; Clinical Professor, 1957-68; since 1969 he has been Professor of Clinical Medicine.

In 1962 he went to Lebanon as Visiting Professor of Medicine at the American University at Beirut; for the past three years he has been a member of the University's Board of Trustees and has headed its medical subcommittee.

He served as Medical Intelligence officer for the Office of Civilian Defense, 1942-45, and was U. S. representative on the medical subcommittee of the European Regional Advisory Committee, U.N.R.R.A., in 1944; Attache at the U. S. Embassy, London, 1944-45; and representative in Europe of the Committee on Medical Research, Office of Scientific Research and Development, 1944-45.

He is a Diplomate of the American Board of Internal Medicine, serving as a member of the Board, 1964-1970; a Fellow in the American College of Physicians, a member of the American Clinical and Climatological Association. Other memberships and educational and professional honors include: New York Academy of Medicine; Alpha Omega Alpha; Phi Beta Kappa; Sigma Xi. He is an Elder in the Presbyterian Church.

Since 1947 Dr. Southworth has been the medical organizer of the elective course for third and fourth year P&S students entitled "Medical Therapeutics and Applied Pharmacology." These lectures became the basis of the "Columbia-Presbyterian Therapeutic Talks" which he and Professor Frederic Hofmann edited and which were published in two volumes by the Macmillan Company in 1963 and 1964. He has also written articles for medical journals and is the author of chapters on advances in medical pathology and physiology published in various yearbooks of the American Encyclopedia.

Dr. Southworth received his A.B. degree from Yale in 1929 and his M.D. from Johns Hopkins four years later; and for the next two years, 1933-35, he was an intern at P.H. After two years as assistant resident at Johns Hopkins, he began his years of practice of Internal Medicine in New York City, which have continued from 1937 to the present, with interruptions only for military service during World War II. He was surgeon and senior surgeon, U.S.P.H.S. (R.), 1942-45. He became Associate Attending Physician at P.H. in 1954, and has been Attending Physician here since 1960.

From 1946 to the present he has served as Consultant in Internal Medicine, Station Hospital, U. S. Military Academy at West Point. He was Consultant in Internal Medicine

time permits; he has a collection of first editions of Samuel Taylor Coleridge; he and his wife enjoy travel.

This year Dr. Southworth is chairman of Dean Paul A. Marks's Committee on Faculty Advisors for Medical Students. One of his activities, a few years ago, when he was President of the Presbyterian Hospital Alumni Society, was to organize the first combined meeting of the various alumni societies of the Columbia-Presbyterian Medical Center.

As Chairman of the Cardiac Arrest Committee, he spent much time in the drive to improve the old Cardiac Monitoring Unit. He devoted five years of work to the promotion and development of the present Cardiac Intensive Care Unit.

## Four Pretty Girls . . .

*Continued from page three*

Blue Mountain Middle School and a member of the school's Talent Show. At present she takes swimming lessons and does quite well. The range of her physical activities will widen as her fusion becomes more solidified.

Patricia Marafioti (left) with her friend Debbie Vogel, who spent much time with her during her long months of convalescence.

A markedly improved outlook on life is the norm for graduates of the Presbyterian Hospital "scoliosis correction course." Wendy Weiss, for example, is being asked to a lot of parties and is acquiring many friends. Ramona Ricotta could confidently model anything from a swim suit to an evening gown, and her social life is on the upswing.

The dramatic improvement that these patients experience—both physically and psychologically—also rejuvenates members of their family and other relatives. Each of the approximately 100 patients who are annually treated for scoliosis in the Presbyterian Hospital Orthopedic Service becomes the focal point of a network of happiness and optimism that emanate from relatives and friends. It is these daily enhancements of the quality of human life that make the support of Presbyterian Hospital's orthopedic surgeons by Friends of the Hospital so worthwhile.

# Year-Round Santas Sought

Would you like to play Santa Claus all year round? Would you like to make just one person—just one little person—happy?

You can, if you are willing to volunteer one night a week, for two hours, in the Tender Loving Care program at Babies Hospital unit of P.H.

This program, sponsored by the Volunteer Department, provides play and companionship for the youngsters in Babies Hospital, ages approximately five to 13, from about six o'clock in the evening until eight, or a little later in some areas. It might be termed a "substitute mother" or "substitute father" program.

Cynthia Lepore, Director of Recreational Therapy at Babies, conducts orientation sessions for volunteers who have elected to take this assignment, familiarizing them with their duties, the pitfalls they

might encounter, and the remarkably excellent psychological effect this companionship has upon the young patients. Miss Lepore explained how eagerly the children await the volunteer and how deeply disappointed they are if she fails to come.

It is clear that the "play" is not always the thing. Just having someone to talk to and laugh with is sometimes more important than actually making a paper doll or a paper chain. A spontaneous hug, a sudden smile, are sometimes all that is needed to make these little ones, lonely for home and family, feel happy and reassured.

Wouldn't you like to make one little person happy?

If you are interested, please contact Mrs. Dorothy Diamond, Director of Volunteers, VC 10th floor, Ext. 2542.

Age is no barrier and men, as well as women, are welcome.

## P. H. Mail Room Needs Your Help For Christmas

Medical Center personnel are reminded that Christmas cards should not be sent to co-workers through the Hospital internal mail system. Outgoing Christmas cards should be deposited in U. S. Post Office receiving boxes and sent to co-workers at their home address.

It is necessary to make this request since large Christmas card mailings going through the Hospital Mail Room would inevitably delay the processing of regular Hospital business mail.

## CALENDAR OF CHRISTMAS EVENTS

### Monday, December 7

9:00 a.m.-4:30 p.m.

PAINT SUPPLIES

become available for two weeks, for use in window decorations. (Chaplain's office)

### Friday, December 11

2:00 p.m.

\*BOGOTA HIGH SCHOOL CHORUS in the Pauline A. Hartford Memorial Chapel.

### Monday, December 14

11:00 a.m.-1:00 p.m.

3:00-4:30 p.m.

\*CHRISTMAS MUSIC on daily radio, broadcast until December 31.

### 7:00 p.m.

BABIES HOSPITAL CHILDREN'S PAGEANT on PH 5E.

### 7:30 p.m.

BABIES HOSPITAL CHILDREN'S PAGEANT on PH 5C.

### Tuesday, December 15

6:15 p.m.

PHYSICAL THERAPY CAROLERS on the wards.

### 6:30 p.m.

\*EQUITABLE LIFE CHORUS in the Pauline

A. Hartford Memorial Chapel.

### Wednesday, December 16

5:15 p.m.

\*CANDELIGHT VESPER SERVICE in the Pauline A. Hartford Memorial Chapel.

### Thursday, December 17

2:15 p.m.

MELODY QUARTETTE caroling on the wards.

### 7:30 p.m.

NURSES AND DOCTORS traditional caroling procession through the Hospital.

### Sunday, December 20

3:00 p.m.

\*STUDIO RECITAL: SPECIAL CHRISTMAS BROADCAST.

### Friday, December 25

CHRISTMAS DAY SERVICES in the PAULINE A. HARTFORD MEMORIAL CHAPEL:

### 7:00 a.m.

\*ROMAN CATHOLIC MASS.

### 10:30 a.m.

\*PROTESTANT HOLY COMMUNION.

\*Broadcast over Bedside Broadcasting System—Channel 1.

Dr. Hamilton Southworth

Dr. Southworth has had quite varied professional experience—in medical practice, medical intelligence in World War II, domestic and foreign teaching, publications, and promotion of medical advances. His contributions may be only suggested by this brief outline.

Dr. Southworth received his A.B. degree from Yale in 1929 and his M.D. from Johns Hopkins four years later; and for the next two years, 1933-35, he was an intern at P.H. After two years as assistant resident at Johns Hopkins, he began his years of practice of Internal Medicine in New York City, which have continued from 1937 to the present, with interruptions only for military service during World War II. He was surgeon and senior surgeon, U.S.P.H.S. (R.), 1942-45. He became Associate Attending Physician at P.H. in 1954, and has been Attending Physician here since 1960.

From 1946 to the present he has served as Consultant in Internal Medicine, Station Hospital, U. S. Military Academy at West Point. He was Consultant in Internal Medicine

## Presbyterian Employees Must Apply Now

### WEINBERG EDUCATIONAL AID

The Weinberg Educational Aid Reimbursement Plan is available to full-time employees of The Presbyterian Hospital. The plan offers to the approved applicants a reimbursement of 50% of the tuition fee for one to six credits per semester, or the equivalent for non-credit courses.

If John pays \$100 in tuition for courses this Semester, the Weinberg Aid Plan will reimburse him \$50. He must complete the course with passing grades. Of course, he had arranged for this in advance by applying for Weinberg Aid. To be eligible for reimbursement, it is necessary for an employee to have the required approval prior to beginning the course.

Here are some items to keep

in mind, if you are planning to continue your education:

The Plan applies only to attendance at a school of recognized educational standing. Correspondence courses are not approved. And the Plan does not apply to auditing.

The selected subjects or courses must be related to your job or to your future responsibilities at the Hospital.

When do you apply for the 1971 Spring Semester? Now—between January 1 and January 31.

The Plan is administered by C. D. Auty, Assistant Vice President for Personnel.

For further information and application, contact Lillian Oring, Personnel Assistant, P.H. 1-44. Telephone: 3215.

## Mayor Lindsay Opens Drug Addiction Clinics

Mayor John Lindsay lent his presence to the official opening of two methadone treatment clinics at Columbia-Presbyterian Medical Center on November 30.

Addressing a gathering of reporters, city health officials and doctors in the Public Health Building, Mayor Lindsay thanked staff members of the College of Physicians and Surgeons, "a great medical school, for their backup, for their involvement, their support, and their leadership in this whole effort."

There are two clinics in operation in the Public Health Building for methadone maintenance, and one clinic at Francis Delafield Hospital, which will do both methadone maintenance and methadone detoxification.

Repeatedly during his informal remarks, Mayor Lindsay emphasized the role of the "private sector" in the genesis of these treatment centers for heroin addicts.

"The involvement of a great university," the Mayor declared, "and one of the world's

greatest medical schools in a community program of this kind to me is the most important aspect of this program; it's medicine at its best, it's medicine out in the neighborhood, it's professional men with years and years of blood, sweat and tears and effort, who are involved in the methadone clinics."

The appearance of these clinics represents the combined efforts of the City of New York, the Narcotics Addiction Committee, appointed by the Executive Faculty of the College of P&S, and the City of New York, The Medical Board at Delafield Hospital, the Administrative Staff at P&S.

The sequence of events began just one year ago when the Narcotics Addiction Committee was formed in December 1969 at the direction of the executive faculty of P&S under the chairmanship of Dr. Philip Feigelson, Professor of Biochemistry. This was a subcommittee of the Student-Faculty-Community Committee. Experts with experience in treating drug addiction were consulted.

Mayor John Lindsay

Community groups joined forces and assisted in drafting recommendations for a comprehensive drug abuse treatment program for the Columbia-Presbyterian Medical Center. A portion of these recommendations served to expedite the planning and implementation of the new facilities that Mr. Lindsay came to open.

The three clinics are a key part of the city's methadone program, which is designed to treat a total of 2,500 addicts within the next year, doubling the number now under methadone treatment in various programs throughout the city.

In addition to the three clinics that Mayor Lindsay symbolically launched here, four other clinics were expected to begin operations elsewhere in the city in December, 1970. An average of four additional units are expected to open each month of this year until the program is fully operational.

There are two ways of treating a heroin addict. One is by methadone detoxification, and this is the appropriate regimen for the young addict who is trying to break the habit. Treatments start with a certain dose of methadone and follow over a two week period with decreasing daily doses until the physical aspects of drug dependency have been eliminated. The danger is that

Please turn to page two

## Dr. Chargaff Named Chairman Of Department Of Biochemistry

Dr. Erwin Chargaff has been appointed Chairman of the Department of Biochemistry, P&S, it was announced recently by Dean Paul A. Marks. He has been associated with the Medical Center since 1935 and has been Professor of Biochemistry since 1952.

Austrian-born, Dr. Chargaff came to the United States first in 1928 and became a citizen in 1940. He received the Ph.D. in Chemistry (summa cum laude), from the University of Vienna in 1928. He was Milton Campbell Research Fellow in organic chemistry, Yale University, 1928-30; assistant in charge of chemistry, Department of Bacteriology and Public Health, University of Berlin, 1930-33; and Research Associate, Institut Pasteur, Paris, 1933-34.

He was a member of the Committee on Growth, National Research Council, 1952-54, and of the Advisory Council on Biology, Oak Ridge National Laboratory, Oak Ridge, Tennessee, 1958-67.

Dr. Chargaff has been the recipient of many honors, including the Pasteur Medal, Paris, 1949; the Carl Neuberg Medal, New York, 1958; the Charles Leopold Mayer Prize, Académie des Sciences, Paris, 1963; the Dr. H. P. Heineken Prize,

Dr. Erwin Chargaff

Royal Netherlands Academy of Sciences, Amsterdam, 1964; and the Bertner Foundation Award, Houston, Texas, 1965.

He has lectured internationally and is the author of a book entitled *Essays on Nucleic Acids*, published in 1963. Dr. Chargaff has contributed extensively to the scientific literature on many subjects and is the editor of the three-volume treatise, *The Nucleic Acids*.

His professional memberships include the National Academy of Sciences, American Academy of Arts and Sciences and the Royal Swedish Physiographic Society, Lund.

Dr. Chargaff is married, and his son, Thomas, is Assistant Administrator at a Kaiser Hospital in Los Angeles.

## Dr. Gerst Utilizes Computer Services To Keep Watch On Pacemaker Patients

Dr. Paul H. Gerst

A computer program begun during 1970 now keeps track of all patients of The Presbyterian Hospital who have implanted cardiac pacemakers.

Dr. Paul H. Gerst, who is in charge of the cardiac pacemaker surveillance program at the Columbia-Presbyterian Medical Center, and Dr. William A. Bauman, who directs medical data processing, have cooperated to develop a com-

puterized system to keep an up-to-date record of the large volume of important information we are accumulating on a rapidly growing number of pacemaker patients. Dr. Gerst is Assistant Attending Surgeon, P.H., and Assistant Clinical Professor, Surgery, P&S. Dr. Bauman is Assistant Attending Pediatrician, P.H., and Assistant Clinical Professor, Pediatrics, P&S.

During the past decade, the pacemaker has become an important device, used to electrically stimulate the heart. The physicians and surgeons of this medical center have contributed greatly to this development.

The heartbeat normally is controlled by the body's own pacemaker, a small area of specialized heart tissue which emits a continuing series of electrical stimuli. These impulses are conducted along special heart fibers to the mus-

Please turn to page three

## Mary Ann Cavanagh Is New Unit Manager At Babies Hospital

Mary Ann Cavanagh

Mary Ann Cavanagh, Unit Manager of Neurological Institute, has been appointed Unit Manager of Babies Hospital, succeeding Elizabeth R. Callahan.

Born in New York City, Miss Cavanagh attended Skidmore College in Saratoga Springs, New York, for two years. She transferred to Columbia University and received the R.N. and B.S. degrees from Columbia.

She worked in the Department of Surgery since graduation and was then promoted to Front Office and Information Services, working with various Unit Manager's offices.

Following a one-year stint in

## THE MUSICAL "BRIGADOON" IS PRESENTED BY P&S CLUB

The leading roles were played and sung by Dr. Douglas F. Greer (P&S '66), who portrayed Tommy Albright, and Marsha B. Schoene, who portrayed Fionna MacLaren.

Dr. Greer and Mrs. Schoene are not new to the theatrical scene.

While in medical school at P&S, Dr. Greer was active in all class shows and became particularly interested in song and skit writing, highlighted by a leading role in the medical school movie "Bloodfinger" and the release, in 1966, of his song "Medical School Talking Blues" on the Reprise label.

Dr. Greer also performed at

last year's Volunteer Tea and the 25-Year-Club Banquet at Presbyterian Hospital.

He is currently serving his residency in ophthalmology at the Edward S. Harkness Eye Institute.

Mrs. Schoene has performed in many musicals in Evanston, Illinois, but this was her first appearance in a P&S Club production.

She is the wife of third-year P&S student, Robert Schoene, and is secretary to Dr. Edward B. Self, Associate Attending Surgeon, PH, and Associate Clinical Professor of Surgery, P&S.

Other outstanding perform-

Cast catches breath between acts of "Brigadoon."

ers in this year's presentation were Eamonn O'Leahey, P&S '73, who directed the show and also portrayed Mr. Lundie. Mr. O'Leahey began directing at Fordham University in 1965 and has appeared in over 80 productions in New York and elsewhere, specializing in character roles.

Jay Guinther, P&S '72, musical director, is a newcomer to P&S Club musicals, but not to music. He has sung in many choirs and has done work in drama. Since attending medical school, Mr. Guinther has sung in the P&S choir which he directed last year.

This was his first experience conducting an orchestra, in addition to a chorus.

Brigadoon marked the second appearance in a P&S Club musical of John Schermerhorn, P&S '71, who portrayed Jeff Douglas. Mr. Schermerhorn is a former member of the National Thespian Society and has made several appearances in summer stock.

### Barefoot In The Park

The P&S Club will present "Barefoot In The Park," a comedy, in Bard Hall, January 7, 8, 9 and 10. Curtain time is 8:15 p.m., and tickets are \$1.50 at the door.

Call Richard Friedlander, P&S '72, 923-0214, for reserved-ticket information.

## Barbara Farace Named Unit Manager

Barbara Farace

Barbara Farace has been appointed Unit Manager of Neurological Institute, succeeding Mary Ann Cavanagh.

Miss Farace has been at Presbyterian Hospital since 1963, when she began her career as a staff nurse, rising through the ranks to the position of supervisor on PH 14.

In September 1969 she was assigned as an administrative trainee until November, when she assumed her present position.

Born in Brooklyn, New York, Miss Farace received the R.N. from St. Catherine's Hospital, and the B.S. from St. John's University, both in Brooklyn.

## MAYOR LINDSAY..

*Continued from page one*

such a patient will return to the habit unless medical treatment is correlated with rehabilitative and psychiatric care.

The second method is that of methadone maintenance, in which the methadone dosage is increased to a certain level and continued there daily. The addict receives methadone free of charge, and it substitutes for the heroin which might cost him \$50 to \$100 daily. The addict must have heroin every four or five hours, and to obtain it he may be led to acts of desperation. The relationship to the rise in crime rate is obvious.

While an addict requires increasingly larger amounts of heroin, a person on methadone can function well on the same dosage for years.

Methadone is taken only once a day, and the patient can live a normal life—go to school or hold down a job.

While welcoming the methadone program as "a breakthrough in the large-scale attack on the plague of narcotics," Mr. Lindsay cautioned that the operation of a methadone clinic "is not simply a matter of taking a pill or a form of liquid for maintenance. Elaborate medical examinations have to precede it," Mr. Lindsay said, "and very careful medical supervision

has to accompany it at all times. Careful social services have to be a part of it, psychiatric training and help are needed in all of this; job training, job connection and job supervision are part of it, too." The Mayor described the methadone treatments as "a very complex program, which is still largely experimental."

According to public health officials and physicians, the success of privately conducted methadone programs has been very high, achieving a successful maintenance rate of as much as 80 per cent at some institutions.

The city-wide program is under the general supervision of the Health Services Administration. The program is being

funded in the current year under a \$2.0 million grant from the New York State Narcotics Addiction Control Commission. On an annual basis, the treatment capacity will ultimately cost \$4,419,000. State funding for the program flows through the city's Addiction Services Agency. The professional personnel are being supplied by Columbia University with Dr. James Wesley, Assistant Professor of Administrative Medicine, P&S, directing these three methadone clinics.

One consideration bodes well for the future development of the program at Columbia-Presbyterian Medical Center; in the words of Dr. Feigelson, "We have a lot going for us, because almost everyone cares."

## Les Bishop Invites Adventurers To Scuba Diving

Les Bishop, fund accountant, Accounting Comptroller Staff, is looking for adventurous souls that might be interested in joining him in a really different vacation that is safe, if perhaps a bit avant-garde.

About three years ago, he journeyed to the Virgin Islands, where his uncle invited him to try skin diving by handing him a snorkel and a pair of flippers. A good swimmer, Les donned the gear, dove into the water, saw all the fascinating reef creatures and marine life below, and promptly fell in love with the whole idea.

As a result, he went to

school, took a course in scuba diving and is now a certified scuba diver.

Last September he embarked on his first scuba diving vacation on a boat manned by Captain Skeet La Chance, who owns and operates the "Highlander IV" out of Adventure Cruises, Inc. Based in Ft. Lauderdale, Florida, the "Highlander IV" cruises the Bahama Islands.

Les wants to share this adventure with anyone who would like to join him on the next cruise, scheduled for early spring, in April or May. A group of nine or 10 people would have the time of their lives and a vacation they would never forget.

The total cost of this cruise is approximately \$295.00, plus round-trip air fare to Ft. Lauderdale, which includes seven days of comfortable living on the boat, all meals included, and all gear necessary for diving. The crew consists of the captain and two mates, and the only thing you are required to provide for yourself is a safety vest.

If you are interested in joining Les and his group on the cruise in the spring, call him at Extension 3282.

Les Bishop

## DR. GERST . . .

Continued from page one

cle of the heart, causing it to contract rhythmically so that it can pump the blood around the body in an efficient manner.

Nearly all patients who need artificial pacemakers have an impairment in the conduction system, the part of the heart that normally transmits these electrical stimuli. Failure to conduct the stimuli from the natural pacemaker to all parts of the heart is called heart block.

This failure may be caused by a birth defect, but in most instances it is the result of heart disease. With heart block the chambers may continue to contract, but at a very slow or irregular rate, insufficient to supply an adequate volume of blood to the body; fainting spells and other circulatory difficulties may result.

Experiments with electrical stimulation of heart tissue were first undertaken many years ago. It was only 10 years ago, however, after years of research and technical advances, that it became possible to successfully implant a miniaturized, self-contained electronic pacemaker in a human being, and thereby overcome the consequences of this type of heart disease.

The artificial pacemaker works in much the same way as the natural pacemaker. It causes the heart to beat regularly by sending a series of electrical stimuli through the heart muscle—so weak in intensity that they cannot be felt. The battery and the circuitry which make up the pulse generator are encased in materials which the body will easily accept and which shield the pulse generator from body fluids.

Here is the story of the first patient whose heart action has been aided by a totally implanted cardiac pacemaker inserted at the Columbia-Presbyterian Medical Center.

Mr. Leo Stiefel, age 72, came to the *Stethoscope* office recently to give a brief account of what it is like, living with a cardiac pacemaker. He brought with him Mrs. Stiefel—a happier, healthier looking couple one would rarely see.

However, the apparent good health of Mr. Stiefel has not come easily. He and his wife have not forgotten the ten years of his heart trouble previous to his surgery—years when, without warning, he might faint while at work, while walking, or while driving across the Brooklyn Bridge. Mrs. Stiefel's ministrations to him were life itself. He required medication day and night, and for many years his wife had to supervise this intricate routine prescribed for the maintenance of life by his physicians. Then, in 1961 he was given the first

The pulse generator is placed under the skin, either below the collarbone or in the abdominal wall. Attached to it are two encapsulated wires which carry the electrical stimuli from the pulse generator to the heart. The operation of implanting such a device now is usually performed under local anesthesia, and most patients remain awake throughout the procedure.

There are several types of artificial pacemaker systems. The so-called "fixed-rate" pacemaker emits stimuli continuously at a preset rate selected by the physician. Another type, the "demand" pacemaker, has a special sensing circuit which picks up the normal electrical activity of the heart. As long as the patient's heart rate remains above the preset rate of the pacemaker, the pacemaker remains inactive. If the heart rate drops below this preset level, the artificial "demand" pacemaker immediately takes over—on demand, so to speak—and stimulates the heart to beat at a suitable rate.

A cardiac pacemaker

rector of the cardiac surgical program, the status of their pacemaker function must be continuously followed by their physicians. The close surveillance of so many patients now has been made possible by the use of our computers and the help of the hospital medical data processing department.

Dr. Malm stresses the fact that such a close follow-up program is imperative for these patients. The miniature batteries eventually weaken and have to be replaced, usually after two to two-and-one-half years. All aspects of pacemaker performance have to be regularly evaluated and recorded and preserved by the medical data computer. The names and addresses of all attending physicians and surgeons involved in the patient's care, the type of heart disease for which the pacemaker was required, the date and nature of each operation and battery change, and the characteristics of the instrument implanted. We also record the rate of the heart beat, the effectiveness of

Pacemaker in action

During the past 10 years, over 250 persons have had cardiac pacemakers implanted at this Medical Center. According to Dr. James R. Malm, di-

rector of the cardiac surgical program, the status of their pacemaker function must be continuously followed by their physicians. The close surveillance of so many patients now has been made possible by the use of our computers and the help of the hospital medical data processing department.

Mr. and Mrs. Leo Stiefel

rector of the cardiac surgical program, the status of their pacemaker function must be continuously followed by their physicians. The close surveillance of so many patients now has been made possible by the use of our computers and the help of the hospital medical data processing department.

After the pacemaker implantation, everything was different. Mr. Stiefel has not required any medications for the last ten years. He leads a normal life, travels with ease, and goes about his normal daily

activities. The record, now computerized, tells the rest of the story. His heart disease was diagnosed as complete heart block, persistent, idiopathic. Heart rate before operation, 26 beats per minute. He had a "fixed rate" pacemaker implanted, model type 5850, serial number 210. He has had battery replacements at intervals of approximately two years. He now has a regular heartbeat of 70 per minute, totally controlled by the pacemaker. The computerized record gives us further data; among these are: the name of his surgeon and his internist, both on our staff; the name and address of his family doctor; Mr. Stiefel's heart rate, pacing status, and general health when last examined by one of his physicians.

Not included on his computerized record, otherwise full of detailed information, are the warm words of praise from Mr. and Mrs. Stiefel for the unflinching attentions of the doctors, nurses and staff of the Medical Center.

## Benna Brodsky New Milbank Librarian

Benna Brodsky has recently been appointed Head Librarian, Milbank Library, PH 20.

Miss Brodsky outlined some plans she has for an expansion of the Library's services, not only for patients, but for staff and personnel.

To meet the needs of the large Spanish-speaking patient population and for personnel who are studying Spanish, how-to-do-it books in Spanish and easy English will be available.

For personnel who are enrolled in courses for high school equivalency diplomas, or in any of the para-medical programs of study, the Library will try to stock the appropriate materials.

Speaking with enthusiasm, Miss Brodsky said, "Here as everywhere, one of the basic problems is communication. We would like to make the Library a place where staff, especially non-professional staff, can find the tools for communicating more meaningfully with the patients they serve, and with each other."

In her new assignment, she will lean heavily upon the expertise and guidance of her two assistants, Mrs. Flora Gordon and Mrs. Linda McCarthy; Mrs. Gordon has been with the Library since 1960.

Miss Brodsky, who was born in New Haven, Connecticut, received the B.A. from Bar-

Benna Brodsky

nard College and the M.L.S. from Columbia University. Her junior year of college was spent abroad at the Hebrew University of Jerusalem.

Just before accepting the position at Presbyterian Hospital, Miss Brodsky was employed as a librarian by the University of California at Berkeley.

## COMPUTER COURSE ANNOUNCEMENTS

An introductory course in PL/1 programming will be offered at the Medical Center, open to personnel who have completed the "Introduction to Programming" course, or who have programming knowledge of some other computer language.

The course begins on February 16 and runs from five to six weeks. There will be three class meetings per week: on Mondays, Wednesdays and Fridays, from 9:00 to 10:00 a.m. Because of the holiday, the first meeting will be held on Tuesday, February 16th.

Class will be held in the Armory, 168th Street entrance, first floor, Room 5. Registration blanks and additional information may be obtained at P.H. 4, Room 33. Director—Dr. William A. Bauman. Telephone—579-2077.

A new course, "Introduction to Programming," is being offered to Columbia-Presbyterian Medical Center personnel who have completed either the course "Introduction to Computers" or its equivalent.

"Introduction to Programming" provides a basic understanding of how a computer is made to do work. It is a prerequisite for subsequent computer language courses.

Homework will be assigned to achieve sufficient ability to run one simple program.

The lectures will be given in the Armory, 168th Street entrance, first floor, Room 5, from 4:00 to 5:00 p.m.

Registration cards can be obtained at P.H. 4-33 and should be returned by January 8.

Schedule: Monday, Jan. 11, Tuesday, Jan. 12, Thursday, Jan. 14, and Monday, Jan. 18. Director—Dr. William A. Bauman. Telephone—579-2077.

## Elizabeth Callahan, Retiring After 43 Years At Medical Center, Is Showered With Honors

Elizabeth R. Callahan, Unit Manager, Babies Hospital, retired in December, the proud possessor of the longest service record—43½ years—among all personnel who have retired from The Presbyterian Hospital.

When Miss Callahan arrived at Presbyterian in 1927, she accepted a position as secretary to A. Isabelle Byrne at Sloane Hospital, then located at 59th Street. The following year Sloane became a part of the Medical Center, which opened in 1928. The executive vice president at that time was John Bush, and Miss Callahan became secretary to his assistant, Ruth Campbell. Soon Miss Campbell became Superintendent of Babies Hospital, and upon her retirement in 1946, Miss Callahan was appointed Unit Manager at Babies.

In addition to her manifold duties as Unit Manager, she coordinated the work of two Babies Hospital auxiliaries—the Board of Women Managers and the Cribside Social Service Committee.

In retrospect Miss Callahan stated that one of her most enjoyable extracurricular activities has been serving as chairman of the Medical Center Program Committee, a post she has held since 1965.

One of her proudest moments was accepting membership in the Twenty-five Year Club on behalf of 47 new members in 1953; another was becoming a Brigadier General during the war in the organization of Blue Star Brigades—made up of persons who sold war bonds at the Medical Center during World War II. In 1942 she sold the second highest number of bonds.

Miss Callahan was born and raised in Tenafly, New Jersey, and has always lived there. She attended Mt. Carmel School, Englewood High and the Egan School of Business. A member of Our Lady of Mount Carmel Church, she served for 30 years as secretary for the parish Propagation of the Faith group.

She has also served as secretary of the Adult Advisory Board for the Catholic Youth Organization, as historian of the Holy Name Hospital Auxiliary, and is a member of the Third Order of Mount Carmel and the Scapular Confraternity.

Vacation and travel were always synonymous for Miss Callahan. Now with more leisure time in prospect, she will look forward to more travel.

Recent weeks have been filled with social events—parties in honor of this wonderful lady who has been given a memorable title, "Miss Babies Hospital." A party at the Cosmopolitan Club on November 6 was arranged by Dr. Joseph A. Silverman, Assist-

Tête à tête: Elizabeth R. Callahan and Dr. Joseph A. Silverman pose at dinner party in her honor at the Cosmopolitan Club on Nov. 6.

Some straight talk from Sam: Sam Levenson, a long-time friend of Miss Callahan, pays her tribute at retirement tea held in the Doctors' Dining Room on Dec. 16.

ant Attending Pediatrician, P.H. At this event tribute was paid to her by Mr. A. J. Binkert, President of The Presbyterian Hospital, Dr. Douglas S. Damosch, Director of the Columbia-Presbyterian Medical Center, and Dr. Rustin McIntosh, emeritus Professor and Chairman of Pediatrics and past president of the Babies Hospital Alumni Association.

And this was only the beginning. The list of farewell events, the addresses of admiration, the description of gifts would fill pages. Miss Callahan will surely have to spend weeks filling scrapbooks, in which here are sure to be pictures and quotes from her long-time friend Sam Levenson—and from many friends among the Hospital Auxiliaries and the Medical Center personnel.

Miss Callahan wishes to express her warm affection and deep appreciation to her hundreds of wellwishers in and around the Medical Center, for their support, cooperation and many kindnesses.

Said Miss Callahan, "I will miss this place and all the friends I have made over the years, but I am looking forward to a well-earned rest and plan

to go to Ireland in the spring. After I return, I hope to do volunteer work, not only in my local parish, but in local hospitals and in the community.

"I leave with a heart full of warm and wonderful memories."

## Masada Dance Group Lights Up Chanukah Party

The annual Chanukah ceremony and party was held in the Pauline A. Hartford Memorial Chapel on December 23 at 4:15 p.m., for the patients in Babies Hospital, their parents, volunteers and guests.

The ceremony included the traditional lighting of the Chanukah candles of the Menorah (or ceremonial nine-branched candelabra). Entertainment was provided by the Masada National Dance Group with the Festival of Lights program. The young people who gave so generously of their time and talent are from several metropolitan-area high schools, and all are members of the Jewish Community Center in Englewood, New Jersey. The dancers were: Jane Glasser, Mitchell Engler, Barry Weinraub, Charles Weinraub, Cheryl Diamond, Anne Simon, Sol Rappaport, Davina Schaf-

## A Merry Christmas Was

Christmas 1970, at Presbyterian Hospital, was as always a delight for young and old. Everyone at the Medical Center was caught up in the happy confusion and beautiful tradition of the season. The "good mornings" and "good nights" seemed to have a special lilt a few weeks before Christmas, and the glow seemed to linger long after the last of the Happy New Years resounded in the ears.

And if you didn't get your shopping done in time for the big day, there are about 51 weeks to accomplish the task before Christmas rolls around again.

As in the past, windows in nurses stations, in the Hospital and in the Clinic, were gaily and ingeniously decorated by the artistic efforts of staff and personnel; holly wreaths adorned walls, halls and doorways; and sugar canes and brightly decorated Christmas trees were seen in many departments and in all Hospital entrance foyers. The Hospital dining rooms looked good enough to eat!

Special traditional festivities marked the Christmas scene at Presbyterian. On December 14 the young patients from Babies Hospital's Orthopedic Service presented their annual Christmas pageant on PH 5 East and PH 5 Center. The children re-enacted the timeless nativity story to the delight of their elders on the wards. As student nurses read from the bible story, the children assumed and held their positions in a tableau, changing and re-changing positions as the story unfolded.

On December 13, the youngsters on the Babies Hospital Orthopedic Service had their own special Christmas party. For the 16th year in succession, Mr. Sam Ulano delighted

the children with his unique performance of story-telling accompanied by drums. The little ones got into the act by using bongo drums, muraches, tambourines, jingle bells and other percussion instruments, making them part of an "orchestra."

With plenty of TLC administered by the nursing staff and volunteers, there was cake and ice cream for everyone and the party's grand finale was the triumphant arrival of Santa Claus, who distributed gifts to each child.

The Zabriskie Auditorium in Neurological Institute was the setting for a Christmas party for the youngsters from the Seizure Clinic in Vanderbilt Clinic.

The Big E (for epilepsy), a charitable organization founded in 1958, arranged the party with the assistance of Jean Collard, Associate Director of Social Services at Neurological, and her staff, and Dr. Maurice Charlton, Assistant Attending Neurologist, PH, and Director of the Seizure Clinic. The Big E offers year-round

Mr. Ward, the magician, has youngsters performing tricks willy nilly at Christmas party arranged by The Big E.

The lighting of the menorah was the central part of the annual Chanukah ceremony held in the Pauline A. Hartford Memorial Chapel on December 23.

fer and Michele Zimbrow. Talia Fishman told the story of Chanukah and sang; other singers were Polly Morris and Rhoda Leichter. Manachem Rivida served as advisor.

The cooperative efforts of Mrs. Edith Marks, loyal parent of a former patient in Babies Hospital; Mrs. Claire

Bierman, long-time volunteer; Mrs. Allen I. Hyman, wife of Dr. Allen I. Hyman, Assistant Attending Anesthesiologist, PH; and Mrs. Joseph A. Silverman, wife of Dr. Joseph A. Silverman, Assistant Attending Pediatrician, PH, made the delightful program possible.

# oyed At The Medical Center—Pageants, Parties And Presents

placement in schools and camps for epileptic youngsters whose families are unable to pay for these services.

The party was a very lively affair, with Christmas carol singing, food and the performance of Mr. Ward, a professional magician, and of course, Santa Claus was there.

On December 20, the United Cerebral Palsy's Bronx League held its annual Christmas party for the youngsters in Babies Hospital, in the Doctors' Dining Room.

The League's president, Sylvia Taubman, lauded the ef-

forts of Mrs. Shirley Rosenberg, who has been running these parties so successfully for the past 22 years.

The children were entertained by Candy, the magic clown (Claire Manley), renowned performer who won the coveted Barnum and Bailey Award as Clown of the Year. Her marvelous magic included the creation of wonderful balloon animals, which she then distributed to the delighted youngsters.

Refreshments were donated by Old London Foods, division of Borden, Inc., and the employees of the Shipping Department at Old London contributed the ice cream for the party.

The main attraction, of course, was Santa Claus, who appeared toward the end of the party.

The annual Doll's Tea Party on December 21, in the Babies Hospital Board Room, was, as always, a very special occasion.

Dolls contributed by the Ladies' Auxiliary, and exquisitely dressed by staff and employees, were distributed to the children at the end of the Tea.

December 23 was the date of the children's Christmas party, given by the House Staff Wives' Club, in conjunction with the staffs of the Pediatric Clinic and Social Service, held

on the 4th floor of Vanderbilt Clinic. Co-chairmen of this year's party were Mrs. Carlos Menendez and Mrs. Roger Gebhard.

The guest of honor was his jolliness, Santa Claus, who magically produced a gift for each child.

And the adage "to each his own" could appropriately be applied as each department within the Medical Center celebrated Christmas with their own interdepartmental parties.

And finally, the brightly lighted outdoor Christmas trees, surrounding the Medical Center, again twinkled their message of cheer and good will to all.

Santa Claus was main attraction at party sponsored by the United Cerebral Palsy's Bronx League on December 20.

"Surround Santa" appeared to be the favorite game of youngsters at party given by the House Staff Wives' Club on December 23.

A Penny for her Thoughts: A young patient gives her imagination free rein as she views inside of doll house in Babies Hospital Board room.

The dolls that were at their Tea Party on December 21 seemed to come alive by virtue of their numbers and authentic dresses.

A random sampling of P.H. window art includes a representation of the last three days in "Twelve Days of Christmas" at the Neurological Institute (above); two contributions from P.H. Admitting (below); and a tempera creation at ESHEI (below, left), indicating that Santa was once a patient there.

## Dr. Foley Named Head, Division Of Community And Social Psychiatry

The Department of Psychiatry and the School of Public Health and Administrative Medicine of Columbia University announce the appointment of Archie R. Foley, M.D., as Head of the Division of Community and Social Psychiatry. The Division functions under the joint auspices of these two departments in the Faculty of Medicine.

The appointment, which became effective on October 1, 1970, is a culmination of Dr. Foley's association with the Division that he began as a trainee ten years ago. After

earning his M.S. degree in the Division's program in 1962, he was appointed as a member of the faculty and then served as Chief, Section on Training for the Division from 1965 to 1968 with rank of Assistant Clinical Professor of Psychiatry. In July 1968 he accepted the post of Chairman, Department of Psychiatry, Catholic Medical Center of Brooklyn and Queens, but maintained his ties with the Division and Columbia University with the rank of Associate Clinical Professor of Psychiatry.

Until June 30, 1971, Dr. Foley will serve half time, continuing in his position at the Catholic Medical Center. Beginning July 1, 1971, he will head the Division on a full-time basis.

## Jack Gold Is Appointed Head Of P.H. Mail Room

The Presbyterian Hospital Mail Room has a new supervisor in the person of Jack Gold, a veteran of 30 years service with the United States Post Office. He began work as a distribution clerk in the General Post Office on 34th Street, working through the ranks until he became supervisor there 13 years ago.

The Newark, New Jersey, native attended DeWitt Clinton High School and the City College of New York. Before going to work at the Post Office, he did a stint as a laboratory technician in a bacteriology laboratory at a Veterans Administration Hospital.

From 1943 to 1946, he served with the United States Navy in the South Pacific, holding the rank of Second

Class Mailman.

Mrs. Virginia B. Smith, Administrative Assistant, Front Office and Information Services, and Mr. James Kiernan, Superintendent of Services, are enthusiastic about the assign-

ment of Mr. Gold. His expertise derived from the Federal Service will be directed toward improving the performance of the Hospital Mail Room, which he believes is a great challenge. In this task he will be assisted by Joseph Rivera, Assistant Supervisor and William Munoz, Foreman.

Mr. Gold is married to the former Betty Viner and is the father of two children. His son, Dennis, is a music educator and teaches at Wisconsin State College, and in the Duluth, Minnesota, high schools. His daughter, Nancy, is a senior at Bergenfield High School. Nancy hopes to enter college after graduation to major in child psychology.

The Gold family lives in Bergenfield, New Jersey.

Jack Gold

# News of Nursing

Helen F. Pettit, Assistant Director of Nursing, and Professor of Nursing, has been appointed a member of the Board of Directors of the New York Heart Association.

Penelope Buschman, B.H., and Carla Jackson, N.I., attended a conference, *Evolving Practices in Psychiatric Nursing*, sponsored by Bellevue Hospital Center, October 15.

Winifred Keaney, Medical/Surgical, and Jane Brown, M/S, participated in a *Urological Instrumentation Workshop*, sponsored by the Arco Medical Supply Corporation and held at the Hilton Inn, Tarrytown, New York, November 10.

Judith Schlinsock, Clinical Specialist, Neurological Institute nursing, has been asked to serve on a utilization review committee set up by the Visiting Nurse Service of New York.

A review of home health

agencies is required for Medicare certification and Miss Schlinsock will be observing service provided by the Washington Heights, Riverside and Lower West Side offices of the Visiting Nurse Service.

J. Schlinsock

D. del Bueno

Dorothy del Bueno, of Central Nursing Office (C.N.O.), and Martha Haber, Director of Nursing at Neurological Institute, attended a conference sponsored by the American Hospital Association and held at the Association office in Chicago, October 19-21. They dis-

cussed staffing the nursing service department.

Sara J. Wells, M/S, and Carol Beaudette, M/S, took part in a conference on *Clinical Nursing*, sponsored by the American Heart Association, held at the Holiday Inn, Atlantic City, New Jersey, November 11-15.

At Grossinger's, New York, Jeanette Knowlton, C.N.O., and Dorothy Demkovich, N.I., participated in a conference sponsored by the New York State League for Nursing, October 19-21.

Patricia McLuckey, M/S, and Mrs. Patricia Warren, M/S, recently attended a conference sponsored by the Memorial Hospital, New York City, on *Oncologic Nursing*.

*Nursing Research—Springboard to Practice*, a conference sponsored by the New York Heart Association at the Waldorf-Astoria, November 2, was attended by Rosemary Altano, C.N.O.; Julie Beshore, C.N.O.; Irene Gasior, C.N.O.; June Weiss, C.N.O. and Hilde Verburg, M/S.

## In Memoriam

### Dr. Yale Kneeland, Jr.

Dr. Yale Kneeland, Jr., Professor Emeritus of Medicine, P&S, died December 15 at his home in Millbrook, New York. He was 69 years old.

An internist and specialist in infectious diseases, Dr. Kneeland was an outstanding teacher of clinical medicine. Early in his career, he became interested in infectious diseases, particularly those affecting the respiratory tract. In the early 1930's he collaborated with the late Dr. A. R. Dochez (Medicine) in pioneer studies of the common cold that showed the cause to be filterable viruses.

With Dr. Harry M. Rose (Microbiology), at Columbia-Presbyterian, he contributed to studies in antibiotics and chemotherapy, and discovered that primary atypical pneumonia was not a viral infection, but rather was caused by a quasi-bacterial agent that is susceptible to antibiotics of the tetracycline class.

Born in Rumson, New Jersey, on July 18, 1901, Dr.

### Dr. Philip E. Smith

Dr. Philip E. Smith, an American pioneer in research on the pituitary gland, died in his sleep on December 8, at his home in Florence, Massachusetts.

Dr. Smith, who was born in De Smet, South Dakota, on New Year's Day 1884, attended Pomona College; he went on to receive a Ph.D. degree from Cornell University in 1912. Following teaching assignments at Cornell, the University of California and Stanford, he was appointed Professor of Anatomy at Columbia University's College of Physicians and Surgeons in 1927 and served until 1952, when he became Professor Emeritus. During his association with Columbia, Dr. Smith demonstrated that the all-important thyroid and the adrenal glands and the gonads cannot develop without the pituitary gland. He accomplished this by per-

Dr. Yale Kneeland, Jr.

Kneeland was graduated from Yale University in 1922, where he was a member of Phi Beta Kappa, and received his M.D. from Columbia's College of Physicians & Surgeons in 1926.

He served his internship at Presbyterian Hospital, and, in 1929, was appointed assistant physician. At the time of his retirement in 1967, he was Professor of Medicine, P&S, and Attending Physician, P.H.

During World War II, Dr. Kneeland served as a colonel and chief of the medical service, Second General Hospital

(Columbia-Presbyterian unit), based in Oxford, England. From 1943 to 1945 he also served as senior consultant in infectious diseases for the European Theater of Operations, among the people of Italy and North Africa. He twice received the Bronze Star.

He was one of the few Americans to become an honorary member of the Senior Common Room at Magdalen College, Oxford, and was a former president of the Century Association.

His students affectionately

feeling a technique for removing and reimplanting pituitary glands into animals without damaging their brains. His work paved the way for studying and treating many hormone deficiencies in man.

In recognition of his achievements, Dr. Smith was the first American in 1963 to win the Sir Henry Dale Medal, medicine's highest honor in endocrinology. He was also named Chevalier in the Legion of Honor and a member in the National Academy of Science

dedicated the class yearbook at P&S to Dr. Kneeland a record number of four times during the last 15 years of his career.

He is survived by his widow, the former Deborah Dyer; a son, Yale Kneeland, III, of New York; three daughters, Mrs. Richard A. Kimball, Jr., Deborah Van Dyck Kneeland and Mrs. Richard P. Ellis, all of New York, and five grandchildren.

Funeral services were held at St. James' Episcopal Church, New York City, on December 18.

## PARTIES FOR SLOANE NURSES

On December 15, the Sloane Hospital nursing staff took advantage of the holiday season to inaugurate a "first."

Bernice Derby, Assistant Director of Nursing (Obstetrics and Gynecology), conceived the idea of an "old timer's day" to salute nurses who had been at the Hospital over two years.

"After all," said Miss Derby, "there are parties for new nurses, parties for retiring nurses, and we felt it would be nice to have a party for the nurses who have been on the job regularly for two years or more. Some of them have been with us 10-plus years. And what better time for a party than during the Christmas season."

The nurses gathered in the classroom on the 16th floor of Presbyterian, and there was plenty of good, hot coffee and delicious coffee cake to go with it. Miss Derby and her assistants, Mrs. Marguerite Peters and Karen Winans, were the official hostesses. Special guests, Mary I. Crawford and Mary Windrow, thought the whole idea was great.

There were two separate parties, one in the morning and another in the afternoon, to make sure the different shifts would be included.

## Benefit Card Party Coming In April

Left to right: Student nurse, Ann Meehan; Mrs. Alfred Steiner, chairman; Mrs. Russell N. Carhart, recording secretary; student nurse, Pat McLaughlin; Mrs. Stanley M. Bysshe, treasurer, and Mrs. Charles S. Neer, III, vice chairman, at business meeting held in Maxwell Hall, November 4, to launch proceedings for 13th annual Benefit Card Party, slated for April 21.

The 13th annual Benefit Card Party for the Nursing Students' Scholarship Fund will be held in Maxwell Hall on April 21, 1971.

Miss Katherine Hepburn is the Honorary Chairman.

Mrs. Alfred Steiner, Chairman, will be assisted by Mrs. Charles S. Neer, III, Vice Chairman; Mrs. Russell N. Carhart, Recording Secretary; Mrs. Arthur L. B. Richardson,

for his contributions to science.

He is survived by his widow, the former Irene Patchett, and a son, Philip Smith, professor of physics at the University of Groningen, The Netherlands; and a daughter, Dr. Frederika Smith, a pediatrician in Northampton, Massachusetts.

He is survived by his widow, the former Deborah Dyer; a son, Yale Kneeland, III, of New York; three daughters, Mrs. Richard A. Kimball, Jr., Deborah Van Dyck Kneeland and Mrs. Richard P. Ellis, all of New York, and five grandchildren.

Funeral services were held at St. James' Episcopal Church, New York City, on December 18.

Corresponding Secretary; and Mrs. Stanley M. Bysshe, Treasurer.

Committee chairmen are: Marion D. Cleveland, Printing; Mrs. Sawnee R. Gaston, Mrs. Milton B. Phillips and Mrs. J. Ward McLaughlin, Prizes; Mrs. Alvin J. B. Tillman, Sponsors; Roberta Spagnola, Hospitality; and Mrs. Everett C. Bragg, Laurie Verdisco and Louisa Kent, Publicity.

Faculty representatives from the Department of Nursing are Mary I. Crawford and Helen F. Pettit.

Proceeds from the benefit annually provide assistance for about 20 nursing students through the Scholarship Fund.

The Committee asks your cooperation in donating trading stamp books of any brand. Your contribution may be left with Mrs. Catherine Finnerty, Nursing Office, Harkness Pavilion, Main Floor.

## Psychiatric Institute To Celebrate 75 Years

The New York State Psychiatric Institute, the world's first multidisciplinary institute established for the purpose of research in psychiatry, will celebrate its 75th Anniversary on November 21, 22, and 23, 1971. A symposium program on the theme "Seventy-five Years of Progress in Psychiatric Research and Teaching" is planned.

## Walking Is Ideal For Keeping In Shape, Says Eglis, Fourth In Competition Of 60

Making a comeback after a multiple leg fracture, Arsene Eglis of Public Interest placed fourth in the sixtieth annual Coney Island Walk sponsored by the Walkers' Club of America. In his age group he was first.

The ten-mile handicap race, which was held on the Coney Island Boardwalk on November 29, drew 60 competitors from New York, New Jersey, Pennsylvania and New England. At 40, Eglis joins a number of Medical Center personnel who have taken up track to keep in shape, including Dr. Irving Abrahams, Assistant Attending Dermatologist, PH, and Assistant Clinical Professor of Dermatology, P&S. Dr. Abrahams competed in the Boston Marathon and other distance running events and was featured in the May 1965 *Stethoscope*.

Eglis, who wears the colors of the Shore Athletic Club, New Jersey's most active track club, walked the ten miles in one hour, 35 minutes, 11 seconds—about ten minutes

slower than his all time best for the distance. Until he broke an ankle playing football in 1967, Eglis specialized in the 40,000-meter walk (25 miles) and the 50,000-meter walk (31 miles) and was a member of an A.A.U. national championship team in 1963.

Arsene Eglis "strolling" on the Coney Island Boardwalk.

"Heel-and-toe walking is an ideal way of keeping your heart and lungs in shape if your schedule prevents regular exercise," Eglis said. "You can practice speed-walking almost anywhere—even in places where most people would be too self-conscious to jog," he explained.

## Tennis Event Will Net Dollars For Fund

A new and unique method of fund raising is being sponsored by the Neurological Institute Women's Auxiliary. A tennis classic at Madison Square Garden, January 21, at 8:00 p.m., will feature the first evening match of the professional tennis tournament, in a series of matches among the nine top professional tennis players of the world.

The Auxiliary has blocked off 400 seats in the Garden for the game, proceeds from these seats to benefit the Auxiliary, making it possible for them to continue their very special supportive work which includes helping social service, emergency nursing care, summer camp activities for children with neurological illnesses, library expenses, recreational work, patient care and special clinic projects.

The evening's program will consist of a first-rate singles match with Arthur Ashe as challenger, making his professional tennis debut, against the winners of previous matches between Laver, Rosewall, Newcombe, Roche and Emerson.

There will also be a doubles match starring four of the top "nine," including Pancho Gonzalez and Okker or Roger Taylor.

The members of the Neurological Institute Women's Auxiliary who comprise the Benefit Committees are: Mrs. Alvin G. Brush, Mrs. Carter L. Burgess, Mrs. Carl T. Chadsey, Jr., Mrs. Robert Estes, Mrs. Hart Fessenden, Mrs. Edward Gardner, Jr., Mrs. Irving Kingsford, Jr., Mrs. Rollo J. Masselink, Mrs. Edward B. Schlesinger, Mrs. George Spa-

ter, Mrs. Sidney J. Weinberg, Jr., and Mrs. John L. Weinberg, who is chairman of the Auxiliary.

Remember the date, January 21, 8:00 p.m. at Madison Square Garden. Tickets for the tennis classic are \$40, \$32 of which is tax-deductible.

Cocktails and a buffet supper at 6:00 p.m. at the Penn Plaza Club, just around the corner from the Garden, will launch the pre-game festivities.

For further information call Mrs. Weinberg at 579-2948, or write Mrs. John L. Weinberg, c/o Unit Manager's Office, Neurological Institute, 710 West 168th Street, New York, New York 10032.

### January Lectures

The Institute of Cancer Research announces these lectures for January, to be given at the Auditorium of Francis Delafeld Hospital, 99 Fort Washington Ave., on Fridays, 4:00 to 5:00 p.m.

January 8. Role of Thiamine in Nervous Tissue, Jack Cooper, Ph.D., Yale University.

January 15: Cell-Mediated Immunity, George B. Mackness, M.D., Trudeau Institute.

January 22. Chemically Defined Interferon Inducers; Structural Requirements and Mechanisms *in vitro* and *in vivo*, Thomas C. Merigan, M.D., Stanford University.

January 29. Antibody Complementarity and Light Chain Structure, Elvin A. Kabat, Ph.D., Columbia University.

These lectures are sponsored by the American Cancer Society, New York City Division, Inc.

DR. RONALD BRISMAN, Chief Resident, neurological surgery, recently presented a paper on *Lung Scan in Childhood Hydrocephalus*, at the annual meeting of the Society for Research into Hydrocephalus and Spina Bifida, in Freiburg, West Germany.

DR. RONALD R. FIEVE, Associate Professor of Clinical Psychiatry, P&S, and Chief of Psychiatric Research (Internal Medicine), Psychiatric Institute, recently returned from medical meetings in Czechoslovakia and Turkey.

In Prague he was elected to membership in the Colegium Internationale Neuropsychopharmacologicum and presented a paper, *Physiological Modes of Action of the Lithium Ion*. In Istanbul, Dr. Fieve presented a discussion on *Psychiatric Diagnosis* at the Symposium of the Turkish College of Neuropsychopharmacology.

Dr. Fieve also presided as chairman of a symposium entitled Depression 1970, sponsored by the Board of Directors of the Excerpta Medica Foundation, in cooperation with the Department of Psychiatry, P&S, held at the Hotel Americana on October 22.

At the same meeting, DR. JOSEPH ZUBIN, Chief of Psychiatric Research (Biometrics), Professor Emeritus of Psychology and Special Lecturer in Psychiatry, P&S, spoke on *Current Biometric Approaches to Depression*.

DR. WILLIAM B. SEAMAN, Professor and Chairman, Department of Radiology, and Chairman of the Executive Council of the American Roentgen Ray Society, which met in Miami, Florida, from September 20 to October 2, was elected second vice president of the Society.

Dr. Seaman gave a refresher course on *Benign Diseases of the Stomach*.

Also in Miami, DR. WALTER E. BERDON, Attending Radiologist, BH, DR. DAVID H. BAKER, Director of Pediatric Radiology, and DR. JUDITH ROSE, Fellow in Pediatric Radiology, attended the annual meeting of the Pediatric Radiology Society, held as part of the American Roentgen Ray Society meeting.

At the meeting, Dr. Rose presented a paper on marked jaundice as presenting sign of massive neonatal adrenal hemorrhage. Its diagnosis is arrived at by high dose intravenous urography with total body opacification, established from the work done by Drs. Berdon, Baker, DR. JAMES WOLFF, Attending Pediatrician, and DR. THOMAS SULLIVAN, Assistant Resident in Pediatrics.

Dr. Baker also participated in a radiology symposium in Danville, Virginia, from November 3 to 6, where he presented a one-hour refresher course on *Pediatric Chest Disease and Genito-urinary Disease*.

DR. EDGAR M. HOUSEPIAN, Associate Professor of Neurological Surgery, attended the meeting of the European Society for Pediatric Neurosurgery in Versailles, France, in September.

Dr. Housepien reported on Columbia-Presbyterian's experience in the treatment of 97 cases of optic nerve glioma, a relatively rare condition which occurs most frequently in children. His paper was titled *Obstructive Hydrocephalus and Optic Glioma in Childhood*.

DR. BENNETT M. STEIN, Assistant Professor of Neurological Surgery, P&S, also presented a paper at this meeting entitled *Supracerebellar Approach to Pineal Tumors*.

The meeting was attended by neurosurgeons from many European countries, and papers were translated into French, German and English. A formal banquet was arranged for participants and their guests at the Palace in Versailles, sponsored by the French government.

## DOINGS OF DOCTORS

Continued from page eight

DR. RICHARD A. R. FRASER, Instructor, Neurological Surgery, P&S, and Dr. Stein attended the International Cerebral Blood Flow Symposium in London, England, in September.

Dr. Fraser spoke on *Cerebrovascular Spasm and Hypocapnic Arterial Constriction: Reversal by Adrenergic Blockade*, and Dr. Stein presented a paper on *Vasospasm and Reactive Cerebral Vessels*.

At a meeting of the American Neurological Association in Atlantic City, N. J., Dr. Fraser spoke on *Noradrenergic Mediation of Cerebrovascular Spasm*, and at the Scientific Session of the American Heart Association, also held in Atlantic City, he presented a paper on *Hypocapnic Arterial Constriction: Adrenergic Blockade*.

DR. MELVIN D. YAHR, Director, Parkinson's Disease Research Center, NI, Associate Dean of Postgraduate Studies, and Merritt Professor of Neurology, P&S; DR. GERALD COHEN, Assistant Professor of Psychiatry (from Biochemistry), P&S; DR. ROGER C. DUVOISIN, Associate Professor of Neurology, P&S; DR. ABNER WOLF, Special Lecturer in Pathology (Neuropathology), P&S; and DR. MARGARET HOEHN, Associate in Neurology, P&S, were invited participants at the Fourth Bel-Air Symposium on Monamines and the Central Nervous System, held in Geneva, Switzerland, September 13-17.

Dr. Yahr presented a paper on *Long-term Effects of Levodopa in Parkinsonism*, Dr. Hoehn delivered a paper on the *Epidemiology and Prevalence of Parkinson's Disease*, and Dr. Duvoisin spoke on *Methods of Evaluating Effects of Treatment of Parkinsonism with Levodopa*.

Also at this meeting in Geneva, DR. SIDNEY MALITZ, Professor of Clinical Psychiatry, spoke on *L-Dopa and Behavior*. DR. MAUREEN KANZLER, Research Associate in Psychiatry, P&S, was co-author.

Dr. Yahr was also an invited lecturer at the University of Jerusalem in Tel Aviv, the University of Portugal in Lisbon, and the National Hospital, Queen's Square, London.

At a session of the Sixth International Congress of Neuropathology, held in Paris from August 24 to September 4, Dr. Yahr presented a paper on the *Pathological Findings in Parkinson's Disease Following the Use of Levodopa*, in association with Dr. Duvoisin and DR. LUCIEN COTE, Associate Professor of Neurology, P&S.

DR. ANDREW DE ROETH, JR., Assistant Professor of Clinical Ophthalmology, attended two meetings in October.

At the Annual Clinical Congress of the American College of Surgeons in Chicago, Dr. De Roeth spoke on *Complications of Glaucoma Surgery*, and at the First International Symposium on Ophthalmic Cryosurgery, in Rome, he was an invited guest speaker for the section on glaucoma, where he presented a paper on *Cryosurgery in the Treatment of Glaucoma*.

DR. HAROLD F. SPALTER, Assistant Attending Ophthalmologist, PH, was a guest speaker at a special meeting of the Swiss Ophthalmological Society in Lausanne, Switzerland. The topic of his presentation was *Photocoagulation of Diabetic Retinopathy*.

DR. STANLEY E. BRADLEY, Bard Professor of Medicine, PH, attended the International Conference on Liver and Alcoholism, held in Freiburg in the Breisgau, Bavaria, October 2-4. As President of the New York Heart Association, Dr. Bradley has been named delegate to the Assembly of the American Heart Association.

# Stethoscopia

## • WEDDINGS

Margaret E. Auchincloss was married to William J. Rademakers on October 24 in the Brick Presbyterian Church. Mrs. Rademakers is the daughter of Dr. Hugh Auchincloss, Associate Clinical Professor of Surgery, P&S, and Associate Attending Surgeon, PH.

Rosemarie Bastone, IBM Control, PH, was married to Arthur W. Bancroft on November 1, in the Pauline A. Hartford Memorial Chapel. The ceremony was performed by Chaplain Robert B. Reeves, Jr.

Lisa-Margaret Stevenson was married to Alexander C. Sanger on October 31 in the Princeton University Chapel. Mr. Sanger is the son of Dr. Grant Sanger, Attending Surgeon, PH, and Associate Professor of Clinical Surgery, P&S.

Patricia Anne Louis, Coordinator, Minority Recruitment Program, P&S, married William H. Call, P&S '74, November 25. The ceremony was performed in the Pauline A. Hartford Memorial Chapel by Rabbi Daniel Wolk and Rev. Grant A. Morrill.

Barbara Perez, daughter of Mrs. Adrienne Perez, IBM Tape Librarian, Data Processing, was married to Michael Reilly on October 8. The couple honeymooned in Europe.

## • NEW ARRIVALS

Mr. & Mrs. John Kennedy welcomed their first child, a daughter, Kerry Ann, at St. Vincent's Hospital, October 29. Mr. Kennedy is Night Manager, Harkness Pavilion. Mrs. Rita O'Brien, Personnel Office, is the proud grandmother.

Mr. & Mrs. George Taub, welcomed their first child, a daughter, Julie Elizabeth, October 29. Mr. Taub is a programmer, Medical Data Processing Department.

## • WELCOME TO:

Mrs. Arlene Koenigsberg, radiotherapy technician, Department of Radiotherapy.

Julita Hernandez, secretary, Department of Radiotherapy. George Hunter and In Duck Song, laboratory technicians, Hematology Laboratory, PH 14.

Eva Spinelli, technician, Harkness Pavilion laboratory. David Berg, staff pharmacist, Satellite Pharmacy, PH 8.

## • DOUBLE CONGRATULATIONS

Fred Perino, who was recently promoted from staff pharmacist to Supervisor of Satellite Pharmacy, PH 8, is engaged to Linda Lamblin of Mount Vernon, New York.

## • ITEMS OF INTEREST

Mrs. Mary Ann Baldus, head nurse, Vanderbilt Clinic Psychiatric Home Care Project, was interviewed on Channel 13 (NET-TV), during the Free Time Program, October 23.

She was asked by a New York Times reporter and the Director of Communications for the Urban Coalition League, "How does it feel to be the wife of a New York City policeman?" She replied, "Any woman married to a policeman is very much aware of the hazards involved."

Mrs. Baldus and her husband, Frederick, from Manhattan's 34th Precinct, were married last May.

M. Baldus

F. Perino

J. Glick

## • SPECIAL COMMENDATION TO:

Mrs. Jeanne Glick, volunteer, Pediatric Endocrine Clinic, described by Dr. Akira Morishima, Associate Attending Pediatrician, PH, in a letter to the Director of Volunteers, as an "indispensable asset to our clinic, working directly with patients and also in our office, helping with some of the paper work that patient care entails. . . Her enthusiasm and industry have created order in our clinic and have enabled the doctors to expedite patient visits to a great degree. Her concern for and friendly interest in the patients have endeared her to them. Her cheerful presence enlivens our office. . . We greatly appreciate her services."

Mrs. Glick has been serving as a volunteer since 1961, and has been stationed in the Pediatric Endocrine Clinic since 1966.

# DOINGS OF DOCTORS

DR. JOHN K. LATTIMER, Professor and Chairman, Department of Urology, as vice president of the International Society for Urology, presided at the Society's annual meeting in Tokyo in July.

Dr. Lattimer presented two papers at the meeting: *Cryosurgery of the Prostate Gland* and *The Effect of Actinomycin on Wilms's Tumor Cells*.

He also presented *Cryosurgery of the Prostate* with Drs. MYRON S. ROBERTS, Associate Clinical Professor of Urology, P&S, and JOHN G. FEMINELLA, JR., Assistant Resident, Urology, and showed time-lapse motion pictures of the *Effect of Actinomycin on Wilms's Tumor Cells*, a technique developed by Drs. MYRON TANNENBAUM, Assistant Professor of Pathology (Urology), P&S, and JOSEPH PRIESTLEY, Assistant Resident, Urology, in the Squier laboratories.

Dr. Lattimer also lectured in Bangkok, Thailand, on the population explosion in relation to sexuality and urology.

Also in July, at the Nagoya Medical School in Japan, Dr. Lattimer was the guest of the staff. He spoke at several of the School's staff meetings on subjects of new and current interest, and presented three papers: *Educational Techniques in Urology*, *Evidences for Virus Activity in Prostatic Cancer* and *Cryoprostectomy*.

This reciprocated a series of visits by research Fellows from the Nagoya Medical School who have been studying in an uninterrupted succession in the Squier Urological Clinic over the past five years. Dr. Lattimer met many of his old students and was royally entertained by them in classic Japanese fashion.

Dr. Hideo Mitsuya, the first of the men who trained here at P&S, is now acting chairman of the department at Nagoya.

DR. CHARLES A. PERERA, Clinical Professor of Ophthalmology, P&S, and chairman of the Scientific Advisory Committee of Fight for Sight, Inc., was presented with a pair of gold cuff links embossed with shield and torch, emblem of the organization, during the annual review meeting of the Committee, held at the Americana Hotel, June 19.

Mr. Silas Adelsheim, Chairman of the Board of Directors, Fight for Sight, Inc., presented the cuff links and said, in part, ". . . These are a small evidence of our very great appreciation to Dr. Perera for his 20 years of outstanding service in helping to guide the Fight for Sight research awards program."

DR. J. LAWRENCE POOL, Professor and Chairman of Neurological Surgery, gave a lecture on *Intracranial Aneurysms, Brain Tumors and Intervertebral Discs* at the Colby College Symposium, Waterville, Maine, July 25-29.

DR. LESTER C. MARK, Professor of Anesthesiology, P&S, attended a private research conference on *The Pharmacokinetics of Halothane in Man*, in Geneva, Switzerland, September 17.

Dr. Mark also participated in a symposium on *The Metabolic Effects of Anesthesia* at the Royal College of Surgeons of England, in London, September 18-19, where he spoke on *Metabolism of the Barbiturates*.

DR. ELIZABETH B. CONNELL, Associate Professor of Obstetrics & Gynecology, P&S, and Director of Research and Development in Family Planning, International Institute for the

Study of Human Reproduction, P&S, authored an article, *The Pill in Perspective*, which was published in the October issue of *The Reader's Digest*.

DR. W. JOST MICHELSEN, Assistant Attending Neurological Surgeon, PH, recently journeyed to Sweden to attend two meetings.

At a meeting of the Scandinavian Neurosurgical Society in Stockholm, he presented a paper, *Percutaneous Spinal Cord Puncture in the Management of Hydromyelia*. At the International Neuroradiology Symposium in Göteborg, he gave two papers: *Factors Involved in the Surgical Management of Normal Pressure Hydrocephalus*, and *Magnetic Devices for Intravascular Exploration*.

DR. ROBERT GOTTSCHEN, Professor of Dentistry and Director of Periodontics, DOS, and Attending Oral Surgeon, PH, was installed as president of the American Academy of Periodontology at its annual meeting in Montreal, in September.

DR. ARTHUR G. DE VOE, Professor and Chairman, Department of Ophthalmology, attended the annual meeting of the American Academy of Ophthalmology and Otolaryngology, held in Las Vegas, Nevada, October 8. Dr. De Voe spoke on *The Management of Acute and Chronic Corneal Problems*.

Dr. Ngai

Dr. DeVoe

Several members of the Department of Anesthesiology contributed to the scientific program of the 1970 annual meeting of the American Society of Anesthesiologists, held in New York City, October 12-21.

Nine papers were presented by Drs. SHIH-HSUN NGAI, Professor and Chairman, Department of Anesthesiology; RONALD L. KATZ, GABRIEL G. NAHAS, Attending Anesthesiologists, PH; RICHARD W. PATTERSON, STUART F. SULLIVAN, AARON J. GISSEN, Associate Attending Anesthesiologists, PH, LUBOS TRINER, Assistant Professor of Anesthesiology, P&S; ROBERT A. BARATZ, LLYNDA M. HINDS, Assistant Attending Anesthesiologists; LAURENCE J. KRENIS, PHILIP L. LIU, ROGER S. WILSON, Visiting Fellows in Anesthesiology, P&S and Y. VULIEMOZ, Research Associate, P&S.

Dr. Katz spoke on *Clinical Use of Muscle Relaxants*, participated in a panel discussion titled *Questions Please*, and in a *Cardiovascular Workshop*.

DR. HERBERT RACKOW, Attending Anesthesiologist, PH, participated in a panel discussion on *Anesthesia for Neonates and Small Children*.

Dr. Liu and Krenis were co-winners of the first prize in a residents' research contest, sponsored by the Society. Their winning paper was entitled *Effect of L-Dopa on the Norepinephrine Stores in the Rat Heart*.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXVI, NUMBER 2

FEBRUARY, 1971

## James M. Clark Is New Trustee

James McConnell Clark, General Partner in the brokerage firm of Hornblower & Weeks—Hemphill, Noyes, has been elected a member of the Corporation of The Presbyterian Hospital in the City of New York and to its Board of Trustees, it has been announced by Augustus C. Long, Chairman of the Board and Chief Executive Officer.

Mr. Clark, who was born on June 3, 1922 in Hillburn, New York, attended Loomis School and received a Bachelor of Science degree from Cornell University in 1944. He joined Hornblower & Weeks in July 1955, after service in the Pacific Theater as a U. S. Navy Engineering Officer. He was named General Partner of the firm on February 1, 1963 and now serves as Chairman of its Finance Committee. Mr. Clark is a past member of the New York Stock Exchange and President of the Edna McConnell Clark Foundation, Inc.

The new P.H. Trustee is a member of the New York Stock Exchange Luncheon Club, the

James McConnell Clark

DKE Club of New York City, the New York Yacht Club, the Woods Hole (Massachusetts) Golf Club, Tokeneke Club of Darien, Connecticut, and of the Indian Harbor Yacht Club of Greenwich, Connecticut.

He is married to the former Cynthia Manchee. They reside in Darien with their 11-year-old son, James McConnell Clark, Jr., and attend the Noroton Presbyterian Church in Noroton.

## GRADUATION TIME FOR

### Operating Room Technologists

On January 7, the third class of the Columbia-Presbyterian School of Operating Room Technology was graduated in a simple but impressive ceremony in PH 1-50.

The graduates, wearing their dress uniforms for the first time, proudly received their certificates from Mary I. Crawford, Director of Nursing, Presbyterian Hospital, and Associate Dean of Nursing, Faculty of Medicine, Columbia University. They received their pins from Mrs. Gilda Gehm, Assistant Director of Nursing (Operating Rooms). Mrs.

Gehm had been the supervisor of the course until her recent appointment as Assistant Director and has been succeeded by Betty Jean Sanford.

Miss Crawford congratulated the group on their successful achievement, stating they are now qualified to serve as part of the operating room team . . . "This carries with it a very great responsibility. You will have to be resourceful, interested and expend a good deal of effort as part of the health team."

Miss Sanford, the newly appointed supervisor of the

## FOR BIOENGINEERING STUDY OF ENERGY EXCHANGE

### Hartford Foundation Award

The John A. Hartford Foundation, Inc., has awarded \$354,601 to the College of Physicians and Surgeons for a "Bioengineering Study of Energy Exchange in Acutely Ill Patients." The three-year grant was announced jointly on January 18 by Harry B. George, President of the Hartford Foundation, and Dr. Paul A. Marks, Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs, Columbia University.

The classical role of the engineer in medical care has been to assist the physician by designing medical devices. This continuing project, directed by Dr. John M. Kinney of the De-

Dr. John M. Kinney and Dr. Edward Leonard

partment of Surgery and Dr. Edward Leonard of the School of Engineering and Applied Science, extends the role of the engineer by allowing him to

devote himself to other problems that are immediately relevant to patient care. In this way, the engineer is able to

*Please turn to page three*

## Dr. Vande Wiele Appointed Head of Obs-Gyn

Dr. Raymond L. Vande Wiele, an endocrinologist of international repute and a consultant on population problems, has been appointed Chairman of the Department of Obstetrics and Gynecology at the College of Physicians and Surgeons and Director of Service at The Presbyterian Hospital. Dr. Vande Wiele rose to Professorship in Obstetrics and Gynecology in 1968, climaxing a steady progression of academic appointments at the College.

In addition to his newly acquired administrative assignment and his teaching duties, the new Chairman hopes to

continue some clinical practice as Attending Obstetrician and Gynecologist, P.H. and to remain involved in the many activities of the research group he has developed over the years.

Felicitously combining these interests with many years of clinical experience, Dr. Vande Wiele sees as his departmental goal, "bridging the gap between the basic sciences and clinical practice."

"A second but no less important goal," says Dr. Vande Wiele, "will be to orient the Department to the new responsibilities that are inherent in its involvement in problems of population growth." He believes that departments of obstetrics and gynecology all over the world will have to accept "a major role in the battle

Dr. Raymond L. Vande Wiele

against the population explosion."

When Dr. Vande Wiele came to the Department of Obstetrics and Gynecology here in 1952, Dr. Howard C. Taylor, Jr., then Department Chairman, was working toward the creation of an institution to study human reproduction. Dr. Vande Wiele was involved in this endeavor from the start.

After the efforts of Dr. Taylor were crowned with the formation of the International Institute for the Study of Human Reproduction, Dr. Vande Wiele became an early staff member. After Dr. Taylor retired as Director of the Institute last year, Dr. Vande Wiele was appointed its Acting Director.

His research has encompassed a wide range of problems in reproductive physiology and biochemistry, but he has centered his investigations on factors controlling the human menstrual cycle. He is a prolific contributor to medical journals and a frequent speaker at scientific meetings.

Born on October 2, 1922 in Kortryk, Belgium, Dr. Vande Wiele completed his secondary and college education there. He was graduated cum laude with an M.D. from the University Catholique de Louvain in 1947 and completed his assistant, junior and chief residen-

## P&S Club's "Barefoot In The Park" Merited Extra Performances

The P&S Club presented Neil Simon's comedy "Barefoot In The Park," produced by special arrangement with Samuel French, Inc., January 7 through 10, in the Bard Hall Lounge.

The leading roles were played by Beth Myerberg (Corrie Bratter), John Schermerhorn (Paul Bratter), Abby Chodoff (Mrs. Banks, Corrie's mother) and Eamonn O'Leahey (Victor Velasco).

Beth Myerberg teaches at the Discovery Room for Children, a community school near the Medical Center. Her husband, David, is a second-year student at P&S. Mrs. Myerberg has appeared in several plays, including the role of Dorothy in "The Wizard of Oz" and Peter Pan in "Peter Pan." She

"Barefoot in the Park" in rehearsal. Left to right, Eamonn O'Leahey, Abby Chodoff and Beth Myerberg; standing behind couch, John Schermerhorn.

performed with the Surfflight Summer Theater, Long Beach Island, N. J., in several productions, and also appeared as Meg Brockle in "Brigadoon," presented last November by the P&S Club.

Mr. Schermerhorn (P&S '71)

will be remembered for his portrayal of the hard-drinking cynic, Jeff Douglas, in last November's "Brigadoon." This marked his third performance for the P&S Club.

Abby Chodoff, a staff nurse at Presbyterian Hospital, has

performed in summer stock and has been appearing in P&S Club musicals for four years. She is a graduate of the Columbia University - Presbyterian Hospital School of Nursing and is the wife of Mark Chodoff (P&S '71), who served as technical consultant for the production.

Mrs. Chodoff's most recent contribution to the P&S Club was as orchestra pianist for "Brigadoon."

Finally, Edward B. Leahey (P&S '73), who directed the performance, and Eamonn O'Leahey, who did the set designs and appeared on stage as Victor Velasco, are one and the same person. Truly a man for all seasons!

The other performers were: Christopher Bell (P&S '72), (Telephone Repair Man), who also served as technical director, and Steve Becker (Delivery Man), student in Columbia University's School of Public Health and Administration, class of 1972.

The hilarious comedy was so well done and so well received that it was held over for two additional performances on January 15 and 16.

### LOOKING AHEAD

The P&S Club is planning another musical to be presented in March (title as yet not known).

Anyone interested in auditioning is requested to leave a message for Mr. E. B. Leahey at the P&S Information Desk.

National Multiple Sclerosis Society.

Dr. Luse received many honors including the Lederle Faculty Award, the Outstanding Achievement Award of the University of Minnesota and the Alumni Achievement Awards of both Case-Western Reserve University and Rockford College.

She is survived by her mother, Mrs. D. H. Luse, Modesto, California, and two brothers, Stephen of Modesto, and G. Blain of Big Springs, Texas.

## United Cerebral Palsy Foundation Grant For Dr. L. Stanley James

Dr. L. Stanley James, Attending Pediatrician, P.H., and Professor of Anesthesiology, P&S, has received a \$27,300 research grant from the United Cerebral Palsy Research and Educational Foundation.

The grant, extending through June 30, supports Dr. James's investigations into "maternal and fetal stress and the onset of labor."

The Foundation award is in keeping with the research organization's objective of searching out the causes of cerebral palsy and developing the means of preventing the multihandicapping condition. Currently, the UCP Foundation emphasizes five areas for medical research: premature birth; problems of obstetrical care and delivery; viral diseases during pregnancy; and hyperbilirubinemia, a condition causing jaundice in the newborn.

The UCP Foundation has channelled nearly \$11 million into a national research and medical training program since it was established in 1955 as the scientific partner of United Cerebral Palsy Associations, Inc.

## Appointment Of Betty Jean Sanford

Betty Jean Sanford

Betty Jean Sanford has been appointed supervisor of the Columbia-Presbyterian School of Operating Room Technology, succeeding Mrs. Gilda Gehm.

Miss Sanford, a graduate of Kings County Hospital Center School of Nursing, has been on the staff at Presbyterian since 1967.

## In Memoriam

### Dr. Theodore B. Russell

Dr. Theodore B. Russell, former Associate Attending Physician, PH, and former Associate Clinical Professor of Medicine, P&S, died on December 30 in The Presbyterian Hospital. He was 66 years old and lived in Stamford, Connecticut.

Dr. Russell was born in New York. He prepared at Trinity School for Princeton, where he was a member of Cottage Club and received the B.S. in 1926. He graduated from Columbia University's College of Physicians and Surgeons in 1930, and was elected to Alpha Omega Alpha, honorary medical society.

After his internship at Presbyterian and residency at Bellevue Hospital, Dr. Russell was in private practice in New York City. Other staff appointments included the Veterans Administration Hospital in the Bronx.

During World War II he served as a Navy physician in the South Pacific. Dr. Russell left the service in 1946, holding the rank of Commander.

He practiced for several years in Ann Arbor before he retired.

He is survived by three daughters of his first marriage: Mrs. Mary Kane White of New Canaan, Conn.; Mrs. Katherine R. Schmidt of New York and Mrs. Phoebe R. MacAdams of San Francisco; a brother, John, of New London, Conn., and five grandchildren. His first wife was the former Mary Learned Pelz (now Mrs. Lewis Perry, Jr.); his second was Mrs. Rhoda Reddig Russell. Both marriages ended in divorce.

A memorial service was held in the Pauline A. Hartford Memorial Chapel on January 6. The service was conducted by the Rev. Ernest Campbell, Minister of the Riverside Church.

### Dr. Sarah A. Luse

Dr. Sarah A. Luse, internationally known expert on submicroscopic changes in tissues caused by disease, died in San Francisco on December 28 in her sleep. She was 52 years old and lived in Bard Hall at the Medical Center.

Dr. Luse initiated the study of diseased tissues with the electron microscope, specializing in the ultramicroscopic changes in brain cells caused by drugs, viruses, and cancer. She discovered that a particular kind of brain cell is damaged by multiple sclerosis and described changes in nerve cells caused by the drug L-dopa. Her work called the attention of the Food and Drug Administration to the need for a more intensive study of the substance. L-dopa is now being used experimentally in treating Parkinson's Disease.

Her most recent work involved pioneering applications of the scanning electron microscope to the study of cell surfaces.

Dr. Luse was born in Emmetsburg, Iowa, and attended Rockford College. She received the M.D. from Western Re-

### Dr. Donald R. Reed

Dr. Donald R. Reed, Assistant Pediatrician, BH, and Instructor in Pediatrics, P&S, died of a heart attack on January 9 at his home in Irvington-on-Hudson. He was 64 years old.

Other hospital staff appointments held by Dr. Reed included Grasslands Hospital, Valhalla; Phelps Memorial Hospital, North Tarrytown; St. Faith House, Tarrytown and St. Christopher's School, Dobbs Ferry.

Dr. Reed was a founder of the Hudson River Speech Center in North Tarrytown and the Tappan Zee Mental Health Clinic.

Born in Eldora, Iowa, he received his M.D. from the University of Iowa in 1929. He was a diplomate of the American Board of Pediatrics and was a fellow of the American Academy of Pediatrics.

Dr. Reed is survived by his widow, the former Isabelle Preston; a daughter, Mrs. Walter Anderson; a sister and a grandchild.

serve University in 1949.

She served her internship at Johns Hopkins Hospital and her residency in pathology at the University Hospitals in Cleveland, and in neuropathology at the Mayo Clinic in Rochester, Minnesota.

At the time of her death Dr. Luse was Professor of Anatomy, P&S.

Professional memberships included Phi Beta Kappa, the Harvey Cushing Society, the American Association of Experimental Pathologists and the American Association of Anatomists.

She served as consultant to the Armed Forces Institute of Pathology and to several committees of the National Institutes of Health and of the

## Mrs. Awer Is Winner Of National Contest

Mrs. Erika Awer

Mrs. Erika Awer, Supervisor, Blood Bank, PH 20, attended the annual meeting of the American Association of Blood Banks, San Francisco, October 27-30, in truly high style.

Mrs. Awer was the winner of the annual Blood Bank Con-

test, sponsored by Fenwal Laboratories of Morton Grove, Illinois, manufacturers of blood bags used in blood banks. Several hundred persons, from all over the country, participated in the contest.

The prize—awarded for the best suggestion beginning "Why don't they make?"—was an all-expenses-paid trip to the meeting, which included red carpet treatment as the guest of Fenwal Laboratories, first class round-trip fare to San Francisco, first class accommodations at the San Francisco Hilton Hotel, gourmet dining at the restaurant of choice, and \$200 to spend as desired.

Mrs. Awer's winning suggestion read: "Why don't they make a simple computer system to record the results of Group and Rh on each patient and the Group and Rh of each unit of donor blood.

"Most fatal transfusion errors occur not because of faulty laboratory technique but because of clerical errors, such as properly labeled blood specimens drawn from the wrong patient.

"A perfect solution to this

problem is to draw a blood specimen at the time of the patient's admission and send it to the Blood Bank. At that point a computerized record can be started.

"In case of transfusion or on future admissions, the computer would indicate if there is any discrepancy between current and past typing, and if there were any unusual problems in the past.

"This system, though costly, would have a great advantage over the conventional card-file system and, in the long run, would prove to be a time saver and, in some cases, a life saver."

## Dr. David Gocke Will Present Gibson Lecture

Dr. David J. Gocke

The twenty-fourth John G. Gibson, II, Lecture will be given on April 1 in the Alumni Auditorium, P&S, at 4:00 p.m.

This year's lecturer is Dr. David J. Gocke, Associate Pro-

## Journal Prints Color Cover By Dr. Melicow

Dr. Meyer M. Melicow

At a time when most men his age are sitting back and resting on their laurels, Dr. Meyer M. Melicow, Given Professor Emeritus, Uropathology, P&S, is more active than ever.

He recently journeyed to a meeting of the American College of Surgeons in Chicago, where he spoke on *Pituitary-Gonadal Axis*. From there he went to La Paz Medical Center in Madrid, Spain, to lecture on *Natural History of Bladder Cancer* and, upon returning to New York, spoke on *Uropathology* at a Postgraduate Seminar, sponsored by the American Urological Association, held at the Hotel Commodore.

However, Dr. Melicow's talents are not limited to medicine, for he has achieved significant prominence as an artist.

The October 26, 1970 issue

"We always admire a teenager's heart," says JAMA, *The Journal of the American Medical Association*, "and occasionally his brain, but never his kidney. This slighted organ must resort to self-admiration, as illustrated in Dr. Melicow's *Teenager Kidney Admires Itself in the Mirror*."

of the *Journal of the American Medical Association* carried on its cover a reproduction, in color, of a painting he executed in the style of Picasso, entitled *Teenager Kidney Admires Itself in the Mirror*.

The Fall, 1970 issue of the *P&S Quarterly*, also on its cover, carried a reproduction of Dr. Melicow's drawing of *Central Park, View From My Window*, and on the inside was another drawing entitled *New York*.

An article about Dr. Melicow and his art appeared in the July/August 1967 issue of *The Stethoscope*.

## FROM THE MAILBAG

Columbia - Presbyterian Medical Center, Gentlemen:

Mrs. L. and her daughter wish to express their deep appreciation and thanks to the Staff on duty in the eighth floor West, of the Presbyterian Hospital—nurses and Dr. G. Mudge—for their kindness, attention and care given to our beloved husband and father, the late Emil L., during his hospitalization.

Sincerely,

The wife and the daughter of a recent patient.

To Babies Hospital:

My daughter Elizabeth has just returned from a week of diagnostic tests in the pediatric urology unit, 10th floor of Babies Hospital.

Both she and I were most impressed with all the staff we encountered. Everyone was courteous and pleasant. The whole atmosphere exuded confidence that the right things were being done and all would eventually be made right.

The nurses radiated a

warmth and concern for the youngsters and there was intelligent handling of difficult situations. A dreaded experience for my daughter became what a hospital experience should be—a place for necessary remedial health treatment—but a place of kindness and even some fun. Elizabeth enjoyed the playroom on the seventh floor and brought home some treasures for her brother and father to admire.

As a mother I can express my appreciation for all that was done for my child and hope that it will be passed on to the staff so they can feel that their hard work is not for nothing.

As a teacher of special education, which is my profession, I can only express my admiration for the excellent job your nurses are doing and a hope that their tenderness and ingenuity in handling children with special needs will someday be more widespread.

Once again, thank you.

The mother of a recent patient.

## OBS-GYN . . .

*Continued from page one*

cies in obstetrics and gynecology at the University Hospital. Dr. Vande Wiele, who speaks Flemish, French, English and German, spent a year as Visiting Fellow in Vienna, just before coming to the United States as a Smith-Mundt Fellow and a Fulbright Travel Grantee. During his Visiting Fellowship at the Presbyterian Hospital from 1952-1954, his scientific interests branched out under the direction and stimulation of Dr. Seymour Lieberman, now Professor of Biochemistry, P&S.

Dr. Vande Wiele returned here in 1955 as Instructor in Obstetrics and Gynecology, P&S, after a research fellowship at Yale. He was appointed Assistant Obstetrician and Gynecologist in 1958, Assistant Professor in 1960, Associate Attending Obstetrician and Gynecologist and Associate Professor in 1962.

fessor of Clinical Medicine, P&S, and Assistant Attending Physician, PH and VC.

He will speak on *Hepatitis and Hepatitis Antigen (S)*.

Dr. Gocke has the unique distinction of being the first physician from Presbyterian to be chosen to present the lecture. All previous lecturers have been from out of the country or out of state.

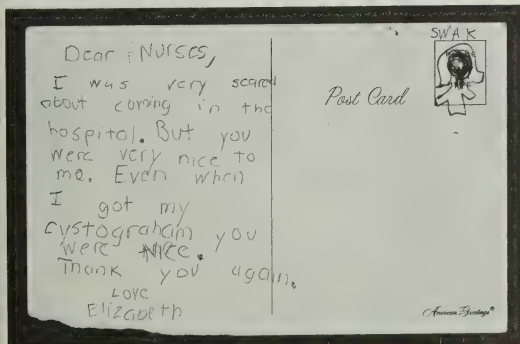

## HARTFORD . . .

*Continued from page one*

observe problems in clinical care so that his contribution to the planning of research as well as the analysis of clinical care can be based upon personal experience.

Many types of mathematical analyses and technical procedures commonly used by engineers in other applications have potential value for medical research and for clinical care. Yet, in the past, these have not been made available through the lack of opportunity for engineers to play an active role in a patient care environment.

The project is being carried out in the Surgical Metabolism Unit in The Presbyterian Hospital, where much original equipment has been designed by the physician-engineering team for numerous clinical and research applications, especially for the study of energy exchange in various types of critically ill patients. This continuing program is expected to advance knowledge in many unexplored areas, and such knowledge will continue to be made available to physicians everywhere as clinical applications are proved beneficial for the acutely ill patient, especially burn and other accident victims.

# THESE PERSONS ARE RETIRING FROM PRESBYTERIAN HOSPITAL

Mrs. Margaret Johnson

Mrs. Margaret Johnson, nursing assistant, Nurses Registry, HP, retired in October, completing 11 years of employment at Presbyterian Hospital.

She spoke with a good deal of enthusiasm about her work, stating, "I loved every minute of it."

Mrs. Johnson's hobby is one that really pays. During her working years she engaged herself as a babysitter or companion, to earn extra money. Her other hobby, about which she is equally enthusiastic, is coin-collecting. She has a fairly extensive collection of American coins, and if some day the price is right, she might sell them.

Mrs. Johnson has three children, eight grandchildren and two great grandchildren.

Retirement plans include a visit to Atlanta, Georgia, to visit her son and his family, visits to her other children and their families near New York, plus her usual summer vacations spent in a small, converted 90-year-old school house in Perkiomenville, Pa., she has owned for many years.

Other than that, retirement years for Mrs. Johnson will be a continuation of her services as a babysitter and companion, whenever she is needed.

## Pearl E. Sneden

Pearl E. Sneden, Secretary to recently retired Comptroller John G. McCullough, chose early retirement in November, completing 36 years of service to Presbyterian Hospital.

Known as Auntie Pearl to many, young and old, at the Hospital, Miss Sneden commented on the so-called generation gap. "There is no gen-

eration gap between myself and the young people. I don't try to understand them. I interpret them with love."

Born in West Orange, New Jersey, Miss Sneden grew up on Staten Island. She has been living in New York City for many years now, with her sister, Ruth, their 81-year-old mother and a Persian cat named Mickie.

During the years she lived in the immediate vicinity of the Hospital, she volunteered at the Pauline A. Hartford Memorial Chapel, escorting patients to Sunday Mass.

Retirement for Miss Sneden will provide more time for relaxation and, hopefully, for her avocation—writing poetry. *Stethoscope* readers may remember samples of some of Pearl's poems which appeared in the November, 1964 and February, 1970 issues.

At a tea, given in her honor on November 6, Pearl was, to put it mildly, overwhelmed with her beautiful new portable electric typewriter, a gift from all her friends at the Hospital.

Comptroller Norman Peters gave Pearl appropriate accolades in speaking about her long and fruitful years of employment in the Comptroller's office when he said, "Pearl was always kind and considerate. She never sought or found anything to criticize and gave unstintingly to her work. We all wish her continued happiness and peace of mind in the many years to come."

## Elizabeth Brown

Elizabeth Whitcomb Brown, social service case worker in the Edward S. Harkness Eye Institute, retired this month, completing a 22-year period of distinguished service to the Presbyterian Hospital.

Born in Quincy, Illinois, Miss Brown received the B.S. from the University of Illinois. She went on to earn her M.S. in Education from Washington University in St. Louis. She then taught school, in the primary grades, in Kirkwood, Mo., for 12 years.

During World War II, Miss Brown enlisted in the Women's Army Corps and served overseas in England, France

and Germany, from 1943 to 1946.

Following her enlistment, she returned to school and received the M.S. in Social Work from the University of Louisville. Directly following this, in 1948, she came to work at Presbyterian. She has always been assigned to the Eye Institute and truly enjoyed her work. The case load at the In-

Elizabeth W. Brown

stitute is a heavy one, and Miss Brown had the responsibility of serving patients from the wards, the clinics and private pavilion. But she insisted that the joy derived from doing her job was sufficient reward.

She plans to join her sister in Ft. Lauderdale, Florida, and make her home there. "My sister and I hope to just enjoy life from here on in," said Miss Brown.

## Rupert Waltram

Rupert Waltram

Rupert Waltram, carpenter, Maintenance and Construction, retired in December, completing eight years of employment at Presbyterian Hospital.

Born in Bavaria, Germany, Mr. Waltram came to the United States in 1928 and now lives in Brooklyn, New York, with his wife.

Retirement plans include a trip to Ft. Walton Beach, Florida, to stay with his married son for several months, then perhaps a visit to Bavaria, Germany, where Mr. Waltram has relatives.

"After that," said Mr. Waltram, "I will be doing some carpentry on my house."

## Margaret Thomson

Margaret H. Thomson, staff nurse in Orthopedic service, chose early retirement in September.

Miss Thomson had been employed at the Orthopedic Hospital since 1934 and moved up here when that hospital joined forces with the Columbia-Presbyterian Medical Center in 1950.

A lieutenant in the Army Nurse Corps in World War II, Miss Thomson served overseas on a hospital-ship, from 1942 to 1945.

## Mrs. Alice Knopf

Mrs. Alice Knopf, nursing aide, HP 11, retired in September, completing 20 years of employment at Presbyterian Hospital.

Mrs. Knopf and her husband live in Washington Heights, near the Hospital, and have two children, both married. There are three grandchildren.

The Knopfs are very fond of travel and will spend a good deal of their time visiting their children and grandchildren, who live in Pennsylvania and Connecticut.

## Mrs. Doris Lagergren

Mrs. Doris Lagergren, adult recreational therapist, Orthopedic Service, has retired.

Whatever made the patients happy was her goal. If they didn't want to work on leathercraft or sewing, she would play chess with them.

With a chuckle, Mrs. Lagergren added, "The patients call the recreational therapy program the frosting on the cake." The program is supported by the Women's Auxiliary of the New York Orthopedic Hospital of which Mrs. Jarvis J. Slade is president.

One of Mrs. Lagergren's specialties is a stuffed clown she created many years ago. "I am a clown by nature and it was only natural for me to create him. The joy these stuffed toys has brought to so many grandchildren—and grandparents—is reward enough."

"Everyone at the Medical Center is my friend," said Mrs. Lagergren. "From maids to head nurses to porters—they have all helped me in my work, they have been of invaluable aid."

She proudly wears her pin representing over 8,000 volunteer hours. And her only complaint was "My feet hurt."

Doris Lagergren started as a volunteer and will end as one. She said, "As long as I can draw a breath, I will come to the Hospital—this is where I enjoy myself."

Now that Mrs. Lagergren has returned to volunteer, Rose Mary Hohnak, Assistant Director of Nursing (Orthopedics), remarked, "We shine her halo every day!"

## Rosalind Levy

Rosalind Levy, social service caseworker, retired in September, completing three years of employment.

She said, "I know I have been here only three years, but I feel I have been here for a very long time—it has been so enjoyable and pleasant."

Miss Levy received the B.S. from the University of Pittsburgh, the M.S. from Carnegie Institute of Technology, and spent many years as a caseworker with the Red Cross, including a two-year stint overseas during World War II.

## Oscar Sewell

Oscar Sewell, elevator operator, E.S.H. Eye Institute, chose early retirement in October, completing 21 years of employment at Presbyterian Hospital.

Mr. Sewell was born in Jamaica, West Indies, and worked for the Police Department there for 20 years before coming to New York.

When he came to Presbyterian in 1949 he was assigned to the Eye Institute elevators and said, "I was a traffic cop in Jamaica and now I am a traffic cop on an elevator."

He and his wife live in Brooklyn but are planning trips to Jamaica and England to visit relatives. As a matter of fact, they have a little home in Jamaica to which they retreat for a couple of months each year.

## Beatrice Langmuir

Beatrice Langmuir, assistant director, Nursing Service (operating rooms), PH, retired in July, completing a 42 year span of dedicated service.

Miss Langmuir decided early in life to become a nurse and chose Presbyterian Hospital nursing school because an aunt, Alice Joy Field, had graduated from Presbyterian in 1902.

She watched the Hospital in general, and the operating rooms in particular, grow and expand through the years, reminiscing about the old days with Dr. Whipple, Dr. St. John, Dr. Hanford, Dr. Humphreys and Dr. Harvey, to name a few. "But with men like Dr. Herter and his colleagues I am not worried about the future of the operating rooms at PH," Miss Langmuir said.

Aside from her usual summer vacation trip to Toronto, the city where she was born, and visiting her sister in Bremen, Indiana, retirement will mean leaving her apartment in Harkness Hall to live in Bloomfield, New Jersey, where she has many other friends.

Left to right: Pearl Sneden, Mrs. Refa Zouzoulas, who is succeeding Pearl as secretary to Comptroller Norman Peters, and Pearl's sister, Ruth Sneden, make a happy threesome at festivities on November 6.

## Annual Waelsch Lectures

"Why don't you have more lectures like this in a year?" This question has been a refrain in letters of appreciation and phone calls from high school students following the Psychiatric Institute's Eighth Annual Heinrich Waelsch Memorial Christmas Lectures last December.

More than 150 high school seniors gave up a slice of their holidays and got up early on the mornings of December 29 and 30. At 9:30 a.m. they jammed the 8th floor auditorium of the Institute to hear four members of the Department of Psychiatry, P&S, give reports on their respective fields of specialization. About two thirds of the audience were students from public schools in New York City; the rest came from private and parochial schools. They had been selected by their schools on the basis of their interests and academic standing, especially in the sciences.

"These students were keenly interested in science, and the questions they asked during the discussion periods were stimulating and piercing," said Dr. John D. Rainer, Chief of Psychiatric Research, Department of Medical Genetics of the Psychiatric Institute. Dr. Rainer has coordinated the Christmas Lectures for five years.

The first Christmas Lectures were organized here by Dr. Heinrich Waelsch, Professor of Biochemistry, P&S, in 1963

to explain to high school students the importance of basic biomedical sciences in psychiatry and to encourage them to pursue careers in these disciplines. After Dr. Waelsch's death in 1966, the Psychiatric Institute named the lectures for Dr. Waelsch in honor of his memory.

The origin of these lectures may be sought in the 19th century, when Michael Faraday, the famed physicist, started a series of lectures in physics. They were known formally as Christmas Courses of Lectures Adapted to a Juvenile Auditory. In the New York area, similar lectures are known also to be held at Rockefeller University.

The Heinrich Waelsch Lectures consist of four presentations, one covering clinical psychiatry and three in the basic sciences. Last December's lecturers and their topics were: Dr. Donald S. Kornfeld, "Emotional Health and Disorder"; Dr. Rainer, "Genetics in Psychiatry"; Dr. Maurice Rapoport, "Biochemistry and the Nervous System"; and Dr. Leo Srole, "Sociology and Human Behavior." In previous years lectures were given by Dr. Lawrence C. Kolb, Director of the Psychiatric Institute, Dr. Lothar Hidro-Frank, and Dr. Shervet Frazier (clinical psychiatry); Dr. Waelsch, Dr. Amos Neidle, and Dr. Gerald Cohen (bio-chemistry); and Dr. Howard Hunt and Dr. Joseph Zubin (psychology).

## Presbyterian Patient, Age 110, Still Resembles Indian Nickel

Do you recall the handsome Indian face on the Indian-and-buffalo nickel? Would you recognize the Indian who posed for this famed engraving?

There were, in fact, three Indians who served as models; two are living—one of them is presently a patient at Presbyterian Hospital, ill with a heart-

lung condition.

This is George S. Squires. Birthplace—the Territory of Oklahoma. Tribe—Sioux. Indian name—Running Water.

Age—110 years.

Mr. Squires has dark bronze skin, flowing white shoulder-length hair, and lively dark eyes. Many years ago he wore

## Mothers, Babies, LPNs

Edith Ankers, Director of the Columbia-Presbyterian School of Practical Nursing, and Lucy Lazzopina, Associate Editor of *The Stethoscope*, have collaborated with the *Journal of Practical Nursing* in the publication of a two-part article on the nursing care of mothers and newborn infants at P.H.

Entitled "Mothers, Babies, and LPNs," the article outlines the duties of the licensed practical nurse from the moment a mother-to-be is admitted, to the day that two patients, the mother and her baby, leave the hospital.

Our LPNs' duties include counseling and psychological preparation of the expectant mother, measuring her pulse, respiration and blood pressure and the fetal heart rate to anticipate complications, assisting her during the first stage of labor, and taking care of the infant and mother after delivery.

The two instalments of the article in the October and November issues of *The Journal* emphasize the value of inservice education programs of LPNs at Columbia-Presbyterian in building upon the foundations of basic education provided by the School of Practical Nursing. The 18 photos, including the cover photo in the October issue, showing our LPNs in action, were taken by Mrs. Lazzopina.

## Medical Data Course

An introductory course in PL-1 programming will be offered to Columbia-Presbyterian Medical Center Personnel who have completed the "Introduction to Programming" course, or who have programming knowledge of some other computer language.

The course begins on February 16th and runs from five to six weeks. There will be three class meetings per week: on Mondays, Wednesdays and Fri-

days, from 9:00 to 10:00 a.m.

Because of the holiday, the first meeting will be held on Tuesday, February 16. Classes will be held at the Armory, 168th Street entrance, first floor, Room 5. Registration blanks and additional information may be obtained at P.H. 4, Room 33, and should be returned by February 12th.

Dr. William A. Bauman is the Director of Medical Data Processing. Phone 579-2077.

braids which fell to his waist. His good humor radiates from his strong face as he answers our questions. The years have not dulled his zest for conversation. Recently he was interviewed by reporters from two New York City newspapers, and the *Daily News* printed a photo of his profile and a matching photo of the Indian nickel.

As a result of the *Daily News* story, which mentioned that Mr. Squires would need a home after he emerged from the hospital, inquiries have come in from all of the radio and TV networks. "This big city has a big heart," someone at the Hospital commented.

Newspapers in several states have picked up the story of Mr. Squires. He has received letters with friendly messages from many school children, and good wishes have been

## For Research Projects Of Dr. Murray

## Multiple Sclerosis Grant

The College of Physicians and Surgeons has been awarded an 18-month grant of \$48,817 by the National Multiple Sclerosis Society. The grant, which became effective on January 1, 1971, will support the research of Dr. Margaret R. Murray, Professor Emeritus of Anatomy at the College. Her research relates to the use of cultures of living nerve tissue in an attempt to unravel some of the mechanisms involved in autoimmune disease.

In an infectious disease, the body manufactures antibodies to neutralize an antigen, such as a bacterium or a virus. In an autoimmune disease, by contrast, an antibody induced by an antigen is directed against some protein component of the body. Or possibly the reaction may be caused by a combination of antibody, an antibody-antigen complex, or lymphocytes (certain white blood cells) that have become sensitized by exposure to antigen. In multiple sclerosis there may be a conspicuous loss of myelin, a sheath which envelops and insulates many nerve fibers like a sleeve.

Tissue cultures of living myelinated nerve cells provide a simplified mechanism by which to study the effects of antibody, antigen, lymphocytes, and other factors that may be involved in autoimmune disease.

Dr. Murray plans to test on cultures of the central nervous system, various components of the blood and tissues from patients, and especially from animals with an experimental

days, from 9:00 to 10:00 a.m. Because of the holiday, the first meeting will be held on Tuesday, February 16.

Classes will be held at the Armory, 168th Street entrance, first floor, Room 5. Registra-

tion blanks and additional information may be obtained at P.H. 4, Room 33, and should be returned by February 12th.

Dr. William A. Bauman is the Director of Medical Data Processing. Phone 579-2077.

ness of supplying donkeys for both Ringling Brothers and Barnum and Bailey. The Kings sponsored his education when he was a boy and employed him. His trade, bricklaying, enabled him to travel and earn his living in different states.

During his travels around the country, he lost a proud possession, a wooden nickel nine inches in diameter, a replica made for him by the engravers. But he has by no means lost his natural flesh-and-blood identification with the coin.

According to his physicians, this strong-spirited man is slowly winning the battle over his illness.

As of mid-January, George S. Squires, age 110, looks forward to living in one of the comfortable homes which this city with a big heart has offered him.

Dr. Margaret R. Murray

disease similar to multiple sclerosis, in an attempt to segregate and identify these factors. If cultured myelin differs in its sensitivity to the segregated materials, this could lead to a more useful method for assessing the roles of the antibody or antigen involved.

By studying serums from other demyelinating diseases with the tissue-culture method, she hopes that similarities and differences among MS and various related diseases may emerge.

Multiple sclerosis is a chronic, disabling disease of the brain and spinal cord. It usually manifests itself between the ages of 20 and 40—prime years for building careers and families. At present an approximately half million Americans suffer from multiple sclerosis and related diseases.

George S. Squires, at Presbyterian, has more than a century of memories.

# News of Nursing

Mrs. Agnes Albro, N.I., and Lucille Manning, Medicine/Surgery, were delegates at a conference entitled *Institute on Evening and Night Nursing Service Administration*, sponsored by the American Hospital Association, November 16-18, at the Hilton Inn, St. Louis, Mo.

On December 9, Mrs. Mary Ann Baldus, V.C., attended a

conference entitled *Nurse Clinician Program*, sponsored by, and held at Mount Sinai Hospital, N.Y.C.

*The Home Care of Patients with Airway Obstruction* was the title of a conference sponsored by, and held at St. Vincent's Hospital, New York City, December 2. Delegates from PH were Kathleen Ryaby, M/S, and Patricia Doran, M/S.

Martha Schmidt, M/S, attended the *Second Annual Seminar for Recovery Room Personnel*, sponsored by the Florida Society of Anesthesiologists, November 20-22, at the Tides Hotel and Beach Club, St. Petersburg Beach, Florida.

A conference on *Infection Control Within the Hospital* Symposium, sponsored by the Association of Operating Room Nurses of Long Island, November 21 at Carl Hoppl's Restaurant, Baldwin, N. Y., was attended by Catherine Guzinski, O.R., and Denise Knott, O.R.

The sixth annual *Greater New York Symposium on Respiratory Therapy—Recent Advances in Intensive Respiratory Care*, sponsored by Greater New York Coronary Care/American Association of Inhalation Therapists, at the Americana Hotel, N.Y.C., November 27-28, was attended by Letty Chiew, N.I., Caroline Emig, M/S, and Rose Serafini, M/S.

Jacqueline Webb, V.C., attended a conference on *Frustration, Protest, Conflict*, sponsored by District 13, New York State Nurses Association, at the American Red Cross Center, N.Y.C., December 2.

Webb

## STETHOSCOPIA *Continued from page eight*

### • BIRTHS:

Dr. John Grant Gorman, director of the Blood Bank, and his wife, the former Dr. Carol Rutgers, welcomed their third child and second daughter, Alexandra Grant, on October 20.

Martin Ryan, Maintenance & Construction, welcomed his first grandchild, a granddaughter, Stacey Marie Keeley, on December 19.

Daniel Kenny, Maintenance & Construction, welcomed his second grandson, Joseph Murphy, Jr., born in Sloane Hospital, December 27.

Mr. & Mrs. John Lahiff welcomed their first child, a son, Brian Patrick, on January 2, at Sloane. Mrs. Lahiff, the former Barbara Connors, was an account representative, Out-patient Collection Department. Mr. Lahiff is Operational Supervisor, IBM Unit.

### • CONGRATULATIONS TO:

The following members of the Housekeeping Department: Mose McNeill, who has been promoted from Supervisor to Unit Housekeeper in Harkness Pavilion; Fred Morris, who has been promoted from Head Porter to Supervisor of the Utility Day Staff; and Juan Rivera, who has been promoted from Porter to Head Porter.

Carol Gentile, who has been appointed Head Nurse, Medical Intensive Care Unit.

Sandra Sooder, who has been appointed Assistant Head Nurse, Medical/Surgical.

Joan Lawson, who has been appointed Head Nurse, Operating Room.

Linda Hanson, who has been appointed Head Nurse, B.H.

Mary Giovannelli, who has been appointed Assistant Head Nurse, B.H.

Mary Baxter, who has been appointed Head Nurse, Admitting Ward.

Mary Ann Melone, who has been appointed Assistant Head Nurse, Medical/Surgical.

Sheila Kellett, who has been promoted to head nurse, PH 15 center.

Dorothy Ranson, who has been promoted to evening head nurse, Sloane Hospital.

Rosemary McElroy, who has been promoted to evening head nurse, Operating Room.

Elinor Ann Moody, who has been promoted to head nurse, Babies Hospital.

Sheila McLoughlin, who has been promoted to assistant head nurse, Babies Hospital.

Rosanne Kelly, who has been promoted to assistant head nurse, Babies Hospital.

George Minaya, Jr., who has been accepted as an undergraduate student at the Stevens Institute of Technology in Hoboken, New Jersey. George is the son of George Minaya, Sr., Supervisor, Assistant Treasurer's Office, PH.

## Welcoming Party For New Staff Nurses

A happy blending of good food and good conversation seemed to prevail at the Welcoming Party for new staff nurses, held in Harkness Hall, November 4.

In relaxed and informal surroundings, the new staff nurses had an opportunity to meet and chat with members of the nursing and administrative staffs.

## Cake Sale For Stewart-Elliott Fund

A cake sale, sponsored by the private duty nurses, was held in PH 1-50, December 4. Proceeds from the sale were allocated to the Stewart-Elliott Fund, established several years ago in memory of two Presbyterian nursing school graduates, Lucille Stewart and Margaret Elliott.

When the Misses Stewart and Elliott died, their colleagues decided that in lieu of flowers, a more permanent memorial would be preferable.

The Fund is used to help private duty nurses when they become ill and cannot work, to tide them over any rough spots and to boost their morale.

The cakes and cookies, baked or purchased by the nurses, are donated for the occasion and the sale, their first such venture, was a great success. One-hundred and sixty-eight dollars was raised for the Fund.

## DOINGS OF DOCTORS

*Continued from page eight*

DR. GEORGE I. LYTHCOTT, Associate Dean, P&S, who serves as chairman of the Medical Advisory Board for the Peace Corps in Washington, D. C., has recently returned from a 14-day visit to West Africa where he reviewed the professional staffing problems with respect to the new \$8,000,000 John F. Kennedy Hospital in Monrovia, Liberia.

This modern hospital, built and equipped with the assistance of the Agency for International Development, was formally opened on December 1.

Following his visit to Liberia, Dr. Lythcott visited Nigeria for four days for consultations with the USAID Mission there on the United States Relief and Rehabilitation Effort, a consequence of the Nigerian civil war.

DR. JOHN K. LATTIMER, Professor and Chairman, Department of Urology, Governor of the American College of Surgeons, and a member of its committee on Undergraduate Education, presided at a discussion by medical students, psychiatrists and deans on *What Today's Medical Students Expect from Departments of Surgery*, during the annual meeting of the College, held in Chicago in October.

At a meeting of the American Academy of Pediatrics in San Francisco, also in October, Dr. Lattimer delivered a paper on virus-like particles which react with measles antibody in the kidneys of patients with systemic lupus erythematosus, in conjunction with DR. MYRON TANNENBAUM. Assistant Attending Pathologist, PH, DR. KONRAD HSU, Professor of Microbiology, P&S and DR. JOSEPH BUDA, Assistant Attending Surgeon, PH.

On November 1, Dr. Lattimer presented

papers on *Renal Tuberculosis and Kidney Masses in Children* before the Postgraduate Symposium of the American Urological Association, New York City. After a flight to Los Angeles, that same day, he presided as chairman of the Long-Range Planning Committee of the Society of University Urologists.

On November 4, Dr. Lattimer delivered the Belfield Memorial Invitational Lecture before the Chicago Urological Association, receiving the plaque and award which accompanies it. The subject of his address was *Evidence for Viral Factors in Cancer of the Prostate*. In his talk he outlined the new hopes for possible better cancer treatment which have arisen as a result of the recent discoveries that DNA may sometimes be created from RNA. He showed electron micrographs and time-lapse motion pictures of cancer cells as they are being studied in the Department of Urology.

At the annual meeting of the American Academy of Pediatrics in October, DR. ALLEN HYMAN, Assistant Professor of Anesthesiology, P&S, was elected to the Executive Committee of the Anesthesia Section of the Academy.

DR. P. MAYNARD BEACH, Assistant Professor of Surgery, P&S, attended the 43rd Scientific Session of the American Heart Association in Atlantic City, N. J., November 13. He spoke on *Total Correction of Tetralogy of Fallot in Adolescents and Adults*.

At the Western Massachusetts Division of the Association's meeting in Springfield, December 5, Dr. Beach lectured on *Recent Surgical Advances in the Treatment of Acquired Heart Disease*.

## Young Men Are Choosing Nursing

Ramon Lavandero and John Mladinich, nursing students at Presbyterian.

In an era when traditionally all-male universities like Princeton and Yale yielded to the pressure brought to bear by female students clamoring for admission to these institutions, Columbia University-Presbyterian Hospital School of Nursing finally broke its 80-year tradition of an all-female student body.

Two young men have registered and are now well along in their studies as the first male students to be admitted to Columbia's nursing program.

According to John Mladinich and Ramon Lavandero, the two junior student nurses, their reasons for selecting Columbia-Presbyterian were not specifically directed toward breaking the formerly all-female tradition, but rather because of the educational advantages offered.

Mr. Mladinich elected to come here because it is one of

the few nursing schools that offer a two-year course leading to a baccalaureate degree. He had attended the University of Dallas in Texas for two years, and St. Peter's College in Jersey City for one year.

He lives in North Bergen, New Jersey, with his parents and three sisters; one sister is a nurse.

Mr. Mladinich plans to work as a nurse for a while after graduation, but is contemplating continuing his education with a Master's degree as his goal.

Mr. Lavandero was born in San Juan, Puerto Rico, and came to the United States in 1966. He attended the University of Miami for two and a half years, and Fordham University for one year.

He also chose Columbia-Presbyterian because of the baccalaureate program and because of its emphasis on clinical

work (bedside patient care).

Both young men declared that their fellow students have made them feel very comfortable and very much at home. "They sort of 'sister' us and make us feel we are part of the group."

In fact, in the few months he has been a member of the student body, Mr. Lavandero has already been elected to two posts: treasurer of the Student Government Association and co-chairman of the Affiliating Students Committee.

Mr. Mladinich and Mr. Lavandero predict that there will be an upsurge of male nurses in the near future. Nursing salaries are better, and if they continue their upward trend, more and more young men may be attracted to nursing.

They also feel that current orientation toward specialties make nursing more interesting and challenging. Specialties such as intensive coronary care, intensive medical care, psychiatric community health care, maternity nursing-midwifery, hemodialysis unit nursing and administrative nursing on all levels, are particularly stimulating. Mr. Lavandero is personally very much interested in intensive coronary nursing.

How do the girls feel about the boys?

One female student wrapped it all up by saying, "We welcome the boys and hope there will be more coming in the future."

## Austrian Doctor Visits Orthopaedic

Dr. Charles S. Neer, II, Attending Orthopaedic Surgeon, PH, and Professor of Clinical Orthopaedic Surgery, announced that Professor Jorg Bohler of Austria visited the Fracture Service of the New York Orthopaedic Hospital-Columbia-Presbyterian Medical

Center on January 26.

Approximately 150 representatives of the approved residency training program in this section of the country participated in a conference on the recent advances and methods in the treatment of important fractures.

## Annual Events For Private Duty Nurses

The Harkness Hall lounge was brightly decorated with Christmas candles, holly and wreaths, to enliven a cheerful gathering of private duty nurses on the occasion of the annual buffet supper on December 1, and at the breakfast party for night duty nurses on December 2.

The sound of gay Christmas music on the stereo hi-fi, combined with lively

conversation and good food, created a very cheerful atmosphere as the parties got under way.

Several administrators joined the nurses for the festivities, and a high point of the December 1 buffet was the presence of Phyllis Young, retired former Director of the Nurses' Registry (at right in photo).

Anthony Cassaniti poses beside model miniature cathedral he constructed.

## Neuro Institute Announces Workshop

Mrs. Beverly Jones, supervisor, Staff Development, N.I., has announced that the Nursing, Medical and Social Service Departments of N.I. and Columbia's School of Public Health and Administrative Medicine, in cooperation with the New York State Nursing Home Association, will present a workshop on February 10, from 8:00 a.m. to 5:00 p.m. in the Alumni Auditorium, P&S.

The workshop is entitled *Adapting Care for the Patient with Organic Mental Syndrome*.

The keynote address will be made by Dr. Shervert Frazier, Attending Psychiatrist, PH, Professor of Clinical Psychiatry, P&S, and Deputy Director, New

Dr. Shervert Frazier

York State Psychiatric Institute.

All Medical Center personnel are welcome. There will be no registration fee if an identification card is presented. Please call Extension 3248 to place your registration.

## Anesthesiology's Thursday Lectures

The Department of Anesthesiology is sponsoring a series of lectures held on Thursday afternoons, from 5:00 to 6:00 p.m., in the 4th floor amphitheater, Babies Hospital.

Already given, on January 28, was the first of the series, "Anesthesia and Hypoxemia," by Dr. Stuart F. Sullivan, Associate Professor of Anesthesiology, P&S.

Scheduled for the four Thursdays in February:

February 4, "Work of Breathing," by Dr. Dudley F.

Rochester, Assistant Professor of Medicine, P&S.

February 11, "Respiratory Failure in the Infant with Congenital Heart Disease," by Dr. Jack Downes, Assistant Professor of Anesthesiology, University of Pennsylvania.

February 18, "Recent Trend in Respiratory Care," by Dr. Bennie Geffin, Associate Professor, Harvard University.

February 25, Title to be announced, by Dr. Harry M. Thomas, Associate in Medicine, P&S.

## Portrait Of P.H. Information Clerk Types Him As Real Renaissance Man

Anthony Cassaniti is a young man with many irons in the fire. He is employed, part-time, in the P.H. Information Service, and is also assistant minister at St. Matthew Lutheran church in the Inwood section of Manhattan.

In addition to his dual-work role, Mr. Cassaniti finds time for a variety of fascinating hobbies ranging from taxidermy to raising tropical fish, to building miniature models of churches and ships. His

latest triumph is a miniature cathedral of his own design, based on the many cathedrals he has visited. Add to this amateur Egyptology and collecting memorabilia from the Victorian era, of which he is a devotee, and you have a small idea of some of the accomplishments of this resourceful young man.

Mr. Cassaniti is currently working towards the B.A. degree at City University of New York, majoring in church

Close-up view of portion of cathedral to show detail.

history. His particular area of interest is in the Protestant reformation, specifically within the English church.

He was born and raised in New York City and served with the U. S. Air Force as airman 1st class from 1963 to 1967. From 1967 to 1969 he was with the Air Force reserve.

Upon completion of his studies at C.U.N.Y., he will enter the Lutheran seminary in Springfield, Illinois.

Mr. Cassaniti lives with his parents near the Hospital. His father, John, is well known to Hospital staff and personnel as the Maitre d' at the ABG, a favorite local eating place.

# Stethoscopia

## • ENGAGEMENTS:

Rose Salikas, medical secretary, Medical Information, is engaged to Anthony Penzabene. A June wedding is planned.

Delores Hagood, staff nurse, N.I., is engaged to William Singleton. The wedding will be in March.

## • WEDDINGS:

Doris E. Miller, Secretary to Chaplain Robert B. Reeves, Jr., was married to Gerald R. Wescott, Jr., of Briarcliff Manor, New York, on January 3. Mr. Wescott is associated with the Physician's Planning Service Corporation of New York City, which is the service organization for the National Association of Residents and Interns (NARI) and the American Professional Practice Association.

The ceremony was performed in the Pauline A. Hartford Memorial Chapel by Chaplain Reeves, assisted by the Reverends Jon Norton and David J. Harper.

Catherine Gleason, account representative, OPD Accounting Department, was married to Sgt. Dennis Diedrich, in the Church of the Incarnation, New York City, November 7. Sgt. Diedrich, a member of the United States Air Force, is stationed in Thailand.

Doris M. Knappenberger, staff nurse, was married to Stephen M. Konyha, of the Bankers Trust Company, on December 12.

Chaplain Robert B. Reeves, Jr., performed the ceremony in the Pauline A. Hartford Memorial Chapel.

Anne B. Leland was married to Ian David Benham on December 19. Mrs. Benham is a member of the class of P&S '72 and her father, Dr. James Leland, is Clinical Professor of Medicine, P&S.

Dr. Ruth D. Neuman was married to Dr. Bertel Bruun, Instructor in Neurology, P&S, (assigned to Harlem Hospital) on December 19.

Barbara E. Mueser was married to Dr. Richard P. Perkins, in the St. Saviour Chapel of the Cathedral of St. John the Divine, on December 26.

Dr. Perkins, a P&S graduate, is completing his chief residency in Obstetrics and Gynecology at PH.

Susan G. Spevack and Robert H. Carlson, third year medical students at P&S, were married on December 27.

## • FAREWELL TO:

Beverly Roberts, technologist, Special Hematology, who left for Jamaica in October.

Pamela Jensen, technologist, Coagulation Laboratory, who resigned to accept a position at the New York University Medical Center.

Luis A. Yrizarry R.T., supervisor and chief technician, Babies Hospital X-ray Department, who has resigned to accept a position at Beekman Downtown Hospital, New York City.

Mr. Yrizarry had been employed at PH for 11 years.

## • NOTES OF INTEREST:

Mrs. Catherine Finnerty, receptionist, Nursing Office, HP Main, has transferred to Group Clinic, V.C. 2, after serving for 18 years in the Department of Nursing.

Diedrich

Rakowski

Cherny

## • WELCOME TO:

Mrs. Helen Rakowski, R.T., supervisor and chief technician, Babies Hospital X-ray Department. Mrs. Rakowski has been with Presbyterian since July, and was formerly chief x-ray technician at Dover General Hospital in New Jersey, a position she held for 19 years. She is past president of the New Jersey State Society of X-ray Technicians.

Alexis Cherny, who has been appointed Administrative Coordinator, Division of Epidemiology, School of Public Health.

## DOINGS OF DOCTORS

DR. LAWRENCE C. KOLB, Professor and Chairman, Department of Psychiatry, has been appointed Consultant to the World Health Organization, Mental Health Section. He attended a meeting of that organization in Geneva, Switzerland, November 9-17.

DR. ANTHONY DONN, Assistant Professor of Ophthalmology, P&S, and Co-director of the Corneal Center, ESHEI, was invited by the University of Ottawa to organize a two-day symposium on the cornea. He presented two papers, *The Management of Endothelial Disease* and *The Physiology of Contact Lenses*.

Other participants from the Corneal Center were DR. HERNANDO CARDONA, Assistant Professor of Ophthalmology, P&S, who presented a paper on *Keratoprostheses*; DR. RICHARD W. DARRELL, Assistant Ophthalmologist, PH, who spoke on *Management of Viral Diseases of the Cornea* and DR. FRANK B. HOFFLE, Assistant Ophthalmologist, PH, who presented two papers, *Evaluation of Corneal Donor Material* and *Contact Lenses after Keratoplasty*.

At a meeting of the Cleveland Radiological Society, October 26, DR. GUY D. POTTER, Associate Attending Radiologist, PH, gave an address on *The Ear, the Surgeon and the Radiologist*.

Dr. Potter was also Visiting Professor at the Cleveland Clinic in October and lectured on *The Roentgenology of the Orbit*.

DR. SOL SPIEGELMAN, Director, Institute of Cancer Research, P&S, was an invited speaker at a meeting of the Royal Society in London in June. He spoke on *Molecular Consequences of Infection with RNA Tumor Viruses*.

Dr. Spiegelman also presented papers at the 10th International Congress of Microbiology in Mexico, and at the 8th International Congress of Biochemistry in Switzerland, during August and September respectively.

In November, Dr. Spiegelman was an invited speaker at the Second Lepetit Colloquium at the Institute Pasteur, in Paris. He lectured on *Intermediates and Products of the RNA-dependent DNA Polymerase of RNA Oncogenic Viruses*.

DR. S. RAYMOND GAMBINO, Professor of Pathology, P&S, and Director of the general Clinical Chemistry Laboratories at PH, gave the keynote address at the Technicon International Congress on Advances in Automated Analysis held in New York City, November 2.

Dr. Gambino spoke on *The Law, The Teacher and Technological Progress*.

At the annual meeting of the American Academy of Neurological Surgeons in Mexico City, November 19, DR. J. LAWRENCE POOL, Professor and Chairman, Neurological Surgery, spoke on *Bifrontal Craniotomy for Treatment of Anterior Communicating Aneurysms*.

DR. WILLIAM CURTH, Associate in Dermatology, P&S, and DR. HELEN O. CURTH, Special Lecturer in Dermatology, P&S, were invited to the 20th Medical National Congress in Managua, Nicaragua, November 18-21.

Dr. William Curth lectured on primary syphilis and the importance of looking for contacts.

Dr. Helen Curth showed her movie, *Surgical Treatment of Benign Acanthosis Nigricans*.

The Drs. Curth were made Honorary Members of the Nicaraguan Society of Dermatology, and also of the College of Physicians and Surgeons of Nicaragua.

At a meeting of the American College of Surgeons, held in Chicago, October 12-15, DR. RALPH J. VEENEMA, Attending Urologist, PH, and Chief of Urology, Delafield Hospital, chaired a postgraduate seminar in urology. He presented a paper on *Endocrinological Aspects of Urology*.

Dr. Veenema also served as a panelist at the above seminar, at which time he spoke on *Cancer of the Urogenital Tract*.

At the Graduate Seminar of the American Urological Association, held in New York on November 2, Dr. Veenema presented a paper on *Chemotherapy of Bladder Tumors*.

DR. CHARLES L. FOX, Professor of Microbiology (Surgery), attended the 3rd International Congress for Research in Burns, Prague, Czechoslovakia, September 20-25. He spoke on *Control of Infection with Silver Sulfadiazine and Evaluation of Various Salt Solutions*.

Dr. Fox also presented a scientific exhibit, in collaboration with Dr. R. C. Baxter of the Southwestern Medical School in Dallas, and Dr. J. R. Lloyd of the Children's Hospital in Detroit, at the meeting of the American College of Surgeons in Chicago, October 12-17, and at the meeting of the American Academy of Pediatrics in San Francisco, October 18-22.

The exhibit, entitled *Silver Sulfadiazine Cream (1%) Topical Anti-Infective for Burns*, received the Bronze Award at the San Francisco meeting for "originality of concept and presentation."

Dr. Schullinger

Dr. Santulli

DR. THOMAS V. SANTULLI, Attending Surgeon, PH, and Chief of Pediatric Surgical Service, B.H., attended the annual meeting of the American Academy of Pediatrics in San Francisco, October 18.

As chairman of the Committee on the Imperforate Anus Survey of the Academy, Dr. Santulli reported on the findings of a survey of the members of the Surgical Section of the Academy, including national and international members. DR. JOHN N. SCHULLINGER, Assistant Attending Surgeon, PH, a member of the Committee, was co-author of the paper.

Dr. Santulli also attended the Surgical Committee Meeting of the National Children's Cancer Study Group A in San Francisco, October 16, and a meeting of the Board of Governors and committee members of the newly formed American Pediatric Surgical Association in San Francisco, October 17.

DR. PAUL A. MARKS, Vice President in Charge of Medical Affairs, and Dean of the Faculty of Medicine, P&S, lectured on *Differentiation of Erythroid Cells for the Harvey Society's 1971-72 series* at Caspary Hall, Rockefeller University, November 19.

At the annual dinner of Alumni of Presbyterian Hospital, held at the Union Club, November 20, Dr. Marks spoke on *Perspectives in Education for Health Care*.

## SURGICAL RESEARCH GIFT FROM BROOK FOUNDATION

Surgical research at the College of Physicians and Surgeons will benefit from a special fund contributed by the Brook Foundation, Inc., it was announced by Dr. Paul A. Marks, Vice President in Charge of Medical Affairs at Columbia University and Dean of the College.

The research fund represents the balance of The Carolyn H. Edison Fund within

The Brook Foundation.

In donating the assets, totaling \$195,500, to the College, the Orange, New Jersey-based nonprofit corporation asked that they be used to establish the Carolyn Hawkins Edison Surgical Research Fund "for support of surgical research and educational activities relating to surgical research at the College of Physicians and Surgeons."

## DR. KROOTH APPOINTED PROFESSOR, HUMAN GENETICS AND DEVELOPMENT

Dr. Robert Schild Krooth has been appointed Professor of Human Genetics and Development, P&S, it was announced recently by Dean Paul A. Marks.

Dr. Krooth, who was born in Chicago, Ill., received the A.B. from Stanford University in 1948, the Ph.D. from the University of London (England) in 1952 and the M.D. from Harvard Medical School in 1957.

He was a post-doctoral student at King's College, Cambridge University, 1952-53 and a Fellow in medical genetics of the Population Council Incorporated of New York (at Harvard Medical School), 1955-57.

Dr. Krooth served his internship at the University of Utah Medical School, 1957-58; served as surgeon and geneticist, epidemiology branch, and acting chief, section on genetics, National Institute of Neurological Diseases & Blindness; surgeon and visiting investigator, NINDB and National Institute of Allergy and Infectious Diseases, respectively, National Institutes of Health, 1958-61, and acted as clinical associate, NINDB, 1959-61.

He served his residency in the Department of Medicine, University of Rochester, 1961-62 and was the recipient of a Career Development Award, USPHS, 1962-68.

Immediately prior to coming to Columbia-Presbyterian Medical Center, Dr. Krooth was Professor, Department of Human Genetics, University of Michigan Medical School.

He has served as a consultant

to the National Institutes of Health and to a variety of private foundations concerned with medical research.

Professional memberships include the American Society of Human Genetics, Sigma Xi, American Federation for Clinical Research, American Tissue Culture Association, the Genetics Society of America and the Harvey Society.

Dr. Krooth is a member of the editorial boards of the *Journal of Cellular Physiology* and *In Vitro*; he is a member of the Genetics Training Com-

Dr. Robert S. Krooth

## Beautiful Capping Ceremony For Forty Practical Nursing Students

A capping ceremony for the 40 members of the fifth class of the Columbia-Presbyterian School of Practical Nursing was held on January 22 in the Pauline A. Hartford Memorial Chapel.

Following the processional, Father Blase, a Capuchin monk of the First Order of St. Francis of Assisi, delivered the invocation.

Mary I. Crawford, Associate Dean of Nursing, Faculty of Medicine, Columbia University and Director of Nursing, Presbyterian Hospital, welcomed the nurses and told them she shared, in a very real way, their joy and pride of accomplishment as they continue on their journey toward becoming members of the hospital team.

Edith J. Ankers, director, Columbia-Presbyterian School

Edith J. Ankers, with an assist from Jean Cormack, caps student Nancy Scott.

of Practical Nursing, assisted by Jean Cormack, instructor and class advisor, capped each student. The chapel lights

were then dimmed and the newly capped students, each holding a candle, recited the practical nursing pledge, led by senior class president, Christine Carden. This was an impressive and beautiful recitation.

Benediction by Father Blase and the recessional ended the ceremony.

Miss Ankers is very enthusiastic about the record-breaking 40 students in this group; the previous class numbered 23. She commented, "This is the biggest one to date and I am hopeful that the upward trend will continue."

Following the capping ceremony, a reception was held in Harkness Hall for the students and their relatives, friends and classmates; photographs were taken and warm goodbyes said.

## Art Show Coming April 27 Through May 7

To give truth to the Biblical statement that "man shall not live by bread alone," we would remind all Medical Center artists, who indeed labor for bread but do art for love, that the annual art show will be held April 27 through May 7.

mittee, National Institute of General Medical Sciences, NIH and of the Board of Directors of the American Society of Human Genetics.

His major research is in the area of cultured human cells and inherited metabolic disease.

Dr. Krooth has contributed significantly to the scientific literature.

Art in any form, including painting, sculpture, photography and crafts is sought. As in the past, the show will be housed on the 20th floor of Presbyterian Hospital, adjacent to the Milbank Library.

This traditional event, arranged jointly by the Office of Public Interest and the Art Show Committee, under the chairmanship of Chaplain Rob-

## Many Presbyterian Hospital Employees Continue Education Through Weinberg Aid

Many employees of the Presbyterian Hospital are discovering the benefits of the plan that helps them advance their education while working full-time—the Sidney J. Weinberg Educational Aid Reimbursement Plan.

Fifty-nine persons to date are taking advantage of the Weinberg Plan for the spring semester, 1971. These 59 Presbyterian employees (their names are listed below) are to be congratulated. While continuing their jobs they are go-

ing to school, gaining new educational resources, adding to their statuses as employees and as persons of this world.

More than three-fourths of these current Weinberg students are working toward college degrees.

Of the 46 seeking college degrees, two are working toward the Ph.D.; 13 toward master's degrees; 17, bachelor's degrees; and 14, A.A.S. degrees.

Eighteen different colleges and universities are repre-

sented in the list of 59 spring enrollments. They are:

Universities and schools	Number of Weinberg enrollees
Bronx Community College	2
City College	2
Columbia University	5
Edward Williams College	1
Fairleigh Dickinson University	4
Fordham University	3
Hunter College	2
Iona College	4

Long Island University	2
Luther College	1
Manhattan College	3
Manhattan Community College	18
Mercy College	1
New York Community College	3
New York University	4
Polytechnic Institute of Brooklyn	1
State University at Farmingdale	1
St. John's University	2

# Many Presbyterian Employees Continue Education Through Weinberg Aid

Continued from page one

Congratulations to the following employees whose applications have been approved:

NAME	POSITION	DEPARTMENT
Merna Alpert	Supervisor	Social Service
Ursuss Alvarez	Inhalation Therapist	Inhalation Therapy
Ann Ametta	Resident Manager	Harkness Hall
Khosrow Anjom	Associate Physicist	Radiotherapy
Romulo Arbas	Computer Operator	Medical Data Processing
Izabella Babian	Laboratory Technician	Trace Chemistry
Rodger Bailey	Computer Operator	Medical Data Processing
Ruby Baker	L.P.N.	Nursing Service
Michael Barry	Account Representative	Credit & Collection
Walter Barton	Ward Clerk	Nursing Service
Robert Bechner	Security Officer	Protective Department
Richard Blaber	Technologist	Diagnostic Microbiology
Daniel Bowden	File Clerk	P.H. X-Ray
Ann Brand	Laboratory Technician	Clinical Chemistry
Ellen Connolly	Technician Trainee	Clinical Chemistry
Eugene Daly	Insurance Clerk	Accounting
Nancy Duffy	Ward Manager	Nursing Service
Nancy Feldman	Case Aide	Social Service
Dina Fine	Physical Therapist	Physical Therapy
George Gallagher	Security Officer	Protective Department
Jaime Gill	Night Manager	P.H. Unit Manager's Office
Ernestine Gore	Ward Clerk	Nursing Service
Edward Guerrero	Technologist	Bacteriology
Judith Hogan	Chief Physical Therapist	Physical Therapy
Laura Hoffman	Therapist	Occupational Therapy
Kathleen Horgan	Staff Nurse	Nursing Service
Gilbert Hsu	Laboratory Technologist	Clinical Chemistry
Mary A. Hughes	Physical Therapist	Physical Therapy
Sheila Kellett	Head Nurse	Nursing Service
John Kennedy	Night Manager	P.H. Unit Manager's Office
Catherine Lang	Supervisor	Clinical Pathology
Cheng Liao	Technician	Trace Chemistry
Joseph Lyons	Wage Analyst	Personnel Office
John McKinney	Assistant Supervisor	Protective Department
Paul Manchess	Account Representative	Out-patient Collection
Alfredo Martinez	Porter	Housekeeping Department
Patrick Meehan	Credit Supervisor	Credit Department
Virginia Mejia	Case Aide	Social Service
Harry Morelli	Pharmacist	Pharmacy
Mary K. Mullen	Staff Nurse	Atchley Pavilion, D.P.O.
Letty Munz	Psychometrist	Pediatric Psychiatry
John J. Murphy	Inhalation Therapy Trainee	Inhalation Therapy Department
John V. Noselli	Security Officer	Protective Department
Thomas Papachristos	Laboratory Technician	Diagnostic Microbiology
James Parson	Supervisor	Out-patient Collection
Elizabeth Potter	Staff Nurse	Nursing Service
Julia Poyhonen	Clerk-typist	Nurses Registry
Antoine Prophete	Laboratory Technician	Clinical Chemistry
Zofia Pytowska	Receptionist	Vanderbilt Clinic
Maureen Reilly	Staff Nurse	Nursing Service
Doreen Sachs	Laboratory Technician	Hematology
Wilfredo Sanchez	Assistant Supervisor	Equipment Room
Donald Sichler	Medical Laboratory Technician	Clinical Chemistry
Ruth Singer	Technician	E.M.G.
Elaine Smith	Infant Care Technician	Nursing Service
Barbara J. Spratley	Ward Clerk	Nursing Service
Elizabeth Stoffer	Psychiatric Social Worker	Pediatric Psychiatry Clinic
Laurie Wheeler	Physical Therapist	Physical Therapy
Tina Zamerinsky	Clerk-typist	Bacteriology

Here are the essential points of information on the Weinberg Aid Plan for the benefit of other Presbyterian Hospital employees who may wish to apply in the future:

The Weinberg Educational Aid Reimbursement Plan is available to regular full-time employees of The Presbyterian Hospital. The plan offers to the approved applicants a reimbursement of 50% of the tuition fee for one to six credits per semester, or the equivalent for non-credit courses.

If you pay \$100 in tuition for courses for a semester, the Weinberg Aid Plan will reimburse you \$50.

You must complete the course with passing grades. And at the start you must have applied for Weinberg reimbursement, and must have received approval. The Plan

applies only to attendance at a school of recognized educational standing. Correspondence courses are not approved. And the Plan does not apply to auditing. The selected subjects or courses must be related to your job or to your future responsibilities at the Hospital.

Dates for applying for fall courses will be announced in a future issue of *The Stethoscope*, and you may also receive this information from your supervisor. Summer session will be handled on an individual basis.

The Plan is administered by Mr. C. D. Auty, Assistant Vice President for Personnel.

For further information and application, contact Lillian Oring, Personnel Assistant, P.H. 1-44. Telephone: 3215.

## Receive Plaques In Recognition Of Generous Gifts

At a reception on January 29, held in the Squier Urological Library on PH 10, Dr. John K. Lattimer, Professor and Chairman, Department of Urology, presents plaque to Michael Chernow, President of Monet Jewelers.

Mr. Chernow, his family and friends, have consistently, enthusiastically and generously contributed to urology research for many years.

In the photograph, left to right, are Mrs. Joseph Chernow (Mr. Chernow's sister-in-law), who also received a plaque, Dr. Ralph J. Veenema (Mr. Chernow's physician), Mrs. Michael Chernow, Mr. Michael Chernow and Dr. Lattimer.

## Nursing Alumnae Day To Be Held On May 14

Columbia University-Presbyterian Hospital Nursing Alumnae Day will be held on May 14.

Registration and coffee hour will be at Maxwell Hall from 9:00 to 11:00 a.m.

Tours of the Medical Center, from 11:00 a.m. to 12:30 p.m., are to be arranged.

Lunch at Maxwell Hall from 12:30 to 2:30 p.m. will include

time for reunion photographs to be taken.

The annual alumnae meeting will be held in the Alumnae Auditorium from 2:30 to 4:00 p.m. and the day will end on a festive note with a cocktail party at Harkness Hall from 4:00 to 5:30 p.m.

Reservations should be made by May 5. For further information call the Alumnae Association Office, 579-3193.

## Dr. Joseph Priestley, Squier Urological Clinic, Awarded Top Prize

Dr. Joseph Priestley

Dr. Joseph Priestley, resident, Squier Urological Clinic, has been awarded top prize in the country for his research on the mechanisms of action of Actinomycin-D, Vincristine and radiotherapy on Wilms' tumors, by the American Urological Association.

He has been invited to present his work before the annual meeting of the Association in Chicago in May.

On leave from the Squier Urology residency program,

Dr. Priestley is currently a National Institutes of Health research fellow, working in the tissue culture laboratories of the Department of Urology, under Dr. Myron Tannenbaum, Assistant Professor of Pathology (Urology), P&S, and Mrs. Jean Todd, Research Associate (Urology), P&S.

Dr. Priestley has also recently received the Doctor of Medical Science degree from Columbia University.

## Scholarship Fund Raffle

A trip for two from New York City to Freeport in the grand Bahama Island, plus a one week stay at the Holiday Inn of Freeport, is the top prize in this year's raffle for the Nursing Student's Scholarship Fund.

Tickets will be available this month and the drawing for this trip and other prizes will take place April 21, at the annual Nursing Students Benefit Card Party in Maxwell Hall.

The main drawing will also include a portable color television, donated by a friend; a weekend for two at Lake Mohawk Mountain House; a fur piece, courtesy of John F. Morris, Furs; a \$100 B. Altman gift certificate, courtesy B. Altman & Co.; a Sylvania cassette tape recorder, Sylvania Corporation; the Columbia Encyclopedia, given by the Columbia University Press, and Lark Luggage-weekender suitcase, donated by Lark Luggage.

An additional special drawing will also be held for those who are present at the Benefit Card Party.

The Committee, headed by Mrs. Alfred Steiner, wishes to express its thanks for the generous response of those who have donated stamp books and prizes. Chance books are now on sale and may be obtained from Miss Louisa Kent, Babies Hospital Nursing Office, Room 221; Nursing Office, Harkness Pavilion, Main Floor and at Maxwell Hall.

In the January 1970 issue of *The Stethoscope* Mrs. Alvin J. Tillman was erroneously listed as sponsor chairman. Mrs. Frank Stinchfield is the sponsor chairman.

The honorary sponsors of the April benefit are Mrs. Alvin J. Binkert, Mrs. B. DeWitt Bleeker, Mrs. W. Van Alan Clark, Mrs. Augustus C. Long, Mrs. William J. McGill and Mrs. Paul Marks.

## Thursday Lectures

The Department of Anesthesiology announces the following March and April lectures for Thursday afternoons, 5 to 6 p.m., Fourth Floor Amphitheater, Babies Hospital, Broadway at 167th Street:

March 4—"Recent Aspects of Fluid Balance" by Louis Cizek, M.D., Associate Professor of Physiology, College of Physicians and Surgeons.

March 11—"Iatrogenic Complications" by Jay Jacoby, M.D., Professor and Chairman Department of Anesthesiology, Jefferson Medical College.

March 18—"Fluid Therapy in Infants" by Robert Winters, M.D., Professor of Pediatrics, Columbia University, College of Physicians and Surgeons.

March 25—"Some Circulatory Effects of Morphine" by Edward Lowenstein, M.D., Assistant Professor of Anesthesia, Harvard Medical School.

## MANY ATTEND WORKSHOP

Dr. Richard Masland

Approximately 400 nurses, physicians and social service case workers, mostly from the greater New York area, and others from New Jersey, Con-

necticut and Pennsylvania, attended a workshop on adapting care for the patient with organic mental syndrome. The workshop was presented by the Nursing, Medical and Social Service Departments of N.I. and Columbia's School of Public Health and Administrative Medicine, in cooperation with the New York State Nursing Home Association, on February 10, in the Alumni Auditorium, P&S.

The program, coordinated by Mrs. Beverly Jones, supervisor, Staff Development, NI, was presided over by Dr. Richard Masland, Professor and Chairman, Neurological Service.

Morris Goldsmith, President, New York State Nursing Home Association, greeted the participants.

The keynote address was delivered by Dr. Shervert Frazier, Attending Psychiatrist, PH, Professor of Clinical Psychiatry, P&S and Deputy Director, New York State Psychiatric Institute.

Other participating faculty and guest faculty included Prof. Harold Baumgarten, Department of Continuing Education, C.U.'s School of Public Health; Martha Haber, Assistant Director of Nurs-

Dr. Shervert Frazier

ing, NI; Dr. Israel Kesselbrenner, Director, Neuropsychiatric Service, Manhattan State Hospital; and from Beth Abraham Hospital: Mrs. Irene Patt, Chief of Occupational Therapy; Mrs. Syma Crane, Director, Social Service and Barbara Nacovsky, charge nurse.

## ART SHOW...

*Continued from page one*

ert B. Reeves, Jr., is completely dependent upon your participation for its success. All members of the Medical Center community—staff, P&S medical and dental students, and personnel—are urged to submit their art or craft.

For information and entry blanks, please call the Office of Public Interest, Extension 1911.

Our art show will only be successful if you help to make it so. And we are looking forward to a very successful 1971 showing.

## One-Time Tsar Nicholas Doubles As Night Information Clerk

Late callers inquiring about patients at the Presbyterian Hospital may find themselves talking to the former Tsar of Russia.

There is no need, however, to address the ex-monarch in the third person, as befits the royalty, for his tenure of the Imperial Crown was limited to the Hallmark Hall of Fame production of "Anastasia."

He is George E. Morse, P.H. night information clerk, and he hails not from Muscovy but from Buffalo, New York. After appearing in high school plays and in community theater there, Mr. Morse came to New York to find himself as an actor.

Recently Mr. Morse, at 50 years of age, celebrated the tenth anniversary of his employment by the Presbyterian Hospital—a vibrant decade of auditions, study, rehearsals and appearances in Broadway theater, Off Broadway, on national television, and in motion pictures.

"A couple of weeks after Patricia, my wife, and I came here from Buffalo in January 1961," Mr. Morse recalled in an interview the other day, "I went to an employment agency, and they had a job open at Presbyterian. When Peter O'Sullivan in Vanderbilt

April 1—"Anesthesia and Endocrine Function" by Leroy Vandam, M.D., Professor of Anesthesia, Harvard Medical School.

April 8—"Fetal Asphyxia and Resuscitation" by Mieczyslaw Finster, M.D., Associate Professor of Anesthesiology, College of Physicians and Surgeons.

A Thursday morning Clinical Conference will be held at 7:15 a.m.

Clinic Admitting asked me, 'Would you like to work nights?' I said, 'These are the exact words I wanted to hear.' From the standpoint of being an actor and making both ends meet this job has worked out wonderfully."

There followed months—and years—of study at the Herbert Berghof Studio on Bank Street, downtown. Coached by Walt Witcover, Mr. Morse began to draw assignments on Broadway and Off Broadway.

In 1964, he portrayed Judge David Davis in "The Last Days of Lincoln," produced in the ANTA Matinee Series, and appeared on Broadway as a Roman Jew and Refugee in "The Deputy" at the Brooks Atkinson Theatre. The following year, he understudied four roles in the Broadway Theatre production of "The Devils." His other stage roles include appearances in the Theatre For The Forgotten—as Dr.

Werner in "Does A Tiger Wear A Necktie" and as Judge Ballantine in "The Advocate," as well as a portrayal of Joseph Barach in "The Golden Door" for the H-B Playwrights Foundation Theatre.

In addition to his TV interpretation of Tsar Nicholas in Hallmark's "Anastasia," Mr. Morse played the grandfather in "Do Not Go Gentle Into That Good Night," televised nationally by the CBS Playhouse. He has also been seen on television's "Another World" and "N.Y.P.D." His movie credits, in addition to a half dozen or so industrial films and documentaries, include "Popi" and "The Husbands," produced and directed by John Cassavetes.

For a while last year, Mr. Morse exchanged the boards so dear to him for more prosaic lumber, which he used to remodel his newly acquired house in Wantagh, Long Is-

George E. Morse . . . sometime before midnight, as Judge Ballantine in "The Advocate" (left), and George Morse sometime after midnight, as "Mr. Medical Center Information."

land. His wife teaches English at the John F. Kennedy High School in neighboring South Bellmore.

With the capital improvements on his house out of the way and with the advent of spring, Mr. Morse hopes to return to the Berghof Studio any day now, to the acting business that he loves.

Although "doggone few actors make a living at it," he counsels young actors to try Off Broadway: "It makes a good springboard because if you get into a play that has a good run, it may open the door to soap operas, commercial work and TV work, and even opportunities on Broadway."

## Dr. Mitchell's Vision of Next Summer's Program Builds Upon Success of Teenage Groups Last Year

Last July and August, 77 teen-agers and a further group of nine- to 14-year-olds from the metropolitan New York ghetto areas participated in a program that introduced them to many health career opportunities.

Dr. Doris Mitchell, D.V.M., of the Department of Surgery, directs these summer programs, which are sponsored by the Children's Council for Biomedical Careers at Columbia University.

It is her hope that another group of interested teenagers may be attracted to participate in the program, to be offered this summer after reading about the very successful 1970 venture.

Dr. Mitchell, a charming and vivacious young woman, said the older children, ages 14 to 17, came daily, acted as tutors, and helped plan a two-day-a-week program for the younger children. Helping her in her work were three actors, a nursing student, a dental student and four medical students.

Said Dr. Mitchell, "We did more than just direct the children and work in scientific areas; we talked more in terms of the complete youngster and we tried to get them interested in doing things for themselves.

"Getting kids this age to read, for example, is a problem. We tried to explain that literature is one of the only links between themselves and other human beings that lived 2,000 years ago. And it is for this reason that reading is so very important."

Most of the youngsters were black or Puerto Rican, but about 12 were white; approximately half a dozen did not fully meet the requirements of the Neighborhood Youth Corps but were accepted anyway. One child came from a fairly well-to-do family.

One part of the program was a visit to the New York State Rehabilitation Hospital in West Haverstraw, New York, where the group was escorted by medical students from P&S.

Dr. Michael T. F. Carpendale, director of the Rehabilitation Hospital said, "The introduction of these children to the unique program of a hospital specializing in the treatment of the physically disabled had a two-fold purpose. One was to observe the health career potentials in this field, but the other was to observe the results of diving accidents, jay-walking, car collision and many other traumatic injuries."

What did the youngsters get out of the summer program? Dr. Mitchell felt that the younger children got the most—the older kids got only what they are willing to put into it.

Dr. Doris Mitchell

She feels that over one-half of the group will go on to do something really worthwhile. A few have already been accepted in college but there are some who do not realize or understand their own potential by virtue of life in the poor communities, where the right to exist is unequally shared.

To attract youngsters, the summer program was advertised in all high schools. All the children who participated did so voluntarily.

One most encouraging factor, according to Dr. Mitchell, is the fact that two of the youngsters are planning to enter Massachusetts Institute of Technology in the fall.

Dr. Mitchell was born in Chicago, but was reared in Tuskegee, Alabama, and considers this her home. She received the B.A. from Boston University, and the D.V.M. from Tuskegee Institute School of Veterinary Medicine. She came to New York

Teenagers are highly responsive when faced with a challenge.

## Medical Center Nursery Invites You to a Ball

March 27 is the date for a unique happening that will indirectly affect the Columbia-Presbyterian Medical Center. The entire Medical Center community is being invited to join together for a gala evening of pleasure, to benefit the Medical Center Nursery School, at the Medical Center Ball—the big event of 1971!

Under the sponsorship of the house staff wives, the Ball is planned to bring together, for the first time, residents, attendings, medical students, nurses, patrons and friends of the Medical Center.

The exciting event, which will be held at the Alpine Country Club in Alpine, New Jersey (only a 15-minute drive from the Hospital), will begin at 9:00 p.m. and continue until 1:00 a.m. The Herb Dell Combo promises an evening of great dancing music. Hot and cold hors d'oeuvres will be

provided by the Club, and cocktails may be purchased.

All of the proceeds of the Ball will benefit the Medical Center Nursery School, which was conceived to benefit the preschool children of the Presbyterian Hospital staff and the students at Columbia University's College of Physicians & Surgeons. This year the school faces the problem of a deficit—almost twice that of last year—due to rising salaries and rent increases—and

co-chairmen are Mrs. Joseph Battista and Mrs. Dobli Srinivasan. Advisors for the house staff wives are Mrs. Charles A. Flood and Mrs. W. Duane Todd.

Tickets for the Ball are very reasonably priced at \$12.50 per couple and should be purchased in advance. Please contact Mrs. Marge Zelko (212-265-8068) for tickets. Coat and tie are appropriate.

This will be the first time that the Ball includes the en-

Enjoying a planning session for the Medical Center Ball are, left to right, Mrs. Carol Battista, Dr. Virgil G. Damon, Mrs. Robin Renert and Mrs. Sheila Srinivasan.

it is hoped that the deficit may be made up through the generosity of patrons and friends.

Many lovely door and raffle prizes have been donated and will be given away during the Ball. Some of the fabulous gifts to be raffled off are worth up to \$25; there will also be a \$1 grab bag, with prizes valued at \$5 and higher.

Honorary chairmen of the Ball are Miss Helen Hayes, James MacArthur (Miss Hayes's son, and co-star of television's weekly series, Hawaii Five-O), and Dr. and Mrs. Virgil G. Damon. Ball chairman is Mrs. William Renert;

tire Medical Center community and it is hoped that everyone from Columbia-Presbyterian will attend.

The Medical Center Ball is the big event of 1971. Please don't forget the date, March 27, for an evening you'll long remember.

### First Birthday for Kienast Quintuplets

On February 24, Presbyterian's famous Kienast quintuplets celebrated their first birthday at home in Liberty Corner, New Jersey.

### ANNUAL WHIPPLE SURGICAL MEETING TO DISCUSS, IN BI-STATE PROGRAM, FEDERAL HELP TO TRAIN RESIDENTS

Government support of surgical residency training programs will be the theme of addresses and discussions at the annual meeting of the Allen O. Whipple Surgical Society next month. A number of distinguished representatives of the Federal government will present their views.

The Society's formal get-together this year will be held on April 2 and 3 at the College of Physicians and Surgeons and in nearby New Jersey. The meetings on Friday, April 2, are scheduled for the Alumni Auditorium from 9 a.m. to 5 p.m. On Saturday, April 3, the Society members will use the conference facilities of the Marriott Motor Hotel, Route 80 and Garden State Parkway in New Jersey. The motor inn has been chosen

as the residence hotel for this year's convocation.

The Allen O. Whipple Surgical Society was established in 1955 by the former house officers and attendings of the late surgeon Dr. Allen Whipple, who was director of surgery at P.H. from 1921 to 1946. The current president of the Society is a P&S graduate and a former surgical resident of the Presbyterian Hospital, Dr. Samuel R. Powers, Jr. Dr. Powers serves as Professor of Experimental Surgery and as Director of Surgical Research at the Albany Medical College. The Society's secretary-treasurer is Dr. Edward B. Self, Associate Clinical Professor of Surgery, P&S and Associate Attending Surgeon, P.H.

## Spanish Books Wanted By Milbank Library

¿Tiene usted libros o revistas en español que usted no necesite?

If you understand Spanish you know the above question translates into English to read: Do you have any books or magazines in Spanish you no longer need?

The stock of Spanish literature on the shelves of the Milbank Library is very low, and Mrs. Dorothy Diamond, Director of Volunteers, has issued an appeal for contributions.

If you have any Spanish reading materials that you would like to donate for the reading pleasure of our Spanish-speaking patients, won't you please send or bring them to the Milbank Library, Presbyterian Hospital, 20th floor?

## Occupational Therapy Group Holds Open House

Experiencing Occupational Therapy was the title of an open house, sponsored by Columbia University's Occupational Therapy group, held on February 9 at various locations within the Medical Center.

Relating their personal experiences as occupational therapists, speakers at the morning session included Mrs. Ann Goldberg, O.T.R., Director of Occupational Therapy, Lubin Rehabilitation Center, Albert Einstein Medical School, Diane Shapiro, O.T.R., Staff Occupational Therapist, Hillside Psychiatric Hospital and Louise Potts, O.T.R., Staff Therapist, Children's Unit, Institute of Rehabilitation Medicine, New York University Medical Center.

Master's degree students conducted a discussion on *The Experience of Activities* and during lunch at Bard Hall, Mrs. Nedra Gillette, O.T.R., American Occupational Therapists Association Consultant

# A Glimpse of Our Dialysis-Transplantation Program

The Medical Center's dialysis-transplantation program is quite well, alive and growing at the Francis Delafield Hospital.

A review of the two- and a half-year-old project shows that its capacity to administer life-saving dialysis to critically ill patients has gone up from 6 to 20 patients through the increase in nursing staff, which has allowed the unit to care for more patients. Each patient reports for dialysis on the average twice a week. The unit began in September 1968 under the guidance of Dr. Frederic P. Herter, Attending Surgeon, P.H., and now Acting Director of Surgical Service, and Dr. Joseph A. Buda, Associate Attending Surgeon, P.H. who also serves as Director of Surgery at Delafield. The unit started with one dialysis machine and one dialysis patient being chronically dialyzed; over the years it has been expanded to the present 20 patients who require chronic dialysis. There are, furthermore, eight patients with living related donors who are awaiting transplantation. The nephrology group headed by Dr. John Laragh, Attending Physician, P.H. and Professor of Clinical Medicine, P&S, has been instrumental in the creation of the unit and in its development.

"We're planning to add another room to the present area," said Dr. Buda. "The acquisition will enable us to complete a self-contained unit to care for patients requiring dialysis or for the pre- and postoperative care of patients receiving kidney transplants."

The other future plans include the establishment of a dialysis transplantation pro-

gram and advisor to Columbia's Occupational Therapy faculty, spoke on *New Directions*.

In the afternoon, at Psychiatric Institute, the senior class of occupational therapy discussed experiencing activ-

Discharged from the Hospital, Timothy Fringuello poses in the Dialysis-Transplantation Unit with the nurses most closely involved in caring for him, from left, Jude Ciani, Nancy Gilbert, and Mrs. Virginia Russell. Marilyn Abate is in the background.

ty from the viewpoint of psychiatric occupational therapy, and at Neurological Institute, Mrs. Eleanor Shelly, O.T.R., director of occupational therapy at Presbyterian Hospital,

spoke on observing the experience of occupational therapy with the physically disabled. The open house concluded with a discussion, *On Furthering the Experience*, a small group discussion between occupational therapists and occupational therapy students, meeting in Maxwell Hall in

tion Office.

Seven kidney transplantations have been carried out here since Dreana Winfield received a kidney transplant on November 15, 1969 (see January 1970 *Stethoscope*). Miss Winfield's operation was not only the first kidney transplant of the program but also the first organ transplant ever carried out at Columbia-Presbyterian Medical Center.

The fifth recipient of a kidney at Delafield went home less than a couple of weeks ago, on February 17. He is Timothy Fringuello, an amiable 13-year-old youngster from New Jersey. At the time of writ-

ing, Timothy planned to return to school in his home town of Emerson last week.

Timmy's troubles started eight years ago with suspected damage to nerves leading to his bladder. Several operations were undertaken to minimize kidney involvement associated with his bladder condition. Unfortunately they were to no avail, and Timmy's infected kidneys had to be removed last July. At the same time, a new bladder was constructed. Timmy then became a candidate in the kidney transplantation program.

On January 14 of this year, he received one of his mother's kidneys in an operation at Delafield that was complicated by the rarity of his blood type, AB negative. Thanks to a series of articles in the *Bergen Record*, a number of donors with the same blood type volunteered to help Timmy.

The many surgeons and physicians who had a hand in Timmy's return to school are too numerous to name, but they include Drs. Buda, John H. Laragh, Jay Meltzer, John Grant, Nicholas Romas, Austin Patner, John B. Price, Jr., Conrad Lattes, Roland Smith, Veronica Bakamjian, and Ralph J. Veenema, and Timmy's pediatrician, Dr. Gilbert Simon.

The staff of the dialysis-transplantation unit consists of nine nurses—Mrs. Karin Otero, supervisor; Mrs. Virginia Russell, head nurse; Marilyn Abate, Louise Blanchet, Mrs. Susan Bluhm, Mrs. Bette Frey, Kathleen Knights, Deborah Lyon, Maureen Patterson—as well as of technician Evelio Dominguez and nursing aide Mrs. Barbara Stone.

To obvious delight of patient Josephine Gulen, N.I. 8, occupational therapist Laurelee Hawkins, O.T.R., observes improvement in utilization of arm muscles.

Occupational therapist Kathleen Conyers, O.T.R., stands by as patient Winnie Harper, N.I. 8, works at loom to improve finger dexterity.

ity from the viewpoint of psychiatric occupational therapy, and at Neurological Institute, Mrs. Eleanor Shelly, O.T.R., director of occupational therapy at Presbyterian Hospital,

spoke on observing the experience of occupational therapy with the physically disabled. The open house concluded with a discussion, *On Furthering the Experience*, a small group discussion between occupational therapists and occupational therapy students, meeting in Maxwell Hall in

the Sturgis Auditorium.

Approximately 45 persons, representing 16 colleges in the New York area, attended, according to Rosalee Miller, O.T.R., Assistant in Occupational Therapy, who coordinated the program.

## Dr. Reese Honored

**Emeritus Professor of Ophthalmology, Dr. Algernon B. Reese, has been honored with a special issue of the American Journal of Ophthalmology.**

The three-hundred-page volume contains forty original contributions by distinguished friends and colleagues, as well as biographical data on the highlights of his outstanding career. A listing of Dr. Reese's one hundred sixty-nine articles in the scientific literature is included.

It seems especially appropriate that this festschrift, which appears in his seventy-fifth year, should find him as active, energetic, and forward-looking as in all the years that have gone before.

## Establish Library in Memory of Dr. Luse

A new library to honor the memory of Dr. Sarah A. Luse, late Professor of Anatomy, P&S, has been established on the tenth floor of the College, a committee of the Department of Anatomy announced last week.

Located in the departmental conference room, the Sarah A. Luse Memorial Library incorporates the extensive private collection of medical books and periodicals of Dr. Luse, who died last December 28 at the age of 52.

**The late Dr. Sarah A. Luse**

More than \$1,700 has been contributed by about 50 of Dr. Luse's friends and admirers toward a Sarah Luse Memorial Fund. This money and any future contributions to the Fund will be used to maintain the library and to provide acquisitions for it, the organizing committee declared in its announcement. The members of the committee are Drs. Frederic J. Agate, Ernest April, and Farish A. Jenkins, Jr.

## These Persons Are Retiring

### Mrs. Mary Terenzio

Mrs. Mary Terenzio, cashier, Asst. Treasurer's Department, retired in December, completing 17 years of employment at Presbyterian Hospital.

Mrs. Terenzio was stationed at several posts during her tenure, including the cafeteria in PH, the soda fountain, Harkness Pavilion and Maxwell

ter who live in Massachusetts.

A Florida vacation will be the first item on the retirement agenda. She will then return to work as a volunteer—in Babies Hospital of course. "I couldn't work any place except Babies Hospital."

A retirement tea was held in Mrs. Galanter's honor on January 21 in PH 1.50.

**Terenzio**

**Galanter**

**Cartwright**

## DOINGS OF DOCTORS

*Continued from page eight*

DR. ARCHIE FOLEY, Associate Attending Psychiatrist, PH, has assumed the position of Director of the Division of Community Psychiatry, Columbia University, effective September 1.

Dr. Foley succeeds DR. VIOLA W. BERNARD, the director of this division since its founding in 1956. Dr. Bernard resigned the administrative post but continues on the faculty as Professor of Psychiatry, P&S and Attending Psychiatrist, PH.

DR. GUY D. POTTER, Associate Professor of Radiology, P&S, and Associate Attending Radiologist, PH, participated in the faculty of a course on Radiology in Otolaryngology and Ophthalmology, given at the University of Illinois College of Medicine, Chicago, November 27-28.

Dr. Potter presented three lectures: *Normal Anatomy of the Sinuses and Orbit, Inflammatory Diseases of the Sinuses, and Salivary Gland Disease.*

DR. SIDNEY MALITZ, Associate Attending Psychiatrist, PH, and Professor of Clinical Psychiatry, P&S, chaired a symposium on *L-Dopa and Behavior* at the annual meeting of the American College of Neuropsychopharmacology in Puerto Rico, in December.

At the same meeting, Dr. Malitz and DR. MAUREEN KANZLER, Research Associate (Psychiatry), P&S, presented a paper entitled *L-Dopa in Depression.*

DR. JOHN F. PRUDDEN, Associate Attending Surgeon, PH, and Associate Professor of Clinical Surgery, P&S, addressed the National Conference on Cancer of the Colon and Rectum in San Diego, January 9, sponsored by the American Cancer Society.

He spoke on *Psychological Problems Following Colectomy and Colostomy.*

DR. WILLIAM A. BLANC was Professor Pro Tempore at the Department of Pathology of the Mount Sinai Hospital of Greater Miami, Miami Beach, January 25-30.

During his stay there Dr. Blanc lectured on *Placental Pathology and Newer Concepts in Perinatal and Pediatric Pathology.* He also presented a slide seminar on *Tumors in Infants and Children*, and a Clinical Pathology Conference.

DR. PAUL J. POPPERS, Assistant Attending Anesthesiologist, PH, and Assistant Professor

of Anesthesiology, P&S, presented a scientific exhibit on *Ultrasonic Blood Pressure Monitoring during Induced Hypotension*, at the 24th Postgraduate Assembly in Anesthesiology, New York City, December 13-16.

Dr. Poppers received First Award for this exhibit and was subsequently appointed a member of the Scientific Program Committee of the New York State Society of Anesthesiologists.

From January 25-29, Dr. Poppers was visiting professor of anesthesiology at the University of West Virginia School of Medicine. At interdepartmental meetings he lectured there on *Placental Transfer of Drugs, Clinical Application of Ultrasound Techniques and Resuscitation of the Neonate.*

DR. JOHN A. MILICI, Director of the Psychiatric Division, Columbia University Health Services; Instructor, Psychiatry, P&S and Assistant Psychiatrist, V.C., and DR. JOEL E. MOSKOWITZ, Assistant Director, Psychiatric Division, Columbia University Health Services, have been elected to the posts of president and secretary-treasurer, respectively, of the Metropolitan College Mental Health Association. This organization, which consists of individuals active in the fields of college mental health throughout the eastern states, is in the process of providing consultative advice to small colleges in need of psychiatric or psychological services.

DR. MELVIN D. YAHR, Attending Neurologist, PH, Merritt Professor of Neurology, P&S, and Director, Parkinson's Disease Research Center, NI, and DR. ROGER C. DUVOISIN, Associate Attending Neurologist, PH, and Associate Professor of Neurology, P&S, were also in attendance at this meeting and presented a paper on *Behavioral Abnormalities Occurring in Parkinsonism during Treatment with Levodopa.*

DR. L. ERLENMEYER-KIMLING, Assistant Professor of Psychiatry, P&S, and Associate Research Scientist (Medical Genetics), New York State Psychiatric Institute, was co-chairman of a symposium, sponsored by the American Eugenics Society and the Biomedical Division of the Population Council, held at Rockefeller University, November 13-14.

Dr. Erlenmeyer-Kimling spoke on *Differential Reproduction in Individuals with Mental and Physical Disorders.*

Hall. She enjoyed her work tremendously and was reluctant to say goodbye to her many co-workers and friends.

At home in Washington Heights, where she lives with her 85-year-old mother, Mrs. Terenzio devotes her time to cooking (good Italian food naturally) and needlework.

She will certainly not be lonely during retirement. She has three married daughters and 11 grandchildren, all living fairly close to her, and happiness for Mrs. Terenzio will be "spending as much time as I can with my family."

### Mrs. Madeline Galanter

Mrs. Madeline Galanter, secretary to Jane McConville, Director of Nursing, Babies Hospital, retired in January, completing 14 years of employment. She began her job when the late Marjorie Peto was director.

A native New Yorker, Mrs. Galanter lives in Washington Heights with her husband, Louis. They have a married daughter and one grand-daughter.

### Mrs. Anne Cartwright

Mrs. Anne Cartwright, secretary-receptionist, Doctors' Private Offices, retired in January, completing 11 years of employment. Her first assignment was to Babies Hospital but, for the past year, she has been stationed in Atchley Pavilion.

Mrs. Cartwright has a married son and three granddaughters living in Rochester, New York.

Retirement will begin with a long rest; then a trip to Rochester and perhaps Florida, after which she intends to do some volunteer work, either here or near her home in Yonkers. "I would like to volunteer here to show my appreciation for the many kindnesses extended to me during my employment. My years at Presbyterian were the best years of my life," said Mrs. Cartwright.

A tea was given in Mrs. Cartwright's honor on January 28 in PH 1-50.

## STETHOSCOPIA *Continued from page eight*

### • CONDOLENCES TO:

Mrs. Magdalen McCarthy, assistant office manager, Office of Public Interest, and her family. Mrs. McCarthy's brother, Lawrence Dupree, died January 24.

Mrs. Helen Foster, IBM Control, whose husband, Thomas, died January 19.

Mrs. Kate Rothstein, staff nurse, Premature Nursery, BH, whose husband, Marcus, died January 25. Mrs. Rothstein wishes to express her thanks to everyone at the Hospital who has been so kind and understanding during this difficult period.

### • CONGRATULATIONS TO:

Kathryn Pollak, who has been promoted to head nurse, Labor Room (evenings).

Felicia Duran, who has been promoted to supervisor, Operating Room.

Laurie Pollock, who has been promoted to assistant head nurse, N.I. 4.

Mr. and Mrs. Benjamin Stoloff, who celebrated their fiftieth wedding anniversary on February 9. Mr. Stoloff has been a volunteer at PH for 16 years.

# News of Nursing

## THE NEW NURSE'S FIRST ASSIGNMENT: ORIENTATION

One of the grave concerns in nursing has been the ever-widening gap between educational preparation of nurses and expectations of the nursing service. This concern was voiced by Dorothy J. del Bueno, Assistant Director of Nursing (Staff Development), in an article co-authored by Miss del Bueno, Mrs. Marjorie Quaife, instructor, (Staff Development), and Cynthia A. White, staff nurse (Medical/Surgical), which appeared in the February, 1970 issue of *The American Journal of Nursing*.

To meet this challenge, the Staff Development division of Presbyterian Hospital's nursing service initiated a pilot orientation unit.

"If she is new to nursing and seeks employment at Presbyterian Hospital, the nurse's first assignment will be to an orientation unit." This guideline has become the slogan of the Staff Development group's orientation program.

Begun at the Neurological Institute in 1968, the program has been extended to four units, covering Presbyterian Hospital (Mrs. Marjorie Quaife, instructor); Babies Hospital (Joan Dirkmaat, instructor); and Harkness Pavilion (Mrs. Frances Mason, instructor). Irene Gaisor is currently the instructor at Neurological Institute.

The nurses who are oriented in the unit are selected generally from those who apply for positions as staff nurses and who have had minimal or no previous experience as graduate nurses, and specifically from those who have chosen nursing areas in orthopedics, medicine, surgery, neurology, pediatrics and in the private pavilions.

The new staff nurses are instructed in the policies, procedures and philosophies of nursing care at P.H. The orientation program is individually tailored to the experience and needs of each new nurse. All aspects of patient care, in-

cluding experience on days, evenings, nights and weekends, are offered under the guidance of a Staff Development instructor. The nurses are given an opportunity to handle any given situation in nursing care from the time a patient is admitted to the Hospital until his discharge—from pre-operative to post-operative care. The use of equipment and practice of procedures with which the graduate is unfamiliar are emphasized.

On several occasions, doctors, therapists and other staff members passing through the orientation units have commented on the presence of such a large group of nurses on the floor, remarking, "Who says there is a shortage of nurses?"

"Touché," said Mrs. Mason, newly appointed instructor for the Harkness Pavilion orientation unit. "At this point," she continued, "I explain to these staff members why the nurses are here. The reason they are on the floor is for adequate and complete orientation. By giving a new nurse a greater awareness of the specific unit to which she has been assigned, we hope to reduce some of the frustrations and anxieties of being 'new.'"

Staff Development's concern and area of responsibility are not limited to only the orientation units. Within their framework of orientation and development of nursing personnel, instructors work with R.N.'s, L.P.N.'s, aides, attendants and clerks. They teach and supervise an intensive six-week orientation program for nursing aides and attendants, instructing them in their specific function and role. A concentrated 32-hour program is offered to medical and dental students who wish to work as nursing assistants in their spare time.

A general orientation program for all new nurses is given, which introduces them to the Medical Center, the nursing service administra-

tion, and the ancillary services, including X-ray, Food Service, Laboratory Services and Social Service. A medication review course is offered also to the licensed practical nurses.

Instructors act as "resource people" in the teaching of baccalaureate nursing students, exchange visitor nurses, and physical and occupational therapy students.

In conjunction with Lillian Oring, Administrative Assistant (Personnel), a course in developing management skills is offered to all supervisory personnel, nursing and non-nursing. Also a leadership course is given for head nurses and assistant head nurses.

Evaluation of the orientation unit program to date appears to indicate that it has helped bridge the gap for the new nurse, between expectation and achievement, and that many nurses have gained a feeling of security and increased competence. As one of the nurses said, on completion of the orientation unit program, "The orientation unit made the transition between school and my first job a lot easier."

### Dr. Harry B. van Dyke

Dr. Harry B. van Dyke, professor emeritus of pharmacology at P&S, died on February 14 at the Hospital. He was 76 years old and lived in Englewood, New Jersey.

Dr. van Dyke made many contributions to the field of endocrinology. His studies on the pituitary gland last year won the Sir Henry Dale Medal.

Since his retirement in 1963, he had been a visiting professor at the University of Taiwan and established a department of pharmacology at the University of Malaysia in Kuala Lumpur in 1965-67.

Born in Des Moines, Iowa, Dr. van Dyke graduated from the University of Chicago in 1918 and received his Ph.D in 1921. After receiving his M.D. from Rush Medical College he went abroad on a National Research Council fellowship, studying in Edinburgh, Brussels and Freiburg. He then returned to the University of Chicago where he taught and continued his research until 1932.

In that year he went to Peiping Union Medical College to head the department of pharmacology, returning to the United States in 1938 when the Sino-Japanese war began.

In 1944 he joined the Columbia University faculty as David Hosack Professor of

## Volunteer Awards Tea, April 28

Mrs. Dorothy Diamond, Director of Volunteers, has announced that the annual Volunteer Awards Tea will be held in Maxwell Hall, April 28, from 4:00 to 7:00 p.m. Yearly tribute is paid to the Hospital's voluntary workers and awards are given in recognition of those who have given 100, 150 and 1,000 hours of service.

During 1970, 460 active (and 316 inactive) Hospital volunteers served a total of 97,291 hours.

Mrs. Dorothy Diamond

## Our Thrift Shop Needs Your Help

You're cleaning house? You want to dispose of two or three rugs? Okay, make up a box of things useful to someone but no longer wanted by you, and give it to—

*The Thrift Shop.*

You've been a patient at Presbyterian Hospital, you've returned home, and now you want to do something for the Hospital?

*Our Thrift Shops need your help.*

Substantial contributions may be made by donations of used clothing, furniture, jewelry and other items you no longer need to the Thrift

Shops operated by various Hospital auxiliaries.

Donations to Everybody's Thrift Shop at 330 East 59th Street, N. Y. C., N. Y. 10022, benefit the Babies Hospital and Neurological Institute.

The Stuyvesant Square Thrift Shop at 1430 Third Avenue, N. Y. C., N. Y. 10028, benefits The Presbyterian Hospital.

Contributions may be made in person or may be brought to the Unit Managers' offices in Babies Hospital, Neurological Institute or Presbyterian Hospital.

## In Memoriam

Pharmacology and head of the Department of Pharmacology.

Dr. van Dyke served as president of the American Society of Pharmacology and Experimental Therapeutics in 1962 and had been editor of its journal from 1950 to 1953.

Professional memberships included the New York Academy of Medicine, the Biochemical Society and the Harvey Society in England.

He played a major role in obtaining the support of the National Institutes of Health for training programs in pharmacology.

Dr. van Dyke is survived by his widow, the former Elizabeth E. Allan; a daughter, Mrs. John Felber of Bloomfield, Connecticut; and four grandchildren.

### Mrs. Helena Ferris

Mrs. Helena Ferris, who manned the No. 9 elevator in Harkness Pavilion, from midnight until 8:00 a.m., and was due to retire in July, died by accident on January 20.

Mrs. Ferris had been employed at the Presbyterian Hospital since 1937, a span of 34 years, and was a member of the 25-Year-Club.

A familiar figure with a ready smile, Mrs. Ferris was known to many. Mrs. Virginia B. Smith, Administrative Assistant, Front Office and Information Services, recalling

her early encounters with her when Mrs. Smith was a student nurse and Helena was a pantry maid, spoke of her good Irish temper with matching Irish wit and boundless energy, and her precision in preparing each patient's tray. Others, who have worked closely with her in later years have mentioned the inevitable cheerful greeting with which she would start the day. Although she looked forward to retirement, she had frequently commented that she didn't know what she would do without the Hospital.

Helena's husband died in 1943.

She is survived by five brothers and four sisters. Mrs. Angela Fullerton, a sister-in-law, is a physical therapy aide on HP 2.

Mrs. Helena Ferris

"By giving a new nurse a greater awareness of the specific unit to which she has been assigned, we hope to reduce some of the frustrations and anxieties of being 'new.'"

# Stethoscopia

## • ENGAGEMENTS

Anne Gerrard, head nurse, BH 10, is engaged to Dr. Jonathan McMath, P&S '70. Dr. McMath is an intern at Presbyterian Medical Center in Denver, Colorado, but will return here to begin his residency in Obstetrics & Gynecology, July 1. A June wedding is planned.

Rosalie Siegel is engaged to Dr. Evan R. Wolarsky, resident, Department of Surgery, PH. A late April wedding is scheduled.

## • WEDDINGS

Adelaide H. C. Frick was married to Jothan A. Trafton on January 16 at her home in Alpine, New Jersey. Mrs. Trafton is the daughter of Dr. Henry Clay Frick, II, Associate Attending Obstetrician-Gynecologist, PH, and Associate Professor of Clinical Obstetrics & Gynecology, P&S.

## • NEW ARRIVALS

Joe and Margaret Hollings, of Protective and Laundry Departments respectively, have just become proud grandparents. Their daughter, Catherine White, had a son, Joseph John, at Sloane Hospital, January 18.

Dr. and Mrs. Maynard B. Wheeler welcomed their second daughter, Kate Stuart, on December 29, at Sloane Hospital. Dr. Wheeler is a resident in ophthalmology at the ESH Eye Institute. Mrs. Wheeler is on the staff of the Nursing Department. Young Kate is the granddaughter of Dr. Maynard C. Wheeler, clinical professor emeritus of Ophthalmology, P&S.

Carl Fahr, Superintendent of Construction, Projects Office, and his wife, welcomed their first child, a son, David Carl, on January 12.

Mrs. Barbara Torstenson, Projects Supervisor, Nursing, and her husband, Torsten, welcomed their first child, a son, Robert Lawrence, at Sloane Hospital, February 5.

George Holmes, of Maintenance and Construction, and his wife, Maria, welcomed their second child, a daughter, Jessica Maria, born in Sloane Hospital, February 8.

## • WELCOME TO:

Mrs. Edna Daly, who has joined the staff of IBM Control.

Marquerite Pappas, who has joined the staff of the Babies Hospital Nursing Office.

Rosenthal

Daly

Pappas

Summerfield

## • NOTES OF INTEREST:

Mrs. Irma Rosenthal, formerly secretary, Doctors' Private Offices, AP, is now secretary to the Reverend Robert B. Reeves, Jr., Chaplain, PH.

## • SPECIAL CONGRATULATIONS TO:

Norman Summerfield, volunteer in the Admitting Emergency evening clinic.

In a letter to the director of Volunteers, Virginia Enright, evening supervisor in Admitting Emergency said, in part, "... During the past holiday season he gave so much of his time to us that we felt it should not go unnoticed.

"He is extremely capable and a fine person to be with and work with. His unselfish service to our patients has been a wonderful inspiration to all of us here in Admitting Emergency..."

Mr. Summerfield has been a PH volunteer for two years.

STETHOSCOPIA continued on page six

# DOINGS OF DOCTORS

Several visiting Fellows, research trainees from the Department of Anesthesiology, attended the New York State Society of Anesthesiologists Post-Graduate Assembly, and the Assembly's Residents' Program, New York City, December 15.

DR. LAURENCE J. KRENIS and DR. PHILIP L. LIU, spoke on *Acute Cardiovascular Effects of Levodopa and Dopamine in Pithed Rats*.

DR. ROGER S. WILSON, (now at Harvard Medical School and Massachusetts General Hospital, Boston) spoke on *The Oxygen Cost of Breathing Following Anesthesia and Cardiac Surgery*.

DR. WALTER U. BROWN, (now at Boston Hospital for Women) spoke on *Experimental Production of Respiratory Distress Syndrome (Hyaline Membrane Disease)*.

DR. WALTER E. BERDON, Attending Radiologist, PH (Babies Hospital) presented four lectures on *Pediatric Radiology* at the Armed Forces Institute of Pathology, Washington, D. C., November 16-17.

He also gave a refresher course at the meeting of the Radiological Society of North America, Chicago, November 30.

On January 25-28, at the Pediatric Post-Graduate Course in Miami, Dr. Berdon delivered three lectures: *Use of the Umbilicus, Medical Causes of Respiratory Distress and Inflammatory Lesions of the Gastro-Intestinal Tract*.

At the same meeting, Dr. Berdon also participated in a panel discussion on *Pediatric Radiology*.

DR. DAVID H. BAKER, Professor of Radiology, P&S, and Director of Radiology, BH, participated in a Radiology Symposium in Danville, Virginia, November 30, and gave refresher courses on *Pediatric Chest Disease, Abdominal Disease in Children and Genitourinary Disease*.

He also attended an editorial meeting in connection with the Radiological Society of North America, in Chicago, December 1.

At the meeting of the Texas Radiological Society in Dallas, January 29-30, Dr. Baker was a guest speaker, lecturing on *The Newborn Chest, Acquired Bone Diseases in Children, and Hirschsprung's Disease*.

DR. ARNOLD P. FRIEDMAN, Clinical Professor of Neurology, P&S and Associate Attending Neurologist, PH, was recently elected to the Presidency of the American Board of Psychiatry and Neurology, Inc.

Dr. Friedman, and DR. SHERVERT FRAZIER, Professor of Clinical Psychiatry, P&S, and Attending Psychiatrist, PH, presented papers on *Chronic Recurrent Headache* at the Third Simposio Neurologico, "Jose Maria Ramos Mejia," in Buenos Aires, South America, recently.

DR. CHARLES S. NEER, II, Professor of Clinical Orthopedic Surgery, P&S and Attending Orthopedic Surgeon, PH, recently attended a meeting of the American Board of Orthopedic Surgeons, of which he is a member.

During recent months Dr. Neer has been on the guest faculty of three postgraduate courses on *The Shoulder*, sponsored by the American Academy of Orthopedic Surgeons at Chicago, Montreal and Los Angeles, as well as two postgraduate courses on *Fractures* sponsored by the Academy at Boston and Miami.

DR. EQUINN W. MUNNELL, Clinical Professor of Obstetrics & Gynecology, P&S, and Attending Obstetrician and Gynecologist, PH, attended, by invitation, a meeting of Investigators in Ovarian Cancer sponsored by the Cancer Unit of the World Health Organization in Geneva, Switzerland, October 26-30. On a subsequent visit to Kenya, the following week, he visited the Department of Obstetrics & Gynecology at the Medical School in Nairobi of the University of East Africa where he lectured on *Ovarian Tumors*.

In January, Dr. Munnell was a member of a panel discussing ovarian carcinoma at a meeting of the Society of Gynecologic Oncologists in Key Biscayne, Florida.

Dr. Munnell

Dr. de Roethth

DR. ANDREW DE ROETHTH, JR., Assistant Professor of Clinical Ophthalmology, P&S, and Assistant Attending Ophthalmologist, PH, was a guest speaker at a Glaucoma Symposium at the Louisiana State Medical School in New Orleans, January 22-23.

DR. JOHN D. RAINER, Associate Professor of Clinical Psychiatry, P&S, and Chief of Psychiatric Research (Medical Genetics), New York State Psychiatric Institute, addressed the annual meeting of the Dutchess County Society for Mental Health, February 2. His topic was *Current Aspects of Genetics in Psychiatry*.

DR. ARTHUR G. DE VOE, Professor and Chairman, Department of Ophthalmology, delivered the 24th annual Mark J. Schoenberg Lecture at the December 7 meeting of the New York Society for Clinical Ophthalmology in New York City. His talk was entitled: *Epithelial Invasion of the Anterior Chamber*.

More recently, Dr. De Voe was the guest of honor at the Pan American Association of Ophthalmology meeting in Bogota, Colombia, on February 3, where he delivered a paper on *Anterior Segment Injuries*.

Dr. De Voe also spoke on *Management of Traumatic Cataract Fornix Versus Limbal Based Flaps Epithelial Invasion of the Anterior Chamber* at the Cataract Surgical Congress, Miami Beach, February 6-10.

DR. WILLIAM B. SEAMAN, Professor and Chairman, Department of Radiology, attended the Annual Oration of the Radiological Society of North America, Chicago, Ill., December 2. He spoke on *Diseases of the Colon—New Concepts, Old Problems*.

Dr. Seaman has been appointed chairman of the Committee on Radiology of the National Research Council, National Academy of Sciences, Washington, D. C.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXVI, NUMBER 4

APRIL, 1971

## Parkinson Unit, Nearing Milestone, Draws National Support and Praise

A governor and a Nobel Prize winner will help a Columbia research group celebrate its anniversary.

Governor Nelson A. Rockefeller will call on the State of New York to honor the Parkinson's Disease Foundation on April 28—the organization's 14th anniversary—and at the P&S Alumni Auditorium that same day, Dr. Julius Axelrod, who was awarded a Nobel Prize last year, will deliver The Second James Parkinson Lecture on "Catecholamines in the Nervous System."

Mr. Rockefeller's invitation to join him in a tribute to the Foundation is expected to take the form of a proclamation later this month, according to a spokesman in the governor's press office in Albany.

The Parkinson's Disease Foundation has announced the formation of a National Sponsors Committee to augment the momentum of public support for research into the cause and cure of Parkinson's Disease.

The Committee's growing membership of distinguished Americans at the time of writing included Senator Clinton

Dr. Julius Axelrod

P. Anderson, Honorable Hale Boggs, Honorable William Cahill, Honorable Emanuel Celler, Mr. Bennett Cerf, Mr. and Mrs. Howard Dietz, Prof. Sir John Eccles, Mrs. Dwight D. Eisenhower, Mr. Weeb Ewbank, Honorable Daniel J. Flood, Honorable Sanford Garelick, Honorable Kenneth Gibson, Mrs. Marjorie Guthrie, Mr. Conrad Hilton, Honorable Jacob K. Javits, Honorable Edward Koch, Honorable John V. Lindsay, Mr. George Meany, Mrs. Albert Lasker, Mr. Jerome K. Ohrbach, Prof. I. I.

## PH Urologists Get Hartford Grant To Continue Promising Research

The Urology Service of the Presbyterian Hospital has received a grant extension from the John A. Hartford Foundation, Inc., for its project to control prostatic enlargement and for related research.

The \$134,188 extension, announced jointly last month by Mr. Harry B. George, President of the Foundation and by Mr. A. J. Binkert, President of the Hospital, brings the total amount allotted by the Hartford Foundation to

the Urology research team to \$1,305,669.

Since Hartford's original grant for prostate research, made in September 1965, much new information has been obtained and verified to help control the abnormal growth of this gland.

The Presbyterian research team, headed by Drs. John Lattimer, Ralph Veenema and Myron Tannenbaum, has shown that the medication Aldactone is capable of reducing prostate

enlargements in at least 60 per cent of patients treated by it. Dr. Lattimer is Director of the Urology Service, PH and Professor and Chairman of the Urology Department, P&S. Dr. Tannenbaum is Associate Professor of Pathology (Urology), P&S, and Associate Attending Pathologist, PH and Dr. Veenema is Professor of Clinical Urology, P&S, and Attending Urologist, PH.

Dr. Lattimer's group has also determined, with Hartford support, that cryosurgery—or freezing tissue with liquid nitrogen—is a relatively safe procedure for extirpating benign growths of the prostate in patients whose hearts and lungs are too weak to withstand the stresses of surgery.

One of the more significant findings of the study was the discovery of "viruslike particles" in malignant growths of the prostate and in the tissue surrounding them. Being aware of the structural similarity of prostate and breast cancers, Dr. Tannenbaum and his associates applied the techniques they used for prostates to a search of viruslike particles in breast cancer. They were surprised to find the same type of viruslike particles in both the human breast and its secretion elements.

"The indications we found

## GOOD SHOW!

A total of \$198,492.51 has been raised by the various men's and women's fund raising teams of The Presbyterian Hospital for the United Hospital Fund Campaign of 1970, ending February 26, 1971, according to the final report from Dr. C. R. Wise, Assistant Vice President, Professional Services to Patients, The Presbyterian Hospital.

This amount is an increase of almost four thousand dollars over the total of the previous year—\$194,539.88.

Chairmen and Captains of the several teams were Mr. Harold H. Helm, Dr. Frederic P. Herter, Mrs. Carl T. Nelson, Mrs. Charles E. Adams, Mrs. H. McLeod Riggins, Mrs. Alex N. Lilley, Mrs. Iredell W. Iglehart, Mrs. John L. Weinberg.

Rabi, Honorable Ogden R. Reid, Honorable Nelson A. Rockefeller, Mr. Julius Rosenwald, II, Senator John V. Tunney and Honorable Lester L. Wolf.

Dr. Axelrod's address is scheduled for 4:30 p.m. in the Auditorium. This will be the second presentation in the series of lectureships established by the Parkinson Disease Foundation last year to provide a forum for outstanding investigators in parkinsonism. The First Annual James Park-

Please turn to page eight

## New Medical Discipline Being Developed at P&S; Will Consider Ethics of Scientific Advances

Columbia University's College of Physicians and Surgeons has received a grant from the Commonwealth Fund to build a teaching program in what may become a new medical specialty—medical ethics.

The two-year grant, totaling \$31,900, has been announced by Dr. Paul A. Marks, Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs at Columbia University. The grant will enable the medical school to develop one of the first systematic approaches in the nation to the complex problems and agonizing decisions arising from man's increasing capacity to intervene in the fundamental processes of human life and behavior.

The program will be carried out in cooperation with the Institute of Society, Ethics and the Life Sciences, by faculty members of the College

of Physicians and Surgeons, and by Fellows of the Institute, a nonprofit organization founded in 1969 to study social and ethical aspects of advances in the biological and medical sciences. The Institute for the Study of Science in Human Affairs of Columbia University is cooperating in the project.

Although the experimental teaching program is at present centered on immediate clinical issues, such as prolonging the life of terminal patients, euthanasia, choosing patients for hemodialysis, "heart-lung" machines or for organ transplants, family planning, and experimentation with human subjects, the future medical ethics curriculum will include behavior control, genetic counseling and genetic engineering.

The approaches to be tested in the teaching of Columbia

medical students include the traditional lecture form, small seminars or discussion groups, clinical conferences that would take up actual cases of ethical, rather than physiological, interest, and so-called "intensive weekends" that would stimulate sustained discussion on broad themes, for example, "truth-telling" and "private versus public good."

The program includes two courses by Nobel Laureates: Dr. André F. Courmand is a lecturer on social aspects of medicine and Dr. Dickinson W. Richards offers a course on the history of medicine. The two scientists, now professors emeriti at the College, shared the Nobel Prize for Medicine in 1956 for their studies on the physiology of the heart and lungs.

The program, begun with the second-year and third-year

## Goodbye to Winter and Welcome to Spring!

Once again in the swift succession of seasons, the crocuses cluster like quotation marks in the Medical Center's garden, leading off nature's statement of things to come—the exuberance of early summer, the poignancy of graduations in the garden, the lassitude of August and vacations by sleepy lakes . . . and the inevitability of fall.

## 25-Year Club Schedules Fete; Welcome to 70 Being Prepared

The twenty-fifth annual dinner for the Twenty-Five Year Club of the Columbia-Presbyterian Medical Center is scheduled for Thursday evening, April 29.

Preparations are being made under the direction of the 1970-71 President, Dr. John M. Baldwin, Associate Attending Physician, PH and Associate Professor of Clinical Medicine, P&S.

Other 1970-71 officers of the Club are A. J. Binkert, Vice President; Helen Pettit, Vice President; Jane Smelser, Secretary; Mrs. Virginia B. Smith, Assistant Secretary; Mary Sullivan, Treasurer.

Committee Chairmen are Mrs. Jean Hickey and Dr. Herbert B. Wilcox, Jr., Reception; Dr. Edward B. Self, Nominating; Doris Goddard and Margaret Kane, Arrangements; Dr. Albert Grokoest, Entertainment; Mrs. Lucy Lazzopina, Publicity.

Seventy new members are to be brought into the Club at this year's dinner. They are:

Mrs. Margaret Ahern, Anthony Amoroso, Dr. Howard A. Arden, C. Douglas Auty, Dr. James W. Benfield, Jerry J. Bocca, Colombo Bonanni, Mrs. Catherine Bradley, Dr.

Winifred Bronson, Dr. Stanislaw H. Brzustowicz, William E. Burgess, Dr. Edward A. Cain, Jr., Dr. Louis J. Cizek, Gloria M. Compitello, Mrs. Josephine Connors, George R. Corbett, Mrs. Annie Cox.

Bernice C. Derby, Dr. Arthur G. DeVoe, Dr. Anthony N. Domonkos, James M. Edmond, William K. Egan, Mrs. Carmen Fasanella, Dr. Joseph E. Fiasconaro, Mrs. Shirley C. Fisk, Kathleen T. Foy, Mrs. Alma Freeman, Muriel Gold, Ezekiel Green, Mrs. Franklin Griffin, W. E. S. Griswold, Jr., Mrs. Elizabeth H. Gutierrez, Mrs. Beatrice Hacker, Mrs. Mary F. Hiller, Rose Mary Hoynak.

Leonard H. Jarvis, Mrs. Erma G. Johnson, Mrs. Virginia V. Kearney, Dr. Daniel L. Larson, Carmela Laspina, Jean Lynas, Dr. Irwin D. Mandel, Josephine C. Mannino, Dr. James A. L. Mathers, Dr. George R. Merriam, Jr., Pascual Morales, Dr. Carl T. Nelson, Dr. Carl R. Oman, Mrs. Julia R. Orthwein, Mrs. Adell Porter.

Mrs. Algernon B. Reese, William J. Robinson, Kenneth Russ, Mrs. Mary A. Ryan, Dr. Thomas Santulli, Dr. Julian Schreff, Dr. Harold Sherman, Dr. William H. Silverstein, Mrs. Anna Solga, Mrs. Delia Stack, Karl Stacker, Dr. David Stiles, Dr. Howard C. Taylor, Jr., Nicholas A. Vero, Mrs. Ruth M. Villani, Naomi A. Waldvogel, Gerard J. Walker, E. Leora Williams, Leon Williams, Dr. John A. Wood.

## Former Donnell Staffer Becomes Head Librarian Of PH Milbank Library

Mrs. Susan Temmer was recently installed as Head Librarian, Milbank Library, replacing Benna Brodsky, who left to be married.

Mrs. Temmer received the M.L.S. from Rutgers University in 1967 and worked at the Donnell Art Library, a division of the New York Public Library, before coming to Presbyterian.

A New Yorker all her life, Mrs. Temmer lives in Riverdale, with her husband, Peter, an architect.

## Auxiliaries' Elections

At recent annual meetings, four Hospital auxiliaries elected new officers.

Mrs. George A. Carden has been elected Chairman of the Women's Auxiliary of the Presbyterian Hospital; Mrs. Francis H. Cabot, Jr. and Mrs. Ralph H. Boots, Vice Chairmen; Mrs. Joseph A. Buda, Treasurer; Mrs. Gilbert J. Vosburgh, Recording Secretary. Mrs. Truman Susman remains as Corresponding Secretary.

The Women's Auxiliary of the New York Orthopedic Hospital elected Mrs. George S. Johnston, Jr., President; Mrs. Jarvis J. Slade, First Vice President; Mrs. William L. Hutton, Second Vice President; Mrs. Thomas Hitchcock, Third Vice President; Mrs. Charles B. Grosvenor, Secretary and Mrs. Donald Wallace, Treasurer.

Mrs. Carll Tucker, Jr., was elected President of the Board of Women Managers of Babies Hospital.

Mrs. John L. Weinberg continues as Chairman of the Neurological Institute Auxiliary. Mrs. Robert M. Estes,

Mrs. George Johnston, Jr.

who had been pro tem Secretary, was officially elected as Secretary.

All other officers of the last two auxiliaries remain unchanged.

## P&S Alumni Day Set For May 1

P&S Alumni Day will be held on May 1, 1971, opening in the morning at 9:00 for registration and coffee in the lobby of the Alumni Auditorium and followed with a scientific session at 10:00.

The program will consist of scientific papers presented by the following alumni:

Lillian Recant, P&S '46; Richard J. Cross, P&S '41; Edgar Haber, P&S '56; Charles C. Rohrs, P&S '66; Arthur B. Voorhees, Jr., P&S '46; Gilbert H. Mudge, P&S '41; Louis M. Sherwood, P&S '61 and Frank E. Iaquinata, P&S '51.

The Alumni Luncheon and Business Meeting will follow in Bard Hall. Councilman Morgan '46, Associate Dean, will talk on "Students and Curriculum Under Pressure." The main address will be given by William J. McGill, President of Columbia University.

In the evening, the Annual Alumni Dinner Dance will be held at the Hotel Pierre, at which Dean Paul A. Marks will speak.

Members of the P&S Faculty and Medical attending Staff are invited.

Information on the detailed program and reservations for Luncheon and the Dinner Dance may be obtained from the P&S Alumni Office, Telephone 579-3498.

## Miss Seal Continues Her Faithful Service

A dual celebration marked festivities on December 9 for Ruth Seal, Administrative Secretary, Department of Surgery.

The party marked her 23rd year at Presbyterian and her acceptance of a position as private secretary to Dr. George H. Humphreys, II, recently retired Professor and Chairman of the Department. Miss Seal had worked closely with Dr. Humphreys during his directorship.

Surgeons, secretaries and members of the house staff gathered around as Dr. Humphreys presented Miss Seal with an exquisite wristwatch, a gift from the entire

staff, and concluded the presentation by quipping, "Ruth is stepping down from her job as queen, to become the dowager queen."

Ruth's successor is Mrs. Mary Ortuno, who has been associated with the Hospital since 1947.

## MEDICAL CENTER ARTISTS URGED TO BE AT EASE(L)

To all Medical Center artists — *don't hurry!* Take your time! You still have more than 300 hours in which to finish those masterpieces!

The 1971 Annual Arts, Photography and Crafts Exhibition will be held in the Milbank Library Annex, 20th Floor, Presbyterian Hospital, from April 27 through May 7.

The deadline for delivery of all entries to the Milbank Library is 4:00 p.m., Thursday, April 22.

All members of the staff and personnel of the Medical Center are eligible to display

work in this art show and are cordially invited to do so.

What kind of art work? Sculpture, paintings, sketches, crafts, such as leather and silver work, ceramics, needlework, weaving, basketry, art photography and bonzai.

No copies, please. All work is to be original.

How many items? Three per person, or less. If you bring more, the committee will select your three best.

For other details, see the instruction sheets being circulated. Or call the Chaplain's Office, Ext. 1817, or Public Interest, Ext. 1911.

## ESHEI Staffers Boost Basic Science

The year 1971 marks the 4th year that the staff of the Edward S. Harkness Eye Institute has participated in the basic science course given for the residents in ophthalmology at the University of Puerto Rico at San Juan, and for an additional 17 residents from Latin American countries.

Dr. George K. Smelser, Director of Eye Research at P&S, and V. Ozanics led off with a six-day lecture and laboratory session on "Anatomy and Embryology of the Eye" in January, with the final lectures of the series given by Dr. A. G. DeVoe, Chairman of the Department of Ophthalmology. The series had 20 hours per week of lectures and laboratory demonstration.

Dr. Paul Witkovsky lectured on "Retinal Physiology," Dr. Abraham Spector spoke on "Biochemistry," Dr. Stephen Trokel discussed "Radiologic Anatomy," Dr. Irene Loewenfeld taught "Neuroanatomy," Dr. Julian Manski discussed "Immunology," and Dr. Laszlo Bito spoke on "Physiology." They spent from one to six each in these sessions.

At a later time, February 28 to March 5, Dr. Smelser participated as Guest Speaker in the "Cornea" Symposium of the New Orleans Academy of Ophthalmology. Dr. Smelser delivered three papers, "Reaction of the cornea to injury and wound healing," "Modern views of corneal anatomy," and "Development of the cornea."

## Portfolio of Private Duty Nurse Holds Many Securities and Assets

Two problems that Carol J. Doe, private duty nurse, N.I., will probably never have to face are boredom and unemployment. In addition to being a nurse, this attractive and personable young woman is a dancer, a singer, and a professional actress and model.

Dancing lessons began when she was five years old and included ballet, tap and Afro-technique (formerly called primitive dancing). Although she has danced and sung professionally, she has taken no formal singing lessons.

As a youngster, Carol thought she would like to become a nurse. "I love people and I enjoy helping them."

And so, in 1964, after graduating from Pine Forge Institute, a co-educational boarding (high) school in Pine Forge, Pennsylvania, she came to Presbyterian Hospital to work as a nursing aide in Babies Hospital "to see if I really did want to be a nurse."

She enrolled in the Hospital for Joint Diseases School of Practical Nursing and the Bronx Community College School of Nursing, combining the two school commitments with a part-time position at Joint Diseases in order to meet the required on-the-job hours. She received her R.N. from Bronx Community.

Carol has also liked working with her hands and has long desired to perfect her natural ability as a masseuse. In September, she will begin working toward this end at the Swedish Institute School for Massage and Allied Subjects.

"I feel that, for me, this will be a tremendous aid in nursing many of my patients back to health," said Carol.

"But I have always been a ham," she continued, "I have always wanted to be an actress."

Her decision to become an actress dates back to when she was 12 years old and living in

Carol J. Doe, R.N.

Munich, Germany, with her parents—her father is a retired U.S. Army man, her mother a teacher-turned-housewife—and her brother and sister. "My whole family became involved in dramatic endeavors and I was left out in the cold," Carol recalled. "I was determined to show my family that I could act."

When the family returned to the United States, Carol enrolled in the HB Studios, Inc., a school of drama on Bank Street in New York City. She then joined Riverside Church's "Poor People's Theater," under the direction of Scott Cunningham, and was a member of the cast of "Beautiful Dreamer," a play written by Mr. Cunningham.

The play, which traced the early efforts of the civil rights movement up to the death of Martin Luther King, Jr., achieved considerable popularity in New York and Pennsylvania, playing mostly to college audiences.

A professional photographer, observing Carol's performance, offered to prepare a "portfolio" for her, and she was on her way to becoming a professional actress and model.

She does a great deal of professional modeling, posing

## BH X-ray Waiting Rooms to be Furnished In Memory of Two Nice Girls, Laura and Pam

A gift of utility and beauty has come to the X-ray department of the Babies Hospital from the Judith Harris Selig Memorial Fund. It is being given as a memorial to the children of the late Mrs. Judith Harris Selig — Laura Ross and Pamela Kate—who, with their mother, lost their lives in an automobile accident four years ago.

The gift is to be the complete furnishing of the children's waiting rooms in the new 3rd floor X-ray wing of Babies Hospital. The exact amount of the gift is as yet undetermined but is estimated as several thousand dollars.

The choice of this particular memorial to the children of Mrs. Selig, approved by the Board of Directors of the Fund, came through a suggestion from one of the Board members, Mrs. Catherine Greene, R.N., who is a supervisor in the X-ray Department of Presbyterian Hospital.

Babies Hospital will decide on the details in furnishing the new children's waiting rooms, depending upon, of course, color schemes, decorations and furniture, which will blend with the overall decor in the department. Dr. Herman Harris, Chairman of the Fund's Board, said, "This project must be something special." Mrs. Greene told the reporter from *The Stethoscope*, "Our part will be simply to furnish the check. We have presented the plan to Dr. William B. Seaman, Director of Service of

Radiology, and Dr. David Baker, who is Chief of Radiology in Babies Hospital."

Mrs. Catherine Greene, R.N.

Various memorials have already been made by the fund in memory of Mrs. Judith Harris Selig. Originally several mothers conceived the idea of "adventure playgrounds" in our parks and Mrs. Judith Selig, one of the organizers of the Committee for a "Creative Playground," became its first secretary. The large playground was opened in Central Park shortly after the tragic accident. It was then that family and friends worked with the Committee on a drive and accumulated sufficient funds to create a pre-school play area as a memorial to Mrs. Selig and her daughters. Mrs. John Lindsay and Park Commissioner August Heckscher helped dedicate West 67th Street Playground

on behalf of all the children of New York City. It was during this fund-raising campaign that the Judith Harris Selig Memorial Fund was organized, and their efforts are devoted to aiding humanitarian causes. There is now in existence a Bryn Mawr Scholarship funded at \$30,000. Contributions have also been made to Cancer Research and Cancer Care.

The Board of Directors of the Judith Harris Selig Fund are:

Chairman of the Board, Dr. Herman S. Harris, Adjunct Assistant Professor in the Psychiatric Institute Dental Service at this Medical Center and father of the late Mrs. Selig; Mr. Howard Rudnick, Legal Advisor; Mrs. Dolly Benn Epstein, Grant Advisor; Mrs. William J. Kersner, Executive President; Mrs. Harry P. Wurman, President; Mrs. Milton Greene, Executive Vice President; Mrs. Herman S. Harris, Treasurer; Mrs. Herman Saleski, Vice President; Mrs. Eli Basse, Executive Secretary.

The Fund's headquarters are at 1465 Third Avenue, New York City, 10028. Anyone interested in knowing more about the organization should contact Mrs. Greene in P.H. X-ray.

## Affairs of the Hearts:

### News of the Presbyterian Heart Club

*The Stethoscope* takes this opportunity to give a preliminary report to members of the Presbyterian Heart Club on the campaign to raise funds to provide a new Cardiac Care Center at Babies Hospital.

There have been a total of more than 160 club members sending in contributions from more than 400 people who have responded to their requests for gifts. Each donor, whether he sent his gift direct to the Hospital or to a member of the club, has been sent a formal receipt which will serve as a record for tax deductions.

Many members have yet to be heard from, but we know that several are still working, because they have written in for additional folders to mail to their friends.

The largest gift to date was from the Stella and Charles Guttman Foundation, which totalled \$10,000, and a gift of \$2,000 was received from Buttrick Foundation, in Dallas, Texas. Several individuals have raised more than \$500 among their friends and relatives and four have exceeded \$1,000.

A number of original meth-

ods of raising funds has been reported. Two members gave dinner parties in their home at \$10 a plate; a purchasing agent solicited those firms that sold him supplies, and in Fairfield, Connecticut, a member of the PH Heart Club and another patient operated upon at the Yale Medical Center arranged a 2-hour variety show in the Fairfield University Auditorium, selling tickets to the event. The show was held on Saturday evening, March 20, but thus far we have not had a report on its success. Funds from the ticket sale are to be equally divided between Yale's Medical Center and PH Heart Club. Most members, however, have mailed the folders which tell the story of the new Cardiac Care Center to friends and relatives, asking for contributions. We have additional folders available for all who request them.

Dr. Malm and other members of the Open-Heart Surgical Team wish to express their thanks to all who have sent gifts and their hopes that others will be as successful in soliciting funds for this needed Cardiac Care Center.

## Latest Report of Chaplain's Department Shows Decline in Proportion of Protestant Patients

The 1970 Report for the Chaplain's Department contains information that will be of interest to our readers.

Reflecting changes in the population of the community served by Presbyterian Hospital, our patient population showed a continuing decline in the proportion of Protestants, from 31.5% in 1969 to 29% in 1970. The Roman Catholic proportion remained at 41%, the Jewish at 19%, and Other and undesignated rose from 9% to 11%.

At any one time, on the basis of average occupancy of beds, we had in the hospital approximately 365 Protestant patients, 515 Roman Catholic, 240 Jewish, and 140 Other or undesignated.

Use of the Pauline A. Hartford Memorial Chapel and the Chapel of the Blessed Sacrament continued about the same as in the years before, with a total of 746 services of all types, including 11 staff weddings, 6 memorial services, and 5 academic exercises.

### Patient Services

In terms of specific pastoral services to patients, the Roman Catholic chaplains, Father Frederick Becker and Father Bernard McGorry, administered Holy Communion at bedside 26,000 times, Anointing 975, and Baptism 247. The accent in Protestant ministrations was on pastoral counseling and prayer; and in Jewish, on visitation and advisement. Rabbi Marvin J. Goldfine is the Jewish Chaplain, and the Associate Protestant Chaplain is the Rev. David B. Maxwell.

### Vesper Service

The P&S Vesper Service for medical and nursing students, which was discontinued in 1968 for lack of interest, was revived by the students in January 1970, as a weekly Bible study fellowship, with informal worship and leadership provided by the students themselves. Four times during the year more formal services were held with speakers from the outside.

Attendance at the weekly fellowship over the twelve months grew from 10 to over 25, and for all four of the formal services the Chapel was nearly full. The Rev. Edwin M. Barton, Director of the P&S Club, serves as advisor to the student Vesper Committee.

### The B.B.S.

The Bedside Broadcasting System was operated on the same schedule as in previous years. The weekly and holy day worship services, the formal P&S Vesper services, occasional choir concerts, live studio programs, and tran-

scribed programs of organ music were regularly on the air for patients to hear over channel 1. Many appreciative comments have come in for the change in channel 4 to a Spanish-language station, WHOM.

Volunteer assistance continued at a high level. Chapel escorts, individual singers, choral and caroling groups, clerical helpers getting out "The Weekly Messenger," neighborhood clergymen responding to calls for specific denominational ministrations, friendly visitors, New York Bible Society distributors of scriptures—some of them here just once, others regularly week-by-week, nearly 275 persons altogether—had a part in the program of the Chaplain's Department.

### Pastoral Education

The program in Clinical Pastoral Education ("CPE"), which was begun in the summer of 1969, was carried on again in the summer of 1970, with five theological students full-time for 12 weeks. The students were very well received throughout the Hospital, and benefited greatly from the readiness of the staff in all departments to cooperate in their training. In turn, the students, who were rather more experienced and mature than is often the case, greatly extended the pastoral services of the Chaplain. For the months of June, July, and August, the total number of visits to patients by Protestant Chaplains was 175% higher than it had been in 1968, before the CPE program was begun.

In addition to the CPE program, the Chaplain continued to train students from the Union Theological Seminary during the academic year, two half-days a week, with the assistance again of Dr. Donald C. Bell of the Department of Psychiatry.

For the Joint Allied Health Council, the Chaplain prepared a report on pastoral education as it might relate to the concerns of a prospective School of Allied Health Sciences.

Other teaching activities of the chaplains included lectures, panels, conferences, and seminars for both staff and students in nursing, medicine, social service, and hospital administration, for a total of 168 hours in the year.

In an increasing number of teaching sessions, especially in seminars, problems in the care and understanding of the dying patient and his family have come up for discussion. This is an area of experience in which the chaplains have been found to make a unique contribution; and it is gratifying to see that students and staff are becom-

Chaplain Reeves

ing more aware of this resource.

Chaplain Reeves continued to serve on the Medical Center Committee on Human Investigation and Organ Transplantation, the Professional Advisory Board of the Foundation of Thanatology, and the Columbia University Seminar on the Roles of the Health Professions. He contributed sections or chapters to all three of the volumes so far published by the Foundation of Thanatology, and presented papers or conducted workshops at several professional meetings. The American Hospital Association "Manual on Hospital Chaplaincy," of which he was one of the authors, and a "Chaplaincy Manual" for the chaplaincies in City institutions under the direction of the Council of Churches of the City of New York, of which he was part-author and editor, were both published in the spring of 1970.

### The Alpine Story:

## They Reached Them at Night

Symptomatic of the constant demands on the medical profession, this telephone receiver at the Alpine Country Club was repeatedly in the prone position, as needed physicians were called from the dance floor. Despite their hectic schedules, 450 doctors, medical students patrons, friends, and their dates—a capacity crowd—showed up for the Medical Center Ball on March 27. The proceeds will benefit the Medical Center Nursery School.

## "Showing One's Institute" Isn't Dr. Osserman's Idea Of Career Apex in Science

The full-color photo of a doctor at work in his laboratory which appears on the cover of the 1970 American Cancer Society Annual Report is of special interest to readers of *The Stethoscope*. It is a picture of Dr. Elliott Osserman in his laboratory in the Francis Delafield Hospital.

Dr. Osserman is Professor of Pathology (Immunology and Oncology) and Associate Director of the Institute of Cancer Research, P&S, and Associate Attending Physician, P.H.

Inside the cover of the ACS Annual Report is a note on the photo which reads, in part:

"There is hope because of the brilliant work in laboratories, throughout the country, exemplified by Dr. Elliott Osserman pictured on our cover. Dr. Osserman is one of the 18 people being supported for their entire scientific lifetime by the ACS—part of the dynamic ACS research approach."

One of the features of the ACS Annual Report is a seven-page illustrated article entitled "Great Expectations." The following excerpts are related to Dr. Osserman and his work at this Medical Center:

"Keeping people in the research business is ACS business. Take a man at the top of his scientific reputation, a man worth supporting for the rest of his scientific lifetime—one of the 18 ACS Research Professors on the faculties of schools and institutes throughout the nation—Dr. Elliott Osserman, Professor of Pathology at Columbia University's College of Physicians

and Surgeons in New York City. He puts it this way, 'There are three stages in the life of an investigator: in the first he does some work; in the second he talks about it; in the third he says, "let me show you my institute.'" The ACS professorship enabled me to stay in the first and second categories and out of administration.'

"Dr. Osserman discovered that approximately 50 percent of patients with particular protein abnormalities go on to develop multiple myeloma, a form of cancer that destroys the skeletal system. The disease may take as much as 20 years to develop. But, when skeletal pain begins, Dr. Osserman is ready with the latest drugs. As in leukemia, the drugs have a limited span of effectiveness and it is for this reason that Dr. Osserman follows cases for years before administering anything. In 1952, when he began his investigations, survival was approximately 20 months. Survival from the time therapy begins is now well into five years and is steadily increasing."

Dr. Elliott Osserman

"Dr. Osserman has also been greatly involved with leukemia, and it is thanks to him that we have a diagnostic enzyme test for one form of leukemia. He has shown that a high association exists between chronic infections and subsequently-developed plasma cell leukemia. Now he is following up on a lead based on three cases of multiple myeloma that evolved into leukemia. 'I believe,' he said, 'in enormously detailed studies of a limited number of patients.' Pointing to a machine that can determine the molecular weight of proteins, he added, 'I would rather have a specimen of urine with an interesting protein to study than a \$20,000 gadget—but instruments are necessary and most of them are very expensive.'

"Over the years Dr. Osserman has trained medical scientists working here and abroad. He sees irony—but takes pride in the fact that his three children are dedicated to the arts rather than to the sciences."

# Dr. Barach Didn't Take Breathing for Granted; His Preoccupation With It Was Humanity's Gain

Dr. Alvan L. Barach, Consultant in Medicine at Presbyterian Hospital, has just brought out a most timely book. Titled "Pulmonary Emphysema: A Treatment Manual for Patients," the 113-page volume promises to become not only a ubiquitous reference book for physicians but also a popular account of one scientist's early recognition of the threat of emphysema and of his decision to devote his life to its treatment.

At the time Dr. Barach was sounding clarion warnings about pulmonary emphysema, air pollution was only a gleam in factory windows. In entertaining bits of history throughout the book, Dr. Barach recalls his attempts to alert the medical profession to the rising danger of emphysema throughout most of the fifty years of his association with Presbyterian Hospital.

One of the most useful aspects of the book is its sharp clinical observations, which professional readers are likely to appreciate. Because pulmonary emphysema can manifest itself differently in different patients—even progress asymptotically for a long time—such incisive observations as appear in Dr. Barach's book can be of immense insight-provoking value to diagnosticians.

The slender volume, brought out by Grune & Stratton of New York City, contains many of Dr. Barach's reminiscences, collected in fifty years since he interned at the Presbyterian Hospital in 1919. Even then Dr. Barach would spend most of his time with patients who complained of a shortness of breath. His special feelings for patients with dyspnea and his preoccupation with its cause, he recalls, were the result of experiences with his family doctor, who would periodically cure episodes of breathing difficulty in young Barach's mother.

"Only many years and many experiments later did I realize that my interest in the short-of-breath patient originated from Dr. Bardford's remarkable cures in my mother," he says.

Dr. Barach started administering 60 per cent oxygen to patients with breathing difficulties as early as 1920. Four years later he and Dr. Carl Binger devised an early model of the oxygen tent, a standard device in inhalation therapy today. This model consisted of nontranslucent covering material and did not compensate for the heat and moisture given off by the patient.

One day Dr. Barach got the idea of having the air-oxygen mixture entering the tent pass

through a can filled with ice. The result was spectacular: Dr. Barach's patients felt cool, dry and comfortable in the modified tent. Dr. Barach's ventilated tent, which he described in a 1926 issue of the *Journal of American Medical Association*, was gradually adopted for use in the treatment of pneumonia, cardiac insufficiency and a variety of cardio-respiratory problems.

In the early days of Dr. Barach's experiments with the oxygen tent, its value was often debated by his colleagues. In case of pneumonia, for example, patients were thought to be either not sick enough for the oxygen tent or "too sick to be disturbed." Dr. Barach recalls in his reminiscences that Dr. Samuel Lambert, then P&S Dean, asked him to try the tent on one of the city's leading citizens who was critically ill with lobar pneumonia. The patient was deeply cyanotic and "very short of breath." After 30 minutes of being in the tent in an atmosphere of 50 per cent oxygen, his complexion was pinkish and his pulse had slowed. "Am I going to live?" he asked upon waking. "Yes, you are going to live," Dr. Barach reassured him, whereupon the patient exclaimed, "But I've had last rites!" Five days later he had passed his crisis and was on his way to recovery.

Dr. Barach's idea to utilize the natural tendency of cold air to sink and of warm air to rise for the creation of a convection current inside the tent led to the installation of the first thermal chamber at the old Presbyterian Hospital in 1928. After Presbyterian Hospital had moved to its present location, two thermal circulation chambers were installed on its twelfth floor; subsequently another two were emplaced on the fourth floor of Harkness Pavilion. These chambers and oxygen tents were instrumental in evaluating continuous oxygen therapy for coronary thrombosis and for studies of cardio-pulmonary disease conducted by Dr. Dickinson W. Richards.

Dr. Barach's work with Dr. Robert Levy proved that in coronary thrombosis the in-

halation of 50 per cent oxygen is sometimes a life-saving measure. Dr. Barach also found that the inhalation of a mixture of 80 per cent helium and 20 per cent oxygen, in conjunction with pressure breathing, could relieve dyspnea. He also demonstrated that the pressure required for the intake of this mixture was about one half of the pressure needed for inhaling oxygen.

In recalling these decades of fruitful preoccupation with dyspnea, Dr. Barach likes to paraphrase a line from a poem by Matthew Arnold, that the study of breathing difficulties and of their relief was his "one aim, one business, one desire." "When this is true of a man," concludes Dr. Barach, "he has little free choice." Dr. Barach's lack of freedom of choice was humanity's gain: the generations of physicians he inspired in his teaching and the countless patients he helped in his years at Presbyterian Hospital represent a monumental contribution to the welfare of mankind.

## Illustrated Book Shows Formation of Human Life

A beautifully illustrated book on the beginnings of life, authored by two doctors at the Columbia-Presbyterian Medical Center, has recently been published. The title is "FROM CONCEPTION TO BIRTH, THE DRAMA OF LIFE'S BEGINNINGS," by Roberts Rugh, Ph.D. and Landrum B. Shettles, Ph.D., M.D., D.Sc., with drawings by Rhoda Van Dyke, published by Harper & Row, March 17, 1971, price \$12.

The purpose of the book is to describe attractively, in layman's language, what happens, month by month, from the moment of conception until the child takes its first breath, illustrated with many photographs, 18 full pages of color.

Dr. Rugh, Professor of Radiology, Columbia University's College of Physicians and Surgeons, was a professor of em-

## Medical Center Author Writes Book In Neglected Area of Human Affairs

A book entitled *The Boys and Girls Book About Divorce*, probably the first book on divorce written to be read by children whose parents are divorced, was published recently by Science House, Inc., New York City.

The author is Dr. Richard A. Gardner, Associate Attending Psychiatrist, PH, and Associate in Psychiatry, P&S.

Dr. Gardner's wife, Dr. Lee R. Gardner, is an Assistant Attending Psychiatrist, PH, and an Instructor in Psychiatry, P&S.

Time gave the book extensive coverage (issue of October 26, 1970), and *The New York Times Magazine* (issue of November 22, 1970) devoted its Parent Child section to the book.

A contract has been signed with the Book-of-the-Month Club, which will distribute the book as a special alternate selection in the spring of this year.

A feature article on the book has appeared in the February *Harper's Bazaar*; *Nova Magazine* of London will also carry an article.

Kindler Verlag of Munich

Dr. Richard Gardner

will be publishing the German translation; Editorial Galerna of Buenos Aires has world rights for the Spanish translations; and translations in other languages are being negotiated.

Dr. Gardner has appeared on numerous radio and television programs.

## Dr. Mandl Announces New Science Journal

A new publication is about to be born at the Columbia-Presbyterian Medical Center: *Connective Tissue Research, An International Journal*. The Editor-in-chief is Dr. Ines Mandl, Ph.D., Assistant Professor of Biochemistry (Obstetrics and Gynecology), P&S.

The aim of the journal is to highlight the most significant and original contributions in the field of connective tissue research; to relate the many facets of the subject; and to afford easier communication among those who wish to be informed of current developments while engaged in more narrowly focused studies.

In addition to original, full-length papers, the journal will publish some short communications of novel concepts or reports of papers presented at meetings.

The Editorial Board and Advisory Board include members from many countries around the globe. The journal will be printed only in English.

The Columbia-Presbyterian Medical Center is well represented on both the Editorial and the Advisory Board. Dr. Mandl lists these names:

Editorial Board Members: Drs. Bernard Wagner (Pathology), Karl Meyer (formerly Medicine and Chemistry).

Advisory Board Members: Drs. E. Carwile LeRoy (Medicine), Gerard M. Turino (Medicine), David S. Smith (Biochemistry), Stephen Keller (Biochemistry, Ob. Gyn.) and Michael M. Levi (Ob. Gyn.)

Subscriptions may be sent to Gordon and Breach Science Publishers Ltd., 12 Bloomsbury Way, London WC1, England, or to Gordon and Breach, Science Publishers, Inc., 440 Park Avenue South, New York, N. Y. 10016, U. S. A.

The Medical Center address of Dr. Mandl is Delafield Hospital 4-463.

## Medical Illustrating Described By Emil Bethke, Ophthalmology Artist

Emil J. Bethke

Emil J. Bethke, B.A., Instructor in Ophthalmology, P&S, and member of the Association of Medical Illustrators, New York, N. Y., was among the subject experts interviewed by Joyce Lain Kennedy, writer of a column called *Career Corner*, a syndicated column (McNaught Syndicate, New York City), which appears in approximately 125

newspapers across the country.

The column for which Mr. Bethke was interviewed was entitled *Anatomy of a Medical Illustrator* and was released to the press in February.

Mr. Bethke recently authored a book *Basic Drawing for Biology Students*, published by Charles C. Thomas Publishing Co., Springfield, Ill. (see *The Stethoscope*, November, 1970).

# News of Nursing

The Department of Nursing has announced the appointment of Mrs. Frances Gaskin as Associate in Nursing.

Mrs. Gaskin will be assigned to the Medical/Surgical division of nursing where she will teach and supervise student nurses in pre-operative and post-operative surgical nursing.

Before accepting the position here, Mrs. Gaskin taught clinical nursing at Kings County and Elmhurst General Hospitals in the Board of Education Manpower Development training program.

Born and raised in New York City, Mrs. Gaskin received the R.N. from Fordham Hospital School of Nursing, the B.S. (Nursing) from Hunter College and the M.A. (Nursing) from Adelphi College. She lives in New York City with her husband, Conrad, and their three children: Conrad, Jr., 12; Tracy, 11; and Troy, 10.

Mrs. Frances Gaskin

Velma E. Guy has been appointed Coordinator of Nursing Recruitment, it was announced by the Nursing Department.

Just before accepting the job at P.H., the Ottawa-born Miss Guy worked for the New York Stock Exchange as Personnel Administrator (Benefits Division) for several years, and also did a stint with American Airlines, supervising, training and guiding stewardesses, and acting as a liaison between the stewardesses and the public.

In her new job, she will visit campuses and degree programs in colleges and universities to recruit young women into the nursing profession. As public relations liaison for the Nursing Department, she will write releases for magazines, newspapers and nursing journals and design brochures to attract promising young women into nursing.

Velma Guy

Julie Beshore and June Weiss, Central Nursing Office, attended a conference on *Heart Block: Clinical and Physiological Considerations*, sponsored by the New York Heart Association, January 26, at the Waldorf-Astoria.

Iris Simon and Piigi Aggoulakis, Sloane Hospital, attended a conference on *The Professional Nurse and Chemotherapy*, sponsored by the Memorial Hospital for Cancer and Allied Diseases at the Mary Manning Walsh Home in New York City on the same day.

Ernestine Jefferson, Harkness Pavilion, attended a similar conference held in the Memorial Hospital Auditorium.

A symposium on *Environment and Birth Defects*, sponsored by the New York Chapter of the National Foundation March of Dimes, was attended by Mary Jane Brooks, SH, at the Commodore, January 27.

Dorothy del Bueno, CNO, attended a symposium entitled *National Conference on the Physician's Assistant*, sponsored by the New York State Nurses Association, January 29 at the Brooklyn Center of L.I.U.

Mary Wigman and Carmela Grande, Operating Room, attended a conference entitled *Association of Operating Room Nurses*, sponsored by the Association of Operating Room Nurses, February 7-11, in Las Vegas, Nevada.

Barbara Skydell has been appointed staff development instructor for nurses, Surgical Service Orientation Unit.

Miss Skydell is a graduate of the Columbia University-Presbyterian Hospital School of Nursing and served as head nurse on the medical service prior to her new appointment.

Barbara Skydell

The following have been promoted within the Nursing Department:

1. Jane Fitzgerald has been appointed Head Nurse, V.C.
2. Reuphenia James has been appointed Head Nurse, Surgery.
3. Rose Angelo has been appointed Head Nurse, Infirm.
4. Elveda McKenzie has been appointed Head Nurse, O.R.
5. Zenobia Whyte has been appointed Head Nurse, Sloane Hospital.
6. Viola Vernon has been appointed Assistant Head Nurse, Medicine.

## Activities of School of Dental and Oral Surgery

### Dr. Morris Appointed

Dr. Melvin L. Moss, Dean of the School of Dental and Oral Surgery, announces the appointment of Dr. Melvin L. Morris, Adjunct Professor of Dentistry, as Director of the Laboratory For Periodontal and Salivary Research.

This laboratory is supported by grants from the Rogosin, Sam H. Shubert, Sergei Zlin-koff and Simon Foundations. Its goal is to gain a better understanding of the factors involved in the bone loss characteristic of advanced periodontal disease.

At present physiologic relationships between root and bone are being studied by means of implant techniques. Biologic differences have been revealed between normal dental roots and those involved in advanced periodontal bone destruction. The nature and location of these differences are being further investigated by chemical and immunofluorescent techniques.

### Fund Drive is Waged

Dentists, hygienists, and assistants are being requested by the American Fund for Dental Education to observe a national fund drive scheduled for the month of May. "May is AFDE month."

The AFDE has contributed more than \$3.2 million to dental schools and their students since 1955, through direct financial grants to schools, grants for research, student loan funds, scholarships and teacher training fellowships.

Much more must be done, however, to bring needed relief to dental schools and their students. A few dental schools are now on the verge of closing due to financial difficulties.

Persons interested in assisting with this drive for funds for dental education may contact the office of the Dean, School of Dental and Oral Surgery, Columbia-Presbyterian Medical Center. Phone 579-3573.

### Dental Clinic Planned

The Presbyterian Hospital and the School of Dental and Oral Surgery have announced the construction of a dental clinic to serve the Hospital's inpatients.

The clinic, which will be located on the floor of the School, will have the capacity to treat as many as 40 patients a day, depending on the nature of the dental work required. The clinic will also be equipped with portable units for the emergency dental treatment of patients who are too ill to be moved.

The total cost of the project, to be borne mostly by the Presbyterian Hospital, is expected to reach \$55,000. This amount includes the cost of new construction, renovation, and the purchase of equipment.

The new clinic will also treat special cases, such as hemophiliacs, according to Dr. Edward V. Zegarelli, Attending Dental Surgeon, PH and Robinson Professor of Stomatology, DOS. Dr. Zegarelli will be in charge of the inpatient dental clinic when it begins service sometime this summer.

### Loneliness to be Tackled at Meeting

"Reaching Through Loneliness" is the topic for an all day conference on the Spiritual Dimension of Patient Care to be held on Saturday, April 24, beginning at 9:30 a.m. Registration forms may be obtained at the 4th Floor Nursing Office in Presbyterian Hospital. All medical personnel are invited.

### Ambassadors in White at Reception

A diplomatic reception was held at the Presbyterian Hospital last month for two dozen representatives of foreign countries.

The 24 guests of honor were completing their assignments in the Hospital's exchange visitor graduate nurses program. The one-year course enables foreign nurses to acquire clinical experience in various services of the Hospital and to attend classes in nursing and medicine.

"Of course the study of nursing was an important part," Christa Ursch told a visitor at the reception, "but we learned much about culture, history and social problems in the United States — in discussions in class and at first hand." Miss Ursch, who is an exchange nurse from Bern,

Switzerland, spoke highly of the practice in the exchange program of requiring every participant to give a report about her country and answer questions about it.

One of the reports presented during the course, directed by Ruth Rayner, elicited particular interest. It was presented by Mrs. Nguyen Nu of Vietnam. Mrs. Nu is head nurse on the pediatric ward at the Dinh Tuong Medical Center about 40 miles from Saigon. Her husband is a health technician there. Mrs. Nu has an extension of 3 months to continue her pediatric-orthopedic experience here.

"I like it here very much," said Mrs. Nu in summing up her year's experience here. She wouldn't mind staying on at P.H., "but there is much to do at Dinh Tuong..."

At a reception in their honor on March 10, these 24 exchange-visitor graduate nurses from 13 countries pose for a photographic memento of their year's stay in the United States.

### DR. JOHN JAMES VISITED HERE

Professor James

Visiting Professor in Orthopaedic Surgery from February 22 through 27 was Professor John I. P. James, Professor of Orthopaedic Surgery, University of Edinburgh, Scotland, a Fellow in the British Orthopaedic Association, a Corresponding Member of the American Orthopaedic Association, and a member of many of the orthopaedic associations and societies of the world.

Professor James's main interest is in the surgery of scoliosis and hand problems, as well as in the study of genetics. While here, he conducted all activities of the Orthopaedic Surgery service including grand rounds, conferences, instructing in the operating rooms, and talking to the residents on several subjects.

Professor James is at The Princess Margaret Rose Orthopaedic Hospital, in Edinburgh.

## UnitedFundBeckons; We Shone Last Year

The United Fund of Greater New York has launched its third annual city-wide appeal to raise, with its 425 agencies, the sum of \$102 million. This is the amount that must be collected from the giving public to help support community services which meet the many problems affecting all of us—drug addiction, foster care, adoption, day care, heart disease and cancer.

Our employee campaign on behalf of this worthy charity will begin on May 3, 1971 with Mr. G. R. Masten serving as employee chairman.

Reviewing the results of the 1970 Campaign, the Presbyterian Hospital rose to a standing of 11th among 63 participating hospitals due to an increase in total giving by staff and personnel of \$8,000 over the previous year. Hoping to continue this progress, Mr. Masten stated the 1971 Campaign will emphasize the opportunities we have through the United Fund to extend immediate and meaningful help to the 425 Health and Social Service Agencies in assisting some 4 million in need. It is estimated 350,000 will be commuters residing outside of New York City.

The Fund also supports the American Red Cross whose activities include service to military families, disastored aid, blood, lead poisoning and youth programs.

## Presentation of the Blood Stamp: The Account of Dr. John Scudder

New six-cent stamps appeared last month, bearing the message:

**"GIVING BLOOD SAVES LIVES."**

For information on the official presentation of this new stamp we are indebted to Dr. John Scudder, Special Lecturer, Surgery, P&S, whose name is associated with the establishing of the Blood Bank at The Presbyterian Hospital.

On March 11 at the Waldorf-Astoria, the Honorable Dr. Roger O. Egeberg, Assistant Secretary for Health and Scientific Affairs of the Department of Health, Education and Welfare, presented the first issue of these new six-cent stamps.

After an invocation, greetings, and a eulogy to volunteer donors, a musical tribute to donors was rendered by the United States Navy Band.

It was announced that, on the following day, the Post Office would release one hundred and thirty million of the new stamps.

To a letter carrier, Mr. Melvin Scher, who has donated more than ten gallons of blood throughout the years, the Honorable John Strachen, Postmaster General in New York

## New Medical Discipline . . .

*Continued from page one*

classes, will be gradually expanded to cover all four years of the medical school. At the completion of the grant, it is expected that enough will have been learned from the teaching experiments and from consultations with other medical schools to devise a formal and permanent program in medical ethics at the College of Physicians and Surgeons. It is also hoped that the Columbia program will provide a possible prototype for other medical schools. As part of the program, a national conference on the teaching of medical ethics will be convened in the spring of 1972 to compare the programs offered at different medical schools across the country, to discuss the role of ethics in the medical curriculum and to explore the best ways of teaching this new discipline as a standard part of medical education.

The principal investigators for the grant are Drs. Councilman Morgan, Associate Dean of Curriculum and Student Affairs, Willard Gaylin, Associate Clinical Professor of Psychiatry at P&S and President of the Institute of Society, Ethics and the Life Sciences. The co-investigators are Dr. Donald F. Tapley, Associate Dean, Dr. Welton M. Gersony, Assistant Professor of Pediatrics, and two third-year medical students, Garner Haupt and Keith Sedlacek.

presented a plaque.

Present at the reception were many blood bank workers, research chemists, technicians, nurses, doctors and business executives of hospitals and supporting institutions. Many were from the Columbia-Presbyterian Medical Center, home of the third oldest blood bank in the U.S.

During World War II, our blood bank sponsored the "Blood for Britain" campaign as inspired by Mrs. Latham of Great Britain. Later the American Red Cross was persuaded to inaugurate the historic blood donation campaign upon the sanction of Mr. Norman Davis, the Director of the American Red Cross, Washington, D. C. Dr. Scudder recalls the dramatic change which Mr. Davis underwent from his original opposition to support of the proposed blood donation campaign.

Dr. Scudder attended the presentation ceremony of this new stamp.

Dr. Daniel Callahan, Director of the Institute based at Hastings-on-Hudson, Dr. Courmand and Dr. Richards will assist the principal investigators in program planning. Mr. Robert M. Veatch of the Institute of Society will serve as program director.

### Buying Books?

The Milbank Library announces a book sale, April 12 through April 20, in the Milbank Library Annex on the 20th floor of Presbyterian Hospital.

There will be a large selection of children's books and a wide assortment of other books for almost any reader's preference. Some paperback will be available.

Remember the dates—April 12 through April 20—for bargains galore.

### Rx for Doctors

Because many persons have mentioned the article by Dr. David Seegal in a recent issue of *JAMA*, we wish to call it to the attention of *Stethoscope* readers.

This inspirational article is entitled "On a Cheerful Note—An Intangible Elixir in the Doctor's Bag." You'll find it on page 476 of *JAMA*, *The Journal of the American Medical Association*, January 18, 1971, Vol. 215, No. 3. Dr. David Seegal, the author, is Consultant in Medicine, Presbyterian Hospital.

Here are a few excerpts:

"There is little doubt that, on the whole, today's patient can receive superb medical care at the technical level, but there is more to the management of a sick individual than expert removal of his gallbladder or sound regulation of his diabetes mellitus. . .

"The usual explanation offered for the students' or interns' failures to make the patient feel somewhat the better for some of their visits is that they are so busy and tired that they have little time to offer the warm amenities of human relationships. . .

"Often quoted is Francis Peabody's marvelous aphorism, 'the secret of the care of the patient is in caring for the patient.' The search to implement this responsibility should be stimulated in student days. It is unfortunate that the latency of the budding physician to offer patients care beyond technical diagnostic and therapeutic measures is often largely untapped. A curriculum is inadequate if it lacks elements to convince the student-intern that an optimistic attitude and a responsible bedside visit are important contents of his doctor's bag."

## The Travels of Dr. Greenbaum

Dr. Lowell M. Greenbaum, Ph.D., Professor of Pharmacology and Director of Graduate Studies, recently returned from a seven-month sabbatical leave which embraced a variety of research and lectures in the United States and the Orient on "Chemical Mediators of Injury and Inflammation."

During July and August he conducted research at the Will Rogers Summer Institute of Saranac Lake, New York. Allan Weiss, a medical student at P&S and Miss B. Eckstein, a medical student from Cambridge, England, collaborated with him on studies concerned with alveolar macrophages.

He attended the fall meeting of the American Society of Pharmacology at Stanford University where he chaired a session on "Lysosomes and the Immune Response."

From September to January he was Visiting Professor at the Third Department of Internal Medicine, Osaka, Japan, where he carried out research on chemical agents involved in leukocyte emigration.

Dr. Greenbaum delivered the major address at the Annual Meeting of Clinical Chemists at Tokushima and at the 25th Annual Meeting of the Japanese Tuberculosis Association at Nagoya. He also spoke at Osaka, Kyoto, and Kyushu Universities in Japan and the National Taiwan University.

Dr. Greenbaum was accompanied by his wife, Gloria, and their teenage children, who attended high school in Kobe. His visit to Japan was made possible by fellowships from the National Science Foundation and Osaka University.

### In Memoriam

Dr. Howard D. H. Brown

Dr. Howard D. H. Brown, Associate Attending Ophthalmologist, P.H. and Associate in Ophthalmology, P&S when he retired in 1964, died at his home in Yonkers on March 1 at the age of 72.

After graduating from the University of Kansas, he received the M.D. from Harvard Medical School. He was appointed a Diplomate of the American Board of Ophthalmology in 1935. Dr. Brown is survived by a son, Howard; two daughters, Mrs. Marian McCollough and Mrs. Adrienne Ziehke, a brother, William, and ten grandchildren.

## Easter Seal Continues Grant For Studies of Reading Problems

The Easter Seal Research Foundation has renewed its grant in the amount of \$5,252 for the current year to a Columbia University research project headed by Dr. Richard L. Masland, Director of Service, Neurological Institute, and Professor and Chairman of Neurology, P&S.

The project, "Neurological Factors in Dyslexia," was initiated in 1969. The principal investigators are Dr. Martha B. Denckla and Dr. Bernard M. Patten. Dr. Denckla has been conducting a study of cognitive and perceptual functions in children with dyslexia and related learning disabilities. Dr. Patten, who is also supported by a Glorney-Raisbeck Fellowship in the Medical Sciences under the auspices of the New York Academy of Medicine, has been studying impairment of memory in children and adults.

Created in 1953, the Easter Seal Research Foundation receives a portion of the voluntary contributions made to the Easter Seal Societies throughout the country.

### PH Urologists . . .

*Continued from page one*

of a connection between viruses and genital cancers certainly call for further investigations," Dr. Lattimer commented in a recent report. The laboratory group is continuing its inquiries along these lines under the grant extension.

During the initial Hartford grant, Dr. Veenema and Presbyterian's urologists developed the topical application of the anticancer drug Thiotepa and established it as an effective tool in trying to control superficial cancers of the bladder.

In related work also supported by the preceding grant, the testing of combinations of drugs and radiotherapy for combating kidney cancers in rats has led to more effective approaches to the treatment of such cancers, called Wilms' tumors, in children.

In still another dividend of the research on prostatic enlargement, the Hartford research team implicated the measles virus in the study of systemic lupus erythematosus, a disease that tends to destroy the kidneys in its later stages.

Many of these discoveries have been presented to scientific meetings and published in journals, Dr. Lattimer said, but a "large number" of reports still require followup data before they appear in print. Furthermore, he added, there will be several years of "delayed fallout" of scientific contributions after the completion of the grant in 1972.

### • ENGAGEMENTS

Elspeth M. Royster is engaged to Eric S. Holch. Miss Royster is the daughter of Dr. Thomas S. Royster, Jr., Associate Clinical Professor of Surgery, P&S and Attending Surgeon, Roosevelt Hospital.

### • WEDDINGS

Susan Petrizzo, Information Clerk, PH Information Center, was married to Joseph Trozzo on February 20 at St. Rose of Lima Church.

Ellen Gilmartin was married to Richard James, mail clerk, PH Mail Room, on February 12.

Terella Ivery, LPN, Neurological Institute, 12th floor, was married to Dr. Charles Du Pont, an anesthesiologist, on February 14. The couple will make their home in England.

Felice Susan Elias was married to Dr. Gordon Dale Miller, a P&S graduate, on March 21. Dr. Miller's father, Dr. William Miller is Assistant Professor of Dentistry at Columbia University's School of Dentistry.

### • NEW ARRIVALS

William Munoz, Foreman, PH Mail Room, and his wife, Sandra, welcomed the first child, a daughter, Cyndia, on February 13.

Bob McCool, Print Shop, and his wife, Jacqueline, welcomed their third son, Daniel Christopher, on March 25, at Sloane Hospital.

Dr. Daniel C. Budd, resident, Department of Surgery, PH, and his wife welcomed their second son, David Keith, on March 8 at Sloane Hospital.

John T. Saunders, Jr., systems programmer, Medical Data Processing Department, and his wife welcomed their second child, a son, John T., III, on February 22.

### • WELCOME TO

Judy Cushman, staff nurse, NI 12, who returned after a two year absence.

### • FAREWELL TO

Anne Prendergast, assistant supervisor, Radiotherapy, who is leaving after 10 years of service. A farewell party was given by the Radiotherapy Department on February 26 at which time her many friends expressed the hope that she would enjoy much happiness.

Mrs. Marie Faralan, staff nurse, NI 12, who is joining her Army husband in Germany to await the birth of their child. Mrs. Faralan will return to her post in November.

### • CONGRATULATIONS TO

Sonia Nias, technician, Radiotherapy Department, who assumed the duties of Assistant Supervisor on March 1, succeeding Anne Prendergast.

### • CONDOLENCES TO

Mrs. Ethel Montgomery, tracer, Record Department, whose mother died on January 31.

## Parkinson Unit . . .

*Continued from page one*

inson Lecture was given last year by Dr. Arvid Carlsson, Professor of Pharmacology at the University of Göteborg, Sweden.

Following his address, Dr. Axelrod, Chief of Pharmacology, National Institute of Mental Health, Bethesda, Maryland, will be honored at the annual dinner to be given by the Parkinson Foundation in Columbia University's Low Memorial Library. He will receive a citation in a ceremony presided over by Mr. Benjamin J. Bittenweiser of the Foundation's Board of Directors.

Dr. Axelrod shared the Nobel Prize in Medicine and Physiology last year for his work with noradrenalin and mechanisms that regulate formation and control of this catecholamine in the nerve cells.

The Parkinson's Disease Foundation is under the guid-

ance of Dr. Melvin Yahr, Associate Dean, and H. Houston Merritt, Professor of Neurology. Since its establishment in 1957, the Foundation has dedicated itself primarily to research into the cause, prevention and treatment of parkinsonism. It was established by Dr. William Black, founder and president of the Chock Full O'Nuts Corporation, who serves as the Foundation's Chairman of the Board. Mr. Black contributed \$5,000,000 to Columbia University for the construction of a medical research building with the provision that one entire floor of the 20-story building be devoted to all phases of research on Parkinson's Disease. The Foundation's research activities on the third floor of Black Building have been stimulated and aided in a large way by the immediate proximity of the College of Physicians and Surgeons and of the Neurological Institute of P.H.

DR. BARD COSMAN, Assistant Attending Surgeon, PH and Assistant Clinical Professor of Surgery, P&S, was elected Secretary of the Plastic and Reconstructive Surgery Section of the New York State Medical Society on February 14.

Dr. Cosman also won first prize for his sculpture at the New York Physicians' Art Show at the New York Academy of Medicine.

DR. STEPHEN L. TROKEL, Assistant Ophthalmologist, PH and Instructor in Ophthalmology, P&S, presented a paper, *Radiology of Orbital and Ocular Trauma* before the VII Congress of the Pan American Association of Ophthalmology, held in February at Bogota, Colombia.

Dr. Trokel was also Visiting Professor in Ophthalmology at the University of San Juan Medical School in Puerto Rico, February 8. The title of his presentation was *A Course in Radiology for Ophthalmologists*.

The Editorial Committee of "Human Pathology" has elected DR. BERNARD M. WAGNER Editor-in-Chief of the Journal. He is Professor of Pathology, P&S and Director of Laboratories at Francis Delafield Hospital. The international quarterly is published by the W. B. Saunders Company of Philadelphia, Pa. Because of Dr. Wagner's election, the Journal's Editorial Office will move from Boston to P&S.

DR. HAROLD CARL STRAUSS, Cardiology Fellow, Department of Medicine, has been given a Faculty Development Award by the Pharmaceutical Manufacturers Association Foundation, for studies of antiarrhythmic drug actions. The award is to stimulate teaching, training and research in clinical pharmacology.

Dr. Strauss has spent the past two years as a cardiology fellow in the Department of Medicine. He has been nominated for appointment as an Associate in the Department of Pharmacology this July and will continue his teaching in the Department and in the instructional program of the Cardiac Intensive Care Unit.

DR. ANDREW L. WIT, Associate in Pharmacology, P&S, has been awarded a Senior Investigatorship by the New York Heart Association to study the mechanisms of cardiac arrhythmias originating in the atrioventricular junction of the heart.

The Investigatorships are awarded to scientists who wish to devote full time to research on cardiovascular-renal disease and who have experience in independent investigation without supervision.

DR. JOEL E. ROTHERMEL, Ophthalmology Resident, presented a paper, *Treatment of Hip Fractures in Parkinsonians on L-Dopa*, co-authored by DR. ALEXANDER GARCIA, Chief of Orthopedic Clinic, V. C., and Associate Attending Surgeon (Orthopedics), PH, before the American Academy of Orthopedic Surgeons, held in San Francisco from March 6 to 11.

The authors found that L-Dopa helps overcome the problems of contractures and bone softness—problems complicating bone surgery for hip fractures in patients with Parkinson's disease. Said Dr. Rothermel, "When patients take L-dopa, their neurological disease is minimized and fracture treatment closely resembles that of the usual elderly patient."

Also in attendance at the San Francisco meeting were: DR. FRANK E. STINCHEFIELD, Professor and Chairman, Department of Orthopedic Surgery, who presented a paper entitled

*The Charnley Replacement*; DR. ROBERT E. CARROLL, Attending Surgeon (Orthopedics) PH and Associate Professor of Clinical Orthopedic Surgery, P&S, who spoke on *Arthrodesis of the Wrist for Rheumatoid Arthritis*, a paper that was co-authored by DR. HAROLD M. DICK, Assistant Attending Surgeon; DR. CHARLES T. RYDER, Attending Surgeon (Orthopedics), PH and Professor of Clinical Orthopedic Surgery, P&S, whose subject was *Tibial and Femoral Torsion*, and DR. CHARLES S. NEER, II, Attending Orthopedic Surgeon, PH and Professor of Clinical Orthopedic Surgery, P&S, who discussed *Shoulder Prosthesis*. Dr. Neer also presented a course on *Fractures of the Upper Humerus* and discussed a paper on *Compression Bone Plating* at the Academy meeting.

Dr. Stinchfield

Dr. Seaman

DR. WILLIAM B. SEAMAN, Professor and Chairman, Department of Radiology, presented the Annual Oration *Radiology of the Colon: New Perspectives, Old Problems*, at a recent meeting of the Radiological Society of North America in Chicago.

Dr. Seaman has also been appointed chairman of the Committee on Radiology of the National Academy of Sciences and National Research Council.

DR. HARRY SENECA, Assistant Urologist, PH and Assistant Professor of Urology, P&S, has a book out entitled *Biological Basis of Chemotherapy of Infections and Infestations*, published by F. A. Davis Company, Philadelphia.

Focused on the practical assignments of clinical medicine, Dr. Seneca's book is the latest accepted work in chemotherapy that addresses itself to the daily problems of the clinical practitioner and of all medical workers concerned with drugs or chemicals and their special properties to cure, curb, control or suppress diseases.

DR. FREDERIC P. HERTER, Professor of Surgery, P&S and Acting Director, Surgical Service, PH, served as chairman of the surgical section at the annual convention of the Medical Society of the State of New York, at the Americana Hotel, from February 14 to 17. The title of the program was *Emergency Care in Acute Trauma*. Participants included DR. JOHN M. KINNEY, Attending Surgeon, PH and Professor of Surgery, P&S, who presented *Shock and Disturbances of Acid-Base Balance in Acute Injury*, and DR. KENNETH A. FORDE, Assistant Attending Surgeon, PH and Assistant Professor of Surgery, P&S, who spoke on *The Management of Stab Wounds*.

DR. ARTHUR G. DEVOE, Professor and Chairman, Department of Ophthalmology, attended the corneal symposium at the New Orleans Academy of Ophthalmology in Louisiana, from February 28 to March 5. He lectured on *The Cornea in Systemic Disease, Medical Management of Acute Corneal Conditions and Corneal Disease in Children*.

## Dr. Gocke Gives Gibson Lecture; Urges More Research on Hepatitis

Dr. David J. Gocke

The need for "more additional basic research" was the theme of the 24th John G. Gibson II Lecture, delivered by Dr. David J. Gocke last month.

Dr. Gocke, who is an Assistant Attending Physician, PH, and an Associate Professor of Clinical Medicine, P&S, reviewed the current knowledge of the Australia antigen for the benefit of a large audience in the Alumni Auditorium on April 1. He was the first physician of Columbia-Presbyterian Medical Center to deliver the prestigious lecture; the lecturers to precede him came

## NEW AUDIO-VISUAL PROGRAM IS HEADED BY W. H. UNGER

Mr. W. H. Unger, of Tenafly, New Jersey, has been selected to head the new Audio-Visual Program at the College of Physicians and Surgeons, it was announced recently by Dean Paul A. Marks. "Mr. Unger will serve during the first few months on a part-time basis," Dean Marks said, "and during this period will do much of the basic planning for the new program that will supplement and expand on the audio-visual work that many departments now do independently."

A need for a modern audio-visual center and a pool of advanced equipment and skilled personnel to operate it was established by a team from the National Audio-Visual Center at Atlanta, Georgia, last year. The study was jointly sponsored by the College and the

Presbyterian Hospital.

Mr. Unger graduated from the Massachusetts Institute of Technology in 1941, with a B.S. degree in Communications Engineering. Following graduation, he remained at M.I.T. to work on a "secret" project for the U.S. Navy in the field of underwater acoustics. In 1944 he returned to New York City to join the Philharmonic Radio Company, heading its electrical Development Laboratory, and was responsible for the production design of radar test and training gear. Later, he was involved in the design of home radio receivers and early color television receivers. He also participated in the design of aircraft long-range navigation equipment.

In 1949, with two associates, he formed Elliot, Unger and Elliot, Inc., which was active in the production of television commercials and industrial films. The company grew rapidly and was sold to Columbia Pictures Corporation. In 1965, Mr. Unger formed his own production company and has produced all types of films, including educational, training, sales, and commercials.

"It is hoped," Dean Marks said, "that the new audio-visual program will provide the complex modern equipment needed by physicians and departments in research, teaching, and public communications and eliminate the dupli-

W. H. Unger

## DR. RAGAN APPOINTED TO TOP MEDICAL POST

Dr. Charles Alexander Ragan, Jr., an accomplished administrator and an authority on rheumatoid arthritis, has been appointed Chairman of the Department of Medicine, P&S and Director of Service, PH.

A medical scientist of note, Dr. Ragan has published more than 100 professional articles, including contributions about his discovery, with Dr. Harry Rose, of the rheumatoid factor, which is present in the blood of patients suffering from rheumatoid arthritis. The discovery and isolation of this substance led to the development of a test for arthritis, as well as for other so-called collagen diseases. In another study, Dr. Ragan demonstrated the role of cortisone and ACTH, a hormone secreted by the pituitary gland, in inhibiting inflammation and in wound healing.

Dr. Ragan's education

Dr. Charles A. Ragan, Jr.

spanned the 1930's beginning with Princeton University. Graduating in 1932, he earned his M.D. from P&S in 1936 and served his internship and residencies at PH. Following a year as Commonwealth Fel-

low in Medicine and Instructor at Johns Hopkins Hospital, he returned to PH as Assistant Physician in 1941, receiving a dual appointment at P&S as Assistant in Medicine.

Dr. Ragan's career at Columbia-Presbyterian took a back seat to his country's needs in World War II. He served almost four years as laboratory officer of a station hospital and later as chief of medicine of a field hospital.

Soon after his return to Washington Heights, Dr. Ragan became an Associate in Medicine at P&S. He was named an Assistant Professor of Medicine at P&S and an Assistant Attending Physician at PH in 1948. A succession of promotions in the 1950's led to his appointment as Attending Physician, PH, in 1960 and as Lambert Professor of Medicine in 1961, a post he held until he was ap-

## Presbyterian's Ward Manager Program Completes a Successful First Year

One year ago, in April, 1970, the ward management program was introduced at Presbyterian Hospital. Having as its primary goal the improvement of patient care at the Hospital, the program was initiated and sponsored by the Nursing Department, under the guidance of Mary Windrow, director of Nursing Service. Each unit in nursing contributed to the "non-nursing functions" which were to be undertaken by the ward managers and the program was then coordinated and finalized by Mrs. Barbara Torsten-

Ward managers pose for camera before settling down to a business meeting in the Eye Institute Addition. Seated, left to right: John King, Richard Clark, Thomas Lundy, James Duffy, David Markant. Standing: Joseph Donegan, left, and Thomas Andrews.

son, supervisor of projects (nursing).

The ward manager was to be administratively responsible for the management, organization and coordination of indirect patient care services within the unit. He was to be responsible for the effective utilization of all levels of personnel involved in indirect patient services, and for the man-

agement of the unit in the most economical and efficient manner possible.

The program has successfully achieved its primary goals and has, indeed, accomplished more.

Since its inception in April '70, the program has welcomed six additional ward managers and has expanded to include

*Please turn to page two*

Continued from page one

the orthopedic service, obstetrics and gynecology, medicine, ophthalmology and pediatrics.

The ward managers currently manning the floors are: Joseph Donegan, PH 14 (male surgical); George Sarno, PH 10 (urology); Summitt Wilson, PH 12 (female surgical)—who have completed their first year; and Thomas Lundy, PH 7, 8 and 9 (medicine); David Markant, PH 16 (obstetrics & gynecology); James Duffy, PH and BH 5 (orthopedics); Thomas Andrews, BH 2, 9, 10 and 11; John King, BH 4, 6, 7 and 8; and Richard Clark, ESH Eye Institute.

The presence of the ward manager within the unit has provided a single focal point of liaison between the service areas within the Hospital and the unit involved. Ward clerks have been able to identify with the program; it offers them an immediate, tangible line of authority. According to Jim Duffy, Orthopedic Service, "The program has made many inroads in facilitating better patient care but it has not even come close to the apex of its development. We hope to see more and more opportunities for expanding our services."

Of course, like most fledgling ventures, the ward manage-

ment program has had to overcome a few stumbling blocks. Perhaps the fundamental difficulty has been the terminology barrier. The ward managers came from various fields before coming to Presbyterian. Some had brief encounters with a hospital setting, others did not. Yet all agree that becoming familiar with the med-

ical terminology unique to his particular service has been a difficult task. To function efficiently he must understand the basic medical terminology of the unit because it extends into the areas of equipment, supplies, communication, organization, staffing and supervision.

Approximately nine months after the inception of the program, the ward managers recognized the need for a chair-

his studies at Iona's Graduate School, working towards a master's degree.

John King completed 1½ years of college, served in the United States Navy overseas for four years, returned to college and earned the B.A. degree from Northeastern University, Boston, in 1969.

That same year he began working at Presbyterian as a personnel interviewer, was promoted to employment supervisor and upon completion of the intensive orientation course required for the post of ward manager, he started working in Babies Hospital, sharing the floors with Tom Andrews.

Mr. King is now attending New York University in pursuit of a master's degree.

It is purely coincidental that all of the ward managers now on the job are men. Miss Windrow stated that the nursing department hopes to attract women, as well as men, to this exciting and challenging career.

## See the June Issue Of The Stethoscope

Next month's *Stethoscope* will bring reports of the Volunteer Tea, Wednesday, April 28; the Medical Center Art Show, April 27 through May 7; the annual dinner of the 25-Year Club, April 29, and other events which are occurring as this issue goes to press.

## MAGICIAN HUGH DALY AND YOUNG PATIENTS PROVIDE FASCINATING HOUR FOR ABC CAMERA

April 14 was a big day for the youngsters in Babies Hospital—they were invited to a party where Hugh the Great, magician extraordinaire, would entertain them with his amazing feats of magic.

It was also a big day for Hugh the Great, alias Hugh Daly, sky diver, actor, cinematographer and magician, who manages to pursue all these hobbies in addition to his full time job as clinic registrar in Vanderbilt Clinic.

ABC (Channel 7) Eyewitness newscaster Del Wade and an ABC cameraman were

on hand to interview and photograph Mr. Daly during the performance.

That evening Mr. Daly was featured on ABC's Eyewitness News, during the 6:00 p.m. telecast. There were several shots of Mr. Daly performing to his enthusiastic audience of about 30 youngsters, some of whom were chosen to be his assistants.

Mr. Wade gave the television audience some back-

ground information on Mr. Daly at which time it was learned that he gives as many as 10 performances in a year on a voluntary basis. Said Mr. Daly, "I just love to make these kids happy—a hearty laugh from a sick youngster is better than all the money in the world."

*Stethoscope* readers will remember reading about Mr. Daly and his many avocations in the May, 1970, issue.

# Parkinson's Disease Foundation

Nobel Laureate Julius Axelrod and Dr. H. Houston Merritt, noted medical educator and Moses Professor of Neurology at Columbia University College of Physicians and Surgeons, were cited on Wednesday, April 23, for their outstanding scientific contributions by the Parkinson's Disease Foundation.

The presentations were made at the Foundation's second annual awards dinner attended by 200 medical, community and business leaders, in the Rotunda of the Low Memorial Library at Columbia University, by William Black, the Foundation's board chairman and Dr. Melvin D. Yahr, its executive director and associate dean and professor of neurology at the University. Benjamin J. Buttenwieser was dinner chairman.

In proclaiming April 28 as "Parkinson's Disease Day," Governor Nelson A. Rockefeller of New York and Governor William Cahill of New Jersey hailed the Parkinson's Disease Foundation. Governor Rockefeller cited the Parkinson's Disease Foundation as "the nation's first organization dedicated to finding the cause, prevention and cure of parkin-

sonism. Through its programs of research, treatment, public and professional education and financial support, the Foundation has brought new insight and understanding to this terrible disease."

The tribute to Dr. Axelrod stated that "your painstaking explorations into the delicate labyrinth of the nervous system have enriched medical science with new insights and have earned for you the Nobel Prize in 1970. As Chief of Pharmacology at the National Institute of Mental Health since 1955, you have given the nation extraordinary leadership in man's quest for better understanding of human behavior and new weapons to cure old nervous and mental disorders."

Dr. Merritt's citation stated that "as a teacher, medical sage, author, you have in your forty-five years of practice as a physician, touched the lives of innumerable individuals with your indelible skill and compassion. As Dean of the Faculty of Medicine and Moses Professor of Neurology at Columbia University College of Physicians and Surgeons, you have brought fresh vision and wisdom to new generations of

physicians. You helped create the Parkinson's Disease Foundation in 1957 and as its president endowed its work with your own characteristic foresight, determination and effectiveness."

Earlier that afternoon, Dr. Axelrod delivered the second annual James Parkinson Lecture.

Established in 1957, the Foundation has become a world center in the fight against parkinsonism, a disease which affects more than 1,500,000 Americans. Mr. Black, chairman of the Foundation and founder and president of Chock Full O'Nuts Corporation, contributed \$5,000,000 to Columbia University towards construction of a new building to provide space for medical research. More than 600 medical research projects are currently being pursued in the 20-story William Black Research Building. In specialized laboratories occupying one floor of the building, 55 scientists and technologists work on a variety of approaches to parkinsonism. In addition, a special clinic for treating parkinsonism is held twice weekly at the Vanderbilt Clinic.

A large group of distinguished Americans who serve as sponsors of the Foundation include: Bennett Cerf, Mrs. Dwight D. Eisenhower, Andrew Goodman, Mrs. Marjorie Mazia Guthrie, Harold Helm, Conrad N. Hilton, Mrs. Anna Rosenberg Hoffman, Dr. George James, Mrs. Albert D. Lasker, Gustave L. Levy, Hon. John V. Lindsay, Dr. William J. McGill, Page Morton, Jerome K. Ohrbach, Hon. Nelson A. Rockefeller, Julius Rosenwald II, Laurence Tisch, and Senators Clinton Anderson, Jacob K. Javits, John G. Tower and John V. Tunney.

knowledge of the Australia antigen clearly pointed up the missing pieces in the complex jigsaw puzzle that confronts medical scientists dealing with hepatitis. The direct relationship between antigens and the hepatitis-causing agent is not known, he emphasized. In fact, it is not known for sure whether these "viruslike particles" are not themselves the causative agents. Researchers are confounded by the fact that some patients receiving a blood transfusion that is demonstrably free of Australia antigen contract serum hepatitis.

Dr. Gocke's presentation ended with an appeal for a concerted effort to perfect the present diagnostic tests for Australia antigen and to develop tests for other possible antigens, so that the occurrence of this serious disease can be minimized.

munoelectrophoretic method—most of them as complicated to carry out as they are difficult to pronounce.

Dr. Gocke said the last-named test—utilizing electrophoresis—is now the method of choice for detecting the antigen in a blood sample. The method takes advantage of the fact that the antigens and the antibodies to it migrate in opposite directions in an electrical field. "It is possible—by proper orientation in the electric field—to make them migrate into each other," Dr. Gocke explained. Thus there is substantial gain both in the speed of obtaining a reaction and in sensitivity. Testing a blood sample by electrophoresis takes one to two hours, as compared with one to two days required for other tests.

The method still needs to be further refined, Dr. Gocke added, especially since there is evidence that the antigen has variant forms, which have not been fully classified.

The problem of variants of the Australia antigen, Dr. Gocke stressed, is "quite distinct from the question whether there are other possible hepatitis antigens." He was referring to the discovery in Europe last year of an antigen possibly associated with infectious hepatitis—the milder form of the disease. The Australia antigen is associated with the more severe serum hepatitis, also known as the post-transfusion hepatitis.

Dr. Gocke's survey of our

## DR. BARACH HONORED

Dr. Alvan L. Barach, Consultant in Medicine, PH, is the recipient of the Edward Henderson Lecture Award, given by the American Geriatrics Society. Dr. Barach was one of four persons being honored at the Society's 28th annual meeting last month for their contributions to the improvement of the diagnosis and treatment of diseases affecting the elderly.

During the scientific part of the meeting, which was held in Chicago on April 23 and 24, Dr. Barach spoke on "The Ambient Air, the Good of It and the Bad of It." He was one of three awardees to present a special lecture at the meeting.

During the awards ceremony, Dr. Barach was cited "for eminent and exceptional contributions to a better understanding of the problems of health care for the aging and aged through research

Dr. Alvan L. Barach

and published works in the field of life sciences relating to the aging of man." The other medical scientists being honored included Dr. Karl Menninger of the Menninger Foundation, Topeka, Kansas.

## Dr. Vande Wiele is Named Rappleye Professor

Dr. Raymond L. Vande Wiele has been named the Willard C. Rappleye Professor of Obstetrics and Gynecology at Columbia University's College of Physicians and Surgeons, it has been announced by Dr. William J. McGill, President of the University.

Dr. Vande Wiele joined the faculty of Medicine at Columbia in 1955 and was named full professor in 1968. He has been Acting Director of the International Institute for the Study of Human Reproduction since 1970, and was named Chairman of the Department of Obstetrics and Gynecology, P&S, and Director of Service, Presbyterian Hospital, this

Dr. Raymond L. Vande Wiele

year. (See February, 1971, *Stethoscope*.)

## Journal Praises Achievements Of Dr. Howard C. Taylor, Jr.

The second issue of the *American Journal of Obstetrics and Gynecology* in 1971 is a prized possession of many staff members at the Medical Center. The reason is that the 155-page journal commemorates the work of Dr. Howard C. Taylor, Jr., in his chosen field. A half dozen Austrian, Argentine, Indian and Japanese colleagues of the Professor Emeritus of Obstetrics and Gynecology pay editorial tribute to him for his contributions as long-time Editor-in-Chief of the *Journal* and as an "international entity" in gynecology and obstetrics.

Almost two years in the making, the issue attains the level of a review of the field by treating many aspects of gynecology and obstetrics in 18 articles by Dr. Taylor's friends, or former students

and colleagues, including six contributors from Columbia-Presbyterian Medical Center.

Mrs. Helen Case, Editorial Assistant to Dr. Howard C. Taylor, Jr., during his tenure as Editor-in-Chief of the *American Journal of Obstetrics and Gynecology*, inspects the festschrift for him at the International Institute for the Study of Human Reproduction.

## DR. GOCKE . . .

*Continued from page one*

from other parts of the world.

In giving the available data from the natural history of the Australia antigen, Dr. Gocke underscored the gaps in our knowledge about this mysterious particle, linked with hepatitis. Despite the unfavorable climate of continuing cutbacks in financing research, he sounded a call for expanded efforts "to improve our methods of detecting the Australia antigen, to develop a vaccine in this area, and also to develop methods for detecting other hepatitis viruses." Hepatitis annually affects 50,000 Americans, of whom 3,000 die of the disease.

The Australia antigen was first isolated from the blood of an aborigine eight years ago by a scientist looking for genetic differences in the bloods of the world's isolated population groups. Medical scientists soon realized that the Australia antigen could be found in most people suffering from serum hepatitis.

The Presbyterian Hospital was one of the first institutions in the world to introduce a routine laboratory test for detecting the antigen.

Dr. Gocke's presentation compared five laboratory tests that can be used to detect the particle, such as the complement fixation test, the radioimmunoassay test, the two-dimensional immunodiffusion reaction, and the counterim-

## Benefit for Nursing Scholarships

Right: Mrs. Isabel Bain, member of the Benefit Card Party Committee and mother of nursing student Gail Bain, '72, with Mrs. Percy Sutton, wife of Manhattan Borough President Sutton.

The annual Benefit Card Party held April 21 in Maxwell Hall to aid the Nursing Students' Scholarship Fund was very successful. Upwards of \$14,000 was realized.

Lucky prize winners this year were: Mrs. H. Hallock, trip for two to Freeport in Grand Bahama Island; K. Guerrero, portable Panasonic color TV; Mrs. D. S. Bogert, weekend for two at Lake Mohonk Mountain House, New Paltz, N. Y.; Nell Brown, fur cape; Lawrence Bain, Sr., \$100 B. Altman gift certificate; Ted

Kraue, \$100 Lord & Taylor gift certificate; Mrs. H. C. Frick, fur muff; Mrs. James Bragg, Sylvania tape cassette; Lawrence Garrison, Columbia Encyclopedia; Dr. W. Stehrn, Lark Luggage weekend case; Mrs. Virgil Damon, gold lamé hostess gown; Jennie Kossman, Clairol Kindness instant hairsetter.

The ladies of the Committee wish to thank the following patrons for their support: Holiday Inn, Inc., Lake Mohonk Mountain House, John F. Morris Furs, B. Altman and Co., Mrs. Charles Bellinger, Fredrica Furs, Sylvania Corporation, Columbia University Press, Lark Luggage Corporation, Clairol, Tappan Hill Restaurant, Loungee Corporation, Hay Photographers, M. Citerella, Inc., Steuben Glass and Louis Marx.

### Anesthesiology Lectures

The Department of Anesthesiology announces two Thursday Afternoon Lectures to be given in May:

Thursday, May 6, "Electromyography," by Dr. Ralph A. Epstein, Assistant Professor of Anesthesiology, P&S.

Thursday, May 13, "Complications of Relaxants and Factors Modifying the Action of Relaxants," by Dr. Ronald L. Katz, Professor of Anesthesiology, P&S.

Two lectures in the Thursday afternoon series given late in April were "Old and New Muscle Relaxants," by Drs. Aaron J. Gissen and Ronald L. Katz, Department of Anesthesiology, P&S, and "Effects of Relaxants Other than Muscle Relaxation," by Dr. Robert Donham, Associate in Anesthesiology, P&S.

Lectures are given from 5:00 to 6:00 p.m. in the Fourth Floor Amphitheater, Babies Hospital, Broadway at 167th Street.

Officer Jesus Ayala, Protective Department of the Presbyterian Hospital, holds a Community Service Award plaque recently presented to him by the officers of the 34th Precinct and the Community Council—"for outstanding service."

Officer Ayala, while off duty, saw a policeman from the 34th Precinct engaged in battle with a known drug addict who had pushed him through a store window. As the man tried to escape, Officer Ayala apprehended him and, with the police officer, who suffered only minor injuries, succeeded in placing him under arrest.

Officer Ayala, whose post is at the Hospital parking lot, has been employed at Presbyterian for five years.

## DR. RAGAN APPOINTED . . .

*Continued from page one*

pointed chief of the medical service at Harlem Hospital in 1968.

Dr. Ragan directed the Medical Service at Harlem Hospital for three years prior to assuming his new duties here last month. Before Harlem, he served as Director and Visiting Physician at the First (Columbia University) Division of Bellevue Hospital from 1961 to 1968.

The 61-year-old physician and teacher has undertaken his share of ancillary commitments. He was Consultant for Columbia Research Service at Goldwater Memorial Hospital

from 1951 to 1961, for the V.A. Hospital in New York from 1961 to 1968, and has served in that capacity to the House of the Holy Comforter. In government service, he has been special consultant on metabolism and nutrition, and on arthritis and metabolic diseases. He has a deep interest in the natural history of rheumatoid arthritis.

Dr. Ragan has also worked on special committees of The National Foundation and of the National Arthritis and Rheumatism Foundation, as well as with editorial boards in medical publishing.

His professional awards include the Joseph Mather Smith Prize, the Gairdner

Foundation Award, which he shared with Dr. Rose, and the Heberden Oration Award of the Heberden Society of London.

Dr. Ragan is a member of the AMA, the Medical Society of the State of New York, the N. Y. Academy of Medicine, American Rheumatism Association, and of many other societies, including the Harvey Society, the American Association for the Advancement of Science, and the American Society for Clinical Investigation.

Dr. Ragan lives at 70 Pondfield Road West, Bronxville, New York. He and Mrs. Ragan have four children and eight grandchildren.

### Will Celebrate 50th Anniversary

The School of Dental and Oral Surgery has announced that the Division of Orthodontics will celebrate its fiftieth anniversary with a two-day scientific session to be held in the Alumni Auditorium June 4-5. There will also be a formal dinner on Friday evening (June 4) at the Sky Garden Roof of the St. Moritz Hotel in New York City.

The president of Columbia University, William J. McGill, will greet the alumni at a luncheon to be held at Bard Hall on June 4. Dr. Leumen M. Waugh, founder and first director of the Division of Orthodontics (and also one of the founders of the Dental School), and Dr. Arthur C. Totten, former director, will be honored at the Friday dinner.

Speakers at the scientific session will be Professor Egil P. Harvold, University of California; Brainerd F. Swain, University of Pennsylvania, and Dr. Fred F. Schudy of Houston, Texas. Other speakers (from Columbia Dental faculty) will be Dean Melvin L. Moss, Professor, and Division Director Nicholas A. DiSalvo; Professors Sidney L. Horowitz, Gustave Lasoff, Henry I. Nahoum, Irwin Steuer and Clifford L. Whitman. All speakers, with the exception of Professor Harvold, are Columbia alumni.

The Division of Orthodontics at DOS conducts one of the oldest university postgraduate programs in orthodontics in the world and has educated more than 700 orthodontic specialists. Many of the program's graduates have risen to positions of leadership and have contributed significantly to education and research in the specialty.

### NATIONAL HOSPITAL WEEK, MAY 9-15.

"Your Hospital Cares."

## CAPPING EXERCISES FOR 14 STUDENT DENTAL HYGIENISTS

A capping exercise for 14 student dental hygienists of the School of Dental and Oral Surgery, CU, was held in the Pauline A. Hartford Memorial Chapel on Sunday, March 7.

The academic procession included Dr. George O'Grady, Assistant Dean, DOS; Dr. Joseph A. Cuttita, Chairman of Admissions, DOS; Mrs. Patricia McLean, Director of Division of Dental Hygiene, DOS; M. Diane Curl, Director of Dental Hygiene at Westbrook Junior College, Portland, Maine (formerly Assistant Professor of Dental Hygiene, DOS); M. Julie Wehrle, Mrs. Janet McLean, Kathleen Silko and Laura Latimer, Instructors, Dental Hygiene, DOS.

Following the processional, Chaplain Robert B. Reeves, Jr., gave the invocation.

The capping address was delivered by Miss Curl, who directed her remarks to the significance of the cap worn by dental hygienists. The newly capped student pledges to be temperate in all things, keeping both mind and body in the best possible health so that patients may have the benefit of clearness of judgment and skill; she further pledges herself to obedience and loyalty and promises to uphold the ethical standards of her chosen profession.

Junior "A" students are capped with a plain white cap which signifies the beginning of clinical experience, and is received after one semester. The Senior "A" students receive a cap with a blue ribbon across the left corner, which signifies a milestone in the level of clinical competence.

At graduation, in June, they receive two full ribbons across their caps—a blue ribbon for Columbia University and a lavender ribbon, the professional color of dentistry.

Following benediction by Chaplain Reeves and the re-

Student Kathleen Keneally receives cap from Kathleen Silko, Instructor.

Student Susan Connelly capped by Mrs. Janet McLean, Instructor.

cessional, a reception was held in Bard Hall for the students, their families, colleagues and friends.

## Young Queen of Jungle, Ailing on Civilized Food, Is Charming Patient on Vitamin D and Loving Care

Visitors to the 18th floor of the Black Building may look twice to be sure their eyes are not playing tricks, but, yes, that is a real lion cub skittering clumsily across the floor in the corridor between the office of Dr. Ross M. Grey and the semi-private, two-care accommodations she shares with a German shepherd dog.

Elsa, a frisky, happy, six-month-old charmer, has captivated everyone on the floor where she is being treated by Dr. Grey for osteoporosis. Dr. Grey, who is Associate Professor of Pathology (Veterinary

Medicine), and Curator of Animal Husbandry, Columbia University, explained that Elsa had eaten nothing except chicken since weaning and this resulted in nutritional secondary hyperparathyroidism which, in turn, caused the osteoporosis, a disease of the bone characterized by a reduction in bone volume in which resorption of bone exceeds bone production. She is being treated with a high-calcium, low-phosphorus diet with added vitamin D and a complete mineral supplement.

She loves to lie flat on her

back with all four paws (and they are tremendous paws) in the air, while anyone that is immediately handy may scratch her tummy. And if you move away from her too quickly she is apt to grab your leg in her mouth, pull you back and then turn her large, luminous hazel-gray eyes toward you as if to say, "I didn't tell you that you could stop scratching me."

Her comical antics are a source of great joy to the 18th floor and she is mothered by everyone but has become particularly attached to Adeline Elia and Sandra Rivera and will docilely pad down the hall behind them on command. (Addie may be remembered by *Stethoscope* readers as the adopted mother of Princess the goat. See *Stethoscope*, July, 1968.)

When her treatment is completed, Elsa will be returned to her owner in Syracuse.

What is Elsa's favorite food? A large chunk of raw meat on the bone is her idea of a filet mignon, and she looks like an overgrown puppy, peacefully gnawing away on the bone held tightly between her two immense front paws.

### Dr. Miller to Alabama

Dr. John M. Miller, III, has been named director of rehabilitation programs for the University of Alabama in Birmingham. He was formerly Assistant Attending Rehabilitation Physician, PH, and Assistant Professor of Rehabilitation Medicine, P&S.

### Dr. Cramer Will Give Elsborg Address

Dr. Fritz J. Cramer will deliver the "Elsberg Anniversary" address to the New York Society of Neurosurgery, New York Academy of Medicine, May 18. Dr. Cramer, now advisor and consultant on medical affairs, H.E.W., Washington, D. C., was formerly Clinical Professor, P&S.

### Magazines, Please

The Pediatric Clinic is seeking contributions of magazines to be used by patients and their parents. Magazines may be left in Dr. Asnes' office in the rear of the Pediatric Clinic, VC 4-450.

### NATIONAL HOSPITAL WEEK, MAY 9-15.

"Your Hospital Cares."

## N. Y. STATE PSYCHIATRIC INSTITUTE WILL OBSERVE 75TH ANNIVERSARY

The 75th Anniversary of The New York State Psychiatric Institute, one of the Nation's leading centers for psychiatric education and research, and also one of the oldest, will be observed in November of this year.

Because the Anniversary Program will hold world-wide interest, advance publicity is now being circulated. The three-day Symposium is scheduled for Sunday evening, November 21, through Tuesday afternoon, November 23.

Founded in 1895 as a central pathology laboratory to service the state hospital system, it had as its chief goal, to quote Adolf Meyer (Director of the Institute from 1901 to 1909), "The raising of the standard of the medical work in state institutions." Meyer initiated a program for post-graduate education that, greatly expanded, continues to this day.

Under his successor, Dr. August Hoch, the Institute became one of the first facilities in this country to introduce psychoanalytic theories into its teaching and clinical program. It was later to number, among other prominent contributors to psychiatry, such men as Drs. Franz Kallman, Sander Rado, and Abram Kardiner.

Since December of 1928, the Institute has been closely associated with, and located in,

the Columbia - Presbyterian Medical Center, from which it directs a comprehensive program that embodies research, education, and clinical services.

Director of the Psychiatric Institute is Dr. Lawrence C. Kolb; Deputy Director is Dr. Shervert H. Frazier.

Further information on the 75th Anniversary Program will be printed in coming issues of *The Stethoscope*. For brochures, write Dr. James H. Ryan, Director, Post Graduate Education, New York State Psychiatric Institute, who is in charge of publicity. Address, 722 West 168th Street, New York 10032.

## THESE MEDICAL STUDENTS ARE WINNERS OF 6 PRIZES

Five of the six Urology residents who won prizes are seen in this photo. Front row, left to right: James K. Mooney, Robert L. Pickens and Fabian Sy. Back row, left to right: Anthony Horan and Arthur M. Smith. Missing from the photo is Joseph B. Priestley, currently at Harlem Hospital.

Six residents from the Squier Urological Clinic took four first prizes and two other prizes in the annual Research Essay Contest sponsored by the New York Section of the American Urological Association, held at the New York Academy of Medicine in March.

Dr. Arthur M. Smith, senior resident, won first prize (clinical investigation category) with a paper on *An Historical Perspective on the Surgical Approaches to Recto-Urethral Communication and the Occurrence of Recto-Urethral Fistula in 160 Radical Retropubic Prostatectomies*.

Dr. Robert L. Pickens, senior resident, won first prize (miscellaneous category) for his paper on *Disseminated Intravascular Coagulation: Diagnosis and Treatment of a Hemorrhagic Diathesis after Prostatectomy*.

Dr. Joseph B. Priestley, Jr., assistant resident, won first prize (laboratory research category) for his paper on *The Laboratory Basis for the Clinical Treatment of Wilms's Tu-*

*mor*. (See article in *The Stethoscope*, March, 1971.)

Dr. Anthony H. Horan, Research Fellow, won first prize (fellowship category) for his paper on *The Development of Fertilizing Ability of Hamster Spermatozoa as They Progress Along the Epididymis*.

Dr. James K. Mooney, Jr., resident, won second prize (clinical investigation category) for his paper on *Motility of Spermatozoa in the Human Epididymis*.

Dr. Fabian Sy, of the Babies Hospital Urology Service and Francis Delafield Hospital, won third prize (miscellaneous category) for his paper on *The Value of Bone Marrow Acid Phosphatase Determination in Early Detection of Bone Metastasis from Prostatic Carcinoma*.

The Department of Urology is deservedly proud of this significant achievement by its residents, for more than 80 papers were presented in the essay contest by residents from major hospitals and medical schools in the greater New York, Long Island and New Jersey areas.

## United Fund Keynote: "We hope to do much better"

*It's just around the corner—the fund drive at Presbyterian for the United Fund of Greater New York. The city's campaign kicks off on May 4. Our Hospital drive will start off with a rally of the captains on Monday, May 10, in cooperation with Mr. G. R. Masten, Assistant Vice President, PH, who is the 1971 Chairman.*

*This annual city-wide appeal, functioning through 425 agencies, is the only fund drive to which Presbyterian's employees are asked*

Marjorie A. Purinton

*to contribute. This year's city-wide goal: \$102 million. One of our many captains, a veteran of past campaigns, is Marjorie A. Purinton, in charge of the registry for private duty nurses. When approached for a comment on the forthcoming drive, she responded with words which might well serve as the theme for this year's campaign:*

*"We did pretty well last year. This year we hope to do a lot better."*

*Last year Presbyterian ranked 11th among the 63 participating hospitals. How will we rank this year?*

## In Memoriam

Mary Chamberlin

Mary C. Chamberlin

Mary C. Chamberlin, secretary for 25 years in the administrative offices of the Presbyterian Hospital, died on March 24, following a brief illness.

Miss Chamberlin, a New Yorker by birth, received her education in this city and began work early in life with the Catholic Charities. She was employed as secretary for the Archdiocese of New York in July, 1927, a position she held for 19 years. Many lifelong friendships were formed during this period of service, and it was the friendship with the late Mr. John S. Parke, former Executive Vice President of the Hospital, which was to lead to her association with the Hospital.

She was a very active member of the Seraphic Secretaries of America, an organization composed of secretaries from many fields. At the time of her death, she was the immediate past president of this organization.

One of her principal joys was travel. She knew many parts of Europe, the Caribbean and other parts of the world, and was planning a second trip to Hawaii. Her many co-workers and friends will long miss her warmth, thoughtfulness and generosity to others.

Surviving Miss Chamberlin are a sister and brother-in-law, Mr. and Mrs. Frank Gordon, a brother, David Chamberlin, three nieces, a nephew, two grandnieces and a grandnephew. Mass of the Resurrection was held at Our Lady Queen of Martyrs Church, Forest Hills, N. Y., on March 27, and interment was at Calvary Cemetery.

### Dr. Isadore Margaretten

Dr. Isadore Margaretten, former Professor of Neurology at Columbia-Presbyterian Medical Center, died of a heart attack on April 21. He was 80 years of age and lived at 235 East 22nd Street.

A graduate of the N.Y.U. Medical School, Dr. Margaretten was on the staff of Gouverneur Hospital, as well as

Neurological Institute and following his retirement he served as a psychiatrist for Family Court in New York City.

He is survived by his widow, Dora; two daughters, Mrs. Blossom Press and Mrs. Ruth Mendel; four sisters, five brothers and four grandchildren.

### Peter R. Bozzo

Friends and colleagues of Peter R. Bozzo, Director of Purchasing at The Presbyterian Hospital, were shocked and deeply grieved to learn of his death, suddenly, in Fort Lauderdale, Florida, on March 29.

A man of great warmth, charm and ability, Peter Bozzo was universally admired and liked by all who had occasion to know and work with him.

Peter R. Bozzo

He had planned an early retirement in Florida, and had gone to Fort Lauderdale on Monday, March 29, to supervise the furnishing of a new apartment he had purchased there. When he did not appear for an appointment it was found he had died in his sleep.

Pete Bozzo was born on January 31, 1910; he grew up in the Bronx and spent his entire life as a New York resident.

He was employed in the Hospital's storeroom on July 8, 1931. In January, 1933, he became assistant storekeeper, and in 1946 he was promoted to assistant purchasing agent. In May, 1949, he became purchasing agent, a position he held until his death.

Peter is survived by his wife, Frances; a son, Lt. Commander Peter, Jr., who is a graduate of the U. S. Naval Academy; a daughter, Mary Allen, who is a graduate of The Presbyterian Hospital's School of Nursing; by three brothers, Albert, August and Carl; and one grandchild, Peter.

### Dr. Rollo J. Masselink

Dr. Rollo J. Masselink, former Attending Neurologist at the Presbyterian Hospital and former Professor of Clinical Neurology at Columbia University's College of Physicians and Surgeons, died at his home in Bronxville, New York, on April 12. He was 66 years old and lived at 150 Midland Avenue.

Dr. Masselink's chief interest was the clinical care of patients and the teaching of students and the resident staff of the Neurological Institute.

He was born in East Lansing, Michigan, on May 4, 1904, and received his D.D.S. and M.D. degrees from the University of Michigan in 1924 and 1931, respectively.

He served his residency at the Neurological Institute from 1933 to 1935 and became Assistant Professor of Clinical Neurology at Columbia University in 1954.

At the same time he was Attending Neurologist at Presbyterian and served on many important committees. He also was Assistant Attending Neurologist at the Lawrence Hospital, Bronxville, from 1956 through 1959.

He was a lieutenant colonel in the Army during World War II, serving from February, 1942, to March, 1946, as chief neuropsychiatrist of the Second General Hospital, the Columbia-Presbyterian unit. He had three years of service overseas.

He was a member of many professional societies, including the New York Clinical Society, the American Medical Association, the Medical Society of the County of New York, the Society of United States Medical Consultants of World War II, the New York Neurological Society and the Association for Research in Nervous and Mental Diseases. He was also a Fellow of the New York Academy of Medicine.

He served as secretary of the New York Neurological Society for 30 years and was

## Announcement of Computer Courses

Two short computer courses will once again be offered to all Columbia-Presbyterian Medical Center personnel.

"Introduction to Medical Computing" will be given on May 21, May 25, and May 26 from 3:00 to 4:00 p.m. Classes will be held in the Armory, 168th Street entrance, Room 5. No previous knowledge of computing is necessary. Students and members of the CPMC staff must have the permission of their supervisors or department chairmen.

"Introduction to Programming" will be given on June 1, June 3, June 7, June 8, and June 10, from 3:00 to 4:00 p.m. These classes will also be held in the Armory, Room 5.

"Introduction to Programming" is offered to the Columbia-Presbyterian personnel who have either completed the "Introduction to Medical Computing" course or its equivalent. This course provides a basic understanding of how a computer is made to do work. It is a prerequisite for subsequent computer language courses.

Homework will be assigned to achieve sufficient ability to run one simple program.

Registration cards can be obtained at Room 4-33, PH, and should be returned by May

17. For further information, call the office of Dr. William A. Bauman, Director, Medical Data Processing, 579-2077.

## George Sarno Selected As Community Leader

Some good news came to Mr. George Sarno recently. He learned that he has been selected to appear in the 1970-71 edition of "Community Leaders in America."

Mr. Sarno, who is Ward Manager of the 10th and 11th Floors, Presbyterian Hospital, is a registered roentgenologist and technologist.

The publication is published annually to recognize outstanding leaders. George was among 4,000 citizens selected. He has earned this honor through his professional and civic activities.

A resident of East Paterson, New Jersey, Mr. Sarno is a member of the Jaycees, the American Management Association, the American Society of Radiologic Technologists, the New York and New Jersey State Societies of Radiologic Technologists, and Delta Mu Delta. He has served in the U.S. Army at Walter Reed Hospital in Washington, D. C.

Personalities are selected from nominations received from colleges and universities, businesses, civic clubs, national, state and regional associations and individuals.

Dr. Rollo J. Masselink

its president in 1966-67. He was secretary of the Associa-

tion for Research in Nervous and Mental Diseases from 1954 until his death. Last year he was awarded a medal and certificate for distinguished service to the association.

He leaves his wife, the former Louise Jay Byrd of Rock Hill, South Carolina; a daughter, Mrs. Mary B. Kucharik of Gary, Indiana; a sister, Mrs. Lillian Wright of Big Rapids, Michigan; and a brother, Laurence Masselink of Northville, Michigan.

Funeral services were private. A memorial service will be held at the Columbia-Presbyterian Medical Center on May 3 in the Pauline A. Hartford Memorial Chapel.

## DOINGS OF DOCTORS

Continued from page eight

DR. JOHN P. GRANT, JR., Assistant Urologist, PH and Instructor in Urology, P&S and Institute of Cancer Research, was recently elected to the Board of Directors of the Museum of Black History and Culture.

DR. DANIEL C. BAKER, JR., Professor and Chairman, Department of Otolaryngology, delivered the Chevalier Jackson Lecture at the Philadelphia Laryngological Society in April. The title of his presentation was *Non-Allergic Causes of Wheezing*.

Also in April, at the Sullivan County Medical Society meeting, Dr. Baker spoke on *Common ENT Diseases seen in General Practice*, and at the Symposium on Otolaryngology at

Jefferson Medical College in Philadelphia he lectured on *Diseases of the Salivary Gland* and participated in a panel discussion on *Cancer of the Pharynx and Larynx*.

DR. RALPH J. VEENEMA, Professor of Clinical Urology, P&S, Attending Urologist, PH and Chief of Urology at Delafield Hospital, attended a meeting of the Southeastern Section of the American Urological Association in Miami in April where he presented two papers: *Etiological Factors in Bladder Cancer* and *Chemotherapy in Bladder Neoplasms*. At the same meeting, Dr. Veenema also participated in a panel discussion on *Management of Bladder Carcinoma*.

# NEWS OF NURSING

Patricia Hoban was honored by the staff of the Neurological Institute at a farewell party in Harkness Hall, March 23.

After 18 years on the staff, 11 of which she served as night supervisor, Miss Hoban is returning to her family home in County Mayo, Ireland.

Sue Wehrmaker, staff nurse, Neurological Institute, has been selected for the Dean's List at Columbia University's School of General Studies.

Martini Rossier and Chang Ming Lee, exchange visitor nurses, and Muriel Hill and Eugenia Goshen, Sloane Hospital, attended a conference on *Problems Associated with Gynecological Cancer* at Memorial Hospital, New York City, February 23.

A conference on the Spiritual Dimension of Patient Care, having as its theme *Reaching Through Loneliness*, was presented by the Nurses' Christian Fellowship Association on April 24, at Maxwell Hall, from 9:30 a.m. to 3:30 p.m.

Highlights of the conference were a talk by Dean Richard Camp, Gordon Theological Seminary, who discussed man

as a spiritual being with spiritual needs; a team conference presenting an actual patient situation, identifying the spiritual needs and developing guidelines for staff response; and a small group discussion giving conference members an opportunity to reflect and share their ideas with others.

Marion Thompson, Central Nursing Office, attended a conference on *Improving Hospital Transportation Systems*, sponsored by the American Institute of Industrial Engineers at the Nassau County Medical Center, East Meadow, New York, March 11.

A conference on *Medical, Legal and Moral Aspects of Cerebral Death* was held at Bellevue Hospital in March. In attendance were Elizabeth Kittle, N.I.; Mary O'Connell and Ann Ford, Medicine, and Barbara Skydell, Staff Development.

Fern Kumler conducted a seminar on *Dream Theory* at the Hackensack Y.M.H.A. on March 29. She met with Dr. Callahan, Bureau Chief, Community Mental Health Serv-

## FROM THE MAILBAG

Dear Friends at Presbyterian:

This is the only way I can thank you for having such a wonderful team of nurses and aides. You really have the "cream of the crop," on all three shifts. One is nicer than the other in being helpful and considering the patient above their line of duty as I have seen many times.

I probably hold the world's record for being on the surgical floor the longest, and I know I couldn't have stood the longest 6 months of my life if

I didn't have the help and patience of your sweet girls. It hardly seems possible to have so many girls to be so competent and helpful as you have on all three shifts.

Please thank each and every one of them for me. In the future, I hope I'm not ill, but if I have to be, I only hope I'll be on PH 12 East.

Thanking you again, I remain,

Sincerely,  
Eleanor  
(A recent patient).

ices, Bureau of Institutions and Agencies, Trenton, N. J., to discuss ways and means of increasing the number and variety of clinical nursing specialists in New Jersey.

Miss Kumler also attended the Chicago meeting of the American College of Midwives on April 29 where she presented a paper entitled *Psychological Stresses in Pregnancy*.

Renphenia James, Surgery, and Carol Cooper, Vanderbilt

Clinic, attended a *Para-Urological Seminar*, sponsored by the Urological Nurses Association, at the Roosevelt Hotel, New York City, March 12.

Mrs. Keville Frederickson

A conference on *Let the Elderly Die Living*, sponsored by and held at Montefiore Hospital, New York City, March 4, was attended by Keville Frederickson and Dorothy Delameter, Eye Institute; Dorothy Freund, Surgery; Cecilia Meshelany, Medicine; and Sue Kircher, Staff Development.

## Joint Symposium on Sensory Deprivation

Mrs. Beverly A. Jones, Supervisor, Staff Development, Neurological Institute, and Mrs. Keville Frederickson, Instructor, Staff Development, Eye Institute, have announced that the nursing departments of the Eye Institute and Neurological Institute will sponsor a joint symposium on *Sensory Deprivation*, May 24, in the P&S Alumni Auditorium, from 9:00 a.m. to 3:30 p.m.

Three major areas of deprivation will be discussed: visual, auditory and tactile.

Speakers will include Dr. Graham Clark, Eye Institute; Mrs. R. Gordon, Lighthouse for the Blind; Sylvia Morgan, audiologist, Vanderbilt Clinic; Dr. Edward Shelley, Psychiatric Institute, and Mrs. Elizabeth Jordan, Bronx Veterans' Administration.

All Medical Center employees are invited to attend. There will be no registration fee if Hospital identification cards are shown.

## Alumnae in Dallas

An Alumnae Luncheon for the Department of Nursing of Columbia University will be held during the annual N.L.N. Convention at the Adolphus Hotel, Dallas, Texas, May 10.

Representatives from the Department of Nursing who will attend are Dr. Mary I. Crawford, Associate Dean; Mrs. Andrea Fisher, Director of Recruitment; Gloria Gilbert, Associate; Nancy Huber, President of the Student Association; Ann Meehan, Secretary of the Student Association; and Elsa Poslusny, Associate Professor.

## NURSING ALUMNAE REUNION MAY 14

May 14 is Nursing Alumnae Day. Reservations should be made by May 5. For further information, call the Alumnae Association Office, 579-3193.

## THESE PEOPLE ARE RETIRING

### Mrs. Lois Townsend

Mrs. Lois Townsend, receptionist, Group Clinic, V.C., retired in March, completing 15 years of employment at Presbyterian Hospital.

Her job brought her into

Lois Townsend

contact with 4th year P&S medical students, working on their clinical clerk assignments in the Group Clinic. Mrs. Townsend's job was to assign patients to them for workup, and to see to it that the appropriate attending physician was assigned to each patient and student. She derived much pleasure from watching these young people advance to staff appointments through the years.

Mrs. Townsend's retirement plans include moving to Princeton, New Jersey, so that she may be near her married twin sons and her six grandchildren. "I intend to live the good life in the suburbs, enjoying my family, away from the hustle and bustle of the city," she commented.

A trip to Europe and the Orient is also on her agenda of future plans.

A retirement tea honoring Mrs. Townsend was held on March 3.

### Mrs. Helen Foster

Mrs. Helen Foster, Data Processing, Accounting Department, retired in March, completing 11 years of employment at Presbyterian. "We are a great bunch, and I have mixed emotions about leaving," said Mrs. Foster.

She does not visualize many periods of inactivity in the future, as she has two children

Helen Foster

and six grandchildren to live up the family reunions. After taking it easy for a while, Mrs. Foster plans to do some travelling.

She also enjoys crocheting and said, "Now I will finally have the time to crochet an afghan for my daughter, a project I never seemed to find the time for while I was working."

A farewell tea to honor Mrs. Foster was held in PH 1-50 on March 31.

### Mrs. Delia Stack

Mrs. Delia Stack, laundry worker, Laundry Department, retired in March, completing 24 years at Presbyterian Hospital.

A sprightly lady with a soft Irish brogue, Mrs. Stack was born in County Clare, Ireland, and came to the United States in 1930.

She lives in Manhattan with her husband and has two children and two grandchildren.

She chose early retirement so that she could spend more time with her husband, who is also retired, and to fulfill a desire to travel. Scheduled are a trip to California to visit her son and his family, then perhaps a trip to Florida. Her family will be coming from Ireland to visit her.

Eventually she will work as a volunteer, either here at the Hospital, or at her neighborhood church.

Delia Stack

### Mrs. Mary Luciano, Retiring

Mrs. Mary Luciano, press work operator, Laundry Department, retired in March. She has been employed at the Hospital for 23 years and truly enjoyed every minute of it.

On March 31 her fellow workers gave her a farewell party and she is shown, surrounded by her family, preparing to cut her farewell cake.

Mary plans to visit relatives in Puerto Rico and in Spain before she really settles down to retirement.

This book is due on the date indicated  
expiration of a definite period after the  
as provided by the library rules or by  
charge.

# Stethoscopia

## • ENGAGEMENTS

*Gail Fleming*, Cardiac Intensive Care Unit, PH 9, is engaged to Dr. Charles Leroy, of Englewood Hospital. A May wedding is planned.

*Joyce Vitek*, Cardiac Intensive Care Unit, PH 9, is engaged to Mr. William C. Beisswanger of Tenafly. Mr. Beisswanger is with Arthur Young, an accounting firm.

*Ester C. Flores*, staff dietitian, N.I., is engaged to Dr. Edgardo S. Alday, a surgeon at Jefferson Medical Hospital in Philadelphia. Miss Flores and her fiancé are from the Philippines. The wedding is set for May 15.

## • MARRIAGES

*Tatia Ann McNair* was married to *Ian Archer Harding* in the Pauline A. Hartford Memorial Chapel on April 24. The ceremony was performed by Chaplain David B. Maxwell.

Mr. Harding and his bride are both technicians in Medical Bacteriology, P&S.

## • NEW ARRIVALS

Dr. and Mrs. Michael Blackburn of Guilford, Connecticut, welcomed their third child, a son, Edward Robert, at Yale-New Haven Hospital, March 16. Proud grandparents are Mrs. Catherine Heckman of Personnel and Robert Heckman of Protective.

*Raymond D. Scott* of Maintenance and Construction, and Mrs. Scott, welcomed their second son, Raymond Dean, Jr., born in Sloane Hospital, March 21.

Mr. & Mrs. Danny Cruz welcomed a daughter, Margaretha, on March 28. Mrs. Cruz is staff dietitian at Babies Hospital.

*Luis A. Figueroa* of Maintenance and Construction, and his wife, welcomed a son, Luis A., Jr., born in Santo Domingo, April 15.

## • FAREWELL TO:

*Adelo Murphy*, medical technologist, who is leaving Presbyterian Hospital after seven years of service at the Blood Bank.

Now an ordained minister, Rev. Murphy, who began his theological studies at the Spanish American Bible Institute of New York City in 1959, will begin his ministry this month at the Spanish Evangelical Pentecostal Church in Passaic, New Jersey. The Blood Bank staff wishes him a lot of luck.

Gail Fleming (left) and Joyce Vitek

Rev. Adelo Murphy

## • CONGRATULATIONS TO:

*Laurie Pollock*, who has been promoted to Head Nurse, N.I. 4. Mrs. *Kathy Rieper*, who has been promoted to Assistant Head Nurse, N.I. 4.

Mrs. *Bonita Emirgil*, who has been promoted to Night Supervisor, Neurological Institute.

## • CONDOLENCES TO:

The family of Mrs. *Elizabeth Ryan*, supervisor, Cardiology Department, who died April 3. Mrs. Ryan had been employed at Presbyterian since 1951. She is survived by her husband, Thomas, and two sisters. Following a Mass of the Resurrection, interment was at St. Raymond's Cemetery in the Bronx.

## • NOTES OF INTEREST

Several Presbyterian Hospital persons had important roles in Theater IX's presentation of Frank Loesser's "Guys and Dolls," at St. Gabriel's church, Riverdale, New York, late April and early May.

Dr. *Thomas Murray*, chief resident, Obstetrics & Gynecology, portrayed Sky Masterson, the romantic lead. Dr. *Irving Abrahams*, Assistant Attending Dermatologist, PH, took the role of Society Max and sang and danced in most of the scenes. Dr. Abrahams' wife, Carolyn, played one of the "Hot Box Girls" doing "Take Back Your Mink" and "I Love You a Bushel and a Peck."

# DOINGS OF DOCTORS

DR. HERBERT RACKOW, Associate Attending Anesthesiologist, PH, participated in the 9th Clinical Conference in Pediatric Anesthesiology, held in the Lecture Hall, Children's Hospital of Los Angeles, January 29-31. The Conference was designed to present practical problems in anesthesiology as related to infants and children.

DR. BARRY WOOD, Assistant in Medicine, P&S, was ordained a priest at St. Clement's Episcopal Church, Hawthorne, New York, January 9. Dr. Wood had been serving as an assistant at St. Clement's.

DR. FRANK E. GUMP, Associate Attending Surgeon, PH and Associate Professor of Surgery, P&S, and DR. GERARD A. KAISER, Associate Attending Surgeon, PH and Associate Professor of Surgery, P&S, were elected to membership in the Society of University Surgeons at the Society's meeting in New Haven, Connecticut, on February 12. Dr. Kaiser was also recently elected to the Society of Thoracic Surgeons.

DR. SIDNEY MALITZ, Associate Attending Psychiatrist, PH and Professor of Clinical Psychiatry, P&S, attended the annual council meeting of the National Society for Medical Research in Chicago, on February 13 as the official representative of the American Psychiatric Association.

While on a lecture tour of the Venezuelan cities of Caracas, Macuto, San Cristobal and Marida in March, DR. DAVID H. BAKER, Director of Radiology in Babies Hospital, presented all cases of diseases and injuries in infants and children, their radiographic diagnosis and special procedures.

Dr. Baker also attended the annual meeting of the Pediatric Hospitals Alumni, held in Montreal the same month.

DR. ARTHUR GERARD DE VOE, Edward S. Harkness Professor and Chairman of Ophthalmology, attended a symposium on *Cataract Surgery* at the Louisiana State University in New Orleans, April 2-3.

Dr. DeVoe also presented six lectures to the Basic Science Group at the University of Puerto Rico in March.

DR. JOHN K. LATTIMER, Director, Squier Urological Clinic and Professor & Chairman, Department of Urology, was recently a guest speaker at the Cleveland Urological Association where he presented *The Indication for Viral Factors in Cancer of the Prostate Gland*.

Dr. Lattimer also attended the annual meeting of the Clinical Society of G.U. Surgeons, along with Dr. George W. Fish, at the University of California at the San Francisco Medical Center. He spoke as Chairman of the National Coordinating Council for Urology of the American Urological Association.

At the Lincoln Museum and at the Civil War Round Table at Fort Wayne, Indiana, Dr. Lattimer spoke on the *Medical Aspects of the Lincoln and Kennedy Assassinations*.

DR. GEORGE K. SMELSER, Aldrich Professor of Ophthalmology (from Anatomy), P&S, and director of eye research, was among a group of international scientists invited to participate in the 1971 Glaucoma Research Conference, held in San Juan, Puerto Rico, March 31-April 3.

Dr. Smelser's subject was *Intraocular Pressure and the Optic Nerve*.

DR. CHARLES E. HUCKABA and DR. JOHN A. DOWNEY, Professors of Rehabilitation Medicine, P&S, were featured on the cover of the January issue of the *Chemical Engineering* magazine in connection with an article—*Careers in Biomedical Engineering*.

They also served as co-chairmen of a symposium on physiological control systems held in December at the annual meeting of the American Institute of Chemical Engineers in Chicago.

Dr. Huckaba, a chemical engineer by background, joined the faculty of Rehabilitation Medicine in 1969.

*Placental Transfer of Anesthetic Agents and their Uptake by Fetal Tissues* was the title of a paper given by DR. MIECZYSLAW FINSTER, Associate Professor of Anesthesiology, P&S, and Associate Attending Anesthesiologist, PH, at the 1971 Congress of the Association of Anesthetists of the Province of Quebec, held in Montreal, Canada, last February.

At the same meeting, Dr. Finster was a member of a panel discussing problems of regional anesthesia in obstetrics. Then, in Washington, D. C., Dr. Finster participated in the *Workshop on Toxicology: Implications to Teratology*, sponsored by the National Institutes of Health, in Washington, D. C., March 15-17.

Dr. Finster

Dr. Berdon

DR. WALTER E. BERDON, Attending Radiologist, BH and Associate Professor of Radiology, P&S, was guest speaker at the Intermountain Pediatric Society meeting in Las Vegas in April.

He presented three papers: *The Radiologic Study of Medical Causes of Respiratory Distress in Newborns*, *Abdominal Distension in the Newborn: G.U. and G.I. Causes and Adrenal Disease in the Newborn*.

DR. WILLIAM A. BLANC, Professor of Pathology, P&S, and Attending Pathologist, PH; DR. PREM CHAUHAN, visiting Fellow in Pathology, P&S and DR. CARLOS NAVARRO, resident in Pathology, attended the meetings of the Pediatric Pathology Club, American Association of Pathologists and Bacteriologists and the International Academy of Pathology, held at the Queen Elizabeth Hotel, Montreal, Canada, March 6-13. All are members of the Division of Developmental Pathology.

Dr. Blanc gave a course on *Placental Pathology*. Dr. Navarro participated in a panel discussion on *Problems in Pediatric Pathology* and Dr. Chauhan read a paper, authored by DR. CHRISTINE HOMBERGER (formerly an intern in Pathology and now in Zurich, Switzerland), Chauhan and Blanc, entitled *Lymphoplasmocytic Placentitis, Fetal Infection and Placental Immunoglobulin Synthesis*.

### 18 Practical Nurses Graduated; Many Accept PH Staff Positions

Flanked by Edith Ankers, Director of Columbia-Presbyterian School of Practical Nursing (left), and by Mrs. Nuha Hababo, Instructor, graduate Lucille Petracca is pinned by Kay Stewart, Instructor. Seated on the right are Chaplain Reeves and Dr. Robert H. E. Elliott, Jr., the "guardian angel" of the School.

Wearing crisp, full-dress "whites" and blue-banded orderly caps for the first time, the 18 members of the fourth class of the Columbia-Presbyterian School of Practical Nursing were graduated in the Pauline A. Hartford Memorial Chapel on May 7.

Chaplain Robert B. Reeves, Jr., gave the invocation, choosing the prayer of St. Francis of Assisi as the theme. Its words seemed particularly appropriate to the occasion, for they seemed to apply to the humanitarian ministrations of a nurse.

"... Lord, make me an instrument of your peace . . . Where there is darkness, let me sow light; where there is sadness, joy; where there is doubt, faith; where there is

despair, hope . . . for it is in giving that we receive . . ."

After the commencement address by Mary Windrow, Director of Nursing Service, PH, diplomas and pins were awarded by Edith J. Ankers, Director, Columbia-Presbyterian School of Practical Nursing, aided by Mrs. Nuha Hababo and Kay Stewart, Instructors in Practical Nursing.

Christine Carden, President, Class of 1971, addressed the audience briefly.

A brief congratulatory address by Dr. Robert H. E. Elliott, Jr., Assistant Vice President, Special Projects (Nursing), benediction and the recessional brought the ceremony to a close.

The graduates were honored

## News of Medical Discovery Highlights P&S Alumni Day

A relevant scientific program, an address by the president of Columbia University, and the presentation of the Alumni Association awards were the main features of an eventful P&S Alumni Day on May 1.

A highlight of the scientific session, which began at 10 a.m. following coffee, was the disclosure by Dr. Louis Sherwood ('61) that he and his

associates at Beth Israel Hospital in Boston had recently determined that placental lactogen (HPL) and the human pituitary growth hormone are very closely related chemically. This discovery, announced for the first time at the scientific session in the Alumni Auditorium, could speed the synthesis of that part of the placental lactogen that has growth

## CPMC Silver Anniversary Club Marks Anniversary at Annual Dinner

The Columbia-Presbyterian Medical Center's 25-Year Club added a dash of nostalgia to its 25th anniversary dinner on April 29.

Even as more than 300 Club members crowded into the Bard Hall lounge for the annual event, wisps of their conversation, overheard by a casual listener, spoke of the tennis courts on 165th Street, the old powerhouse on South Property, and "the good old 1960's."

The 25-Year Club is open to all personnel, staff, and trustees associated with the institutions that form the Columbia-Presbyterian Medical Center. The only qualification for becoming a member is 25 years of continuous service.

After the traditional dinner in the Bard Hall dining room, the official part of the program began with selections of classical music, played by Eve Slater, flutist, with accompaniment by Dr. Marshall Primack on the piano. Miss Slater is a senior medical student at the College of Physicians and Surgeons, and Dr. Primack is a Visiting Fellow in Medicine.

Dr. John M. Baldwin, President of the 25-Year Club and toastmaster for the occasion, then welcomed the guests of honor, including Dr. Paul A. Marks, Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs at Columbia University, on this, "the silver anni-

versary of the silver anniversary club."

Two and a half decades ago, Dr. Baldwin recalled, the Club's first annual dinner drew 37 charter members—"of these, 12 are still active members, and of this group four are with us tonight." The foursome—Anna Grosso, Mrs. Dorothy F. Barry, Pauline Hennessy, and Joseph Wyszynski—were introduced to the audience.

Chosen to bring greetings to the 76 new members, Miss Grosso spoke of the good old days when the Club began. For her, "25 years went by so fast, you just don't realize it." In

Anna Grosso welcomes the new members of the 25-Year Club.

## PH Volunteers Receive Tribute At Awards Tea In Maxwell Hall

In the gracious setting of Maxwell Hall, the Annual Awards Tea for Volunteers, sponsored jointly by the Board of Trustees and the Women's Auxiliaries of Presbyterian Hospital, was held on April 29.

Mrs. Henry Clay Frick, II, Chairman, Volunteer Committee, Women's Auxiliary of Presbyterian Hospital, presided.

The Hospital paid tribute to 390 volunteers, including the six honor volunteers who gave over 1,000 hours in 1970: Mrs. Margaret Jacobius, 1,325 hours; Mrs. Ida Rosch, 1,241 hours; Mrs. Helen Harris, 1,207 hours; Mrs. Carmen

Temmer, 1,086 hours; Mrs. Georgia Pappas, 1,060 hours; and Margaret McKenna, 1,000 hours.

United Hospital Fund honor awardees, who have served more than a total of 10,000 hours, are: Mrs. Stella Brown, 12,843 hours; Mrs. Royall G. Cannaday, 11,299 hours; Mrs. Helen Harris, 13,646 hours; Mrs. Katalin Kallay, 15,292 hours; Mrs. Anne Kingsford, 12,151 hours; Mrs. Ida Rosch, 21,668 hours; and Mrs. Charles Stroud, 11,218 hours.

The event opened with a festive, informal one-hour tea and greetings by Dr. C. R. Wise,

# Silver Anniversary of the CPMC 25-Year Club

## Some Scenes From The Silver Anniversary Dinner

The Club members meet in the Bard Hall lounge for some pre-dinner socializing.

Eve Slater, flutist, and Dr. Marshall Primack, pianist, entertain the audience.

... Been a long time ... Club members seem to be saying as they greet each other with affectionate hand clasps.

C. Douglas Auty, Assistant Vice President for Personnel, receives his membership certificate from Mrs. Virginia Smith, Assistant Secretary of the Club.

Continued from page one  
wishing the new members "fond memories of unforgettable evenings of good fellowship," Miss Grosso spoke with feeling of the spirit of the Medical Center that makes these memories possible: "Amidst all these bricks and mortar, I am sure that there is a heart someplace, buried, that beats and cares for us."

Miss Grosso's remarks were followed by the presentation of membership certificates to the new members, who included C. Douglas Auty, Assistant Vice President for Personnel, PH; Dr. Arthur G. DeVoe, Chairman of the Ophthalmology Department, P&S; William E. S. Griswold, Jr., PH Trustee; Dr. Carl T. Nelson, Chairman of Dermatology Department, P&S; Dr. Howard C. Taylor, Jr., Professor Emeritus of Obstetrics and Gynecology; and Gerard J. Walker of Purchasing Department, PH.

Because he had addressed the first 25-Year Club dinner in the doctors' dining room on February 14, 1947—"St. Valentine's Day"—Mr. Griswold was asked to speak for the newly inducted members.

"This is a nostalgic moment for me," Mr. Griswold said, pointing out that when he "went to school in knee pants," he lived "right around the corner from Presbyterian Hospital when it was on Madison Avenue and 70th Street."

Mr. Griswold recalled that in 1947 "tremendous advances had been made in the field of medicine during the war." He praised institutions like Columbia-Presbyterian Medical

W. E. S. Griswold, Jr., PH Trustee, recalls research advances during 25-year existence of the club in the "new member's address."

Center for launching research programs to continue these advances, programs that also "began to introduce an entirely new field of medicine." As a result, medicine's sense of responsibility to the community—not only domestically but also internationally—began to advance, so that "in 1971 we can take a great deal of satisfaction that we have moved ahead that strongly, despite the political and military travail."

In summing up the progress made at Columbia-Presbyterian, Mr. Griswold praised the assemblage "and those that you represent" as "the real core and the strength of any institution—you are the people who have carried the Medical Center to where it is and will continue to carry it by your own efforts, your example, your leadership, and your inspiration to younger people."

The proceedings concluded with a report of the Chairman of the Nominating Committee, Dr. Edward B. Self, on behalf of the other committee

Dr. John M. Hanford, "89 years young," has 61 years of service.

members, Clara Barry, Mary Windrow, and Mr. Auty.

Accepting the committee recommendations, the Club members elected the following slate of officers for next year: Dr. Lester A. Mount, President; Mrs. Minnie F. LoRusso and Mr. John J. Nelan, vice presidents; Arthur Washell, treasurer; Helena F. White, secretary; and Agnes Kovarik, assistant secretary.

## DR. LEVINE IN NEW POST

Dr. O. Robert Levine has been appointed director of the Division of Pediatric Education, P&S, effective July 1, it was announced by Dr. Paul A. Marks, Dean.

Dr. Levine is actively involved in the education program for medical students and house staff in pediatrics at Babies Hospital, and in post-graduate training in cardiology.

His appointment grew out of the need to coordinate these programs between affiliating Roosevelt, St. Luke's and Harlem Hospitals, and Babies Hospital at Columbia-Presbyterian. The affiliations also made apparent the need for innovative educational programs to train primary physicians in the care of pediatric patients.

Dr. Levine has been associated with Columbia-Presbyterian since 1959, when he joined the Department of Pediatrics as a trainee in Pediatric Cardiology.

Dr. O. Robert Levine

He was appointed Associate Professor of Pediatrics, P&S, Associate Attending Pediatrician, PH and director of Pediatric Cardiology in 1970.

## PH Volunteers Receive Tribute . . .

"But ere the sword the surface dipped, there rose an arm . . ." Edward B. Leahey, Jr., describes the spectacular disappearance of King Arthur's brand Excalibur in his recital of Alfred Lord Tennyson's "Morte D'Arthur" at the Annual Awards Tea for Volunteers.

Continued from page one

Assistant Vice President, Mrs. Edna Husband, Nursing Aide, Maxwell Hall, sang several selections, accompanied at the piano by Mrs. Frieda Dankwerth, volunteer. Mr. Edward B. Leahey, Jr., P&S '73, recited Alfred Lord Tennyson's "Morte D'Arthur."

The proceedings were concluded with a continuation of the tea until 7:00 p.m.

Mrs. Dorothy Diamond, the Director of Volunteers, is well pleased with the loyalty of her many helpers. It has often been observed that their services to this Medical Center are indispensable.

## 18 Nurses Graduated . . .

Continued from page one  
at a reception in PH 1-50 following the exercises.

The 1971 graduates are: Barbara Rowe, Christine Carden, Bonnie Crossley (honor student), Mrs. Ruth Gittens, Arlene Gladu, Joyce Goudy, Marsha Green, Vera Key (honor student), Ella Lucas, Tony Miller, Mary Murphy, Theresa Nolan, Doris Nelson, Lucille Petracca, Mrs. Gwendolyn Ray, Mrs. Patricia Saunders (honor student), Mrs. Leonora Thomas and Mrs. Marina Valderrama.

Of these 18 graduates, nine have accepted positions on the staff at Presbyterian Hospital.

# Help For Four Million Persons To Be Marshaled by United Fund

The kick-off rally to launch the 1971 campaign of the United Fund of Greater New York was held on May 10 in the Babies Hospital amphitheater.

The rally, attended by departmental captains and solicitors, was presided over by Mr. G. R. Masten, Assistant Vice President, PH and Chairman of the 1971 drive, who got things off to a fine start.

He explained that each year four million people are helped by the Fund, an amalgamation of the fund-raising campaigns of the Greater New York Fund and the American Red Cross in Greater New York.

Monies raised by the Fund are used to help support New York's 425 affiliated hospitals, health and social services agencies, and the humanitarian services of the Red Cross.

This appeal, the only fund drive to which Presbyterian's staff and employees are asked to contribute, annually aids the young, the old, the sick, the lonely, the troubled and the handicapped.

The drive is centered on the metropolitan New York area, but persons living outside of

G. R. Masten, Assistant Vice President, Nonprofessional Services, PH, acquaints audience of departmental captains and solicitors (below) with benefits of the United Fund at Fund kick-off rally May 10.

the city frequently receive aid from the Fund. Many physically handicapped adults come from suburban areas. One of every two couples who adopt a child are a commuter family and many underprivileged children from the suburbs are sent to summer camps with an assist from the Fund.

Following Mr. Masten's remarks, a movie entitled "Love," with narration by Raymond Burr, showed a small cross-section of some of the ways in which people benefit from the money raised during this annual campaign.

In 1970, the total amount collected and pledged amounted to \$21,109.89, an increase over 1969 of \$8,009.44. A statistical report issued by the Assistant Treasurer's Office shows the number of Presbyterian employees and staff who contributed, how much they contributed and the increase or decrease over a one-year period. There is also a column headed "Percentage Contributing," listing the percentage by department. In some areas the amount is 100%, in others as low as 26%. This year's city-wide goal for the Fund is \$102 million. Let's make our goal 100% for each depart-

ment under that "Percentage Contributing" heading.

Please contribute your fair share when your departmental captain solicits you for a donation. Your contribution, large or small, will be deeply appreciated—by the Fund, the Hospital, but most of all, by the people who are aided by this organization.

"... and now abideth faith, hope, charity, these three; but the greatest of these is charity..." (I Corinthians 13)

The United Fund is Now.

## Drs. Stein and Fraser Accept Boston Posts

Dr. Bennett M. Stein, Assistant Professor of Clinical Neurological Surgery, P&S, and Assistant Attending Neurosurgeon, PH, and Dr. Richard A. R. Fraser, Instructor in Neurological Surgery, P&S, have resigned to accept new posts at Tufts-New England Medical Center in Boston.

Dr. Stein has been appointed Professor and Chairman, Department of Neurological Surgery, and Dr. Fraser has been appointed Assistant Professor of Neurological Surgery.

Both appointments are effective July 1.

# Highlights Of P&S Alumni Day . . . .

Continued from page one

activity, leading to a means of treatment for the estimated total of 20,000 people in the United States who suffer from dwarfism and other medical problems, such as slow antibody production, wasting muscles, and ineffective sex hormones.

The other papers that the program produced were no less timely or practical. Dr. Lillian Recant ('46), Professor of Medicine at Georgetown University School of Medicine, discoursed on "The Diagnostic Value of Plasma Proinsulin Levels." Dr. Richard J. Cross ('41), who is Professor of Medicine at Rutgers Medical School, delivered a talk on the three P's: "Population, Pollution and Posterity." Suggestions toward the solution of the hard-drug problem were offered by Dr. Charles C. Rohrs ('66), Medical Director of the Odyssey House, in a paper on "The Drug-free Treatment of Heroin Addiction."

Dr. Arthur B. Voorhees, Jr. ('46), reviewed the "Historic Milestones of Vascular Surgery." Dr. Voorhees is Professor of Clinical Surgery, P&S and Associate Attending Surgeon, PH. Problems of x-raying the gall bladder were the topic of Dr. Gilbert H. Mudge ('41), Professor of Medicine

Dr. Councilman Morgan, Associate Dean of Curriculum and Student Affairs, was one of the speakers at the business luncheon on P&S Alumni Day.

at Dartmouth Medical School. Dr. Mudge titled his paper "Cholecystography Revisited: Pharmacological Aspects." In a New York City-oriented paper, Dr. Frank E. Iaquinata ('51), discussed "Home Delivery of Medical Care in Welfare Hotels." Dr. Iaquinata is Adjunct Assistant Professor in Administrative Medicine, P&S and Chairman of the Ambulatory Care Department at Roosevelt Hospital.

The afternoon's activities included the Alumni Day luncheon and business meeting in Bard Hall. The luncheon address—on "Students and Curriculum Under Pressure"—was given by Dr. Councilman Morgan ('46), Associate Dean of Curriculum and Student Affairs. Dr. William J.

McGill, President of Columbia University, in delivering the main address of the meeting, analyzed the forces that are leading to academic reform at Columbia University and other universities.

Dr. Paul A. Marks ('49), P&S Dean, in welcoming the alumni and guests to the Alumni Day dinner at the Hotel Pierre that evening, reviewed several of the new academic programs developed in the past year and plans for the coming year. Two alumni and one member of the 1971 graduating class were presented awards of the P&S Alumni Association.

Dr. John K. Lattimer, Professor and Chairman, Department of Urology, P&S, was awarded the Gold Medal for distinguished achievement in medicine. The Gold Medal is the highest award the Alumni can bestow upon one of their members. Dr. Lowyd W. R. Ballantyne ('49), was awarded the Silver Medal, presented each year to an alumnus who has rendered meritorious service to P&S and its Alumni Association. Dr. Ballantyne is a plastic surgeon at Roosevelt Hospital, where he is assistant to the Chief of Surgery and Associate Attending Surgeon. Jeffrey M. Brensilver ('71), was awarded the Bronze Medal and a check for \$100 in recognition of his leadership and demonstrated interest in his medical school. This award is made upon the recommendation of the senior class and the faculty of the college.

## CPMC Art Show Seen By 1500

President Kennedy and two visitors to the 21st annual CPMC Art Show seem to be fascinated by the same painting.

The 21st annual Columbia-Presbyterian Medical Center Art Exhibit, held April 27-May 7, on the 20th floor of PH in the Milbank Library annex, was very well received.

Ninety-four artists contributed 181 entries to make this year's exhibit one of the biggest to date.

A total attendance of about 1500 visitors is proof of the pudding that the 1971 exhibit was a success.

Some excellent works were submitted this year, including oil and water color paintings, sculpture, photographs and a wide variety of crafts. For the first time, the Art Show Committee, under the chairmanship of Chaplain Robert B. Reeves, Jr., unanimously voted to allow bonsai (a potted plant, as a tree, dwarfed by special methods of culture) to be entered. The single plant entered by Dr. David L. Andrews, Assistant Attending

Orthopedic Surgeon, PH and Assistant Professor of Orthopedic Surgery, P&S, titled *Cascade*, was a delicate masterpiece of green-thumb art. The Committee is hopeful that more examples of bonsai will be submitted in future exhibits.

Chaplain Reeves wishes to express his gratitude to all who worked so diligently behind the scenes, including the Art Show Committee, the Maintenance and Housekeeping crews, and many others without whom there could be no exhibit.

The Committee would like to extend a special thank you to Mrs. Robert B. Reeves, Jr., whose untiring efforts on behalf of the art exhibit go unmentioned each year, and to Mrs. Harriet Phillips, medical artist, whose talent at the drawing board produces the theme for the art show poster and catalogue cover each year.

Dr. John K. Lattimer

Jeffrey M. Brensilver

## VC Transfusion Clinic Keeps Up The Tomorrows of Teresa Stivala

For several hours on March 30 the Transfusion Clinic, a unit of the Pediatric Hematology Clinic, VC 4, looked like a Hollywood movie set. Technicians and cameramen walked in and out, arranging and rearranging props and lighting. Actually, the activity was in preparation for the filming of a movie entitled "Another Tomorrow for Teresa," to be used for fund-raising purposes by the Cooley's Anemia Blood and Research Foundation for Children, Inc.

The filming was under the technical supervision of Dr. James A. Wolff, Attending Pediatrician, PH; Professor of Clinical Pediatrics, P&S; Director of Pediatric Hematology and member of the Medical Advisory Committee of the Foundation.

After several weeks of observation in the clinic, watching the Cooley's anemia youngsters being transfused and meeting with the parents, the Foundation, in collaboration with Voice & Vision, the people who were to do the filming chose little Teresa Stivala as one of the patients suited for the theme characterization. Teresa is five, very cute, lively and happy and an excellent choice to represent all the youngsters suffering from this disease.

The initial scene shows Dr. Wolff at his desk, introducing in non-technical terms the background of Cooley's anemia, a hereditary anemia known medically as thalassemia, which occurs most commonly in individuals whose ancestors were natives of the countries surrounding the Mediterranean Sea. In the United States most of the children afflicted are those of Italian descent. Youngsters of Greek, Turkish, southern French and north African descent are also affected and sporadic cases are

found among the Chinese and Israel.

While Dr. Wolff is speaking, the film shows Teresa being prepared for transfusion, along with several other youngsters already receiving their transfusions who are watching television, doing homework or just talking. The film continues to capture other moments in a typical day in Teresa's life—playing, skipping rope and participating in other childhood pleasures. Also during the film a physician explains some of the hopes and aspirations of the scientists involved in research into the disease.

The only effective treatment for Cooley's anemia at present is the proper administration of blood transfusions to alleviate the constantly recurring anemia. According to Dr. Wolff, Presbyterian Hospital has one of the largest groups of children—approximately 20 active patients—now under treatment for the disease.

He spoke of a fairly new mode of treatment that will hopefully increase the life expectancy rate—high blood transfusion levels accompanied by daily intramuscular injections of Desferal, a drug which combines with iron. The iron-containing compound is then excreted into the urine by the kidneys, in this way reducing the excess amount of body iron present in children with Cooley's Anemia. Desferal for use in these patients is supplied on an investigational basis, without charge, by the Ciba Pharmaceutical Company.

Monies raised by the Foundation are used primarily for the continuation of relentless research into the causes and cure of the disease, and to help them continue supplying free blood to ALL children suffering from Thalassemia. It is for this purpose that the Foundation will use the film on television in "spot commercials."

Teresa Stivala copes with her thalassemia.

## Dr. Abraham Spector Paris Bound

Dr. Abraham Spector, Associate Professor of Ophthalmology, P&S, has received a Guggenheim Fellowship award to pursue the investigation of the mechanisms of chain initiation of protein synthesis in mam-

malian and bacterial systems. He plans to work at the Institut de Biologie-Physico-Chimique, Fondation Edmond Rothschild in Paris with Dr. Marianne Grunberg-Manago during his fellowship year.

## Columbia Expands Its Affiliations With St. Luke's And Roosevelt

Columbia University signed full affiliation agreements with Roosevelt Hospital and the St. Luke's Hospital Center last month.

The signing marked the first time that Columbia has entered into a full affiliation with a voluntary hospital since its affiliation with the Presbyterian Hospital in 1921. The University's old and traditional tie to Presbyterian Hospital remains unchanged by the new affiliations, which became effective at a ceremony in Columbia's Low Memorial Library on May 13.

For Columbia and its Faculty of Medicine and Faculty of Dental and Oral Surgery, the new affiliations provide the opportunity to "broaden clinical and research training of students, and to extend their curriculum opportunities," according to the agreement.

For St. Luke's and Roosevelt, the agreement will permit "the further development of the highest possible standards of patient care, community service and research which will result from achievement of university hospital status."

The agreement will allow Columbia's College of Physicians and Surgeons and other divisions of the Faculty of Medicine to assign students to the two hospitals "to the extent and in the manner believed . . . to contribute most to the research and clinical training of said students and the care of patients in the hospitals."

Dr. Paul A. Marks, Vice President in charge of medical affairs at Columbia and Dean

Dr. William J. McGill, President of Columbia University, sets up for the affiliation ceremony in the University's Low Memorial Library on May 13.

of the Faculty of Medicine, cited "need for broadened clinical facilities for the training of medical, dental, nursing and other health profession students, and the opportunity of expanding the health care programs of our Faculty" as the principal reasons for the new affiliations.

The enlargement of the Columbia affiliates to include St. Luke's and Roosevelt, Dr. Marks said, also gives the Faculty of Medicine necessary clinical facilities in the event that Columbia expands the size of its medical school.

Under the new agreements, Columbia may, if it desires, appoint members of the staffs of St. Luke's and Roosevelt as officers of instruction in the Faculty of Medicine or the Faculty of Dental and Oral Surgery.

Dr. Melvin L. Moss, dean of the School of Dental and Oral

Surgery, said he "welcomed wholeheartedly" the new affiliations, adding:

"Although the School of Dental and Oral Surgery maintains affiliation agreements with a number of hospitals in the greater metropolitan area, the new agreements mark the first time that all of the health professions schools of the University have been included in one agreement. . . . These new agreements make it possible for the School to realistically consider the extension of its educational activities to both of these centers of excellence in health care training."

Columbia has had, for many years, a limited affiliation with both Roosevelt and St. Luke's. Roosevelt has had this limited teaching agreement with P&S since the early years of the century. The limited agreement with St. Luke's was made in 1947.

## Virus-Like Particles Discussed by Dr. Spiegelman

Dr. Sol Spiegelman, Director of Columbia University's Institute of Cancer Research and acting Chairman of the Department of Human Genetics and Development, P&S, and his associate Dr. Jeffrey Schlom, Associate Professor in the Department, have discovered that viruslike particles from human mother's milk contain the same strange enzyme found in viruses that are known to cause cancer in animals. This is the first time the enzyme has been found in humans.

Dr. Spiegelman discussed the Institute's work in a segment of April 27 NBC-TV evening news on recent breakthroughs in the continuing battle between science and cancer, particularly the recent indications that science may be getting closer to a decisive discovery in the research for a cause of human cancer.

The clue is found in virus particles that are associated with breast cancer in mice and monkeys. The discovery is that

virus particles have been found in human milk which are indistinguishable from the cancer-causing particles in the animals.

In a study of American women, viruslike particles have been found in the milk of five percent of those women with no family history of breast cancer and sixty percent of those with a family history of the disease.

The work being done does not absolutely prove that viruses cause breast cancer in humans, but it is the strongest, most convincing evidence to date. If human breast tumors contain the same genetic information as those in the particles found in the milk, the researchers will consider this sufficient evidence to begin the search for a means of prevention.

Said Dr. Spiegelman, ". . . Once you establish a causative link between one type of viral agent and a particular kind of cancer, it gives you a real rea-

Dr. Sol Spiegelman

son to believe that other types of cancers may also be caused by viral agents. . . ."

The NBC program explained that the recent developments do not mean a cure for cancer has been found, but that they do offer some very promising indications that something may be discovered about the cause of breast cancer.

# P&S Blood Flow Specialists Discover New Factor Governing Blood Pressure

Researchers in the Hemorheology Laboratory of the Physiology Department, P&S, have developed a sensitive system of measuring the red cell defects in blood diseases and, in a related study, have found a hitherto unappreciated factor governing blood pressure.

The new factor, known as "inertial pressure losses," must be considered along with the traditional variables determining pressure—blood viscosity and the distensibility of blood vessels—according to the research.

The Department's investigations in hemorheology—the study of blood flow—were carried out by Dr. Anthony M. Benis, Assistant Professor of Chemical Engineering, Columbia; Dr. Shunichi Usami, Assistant Professor of Physiology, P&S; and Dr. Shu Chien, Professor of Physiology, P&S and Director of the Hemorheology Laboratory. Their research, combining physiological approaches with engineering models, was presented last month to the Symposium on Flow in Pittsburgh, Pennsylvania.

"The resistance to blood flow, which determines the extent of pressure changes in the circulatory system, has been considered only in terms of vascular size and blood viscosity," according to Dr. Chien. "Our research shows that inertial losses can also be very important in the determination of pressure differences in the circulation."

The inertial pressure losses arise as a result of the accelerations and decelerations that blood undergoes as it follows a winding path through the tortuous vessels. Tortuosity and narrowing of the vessels contribute to inertial losses, much the same way water in a stream forms eddies after passing through narrow spots.

The P&S researchers measured the difference in blood pressures at the inflow and outflow ends of a dog's capillary bed and confirmed the results with an engineering model consisting of bent tubes. The scientists used plasmalike fluids free of red cells to avoid the so-called non-Newtonian tendency of blood to become more viscous, or sticky, with decreased flow rate.

With the viscosity factor controlled, any differences in the resistance to flow offered by the several types of test fluids could be attributed to inertial losses.

Knowing the inertial loss can be of potential importance in evaluating conditions with changing blood viscosity, for example in several kinds of anemia, or in cases involving partially obstructed blood vessels.

There is, furthermore, some variation in the tortuosity of

vessels in different regions of the body. For example, the vessels in the brain are especially tortuous. Dr. Chien pointed out. A change in vascular tortuosity in a region may cause variations in blood flow and mislead the physician in suspecting narrowing of the blood vessels.

The results of this research, supported by the Scaife Family Charitable Trust of Pittsburgh, the U. S. Army and the National Institutes of Health, may be "applicable to the understanding of many problems in cardiovascular research," the scientists believe.

In their study of "Fundamental Determinants of Blood Viscosity," a P&S research team investigated the tendency of red blood cells to aggregate into chains and their ability to "deform," that is, to change shape in order to squeeze through capillaries. It is known that the ability of red cells to deform promotes blood flow through the capillary network. Conversely, when cells aggregate into rods or chains, the blood behaves sluggishly, as if it had a higher concentration of red cells. The P&S scientists came up with a common denominator for a formula to measure both aggregation and deformation, or the lack of it.

Their research on viscosity

—also presented at the flow symposium—shows that the passage of normal red cells through capillaries involves the movement not only of fluids surrounding the cells but also of fluids inside them. When the fluid inside each red cell becomes sticky, such as during a crisis in a sickle cell anemia, the movement of inside fluid is impeded and blood flow becomes sluggish.

Dr. Chien and his colleagues, Dr. Usami, Dr. Kung-Ming Jan, and Dr. John F. Bertles, Associate Clinical Professor of Medicine, St. Luke's Hospital Center, have developed an index, including the internal viscosity of red cells, as an objective means of measuring the degree of red cell deformability in physiological and pathological conditions. At present, the treatment of sickle cell crisis is guided by the patient's sensation of pain, caused by the impaction of sickle-shaped cells in capillaries and by the resulting flow stagnation. The findings of the P&S rheology team may enable doctors to predict a worsening of the anemia through subtle changes in the internal fluid of the patient's red cells. Another benefit of this index will be the ability to objectively judge the efficacy of treatment.

Taking five for a group photo of the P&S hemorheology team are, from left, Dr. Anthony M. Benis, Ethel M. Goodrich, Ronald Carlin, Dr. Shunichi Usami, Dr. Shu Chien, Ignacio Alvarez de la Campa, Dagmara Igals, Orlando M. Leyva, Dr. Kung-Ming Jan, and Juan Rodriguez.

## Dr. Viola Bernard, An Opposition Candidate, Elected Vice-President of Psychiatric Group

Dr. Viola W. Bernard, Clinical Professor of Psychiatry, P&S, was elected to the Vice Presidency of the American Psychiatric Association, as announced at the Annual Meeting of the Association held from May 3 to 7, 1971 in Washington, D. C. Dr. Bernard was nominated by petition in opposition to the official single slate offered by the Nominating Committee of the A.P.A. Her election resulted from an unusually large vote via mail ballot conducted in February. Dr. Bernard and the two other members of the petition slate ran on a statement of principles advocating greater responsiveness to social issues, improvement in

service delivery and structural changes of the organization itself. As Vice President, Dr. Bernard will serve on the Board of Trustees and on the Executive Committee of the American Psychiatric Association.

Dr. Viola W. Bernard

## Illegal Parking Off Expressways Nets Tickets For BH Rock Hunter

Mrs. Bryda O'Hagan, Babies Hospital information clerk, contemplates additions to her rock collection in her Washington Heights home.

Most drivers get tickets for speeding or not feeding the meter, but Mrs. Bryda O'Hagan gets hers for rocks.

Mrs. O'Hagan's husband, Arthur, feels a slight twinge of premonition—caused mostly by the remembrance of tickets past—every time Mrs. O'Hagan on a family outing says: "This looks like a promising area, let's stop."

And as her husband drums on the steering wheel, Mrs. O'Hagan departs the family vehicle with a geologist's hammer and a hunter's look of anticipation on her face.

Mrs. O'Hagan is indeed a hunter, a rock hunter, and she has ranged up and down the tri-state area in search of interesting minerals while not occupied in her regular duties as information clerk in the front office of Babies Hospital.

The conversation piece of the O'Hagan apartment in Washington Heights is without doubt a glass cabinet displaying rocks or minerals from all parts of the world.

On its top shelf rests an unprepossessing piece of tectite, a rarity of probable meteoric origin that was picked up in Thailand and found a home on West 175th Street after a long trip. A fossilized clam shell winks with an opal blue interior at a passing phenomenon—Man—who is inspecting it. Imprisoned in a drop of amber, one of the smallest ants you've ever seen is serving an indeterminate sentence for stepping on sticky pine resin 10,000,000 years ago. On another shelf, a suave-looking piece of agate with beautiful concentric lines steals the scene from a chunk of pinkish rhodochrosite from

Argentina. In the back of the glass cabinet, Mrs. O'Hagan points out, are two noxious minerals—a lump of orpiment, or arsenic trisulfide, from Oregon and some Chilean chalcantite, or blue vitriol, for which she wrote to a copper company in Chile.

Mrs. O'Hagan has written to mineralogy departments of universities and other natural history institutions for some of the minerals. She herself has collected about one-third of the rocks in her collection.

Mrs. O'Hagan's absorption with rocks is an offshoot of her interest in Egyptology in grade school. She was fascinated by the permanence and the variety of materials used by the ancient Egyptians for their buildings and artifacts. She realized that an even greater variety of minerals lay outside King Tut's chambers—in other parts of the world—and it was a logical step for her to turn to mineralogy in high school. Today she tries to convey some of her fascination and appreciation of the natural beauty of rocks and their place in the creation to her daughter, Kathleen, and her son, Kieran, and in her lectures to grade school classes and Boy Scout pack meetings.

And, as the June sun begins to warm the hills of New York, Jersey and Connecticut, Mrs. O'Hagan, accompanied by Kieran, again hopes to be out there with her geologist's hammer, her mineral light and a note pad to record her better finds. If her husband can find an unobtrusive place to park the car, he may join her in her search of beauty.

## Lucy G. Moses Neurology Prizes Go To Drs. Richter and Reuben

Dr. John P. Reuben and Dr. Ralph W. Richter are the recipients of the Lucy G. Moses Prizes in Basic Neurology and Clinical Neurology this year.

Dr. Reuben, who is an Associate Professor of Neurology, P&S, was honored for his work on the retractile mechanisms of the muscle, carried out in the laboratory of Dr. Harry Grundfest. Dr. Grundfest, Professor of Neurology, P&S, was awarded the Basic Neurology Prize in 1965.

Dr. Richter received the Clinical Neurology Prize for his investigation of the effects of narcotics on the nervous system. He is Assistant Clinical Professor of Neurology at Harlem Hospital and an As-

sistant Attending Neurologist, P.H.

The two neurologists received the prizes from Mrs. Henry L. Moses at an informal tea, held in the Neurological Institute on May 18. The prizes—worth \$500 each—were established by Mrs. Moses and her late husband, Henry L. Moses, a prominent New York City lawyer, banker and philanthropist. Mr. and Mrs. Moses also established the Henry L. and Lucy Moses Chair of Neurology in 1963 with a \$500,000 gift from Mrs. Moses. Dr. Richard L. Masland, Chairman of the Neurology Department, P&S, currently holds the chair.

## Anesthesiology Lectures in B.H.

The Department of Anesthesiology announces the following afternoon lectures to be given in June:

Thursday, June 3, "Neural Regulation of Cerebral Blood Flow and Anesthetic Effects on Chemoreceptors," by R. A. Millar, M.D., Ph.D., FFARCS; MRC—Clinical Research Center, England.

Tuesday, June 8, "Biostatistics," by Robert M. Epstein, M.D., Professor of Anesthesiology.

Thursday, June 10, "Anesthesiology—Professional Or-

ganization and Current Scene," by Albert M. Betcher, M.D., Director, Department of Anesthesiology, Hospital of Joint Diseases; Past President, ASA.

Tuesday, June 15, "Medical Aspects of Anesthesia Practice," by Robert H. Mulreany, LL.B., Partner, DeForest and Duer, Attorneys, New York City.

Lectures are given from 5:00 to 6:00 p.m. in the Fourth Floor Amphitheater, Babies Hospital, Broadway at 167th Street.

## Lithium Expert Is Recipient Of Hutchings Award

Dr. Ronald R. Fieve

Dr. Ronald R. Fieve, Associate Professor of Psychiatry, P&S, is the recipient of the 1971 Richard H. Hutchings Award of the New York State Hospitals Medical Alumni Association. The award is presented each year to a New York State psychiatrist in recognition of a major contribution to mental health. Dr. Fieve, who is Chief of Psychiatric Research at the Psychiatric Institute, heads a lithium research and service clinic there and trains other doctors in the use of lithium. He has predicted that within the next 10 years lithium alone—or combined with antidepressant drugs—will largely replace electroshock therapy as the preferred treatment for manic-depressive psychosis.

## 150 Residents Attend Lectures Devoted To Shoulder Conditions

Approximately 150 orthopedic residents from hospitals in the northeastern sector of the United States, from Maine to the District of Columbia, attended the 13th annual Residents' conference in Orthopedic Surgery in the P&S Alumni Auditorium on May 8.

The program was devoted to "The Shoulder," and papers were read by a distinguished faculty. Dr. Frank E. Stinchfield, Professor and Chairman of the Department of Orthopedic Surgery, P&S and Chairman of the Conference, welcomed the audience.

Speakers included Dr. Carter R. Rowe, of Boston, who spoke on *The Painful Shoulder*; Dr. Marvin L. Shelton, a member of the Presbyterian staff, and director of orthopedics at Harlem Hospital, spoke on *Acromioclavicular Joint Separation*; Dr. Charles S. Neer, Presbyterian staff, spoke on *Fractures of the Proximal Humerus and Shoulder Prostheses*; Dr. Anthony F. DePalma, from the New Jersey Medical School, spoke on *Degenerative Lesions of the Shoulder and Lesions of the Rotator Cuff*.

Following each paper there

## Dr. Marks Is President Of American Society For Clinical Investigation

Dr. Paul A. Marks, Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs at Columbia University, was appointed President of the American Society for Clinical Investigation at the Society's annual meeting in Atlantic City, N. J., on May 1. A hematologist and an authority on human genetics, Dr. Marks has served as editor-in-chief of the *Journal of Clinical Investigation* since 1967.

## Biomedical Aspects Of U. S. Technology To Be Discussed On French Television By Dr. Cournand

FRENCH SPOKEN HERE — Dr. André Cournand discusses TV program with members of the French television crew.

A camera crew from a French television network recently photographed and interviewed Dr. André Cournand in the Cardiac Intensive Care Unit on PH 9. The filming, one of several segments for a projected television program called *Technology in the United States*, will be televised in France at a future date. Dr. Cournand spoke on biomedical technology.

Dr. Cournand, Professor Emeritus of Medicine and Special Lecturer, P&S, was a Nobel laureate in 1956 when he shared the Nobel prize with Dr. Dickinson W. Richards and Dr. Werner Forssmann for the work on the physiology of the heart and lung.

was a discussion period, and at the end of the program, Dr. Stinchfield chaired a question and answer period, in which all of the speakers partici-

## VC Patient, Recalling Kindness, Donates \$10,000 To Help Clinic

One day, back in September 1960, Mr. Egbert Barnard, a 62-year-old native of the West Indies but then a resident of the Bronx, came to Vanderbilt Clinic seeking medical assistance. He has informed *The Stethoscope* that the people who listened to his problems then and those who have taken care of him since, were very kind.

Mr. Barnard has continued to visit the metabolism clinic at V.C. periodically, and he was an inpatient of the Urology Service in 1967.

Mr. Barnard is now 72 years of age, and when he had reached the proper age, the Vanderbilt Clinic staff helped him register and establish his rights as a Medicare Patient.

On April 5 of this year, a check for \$10,000 came through the mail, addressed simply to Vanderbilt Clinic. It was signed by Egbert Barnard and had a two line note attached. The two lines gave Mr. Barnard's Unit Record Case Number and "This is a gift or grant" from E. Barnard.

When *The Stethoscope* wrote

Mr. Barnard, asking permission to report his gift in its pages, he replied: "You have suggested that we give permission to insert this gift in your monthly chronicle of information. Humbly, we are not seeking exultation for the giving, except to advance impetus and incentive to others to contribute to a great institution of your kind. I have thought of it before; but all things come in *fated time* . . . And thanking you for the awareness and thankfulness; Respectively yours, Egbert Barnard."

And to you, Mr. Barnard, the staff, personnel and patients of the Presbyterian Hospital, and especially those at Vanderbilt Clinic, thank you for your awareness and generosity. Your splendid gift will be used to continue the work of rehabilitation of Vanderbilt Clinic. Funds are urgently needed to continue this work, and we hope others will be inspired to emulate your generosity and philanthropy for a most worthy undertaking.

## Thanatology Foundation Holds Second Symposium At CPMC

The Foundation of Thanatology held its second major symposium in Maxwell Hall last month. The May 7 conference, which was cosponsored by the School of Dental and Oral Surgery, Columbia University, drew 200 physicians, nurses, dentists, psychologists, dental hygienists, social workers and clergymen for a multi-faceted discussion of the "Oral Care of the Dying Patient." Many of the 60 position papers presented at the symposium documented the need for dentists and dental hygienists trained to treat hospitalized dying patients.

"Dentists and hygienists are not now psychologically ori-

ented to this type of care," said Dr. Austin Kutscher, symposium co-chairman, president of the Foundation of Thanatology and Associate Professor of Dentistry, DOS. The Foundation is a nonprofit, national educational organization to promote scientific and humanistic inquiries into death, grief, bereavement and recovery from bereavement.

The problems presented in the position papers were discussed in seven workshops to improve oral care of terminal patients in such areas as oral hygiene, nursing, education, pedodontics, geriatric dentistry, oral medicine, surgery and psychiatric care.

## Marketing Of Cast Table Boosts Suringle Method In Scoliosis Treatment

The Stryker Corporation of Kalamazoo, Michigan, a leading U. S. manufacturer of medical equipment, has marketed the Von Lackum-Keim Suringle Cast Table for the application of one-piece plaster casts in the treatment of scoliosis. The basic model of the table was developed here by the late Dr. William Von Lackum; it was modified by Dr. Hugo A. Keim to make cast application easier and to obtain more efficient correction of the deforming spinal curve of scoliosis in youngsters (see December 1970 *Stethoscope*). Dr. Keim is Chief of Scoliosis Clinics here.

## Writers' Group Learns Perils Of Medical PR

Winfred L. Van Atta, Director, Department of Public Interest, discussed "Problems and Perils of Professional and Public Relations in the Large Medical Center" as the principal speaker at a dinner meeting of the New York Metropolitan Chapter of the American Medical Writers Association, held at the Yale Club on April 28.

## Dr. Wood Directs Neuroradiology Course; Seven P&S Radiologists Are Participants

A postgraduate course in neuroradiology, sponsored by the Department of Radiology and the Neurological Institute, was held May 3-7 in the Alumni Auditorium, P&S.

The course, under the direction of Dr. Ernest H. Wood, Professor of Radiology, P&S, Attending Radiologist, PH and Director of Neuroradiology at the Neurological Institute, was designed for radiologists, neurologists and neurosurgeons and covered most of the topics of diagnostic neuroradiology.

Twenty-one prominent physicians spoke, including seven from P&S: Dr. William B. Seaman, Professor and Chairman, Department of Radiology; Dr. Sadek K. Hilal, Professor of Radiology, P&S; Dr. Philip M. Johnson, Professor of Radiology, and Director, Division of Nuclear Medicine, P&S; Dr. Guy D. Potter, Associate Professor of Radiology, P&S; Dr. James A. Reilly, Assistant Professor of Radi-

ology, P&S; Dr. Michael S. Tenner, Assistant Professor of Radiology, P&S; Dr. Stephen L. Trokel, Instructor in Ophthalmology, P&S; and Dr. Wood.

The highlight of the five-day symposium was the third Cornelius G. Dyke Memorial Lecture, delivered by Dr. Harold O. Peterson, Professor and Chairman Emeritus, Department of Radiology, University of Minnesota Medical School in Minneapolis. Dr. Peterson was introduced by Dr. Seaman.

The Cornelius J. Dyke Memorial Lecture was established in 1969 in memory of Dr. Cornelius J. Dyke, Director of Neurological Institute and Associate Professor of Radiology, P&S, who died at the age of 42 in 1943.

A prominent physician, Dr. Dyke received many awards for his exhibits on x-ray diagnosis of skull disorders and wrote several books on the subject of nervous disorders.

## Assaults Are Made In Riverside Park; Old Tires And Rubbish Are Targets

In keeping with the current anti-pollution drives in the city, about 75 adults and teenagers from Psychiatric Institute staged a "one-man" assault on rubbish on May 19 in Riverside Park.

Tackling the Park between 167th and 171st Streets, they gathered approximately 175 bags of refuse in special plastic garbage containers.

The project was sponsored by the Departments of Occupational and Recreational Therapy, under the co-leadership of occupational therapists Judy Westerhoff and Karen Diasio, with the assistance of several volunteers.

The Institute and the therapists are especially grateful to the VIP's (Volunteers In the Park, a group of concerned citizens), for supplying all the

These Riverside rubbish hunters pose in front of the prey they've bagged. They are, from left, Karen Diasio, Mrs. Lois Kalb, Mr. Ross, a Board of Ed teacher assigned to the Psychiatric Institute, Mrs. Mimi Eldridge, Jeanette Fukuda, and Judy Westerhoff. The girls are all Institute staff members.

equipment for the clean-up, including the garbage bags, rakes and other tools, and also for

arranging to have the refuse picked up by the Department of Sanitation.

## Two P.H. Retirements Announced

Mrs. Margaret Gill

Mrs. Margaret Gill, nursing aide, Neuro-12, retired in April.

She had been working in the Neuro-12 unit since it opened on March 13, 1960. Before becoming an employee, Mrs. Gill served for many years as a volunteer in Admitting Emergency.

Her interest in helping people and her ability to understand them, uniquely qualified Gilly for her job, and she will be sorely missed by patients and staff.

Friends and staff honored Gilly on April 15 with a lovely party. In the photo she is preparing to make the first cut in her beautiful farewell cake.

Gerald Fife

The protective officer who told John S. Parke to snuff it out retired on May 22 after 14 years as evening supervisor in Housekeeping.

Gerald Fife, completing 20 years of employment at Presbyterian, six of them in Protective Department, recalled how he intercepted Mr. Parke

with a lighted cigarette in his mouth soon after the then executive vice president of P.H. had instituted a "No Smoking" rule in the hospital.

Mr. Fife said he confronted Mr. Parke with a firm "Sorry, sir, no smoking, by order of Mr. Parke."

"He put out the cigarette and asked me my name," Mr. Fife said. "He must have reported me to my superior, because a day later, I was summoned to Mr. Parke's office. It turned out he wanted to praise me for enforcing the law."

### CPMC Nursery School Extends Invitation To Three-Year Olds

The Medical Center Nursery School is still accepting applications.

The School provides a half-day program for three and four year olds.

For further information please call LO 8-0564.

## Dental Health Fair Is A "Groovy Experience" For Youngsters From Washington Heights Area

For the second year in a row, the Department of Dental and Oral Surgery, under the direction of Dean Melvin L. Moss, sponsored a Dental Health Fair for the youngsters of the Washington Heights community on April 7-8.

The community-oriented program was under the supervision of Dr. Harold Applewhite, Associate Professor of Dentistry, DOS and co-director of the Division of Preventive Dentistry and Community Health.

Several members of the student body of the School volunteered their time during the Easter holiday to help instruct neighborhood youngsters in the proper way to brush their teeth and to give them a better understanding of why proper oral hygiene is so important to overall general health.

The kids were divided into small groups, each group under the jurisdiction of a dental student, who spoke to them about a variety of gum and tooth disorders—from malocclusion to abscessed teeth—and how, with proper hygiene, all these disorders may be avoided.

A lesson in proper brushing of teeth can be a lot of fun.

This very absorbed group is learning all about saliva and its relation to systemic disease.

The community was well represented with children from P.S. 173 and J.H.S. 145. They were attentive, responsive, and from all appearances seemed to be enjoying themselves immensely.

Also present were several adult residents from the community, who either accompanied the children or represented different community groups. One group represented the Harlem Alliance for Comprehensive Health planning, a division of Mayor Lindsay's task force.

Dr. Applewhite said the response to this year's Fair was even greater than last year's. Twenty-three children attended the fair.

One youngster told in a letter: "Thank you very much for that groovy experience; that has been by far the best trip I've ever taken."

Several children expressed an interest in a career in dentistry and one girl wrote, "I have been brushing my teeth carefully and watched that I didn't eat too many sweets over the Easter vacation. Maybe if I grow up I will learn how to be a dentist."

Dr. Applewhite expressed

the hope that programs of this sort will be continued at the Medical Center and that, in addition to dental health education, they would provide some motivation in the youngsters to seek careers in the allied health fields.

These youngsters are engrossed in the proper method of polishing and smoothing a dental mould.

Perhaps this young man, learning the intricacies of fashioning a dental mould, is one of tomorrow's dentists.

### • ENGAGEMENTS

Nelly Perez, technician, Clinical Pathology, is engaged to Mr. Nephtali Montfort. An August wedding is planned.

### • WEDDINGS

Rosalie Siegel was married to Dr. Evan R. Wolarsky on April 24. Dr. Wolarsky is a resident, Department of Surgery. Karen Ellen Dunn was married to Dr. Neil Barton Kavey on April 24. Dr. Kavey is a resident in the Department of Psychiatry.

Christina M. Gilligan, Speech and Hearing, and Michael J. Carthy, Protective Department, were married at St. Elizabeth's church on April 17.

Margaret Irwin, secretary, Medical Information, was married to Donald R. Anderson on May 1.

Evey Sanchez, receptionist, ENT clinic, V.C., was married to Sgt. Arthur Lepore, Protective Department, on May 8.

Anita Moyano was married to PH Mailroom Clerk, William F. Gallagher, on May 29. The ceremony was performed at Incarnation Church. The couple honeymooned in Canada.

Ann Antonatos, secretary, Clinical Pathology, was married to George Walker, April 25.

At a nuptial Mass on April 24, at the Church of the Good Shepherd, Kay Brosnan, private duty nurse, N.I., was married to William D. Rossell. Mr. Rossell is an expeditor at Lummus in Bloomfield, N. J.

### • NEW ARRIVALS

Dr. & Mrs. Richard Zipf welcomed a son, David Randolph, on April 19, in Sloane Hospital. Dr. Zipf is a resident in Ophthalmology. Mrs. Zipf was head nurse, Emergency Service, V.C., before the blessed event.

Americo Pomales, technologist, Clinical Pathology, and his wife welcomed their first child, a daughter, Ana Sofia, on March 2.

Efrain Medina, Laundry Department, and his wife, Angela, formerly with IBM Control, welcomed their second son, Anthony Michael, recently.

Mr. & Mrs. David Searles welcomed a son, David Michael, several months ago. The happy new grandma is Edna Daly, IBM Control.

### • FAREWELL TO:

Ella Sanchez, technologist, Clinical Pathology, Ella left after six years at Presbyterian to become a full time housewife in her new home on Long Island.

### • WELCOME TO:

Mrs. Theresa Reese, who has joined the staff in IBM Control. Joseph Cohen, new class "B" electrician, Maintenance and Construction.

Joseph Cohen

Mrs. Theresa Reese

### • CONGRATULATIONS TO:

Walter Barton, Ward Clerk, N.I. 8, who is on the Dean's List at Fordham University.

Mrs. Frances Mason, R.N., who has been promoted to Supervisor, Instructor Harkness Orientation Unit, Staff Development. Joan Sellers and Patricia Stocks, who were promoted to night head nurse and assistant head nurse, respectively, N.I.

George Holmes and John McPhillips, Maintenance & Construction, who were promoted from class "C" to class "B" electricians.

Hector Medina, M & C, who was promoted from lampman to class "C" electrician.

Ray Scott, M & C, who has been promoted from Engineer's Storeroom clerk to lampman.

Elmira Foti, who has been appointed Head Nurse, Orthopedics.

Janice Smith, who has been appointed head nurse, Staff Education, Neonatal Intensive Care Unit, BH.

Rhoda Villaruz, who has been appointed head nurse, Operating Room.

DR. JAMES A. WOLFF, Professor of Clinical Pediatrics, P&S, Attending Pediatrician, PH and Director of Pediatric Hematology, lectured on *Soft Tissue Tumors of Childhood* (in one of a series of lectures dedicated to Dr. R. Janet Watson), at Downstate Medical Center, Brooklyn, February 16.

At the Middlesex General Hospital in New Brunswick, New Jersey, he presented one of a series of weekly lectures of the post-graduate course for physicians, sponsored jointly by the Academy of Medicine of New Jersey and the New Jersey State Medical Society. His lecture was entitled *Acute Childhood Leukemia and Infectious Mononucleosis*.

At the annual scientific session of the Westchester Division of the American Cancer Society in Purchase, N. Y., on April 20, Dr. Wolff spoke on Childhood Tumors, with Dr. THOMAS V. SANTULLI, Professor of Surgery, P&S and Attending Surgeon, PH, and Dr. Robert Sagerman, Chairman of Radiotherapy at Upstate Medical Center, Syracuse, New York.

DR. SOL SPIEGELMAN, Director, Institute of Cancer Research, Columbia University, and Acting Chairman of the Department of Human Genetics and Development, gave one of four public lectures, *Extracellular Darwinian Evolution of Replicating RNA Molecules*, at the Nobel Workshop in Stockholm, December 8. During his visit to Stockholm, he also presented an invitation lecture before the Biochemical Society of Stockholm at the Karolinska Institute.

In January, at the Ciba Foundation Symposium on Strategy of the Viral Genome in London, Dr. Spiegelman presented two papers: *Extracellular Strategies of a Replicating RNA Genome and RNA Tumor Virus-specific Proteins*. During his stay in Great Britain, Dr. Spiegelman also lectured at the University of Glasgow on *Hybrid-directed DNA Polymerases in Animal and Human Leukemias*.

On March 17 Dr. Spiegelman delivered the Louis Gross Memorial Lecture at New York University Medical Center. The lecture was entitled *DNA Polymerases in Oncogenic RNA Viruses and in Human Cancer and Non-cancer Cells*.

At a recent meeting of the Long Island Ophthalmological Society, DR. ANDREW DE ROETH, JR., Assistant Professor of Clinical Ophthalmology, P&S and Assistant Attending Ophthalmologist, PH, presented a paper entitled *Recent Advances in Glaucoma Surgery*.

DR. SOLOMON N. ROSENSTEIN, Professor of Dentistry and Director of the Division of Pedodontics, DOS, attended the fourth International Seminar on Mental Retardation in Athens, Greece, March 19-30.

He presented a paper on *Dental Findings in Prematures Relating to Neurological and Psychometric Abnormality*. The seminar was conducted jointly by the New York Medical College and the School of Medicine of the University of Athens.

DR. JOHN BUCHANAN, Assistant Attending Physician, PH and Assistant Professor of Medicine, P&S, lectured on *The Hyperosmolar State* at Medical Grand Rounds of the University of Colorado School of Medicine, in the auditorium of the Colorado General Hospital, April 21.

DR. HARALD H. ROSSI, Professor of Radiology (Physics), P&S, and DR. ALBRECHT M. KEL-

LERER, Associate Professor of Radiology (Physics), P&S, were invited to lecture at a symposium sponsored by the International Atomic Energy Agency on the *Biophysical Aspects of Radiation Quality* in Lucas Heights, Australia, March 8-12.

DR. J. LAWRENCE POOL, Professor and Chairman, Neurological Surgery, was Visiting Professor at the University of Edinburgh Medical School, April 28-May 5. He also presented three addresses: *Kings College and the Future*, to the Royal Medical Society; *Cerebral Vasospasm*, as the Macarthur Lecture; and *Paget's Disease of the Spine*, before the Royal College of Surgeons of Edinburgh.

Dr. Pool

Dr. Bradley

DR. STANLEY E. BRADLEY, Bard Professor of Medicine, P&S and Attending Physician, PH, devoted three months of a sabbatical leave to studies in the Department of Medicine at the University of Strasbourg in France, with Professors Jules Stahl and Frédéric Stephan. Professor Stahl, Director of Clinique Médicale B, Hôpices Civils, and Professor of Medicine at the University of Strasbourg, worked closely from 1933 to 1934 with DR. ROBERT F. LOEB and DANA W. ATCHLEY, participating actively in the discovery of sodium loss by the patient with adrenal cortical insufficiency. Professor Stephan, now Director of Clinique Médicale F at the Hôpices Civils, was a fellow in Medicine at Columbia-Presbyterian from 1948 to 1949.

Following a lecture to the staff and students, Dr. Bradley was presented with a medal by Dean François Isch, of the Ecole de Médecine, as a token of esteem for the continued friendship and collaboration between the University of Strasbourg and the Medical Center. Dr. Bradley also lectured in Paris at the Hôpital Necker, and Hôpital Beaujon under the sponsorship of the Institut National de la Santé et de la Recherche Médicale.

He participated in meetings of the European Society for Clinical Investigation at Scheveningen, Holland, and lectured at the University of Berne, Switzerland, and the University of Munich, Germany.

DR. WILLIAM B. SEAMAN, Professor and Chairman, Department of Radiology, presented the Joseph Freedman Lectures at the University of Cincinnati in Ohio, April 17-18.

The Lectures, given to the faculty, residents and students of the University of Cincinnati, are four in number.

Dr. Seaman spoke on various aspects of *Radiology of the Gastro-intestinal Tract*, including *The Post-Operative Stomach*, *Inflammatory Disease of the Colon*, *Neuromuscular Dysfunction of the Pharynx and Esophagus* and *Unusual Benign Diseases of the Stomach*.

VOLUME XXVI, NUMBER 7

JULY, 1971

## P&S Graduates 126; Creativity and Flexibility Are Stressed

Dr. Paul A. Marks, Dean of P&S.

Challenged by the prospect of entering, in the words of their Dean, "a world requir-

ing creativity and flexibility," 126 members of the senior class at P&S took the Hippocratic Oath in the Medical Center's garden on the first day of June.

They had emerged in a gray-and-black column of two's from the Pauline A. Hartford Memorial Chapel to take the place in front of their relatives and friends, gathered on the Medical Center lawn following the main graduation ceremony on the University's downtown campus.

In his greetings to the graduating class, Dr. Paul A. Marks, Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs at Columbia, was moved to express his sense of the sharp

contrast between the centuries-old formality of administering the Hippocratic Oath and the practice of medicine in the nontraditional world of the 1970's that follows it.

"The seventies present us with clear signs of change," Dr. Marks told his audience.

"There is a new consciousness encompassing a heightened sensitivity, an awareness of the importance of the individual person and of his role in society. We as physicians have a special obligation to society."

An outgrowth of this new awareness, Dr. Marks said, is

the urgent need to change "the inadequacies of our health care delivery system."

He reminded the graduating seniors of their commitment to change the system: "The responsibility of every member of a health-related service

## Philanthropist Malcolm Aldrich Receives AMA Layman Citation

Malcolm Aldrich

Mr. Malcolm Aldrich of New York City, since 1928 a Trustee of The Presbyterian Hospital, was one of two persons receiving the American Medical Association's "Layman's Citation for Distinguished Service" to medicine, at the AMA Convention, June 20-24. The other layman to receive this honor was Mr. J. Raymond Knighton, Wheaton, Illinois. Both are leaders of important philanthropic groups.

Mr. Aldrich, retired, is currently honorary chairman of the Commonwealth Fund. He was a friend of the late Ed-

## DR. RICHARD E. BEHRMAN IS NEW DIRECTOR, PEDIATRICS

Dr. Richard E. Behrman has been appointed Professor and Chairman of the Department of Pediatrics at the College of Physicians and Surgeons of Columbia University and Director of Pediatrics Services at Babies Hospital and the Pediatric Clinics. He assumed his responsibilities on July 1.

Dr. Behrman received his A.B. degree from Amherst College and his Doctorate in Medicine from the University of Rochester College of Medicine and Dentistry. He subsequently completed his training in pediatrics at the Johns Hopkins University and Hospitals.

Dr. Behrman comes to New

Dr. Richard E. Behrman

York from the University of Illinois Medical School where

## OPEN-HEART TEAM'S 2000TH OPERATION

A small celebration was in order after the 2000th operation by the Columbia-Presbyterian open-heart surgery team. Gathered in a Medical Center laboratory, the celebrants are, from left, Dr. Frederick O. Bowman, Dr. Gerard A. Kaiser, and Dr. James R. Malm, head of the Medical Center's open-heart program. Missing from the photo is Dr. Paul M. Beach, Jr.

Just before midday on June 15—sixteen days after helping to make history at Presbyterian Hospital—Edmund Misajet walked out of Harkness Pavilion into the rain.

Last year he'd had a couple of severe heart attacks, but that rainy Tuesday he breathed the moisture-laden air and thought of the fishing trips he'll take this summer with his friends, and of vacationing in the mountains with his wife, Donna, and their children, Frances, 7, and Edmund, Jr., 5. The history-making part was behind him, and he was glad.

## John A. Hartford Foundation Research Grant

The John A. Hartford Foundation, Inc., has awarded a grant of \$173,160 to the College of Physicians and Surgeons for the development of improved topical therapy of infected wounds and burns by finding more effective, convenient, inexpensive non-toxic drugs that can be applied externally to prevent and treat infections caused by Pseudomonas and other bacteria not amenable to systemic antibiot-

ic therapy.

The three-year grant was announced jointly by Harry B. George, President of the Foundation, and Dr. Paul A. Marks, Dean of the Faculty of Medicine and Vice President in charge of Medical Affairs, Columbia University.

The project for which this grant has been made will be under the direction of Dr. Charles L. Fox, Jr., Professor

# MEYER M. MELICOW UROLOGY LIBRARY

"... a beautiful frieze ... showing historic urologic procedures ..."

The "Meyer M. Melicow Urology Library" was dedicated on Friday, June 11. More than 150 colleagues, former patients and friends of Dr. Melicow gathered in the Library and stem, on the 10th floor of the Squier Clinic. It was an enthusiastic, joyous occasion. Under Dr. Melicow's artistic direction many improvements

have been made in the appearance of the room and a beautiful frieze of pictures in color, showing historic urologic procedures, now extends along the walls between the book shelves and the ceiling.

Dr. John K. Latimer, Professor and Director of Urology, paid tribute to Dr. Melicow's more than 50 years of

Dr. Melicow, left, and Dr. Pulrang

devoted service and also unveiled a bronze name-plaque on the library door. He described the shelf-lined room "not only as a library but as a training center; one that already includes many teaching aids, such as push-button video tapes of various urologic procedures, and closed-circuit TV." Dr. Latimer ex-

plained that a Library Fund is being established for the purpose of acquiring books, periodicals, and ultimately the services of a librarian, to make this venture an outstanding educational feature of the Department of Urology.

Dr. Donald W. King, Delfield Professor and Chairman of the Pathology Department, emphasized Dr. Melicow's contribution to Urology. Dr. Robert L. Pickens, Chief Resident of Urology, expressed the appreciation of the entire Resident Staff for the additional aid in their training; and credited Dr. Stanford Pulrang, Director of the Commonwealth Fund Educational Project for the Department of Urology, for inaugurating it.

Noted among the guests were Dr. Hans Popper, Chairman of Pathology of the Mt. Sinai Hospital and Medical School; Dr. Maurice Lenz, Professor Emeritus of Clinical

Radiology; Dr. R. Lattes and Dr. N. Lane, Professors of Surgical Pathology, of the Columbia-Presbyterian Medical Center, and Mr. Harold Conroy, a Trustee of the Irene Heinz Given and John La Porte Given Foundation.

## COMMONWEALTH

*Continued from page one*

participating in this program in addition to P&S are Yale, Howard, University of Pennsylvania, Johns Hopkins, Duke, Case Western Reserve, and Pittsburgh.

The study will deal with the time spent and course of study pursued by students as undergraduates, in medical schools and in postdoctoral programs.

A subcommittee of administrators from the eight medical schools will be planning meetings with the directors of undergraduate pre-medical programs. A prime goal of their work will be the possible reduction in the total time required to acquire the knowledge and skills needed for the practice of medicine without sacrifice of academic standards.

The group will also consider the possibility that some training offered in medical school be partially redistributed, with some parts offered in undergraduate years and some after medical school, and likewise that work in the humanities, previously restricted to the early or college phase of education, be extended into the medical and postdoctoral period.

Associate Dean Dr. Howard Levin of Yale will serve as Program Director for the project. Dr. Councilman Morgan, Associate Dean of Curriculum and Student Affairs at P&S, is on the subcommittee for curricular studies.

The seven graduates are: left to right in photo—Kathryn Vogel, Darnel Dade, Barbara Conrad, Nora Walthour, Nora Gorrell, Cecilia Dixon and Barbara Maggiani (missing from photo).

Of the seven graduates, five have accepted staff positions at the Hospital; two have accepted positions elsewhere.

The event ended with an informal tea honoring the seven young women.

## CHALLENGE TO MEDICAL STUDENTS

The following letter, received by Dr. Paul A. Marks, Dean of the College of Physicians and Surgeons, has been written by an Illinois doctor's family. Because Dean Marks and Dr. Charles A. Ragan, Chairman of the Department of Medicine, P&S, believed it would be of general interest to young people rising into the field of medicine, a copy has been forwarded to each member of the Fourth Year Class.

The Stethoscope believes that all its readers will find it thought-provoking.

Abingdon, Illinois

To the Dean,  
Columbia University,  
College of P&S.

Dear Dean:

We are writing you on behalf of our father, a small town country doctor who is just too busy to write, but is

## Graduation of First Class Of Radiologic Technologists

The first class of the Presbyterian Hospital School of Radiologic Technology was graduated on May 27—another milestone for this Medical Center. Exercises were held in Harkness Hall.

Clarence Modeste, Director of the School, delivered a welcoming address and presented the speakers, Dr. William B. Seaman, Professor and Chairman, Department of Radiology; Dr. Robert H. E. Elliott, Jr., Assistant Vice President, Special Projects (Nursing) and Associate Dean, P&S; and Mrs. Elly Metrakos, Supervisor, P.H. X-ray Department.

Dr. Elliott spoke of the possibility that these graduates, who now hold certificates in

Radiologic Technology, may continue their studies in pursuit of the Associate Degree in Science.

Mr. Modeste commented, "If all future students exhibit the same enthusiasm and are as highly motivated as this first group, the program cannot help but be successful."

The School of Radiologic Technology, a recent addition to the ever-increasing number of training programs in the allied health field within the Medical Center, was established in response to the growing demand for qualified radiologic technologists, both here at Presbyterian and in the field at large. Standards of training have risen since the New York

## Operating Room Tech. Graduation

The fourth class of the Presbyterian Hospital School of Operating Room Technology held their graduation exercises in a brief but meaningful ceremony on June 3 in PH 1-50.

Wearing beautiful pink car-

State Departments of Health and Education entered the field in the early 1960's, curricula have been standardized, calling for more comprehensive training programs in all hospitals.

Two national organizations, sponsored by the American Medical Association and the Radiologic Society—The American Registry of Radiologic Technologists and the American Society for Radiologic Technologists, the national certifying bodies—have also upgraded their requirements for certification.

The program being conducted at this Medical Center prepares its students to take the qualifying examinations necessary for national certification and New York State licensure.

The School began operations in the winter of 1969 and enrolled its first students in May of that year. The five students who entered that first class are today's graduates: Flor Gomez (Honor Roll), Dolores Katto (Honor Roll), Barry Lipschitz, Felix Rodriguez and Fred Torres.

A second class of nine students was begun in the fall of 1969.

nation corsages on the shoulder of their white dress uniforms, worn for the first time, the six young women proudly accepted their certificates and pins from Dean Mary I. Crawford, Associate Dean, Department of Nursing, Faculty of Medicine, Columbia University, and Mrs. Gilda Gehm, Assistant Director of Nursing (Operating Rooms), and formerly Supervisor of Courses for the School.

Dean Crawford addressed the group briefly before the presentation, complimenting the graduates on their successful completion of the course.

Betty J. Sanford, Supervisor of Courses, also commented on the interest and enthusiasm demonstrated by the graduates throughout the pursuit of their studies, and her pride in seeing them graduate.

From left, Fred Torres, Flor Gomez, Dolores Katto, Barry Lipschitz, Felix Rodriguez.

**DR. BEHRMAN . . .**

*Continued from page one*

he has been Professor of Pediatrics and Director of the Division of Perinatal Medicine. In addition to his principal responsibilities for the care of hospitalized sick children and adolescents at the University of Illinois Hospital, Dr. Behrman has had a broad range of interests in clinical pediatrics including preventive and health maintenance aspects of child care. In Chicago he has been involved in city-wide planning of health facilities for neonatal infants, and in the development of general pediatric clinics in ghetto areas.

Dr. Behrman stated that the "clinical education of medical students, house officers and paramedical personnel is best accomplished in a setting where the finest primary and specialty medical and surgical care is provided for infants, children, adolescents and their families. Babies Hospital and Pediatric Clinics and related medical services in the community and in affiliated hospitals can accomplish these interrelated goals of excellence in patient care and medical education."

Dr. Behrman has served on the Special Study Section for Health Manpower of the National Institutes of Health and is now a member of the Perinatal Biology and Infant Mortality Research and Training Grant Committee. He is on the editorial boards of the *Journal of Pediatrics*, *Pediatric Research* and *Teratology* and is a member of the governing councils of the Society for Pediatric Research and the Perinatal Research Society.

He is also a member of the American Pediatric Society, the American Academy of Pediatrics, and the Society for Gynecologic Investigation.

Dr. Behrman has published more than 70 scientific papers; the principal focus of his research activities has been in areas dealing with the management of acute physiologic changes in sick children, the effects of drugs on fetuses and infants, and the mechanisms regulating the supply of oxygen and nutrients to fetuses and neonatal infants.

ward S. Harkness, whose philanthropy and foresight were responsible for the establishment of the Columbia-Presbyterian Medical Center. Mr. Aldrich, for more than 25 years president and chairman of the board of the Commonwealth Fund, has continued to carry out the purposes of the Harkness family through philanthropies.

Mr. Aldrich's advocacy of the importance of maintaining strong medical schools in the private sector has led to a series of large, unrestricted grants to a number of private

**DR. MELLIN APPOINTED COORDINATOR OF ACADEMIC AFFAIRS, PEDIATRICS**

Dr. Gilbert W. Mellin, Associate Professor of Pediatrics and Associate Attending Pediatrician of Babies Hospital, has been appointed Coordinator of Academic Affairs in the Department of Pediatrics.

Dr. Mellin has served as Acting Chairman of the Department of Pediatrics and Acting Director of Pediatrics at Babies Hospital since 1970 and has been a member of the Faculty of the College of Physicians and Surgeons since 1955.

In his new position Dr. Mellin will serve in a liaison capacity to coordinate the academic activities of the pediatric services of several hospitals affiliated with the Medical School. He will assist the Chairman of Pediatrics in carrying out and integrating policies related to the clinical programs in these hospitals and in Babies Hospital and Pediatric Clinics.

Dr. Mellin is a charter member of the Teratology Society

Dr. Gilbert W. Mellin

and has held special appointments on the Infant Mortality Committee of the Medical Society in the County of New York, the Advisory Board of the Association of Mentally Ill Children in Manhattan, and the Program Area Committee on Drugs of the American Public Health Association.

Dr. Mellin has published more than 40 scientific articles. He is a member of the Society for Pediatric Research and the American Pediatric Society.

**OPEN-HEART TEAM'S 2000TH . . .**

*Continued from page one*

Edmund Misajet, on the morning of his departure from Harkness Pavilion, bids farewell to nurses Stavroula Karanikola, left, and Mrs. Harnetha Doby who cared for him during his recuperation from the 2000th operation by the PH open-heart team.

Mr. Misajet became part of history at Columbia-Presbyterian as the 2000th patient to be operated on by our open-heart surgery team. The operation, called revascularization of the heart, gave Mr. Misajet, at the age of 44, a set of new blood vessels to detour blockages in his coronary arteries.

ly supported schools during the past decade.

Commonwealth Fund grants have also supported modernization of medical education, helping implement curriculum innovations at several universities, and supporting new approaches to health care.

Elected a trustee of Presbyterian Hospital in 1928, Mr. Aldrich has been active on the Joint Administrative Board, as a Trustee of the Columbia-Presbyterian Medical Center Fund, Inc., and on numerous committees. He is a graduate of Yale University, A.B., 1922, where he served as a member of the University Council. During World War II he was a Captain in the U. S. Navy. In the fields of business and philanthropy he has served as a director of many corporations and institutions.

As the 2000th patient, Mr. Misajet represents the beginning of a new era in heart surgery, an era that utilizes new diagnostic procedures and a new method of suturing small blood vessels to restore normal circulation to the damaged heart. Revascularization of the heart is the newest form of open-heart surgery and has been utilized in this Medical Center for the past year.

In revascularization, portions of the long saphenous vein are taken from the patient's leg, which has three other veins to service it. Attached to the aorta, the saphenous portions conduct arterial blood to the heart muscle around blockages caused by fatty deposits.

Before revascularization can be undertaken, the exact sites of blockage must be known. Such information can be obtained with cine-coronary angiography, which involves introducing a harmless dye directly into the coronary arteries. The Medical Center's coronary artery program has been supported by the construction of an ultramodern cardiovascular radiology suite to carry out these vital diagnostic proce-

**P&S GRADUATES**

*Continued from page one*

is health-care delivery. The new consciousness mandates the development of new methods in both disease prevention and in disease care."

"Whatever the nature of social changes that lie ahead, as physicians you will have a vital role," the Dean concluded, after discussing ways of fulfilling the commitment of the seventies.

Chosen by the students to deliver the graduation address, Dr. Willard Gaylin, Associate Clinical Professor of Psychiatry, P&S, confronted the young doctors with the moral issues they will have to face, such as are involved in organ transplants, the equitable distribution of limited medical resources, and extending the lives of incurably ill patients. He said that physicians "have been given little training on the medical implication of priorities" in distributing life-saving medical treatments.

Declaring that "the economic dilemmas of medicine are moral dilemmas," he suggested that the billions "even now being spent on advance research could be spent for distribution of the care and knowledge we already possess."

Challenging the graduates to come to grips with these dilemmas, Dr. Gaylin said that no one will fault them if they do not come up with solutions, "but if you do not even raise

the questions, I, for one, will never forgive you."

A special citation, read by Dr. Irving Sarot, President of the P&S Alumni Association, was presented to Dr. Arthur Bookman for his distinguished service over a period of 70 years as a physician in The City of New York. Dr. Bookman is a graduate of P&S class of 1901.

After the awarding of the degrees by Dr. Councilman Morgan, Associate Dean for Curriculum and Student Affairs, the Hippocratic Oath was administered. The following were the awardees of prizes in the graduating class: Jeffrey M. Brensilver, Alumni Association Award; Howard M. Eggers, Borden Undergraduate Research Award; Francis A. Mithen, Henry R. Palmer, and Thomas L. Roberts, Merck Manual Award; Franklin J. Apfel, Alan Berkman, Kenneth G. Janowitz, Robert A. Marshall and Eve E. Slater, Mosby Book Award; Mark E. Chodoff, Joseph Garrison Parker Award; Thomas M. Drew, Roche Award; Ethel M. Silverman, Upjohn Award; Richard M. Ratzan, Urology Prize; George M. Lazarus, William Perry Watson Prize; Judith S. Palfrey, Walter Winchester Prize.

The Invocation and the Benediction were given by the Reverend Edwin M. Barton, Director of Student Activities at the College.

**JOHN A. HARTFORD FOUNDATION . . .**

*Continued from page one*

of Microbiology (Surgery) at P&S, who has been doing research in this and related areas of investigation since 1942. In 1970, Dr. Fox announced preliminary clinical results with a new topical drug, silver sulfadiazine, which is now undergoing extensive clinical trials throughout this country and abroad, and *Medical World News*, in its issue of April 3, 1970, reported on the promising results and importance of the new ointment.

Knowledge gained from the synthesis and development of silver sulfadiazine, which bonds silver into DNA and prevents the multiplication of bacteria, will be used in fur-

dures.

The members of the Presbyterian open-heart team are also engaged in research to improve the surgical techniques and methods of evaluating coronary artery surgery.

Mr. Misajet, Presbyterian Hospital's 2000th open-heart patient, is a refrigeration and air-conditioning specialist with Bendix Corporation, and plans to cool it this summer, alternating between deep-sea fishing and enjoying his family at the Misajet home in Bergenfield, New Jersey.

We all wish Mr. Misajet good health and luck in his fishing.

Dr. Charles L. Fox, Jr.

ther investigations to find even more effective compounds that can be applied topically. One promising development is a bacterial "pseudo-skin" with potential as a wound cover. Dr. Fox has recently bonded silver into the triple helix of collagen and the new material is being studied in infected wounds and burns, both for its bactericidal action and as substitute "skin" to cover wounds. The new antibacterial organic silver compounds will also be utilized with proteolytic enzymes in hope of finding better ways to remove necrotic tissue and to accelerate healing of wounds and burns.

The need for more effective topical drugs to prevent and treat infections in wounds and burns is great today. Our expanding population and the ever-advancing mechanization of our society are associated with large increases in hospital admission for burns, vehicular and other trauma.

About two million people in the United States now suffer burns each year, and even more suffer serious wounds.

## CHALLENGE . . .

Continued from page two

in great need of an assistant who will eventually take over his practice.

He came to Abingdon (Illinois) thirty years ago and set up a medical practice on the second floor of one of the downtown stores. It wasn't easy. There were four other doctors in the town at that time, but they were growing older and he could see a need was there for his services. Within a few years he enlisted in the Army and interrupted his Abingdon practice to give himself for his country. Resuming his practice, he became a family doctor in the broadest sense of the term.

He has delivered generations of babies, cared for them through infant and child illnesses, heard their adolescent problems, attended their graduations and weddings.

Much of his practice has been with the elderly, making house calls, seeing them at nursing homes. Since this is basically a rural area, many of his calls involve farm accidents. Sometimes he finds himself practicing medicine wherever he goes, for instance he has been called out of the stands at basketball and football games to care for injured players. And telephone calls seem to follow him wherever he is.

Planning time out for vaca-

## In Memoriam

Dr. Nathan W. Ackerman

Dr. Nathan W. Ackerman, Clinical Professor of Psychiatry at Columbia University's College of Physicians and Surgeons, died on June 12 of a heart attack at his country home in Putnam Valley, New York. He was 63 years old.

Dr. Ackerman founded the Family Institute in 1960 and was its director of programs. It was his view that psychiatrists should treat their patients not as individuals but as family groups since, as he expressed it, mental illness rarely occurs in an isolated instance in family life. He observed that the psychiatrist, intentionally or not, treats other members of the family while treating one.

He was graduated from Columbia University in 1929 and from P&S in 1933. He served an internship at the Menninger Clinic. He belonged to a number of professional associations and wrote several textbooks on psychiatry.

He is survived by his wife, the former Gwendolyn Hill; two daughters, Deborah and Mrs. Jean Curwan of Newtonville, Mass.; his mother, Mrs. Bertha Ackerman of New York; two brothers, Harry of Putnam Valley and Bernard of New York; two sisters, Mrs. Leon Cohen of Washington and Mrs. Gertrude Benson of Philadelphia, and two grandchildren.

## Dental School Graduation

Professor McLean and Dean Moss presenting diplomas.

The Columbia University School of Dental and Oral Surgery held its commencement exercises in the P&S Alumni Auditorium on June 2.

The graduating dentists shared the spotlight with the dental hygienists and those receiving post-graduate certificates of training in Pedodontics, Prosthodontics, Periodon-

tics, Endodontics and Oral Surgery.

Thirty-six dental students received the D.D.S.; 19 dentists received postgraduate certificates of training; 23 dental hygienists received the B.S.; 14 received the M.S. in dental hygiene.

Presiding at the exercises was Dean Melvin L. Moss. Fol-

## Annual Meeting of Orthopaedic Alumni

The New York Orthopaedic Hospital held its forty-fourth annual meeting of the Alumni Association on May 20 and 21.

A scientific program of alumni papers was presented on each of these days, highlighted by the Fourteenth Alan DeForest Smith Lecture. The lecture was delivered by Dr. Harold M. Frost, who is chairman of Orthopaedic Surgery at the Henry Ford Hospital.

The two-day meeting was closed by President Dr. William Massie of Lexington, Kentucky. Dr. Max Vechter of Ottawa, Canada, was unanimously elected President, by the alumni, for 1971-1972.

College, and serves as a fine cultural and shopping center for Abingdon and the other surrounding small towns. Abingdon is known as a friendly town where people get along well and community spirit is high. Air pollution is practically non-existent.

Our father cares for these people and also for people from a large number of even smaller communities sprinkled around Abingdon (they come to his office in Abingdon) and he serves a broad rural area. He charges for his services in accordance with his patient's ability to pay. He puts service before self and accepts the fact that doctors are often the last to be paid.

He practices a great deal of office psychology, helping others understand themselves and others through him, working to heal marriages and broken hearts as well as wounds and broken bones. He sees his patients as fellow human beings and he works to be thoroughly effective in helping them in their lives. He works to help parents and the unwed

lowering the invocation by Chaplain Robert B. Reeves, Jr., the commencement address was delivered by Dr. Frederick G. Hoffman, Professor of Pharmacology and Associate Dean of the Medical School.

Presentation of diplomas, certificates and awards of achievement, was made by Dean Moss, assisted by Professor George L. O'Grady, Assistant Dean, DOS; Professor Patricia A. McLean, Director of Division of Dental Hygiene, DOS; Professors John J. Lucica, Alex Lifschutz, Edward A. Cain, Jr., Solomon N. Rosenstein, Edward V. Zegarelli,

Nicholas A. DiSalvo, Joseph A. Cuttita; Dr. Matthew D. Levin and Messrs. Edward M. Sonnenberg and Nicholas A. Vero.

Dental Hygiene honor awards were presented by Dr. Abbe J. Selman, Lenore Nordstrom (President, Dental Hygienists' Association of New York), Kathleen Silko, R.D.H., M.S. and Professors Cuttita and McLean.

Professor Cuttita proudly presented the F. J. Swanson Gold Medal, dental hygienic honor award, to his daughter, Ellen, who received the B.S. in Dental Hygiene.

## Dr. Alan DeForest Smith Retires for Second Time

Dr. Alan DeForest Smith

editor of the New York Herald-Tribune. That brief experience was only one of the interludes on his way to a career, already in view, in orthopaedics.

The career has spanned 52 years, 50 of them in association with The Presbyterian Hospital.

We may suggest something of the magnitude of Dr. Smith's achievements by quoting two paragraphs from the June, 1968, *Bulletin* of the American Academy of Orthopaedic Surgeons, an issue dedicated to him:

"In the period between 1926 and 1933, Dr. Smith developed techniques for transplanting homologous bone grafts in patients with osteogenesis imperfecta when it was important to correct severe deformity and to strengthen the bone structure. The grafts were procured usually from a parent. In two instances it was necessary to preserve a portion of the graft in a refrigerator until the entire procedure could be completed. It was from this experience that Dr. Smith conceived the idea of a bone bank, which eventually was established at the Orthopaedic Hospital in 1946 and was the first to be organized in a civilian hospital."

"One of the most significant of Dr. Smith's achievements was the move of the New York Orthopaedic Hospital in 1950 to the Columbia-Presbyterian Medical Center and integration of the Fracture Service, already established at Presbyterian, within the framework of the Orthopaedic Hospital. A strong and complete Department of Orthopaedics was created thereby with availability for consultation and staff contact in all branches of medicine and surgery, intensification of teaching programs and greater facilities for research in orthopaedics and skeletal trauma. That the amalgamation occurred so smoothly was due in large measure to the wisdom and discernment of Alan Smith."

Among the four hundred guests who attended a certain much publicized wedding at the White House recently were two persons whose names are well known to the Columbia-Presbyterian Medical Center, Dr. and Mrs. Alan DeForest Smith.

When we spoke with Dr. Smith recently, some news came to light quite unrelated to White House weddings: As of June 30, 1971, Dr. Smith has retired for the second time.

His official retirement occurred in June, 1956. At that time he had served as Director of the New York Orthopaedic Hospital and Professor of Orthopaedic Surgery of the College of Physicians and Surgeons for 16 years. After retiring from these posts he continued in active practice.

A few days ago he came into Acheson Pavilion, a hale and hearty eighty, looking hardly any older than his photo of fifteen years earlier. In fact, as he spoke of times past, it was possible to visualize him as the young reporter he had been when his father was an

mother decide what's best for her and her baby. He helps young people choose careers and colleges. He sees that other people's children get some of the things in their lives they'd like to have, but their own parents can't afford—like a

# Presentation Ceremony, Department of Nursing

"... In thy radiance we see light. Torch, thy children's lamps to kindle, "Beacon star, to cheer and guide..."—Stand, Columbia!

Presentation exercises for the June section of the 79th class of the Department of Nursing, Faculty of Medicine, Columbia University were held in the P&S Alumni Auditorium on June 1.

For many, this presentation ceremony was a very sentimental occasion, for the 1971 graduates wore the traditional long-sleeved blue and white striped uniforms for the last time.

Dean Mary I. Crawford, Professor and Associate Dean (Nursing) presided.

Following the processional, the welcoming address was delivered by Clare Gibbs-Rogers, C.U. '71. A period of meditation was led by Karen Orlip, C.U. '71, and Sister Frances Karovic, S.M.I., B.S. Brief addresses were made by Susan Zator, C.U. '71, and Nancy Sturgis, R. N., M.A., Associate in Nursing.

Marian Artis, C.U. '71, sang the lovely ballad, "If We Only Have Love," accompanied at the piano by Ruth Lortz, C.U. '71.

Presentation of awards, diplomas and pins was made by Professor Crawford, assisted by Professor Helen F. Pettit, R.N., M.S., Director of Nursing Education, for the B.S. candidates and Professor Ann M. Earle, R.N., Ed.D., Director of Program, for the Psychiatric-Community Mental Health Nursing M.S. candidates.

Two further brief addresses were made by Sarah Sheets, R.N., M.Ed., Assistant Professor and Anne Walshe, C.U. '71.

The singing of "Stand Columbia!" and closing words

awarded to a member of the graduating class who has demonstrated professional competence and a sincere interest in maternity nursing.

Six of the graduating students received the Master of Science Degree in Psychiatry Community Mental Health Nursing, and 34 were awarded a baccalaureate degree.

Eighteen of the 40 graduates had relatives—ranging from mother to father, from uncle to cousin—who had graduated from either the College of Physicians and Surgeons or from the School of Nursing. Among them—Diane Hodgman, B.A., C.U. '71, whose great-uncle, Dr. Charles Jewett, received the M.D. degree

Professor Helen F. Pettit assists with presentations.

from P&S exactly 100 years ago, in 1871, and whose sister Barbara graduated from the School of Nursing in 1967; Nancy Huber, C.U. '71, whose brother Philip Huber, Jr., is a member of the 1972 class of Columbia's P&S and Sallie Province, B.A., C.U. '71, whose father, Dr. William D. Province, received the M.D. from P&S in 1936, and whose mother, the former Jean B. Smith, graduated from the School of Nursing in 1939. Sallie's parents presented the diploma and pin to their daughter.

## CHALLENGE . . .

*Continued from page six*

week at summer camp. And he gives unstintingly, quietly, with no thought of return, considering these things all part of his role as a physician in the community. He is careful about sending people to the hospitals and having them stay in any length of time as hospital costs are so high. He sees to it they get excellent care, yes, but knows it can be done within the home as well as within the hospital and the difference in cost to the patient is considerable.

Over the years he has built up a sizable practice, too big to handle alone now and he finds himself in real need of help. He is trying to cut back on his practice, is taking off Saturday afternoons as well as Thursday afternoons and Sundays. He is especially busy in the autumn when he does school physicals and he has too

much to handle the rest of the year as well.

We said at the outset our father wasn't writing this because he is too busy. Well, there is more to it than that. He sees the state our country, our society are in and he wonders—do young people really care about helping others any more? Are there people going into the medical profession today who are idealistic enough to dream of service rather than prestige, of giving to others rather than getting for themselves? He wonders if there exists even one young doctor who, with his eyes wide open, would choose to walk into his medical practice and attempt to take on for a lifetime the tremendous load our father has struggled to bear. And he doubts very much that there is. He looks at the headlines and he thinks they just don't turn out concerned, committed young people anymore.

He wonders those things,

## To Dr. H. Houston Merritt, P&S Dean Emeritus, An Honorary Degree and a Memorable Citation

Dr. H. Houston Merritt

The honorary degree of Doctor of Science was conferred upon Dr. H. Houston Merritt, Dean Emeritus of Columbia University's College of Physicians and Surgeons, at the Columbia University Commencement Exercises on June 1. *The Stethoscope* is proud to print the text of the citation used by President William J. McGill in conferring this degree:

"H. Houston Merritt, for the Degree of Doctor of Science:

"Native North Carolinian, you sought your undergraduate training at a Southern institution moving northward to Johns Hopkins for your medical training, then to New Haven and to Boston for your postgraduate training. However this northward progress may have been regarded by your Southern forbears, your New York colleagues recognize in you a rare combination of Southern courtliness and Yankee ingenuity, together with the New Englander's ability to communicate eloquently with the fewest possible words.

"Early in your career you firmly established your prowess as a clinician and teacher while at the same time adding to the knowledge of neurological disease and developing treatment to enable the afflicted to lead useful lives, notably your pioneering work in anticonvulsant therapy. Neurologists the world over, many of them trained by you, regard you as their prophet and your

textbook as their Bible.

"For more than a score of years as professor and chairman of the Department of Neurology in this University and for the last twelve of these as Dean of the Faculty of Medicine and Vice President in Charge of Medical Affairs, you enlarged your scope of leadership as you advanced your discipline and brought an entire medical school and the whole of medical education increasing distinction.

"As man of science, you serve medicine with brilliance in discovery and with objectivity in judgment; as healer, you serve your fellows with compassion and your profession with integrity; as a member of this academic community you have served Columbia with wisdom and affection. In recognition of laudable qualities and accomplishments in friend and colleague, I confer upon you in gratitude Columbia's doctorate in science, *honoris causa*."

but, believe me, we don't! We believe in your young medical students. We believe in their idealism. We believe they do care and want to try through their skill and concern, to make this tired old world a better place for us all.

Please, share this letter with your medical students, all of them, but especially with those whose dreams most match his. If they are behind him, please ask them if they won't take a moment, any of them, to write him and tell him they support him in his effort. We, his family, do what we can, but this kind of encouragement, true moral support, really must come from his own profession. Those who are going forth to the crowded ghettos of our inner cities, those who are heading into the diseased and drug infested college campuses, those who are going back to help heal the many different kinds of wounds, physical, mental, moral and spiritual, of their own ethnic minority groups—won't you send him a note sharing with him your plans—telling him that you are throwing off the certain promise of a prosperous urban affluence for the uncertain future, but the better life, where your only security will come from your own sense of self-worth, your own inner

knowledge that you are doing all you know how to help build up a country, to help shore up a society, that you are being the doctor, the physician, the healer in the broadest sense of the term.

Most especially if there is one among you whose dream is to serve in a community like Abingdon, please get in touch with us! We want you to come to Abingdon to look the situation over. Call us or write us—let's start working something out between you and our father. Do remember, in a career as a small town family doctor you will be the heartbeat of the community, you will know its greatest sorrow as well as its greatest joy, you will be involved to your fullest for your responsibility will take all you have to give. If the responsibility is tremendous so is the satisfaction, the sense of fulfillment. It is a big investment of yourself you'll be making—with dividends that know no bounds and opportunity that knows no limits. In the small town the only boundaries you have in serving others are those you set yourself!

Sincerely,

The Bowman Clan

Write: Dr. J. A. Bowman, R.R. 1, Abingdon, Ill. 61410.

# Stethoscopia

## • ENGAGEMENTS

Dr. Maryann J. Colenda, intern, Department of Pediatrics, is engaged to Dr. Ralph E. Riccardi, Jr. A fall wedding is planned.

## • MARRIAGES

Dr. Ethel M. Silverman, intern, Department of Medicine, was married to Dr. Samuel G. Siris, resident, Department of Psychiatry, on June 3.

In accord with the new trend to bring weddings outdoors, Ann Marie Silvani, secretary, Projects Office, was married to Edsel Rodriguez on June 12, in the Botanical Gardens of the Bronx. Mr. Rodriguez is a junior at Brooklyn College.

Anne Wimpje Kalf, staff nurse, PH, was married to Dr. David H. Brown, resident, Department of Ophthalmology. Mrs. Brown, the bride, participated in the Columbia University Exchange Visitor Graduate Nurses Program in 1969. Dr. Brown, the groom, is the son of Dr. Harold W. Brown, Professor Emeritus of Parasitology and founder of the Medicine in the Tropics program at P&S.

## • NEW ARRIVALS

Diana Duffy, staff nurse, labor and delivery, and her husband, Charles, welcomed their second daughter, Gayle Frances, on May 23 at Sloane Hospital. Proud grandfather is Thomas Duffy, Maintenance and Construction retiree.

Eugene Mozillo, Maintenance and Construction, and his wife, welcomed their fourth child, a daughter, Zefira, born May 16 in Sloane Hospital.

Paul Cardillo, staff pharmacist, and his wife, welcomed their first child, a daughter, Donna Marie.

Mrs. Sally Avalone, supervisor, A.C.R., Out-Patient Billing, recently became a great-grandmother. Her granddaughter, Mrs. Cira Ricardo, welcomed her second child and second daughter Magda.

Mrs. Rita Engstrom, assistant supervisor, clinic reception, became a grandmother for the first time, with the arrival of a granddaughter, Laurie Ann, on May 24.

Dr. Stanley M. Steinerman, Adjunct Clinical Professor of Dentistry, DOS, and his wife, Susan, welcomed a son, Evan James, on May 21.

Rodriguez-Silvani

Mrs. Avalone

Lillian Vahey

## • CONGRATULATIONS TO:

Harry S. Morelli, staff pharmacist, who was awarded the Master's Degree in Hospital Pharmacy from St. John's University in June.

Ralph Hylton, who was promoted from porter to head porter, Department of Housekeeping, PH 20.

Lillian Vahey, who was promoted from senior supervisor to Assistant Director of Nursing, Vanderbilt Clinic.

Cynthia Charlton, who was promoted from head nurse, Emergency Service, to senior supervisor, Vanderbilt Clinic.

Carol Pafundi, who was promoted from staff nurse to head nurse, Pediatric Clinic, V.C.

Barbara Herndon, who was promoted from staff nurse to head nurse, V.C. 10.

## • WELCOME BACK:

Mrs. June O'Neill, staff nurse, Babies Hospital, who returned to her post following a maternity leave of absence. Her son, Terrace Edward, was born November 11.

## • NOTES OF INTEREST:

Mrs. Catherine M. Long, supervisor of Clinical Pathology Laboratories, attended a meeting of post-graduate medical technologists in Kamloops, British Columbia, recently. She spoke on automation in laboratories.

## DOINGS OF DOCTORS

DR. CHARLES S. NEER, II, Attending Orthopedic Surgeon, PH and Professor of Clinical Orthopedic Surgery, P&S, was Visiting Professor at the University of Colorado in Denver recently. During his stay he was the guest speaker at the First Annual Trauma Conference of the Rocky Mountain Chapter of the Western Orthopedic Association. The title of his lecture was *Shoulder Injuries*.

DR. ALLEN I. HYMAN, Assistant Professor of Anesthesiology, P&S, Assistant Attending Anesthesiologist, PH and co-director of the Respiratory Care Service, delivered two lectures at a conference on Pharmacology of the Perinatal Period at Emory University, Atlanta, Georgia, April 12-14. He spoke on *Pharmacology and Physiology of Hypoxia in the Fetus and Newborn and Anesthesia Management of the Newborn*.

Dr. Hyman was recently elected to the Executive Committee of the the Anesthesia Section of the American Academy of Pediatrics.

DR. ANDREW L. BASSETT, Professor of Orthopedic Surgery, P&S and Attending Orthopedic Surgeon, PH, was a panelist at a recent symposium on the *Impact of Medical Device Legislation*, held at Rockefeller University in New York City.

DR. CHARLES E. HUCKABA, Professor of Rehabilitation Medicine, P&S and Member-At-Large of the Faculty of Engineering and Applied Science, was recently presented with a Distinguished Alumnus Award by the College of Engineering of the University of Cincinnati. These awards, initiated in 1969, were presented to four of the Alumni this year.

DR. SIDNEY L. HOROWITZ, Professor of Dentistry and Director of the Division of Orofacial Development, DOS, delivered the 25th Annual Northcott Memorial Lecture at a meeting of the British Society for the Study of Orthodontics in Sheffield, England, April 23. His topic was *The Challenge of Facial Deformity*.

At the May 11 meeting of the Pirquet Society for Clinical Medicine at the New York Academy of Sciences, DR. MICHAEL HEIDELBERGER, Professor Emeritus of Immunochimistry, P&S, and Adjunct Professor of Pathology (Immunology), was awarded the Pirquet Gold Medal for 1971. Dr. Heidelberg was also made an honorary member of the Society at the meeting. The subject of his talk was *Immunology from von Pirquet to Today*.

DR. WILLIAM A. BLANC, Professor of Pathology, P&S, and Head of the Division of Developmental Pathology, presented a paper, *Placental Pathology for the Pediatrician*, at St. Christopher's Hospital for Children, in Philadelphia, April 22.

Dr. Blanc also attended the combined American Pediatric Society and Society for Pediatric Research meetings, held in Atlantic City, April 29-30, and was co-author with Drs. Naeye and Wright, and Mr. Burt, of the Pennsylvania State University-Milton S. Hershey Medical Center, of a paper on *Economic and Racial Influence on the Sex Ratio*. And as an invited guest of the Tenth Annual Pediatric Postgraduate Symposium at Maimonides Medical Center on May 25, he presented two papers: *Obstructive Jaundice in Infancy*, and *Hypogammaglobulinemia*.

DR. RICHARD L. MASLAND, Professor and Chairman, Department of Neurology, was appointed Chairman of the Easter Seal Research

Foundation's Board of Trustees. The announcement was made by Dr. William Gellman, Foundation Director, at a recent meeting in Chicago.

DR. DAVID B. MOORE, Associate Attending Obstetrician and Gynecologist, PH, and Associate Clinical Professor of Obstetrics and Gynecology, P&S, has been elected Secretary of the Section on Obstetrics and Gynecology, Medical Society of the State of New York.

Dr. David B. Moore

Dr. Zacharias Dische

Exchanging the bedrock of the usual medical convention sites for the choppy Baltic, DR. ZACHARIAS DISCHE presented a paper on "Science and the Uniqueness of Man" to members of the Finnish Medical Society at the annual meeting this spring. The Society's meetings end with a cruise to selected ports in the Baltic Sea. Following this year's voyage, which included a stopover in Riga, Dr. Dische was received by the Rector of the University of Helsinki and was presented the university medal. Dr. Dische is Professor Emeritus of Biochemistry, P&S, and special lecturer in biochemistry. He was invited by the University of Helsinki to lecture on any subject in biochemistry he may choose during the next school year.

DR. ROBERT W. WINTERS, Professor of Pediatrics, P&S, and Attending Pediatrician, PH, has been appointed Chairman of the Training Committee of the National Institute of Child Health and Human Development. The Committee, composed of 12 distinguished behavioral and biological scientists from various universities throughout the United States, is charged with the review of all training and program-project grants concerned with research in growth and development.

DR. ARTHUR G. DEVOE, E. S. Harkness Professor of Ophthalmology and Chairman of the Department of Ophthalmology, spoke on *Management of Controversial Problems in Ocular Trauma* at the annual Eye Teaching Day, held at the State University of New York at Buffalo, May 6.

DR. ORLANDO J. MILLER, Professor of Obstetrics and Gynecology and of Human Genetics and Development, P&S, spoke on *Assignment of the Human Thymidine Kinase Gene Locus to Chromosome 17, Using Quinacrine Fluorescence in Man-Mouse Somatic Hybrid Cells*, at the Society for Pediatric Research, in Atlantic City on April 30.

Earlier that month, he discussed gene regulation in somatic cells at Basel, Switzerland, and visited scientists in Warsaw and Cracow, Poland. Dr. Miller also delivered the keynote address at the Teratology Society's Annual meeting in Williamsburg, Va. His subject was *Prenatal Diagnosis of Congenital Malformation and its Implications for the Future*.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXVI, NUMBER 8

AUGUST, 1971

## FOR A HYPERTENSION CENTER AT COLUMBIA-PRESBYTERIAN, HEART-LUNG INSTITUTE GIVES

Dr. John H. Laragh of the Department of Medicine at Columbia University has been awarded a five-year grant from the National Heart and Lung Institute to establish a Hypertension Center at the Columbia-Presbyterian Medical Center.

With a group of associates, Dr. Laragh will create this Center for the study, biochemical classification, diagnosis and treatment of patients with high blood pressure. A grant of \$992,586 has been assigned to the first 12 months' development of this project.

It is one of 34 grants totaling \$16.4 million announced on July 15 by the National

Dr. John H. Laragh

Heart and Lung Institute of the National Institutes of

Health, Bethesda, Maryland, for the establishment of Specialized Centers of Research (SCOR) in the fields of hypertension, arteriosclerosis, pulmonary disease and thrombosis, to be located at 29 universities and hospitals throughout the country.

At the Hypertension Center any person with high blood pressure, including those with kidney or adrenal disease, can be considered for acceptance in the program.

Each patient will be treated individually, depending on the results of measurements of the kidney and adrenal hormones of the renin-angiotensin-aldosterone system. This group of

hormones works together in normal people to regulate blood pressure by regulating the amount of sodium, potassium and fluid content of the body. Many of the patients accepted for study at the Center will be admitted to the Hospital, usually for a two-week period, for special studies involv-

ing precise and complicated measurements of the kidney and adrenal hormones in both blood and urine.

These complex analyses require the measurement of exceedingly small (one trillionth of a gram) amounts of these hormones for which methods

*Please turn to page three*

## 5-Year Grant to Dr. Laragh

## Dr. Reemtsma Heads Surgery

Dr. Keith Reemtsma has been appointed Chairman of the Department of Surgery at Columbia University's College of Physicians and Surgeons, and Director of the Surgical Services at Presbyterian Hospital, effective July 1. He comes to Columbia-Presbyterian from the University of Utah, where he was director of the Department of Surgery.

Dr. Reemtsma, who was born in Madera, California, in 1925, was graduated from the Idaho State University and received his M.D. from the University of Pennsylvania in 1949. He served his internship and residency at Presbyterian Hospital, and was a member of the Department of Surgery in 1957. In 1958, he received his Med. Sc. D. from Columbia University.

For a time he worked at Tulane University where he became professor of surgery, and in 1966 moved to the University of Utah to assume the directorship of the Department of Surgery.

Dr. Reemtsma's major research activities have been in the fields of cardiovascular surgery and organ transplantation. In recent years he has been one of the pioneers in renal hetero-transplantation.

He is married to the former Ann Pierce and is the father of two children.

Dr. Keith Reemtsma

## Heart-Lung Institute Awards Three-Way Grant

Dr. DeWitt S. Goodman

Rockefeller University, Columbia University's College of Physicians and Surgeons, and Albert Einstein College of Medicine have combined forces

to conduct an innovative and unique research program in the prevention of coronary heart disease. With the promise of five years of financial support from the National Heart and Lung Institute of the U.S. Department of Health, Education and Welfare, they have established a Center for Research in the Prevention of Premature Arteriosclerosis.

Announced on July 15 was the initial grant of \$939,250 to start the program. Also made known were 12 other university and medical research centers in which the U.S. will conduct investigations into various aspects of arteriosclerosis.

According to Dr. Frederick Seitz, President of The Rockefeller University, this coordinated attack by three major scientific centers in New York City might well lead to the establishment of a model for an even more extensive attack on heart disease.

Dr. Edward H. Ahrens, Jr., Professor of The Rockefeller University and an authority on lipids, will serve as principal investigator. Associated with him in determining policy are: Dr. Howard A. Eder, Professor of Medicine at the Albert Einstein College of Medicine, and Dr. DeWitt S. Goodman, Professor of Medicine at

*Please turn to page three*

*"To be involved in any way with a child afflicted . . . is to understand the urgency of this challenge."*

A mother's compassion for young cancer patients has generated a fund-raising effort to finance tumor research.

When the son of Mr. and Mrs. Harold Tananbaum had a benign tumor removed at Babies Hospital, his mother learned of the work of the Medical Center's Pediatric Combined Tumor Clinic and saw the pressing need to help afflicted children of all ages. "To be involved in any way with a child afflicted by cancer is to understand the urgency of this challenge," she wrote following her son's hospitalization last year.

Mrs. Tananbaum's individual reaction to the challenge

was to establish a private foundation, which she named, in memory of her father, the Maxwell Leeds Pediatric Tumor Foundation. The officers of the one-year-old Foundation are all young women, contemporaries of Mrs. Tananbaum, and include Mrs. Tricia Cox, nee Nixon, Honorary Director of the organization.

The Foundation's fund-raising committee recently met in the B.H. Board Room to plan future activities and to present the proceeds from past projects to Dr. Thomas V. Santulli, Attending Surgeon, P.H., and Professor of Surgery, P&S, and Dr. John N.

Schullinger, Assistant Attending Surgeon, P.H., and Assistant Professor of Clinical Surgery, P&S. The contribution, in the form of a \$5,000 check, was the first in the Foundation's brief history. The pediatric surgery service, of which Dr. Santulli is the director, is most closely involved in the clinical research and treatment of childhood tumors.

"The contribution of the Maxwell Leeds Pediatric Tumor Foundation will be used to further both clinical and basic research on malignant tumors of children," Dr. Santulli said in accepting the check for the P.H. Pediatric Tumor Fund.

Mrs. Harold Tananbaum (center) chairs a meeting of the Maxwell Leeds Pediatric Tumor Foundation in the B.H. Board Room on June 16. Representing Babies Hospital are (in foreground, from left) Dr. Thomas V. Santulli, director of the pediatric surgery service; Ann Cavanagh, Unit Manager, B.H.; and Dr. John N. Schullinger, Assistant Attending Surgeon in the service.

## Gerard Walker is Our Purchasing Agent

Gerard J. Walker

The appointment of Gerard J. Walker as Purchasing Agent for the Presbyterian Hospital has recently been announced by G. R. Masten, Assistant Vice President, Nonprofessional Services.

Mr. Walker is very happy about his new appointment

but regrets that it had to come about as a result of the untimely death of his long-time friend and colleague, Peter R. Bozzo.

His career at the Hospital began in 1946 when he served as Night Superintendent in PH, a position he held until his appointment as Assistant Purchasing Agent in 1950.

Jerry, as he is known to his friends, recently received an honor of which he is most proud—membership in the 25-Year-Club at this Medical Center. A beautifully framed diploma commemorating this distinction hangs on his office wall, about which he affably comments, "Now I really feel like an oldtimer."

A native New Yorker, Mr. Walker has long been a resident of the Flatbush section of Brooklyn, where he lives with his wife, Jeanne Marie, a son, Rod, 17, and a daughter, Mary Grace, 15.

## Testing Chemicals for Cancer-Causing Properties

Does a new chemical product have cancer-causing properties?

Until recently, this was a \$100,000 question for every chemical compound being considered for marketing. Today, an overnight test developed in the Microbiology Department of P&S can save a manufacturer—and the consumer—from \$75,000 to \$100,000 in testing expenses by screening out the compounds that have a high likelihood of being carcinogenic, or cancer-causing. The heavy costs of animal tests required by the Food and Drug Administration are frequently passed on to the consumer through increases in the retail price.

Because the burden of proof of a product's safety is on the manufacturer, he still has to conduct tests on the compounds that pass the rapid screening test. But now he can elect to stop further testing of a compound if the rapid screening test shows it to be potentially carcinogenic, thus saving as much as three years' time, thousands of man-hours of skilled technicians, and the cost of maintaining as many as 600 laboratory animals throughout their natural lives.

The new test, which uses bacteria, was developed here by Dr. Herbert S. Rosenkranz, Professor of Microbiology, Columbia University, Dr. Marvin D. Anderson, now with Henry Ford Hospital in Detroit, and Dr. Eve E. Slater, while she was a student at P&S.

Dr. Rosenkranz, together with George A. Carden III and senior technician Howard S. Carr, has now extended the application of the new bioassay to pesticides and chemical substances that contribute to environmental pollution. This direction of their research has produced some interesting results. Mr. Carden, who is the

son of Dr. George A. Carden, Associate Attending Physician, PH, and Associate Clinical Professor of Medicine, P&S, has been doing the research while awaiting his first year of medical studies at P&S this fall.

The bacterial organisms in the test are an abnormal variety of the intestinal bacteria known by their abbreviated scientific name of *E. coli* (pronounced ee-coal-eye). The aberrant variety is like the normal bacteria that naturally inhabit the human intestine, except for one quality: it lacks an important enzyme, called DNA polymerase, which enables normal bacteria to repair their damaged DNA. The nucleic acid DNA contains genetic information vital to biological reproduction. Thus these abnormal bacteria cannot multiply in the presence of substances that damage their DNA. There is a strong direct connection between a compound's tendency to damage DNA and its tendency to cause cancer.

The chemical to be tested is placed in the middle of a dish containing abnormal bacteria and plenty of agar, containing their favorite nutrient. The substance is also tested in another dish with normal, or "wild," *E. coli* as controls. The bacteria are allowed to grow overnight at 99° F. In the morning the lab technologist can measure the extent of inhibition of bacterial growth surrounding the compound. Carcinogenic substances inhibit the growth of the abnormal bacteria around them much more markedly than they do the growth of the normal strain.

The Columbia University microbiologists tried out the *E. coli* test on a selected group of chemicals that had already undergone extensive animal testing. They established a

## SEVERAL AWARDS TO DR. MANDEL

Dr. Irwin D. Mandel, Professor of Dentistry at Columbia University School of Dental and Oral Surgery, was awarded The Research Medal of the Columbia University Dental Alumni Association on May 20, 1971. On June 13, as part of the 22nd Annual Berkshire Conference in Periodontology and Oral Pathology, Dr. Mandel received The Tufts University Award for Leadership in Periodontology. These awards are in recognition of research in the areas of plaque and calculus formation, salivary composition and its relation to oral and systemic diseases.

Dr. Mandel is Director of the Division of Preventive

Dr. Irwin D. Mandel

Dentistry at C.U. He serves as an Associate Editor of Pharmacology and Therapeutics in Dentistry, and as a Consultant to the Council on Dental Therapeutics of the A.D.A. Recently, Dr. Mandel was elected President of the Periodontal Research Group of the International Association of Dental Research. He will become a Fellow of the American College of Dentists early this fall.

close correlation of *E. coli* growth inhibition with well-known cancer-causing chemicals. For instance, cigarette smoke condensate gives a positive test of *E. coli* growth inhibition.

In discussing the practical applications of the *E. coli* test, Dr. Rosenkranz makes a point of emphasizing that the test, "its accuracy notwithstanding, is not a substitute for animal studies, since carcinogenic tendencies are established by inference."

In screening pesticides and pollutants, Dr. Rosenkranz and his associates have found that the widely used pesticides captan and dichlorvos, as well as the gasoline additive dibromomethane, give strongly positive reactions in their bioassay system. Because of the established correlation between ability to react with cellular DNA and carcinogenic potential, the investigators feel that continued use of these substances requires re-evaluation. The Columbia scientists are also hard at work trying to determine the chemical basis of the action of these substances on the cellular DNA.

## Dr. Lester C. Mark is Chairman, HEW Pharmacology-Toxicology

Dr. Lester C. Mark, Professor of Anesthesiology, P&S, and Attending Anesthesiologist, PH, has been appointed Chairman of the Pharmacology-Toxicology Program Committee, Department of Health, Education and Welfare, National Institutes of Health, for a two-year period commencing July 1.

The Committee was established by the Assistant Secretary for Health and Scientific Affairs, HEW, in 1970, by combining the Pharmacology and Toxicology Training Committee and the Pharmacology/Toxicology Review Committee.

The Committee reviews research program-project and grant applications in pharmacology and toxicology; reviews training grant and fellowship applications in areas of pharmacology, toxicology, clinical pharmacology, and medicinal chemistry; makes recommendations concerning scientific

Dr. Lester C. Mark

merit of grant applications and provides continuing research status assessment in these fields of science. The Committee also advises on the direction of research manpower needs and research training in these areas and provides coordination, balance, continuity and priorities in research and research training.

## New Director of Pediatric Cardiology

Dr. Welton M. Gersony, Associate Professor of Pediatrics at Babies Hospital, has been appointed Director of the Division of Pediatric Cardiology in the Department of Pediatrics.

Dr. Gersony received his training in pediatrics at the Case Western Reserve University Medical School and in cardiology at the Children's Hospital Medical Center of the Harvard Medical School. He has been on the faculty of the College of Physicians and Surgeons at Columbia University since 1968 and is the Director of the Pediatric Cardiovascular Laboratory of the Columbia-Presbyterian Medical Center. He is a fellow of the section on cardiology of the American Academy of Pediatrics and a member of the Society for Pediatric Research, the Harvey Society, and the American Federation for Clinical Research.

Dr. Gersony is also the principal investigator on a National Institutes of Health grant to study "Natural His-

Dr. Welton M. Gersony

tory of Congenital Heart Defects" and is co-investigator in the Medical Ethics Program of the College of Physicians and Surgeons. The Division of Pediatric Cardiology at Babies Hospital is responsible for the clinical care, educational programs and research related to heart disease in children. The previous director of the division, Dr. O. R. Levine, will remain an active member of the division of pediatric cardiology and will continue to direct the cardiovascular research laboratory.

of detection have only recently been developed. Various abnormal patterns of these hormones in patients with high blood pressure can point to a cause for the hypertension, and this information in turn can suggest specific treatment with a particular drug to correct the hormonal abnormality. Less frequently, kidney or adrenal surgery may be recommended instead of drug therapy.

Dr. Laragh, Professor of Clinical Medicine, P&S, and Associate Attending Physician, PH, who is the Program Director of the new Hypertension Center, was a co-recipient in 1969 of the \$50,000 Stouffer Prize, awarded annually for notable achievements in research into causes of high blood pressure and arteriosclerosis. At that time he was cited for original work describing the basic nature of the interaction of kidney and adrenal hormones (renin and aldosterone), their role in causing malignant hypertension, and their important role in the normal regulation of the amount of salt and water in the body.

Dr. Laragh states: "While we used to think of high blood pressure as a single disease, recent biochemical studies by our research team have indicated that there may be as many as nine different subgroups with distinctly different hormonal patterns. These various categories may have a different prognosis and they appear to respond to different drug programs. The information that we have already obtained is exciting because it suggests that the treatment and the outlook can be guided to great advantage, depending on the biochemical type of high blood pressure the patient exhibits."

There will be other studies linked to this central theme of longitudinal analysis and treatment of hypertensive diseases based on specific biochemical profiles. Included as part of the multidisciplinary research program at the Medical Center will be: 1) a characterization of catecholamine metabolism in hypertensive biochemical subtypes; 2) the development of a control system for the automatic regulation of blood pressure; 3) fundoscopic mapping of the retina in hypertensives with the joint participation of the Eye Institute staff; 4) measurement of regional blood-flow changes in hypertension with renal, coronary, cerebral circulations; a combined effort involving the Departments of Medicine, Neurology and Radiology; and 5) analysis of salivary electrolyte excretion in hypertension: this last to be carried out in the Columbia University School of Dentistry.

Among those to be associated with Dr. Laragh in the Hyperten-

## New Conference Room Honors Dr. Merritt, P&S Dean Emeritus

Many Medical Center staff members and guests recently came to view the effects of a transformation and to honor the man who made it happen.

The occasion was the dedication on June 18 of The Merritt Conference Room, transformed from an antiquated laboratory on the third floor of P&S.

Gathered at the entrance to the new facility, adjacent to the associate deans' offices, the crowd witnessed the unveiling of a plaque dedicating the conference room "in Honor of H. Houston Merritt, M.D., Dean of the Faculty of Medicine and

Vice President in Charge of Medical Affairs, 1958-1970 . . ."

Dr. Paul A. Marks, who was appointed to the two posts following Dr. Merritt's retirement, warmly praised Dr. Merritt's contribution to medical education in his dedicatory remarks. He pointed out that the new conference room was part of the area set aside by Dr. Merritt as office space on behalf of the incoming administration.

After Dr. Merritt's comments, acknowledging his role in reserving the space for administrative offices, the visitors filed into the new conference room for inspection and refreshments. Gone were the dusty tables and the corroded sinks that filled the room in the summer of 1970, when renovation began. Instead, the visitors found an airy room equipped to accommodate the latest teaching and communi-

As Dr. H. Houston Merritt's likeness looks on in the background, Medical Center's staff members and guests partake of refreshments at the opening of The Merritt Conference Room on June 18.

cations equipment. The Merritt Conference Room has a central conference table seating 12, a multi-panel board for writing and a screen for the projection of slides and movies. The room has ample closet space and even an elec-

trical range to prepare sustenance for extended sessions. With a maximum seating capacity of 40, the Merritt Conference Room can also be converted into a teaching area for smaller classes and for seminar groups.

### Three-Way Grant

Continued from page one

the College of Physicians and Surgeons of Columbia University, and Associate Attending Physician, Presbyterian Hospital.

Drs. Ahrens, Eder and Goodman call the new center a "unique medical resource in New York City that will permit a wide range of interrelated investigations in a coordinated and effective manner." It came into being, they point out, because no single laboratory in the area could adequately take advantage of the "enormous advances" in research or disease prevention that have taken place in the field of lipid metabolism as applied to arteriosclerosis during the past 20 years.

Elevated levels of cholesterol and other fatty substances such as triglycerides, which are collectively called lipids, are, with few exceptions, strongly associated with increased risk of arteriosclerosis (so-called hardening of the arteries) and such consequences of the disease as heart attacks and strokes.

One unique aspect of the Rockefeller, Einstein, and Columbia joint operation will be the heavy dependence on the private sector in preliminary screening of candidates for the study.

#### Four-Part Program

The new medical resource will have four parts, as follows:

1) Private organizations, such as member companies of the American Telephone and Telegraph system, and Group Health Insurance, Inc., will screen out men and women with high blood lipid levels and refer them to the Central Clinic.

2) A Central Clinic is being established at The Rockefeller

University for examination of patients and comparative studies.

3) Satellite Clinics will be established at Columbia, Einstein, and The Rockefeller Hospital where specialized clinical and metabolic studies will be carried out on small groups of patients with special characteristics.

4) The research laboratories at the three institutions will study various aspects of human lipid and lipoprotein metabolism from several critically important points of view.

While the population of individuals with elevated lipids in their bodies will not necessarily be a representative sample of all of New York City, it is expected that important answers will be provided to many questions such as the prevalence of these occurrences in an urban area, the incidence of heart disease in various members of a family, methods of providing better detection and diagnosis of hyperlipidemia (high blood lipid levels), and the relative values of drugs and diet on reducing cholesterol and other lipids.

Another important area to be investigated concerns the sociological and psychological factors that determine the attitudes and behavior of the public and their physicians toward "active intervention" against arteriosclerosis in people who apparently have no external symptoms. Can studies be set up to show how well people can be motivated to keep to a certain diet, hold their weight down, and use prescribed drugs?

Many of the patients referred to the Central Clinic will have abnormally high cholesterol or triglyceride levels

and will be placed on various treatment regimens. Statistical controls will be established.

#### Associated with Dr. Goodman: Dr. Nossel and Dr. Cannon

Simultaneously, specialized studies will be proceeding at the other satellite clinics. Dr. Goodman, using a wide range of resources at the Columbia-Presbyterian Medical Center, will carry out cholesterol turnover studies and evaluate various methods of treatment. Associated with him in related research will be Dr. Hymie Nossel and Dr. Paul Cannon.

Dr. Eder at Einstein and the Bronx Municipal Hospital Center will conduct detailed studies in lipoprotein chemistry and metabolism. Associated with him will be Dr. Clinton Deming and Dr. Charles Frank. Dr. Ahrens will direct research at The Rockefeller University.

Because of the large number of patients who are expected to participate in this research project, computer programming will be necessary to cope with the data. When individuals are referred back to their company or private physician, the personnel of the Center will advise and assist the physician in every way possible.

The representatives of the three institutions, in forecasting developments, have expressed the hope that within three years many significant conclusions about arteriosclerosis will be available for all scientists, and that a model can be developed which may be duplicated in other urban centers, contributing to a large-scale, multicenter primary prevention study.

"Have camera, will travel" may well be the motto of the specialists working for the P&S audio-visual program under the direction of W. H. Unger. Except that cameras, such as the movie camera (above) recording a procedure in the Medical Center's Urology Department, are only one part of the impressive panoply of complex modern equipment being placed in service by Mr. Unger to assist the various departments of P&S in research, teaching, and communications.

## TWO STORIES FOR NBC-TV

Elsa appears indifferent toward mike extended by Dr. Field, as she lies comfortably next to Dr. Grey.

"Every dog has his day," goes the old saying, and in this instance Elsa, the seven-month-old lion cub, had her day on May 29 when she was visited in her temporary home on the 18th floor of the Black Building by Dr. Frank Field, Science Editor, NBC-TV News.

Dr. Field interviewed Elsa with an assist from Dr. Ross M. Grey, Associate Professor of Pathology (Veterinary Medicine), who has been treating Elsa for osteoporosis (see *The Stethoscope*, May, 1971).

Elsa, Dr. Grey and Dr. Field appeared on the six o'clock NBC-TV news that evening.

On June 3, Dr. Field again visited the Medical Center, this time at Delafield Hospital, where he interviewed Cynthia and Sheila Duncan, the 17-year-old twin sisters from Corona, New York, who are both recuperating from surgery. Cynthia recently had both kidneys removed because of glomerulonephritis and was being kept alive with the aid of an artificial kidney. Sheila agreed to donate one of her kidneys so that her sister might live.

Two teams of surgeons, un-

der the direction of Dr. Joseph A. Buda, Associate Attending Surgeon, PH, and Director of Surgery at Delafield Hospital, performed the transplant operation on May 27.

Dr. Buda explained to Dr.

Cynthia, left, and Sheila Duncan smile disarmingly at Dr. Field, as he stops to pose for *The Stethoscope*.

## Smooth Transfer of Many Psychiatric In-Patients

A unique psychiatric program that allows severely disturbed psychiatric patients to go home at night is winning over skeptical psychiatrists at the Washington Heights Community Service.

The program is an outgrowth of a study carried out by the Service on 90 "in-between" patients, who could qualify as either full-time in-patients or day patients.

"Our study, which lasted 26 months, clearly showed that letting these patients go home at night is superior to hospitalizing them," said Dr. Marvin I. Herz, Director of the Community Service.

As Director, Dr. Herz is responsible for a 55-bed ward, occupying a whole floor of the Psychiatric Institute building, and for a large staff of supervising psychiatrists, residents, nurses, social workers and occupational therapists. The Community Service was set up six years ago under a grant from the National Institute of Mental Health to treat the psychiatric problems of the people of Washington Heights.

"Our day patients resumed their personal interrelationships with people in their community and returned to their jobs sooner than those patients who had been hospitalized full-time for similar mental conditions," Dr. Herz said. "Furthermore, fewer of these patients, once released, re-

quired additional psychiatric treatment than did in-patients with similar conditions."

About one fifth of patients who are sent to the Washington Heights floor of the Institute are in this "in-between" group. Some patients have just about the right level of psychiatric disability to go home evenings but are disqualified for nonpsychiatric reasons, such as living alone

Dr. Marvin I. Herz

and needing supervision, or needing hospital care for some physical illness.

Dr. Herz pointed out that the study was unique in that the 90 patients who qualified for day care were allowed to mingle with in-patients on the Service's busy ward and were treated by the same teams of

## Foreman of Elevators

Harry Satzger

The appointment of Harry Satzger as Foreman of Elevators, effective July 1, was announced jointly by Eugene T. Cleary, Administrative Assistant (Projects), and Francis X. Bernard, Supervisor of Engineering. He will succeed William Egan, present Foreman of Elevators, who is retiring in November.

Mr. Satzger will be responsible for the inspection and maintenance of all elevators within the Medical Center complex. Fifty-two elevators comprise the current roster, with several more to be installed in new buildings and in additions to existing buildings. But his primary field of interest lies in "preventive medicine"—spotting trouble before it happens.

mental health workers that treated the in-bound patients. Conducting the study in addition to Dr. Herz were Dr. Jean Endicott, Research Associate in the Department of Psychiatry, P&S; Dr. Alvin Mesnikoff, Director of the Community Service until 1969 and now Director of the South Beach Psychiatric Center, and Dr. Robert Spitzer of the New York State Department of Mental Hygiene. Dr. Herz is an Assistant Professor of Clinical Psychiatry, P&S, and an Assistant Attending Psychiatrist, PH.

The differences in the length of treatment and in psychiatric complications of the two groups of patients were striking. The "commuting" patients needed an average of only 48 days of treatment each to return to their private lives full time. Those confined to the ward during their treatment required an average of 139 days to be discharged.

The low average of treatment days for day patients did not mean that they were readmitted more frequently than the in-patients. Follow-ups of both groups show that the in-patients had to be readmitted for treatment at more than double the rate of former day patients.

Similarly, complications, necessitating placement of a patient in the intensive care unit for "regressive, suicidal or disruptive" behavior, occurred more than twice as often among in-patients than among the in-and-outers.

The success of the program cannot be attributed to a staff bias in favor of the program, Dr. Herz said. The therapists working with the patients in fact doubted the wisdom of allowing acutely ill patients to go home every night. As they gradually found out that the day-care system did the job, their fears and antagonism lessened. Nevertheless, they continued to oppose the day plan on the grounds that it took their patients from their supervision and control for more than half a day. They felt that it was harder to give proper treatment for patients without knowing what situations they had encountered on the outside.

Dr. Herz's advice to psychiatric treatment centers contemplating the introduction of the day-care system is to apply "a little administrative pressure" to help the therapists overcome their reservations and apprehensions.

The early experience of Dr. Herz and of his colleagues has helped the Washington Heights Community Service develop a smooth system of transferring patients from in-patient status to day care as soon as they reach the "in-between" category.

## If Your Friend Is a Litterbug, Kindly Ask Him To Please Refrain

Despite frequent public service "spot" commercials concerning littering on television, signs at every turn on highways, in busses and subway trains, it would appear that some people either don't see them, don't pay attention, or simply don't care about the cleanliness of our city.

A recent letter to a PH administrator from the Office of Neighborhood Government, Office of the Mayor of the City of New York (our local city hall), told of an "eyes" survey recently conducted by maintenance employees of the New York City Department of Parks which revealed that significant amounts of garbage and debris are "being deposited" in Mitchell Square Park by some employees and visitors.

*The Stethoscope* would like to appeal to Hospital staff, employees and visitors to please refrain from this act.

Mitchell Square Park is directly across from the Chemical Bank of New York, where the majority of Hospital staff and personnel deposit their money; think of that empty candy wrapper, soiled napkin or empty soda pop bottle as "money," and hold it for "deposit" in any one of the many garbage baskets posted in and around the area of the Park and the Hospital.

## Dental Staff, Hosts To Palsy Council

The staff of the Cerebral Palsy Dental Program in the Division of Pedodontics of the School of Dental and Oral Surgery was host to the Dental Guidance Council for Cerebral Palsy during its 24th Annual Scientific Meeting on Friday, May 14, 1971. Dean Melvin L. Moss extended a cordial welcome to the group. Dr. David H. Wolmer, Adjunct Assistant Professor and a Supervisor in the Cerebral Palsy Dental Clinic, is President of the Council and gave the keynote talk. Following a clinic demonstration, papers were presented by Dr. Solomon N. Rosenstein, Professor of Dentistry and Director, Cerebral Palsy Dental Program; Dr. Albert Green, Adjunct Assistant Professor and a Supervisor in the Cerebral Palsy Dental Clinic; and Dr. Samuel Rosen, formerly Supervisor in the Cerebral Palsy Dental Clinic. Following luncheon at Bard Hall, a paper was presented by Dr. H. Barry Waldman, Associate Professor at the Dental School of State University of New York at Stony Brook and a former Cerebral Palsy Clinic Fellow in Pedodontics at Columbia University.

## Child Care Association Tours Babies Hospital

From left, Penny Buschman, R.N., Dr. William S. Langford, Grace Sum.

Twenty members of the American Association of Child Care in Hospitals spent a "day on location" at the Medical Center on May 21.

The morning session was devoted to a tour of Babies Hospital and the pediatric unit of Psychiatric Institute.

Team discussions in the Babies Hospital amphitheater were held in the afternoon.

The first team, composed of Dr. William S. Langford, Director of Pediatric Psychiatry; Penny Buschman, R.N., Clinical Specialist (Pediatric Psychiatry); and Grace Sum, supervisor, Pediatric Psychiatry Social Service, discussed *Anorexia Nervosa*.

The second team, made up of Dr. Russell Asnes, Director, Pediatric Clinic; Dr. Yvonne Driscoll, Assistant Attending Pediatrician, PH; Mrs. Lilia Graham, supervisor, Social Service, BH; and Barbara Scheyer, R.N., Nursing Education, C.U., discussed *Abused and Neglected Children and Lead Poisoning*.

The "day on location" program was sponsored by Babies Hospital Social Service, under the direction of Agnes Dilworth, Associate Director.

On May 20, Mrs. Graham and Patricia Riccio of Babies

Hospital Social Service were panelists in seminars sponsored by the AACCH.

Mrs. Graham participated in the group under the chairmanship of Dr. Thomas W. Patrick, Jr., Assistant Attending Pediatrician, V.C., discussing *Working with the Community*, and Miss Riccio joined Dr. Carolyn Denning's group in a discussion of *The Chronically Ill Child*. Dr. Denning is Assistant Attending Pediatrician, PH, and Director of the Pulmonary Disease Center at BH.

## A LITTLE MORE CARE - FEWER EMERGENCIES

As every hospital knows, emergency services would go further if people would try a little harder to avoid trouble.

*An ounce of prevention!*

Here are a few quick off-the-cuff suggestions given recently by Dr. Joseph E. Snyder, Assistant Vice President, PH, who is in charge of Vanderbilt Clinic and other patient services.

## New Director of Psychoanalytic Clinic

Dr. Lawrence C. Kolb, Professor and Chairman, Department of Psychiatry, announced the appointment of Dr. Aaron Karush as Director of the Psychoanalytic Clinic for Training and Research, to succeed Dr. George S. Goldman, who retired July 1.

The Psychoanalytic Clinic for Training and Research was established in 1945. Dr. Karush, as a member of the first graduating class of the Psychoanalytic Clinic, will be in a position to carry on the special traditions of the Clinic, which was the first psychoanalytic institute affiliated with the American Psychoanalytic Association to be established in a university setting.

Dr. Karush has been a member of the faculty of the Psychoanalytic Clinic since 1945, where he has been active as a teacher and researcher.

Retiring, Dr. Goldman will receive the appointment of Special Lecturer to the Department of Psychiatry and in this capacity will continue to make his services available to the Clinic.

Dr. George S. Goldman

Dr. Aaron Karush

5. Do not go swimming until one hour after eating.

If you and your family adhere to these few simple rules, you will help to reduce the number of demands upon your hospital's emergency services.

Can you add other rules to this list? Think back to the emergencies in your experience. Could they have been prevented?

1. Keep medicines out of the reach of children.

2. Make sure that children don't tamper with electric wall outlets.

3. Look up and down the street before crossing, and "cross on the green, not between."

4. Do not drink large amounts of cold water after exercising in the heat.

## THESE PHYSICAL THERAPISTS ARE WORKING IN VIETNAM

Beth Brown

Caroline Elliot

degree in Physical Therapy from C.U. in June, 1969. At the time of the student unrest that year, she says, she "started thinking seriously. You couldn't deny the immorality of war."

She came to Columbia from Bridgeport, Connecticut. After her graduation here, she served as a physical therapist at the Upstate Medical Center in Syracuse.

Caroline Elliot, from Charlotte, North Carolina, after graduating from the University of North Carolina in 1967, received her one-year Certificate in Physical Therapy from Columbia in October, 1968. Before volunteering for overseas experience, she practiced at the Medical College of Virginia at Richmond, and at the Richmond Health Department. Only a few weeks ago she returned to this country from a year of service in the war-torn nation of Nigeria, where there were only eleven physical therapists serving a population of 60 million, according to the American Friends Service Committee report. She will now serve for a year and a half in Vietnam. In Nigeria she taught rehabilitation skills

Two physical therapists, recently graduated from Columbia University, have gone to Vietnam this summer to work with civilian victims of the war, according to a report from the American Friends Service Committee, Philadelphia. They will be stationed at a Quaker center just six miles from the site of the My Lai massacres.

Beth Brown received her two-year Bachelor of Science

to nurses and nursing students, and guided the manufacture of crutches, canes, and apparatus for physical therapy.

For the next few weeks Miss Elliot and Miss Brown will be in language training, as the Quaker center requires all staff to be able to speak Vietnamese.

The American Friends Service Committee, in keeping with the Quaker tradition, provides aid to civilians on all sides of major conflicts.

## Association Elects Dr. Nelson President

Dr. Carl Truman Nelson, Director of Dermatology and Professor and Chairman, Department of Dermatology, was elected President of the American Dermatological Association at its annual meeting May 16-20. The Association was founded in 1876. Its membership is composed of approximately 200 dermatologists in the United States and Canada who are for the most part associated with academic and research institutions.

## Nursing Student Wins Writing Contest Prizes

Susan Zator

Susan Zator, class of 1971, Department of Nursing, Fac-

ulty of Medicine, Columbia University, recently won the prestigious Mary M. Roberts Scholarship Award of the Breadloaf Writer's Conference.

This award is sponsored annually by the *American Journal of Nursing* for senior students and graduate nurses. The treatise may be in the form of an essay, a poem, prose, fiction, or may be gathered from a real-life experience. Miss Zator's winning composition was on the subject of rape and the impact of its reaction upon the victim.

The best part of the prize, according to Susan, is the privilege of being invited to attend the annual Breadloaf Writer's Conference, founded by poet Robert Frost in Mid-

dlebury, Vermont, and now under the direction of poet-critic John Ciardi.

Susan was also the recipient of third prize in the senior writing contest sponsored by *RN Magazine*, recently. Her subject for this competition was called "The Molly Papers" and was a description of her personal memoirs of a patient she attended during her clinical experience.

Susan holds the B.S. from Rivier College in Nashua, New Hampshire; she received her B.S. in nursing from Columbia University this year.

She hopes to pursue a career in "adventure nursing" which is, as Susan explains it, "doing all the things that interest a nurse-person, so that the nurse and the person may broaden his or her horizons."

Having already served with the Peace Corps in Turkey, she hopes to be driving a jeep as a migrant health nurse in New Mexico this summer.

Other future plans include owning a restaurant, acting in a repertory company, and marriage—not necessarily in that order.

## Many Attend Radiology Postgraduate Course

A postgraduate course in radiology of the head and neck, sponsored by the Department of Radiology last March, drew radiologists, otolaryngologists and oral surgeons from all over the United States and Europe.

The course in the P&S Alumni Auditorium was directed by Dr. Guy D. Potter, Associate Professor of Radiology, P&S, and Associate Attending Radiologist, PH, and its faculty included Dr. Daniel C. Baker, Jr., Professor and Chairman, Department of Otolaryngology, Dr. Milos Bask, Professor of Clinical Otolaryngology, Dr. John Conley, Clinical Professor of Otolaryngology, Dr. Robin Ran-

kow, Associate Professor of Clinical Otolaryngology, Dr. William B. Seaman, Professor and Chairman, Department of Radiology, Dr. Jules Waltner, Professor of Clinical Otolaryngology, Dr. Louis Mandel, Associate Professor of Oral Surgery, and Dr. Edward Zegarelli, Professor of Dentistry.

The course—the first of a kind to be presented here—dealt with the ear, the sinuses, the mandible and the jaws. Emphasis was placed upon the collaboration of the radiologist and the surgeon in treating congenital anomalies, trauma, inflammatory conditions, and tumors affecting these structures.

## Five Theological Students Training Here

A group of five theological students are engaged in a summer training program in clinical pastoral education, under the supervision of Chaplain Robert B. Reeves, Jr.

The program, a 12-week, full-time project, from June 1 through August 20, is designed to permit these young men to work on assigned wards as Protestant chaplains and, where appropriate, to observe procedures that will help them to understand the patients' experience. They will also attend and participate in conferences, seminars and other meetings related to patient care.

The program is under the auspices of the Association for Clinical Pastoral Education, the national body that accredits hospitals as training grounds on behalf of religious schools.

With Chaplain Reeves the students are: rear: left to right: William C. Riker, Jr., 2nd year B.D., student, Church Divinity School of the Pacific, Berkeley, California—Episcopal; Jon M. Walton, 3rd year B.D. student, Union Theological Seminary, New York City—Presbyterian; William A. Calhoun, 3rd year B.D. student, Union Theological Seminary, New York City—Presbyterian; Sidney K. Nelson, 2nd year M.Div. student—Lutheran; front: left to right: Chaplain Reeves and David C. Musgrave, 2nd year B.D. student, General Theological Seminary, New York City—Episcopal.

## Dr. Patrick, Dr. Asnes and Mrs. Graham Participate in Seminar on Community

Dr. Thomas W. Patrick, Jr.

Dr. Thomas W. Patrick, Jr., Assistant Attending Pediatrician, V.C., chaired a symposium on *Working With the Community—Community Involvement Programs and Problems*, at the Sixth Annual Conference of the American Association for Child Care in Hospitals, held at the Commodore Hotel in New York City, recently.

Participants in the seminar included Dr. Russell S. Asnes, Director of Pediatric Ambulatory Care, V.C., who spoke on *How the Community Can Help Achieve Adequate Pediatric Care in the Hospital*, and Mrs. Lilia Graham, Supervisor, Department of Pediatric Social Service, V.C., who spoke on *Solving Problems of Culture and Language Differences in Health Care for Children*.

Dr. Patrick, who has been associated with the Hospital since 1938, is also attending pediatrician at the Northside Center for Child Development, and acts in an advisory capacity for many other groups, including the Children's Aid Society, Wiltwyck School, Tuberculosis and Heart Association,

and the Special Committee on Child Welfare of the New York County Medical Society.

In addition to a heavy teaching and clinical load, Dr. Patrick is engaged in the private practice of pediatrics in Harlem and is children's health editor for the New York *Amsterdam News*.

He is a candidate for the degree of Doctor of Education, Teachers College, at Columbia University, and is working on a program of parental participation in early childhood education among children of lower socio-economic status.

## DOINGS OF DOCTORS

Continued from page eight

DR. CHARLES S. NEER, II, Attending Orthopedic Surgeon, PH, and Professor of Clinical Orthopedic Surgery, P&S, lectured on *Anterior Acromioplasty for Chronic Impingement Syndromes* at the annual meeting of the American Orthopedic Association in Hot Springs, Virginia, recently.

DR. D. KEITH McELROY, Assistant Attending Orthopedic Surgeon, PH, and Assistant Clinical Professor of Orthopedic Surgery, P&S, was a member of the faculty of the Committee on Injuries of the American Academy of Orthopedic Surgeons, for the Academy course on the spine, held in Cleveland, in June. He lectured on *The Detection of Functional Back Pain* and presented a course on *The Indications and Techniques for Bilateral-Lateral Fusion*. He also participated in the various consultation clinics and attended the Association of Bone & Joint Surgeons meeting in Madrid, in May.

At New York's Mount Sinai Hospital, DR. SOL SPIEGELMAN presented an evening lecture before the hematology group entitled *DNA and the RNA Tumor Viruses*. He also presented one of the State of the Art Lectures on the *Molecular Basis of Cancer* at the Denver meeting of the American College of Physicians recently. In Arizona, in April, he attended and spoke at the American Cancer Society's 13th annual Science Writers Seminar; and on April 10, at a meeting of the American Association for Cancer Research in Chicago, Dr. Spiegelman was chairman of a symposium on Mechanisms of Oncogenesis and also gave a paper on *DNA Polymerases in Oncogenic RNA Viruses and in Human Cancer and Non-cancer Cells*.

Dr. Spiegelman and several other prominent researchers will appear on NBC-TV, Channel 4, on a program entitled *Cancer: The New Frontier*, Friday, August 6, at 10:00 p.m. Sander Vanocur, NBC-TV news correspondent, will be anchorman for the telecast.

DR. NIELS L. LOW, Associate Attending Neurologist, PH, and Associate Professor of Neurology, P&S, was elected to succeed Dr. Carter as Chairman of the Section of Child Neurology.

DR. MAX FORBES, Assistant Ophthalmologist, PH, and Associate in Ophthalmology, P&S, was guest lecturer at the Illinois Eye and Ear Infirmary, University of Illinois School of Medicine, Chicago, April 14. His talk was on *Goniotomy in Congenital Glaucoma*.

At the Jules Stein Eye Institute Post-Graduate Seminar on Glaucoma, held at the University of California Medical School in Los Angeles, in May, Dr. Forbes lectured on *Gonioscopy in Angle-Closure Glaucoma and Management of the Flat Chamber after Filtering Surgery*.

DR. ALBERT L. WALDO, Assistant Professor of Pharmacology, assigned to Surgery, has been awarded an Established Investigatorship by the American Heart Association, for a five year period commencing July 1. Dr. Waldo will be engaged in a study of *Normal and Abnormal Cardiac Electrophysiology in Man*.

DR. THEOPHILUS W. ROBERTS, Clinical Professor of Pathology, P&S, and Director of Pathology, Harlem Hospital Center, was elected *Alumnus of the Year* by the Alumni of LeMay College, Memphis, Tennessee.

During June, DR. ARNOLD P. GOLD, Associate Professor of Neurology, P&S, and Associate Attending Neurologist, PH, gave several lectures. He spoke at a Learning Disability Symposium at Rutgers University, was principal speaker at a two-day symposium on *The Emotionally Disturbed Hearing Impaired Child* at Montefiore Hospital, was banquet speaker at the New York Dental Society for cerebral palsy, and participated in meetings on the Drug Committee for the American Medical Academy of Pediatrics, National Institutes of Health. In addition, Dr. Gold has accepted the Chairmanship for the Pediatric Section of the National Stroke Study.

## FROM THE MAILBAG

Dear Hospital:

I want to take this opportunity to express my thanks to the nursing staff of the fifth floor at Harkness. The entire staff proved to be able, competent, compassionate professionals in the fullest sense, and helped to make a difficult illness tolerable for both my wife and myself. Please convey my gratitude to all, nurses, aides, doctors and attendants.

Most of all, myself and my family want to express our thanks to Dr. Habif for his superb dedication, and to Dr. Moore, Dr. Donovan, Dr. Price, Dr. Wilcox, Dr. Hickey and others for their efforts and interest.

Yours sincerely,  
(A patient)

## THESE PEOPLE ARE RETIRING

**LOUISE KENT**, Associate in Nursing (Pediatrics), Faculty of Medicine, Department of Nursing, C.U., retired in May after more than 30 years in professional service at Babies Hospital. Her wide education includes a B.S. from Connecticut College for Women; nursing at Presbyterian; Teachers College at C.U.; an M.S. from New York University's School of Education.

During World War II she served three years with the U. S. Army's Nurse Corps in the European Theater.

For the past 25 years she has taught the nursing of children to nursing students of Columbia University and 40 affiliating schools. In April the Affiliating Directors presented her with a Certificate of Merit "in recognition of your loyalty, sincerity and devotion during 25 years of service."

Miss Kent will spend winters in New York, summers in Cape Cod. She enjoys swimming, even on the coldest days, she makes plum jelly, and is a fan of the theater.

**CLINTON HOWZE**, head porter, Presbyterian Hospital, retired in May, after 17 years.

Born in South Carolina, he came to New York in 1935 and now lives in Teaneck, New Jersey. Following family visits in California and Detroit, he plans to periodically hang a sign on his front door that says "Gone Fishin'"—maybe fishing, maybe more travel.

**MRS. ANNA MCGONEGAL**, desk clerk, PH 14, retired in June, having completed 19

years' employment at the Hospital.

She looks back fondly on her long association here, but is now looking forward to spending more time with her seven grandchildren. She and her husband are planning a few trips within the United States.

**MRS. ANNA SIMS**, Labor and Delivery Room secretary, retired in May, completing 12 years of service. Her achievements are remarkable, in view of her physical handicap. When her right arm was amputated just below the shoulder many years ago, she strongly resolved to carry on. She has not only been an efficient secretary—she has done oil painting, knitting, crocheting. She has served as a Gray Lady (volunteer) for the Red Cross, and she is a past commander of the Navy's Mother's Clubs of America.

She plans to visit relatives in Canada and England, and on her return to her home in Staten Island will volunteer at the Public Health Hospital.

**MRS. MARDIE SUGHRUE**, Assistant Supervisor, Compensation and Liability Unit, retired in July. She will be remembered as the cooperative, vivacious and friendly worker who processed compensation claims.

Gifts presented at her retirement tea included a typewriter and an inscribed gold bracelet.

Mardie plans to divide her time between Hawaii and her pleasant home in Inwood.

She will return to Presby-

**Dr. Ann M. Earle**, Assistant Professor of Nursing, CU, and Director, Graduate Program, Psychiatric Community Health Nursing, participated in a seminar, under the auspices of the Department of Psychiatry, at Harvard Medical School in Boston, April 26-28. The subject of the seminar was *Recent Advances in Care-giving Practice*.

**Nancy Sargis**, Associate in Nursing, Medical/Surgical, has been elected Director of District 13 of the American Nursing Association.

At the Atlantic City meeting of the Foundation of Thanatology, on April 27, **Penelope Buschman**, Clinical Specialist, Child Psychiatry, and **Sara Sheets**, Assistant Professor of Nursing, C.U., presented papers on *The Child with Cystic Fibrosis*.

**Miss Buschman**, **Jan Turney**, Head Nurse, BH 7, and **Cynthia Lepore**, recreational therapist, BH, were panelists with **Dr. Carolyn Denning**, Assistant Professor of Pediatrics, P&S, and Director of Pediatric Pulmonary Disease Center, and **Patricia Riccio**, Social Serv-

ice, (Pediatrics) in a seminar concerned with *The Chronically Ill Child*, of the American Association of Child Care in Hospitals, held at the Hotel Commodore, May 20.

**Shirlee Stokes**, Assistant Professor of Nursing, and **Patricia Buchholz**, Associate in Nursing, Department of Nurs-

thereby decrease the number and length of subsequent hospitalizations.

Selected patients with congestive heart failure admitted to the medical service of Presbyterian Hospital will be placed in either a control or a study group. The discharge regimen of diet, rest, exercise

Shirlee Stokes

Patricia Buchholz

ing, Faculty of Medicine, CU, have been awarded a three-year grant from the Bureau of Health Manpower of the National Institutes of Health.

The project, *Hospital Teaching of Patients with Heart Failure*, will determine whether patients receiving intensive in-hospitalization teaching will be able to care for themselves on an ambulatory basis, and

and medication, as defined by the physician, will be taught to the study group by the project nurse.

There will then follow a two-year observation period during which time it will be determined how many of the group require re-hospitalization, and how many can be maintained as ambulatory, home patients.

terian to work as a volunteer.

**KARL STACKER**, painter, Maintenance & Construction, chose early retirement in May, completing a 25-year period of employment.

His bailiwick was Harkness Pavilion, where he kept the rooms in a state of constant beauty by wielding his paint brush.

Soon he will revisit his native Germany, see his relatives, and perhaps stay. He also looks forward to pursuing his hobby as a philatelist.

Co-workers gave Mr. Stacker a grand party in Harkness Hall.

**EMILINE JORDAN**, maid, Housekeeping Department, retired in June, completing 16 years of employment at the Hospital.

Born in Barbados, Emiline now lives in Brooklyn. She will miss the people here at the Hospital, but will enjoy her main hobbies—reading and radio. After a good rest, she hopes to do some traveling.

**MRS. LILLIAN ROONEY**, nursing aide, retired in May after 18 years at Presbyterian—"very pleasant!"

Born in Ireland, Mrs. Rooney

Mrs. J. Gorman

Jose Rey

Mrs. F. Lawson

now lives in Manhattan. Her children and grandchildren live quite close, and retirement will mean more time with them. Also she will now be able "to really travel instead of just dreaming about it."

Mrs. Rooney was honored at a retirement tea.

**MRS. LORETTA CLOHISIE**, IBM Control, chose early retirement in June, ending a 20-year employment at Presbyterian.

She and her husband, Harry, plan to remain in the City and enjoy it. Summers, as always, will be spent at the Jersey shore.

"I will always remember the many friends I have made during my 20 years here," said Loretta.

Fellow employees honored her at a retirement tea.

Louise Kent (r)

Mrs. McGonegal

Mrs. Anna Sims

Mrs. M. Sughrue

Karl Stacker

Emiline Jordan

Mrs. Lillian Rooney

Mrs. L. Clohissie

**MRS. JOSEPHINE GORMAN**, retiring on August 1, was employed in May, 1952, and has worked for 19 years as a clerk in the main kitchen. The above photo was taken at her retirement party in June.

**JOSE REY**, caretaker, Animal Care, Institute of Comparative Medicine, retired in July completing 14 years at the Medical Center.

He and his wife, Candida, who works in the Laundry Department, live in the Marble Hill section of the Bronx. They have one son and three grandchildren.

Florida born, he and his wife plan to visit Florida and Puerto Rico. His hobbies are horseback riding, sports and old country music records.

**MRS. FLORENCE LAWSON**, maid, Housekeeping Department, retired in June completing 24 years' employment.

Born in St. Thomas, Virgin Islands, Mrs. Lawson lives in the Bronx. She has two children and eight grandchildren.

She has always worked in Babies Hospital, enjoying her tasks and earning extra income to help educate her children. Retirement will afford her more time for her favorite hobby—her grandchildren!

# Stethoscopia

## • ENGAGEMENTS

Elizabeth C. Thacher is engaged to Van Zandt Hawn. Miss Thacher is the granddaughter of Dr. Hugh Auchincloss, Clinical Professor of Surgery, P&S, and Mr. Hawn's father, Dr. Clinton Van Zandt Hawn, is chief pathologist at Mary Imogene Bassett Hospital, and Clinical Professor of Pathology, P&S.

Michelle L. Silva, secretary, Electroencephalography Department, is engaged to Jeffrey J. Videtto, a student at Columbia University's School of Physical Therapy. A September wedding is planned.

Michelle  
Silva

Mrs. Emily  
Young

Mrs. Yolanda  
Figueras  
Santella

## • MARRIAGES

Lillian Bennett, secretary, E.S.H. Eye Institute, was married to George Williams at Sts. Peter and Paul Church in Elmira, N. Y. on June 19.

Mrs. Patricia M. Warren, LPN, was married to Howard T. Perry on June 26. Chaplain Robert B. Reeves, Jr., performed the ceremony in the Pauline A. Hartford Memorial Chapel.

Yolanda Figueras, stock typist, Purchasing Department, was married to Peter Santella on July 10, in Opa Lockar, Florida. A veteran of the Vietnam conflict, Mr. Santella holds the rank of Yeoman 1st class in the United States Navy.

Dr. Karen J. Back was married to Dr. Donald M. Bachman on July 11. The bride is a resident in Pediatrics at Babies Hospital. Her husband recently completed a surgical residency here. The bridegroom's father, Dr. Arnold P. Bachman, is director of Radiology at Delafield Hospital; his mother, known professionally as Dr. Jean Pakter, is in charge of surveillance of abortion services for the New York City Department of Health.

## • NEW ARRIVALS

Mrs. Phyllis Siravakian, secretary, Personnel Medical, and her husband, George, welcomed their first child, a son, George Nishan, on June 2, in Sloane Hospital.

Mr. and Mrs. Peter Farrell welcomed their first child, a son, Brendan John, on June 21, in Sloane Hospital. The proud and happy grandfather is John Nelan, Supervisor, Laundry Service. His daughter, Lucy, is the new mother.

Dr. Herbert S. Rosenkranz, Professor of Microbiology, and his wife, welcomed their second daughter, Marguerita Elena, on May 5.

Mr. and Mrs. William Earl, Jr., became grandparents for the first time with the arrival of their granddaughter, Karen Patricia Earl, on June 24.

Mr. Earl is in charge of Radio/TV repairs, Department of Maintenance & Construction. Mrs. Earl is secretary to Dr. Olaf Haroldson, Jr., Assistant Attending Otolaryngologist, PH.

## • CONGRATULATIONS TO:

Alfred Martinez, evening porter, Housekeeping Department, who has just received the B.A. from Mercy College.

Joanne Wintermute, who has been promoted from head nurse to Clinical Supervisor, NI 5.

Irene McLeod, who has been promoted from assistant head nurse to head nurse, NI 5.

Louise Lapata, who has been promoted from staff nurse to assistant head nurse, NI 5.

## • WELCOME TO:

Mrs. Emily Young, NSID, interior designer, who has joined the staff in the drafting section of the Projects Department, SB 6.

Mrs. Beatrice Bennis, secretary, Babies Hospital Nursing Office, BH 2.

## • NOTES OF INTEREST:

Arsene Egls, Public Interest, was runner-up in the New Jersey State 10-kilometer race walking championship on May 16. His time for the 6¼ mile distance was 49 minutes, 50 seconds.

## DOINGS OF DOCTORS

At a meeting of the American Laryngological Association in San Francisco on May 25, DR. DANIEL C. BAKER, JR., received the Newcomb Award for outstanding services in the field of laryngology. Dr. Baker is Professor and Chairman, Department of Otolaryngology.

DR. BERNARD MOSKOW, Adjunct Associate Professor of Dentistry, Division of Periodontics, DOS, delivered a paper entitled *Some Histologic Aspects of the Periodontium Associated with Clinical Findings* before the Association Pour les Recherches sur les Parodontopathies (ARPA), in Paris on June 2.

DR. DAVID H. BAKER, Director, Radiology, Babies Hospital, and Attending Radiologist, PH, was visiting professor at Fitzsimons General Hospital, Denver, Colorado, teaching *Pediatric Radiology*, June 14-17. He also attended the annual meeting of the John Caffey Society at Children's Hospital Medical Center in Oakland, California, June 17-20, and lectured at the Children's Hospital in Tucson, Arizona, June 21.

DR. W. H. SEBRELL, JR., Robert R. Williams Professor Emeritus of Nutrition, Institute of Human Nutrition, has been awarded the National Order of the Cedar (Rank of Officer) by the Republic of Lebanon in appreciation of his esteemed services in the field of nutrition as Expert in Nutrition Science, and Chairman of the WHO/FAO/UNICEF Consultative Committee. The United States Navy also awarded Dr. Sebrell the Antarctica Service Medal and Lapel Pin in recognition for having served in Antarctica during Operation Deep Freeze 70.

DR. GUY D. POTTER, Associate Attending Radiologist, PH, and Associate Professor of Radiology, P&S, was guest speaker at the Nassau Otolaryngological Society on June 7. He spoke on *Tomography of the Ear*.

DR. GEORGE F. CRICKELAIR, Attending Surgeon, PH, and Professor of Clinical Surgery, P&S, was recently appointed to the National Health and Safety Committee of the Boy Scouts of America, and has also been reappointed to the Advisory Committee to the Secretary of Commerce on Fabric Flammability. As chairman of the Sub-committee on Burn Prevention of the American Burn Association, Dr. Crickelair spoke on *Burn Prevention* at the Association's April 16 meeting in San Antonio, Texas. At a meeting of the Plastic Surgery Research Council in Rochester, Minnesota, April 29-30, Dr. Crickelair presented a paper on *The Physical Basis for Study of Heat Production and Heat Transfer in Whole Garment Burnings*. The paper was co-authored by DR. RONALD N. OLLSTEIN, Associate in Surgery, P&S, and DR. FREDERIC J. AGATE, Associate Professor of Anatomy, P&S.

Dr. Crickelair was recently awarded the Silver Beaver Award by the Ridgewood-Glen Rock Boy Scout Council of New Jersey. The award is given to an outstanding scout leader and is a nationally recognized award.

At the joint meetings of the American Psychiatric Association and the Scandinavian Psychiatric Societies, in Copenhagen, Denmark, recently, DR. PHILIP POLATIN, Professor of Clinical Psychiatry, P&S, Attending Psychiatrist, PH, and Clinical Director of Psychiatric Institute, presented a paper, *Patient Rejection of Lithium Carbonate Prophylaxis*. The paper has been accepted for publication in the *Journal of the American Medical Association*.

At the recent three-day 10th annual Pediatric Postgraduate Seminar, held at Coney Island Hospital and sponsored by the Maimonides Medical Center of Brooklyn, DR. VINCENT J. FREDA, Assistant Clinical Professor of Obstetrics & Gynecology, P&S, and Assistant Attending Obstetrician and Gynecologist, PH, participated in a symposium on *Intrauterine Diagnosis*. His lecture was entitled *The Rh Problem in Obstetrics*. He also participated in a conference on *Abortion Techniques*, sponsored in part by the Planned Parenthood World Population group, held at the Barbizon-Plaza, June 3-5, and took part in a panel on June 3, discussing the need for RhoGAM following abortion in the non-sensitized Rh negative woman.

At the meeting of the American College of Obstetricians and Gynecologists, held in San Francisco, May 3-6, Dr. Freda participated in a closed-circuit TV panel discussion on *The Use of RhoGAM in Pregnancy*.

DR. ERIC J. HALL, Professor of Radiology (Radiobiology), P&S, was invited to participate in the third L. H. Gray Memorial Symposium, in Manchester, England, recently. His subject was *Radiation Effects and the Mitotic Cycle*. In May, at the Inter-American Congress of Radiology held in Puerto Rico, Dr. Hall presented two papers on *Radiobiology for the Radiation Therapist* and *Anoxia in Radiotherapy*.

DR. SEYMOUR LIEBERMAN, Professor of Biochemistry, P&S (Obstetrics & Gynecology), received the Distinguished Alumnus Award for the year 1971 from Brooklyn College in New York City. Dr. Lieberman was graduated from Brooklyn College in 1936.

Dr. Seymour Lieberman

Dr. Francis L'Esperance, Jr.

DR. FRANCIS A. L'ESPERANCE, JR., Assistant Attending Ophthalmologist, PH, presented a paper on *Argon Laser Photocoagulation for Eye Teaching Day* on May 6, in Buffalo. He also lectured at the 44th annual Clinical Conference at the New York Eye and Ear Infirmary on May 7. His topic was *Laser Coagulation of Macular Disease*.

Dr. L'Esperance was a guest speaker at a laser symposium at the Palo Alto Medical Clinic of Stanford University in Palo Alto; at the American Academy of Endocrinology, in Ann Arbor, Michigan, he lectured on *The Assessment of Photocoagulation in the Treatment of Diabetic Retinopathy*.

DR. SIDNEY CARTER, Attending Neurologist, PH, Professor of Neurology, P&S, and Chairman, Division of Child Neurology, completed his two-year term as president of the American Academy of Neurology at the annual meeting of the Academy at the New York Hilton Hotel. On the evening of April 29, his fellows and current trainees gave him a testimonial dinner, attended by 55 fellows and spouses.

## "A Time of Projection"

### Graduation of Nurses Focuses On The Future of Country and Careers

The August section of the 1971 graduating class of Columbia University's Department of Nursing received not only the traditional certificates and nurse's pins but also a checklist of questions for the future at the 1971 presentation ceremony last month.

In contrast to the typical graduation speeches of a generation ago — featuring prescriptive advice on how to succeed in your business and be "a better person"—the main

speakers at the ceremony fired some hard questions at the graduating nurses about the future of their country and of their professional careers.

"Will we fight the real problems of our society rather than be driven by the paranoid fantasies which have driven us in years past?" asked Susan Maines, Assistant Professor of Nursing, of her audience of 95 graduates and their relatives and friends seated in the Medi-

## Presbyterian Hospital's Board of Trustees Elects Three

Mr. Augustus C. Long, Chairman of the Presbyterian Hospital's Board of Trustees and its chief executive officer, has announced the election of three doctors to the Board. The new Trustees are Dr. Lawrence C. Kolb, Dr. Charles A. Ragan, Jr., and Dr. Frank E. Stinchfield.

Dr. Kolb, who heads both the Presbyterian Hospital's Psychiatry Service and the Department of Psychiatry at Columbia University's College of Physicians and Surgeons, is also Director of the New York State Psychiatric Institute.

Born in Baltimore 60 years ago, Dr. Kolb received his M.D. degree from Johns Hopkins in 1934. He did his undergraduate work at Dublin's Trinity College. Dr. Kolb interned in medicine and surgery in Rochester, New York, before being awarded fellowships in neurology at Johns Hopkins and in England.

Following service in the U.S. Navy Medical Corps during World War II, he was the first Director of Research Projects of the National Institute of Mental Health, and he completed his psychoanalytic education in the Washington Institute. In 1950 Dr. Kolb accepted an appointment to the Mayo Clinic, Section of Psychiatry, and also to the graduate faculty of the University of Minnesota. Dr. Kolb served as President of the Medical Board of the Presbyterian Hospital from 1962 to 1964.

Dr. Ragan is Director of the Medical Service of Presbyterian Hospital and Chairman of the Department of Medicine of the College of Physicians and

## New Unit on 14 East to Become Part Of Modern Center for Intensive Care

A surgical wing of the Presbyterian Hospital is being converted into a center for the intensive care of critically ill and injured surgical patients.

The new unit is being constructed at a cost of \$1.2 million. This large cost is due to a combination of the rapid rise in building costs which have occurred over the last three years as well as the complexity of the construction project.

An important part of this construction will be a conference room adjacent to the nurses' station. This will be used for informal teaching sessions between the attending staff and their residents, groups of medical students studying cases on the intensive care unit, and frequent meetings of groups, of as many as twenty people, to review complex cases and discuss related clinical subjects.

Dr. John Kinney, Dr. Frank Gump and Dr. Frederic Herter of the Department of Sur-

This bird's eye view of the architect's drawing board shows the floor plan of 14 East after completion of the Surgical Intensive Care Unit.

gery have been working with Dr. Joannes Karis, Dr. Ralph Epstein, Dr. Allen Hyman and Dr. Shih-Hsun Ngai of the Department of Anesthesiology in the joint planning of this unit.

The construction of an in-

tensive care unit for this kind of patient at Presbyterian Hospital represents the fulfillment of a dream of Dr. Emanuel Papper, who presented the concept of such a unit in the late 1950's following his personal experience with the care of acute ventilatory failure in Scandinavia during the polio epidemics. The success of post-anesthesia recovery rooms has resulted in anesthesiologists playing an important role in the development of the concept of intensive care units. The anesthesiologist has a great deal to contribute to the intensive care of surgical patients because of his background in the management of acute ventilatory and circulatory problems.

During the past years many critically ill patients have received intensive care on the 18th floor of Presbyterian Hospital, utilizing recovery room personnel and facilities. Therefore, this new unit has been planned and will be supervised jointly by the departments of general surgery and anesthesiology. Both services expect to assign members of their house staff on rotation as a recognized part of their residency training.

The need for specially designed and staffed units to provide intensive care for certain life-threatening problems has been a concept which has

Dr. Charles A. Ragan, Jr.

Surgeons. He was named Lambert Professor of Medicine at P&S in 1961.

Dr. Ragan, who was born in Washington, D. C., earned his M.D. degree from P&S 35 years ago and completed his internship and residencies at the Presbyterian Hospital. He received a fellowship to Johns Hopkins. After his stay in Baltimore, which he spent as both a Commonwealth Fellow and an Instructor in Medicine, Dr. Ragan returned to Columbia-Presbyterian in 1941 as Assistant Physician, Presby-

terian Hospital, and as an Assistant in Medicine, College of Physicians and Surgeons. In the three decades prior to his promotion to chief of service, Dr. Ragan has distinguished himself as a dedicated physician, teacher and medical scientist.

Dr. Stinchfield has been Chief of the Presbyterian Hospital Orthopedic Surgery Service and Chairman of the Orthopedic Surgery Department at the College of Physicians and Surgeons for 15 years. He also serves as Vice-President of

# First Year is Very Successful for Central Pharmacy's Satellite on PH-8

The Presbyterian Hospital's Satellite Pharmacy has just completed its first year of service and has gone far toward proving its usefulness. Presbyterian is the first and only hospital in New York City to institute a satellite unit-dose pharmacy service. Nurses and physicians, working closely with the staff of pharmacists, are enthusiastic over the many advantages it offers.

The Satellite Pharmacy was conceived as an answer to the problem of distribution of medications, a many sided problem which has grown more pressing with the years of expansion of this medical center. In September, 1970, after two years of careful planning by Dr. Joseph E. Snyder, Assistant Vice President of Presbyterian in charge of Vanderbilt Clinic and other patient services, and John Rio, Chief Pharmacist, the Satellite Pharmacy was opened on the 8th floor of Presbyterian Hospital, Room 843, to serve several patient areas on the 8th and 9th floors.

It extends and makes immediate the services of the Hospital's Central Pharmacy, which is located on the first floor, Vanderbilt Clinic. It is a contribution to the design of more efficient patient care, a shorter hospital stay for the average patient, and closer accounting of costs.

*Its central purpose is greater efficiency in the preparation and distribution of medication, to the benefit of staff and patient alike.*

What is the usual procedure for securing and administering medications at the patient's bedside?

Traditionally, after the doctor writes the order for medication, the nurse assumes responsibility for following through. It is her duty to interpret the doctor's order, to place the order for medication with the pharmacy; and when the order is delivered to her station, it is her task to prepare the dosages, administer the medicine, and keep all records of administering and of

charge, returning the surplus medicine to the central pharmacy and adjusting the charges accordingly.

In setting up the plans for the Satellite, the planners foresaw that the nurse's responsibility should be reduced, if possible, to (1) administering the medication, and (2) charting the medication given.

Preparing to establish this Satellite Pharmacy, the planners visited several satellite facilities in other hospitals, finding that no two were the same. To meet this Hospital's unique needs, a detailed original plan had to be devised.

It was recognized that the way to relieve the nurse of time-consuming responsibilities and worries was to extend the functions of the pharmacist. Thus, it could become the pharmacist's task to interpret the physician's order, transcribe the order, prepare the precise amount of medication for the nurse with full instructions, and handle the book-keeping to make charges only for those doses given.

*All of this could be done to much greater advantage if pharmacists were stationed near the patient care area.*

Under the traditional system, the physician and administrator were faced with an error-prone system, poor utilization of the professional staff, an inequitable drug charging system and drug credits.

Fred J. Perino, a pharmacist of the Central Pharmacy who was chosen to be Supervisor of the Satellite Pharmacy, wrote, in a description of the new facility:

**"The goals of our Satellite Unit-Dose Pharmacy are threefold: first, to institute a more efficient and accurate drug distribution system; second, to make the pharmacist readily available to the nurse and the physician 24 hours a day; and third, to relieve the nurse of the preparation of medications, thus giving her more time for patient care."**

It was recognized that the unit-dose system was one of the keys to improved efficiency. Unit-dose refers to medications packaged in a single dose unit, adequately labeled, in a form ready to administer. The unit-dose facilitates distribution, and charging of medications, and provides greater safety, economy and improved patient care.

Some unit-dose medication may be procured directly from the pharmaceutical manufacturers; but for more than fifty per cent of all medication the pharmacy must make bulk purchases—tablets, capsules, oral liquids, and injectables—and these must be measured precisely, by the use of automatic equipment, into single doses, packaged and labeled, to remain unopened until the moment of use at the patient's

The Satellite Pharmacy, operating 24 hours a day, serves Medical Center's emergency needs by night.

bedside.

Another factor toward efficiency is the pharmacist's presence in the patient areas. It was foreseen by the planners that a much greater rapport could be developed among the physicians, nurses and pharmacists working together as a team; and this advantage has been realized beyond expectations during the first year of the Satellite service. The pharmacist with his knowledge of medications, working in the immediate vicinity, is able to make a greater contribution because of his knowledge of the patient's needs. Also his presence results in an educational benefit to the interns and nurses. Occasional lectures have been given by the pharmacists.

Packaging of medicines for the unit-dose system is performed by a closely supervised hospital technician, using machinery specially designed to package drugs in unit-of-use packets, seal, and label with drug name, strength contained, control number, and expiration date. The liquid doses are placed in bottles and administered directly from these bottles. Labels for bottles are printed in the packaging area. Once the product has been made available in a unit-dose form, the distribution system begins.

The steps begin with the doctor writing the order for medication.

The doctor flags the order, and a nurse or ward clerk removes the copy and places it on a spindle at the nurse's station.

Every two hours a pharmacist makes rounds and picks up the orders. (Orders for immediate medication are handled specially, apart from this routine.)

The orders are brought to the Satellite Pharmacy, located nearby, and a pharmacist charts each order in a pharmacy profile, from which the medications are dispensed for a set length of time and then

sent to the nurse's station. The nurse administers the medication and charts it immediately.

If any medication is returned to the pharmacy without reason, the pharmacist checks immediately for the explanation and, if necessary, notifies the physician.

**Large-volume intravenous** solutions with additives are prepared in the Satellite Pharmacy. Upon receiving an I.V. order, the pharmacist prepares the solution with sterile techniques under a laminar flow hood (clean air center). The solution is then clearly labeled as to the patient's name, unit number, location, I.V. number, exact volume contained with additives, ingredients in formula form, expiration rate, and flow rate, and there is a space provided for recording the time of "hanging" the I.V.

Advantages offered by the Satellite Pharmacy for the nurse have been referred to, above, in terms of saving time, energies and nerve strain, and there is much more to be said on the positive side: The nurse has more time to give individual attention to her patients. She is also benefited by closer professional communications with the physician and the pharmacist.

From the point of view of the pharmacist, the medication

preparation becomes his responsibility under rigidly controlled conditions in a totally segregated yet nearby location. Accuracy is improved by the series of independent checks by pharmacist, technician and nurse. Positive drug identification is afforded to the point of administration, and the chances for error are almost nil. The pharmacist is involved directly in patient care, making available his knowledge of drugs. Inventory management is closely controlled.

**The educational advantages** of a pharmacist available to the physician and nurse at all hours, 24 hours a day, at the patient care area are a part of the success of this Satellite Pharmacy in its first year of service.

Mr. Perino, the dynamic young supervisor of the Satellite Pharmacy, came to Presbyterian in 1968, following his studies at Fordham. For a time he worked evenings as staff pharmacist in the Central Pharmacy.

According to Mr. Perino, much of the success of the service must be attributed to the staff of young, energetic, dedicated pharmacists of diversified backgrounds. Six have a background of work in hospital pharmacies; two, in research and industrial pharmacy.

costs. The distance between the nurse's station and the pharmacy is, of course, a complicating factor, particularly in so large an institution as this medical center of 1,700 beds.

Because there is a shortage of nurses, it is a serious question as to how much of the nurse's time and energy should be expended in making copies of the doctor's order, guiding the order through until the required medicine arrives from the pharmacy, preparing the dosages as needed for the designated hour, recording the

# Graduation of Nurses Focuses on the Future . . .

Continued from page one

cal Center's garden under a sky threatening rain.

Calling the graduation ceremony "a time of reflection and a time of projection," Miss Maines focused her inquiries on the future of health care in the U. S.

"Will there be a national insurance plan for all . . . will we work for equal opportunities in health care . . . will we put into effect our often-spoken but not so often implemented philosophy that health is a right rather than a privilege . . . and will we allocate resources to promote health rather than war?"

And to these questions Miss Maines answered softly but firmly, "I think we will . . ."

Susan Maines focuses on the future of health care in America.

Miss Maines emphasized the importance of education in coming to grips with these issues on an individual level, in one's community or hospital. "How will you choose to use your education—as a tool? As a stepping stone? As a status symbol?" she asked. "And when you have your answers," Miss Maines went on, "ask further, 'why do I choose to use it this way . . . for what purpose?'"

As the nurses will fulfill the responsibility of their education by bettering their society and by fighting to retain what's already achieved, Miss Maines said in conclusion, they should not forget "a very important aspect" of their lives—that of caring for others—an aspect of human life that is built into the very fabric of nursing.

Speaking of "matters of heart and not the intellect," Nancy Sargis, Associate in Nursing, addressed herself to the individual in the "graduation Class of 1971—a Class of fine people that the Faculty felt privileged in having taught and having known somewhat."

Miss Sargis quoted the theologian Paul Tillich to describe life as including "both fear and courage as elements of a life process in changing but essentially established balance." She said she shared the "anticipatory fears" the graduating class may have on making "the transition from student to graduate nurse with all its attendant demands and responsibilities," . . . such as not having enough emotional rewards to fill "the intellectual voids," or finding that "the nursing environment interferes with one's contribution."

"Perhaps at the root of it,"

Nancy Sargis deals with future concerns of fledgling nurses.

Miss Sargis said, is the question: "Will I like nursing enough to want to continue it as a professional way of life?"

Describing these fears as "a manifestation of a vital being in preparation for a new role and new experiences," Miss Sargis emphasized that such a fear can be "a positive moving force in the life of an individual."

Counterbalancing these apprehensions, Miss Sargis pointed out that the graduates have demonstrated their courage "by choosing a profession with a social conscience, by selecting a profession where service rewards and monetary gains are not commensurate with the demands, and by taking a path academically more demanding and arduous than a hospital diploma school."

Lastly, Miss Sargis reminded the graduates of Walt Whitman's observation that wisdom cannot be tested in school, that, being "of the soul," it cannot be passed from one having it to another not having it.

In an entertaining exposi-

## Trustees Elect . . .

the Hospital's Medical Board.

A Minnesotan by birth, Dr. Stinchfield earned his M.D. from Northwestern University in 1934. He interned in Chicago and completed his initial residency at the Passavant Memorial Hospital. In 1936 he joined the Fracture Service of the Presbyterian Hospital as Assistant Resident. After a traveling orthopedic fellowship in the U. S. and Europe Dr. Stinchfield served as orthopedic surgeon at the New York Orthopaedic Hospital and the Institute for the Crippled and Disabled. He accepted an appointment as Assistant Attending Surgeon on the P.H. Surgery Service in 1940. During World War II, he was the Commanding Officer of the 307th Station Hospital and Commanding Officer of the 826th Group Center Hospital in England.

In 1947, Dr. Stinchfield became an Associate Attending Surgeon and an Associate Attending Orthopedic Surgeon. He was appointed Attending Orthopedic Surgeon in 1951, soon after the New York Orthopaedic Hospital moved here from its original site on 59th Street. Five years later, Dr. Stinchfield assumed his present posts.

tion of the "Peter Principle," Susan Krauter, class president, gave some humorous but practical advice to her fellow graduates, about to go out in the world to work in set-ups involving some type of job hierarchy. Expanding on the well-known principle, described by Lawrence J. Peter, that "in a hierarchy every employee tends to rise to his level of incompetency," Miss Krauter proposed "self-awareness" as a key defense mechanism against being promoted to this insidious level. Her point was that if a person is aware of his strengths and limitations, he can avoid falling victim to the Peter Principle.

In another lively presentation, Sister Mary Aileen Dame acquainted the audience with the problems of nurse-midwives in today's society and

Sister Mary Aileen Dame makes a point in her remarks about nurse-midwives.

outlined their role in 20th century health care in America.

The August 19 proceedings were presided over by Dr. Mary I. Crawford, Associate Dean (Nursing), Faculty of Medicine, Columbia University, and Director of Nursing, P.H. Nancy Huber, President of the Student Association, introduced the speakers, including Deborah Mull, Chairman of Annual Activities, and Emilie Steinhauer, who both led the Meditation, and Judy Veenema, who presented the Yearbook.

Dr. Crawford presented the Margaret Eliot Prize to Miss Mull, and Loretta Verdisco presented the Alpha Zeta Chapter of Sigma Theta Tau medal of excellence to Miss Krauter. As in the previous year, two groups completed the nursing program as members of the same graduating class, and the two awards were given to one representative of each group.

Helen F. Pettit, Professor of Nursing and Director of Nursing Education, presented certificates and pins to the 83 candidates for the baccalaureate degree, and Carole Kaufman, Assistant Professor of Nursing, made presentations to 12 registered nurses completing the M.S. program in

Helen Pettit acknowledges the class gift, presented to her during the 1971 graduation ceremony.

Maternity Nursing—Nurse Midwifery.

A highlight of the ceremony was the presentation of the class gift by Misses Huber and Mull.

This year's gift was a large oil painting of Miss Pettit—and was presented by the graduating students to their well-respected Director of Nursing Education. Although it wasn't raining, there was a wee bit of moisture around Miss Pettit's eyes as she acknowledged the gift "from the girls in the class."

Immediately after the recessional and the class photo and with the students repairing to Maxwell Hall for their traditional reception, the rain did start coming down in a drizzle, as if Nature appreciated nurses for their work well enough to have delayed the unpleasantness.

## New Unit on 14 East to Become Intensive Care Center . . .

Continued from page one

gained momentum in the United States over the past decade. It is a logical outgrowth of the widespread acceptance of post-anesthesia recovery rooms during the decade of the '50's. Certain specialized types of units, such as those for cardiac monitoring and the care of patients after open heart surgery, have received special attention and developed more rapidly than other kinds of intensive care.

The development of units for providing surgical intensive care has been more difficult because it involves care for such diverse clinical problems as the patient with multiple injuries after an automobile accident, the patient with shock from generalized peritonitis, the patient with a major third degree burn, and the patient with acute postoperative ventilatory failure.

In 1964, a four-bed intensive care unit was constructed on the east end of the 14th floor of Presbyterian Hospital, in order to provide intensive care and perform specialized research devoted to improving the understanding and care of such patients.

This unit was named the Surgical Metabolism Unit and later became the first of nine clinical research units funded by NIH for the care and study of patients with trauma and related surgical problems. The selection of the 14 East wing and adjacent corridor for the new eight-bed intensive care

unit will allow it to be integrated with the four beds of the Surgical Metabolism Unit, allowing the latter to become the research arm of a 12-bed intensive care unit.

The research on the Surgical Metabolism Unit has been directed toward the improved understanding of energy requirements of the critically ill and injured patient and the requirements for ventilation and circulation to fulfill these energy requirements.

Along with this research has been a continuing interest in improving the monitoring of such patients, so that critical

care before the more serious later stages are reached.

In 1967, the Surgical Metabolism Program was enlarged to include a Bioengineering group in collaboration with the Columbia University School of Engineering and Applied Science.

Generous financial support was provided by the John A. Hartford Foundation for this work, under the direction of Dr. John M. Kinney, Professor of Surgery at Columbia and Attending Surgeon, Presbyterian Hospital, and by Dr. Edward Leonard, Professor of Chemical Engineering.

Initial efforts at the organization and presentation of patient data by computer were carried on by means of computer cards which were punched at the Medical Center and carried down to the computer center on the main campus.

This effort was improved when an IBM-1130 digital computer was set up on the 12th floor of the Vanderbilt Clinic in order to accept signals directly from the Surgical Metabolism Unit.

Recently this group has been working with a Swedish computer system which has been uniquely designed for the monitoring of intensive care patients. It is expected that the experience gained with patients on the Surgical Metabolism Unit will allow utilization of this system for some of the patient monitoring to be developed in the new intensive care unit.

Artist's conception of patient's room in an intensive-care unit does not show profusion of auxiliary medical apparatus and the concerned absorption of doctors and nurses caring for a critically ill patient.

conditions such as shock and ventilatory failure would not only receive better treatment but that early stages in the failure or ventilation or circulation might be identified and

## Human Genetics Teaching Grant

The Department of Human Genetics and Development of the College of Physicians and Surgeons has received a \$29,320 teaching grant from the National Institute of Child Health and Human Development to train academicians for research in genetics. Centered on "Genetic Control of Cell Differentiation and Replication," the program will be coordinated by Dr. Robert S. Krooth, Professor of Human Genetics and Development, P&S. It is the only predoctoral program in developmental biology and genetics in the Faculty of Medicine.

According to Dr. Krooth, the Genetics Department has enrolled two pre-doctoral students and one post-doctoral fellow under the grant, which is the initial instalment of a proposed three-year award of \$187,870.

## TO THE UNITED FUND OF GREATER NEW YORK, Presbyterian Hospital Makes Strong Contribution

Sue Kircher, Nursing Department, left, and Mrs. Anne Lubrecht, Public Interest, discuss results of successful United Fund drive with Mr. G. R. Masten.

There is never a freeze on human generosity, and we are happy to report that the employees of The Presbyterian Hospital have responded magnificently to the 1971 appeal for the United Fund of Greater New York.

This year's gifts and pledges total \$25,556.52, which is \$4,446.63 more than last year—an increase of 21%.

The final report has now been issued by Mr. G. R. Masten, Presbyterian's Assistant Vice President in charge of Non-Professional Services, who directed the campaign, and he has expressed praise for the captains and others who assisted. He also stated that a special word of gratitude goes to Mr. C. Douglas Auty, Assistant Vice President, Per-

sonnel, who carried on during Mr. Masten's illness.

The tabulation shows that 10 of the 15 divisions of Presbyterian personnel increased their gifts this year; responses from some of these were 70%, 80% and even 100%.

The most startling gain over last year's participation was that of the Department of Nursing, up from 25% to 45%. The nurses are surely to be commended for contributing a total of \$7,140.32—an increase of \$2,270.56 over last year. When asked the reason for this gain, Mr. Masten made reference to the charisma of Sue Kircher, who was in charge of the campaign for the Nursing Department.

In the post-campaign recounting of the many phases of the drive—preparatory work, soliciting, clerical work—many other persons were lauded for their excellent help: Mrs. Anne Lubrecht, Department of Public Interest; Mr. Vincent D'Alessio, Jr., Payroll Department; Mr. George Minaya, Assistant Treasurer's Office; Kathy Foy, Mr. Masten's Secretary.

The efforts of these and many others, including the departmental captains, are all reflected in the excellent record. In sum, all persons who participated may well be proud of the Hospital's accomplishment.

Presbyterian is grateful.

## Bowman Medal To Dr. Reese

Dr. Algernon B. Reese

The Ophthalmological Society of the United Kingdom has conferred the Bowman Medal upon Professor Emeritus Algernon B. Reese, of the Edward S. Harkness Eye Institute.

This prestigious honor, one of the most coveted in ophthalmology, was established in 1883 by the British Ophthalmological Society to honor Sir William Bowman, its first president and a world leader in ophthalmology.

The nominee, chosen periodically, delivers the Bowman lecture upon a subject of his particular interest in ophthalmology.

Dr. Reese presented a summary lecture on *Expanding Lesions of the Orbit*, his life-long interest. This presentation took place recently in the auditorium of the Royal College of Physicians in London. The Bowman lecturer becomes an honorary member of the Ophthalmological Society of the United Kingdom.

## Grant from NIMH for Study of 'Brief Hospitalization'

The effect of "brief hospitalization" on psychiatric patients and their families will be studied in Washington Heights under a \$350,000 grant, to be allotted in five yearly installments of \$70,000 by the National Institute of Mental Health.

The announcement of the grant was made jointly by Dr. Marvin I. Herz, Director of the Washington Heights Community Service, and Dr. Robert L. Spitzer, Director of the Evaluation Section of Biometrics Research, New York State Department of Mental Hygiene.

The investigation, which

will dovetail with a recently completed study of day care, will be carried out in the Community Service facilities on the sixth floor of the Psychiatric Institute and in the Biometrics Research offices, located two blocks from the Institute.

A number of recent studies have shown that many psychiatric patients are better off if their initial hospitalization is brief, that is, lasting, on the average, a few days and certainly no more than a week. Prolonged hospitalization, according to these studies, may cause a patient to regress and may damage his self respect and his ability to function normally in his family and community. In contrast with these data on the beneficial aspects of brief hospitalization of patients, its effect on their families has not been adequately studied. To conduct such a study, the biometrics research group has developed question-

naires and gained experience in scientifically evaluating the problems faced by families of psychiatric patients.

This policy was instituted at the Service after a 26-month study had demonstrated the advantages of day care over full-time hospitalization in the treatment of severely disturbed psychiatric patients (see August, 1971 *Stethoscope*).

The two test groups will be compared with a random control group of 100 patients who will receive standard inpatient care until their individual therapists decide they are ready to become outpatients.

Follow-up evaluations will be made periodically from two weeks to two years after the patients' hospitalization to find out how they have coped with the tasks of every-day living and to measure both the positive and the negative effects of their presence on their families.

## MAGAZINES, PLEASE

The Pediatric Clinic is seeking contributions of magazines to be used by patients and their parents. Magazines may be left in Dr. Asnes' offices in the rear of the Pediatric Clinic, VC 4-450. Thank you.

## Mental Hygiene Week: Praise for Volunteers at P.I.

In an effort to spark some community interest and involvement in the problems of teen-age patients at Psychiatric Institute, Mrs. Elizabeth B. Kilborne, coordinator and head of volunteer services, took advantage of Mental Hygiene Week, observed recently, to hold a two-day open house. Many young people of high

school and college age attended.

The patients prepared refreshments and, with an assist from staff and volunteers, showed the visitors around the Institute.

Mrs. Kilborne, describing the activities, stressed the importance of volunteers in any successful program treating

patients with emotional problems. She stated that admission to a psychiatric facility is not, or should not be, a frightening experience. "But generally," she said, "the patient's lot in any such institution is not a happy one. The patient may spend endless hours sitting apathetically, pacing or 'fantasizing' because there is nothing to do. And beneath these layers of depression lurk talents, creativity and intellectual curiosity. It is these untapped resources that our volunteers try to bring to the surface."

She could not praise highly enough the current roster of 62 volunteers now serving at Psychiatric Institute. "Volunteers are teaching a wide variety of subjects: dressmak-

ing, modern dance, photography, hand crafts, computer programming and tutoring in school work in conjunction with the Board of Education."

Almost as if he were her own child, Mrs. Kilborne spoke warmly and proudly of one 14-year-old patient who captured first prize in a photography contest in competition with 39 hospitals and agencies.

Initiated in September, 1970, the volunteer program, "slightly wobbly when it was born, has become full-fledged."

Anyone interested in serv-

ing as a volunteer is urged to contact Mrs. Kilborne, Head of Volunteers, Psychiatric Institute.

Mrs. Elizabeth B. Kilborne

Rebecca Srole with group of patients all tied up, learning an old craft—originated from sailor's knots—called macrame.

## Dr. Fay Appointed Supervisor, Speech and Hearing Clinic

Thomas H. Fay, Ph.D., has been appointed Supervisor of Speech and Hearing Clinic, and Professor of Otolaryngology, P&S, it was announced recently by Dr. Daniel C. Baker, Jr., Professor and Chairman, Department of Otolaryngology, and Dr. Robert M. Hui, Chief of the Otolaryngology Clinics.

Dr. Fay is not a newcomer to Presbyterian Hospital, having served as supervisor of audiology from 1958 to 1961 before accepting a position as Chief of the Communicative Disorders Service, Department of Rehabilitation Medicine at New York Medical College-Flower Fifth Avenue Hospital, and its affiliating institutions, Bird S. Coler and Metropolitan Hospitals, and the Cen-

Thomas H. Fay, Ph.D.

ter for Chronic Disease.

Just before accepting the post here, Dr. Fay was Associate Professor of Audiology and Speech Pathology at New York University from 1969 to 1971, where he also held the appointment of Associate Director of the Deafness Re-

search and Training Center.

He received his B.A. from the University of Florida in Gainesville in 1949, and his Master's degree from Teachers College, Columbia University in 1950. In 1958 he earned his Ph.D. from the University of Illinois in the area of speech and hearing disorders.

Dr. Fay has contributed significantly to the medical literature. He is a member of several professional societies and has served as president of the New York State Speech and Hearing Association, and has also served on a number of conference and workshop planning committees.

His professional career has been devoted to the care and assistance of persons who have sustained impairments of hearing, voice, language and speech. He has long been a champion of research concerned with the personal and public safety of deaf and other communically handicapped persons.

Dr. Fay is an advisor in communications to the New York Fire Department and serves on the Mayor's Subcouncil on Noise, City of New York.

## Presbyterian Employees Must Apply Now

### WEINBERG EDUCATIONAL AID

Is there a promotion in your stars for tomorrow?

Do you keep saying to yourself, "All I need is a little more education?"

A little more education may be the doorway to many things you hope to attain in this life. This has already proved true for a few hundred employees of The Presbyterian Hospital.

Read this explanation carefully:

More education costs a little money, but there is a plan available to help you if you are a regular employee of The Presbyterian Hospital.

The Weinberg Educational Aid Reimbursement Plan is available to all regular full-time employees of this Hospital.

If you qualify, the Weinberg Plan offers to repay you 50% of the money which you pay for tuition fees, up to six credits per semester, or the equivalent for non-credit courses.

Here is an example of what may happen. You may pay \$60 for tuition for college courses

for the fall semester. Later, the Weinberg Aid Plan will pay you \$30 to reimburse you for one-half of this cost.

Whether you are thinking of college or some other type of school, your application can be approved if it is a school of recognized standing. Not correspondence schools, however.

To be eligible for this reimbursement, you must receive approval before you begin the course.

The subjects you select must be related to your job or your future responsibilities at the Hospital.

For the Fall Semester, 1971, the enrollment period is September 1-30, and completed applications must be returned to PH 1-44 on or before Thursday, September 30.

The plan is administered by C. D. Auty, Assistant Vice President for Personnel.

For application forms and further information, contact Lillian Oring, Personnel Assistant, PH 1-44. Telephone: 3215.

## Dr. Sinnette Heads Social Pediatrics

The Department of Pediatrics, Columbia University College of Physicians and Surgeons, announces the establishment of a Division of Community and Social Pediatrics. The primary responsibility of the new Division is to harness the considerable pediatric resources available in the affiliated hospitals. This would promote more effective utilization of the resources to meet the health needs of children in the communities served by these institutions. Initial emphasis will be directed toward the inadequacies of child health services in the greater Harlem Community.

Dr. Calvin H. Sinnette, Clinical Professor of Pediatrics, has been appointed Director of the Division. For more than 10 years, Dr. Sinnette was in practice in New York City and was on the Pediatric Faculty at Albert Einstein College of Medicine. In 1965, he accepted a full time appointment as Senior Lecturer in Pediatrics at the University of Ibadan, Nigeria. Subsequently, he was appointed Professor of Pedi-

Dr. Calvin H. Sinnette

atrics, Ahmadu Bello University, also in Nigeria. In 1970, Dr. Sinnette returned to the United States where he joined the Columbia Faculty.

Under a new program, the Josiah Macy Jr. Foundation has awarded a faculty fellowship to Dr. Oliver D. Hueston. The fellowship, one of eight awarded throughout the country, is designed to prepare minority recipients for careers in academic medicine. Dr. Hueston's appointment will be in the Division of Community and Social Pediatrics.

## AN APOLOGY AND A CORRECTION

The editors of *The Stethoscope* wish to apologize to Dr. Sidney Carter and Dr. Niels L. Low, and also to our readers, for an error which appeared in last month's DOINGS OF DOCTORS. The five-line paragraph in which these doctors' names appeared was entirely erroneous.

The correct information is contained in the following two paragraphs, submitted by the office of Dr. Carter:

DR. SIDNEY CARTER, Attending Neurologist, Presbyterian Hospital, Professor of Neurology, College of Physicians and Surgeons and Chairman, Division of Child Neurology, finished his two year term as President of the American Academy of Neurology at the Annual Meeting of the Academy at the New York Hilton Hotel. On the evening of April 29th his fellows and current trainees gave him a testimonial dinner. That dinner was attended by 55 Fellows and spouses.

DR. NIELS L. LOW, Associate Attending Neurologist, Presbyterian Hospital, and Associate Professor of Neurology, College of Physicians and Surgeons was elected Chairman of the Section of Child Neurology of the American Academy of Neurology at the same meeting.

DR. HUGO A. KEIM, Assistant Attending Orthopedic Surgeon, PH, has been selected Distinguished Alumnus of the Year by the Alumni Association of St. Mary's College in Winona, Minnesota.

Dr. Keim graduated summa cum laude from the College in 1956.

At the section on urology during the convention of the American Medical Association, held in Atlantic City, N. J., June 20-24, DR. JOHN K. LATTIMER, Professor and Chairman, Department of Urology, discussed *The Capability of American Urology to Keep Up with the Population Explosion*.

At the same meeting, a paper on the Effect of Aldactone on Benign Prostatic Hypertrophy was presented by Dr. RALPH J. VEENEMA, Attending Urologist, PH, DR. BRUNO FINGERHUT, Special Lecturer, Urology, P&S, and DR. PAUL TUCCI, Instructor in Urology, P&S.

## DOINGS OF DOCTORS

A paper on *The Cellular Basis for the Current Treatment of Wilms's Tumor* was read by DR. JOSEPH B. PRIESTLEY, Assistant Resident, Urology, who received the Grayson Carroll Annual Essay Award of the American Urology Association for this paper.

DR. MEYER M. MELICOW, Special Lecturer, Urology, P&S, received a special award and second prize for his painting and drawing at the exhibit of the American Physicians Art Association, held in Atlantic City, N. J.

At the National Meeting of the American Urological Association at the Palmer House, in Chicago, May 17-20, DR. MICHAEL WECHSLER, visiting Fellow, Urology, was awarded first prize for the best scientific exhibit. His exhibit showed refinements of a cancer detection test currently receiving wide publicity, using an antigen from embryonic and cancerous tissues, to detect whether or not all of a cancer has been eliminated by any given treatment.

DR. NICHOLAS ROMAS, Assistant Professor of Clinical Urology, P&S, new member of the attending staff of the Department of Urology, won second prize in the exhibit. He showed that diseased kidneys receive less of a medication than normal kidneys, a fact rarely appreciated in deciding dosage of medication. Dr. Romas measured this by using radioactive tracers attached to various medications, and measuring the concentrations of medications in both normal and abnormal kidneys.

Dr. Priestley read his prize-winning paper describing how the most effective treatment for Wilms's tumor—may be determined by testing various drug combinations on cells from this cancer, grown in test tubes.

Also at this meeting, Dr. Melicow had an exhibit and presented a paper on *Endometrial Carcinoma of the Utricleus Masculinus (Prostatic Utricle): A Report of Six Cases*.

Dr. Lattimer, as chairman of the National Coordinating Council for Urology, reported on the organizational capabilities of American urology, and as chairman of the Undergraduate Educational Committee for Urology, he reported on new developments in urological

Please turn to page eight

## FROM THE MAILBAG

Dear Everyone,

Christopher's been home for a couple of days now and seems to be doing fine.

I didn't have an opportunity to thank all of you individually . . . A sincere thanks to each one of you.

I was really frightened at the prospect of leaving our baby at an impersonal, cold "big city hospital." You've all proved to me how wrong I was . . . All of you seem to love your work with the children trusted to your care and even seem to find time to be nice to the mummies (a very rare quality, I've found).

Hopefully, Christopher will remain healthy and not have to come see you again, but if he should have to return my mind will rest more easily

knowing the wonderful staff at Babies will take the very best care of him.

Sincerely,  
The mother of a recent patient.

P.S. A special thank you to Miss Sarr, Mrs. Robinson and Dr. Durbin.

To the Nurses at 11 Annex and Group Nursing:

I am writing this to say how grateful I am to all who have served me and others on Group Nursing and 11 Annex. It was remarkable the way all of the nurses were so attentive, both day and night. The kindness and compassion they showed to all patients was very wonderful.

Sincerely,  
A grateful patient.

# Occupational Therapy Program Guides Student Aides Toward Personal Responsibility

Students gathering ideas for careers visited 19 different occupational therapy areas at Presbyterian Hospital.

Mrs. Adelaide Deutsch welcomes the group of 24 young students who chose to become summer aides in Occupational Therapy.

A one-day orientation session was held on June 28 for 24 young students who chose to work as occupational therapy aides in a program called *A Summer Experience in Occupational Therapy*.

The students, representing 17 colleges from four states, had an opportunity to meet staff members and to formulate ideas that might be of interest to them — especially those who might be seriously considering a career in occupational therapy. They were placed in 19 different hospital occupational therapy departments, including three at Psychiatric Institute.

At the morning session Mrs. Adelaide Deutsch, M.S., O.T.R.,

Associate Director, Courses in Occupational Therapy, Columbia University, and founder and director of the Summer Experience program through 1970, welcomed the group and introduced Mrs. Rosalee Miller, O.T.R., Director of Career Development and the Summer Experience program, who spoke to the group on "Summer '71 — A Time for Growing."

Mrs. Miller touched on the many possibilities open to young people today, and asked, "How does one distinguish one's self? How does one develop compassion and a sense of honest responsibility?" According to Mrs. Miller the key word is experience: "... experience with people who are

different, whose problems are bigger and more basic to survival than yours; experience which demands that you respond and give of yourself — not as a member of some group or cult, not as a hippie, or a liberal; not as a feminist or a political activist, but as a person, an individual, as yourself."

Other speakers were Mrs. Laura Goderez, M.S., O.T.R., staff occupational therapist, Bird S. Coler Hospital; Mrs. Sandra Peeples, O.T.R., senior occupational therapist, Hillside Hospital; Mrs. Susan Thorne, O.T.R., staff occupational therapist, Harlem Hospital; Mrs. Patricia Nolan and Mrs. John Pitselos, O.T. assistants, Bronx State Hospital.

The session concluded with a lively question and answer period.

The students were required to write a paper at summer's end, expressing their objective experiences and subjective reactions for a follow-up session in the fall.

## "East Meets West" in Vietnam and at Presbyterian Hospital

"Oh, East is East, and West is West, and never the twain shall meet," Rudyard Kipling declared.

Never?

In 1967, Edna Farrington, nurse in the Edward Daniels Faulkner Arthritis Clinic, V.C., accepted a position with the United States Department of State to work in South Vietnam as a nurse-advisor. There followed a two-year tour of duty in a Vietnamese province hospital in the city of My Tho, situated about 40 miles south of Saigon in the Mekong Delta. Miss Farrington's assignment brought her to the pediatric ward where she met the head nurse, Mrs. Nguyen Ngoc Nu.

While working together the two nurses shared their nursing experiences and during the course of this professional relationship they became friends and visited each other in their homes, learning about the other's customs and way of life. Miss Farrington met Mrs. Nu's husband, Mr. Hien, who is employed by a rural health organization and works as a health technician, diagnosing and treating patients in the area. This may sound strange to our occidental ears, accustomed as we are to many doctors specializing in many areas of medicine. But having a "junior" doctor where there frequently is no doctor, is better than no health care at all.

Miss Farrington also met and became acquainted with Mrs. Nu's two children, a 12-year-old daughter, Ngoc Lanh,

and a 10-year-old son, Phu My.

Mrs. Nu confided to her American friend her wish to be able some day to study nursing in the United States.

When, in 1969, Miss Farrington returned to her old job in the Arthritis Clinic, she

terian, the tiny, soft-spoken, almost shy nurse observed and learned many new skills, including the use of intermittent positive pressure breathing apparatus, and the use of the electrocardiogram machine.

But more importantly she

gery for birth defects, particularly scoliosis. These are but a few examples of the invaluable training she received here.

She also had the opportunity to watch open heart surgery and was particularly impressed by the incidence of coronary disease in the United States, a disease rarely encountered in Vietnam.

Mrs. Nu's stay in our country was not limited strictly to learning American nursing methods. She had occasion to do some sightseeing and visited New Hampshire, Virginia, Washington, D. C., Chicago and upstate Cooperstown. She thrilled to the sights of New York City, especially the Circle Line Cruise, the Empire State building and the Statue of Liberty.

Sixteen months later, on July 9, Mrs. Nu began her 10,000 mile journey back home. There she will have a chance to pass on her new skills to the three nurses who assist her on the 50-bed pediatric ward in

"How is our little patient?" the mother and grandmother ask Mrs. Nu (left), who has come to Presbyterian from Vietnam through the Exchange Visitor program for nurses.

contacted Ruth Alberta Rayner, Director of Presbyterian Hospital's Exchange Visitor Program for nurses. An application was sent and Mrs. Nu arrived here in March, 1970, the first Vietnamese nurse to participate in our Exchange Visitor program.

During her stay at Presby-

has gained knowledge in basic areas of care that will be most meaningful in the children's ward: aseptic technique in the suturing and dressing of wounds, administering parenteral medications, and an opportunity to observe successful rehabilitation of children who have undergone corrective sur-

Mrs. Nu and Edna Farrington

South Vietnam, frequently occupied by 60 or more patients, for they put two patients in a bed when they are crowded.

She feels very strongly her obligation and responsibility to bring these new skills to her country and to her people. But, "I fell in love with the United States and hope that someday I may return with my family and live here permanently," said Mrs. Nu.

## From the Mailbag

Dear (Staff Member):

Last Sunday, May 9, I was discharged from 10 East, urology section. I want to write you and tell you of the wonderful treatment I received from the Staff on that floor.

They were wonderfully efficient, kind and did their best to make me feel like a human being again.

This humane treatment included the floor doctors, junior residents, the nurses, the nurse trainees, orderlies and all personnel on 10 East. Their efficiency and kindness will long be remembered by me and my wife.

Very sincerely yours,  
A recent patient.

## Junior Volunteers Acquire Hospital Experience

"... People who need people are the happiest people in the world..." are the words of a hit tune sung by Barbra Streisand in "Funny Girl." They might have been tailor-made, so accurately do they fit a capsule description of what a junior volunteer is.

Each year young people between the ages of 16 and 18, seeking motivation for possible future careers in medicine, nursing, occupational or recreational therapy, or in one of the paramedical fields, enroll in Presbyterian Hospital's Junior Volunteer Program during summer vacation. The program is a part of the regular volunteer services under the direction of Mrs. Dorothy Diamond, Director of Volunteers, and is a full-time project during the summer months. It does not end, however, when summer is over, for many of the young volunteers continue to serve, coming in after school and on Saturdays and holidays.

Working papers are required for youngsters under 18. These can be secured from their school, and the Pledge of Employment will be signed by Mrs. Diamond, after acceptance into the program.

Girls between the ages of 16 and 18 are known as "candy strippers." Wearing the official red and white pinafore and white blouse, the uniform designated by the American Hospital Association, they represent not only our Hospital but candy strippers all over the country. Boys in this same age group wear a blue jacket. The uniforms are provided by the Hospital; the blue jacket is laundered by the Hospital, but the candy strippers are responsible for laundering their uniforms and keeping them immaculate at all times.

Youngsters who like nursing can help nurses in several ways, including feeding babies and adults, making beds, running errands, transporting patients and laboratory specimens, folding linens and arranging flowers. Those who

like recreation and are skilled in some arts and crafts can be of invaluable assistance to the occupational and recreational therapists. Some may like to cuddle babies and toddlers in the lap, talking or reading to them. An important thing to remember is that the volunteer does not replace the nurse, but simply continues with the TLC (tender loving care), which the nurse does not always have time for if she is to complete her professional duties. Sometimes just the sight of the candy stripper or the blue-jacketed teen-age boy is all that is necessary to bring a smile to the face of a sick child or adult.

For those who enjoy detail work, there are books in the library that need to be catalogued, put back on shelves; cards that need to be typed. And there are many places that require typing and clerical work—the blood bank, pharmacy and some clinics.

Nor is the program one-sided, whereby only the patient gains from the services of the junior volunteer. These young people not only gain insight into Hospital policies and procedures, but achieve the moral satisfaction of contributing constructive service to a community institution. This in turn helps them develop a sense of civic responsibility which will benefit not only the patients and the Hospital, but the community as well.

Doctors, nurses and other

personnel are also grateful for the help of these young volunteers.

An important point to remember—if you are considering volunteering yourself or know someone who would like to—is that no volunteer is asked to go to the job "cold." All volunteers, junior or adult, receive the necessary job training from a member of the staff in the area to which they will be assigned.

Junior volunteers who serve for 70 hours without absence or lateness receive honor awards. For the girls, a lovely Florence Nightingale pin; for the boys, a Maltese cross.

This year, 57 young people were on the job as junior volunteers. The Hospital can always use more.

If you would like to be "... one of the happiest people in the world..." call the Volunteer Office at 579-2542, or stop in and chat with Mrs. Diamond or Vanderbilt Clinic 10.

## NEWS OF NURSING

Mary Ann Melone, Medical Service, was in Miami, Florida, this June to attend the Third National Conference on Coronary Care Units, sponsored by the American Heart Association.

\* \* \*

Penelope Buschman, Clinical Specialist in Child Psychiatry, and two nurses from the Sloane Hospital for Women, Hope Wilson and Miriam McCormick, journeyed to New Hyde Park, New York, in June to attend a conference on "Death and Dying" held at the Long Island Jewish Medical Center.

\* \* \*

A Symposium on Child Abuse that took place in New York City on June 15 under the auspices of the Medical Society of the County of New York drew Pauline Murray of Babies Hospital and Carol Palfundi of Vanderbilt Clinic.

\* \* \*

Mrs. Felicia Duran, Operating Room, was at the Bellevue Hospital Center in New York on June 30 for a symposium on "Management of the Patient Undergoing Open-Heart Surgery."

\* \* \*

A strong delegation of the Surgical Unit of the Presbyterian Hospital's Nursing Service took part in the "Os-

tomy Seminar" of the United Surgical Company, held at Saddle Brook, New York, in July. The members of the Presbyterian delegation were: Ann Lanoway, Ann Kelaher, Ann Amenson, Mary Ann Bertinelli, Sue Staump, Barbara Curly, Mary Lynn Cipolla, Dora Urtula and Margaret Breiter.

\* \* \*

"In-service Education in Nursing" was discussed at the Teachers College in New York City from July 19 to July 23, and Columbia-Presbyterian was represented by June Weiss, Staff Development, Keville Frederickson, Eye Institute, and Beverly Jones, Neurological Institute.

\* \* \*

Dorothy del Bueno, Staff Development, Ann Swain, Surgery, and Miss Jones participated in a workshop on "Motivation and Discipline," sponsored in July by the Practical Management Associates of New York City.

\* \* \*

Dr. Ann M. Earle, Assistant Professor of Nursing, C.U., and Director of the Graduate Program in Psychiatric Community Health Nursing, attended a conference commemorating the 25th anniversary of the Mental Health Act. The conference was held in Washington, D. C., in June.

## Capping of 21 Practical Nursing Students

Marking the first milestone in their academic curriculum, 21 members of the 1972 graduating class of the Columbia-Presbyterian School of Practical Nursing received their nursing caps in the traditional setting of the Pauline A. Hartford Memorial Chapel on August 13.

Following the processional, Edith J. Ankers, Director of the School, welcomed the students, their relatives and friends, and spoke with obvious pride concerning this event, a significant step toward their goals.

Then Miss Ankers, assisted by Instructor Annie Laurie Bryant, capped each student.

The chapel lights were dimmed and, led by the senior class president, Marion Gittens, the newly capped students, holding candles, recited the practical nursing pledge, a beautiful and impressive recitation.

Dr. Robert H. E. Elliott, Jr.,

Assistant Vice President, Special Projects (Nursing), spoke a few words of praise for all the students.

Benediction by Chaplain Robert B. Reeves, Jr., followed by the recessional, brought the ceremony to a close.

After the ceremony, a reception was held in Sturges Hall, Maxwell Hall, for the students, their colleagues, relatives and friends.

## Bio-Medical Fair Presents Nursing to Young People

On Monday, July 19, a group of students and faculty of the Department of Nursing, Faculty of Medicine, Columbia University, sponsored a "Bio-Medical Fair" for 60 children and young people involved in the Bio-Medical Summer Program. The 60, ranging in age from nine to 18, came from the community and the neighborhood schools. Basically, all were interested in gaining knowledge in the science fields.

The purpose of the fair was to present nursing to these children and young people. The age range of the group made it necessary to offer a varied program including the demonstration of some technical skills, explanation of the

nurse's role, the patient's involvement, some psychological insights, and a presentation of the philosophy of nursing as it should be.

The fair was held in Sturges Auditorium of Maxwell Hall. Tables were set up, carnival style, each presenting a different technique or display.

The visitors were greatly interested in such demonstrations as pulse and blood pressure, Resussi Annie, G.A.D.'s, IPPB machine, sterile technique, a manikin in traction and three dolls in casts. The visitors donned gowns, masks and gloves, using sterile technique, and watched each other for mistakes!

Following a short film, "This

Side of Life," there was a discussion of the steps necessary to become a nurse. Several of the older girls were personally interested.

The younger visitors enjoyed using the equipment and indicated their interest by asking many questions. For many, it was the first time they had been exposed to nursing.

For the twenty nursing students who helped the Human Relations Committee sponsor the fair, it provided an opportunity to be involved in the community and a chance to project an image of nursing as it should be. For both the students and the young visitors, it was a great opportunity for growth.

## • MARRIAGES

Corinne E. Goldsmith was married to Dr. Philemon Dickinson on July 25. Mrs. Dickinson was graduated from Columbia University's Department of Nursing and will join the nursing staff at Roosevelt Hospital, where her husband is a surgical resident. Dr. Dickinson is a P&S graduate.

## • CONGRATULATIONS TO:

The following members of the Food Service Department who have been promoted: *Rupert Blondel*, from dining room attendant to ice cream attendant; *Harvey Cheeseboro*, from ice cream attendant to assistant baker; *Lucy Franklin*, from salad room attendant to salad room supervisor; *Mrs. Amelia Jackson* from dining rooms supervisor to senior dining rooms supervisor; *Donald Jennings*, from dining rooms supervisor to head dining rooms supervisor; *James Lee*, from main kitchen utility man, to assistant cook; *Jesper Miner*, from central food service attendant to diet aide; *Eustaquio Morales*, from assistant cook to cook; *Anthony Muir*, from vegetable attendant to cooks' attendant; *Mary Ellen Robinson*, from central food service attendant to main kitchen clerk; *Randolph Singleton*, from dining room attendant to dining rooms supervisor; *Eugene Todd*, from vegetable room supervisor to vegetable cook and *Austin Van Putten*, from Steward to Head Steward.

Mrs. Kathleen Duggan, Comptroller's Office, on her daughter's adopting a nine year old son, Dale Riordan.

## • NOTES OF INTEREST

May Udisky, secretary, Maintenance and Construction, vacationed in Japan and Hong Kong.

Mrs. Molly Costigan, nurses' aide, Doctors' Offices, Atchley Pavilion, recently enjoyed an exciting and memorable vacation in Greece.

The action photo above comes from the vacation of Mrs. Molly Costigan,

who, with her husband, spent a delightful vacation in Greece. Mrs. Costigan is a nurse's aide at Atchley Pavilion. "That donkey ride was really something," she reports. "It began rather abruptly, but it proved to be the ideal way to travel the zigzag ascent up the mountain . . . The islands of Greece were really beautiful."

# DOINGS OF DOCTORS

Continued from page five

education.

Sixty alumni members of the various Columbia University urology programs met for a luncheon at the Palmer House during this meeting, and were addressed by Dr. Lattimer about the new developments at P&S.

At the annual meeting of the American Association of Genito-urinary Surgeons at Oakbrook, Illinois, in May, DR. PHILIP TOMASHEFSKY, Associate in Urology (from Pathology), P&S; DR. JACOB FURTH, Special Lecturer in Pathology, P&S; DR. MYRON TANNENBAUM, Associate Professor of Pathology (Urology), P&S; Dr. Priestley and Dr. Lattimer, reported on the development of an experimental animal model of a Wilms's tumor, occurring in the rat, which spreads exactly like a Wilms's tumor spreads in a child, and which responds to treatments exactly as a Wilms's tumor does in a human. This has enabled the urology research group to test various medications on the tumor, to see which combinations are most effective. This tumor, discovered by Dr. Furth in his Delafeld Hospital rat colony, was named the *Columbia-Furth Experimental Rat Wilms's Tumor*, in his honor. It has already proved useful in determining the best treatment for particular tumors.

DRS. ROBERT W. WINTERS and RALPH B. DELL, Attending Pediatrician, PH, and Assistant Attending Pediatrician, PH, respectively, attended the Aspen Conference on *Research in Emphysema* in Colorado, June 9-12.

Dr. Winters also chaired a session on *CO<sub>2</sub> and Acid-Base Reactions*, and Dr. Dell also presented a paper entitled *In Vivo CO<sub>2</sub> Equilibrium Curve*.

DR. J. LAWRENCE POOL, Professor and Chairman, Department of Neurological Surgery, presented a paper on *Cerebral Vasospasm* before the Fourth European Congress of Neurosurgery, in Prague, Czechoslovakia, June 24-July 2.

Dr. Pool also chaired a scientific panel and participated in a delegates' meeting of the World Federation of Neurological Surgeons.

At a meeting of the Canadian Ophthalmological Society in Montreal, Canada, in June, DR. ARTHUR G. DE VOE, Edward S. Harkness Professor of Ophthalmology, P&S, and Director of Ophthalmology Service, PH, was the guest of honor. He presented two papers on the *Management of Ocular Infections*.

Dr. De Voe also presented two papers at a meeting of the Michigan Ophthalmological Society in Bellaire, July 22-23. Both lectures concerned *Corneal Disorders*.

At the Fourth Congress of the International Society for Ultrasonic Diagnosis in Ophthalmology in Paris, recently, DR. DAVID H. ABRAMSON, Resident in Ophthalmology, presented a paper entitled: *Correlation of Ultrasonic Characteristics and Tissue Morphology of Malignant Melanoma*.

At the spring meeting of the Association for Research in Vision and Ophthalmology, held in Sarasota, Florida, DR. GEORGE K. SMELSER, Director of Eye Research, and the Fellows collaborating with him—DR. HIDEHIKO MATSUDA, DR. TADASHI TAMURA and DR. SHIEGEKAZU UGA—presented the following papers: Dr. Matsuda and Dr. Smelser: *Ultrastructural Alterations of Endothelial Cells in the Experimentally Alkali-burned Cornea*; Dr. Tamura and Dr. Smelser: *Development of the*

*Sphincter and Dilator Muscle of the Iris*; Dr. Uga and Dr. Smelser: *Comparative Study of the Fine Structure of Retinal Müller Cells in Several Vertebrates*.

Also presenting papers at the meeting were: DR. TAKEO IWAMOTO, Assistant Professor of Ophthalmology, P&S; DR. ARTHUR G. DE VOE, Professor and Chairman, Department of Ophthalmology, and DR. R. LINSY FARRIS, Instructor in Ophthalmology, P&S, who presented a paper on *Electron Microscopy of Marginal Degeneration of the Cornea*.

DR. JOE G. HOLLYFIELD, Assistant Professor of Ophthalmology, P&S, spoke on *Cell Dynamics During Differentiation and Growth of the Frog Retina*; DR. JORGE FISCHBARG, Assistant Professor of Ophthalmology, P&S, presented *Electrical Potential Difference Across Isolated Corneal Endothelium*; DR. RILEY C. SIBLEY, Assistant Professor of Ophthalmology, P&S, and DR. FRANK B. HOEFLE, Instructor, Ophthalmology, P&S, lectured on *Physiological effects of Eye Bank Storage on the Rabbit Cornea, In Vitro Studies*.

In collaboration with Gordon I. Kaye and Jeanne D. Cole from the F. Higginson Cabot Laboratory, Division of Surgical Pathology, Drs. Sibley and Hoefle discussed *Morphologic Effects of Eye Bank Storage on the Rabbit Cornea, In Vitro Studies*.

DR. HAROLD F. SPALTER, Associate in Ophthalmology, P&S, spoke on *Macular Lesions of Diabetic Retinopathy*.

DR. TADASU TOKUMARU, Assistant Professor of Ophthalmology (from Microbiology), P&S, and DR. ANN AVITABLE, presented the *Mode of Suppression of Herpes Simplex Virus Infection by Antimitotic Substances in the Rabbit Cornea*.

Dr. Smelser

Dr. Spector

DR. LU-KU LI, Assistant Professor of Ophthalmology, P&S, DR. ABRAHAM SPECTOR, Associate Professor of Ophthalmology, P&S, and DR. THOMAS FREUND spoke on *Heterogeneity and Subunit Interaction of Calf Lens Alpha-crystallin*.

DR. WLADYSLAW MANSKI, Assistant Professor of Ophthalmology (from Microbiology), P&S, and D. ZOUIAS presented *Immunochemical Investigations of Alpha Crystallin Subunits*.

Dr. Manski also spoke on *Corneal Transplantation in Inbred Rats*.

DR. ROBERT A. BETHEL, visiting Fellow, and DR. KENNETH E. EAKINS, Assistant Professor of Ophthalmology, P&S, presented a paper entitled *Antagonism by Polyphlorethin Phosphate of the Intracocular Pressure Rise Induced by Prostaglandins and Formaldehyde in the Rabbit Eyes*.

And finally, Drs. Paul Witkovsky, J. Nelson and H. Rippes, of the Departments of Psychology and Ophthalmology, State University of New York at Stony Brook, lectured on *Spectral Properties of the Isolated Receptor Potential of the Carp Retina*.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

BALDWIN STACKS  
COLUMBIA UNIVERSITY  
MEDICAL LIBRARY

VOLUME XXVI, NUMBER 10

OCTOBER, 1971

## Columbia-Presbyterian Welcomes New Students

### PHYSICIANS

Last month, P&S enrolled 109 men and 28 women in its First Year Class. The premedical studies of the new students were completed at colleges and universities throughout the United States and Canada.

While most of the students were born in North America, a few were not, and the class contains residents of Burma, Nigeria, Hong Kong and Turkey. Twenty-nine members of the new class are the children of physicians. Five are sons or daughters of P&S faculty members and three are the sons of members of the faculty of our dental school. P&S alumni are the parents of six of the new students and another is the granddaughter of an alumnus. Four students enrolled at P&S with less than four years of undergraduate studies, while three of the new students already have a Ph.D. degree and one is an attorney.

Thanks to the minority student recruitment drive conducted by P&S students and supported by the P&S Alumni Association and the Urban Center of Columbia University, a record number of minority group students applied

to P&S in the past academic year. Relative to the last year's entering class, a somewhat larger number of minority group students was enrolled this year, including 16 black men and women and seven men and women with Hispanic surnames.

### DENTISTS

When the new dental students step off the elevators at the 7th floor to begin their school year, the first thing they will see as they walk along the gleaming corridors is a huge red poster with a challenge from Uncle Sam, "Revolution in Dental Care Depends on You."

From the first day, the new students will catch the message: There are new times ahead. Many dental difficulties are now preventable. As never before, the stress will be on preventive dentistry.

"This is the first time we have ever started out a class this way," said Dr. Melvin L. Moss, Dean of Columbia University's School of Dental and Oral Surgery.

The class is one of the largest ever—fifty-two freshmen. They come from 24 universities and colleges. Many are from the state of New York,

others are from Maryland, Michigan, California, and even Taiwan. A most interesting variety of special talents and abilities will give the class a colorful character, according to Dr. George L. O'Grady, Assistant Dean. There are three girls in the class; there are members of different races; and there are two older students who have turned to dentistry in their forties, one of whom was a faculty member at Mt. Holyoke College. Photographers, fencers, guitarists, lifeguards, sculptors, composers—these are a few of the 52 new dental students.

### NURSES

"Even if we don't quite know whether we are coming or going, it's reassuring to know that at least our trunks and suitcases do," quipped one of the 149 college juniors who

Basic anatomy—where new medical and dental students start together. From left, Gary Savatsky, 1st year P&S; Dick Williams and Jacque P. Morgan, 1st year DOS.

moved into their new quarters in Maxwell Hall on September

## Dr. James Awarded 5-Year Grant To Establish Newborn Lung Center

Dr. L. Stanley James has been awarded a five-year research grant to investigate pulmonary disease in the newborn. This is one of several grants totalling \$16.4 million to establish, throughout the nation, Specialized Centers of Research (SCORs). Dr. James is an Attending Pediatrician, Babies Hospital, and Professor of Pediatrics (Anesthesiology) P&S.

The grant was announced on July 15 by the National Heart and Lung Institute of the Department of Health, Education and Welfare. The SCORs will be distributed among 29 universities and hospitals in the United States. Each will concentrate its resources, facilities and manpower on high-priority problems in several disease areas. Dr. James is principal investigator of a SCOR concerned with establishing a newborn lung center. His award for the first year is \$436,543.

Dr. James is a member of the Medical Board of the Presbyterian Hospital and a member of the Faculty Council of the Faculty of Medicine, P&S.

Dr. L. Stanley James

He is president of the newly formed Perinatal Research Society and Chairman of the American Academy of Pediatrics Committee on Fetus and Newborn. Early this year he received a research grant from the United Cerebral Palsy Research and Education Foundation for a continuation of his investigations into maternal and fetal stress and the onset of labor.

He has been a recipient of

## NATIONWIDE DRUG USE SURVEY BY SCHOOL OF PUBLIC HEALTH

Fifteen per cent of Americans from 12 to 17 years of age have smoked marijuana, and adolescent American girls smoke as much as boys.

These are just two of a number of findings from a national survey of adolescent drug use by Columbia University's School of Public Health. The results of the countrywide survey, the first of its kind, were presented on September 14 at the First International Conference on Student Drug Surveys. The conference was held at Newark, New Jersey.

The survey provides information on the use of marijuana by region, age and sex and also on the use of other drugs or products, such as amphetamines, barbiturates, glue,

LSD, heroin, cigarettes and alcohol.

The survey was designed to serve as a kind of national yardstick for Columbia's ongoing investigation of drug behavior among 35,000 students in 25 high schools in four regions of the United States. It is the first coast-to-coast sampling of the 12- to 17-year-old group. It is more representative than single high school surveys because it is a household-based survey and includes high school dropouts.

The survey has grouped the youngsters as "experimenters" (those who have tried marijuana no more than nine times); "occasional users" (who have smoked "grass" from

## Training Grant Of \$114,200 to CU Psychiatric

The Psychiatric Division of the Columbia University Health Services has been awarded a \$114,200 grant from the National Institute of Mental Health to train post-doctoral fellows in the subspecialty of college psychiatry.

Columbia University, one of only four institutions in the country so honored, has been chosen as a particularly appropriate setting for the training of advanced psychiatric candidates.

Director of the Psychiatric Division is Dr. John A. Milici, Instructor in Psychiatry, P&S, and Assistant Psychiatrist, Vanderbilt Clinic. Other members of the senior faculty are Dr. Ralph Colp, Jr.; Dr. Robert Michels; Dr. Joel A. Moskowitz, Assistant Director; and Dr. Adam Munz, Ph.D.

The program provides for the training of two fellows over a period of five years. Additional funding to supplement the NIMH grant is being sought through the University.

## Anesthesiology's Thursday Lectures

The Department of Anesthesiology announces the following Thursday Afternoon Lectures, to be given in October at the Fourth Floor Amphitheater, Babies Hospital, from 5 to 6 p.m.:

October 7, *Central Control of the Circulation*, by Dr. S. C. Wang, Professor, Dept. of Pharmacology, P&S.

October 14, *Pathophysiology of Congestive Heart Failure*, by Dr. Dean Mason, Chief, Section of Cardiovascular Medicine, University of California School of Medicine, Davis.

October 21, *Effects of Anesthetics on the Control of Breathing*, by Dr. C. Philip Larson, Dept. of Anesthesiology, University of California.

October 28, *Cardiac Arrhythmias: Mechanisms and Treatment*, by Dr. Ronald L. Katz, Dept. of Anesthesiology, P&S.

Three earlier lectures of the fall series were given on September 16 and 23, by Sidney Spector, Ph.D., Roche Institute of Molecular Biology, and September 30, by Dr. Harry Wollman, Dept. of Anesthesiology, University of Pennsylvania.

## One Million for 5-Year Research From National Cancer Institute, Chief Investigator is Dr. Rossi

The National Cancer Institute has awarded a grant of one million dollars for additional research at The Radiological Research Laboratory, Department of Radiology of Columbia University's College of Physicians and Surgeons. Much of the new work will be performed at Columbia-Presbyterian Medical Center, but some additional staff will be located at the Brookhaven National Laboratory to make full use of special equipment located there. The principal investigator for the five-year grant is Dr. Harald H. Rossi,

Professor of Radiology, P&S; the co-principal investigator is Dr. Victor P. Bond, Adjunct Professor of Radiology, P&S, and Director at Brookhaven.

With a group of associates that includes physicists, biologists, and physicians, Dr. Rossi will study the effects of small doses of x-rays and neutrons on a number of biological systems, which includes plants, small animals, and human cells grown in culture. His senior associates on the project are Dr. E. J. Hall, Professor of Radiology, P&S, and Drs. William Gross and Albrecht Kellerer, Associate Professors of Radiology at P&S.

"I think we have to recognize the fact that the uses of ionizing radiation are bound to increase in the future," says Dr. Rossi. "More people are likely to be exposed to minute doses of radiation, for example, as new applications of diagnostic radiology become more widely available, as more nuclear generators take the place of natural power sources and as more people are exposed to cosmic rays in high-flying supersonic airliners or space craft."

The staff members of The Radiological Research Laboratory are active on national and international bodies concerned with radiation protection, including The International Commission on Radiation Units, National Council on Radiation Protection, Advisory Committee on Ionizing Radiation for the Mayor of New York and Advisory Committee for Radiation Biology Aspects of The Supersonic Transport. They are acutely aware of the need for more experimental data on the effects of small doses of radiation. In Dr. Rossi's words, "the benefits to society from the peaceful uses of radiation can be enormous, but we must precisely assess the risks involved from this type of energy." Members of The Radiological Research Laboratory hope that Columbia-Presbyterian can play a prominent part in fulfilling this need.

## DR. GARRETT IS ACTING DIRECTOR, WEST HAVERSTRAW

Dr. Alice L. Garrett

Dr. Alice L. Garrett, Director of Surgical Services at the State Health Department's Rehabilitation Hospital, West Haverstraw, New York, has been designated Acting Director of the Hospital until such time as the vacancy created by the recent resignation of Dr. Michael T. F. Carpendale can be filled.

Dr. Garrett is an Assistant Attending Surgeon of the Orthopaedic Surgery Service at the Presbyterian Hospital and Associate Clinical Professor at the College of Physicians and Surgeons.

Prior to Dr. Garrett's appointment as Director of Surgical Services in October, 1968, she was Chief of Cerebral Palsy Services and Children's Reconstructive Surgery Services at Rancho Los Amigos, Downey, California.

She has published many papers in professional journals and lectured extensively on the orthopedic management of children with cerebral palsy, juvenile rheumatoid arthritis and the brain injured child.

She is a member of the faculty of the American Academy of Orthopaedic Surgeons and will instruct in Academy courses on athletic injuries, spinal cord injuries, scoliosis and bracing in cerebral palsy. She is Project Director for an Academy-sponsored symposium to be held on "Juvenile Rheumatoid Arthritis."

Dr. Garrett resides in Valley Cottage, New York.

## DR. JAMES RECEIVES 5-YEAR GRANT

*Continued from page one*

Many honors, among them the E. Mead Johnson award, in 1965, "for outstanding studies in respiratory physiology of the fetus and newborn infant and in its adaptation to extra-uterine life."

During the past year and a half, Dr. James has been associated with the famous five, the Kienast quintuplets, for whom he cared from the time of their birth on February 24, 1970, until their discharge from Babies Hospital two months later.

The Newborn Lung Center will have a multidisciplinary approach to study the problems of the respiratory distress syndrome (RDS) or hyaline membrane disease, the major cause in mortality in premature infants. Research will be coordinated between the departments of Anesthesiology, Obstetrics and Gynecology and Pediatrics.

There will be several areas of investigation. The first is a longitudinal study of RDS. This will begin in antenatal life with both clinical and biochemical surveillance and will continue through labor, delivery, resuscitation and the acute period of RDS and post-natal adaptation. In those who survive it will continue into childhood with careful follow-up of pulmonary and neurological development. Pulmonary evaluation will include measurement of pulmonary function by special "hands-off" techniques as well as by conventional clinical, x-ray and laboratory methods. Participating in this section are Dr.

Edward Bowe and Dr. Solan Chao, obstetrics, Dr. John Driscoll, Dr. Martin Lifschitz, Dr. Robert Mellins and Dr. Gilbert Mellin, Pediatrics and Dr. Richard Koenigsberger, neurology, Dr. David Baker and Dr. Walter Berdon, radiology, Dr. William Blanc and Dr. Joachim Wigger, Pathology and Dr. Carl Strande, biochemistry.

The second area of investigation dealing with metabolic aspects of RDS will be conducted by Dr. Robert W. Winters together with Drs. Ralph Dell, William Heird and John Nicholson. Complete metabolic balance studies will be done on infants with RDS and respiratory acidosis. Intake of net acid and base will be compared to output during period of developing respiratory acidosis, steady state and recovery. This project will also assess the value of special intravenous nutrition (hyperalimentation) in infants with RDS.

The third area of investigation, which deals with the role of bacterial infection in infants with RDS, its prevention and management will be conducted by Dr. Katherine Sprunt and Miss Grace Leidy. There is considerable data to indicate that normal flora inhibits the growth of various pathogenic bacteria. Many of the severely ill infants with RDS who require prolonged and complicated treatment are also treated with antibiotics, which interfere with the growth of normal bacterial flora. This sometimes results

*Please turn to page three*

## Lectures at Delafield

The following Friday lectures are announced for the month of October by The Institute of Cancer Research and P&S, Columbia University. This Scientific Program is supported by the American Cancer Society, New York City Division, Inc.

October 1, *Conceptual Models for Automated Disease Screening*, by Donald A. Lindberg, M.D., University of Missouri.

October 8, *Genetic Studies on Rous's Sarcoma Virus*, by Hidesaburo Hanafusa, Ph.D., Public Health Research Institute of the City of New York.

October 15, *Surface Changes in Transformed Tissue Culture Cells as Detected with Agglutinins*, by Max M. Burger, M.D., Ph.D., Princeton University.

October 22, *The Immunoglobulin Origin of Amyloid Fibers*, by George G. Glenner, M.D., National Institutes of Health.

October 29, *Infective Heredity in Bacteria*, by Norton D. Zinder, Ph.D., Rockefeller University.

Lectures are held on Fridays, 4:00 to 5:00 p.m., in the Auditorium of the Francis Delafield Hospital, 99 Fort Washington Avenue at 164th Street.

## Kidney Foundation Sells Trick-Treat Candy and Puppets

The Kidney Foundation of New York, Inc., states that thousands of New Yorkers will die this year because there isn't enough money for artificial kidney machines, personnel or adequate facilities.

To meet this crisis, the volunteer members of the Kidney Foundation are selling Halloween trick or treat candy, packed in attractive hand puppets, for \$1, or \$12 per case of 12. Free delivery on cases. To order, or to learn about the program, call or write: Kidney Foundation of N. Y., 124 East 40th St., N. Y. 10016; telephone 212—682-7772.

# FOR WHOM THE SCHOOL BELL TOLLS

Mrs. Lillian Graham, teacher, helps her young students in Babies Hospital 7th floor Classroom.

The school bell tolled for many new students this fall in nursing, medicine and dentistry. But the school bell also tolled for the youngsters in Babies Hospital on Monday, September 13.

Welcoming the children back to school for the new term at PS 402 X (recently changed from PS 401 X), were the school's three teachers—Mrs. Lillian Graham, Mrs. Rose Neufeld and Mrs. Sheila Goett.

Mrs. Graham teaches the little ones, grades one through six; Mrs. Neufeld covers grades seven through 12 (junior and senior high school) and Mrs. Goett confines her teaching to the orthopedic patients on the 5th floor, covering grades one through nine. Any higher grades on the Orthopedic service are automatically picked up by Mrs. Neufeld.

Classroom teaching is done in the morning, usually from 9:00 to 11:30 A.M., in three classrooms provided for the purpose, and all children who come to the classroom must have their doctor's authorization. Those youngsters who are unable to go to the classroom, receive individual bedside tutoring by the teachers in the afternoon.

In a conversation with Mrs. Graham, she noted that the main object of the school program is, of course, to allow

Mrs. Sheila Goett seems to have caught the attention of her pupils on Babies Hospital 5th floor Orthopaedic Service. Youngsters facing camera are Brian Gieseler, left, and Judith Anthony.

Mrs. Rose Neufeld giving individual tutoring at bedside of pretty, young patient, Mary Lou Conte, on Harkness Pavilion 7 Annex.

the hospitalized youngsters to keep up with their school work. "But," said Mrs. Graham, "besides the obvious reason, the program is also of tremendous therapeutic value. Most of the children are worried on

Please turn to page four

## Walter Schulze Appointed Ward Manager, N. I.

Walter Schulze has been appointed Ward Manager, Neurological Institute, it was announced recently by Martha E. Haber, Assistant Director of Nursing, N.I.

Mr. Schulze is especially

Walter Schulze

qualified for this post for he worked three years at the Waterbury Hospital in Connecticut in the same capacity. He brings with him an expertise that will be invaluable in his efforts to establish improved indirect patient care services, for which the Nursing Service is answerable. He will have responsibility for patient floors 7, 8, 9 and 12 at Neurological Institute.

Mr. Schulze attended Harris Teachers College in St. Louis, Missouri. He is now attending Southern Connecticut State College in New Haven, working towards the B.S. in psychology.

He and his wife, Bonita, a graduate nurse, hope eventually to settle in the Westchester area.

## NURSES...

Continued from page one

26 to begin the new school semester.

Of the 149 students, 47 already have baccalaureate degrees, 90 have had two years of college and 12 are registered nurses. Three out of the 149 are men, increasing the ranks of male nursing students to five.

The 149 represent 21 states, the greatest majority from New York, the next largest group from New Jersey. Three are foreign—one from Puerto Rico, one from Iran and one from Kenya, Africa.

The students underwent an intensive orientation program the week of the 26th, which included an informal welcoming tea on Sunday, after all suitcases and trunks were in place, in Sturges Auditorium. Peggy Ferri and Kathy Wall '72, co-chairmen of the Annual Activities Committee of the Undergraduate Student Association, were on hand to welcome the new students. On September 28, the entire student body was welcomed by Dean Mary I. Crawford in a special address held in Sturges Auditorium.

## DRUG USERS...

Continued from page one

10 to 59 times); and "frequent users" (who have tried marijuana 60 times or more).

Nine per cent were found to be experimenters; three per cent were classified as occasional users; and another three per cent were frequent users.

In general, one out of seven youngsters, or 15 per cent of this national sample, had tried marijuana one time or more. Surprisingly, there were no significant differences between the sexes as to marijuana use, girls having tried the drug only slightly less than boys, and having used the drug almost as frequently as boys.

More than nine-tenths of the "pot" smokers report that they consume liquor away from home, while approximately one-half of non-users have tried liquor away from home.

The results of the survey, conducted in May of this year, support "the fairly plausible assumption that cigarette smoking is a precursor of marijuana use." Only three per cent of nonsmokers have ever tried marijuana, while as

Dr. Eric Josephson

## DR. JAMES RECEIVES 5-YEAR GRANT

Continued from page two

in super-infection, the growth of pathogenic bacteria that would ordinarily be inhibited by normal flora. This project is aimed at the development of a practical means of preventing super-infection by either altering dosage schedules of antibiotics or by implantation of normal flora with desirable characteristics of inhibiting spectra and degrees of resistance to commonly used antibiotics.

The fourth project is to investigate the pulmonary biochemical characteristics in RDS and will be conducted by Dr. Inez Mandl, Department of Biochemistry and Obstetrics and Gynecology, and Dr. Hugh Evans of the Department of Pediatrics.

Abnormalities of amino acid composition of lung tissue elastin will be investigated. In addition the role of serum enzyme inhibitors RDS will be studied by measuring levels serially in infants with RDS. Possible familial predisposition will be determined by examination of sera from parents of siblings.

A fifth program will investigate the filtration coefficient of pulmonary capillaries in immature newborn animals and experimental RDS in the newborn lamb. These investigations will be conducted by Dr. O. R. Levine and Dr. Robert Mellins. The forces governing fluid transudation in the lungs of immature animals as related to the pathogenesis of RDS will be studied and the effect of surface tension on

fluid transudation will also be determined.

This research program constitutes a multidisciplinary approach to the problems of RDS in infants and includes basic studies as well as clinical application of new methods and trials. A dual approach has been organized using both clinical investigation of infants and the experimental lambs model of RDS. This model enables the study of aspects not possible in the human and the testing of new devices or treatments.

The principal investigators all have national reputations and a number already have the fetus and newborn as their major area of interest. The long standing tradition of collaboration in our institution, particularly between the departments of Anesthesiology, Obstetrics and Pediatrics has made it possible to integrate these resources with projects that interrelate and complement each other.

## From the Mailbag

Bear Ones,

Thank you so much for sending me the *Stethoscope*. I truly enjoy reading it. So many nice doctors I know have write-ups. Nice memories, and I need these, I have so much pain . . . I make flowers from egg cartons to help forget, and made some to cheer your table too. They are sent with love . . . Thanks again,

A very grateful old patient, S.S.  
St. Louis, Mo.

many as 50 per cent of smokers have tried it.

The authors of the report are Dr. Eric Josephson, Associate Professor; Paul Haberman and Anne Zanes, Research Associates; and Dr. Jack Elinson, Professor.

The Columbia investigators are members of the Public Health School's Division of Sociomedical Sciences.

The data indicate that regional differences become more pronounced among the older adolescents. While 11 per cent of the Southern youngsters from 12 to 17 report smoking pot, in the Northeast the proportion is 20 per cent, and in the West, 23 per cent. Use of the drug among the 16- and 17-year-olds, however, is especially high in the Northeast and the West—33 and 39 per cent respectively; in the Southern group, 13 per cent.

Among other areas of interest to the Columbia research team was the relationship between family income and marijuana use. The report shows that six per cent of the youngsters from families with an annual income under \$10,000 have tried pot, in contrast with 19 per cent of those from families with income of \$15,000 or over.

## Presbyterian's Exchange-Visitor Nurses Honored

Exchange Visitors from 12 foreign countries, flanked by Ruth A. Rayner, left, and Bonnie Jones, right.

Having completed their one-year tour of duty at Presbyterian Hospital, 18 exchange visitor nurses, representing 12 foreign countries, were honored at a reception held in the Hospital last month.

The one-year course gives these nurses an opportunity to observe clinical procedures on several different services and to attend classes in nursing and medicine. The pro-

gram is under the direction of Ruth A. Rayner, assisted by Bonnie Jones, Instructor.

In addition to their nursing studies, the girls, who have a one-month vacation during the year, absorbed more American culture by visiting other states from Florida to California, and also visited Mexico, Canada and the Caribbean.

Inger Christensen from Denmark, an enthusiastic amateur

photographer, on her return from a 22-day trip, showed the class some of her 400 color slides—"a marvelous way to enjoy instant American geography," commented Miss Jones.

Inger is among the several exchange visitor nurses who have applied for an extension of their visas so that they may stay in this country for another year.

When she returns home to

Copenhagen, she will share with her colleagues what she has learned and observed here at Presbyterian.

The other 17 nurses and the countries they represent are: Lea Berlikovsky and Noemi Farkas from Israel; Else Boesen from Denmark; Mrs. Mercy Chacko from India; Klara Donnestad, Björg Mosvoll and Linda Severinsen from Norway (Miss Severinsen is very active in public health nursing in her country); Faye Ingleton from Australia; Tomoe Kawamura and Kiyo Kudo from Japan; Mrs. Chang Ming Lee from Taiwan, who is Director of Nursing at a hospital in Taiwan; Way Sun Oh from Korea; Dolores Oiza from Spain; Corazon Canlas from the Philippines; Martine Rossier from Switzerland, and Lucette Thouvenin and Marie-Noelle Turbil from France. Miss Turbil did specialty nursing in a kidney transplant unit in France and was especially gratified with the opportunity to work here in our open heart surgery unit.

## 75th Anniversary of Psychiatric Institute

The New York State Psychiatric Institute is celebrating its 75th anniversary on November 22 and 23.

The title of the two-day program is "A Symposium on Mark Progress in Psychiatric Research and Education."

The meetings, to be held at The Psychiatric Institute, 722 West 168th Street, New York City, will consist of a series of symposia, conferences, and addresses by a variety of nationally and internationally distinguished professionals in the psychobiological sciences.

Among those participating will be Ewald Busse, M.D., Denis Leigh, M.D., Seymour Kety, M.D., Marshall Nirenberg, M.D. (Nobel Laureate), Joel Elkes, M.D., Douglas Damosch, M.D., Frank Brace-land, M.D., Neal Miller, Ph.D., as well as many others from the Columbia-Presbyterian Medical Center faculty and from other medical schools.

Anyone who cares to participate may write for information. Address: Dr. Lawrence C. Kolb, Director, Psychiatric Institute, 722 West 168th Street, New York, N. Y.

## For Babies Hospital Patients, a Real Live ZOO? Volunteer Efforts Make the Dream Come True!

The whole thing began a few months ago when second year dental student Albert Kurpis (known as Big Al), at Columbia's School of Dental

the 18th floor of the Black Building. This floor houses the Institute of Comparative Medicine (Veterinary Medicine) where Al and a fellow-student,

Big Al and his wife, Robin, are fascinated by the reactions of two patients from Babies Hospital.

and Oral Surgery, and his petite blonde wife, Robin, saw two nurses leading a group of youngsters from Babies Hospital to see the animals on

Alfred (Little Al) Lanfranchi, are working part of a research project on a bacterium that causes fatal pneumonia in animals.

Some of the young patients were walking, some were in wheelchairs and others were in movable cribs and beds. All were enchanted with the animals: rabbits, sheep, goats, chickens, monkeys, a baboon, and Elsa, the lion cub, being treated for osteoporosis. To make their joy complete, the kids were allowed to hold and fondle some of the smaller animals.

After watching the happy kids, Robin asked Big Al, "Wouldn't it be nice if there was a permanent zoo for the kids, to lift up their spirits?" This remark started the wheels turning. Big Al quickly drafted his partner, Little Al, and they

"Anybody want to take me home?"

were off.

Dr. Ross Grey, director of the Institute, thought it was a great idea. He started the ball rolling by providing a room and Big Al promptly incorporated the Children's Zoo Committee, whose current membership includes Dr. Grey, his administrative assistant, Adeline Elia, his secretary Mary Matthies, Big Al, Robin, and Little Al.

Their first contribution of \$50 was received from a Hospital administrator and was used to buy lumber. With this contribution, the zoo was on its way. Other contributions have come along in a succession of surprises...

(To be continued in a coming issue of *The Stethoscope*.)

"I know I have many friends here."

## SCHOOL BELL...

Continued from page three

two counts—they are worried about their illnesses and they are worried about missing their school work. This program offers a continuity of education from school to hospital and back to school; it keeps them mentally occupied so that they will not tend to unduly concentrate on their illnesses. And, importantly, it maintains their interest in their school work and brings with it the advantage of necessary remedial work, which can be given on an almost individual basis because of the smallness of the classes, and because the non-ambulatory child is receiving individual tutoring at his bedside in any case.

All three teachers began their teaching careers in public schools, but had always been interested in helping sick or handicapped children. In addition to a baccalaureate degree, 15 credits, including a master's degree, are required before the teachers may pursue an intensive period of specialized training in the teaching of physically handicapped children. At the end of this training period they are granted a special health conservation license and are then assigned to their hospital teaching posts.

Mrs. Graham has been working at Babies Hospital for 10 years; Mrs. Neufeld, three years; Mrs. Goett, one year.

While the Mesdames Graham, Neufeld and Goett may have their own individual methods of teaching the three R's, they are decidedly indivisible on the subject of their young pupils. They are dedicated to teaching and uniquely dedicated to teaching the sick or handicapped youngster.

## Two-Week Course in Orthopedic Surgery

An intensive course in orthopedic surgery will be given in December under the direction of Dr. Frank E. Stinchfield, Chief of Orthopaedic Surgery Service, P.H. and Chairman, Orthopaedic Surgery Department, P&S; Dr. Austin D. Johnston; Dr. Alexander Garcia, and associates.

Columbia University announces the course for December 6-17, a solid two-week schedule with daily classes from 8 a.m. to 8 p.m. It is designed for specialists and other physicians interested in musculoskeletal disease.

This intensive course will include seminars, lectures and demonstrations on anatomy, biochemistry, physiology and biomechanics as well as adult, children's, traumatic and hand orthopaedic surgery.

The pathology section will present an intensive review of musculoskeletal diseases, including diagnostic identification of unknown tissue sections, gross specimens, and color slide projection material.

This is the Sixteenth Annual Postgraduate Course, P&S. The faculty will consist of members of the Departments of Orthopaedic Surgery, Pathology, Medicine, Surgery, Pediatrics, Neurology, Radiology, and Physical Medicine and Rehabilitation. The fee is \$250.

To receive an application, write to Dr. Melvin D. Yahr, Associate Dean, College of Physicians and Surgeons, 630 West 168th Street, New York, N. Y. 10032.

Registration is limited and closes on December 1.

# Thousands of Readers Catch Sparks of Life From Chaplains' 'Weekly Messenger'

Once a week, whether you are a patient, doctor, nurse, student or employee, you may see a copy of *The Weekly Messenger*, attractively printed on four pages, a different color each week, ranging from blue to green to pink to buff.

The front cover of the *Messenger* lists the names of the clergymen who serve all major faiths. Rev. Robert B. Reeves, Jr., Chaplain; Rev. Frederick Becker, Roman Catholic Chaplain; Rabbi Marvin J. Goldfine, Jewish Chaplain; Rev. David B. Maxwell, Associate Protestant Chaplain; and Rev. Bernard McGorry, Associate Roman Catholic Chaplain.

The front cover also lists information about the basic functions of the Chaplain's Department, including details concerning the receiving of sacraments, the holding of weekly services for Protestant, Catholic and Jewish patients in the Pauline A. Hartford Memorial Chapel, and the availability of bedside broadcasting of these services via PH Channel 1 for those who cannot attend in person. The back (fourth) page is a continuation of a more detailed explanation of the functions of the Chaplain's Department.

The two short inside pages are packed with the most important feature of the *Messenger* — poems, Biblical

Hard work: an accumulation of easy things you didn't do when you should have done them. (—Tranquilizers)

Two men sat at a bar. Suddenly one man pulled a mouse out of one pocket, a tiny piano out of another, then a little piano bench, and finally a butterfly.

Immediately the mouse began to play the piano and the butterfly began to sing. The onlooking gentleman was amazed. "You've got a great act there," he said. "I'll bet you Ed Sullivan would pay plenty for it."

"It's really not worth it," said the owner glumly. "You see, the butterfly isn't really singing—the mouse is a ventriloquist." (—Liberty Civic News)

If at first you succeed, hide your astonishment. (—Bob Goddard)

When one door closes, another opens; but we often look so long and so regretfully upon the closed door that we do not see the one which has opened for us. (Alexander Graham Bell)

A monastery is in financial trouble and, to increase its

Rev. Robert B. Reeves, Jr., Chaplain, is the *Weekly Messenger's* guiding spirit. Each week he is rewarded by two or three letters of appreciation, sometimes from Hospital patients, often from readers who keep in touch from a distance. Gems have been reprinted in far corners of the world. Someone has asked, "Do printed words have health-giving qualities?"

He will be found of thee. (—I Chron. 28:9)

It is better to look forward and make new mistakes than to look back and do nothing. (—Filen)

The mark of a man is how he treats a person who can be of no possible use to him. (—author unknown)

The probability of life originating from accident is comparable to the probability of the unabridged dictionary resulting from an explosion in a printing shop (—Edwin Conklin)

And the very funny poem (too long to reprint in its entirety) which begins, "... How do I know my youth has been spent? Because my get-up-and-go has got up and went. But in spite of all that I'm able to grin, When I think where my get-up-and-go has been . . .", ends, "... I get up in the morning and dust off my wits, Pick up the paper and read the "obits." If my name isn't mentioned I know I'm not dead, So I eat a good breakfast and go back to bed ..." (author unknown)

The origin of the *Messenger* dates back to 1933, when it was known as the Sunday Visitor and was first compiled by Rev. Nelson B. Chester, who served as Chaplain at the Medical Center for ten years. In 1938 Chaplain George Russell, who succeeded Chaplain Chester, changed its name to *The Weekly Messenger*.

With the advent of the Pauline A. Hartford Memorial Chapel in 1952, making it possible for services to be held once a week, the need for the *Messenger* increased rapidly. By 1954, under the direction of Chaplain Lyman Hartley, its circulation rose to 3,000 copies circulated locally, and about 600 mailed outside the Hospital.

Today, in 1971, approxi-

mately 3,300 copies are sent to patients, staff and employees. About 1,400 copies go to persons outside the Hospital, to retired employees, former patients who request it, employees on military leave, trustees, volunteers and many others.

The *Messenger* now also enjoys an international circulation, for it goes to individuals in 34 states in the United States, from Florida to California, from Rhode Island to Texas, and to ten foreign countries, namely, Australia, Canada, England, Germany, India, Ireland, New Zealand, Philippines, Republic Honduras, C.A., and Saudi Arabia.

There is a passage in the Bible (Matthew 22:14) that admonishes "Many are called but few are chosen," which metaphorically describes Chaplain Reeves's weekly chore of sorting through the great volume of material submitted from a wide variety of sources for hopeful publication. Some items are too long and out of proportion for the limited space in the *Messenger*; others are too caustic or too saccharine, and still others would not have enough appeal for the majority of readers.

But even by eliminating unsuitable material it remains a difficult task for Chaplain Reeves to select the material to be used each week from the remaining excellent suggestions sent in.

Preparation of the *Messenger* is done by Mrs. Irma Rosenthal, Chaplain Reeves's secretary. She handles all phases of the operation except the actual printing. This is done in the Print Shop, where 4,700 copies are printed weekly under the aegis of Ralph Samuels, print shop supervisor, and his staff. Mrs. Rosenthal is aided in her task by two Chapel volunteers—Mrs. Marion Reeves (Chaplain Reeves's wife) and Eva Daniel. Miss Daniel has been volunteering at the Hospital for 12 years, and divides her work between

Mrs. Anna Pavlecka, patient on 17-Center, is obviously deeply absorbed in her copy of the *Weekly Messenger*.

the Milbank Library, where she "shelves" books, and the Chaplain's office, where she stuffs and mails the *Messenger*.

If the mailing list is any measure of popularity, the *Messenger* would appear to have a tremendous impact upon the many persons who receive it. According to Chaplain Reeves, several physicians place it on their private office waiting room tables (along with the usual 1950 Ladies' Home Journal and 1940 Reader's Digest). Other institutions have requested permission to quote from it and some even reprint the entire issue.

More than 60 ministers, priests and rabbis have requested permission to use quotes from the *Messenger* in their parish bulletins.

It has also been observed that staff and employees frequently clip their favorite quotable quotes from the *Messenger* and tack them to their departmental or individual bulletin boards, or place them under glass desk protectors where they share space with frequently called telephone numbers, departmental schedules and announcements.

Said Chaplain Reeves, "Apart from these uses we have no way of knowing what impact psychologically or otherwise the *Messenger* has on those who read it. We do know that the majority of patients who get it receive it enthusiastically. It is compiled and edited to be meaningful to all faiths."

Irma Rosenthal, Chaplain Reeves's secretary, at the business end of her typewriter, preparing manuscript.

passages, jokes and witty sayings. These pages happily combine the profound and the philosophical, the humorous and the inspirational; the lines that can have a real effect on an individual whether he is seeking consolation, courage or cheer.

A random selection of passages from past issues provides examples of the multifarious content of these pages:

Worry does not empty tomorrow of its sorrow; it empties today of its strength. (—Carrie Ten Boom)

The only man who ever got all his work done by Friday was Robinson Crusoe. (—Tranquilizers)

Eva Daniel, a Presbyterian Hospital volunteer for 12 years, helps regularly with *Weekly Messenger* circulation.

revenue, it goes into the fish and chip business. One night a customer raps on the door and a monk answers. The customer asks, "Are you the fish friar?" "No," the robed figure replies, "I'm the chip monk." (—contributed)

A wildly excited man ran into the police station shouting, "I need help! A thief just stole my car!" "Did you see him?" asked the desk sergeant. "No, but I did get the license number as he pulled away."

The Lord searcheth all hearts, and understandeth all the imagination of the thoughts; if thou seek Him,

Bob McCool keeps an eye on the *Weekly Messenger* as it rolls off the press.

## AN AWARD OF \$33,144 TO DR. DONALD HARTER, NEUROLOGY

The National Multiple Sclerosis Society has awarded an 18-month grant of \$33,144, effective July 1, to P&S for Dr. Donald H. Harter, Professor of Neurology, P&S, and Associate Attending Neurologist, P.H. Under the grant, made possible by a generous contribution to the Society from the William Lightfoot Schultz Foundation, Dr. Harter will try to devise methods of detecting indirectly the possible presence of virus in tissues obtained from multiple sclerosis patients. Many investigators have suspected that multiple sclerosis is caused by a virus—possibly a “slow” virus that remains in the body for months or even years before recognizable symptoms of the disease process appear.

The presence of a virus can sometimes be determined directly by injecting tissues suspected of containing a virus into laboratory animals or into living cultures of various kinds of tissues obtained from man or laboratory animals. However, growth requirements of many viruses are so specific

that they may not reproduce themselves in such experimental animals or tissue cultures to such an extent that they can be recognized. Sometimes the virus does become detectable after repeated “blind passages” in animals or cultures. A blind passage means that when signs of viral multiplication are not detectable after the first injection of suspected tissue into a culture or into an experimental animal, the latter tissues are injected into new cultures or animals. Sometimes a virus appears only after a series of such blind passages, perhaps because a few of the virus particles in the original tissue have become adapted to and develop the capacity to grow in the experimental animals or cultures that did not initially support their growth.

A somewhat indirect method used to reveal the presence of a virus is to examine the sera from animals injected with tissue suspected of containing a virus in a search for antibodies to a large variety of known viruses. If antibodies

Dr. Donald H. Harter

specific to a known virus are found in these sera, it indicates that the virus itself was present in the tissue that was injected initially, even though it could not be found in the animal that was injected originally.

Some viruses, however, are not revealed by either method. Under these circumstances, an indirect approach must be undertaken to reveal their presence. Such an indirect approach is to be pursued by Dr. Harter. Previous work by himself and others had shown that all tumor viruses studied contain a particular enzyme (a

protein that speeds up or directs certain biochemical reactions). The possibly important biological activity of this enzyme is not relevant to the proposed research, but its identification serves as an indirect means of determining the existence of a virus when it cannot be revealed by ordinary means.

More recently, Dr. Harter, in collaboration with Drs. Arsene Burny, Research Associate, Institute of Cancer Research; Jeffrey Schlom, Instructor in the Department of Human Genetics and Development, P&S, and Sol Spiegelman, Department Chairman and Director of the Institute, has found the same enzyme in visna virus, which induces a disease in Icelandic sheep that bears some resemblance to multiple sclerosis. As an outgrowth of this finding, Dr. Harter plans to examine tissues from patients with multiple sclerosis to see if they also contain this enzyme in significant quantities. If such a finding is made, he believes, it might provide a means to reveal by indirect means the presence of a virus that has thus far escaped detection by conventional methods of isolation.

Multiple sclerosis is a chronic disease of the central nervous system (the brain and spinal cord), which usually strikes between the ages of 20 and 40—the critical years for building families and careers. At present it is estimated that half a million Americans suffer from MS or related neurological diseases.

## Public Health Appoints Dr. Harold Fruchtbaum

Dr. Harold Fruchtbaum has been appointed to the faculty of the School of Public Health and Administrative Medicine as Assistant Professor of the History and Philosophy of Public Health. According to the announcement by Columbia University, Dr. Fruchtbaum will give courses in this field and will participate in faculty-student groups where the historical, ethical or sociopolitical aspects of health care need to be considered.

Welcoming Dr. Fruchtbaum to the faculty, Dr. John H. Bryant, Associate Dean, School of Public Health and Administrative Medicine, Columbia University, said that the new appointee, will be “both participant and observer in the decision-making process of the School as it searches for ways in which it can most effectively respond to the needs of society.”

After completing his under-

Dr. Harold Fruchtbaum

graduate education in civil engineering at New York University and graduate study in science writing at Rensselaer Polytechnic Institute, Dr. Fruchtbaum worked as a sanitary and public health engineer. He received his doctorate in the history of science from Harvard University in 1964. During the next three years he taught in the cooperative program of the University of Massachusetts, Amherst, Mount Holyoke and Smith Colleges, where he developed a program in the history of science in Human Affairs, teaching the history of science and technology at Columbia College and the School of Engineering and Applied Science. At the latter he is helping to develop courses on the social aspects of technology, while at the College of Physicians and Surgeons he participates in a program on medicine and society and the history of medicine.

Dr. Fruchtbaum's appointment to the faculty of the School of Public Health and Administrative Medicine is, in the words of Dr. Bryant, “an expression of its concern for the interaction of technology and society as well as its efforts to enrich teaching and research in those humanities and social sciences related to public health.”

## In Memoriam

Dr. John Macky Baldwin, Jr.

Dr. John Macky Baldwin, Jr., long associated with the Columbia-Presbyterian Medical Center of New York City, died at The Presbyterian Hospital on Friday morning, September 17. He was 56 years old and lived at 267 Maple Street, Englewood, New Jersey.

Until recent weeks, Dr. Baldwin was active as Director of the Personnel Medical Service at The Presbyterian Hospital in the City of New York and practiced internal medicine in New York from 1947 to the time of his death.

Dr. John M. Baldwin, Jr.

From 1965 he was an Associate Attending Physician at Presbyterian, and since 1967, Associate Professor of Clinical Medicine at Columbia University's College of Physicians and Surgeons.

Dr. Baldwin was born at Norfolk, Virginia, on November 18, 1914, the son of John Macky and Florence M. Baldwin. After attending William and Mary College, he studied

from 1935 to 1939 at the College of Physicians and Surgeons, receiving his M.D. degree in 1939. He and Elizabeth Whittle Johnston were married on March 15, 1941.

At Presbyterian Hospital, between the years 1939 and 1943, he interned in internal medicine, was assistant in pathology for two years and assistant resident in cardiology for two years. In the post-war years of 1946 and 1947 he was medical director of the International Division of Trans World Airlines and at that time served as Flight Surgeon. He was also a medical consultant for other major airlines.

Dr. Baldwin was a member of several professional associations. He was a diplomate, American Board of Internal Medicine; a member of the American Medical Association, the American Heart Association, the New York County Medical Society, and the New York Clinical Society. In 1960 he was decorated by the Order of African Redemption, Republic of Liberia. He was the immediate past president of the Medical Center's 25-Year Club.

He lived in Englewood, New Jersey, for 22 years. His office was at 161 Fort Washington Avenue, New York City, at the Columbia-Presbyterian Medical Center.

He leaves his wife, Mrs. Elizabeth Johnston Baldwin; his three sons, John Macky Baldwin III, Kennon Whittle Baldwin, and Robert Johnston

### Nursery Applications

The Medical Center Nursery School is still accepting applications.

The School provides a half-day program for three and four year olds.

For further information please call LO 8-0564.

Baldwin; and his mother, Mrs. Florence M. Baldwin, who resides in Virginia Beach, Virginia.

Services were private, with burial at Virginia Beach. A memorial service was held at The Presbyterian Hospital on September 30.

The family has established a memorial in Dr. Baldwin's name. Contributions may be made payable to The Presbyterian Hospital with an accompanying note to indicate that the gift is for the Dr. John M. Baldwin, Jr., Fund.

### Margaret Kane

Margaret Kane, Administrative Assistant, E.S.H. Eye Institute, died suddenly on September 11.

Miss Kane, who was born in Bangor, Maine, came to work at Presbyterian in 1933, when Dr. John Wheeler was chairman of the Department of Ophthalmology. She served as his secretary. After his death she continued in the secretarial post when Dr. Arthur G. De Voë became chairman.

She is survived by two sis-

ters, Mrs. Artie Hanmer and Verge Kane, and a niece, Mrs. Donald Hershey. Interment was in Bangor.

A memorial Mass will be held in the Pauline A. Hartford Memorial Chapel on October 7.

A Memorial Mass is planned for Tuesday, October 5, 4:30 p.m., at the Pauline A. Hartford Memorial Chapel.

### Helen Morgan Murphy

Helen Morgan Murphy, retired Administrative Assistant, Department of Obstetrics and Gynecology, died on August 10 in Ireland.

At the time of her retirement in 1963, Miss Murphy had completed 40 years of service at the Medical Center.

She also served as a volunteer in the Pauline A. Hartford Memorial Chapel for approximately 15 years, continuing in this capacity after retirement until she returned to Ireland in 1969.

She is survived by two cousins, Beatrice and Mildred Black of New York City.

Interment was in Ireland.

# DOES THE HOSPITAL CHART TELL THE STORY? MYRA ENKELIS CONTRIBUTES SUGGESTIONS

Myra Enkelis

Myra Enkelis, R.R.L., chief medical librarian, PH, was the third collaborator for an article, *Hospital Records on Trial: Improving Your Program Notes and Discharge Summaries*. The two other collaborators were Dr. Whitworth F. Bird, internist, Ogden Clinic, Utah and Dr. William Fifer, internist, University of Minnesota Medical School.

The article, an in-depth examination of doctors' notes in hospital charts or in private practice charts, with suggestions for improving them, appeared in the June 15 issue of *Patient Care*, a magazine designed to aid the family physician in providing more effective and efficient care for his patients.

Some of the questions put to physicians concerning progress notes and discharge summaries were: "... do they

reflect effective utilization of your time and afford an accurate picture at any stage? ... can other physicians pick up your chart at any point and get an accurate picture of your evaluation of and plans for the patient? ... does your chart provide sufficient information to enable the house staff to deliver necessary care? ... will your notes in the chart allow the patient to obtain optimum benefits from third party payment plans? ... will your chart keep you out of court or, if you are sued, will it stand up in court? ..."

A few suggestions to fulfill these requirements given by the three collaborating experts, within the requirements set by the Joint Commission on the Accreditation of Hospitals, were: "... when writing discharge summaries, they should contain all information

necessary for continuing care and be future directed ... Interpret events rather than list them ... keep them short. Long summaries discourage anybody from reading them ..."

Some hospitals are experimenting with new techniques of recording. A family physician from Webster, New York, described what one hospital in his area is doing to improve this situation. Nurses' notes are frequently segregated in the back of the chart and never read, but nurses and doctors in the Webster hospital are integrating these notes in sequential, chronological order on the same sheet of paper, achieving a level of patient care that has improved in at

least two ways: the physician obtains a better total picture and the nurses are more likely to read and be guided by the doctor's clinical judgments.

Other hospitals are experimenting with the problem-oriented record, a technique developed by Dr. Lawrence Weed of the University of Vermont, which organizes the record entries and makes it possible to review easily the total problem of the patient on each visit.

One final word of advice from Miss Enkelis—"Keep up with records as you go along so that everyone has the information he needs as he is treating the patient."

## FROM THE MAILBAG

Dear Dr. L.:

I just wanted to write you a short note to let you know how much my husband and I appreciated your taking care of our son. It gave us great confidence knowing we had the best man to do the operation and we both thank you very much.

I also wanted you to know how grateful I was for the excellent job done by the nursing staff on Babies 10. Their perfect mixture of professionalism and empathy, along with their cheerful and discerning ways, helped to make our son's

hospital stay an easy experience for him as well as for me.

*Kindest regards,  
(The mother of a recent patient.)*

To Mrs. G. M.  
*Clinic Administration*

Dear Mrs. M.:

Today while I attended the G.U. Clinic it was a pleasure to unobtrusively watch Miss S., receptionist, help a sick man who was sitting on the bench.

(She) calmly took the information from the patient and immediately obtained help for

him ... and she herself wheeled him away. ... I feel she should be given the highest praise, not because she executed her duties but in the manner which she performed it. Not a lot of unnecessary talk but firm action.

I have attended the G.U. Clinic before and she has always acted in this manner and accomplishing much very quickly and orderly. This is the true spirit of anyone working in a hospital ... My conscience would whip me if I did not write you commending her for her act of mercy.

May God bless you all to carry on the work that you have chosen.

Very truly yours,  
An observer.

Carol Lewis at the Fair

## Carol Lewis and Friends Hold 6th Annual Fair

### FOR CONTRIBUTION TO S. S. HOPE

The Sixth Annual S.S. Hope Fair is over, but contributions for the international hospital ship are still arriving at the Sea Girt, New Jersey, home of

Carol Lewis.

Carol, now 16 years old, was a patient at Babies Hospital and Neurological Institute as a child. When she left the Institute, she wanted somehow to express her appreciation to her neurosurgeon, Dr. Lester A. Mount, who had encouraged her during her hospitalization and had related to her some of his experiences on the S.S. Hope.

Carol started an annual fair in her back yard in honor of Dr. Mount, who is an Attending Neurological Surgeon, PH, and a Professor of Clinical Neurological Surgery, P&S. At this year's fair on August 7, Carol and her helpers collected \$100 in proceeds from games, snacks and refreshments, and from white elephant sales. In the meantime, Carol has heard from others who wish to donate to the ship that brings medical care to patients in the developing nations of the world.

## Last Spring's Art Show was Springboard for Ross

Last spring's Medical Center Art Show brought pleasure to 1,500 viewers and

a glow of recognition to 94 participating artists. Ed Ross, an office employee at Bard Hall, received many compliments on his display of three oil paintings. One of these works, a fantasy on human evolution, was purchased during the show for a good price in three figures. Mr. Ross, who has sold many paintings in recent years, is now undertaking the adventure of full-time free-lancing. He credits his wife, who also works at Bard Hall, as his chief salesman.

Mr. Ross received his B.A. degree in Fine Arts from C.C.N.Y. and spent a year of study in Europe. His penchant for painting symbols of molecules developed as a result of the strong impression made upon him when, as a child, he learned about the molecular composition of materials. The painting shown above is called "Maternal Molecular."

Ed Ross

## 'Cancer is the Next Frontier,' Says Dr. Spiegelman on NBC-TV

In a four-way audio-video hook-up—Bethesda, Maryland; Boston, Massachusetts; San Juan, Puerto Rico and New York City—NBC-TV (Channel 4) presented a special program entitled *Cancer Is The Next Frontier*. The four-way conversation was carried on between Dr. Carl G. Baker, Director, National Cancer Institute in Bethesda; Dr. Sidney Farber, Scientific Director, Children's Cancer Research Foundation in Boston; Dr. Henry Kaplan of Stanford University in California, speaking from Puerto Rico; and Dr. Sol Spiegelman, Director, Institute of Cancer Research, CU. Sander Vanocur, taping in New York City with Dr. Spiegelman at Delafield Hospital, was anchorman for the telecast. The one-hour program was shown to TV audiences in the New York area on Friday, August 6 at 10:00 p.m.

Dr. Spiegelman spoke of the recent developments which

Dr. Sol Spiegelman, seated, with Sander Vanocur.

have made a great impact in the field of cancer research, i.e., the discovery of an RNA-dependent DNA polymerase in all RNA viruses which are known to cause cancer in animals. Dr. Spiegelman recently reported this same "reverse

transcriptase" enzyme in virus-like particles found in human milk. The human particles have the same ultrastructure and biophysical properties as viruses found in mouse milk and known to cause breast cancer in mice.

### • ENGAGEMENT

Karen Grant is engaged to *Dr. John English McWhorter, IV*. Dr. McWhorter is serving a fellowship in internal medicine, Department of Medicine, P&S.

### • MARRIAGES

Sarah Bruce Howe was married to Anthony T. Oppersdorff on August 21. Mrs. Oppersdorff, the bride, is the daughter of *Dr. Calderon Howe*, Professor of Microbiology, P&S, and Attending Microbiologist, PH.

*Louise Grant*, ward clerk, N.I. 4, was married to Charles Rodd on July 24.

### • NEW ARRIVALS

*Dr. Arnold P. Gold*, Associate Attending Neurologist, PH, and Associate Professor of Clinical Neurology (Pediatrics), P&S, and his wife, welcomed a baby daughter, *Amelia Meredith* on August 7. This is the fifth addition to their family.

*Donald McLean*, Inhalation Therapy, and his wife, Sharon, welcomed their fourth child and second son, *Michael Donald*, born in Sloane Hospital, August 18.

*Frank Stingo*, upholsterer foreman, Maintenance and Construction, welcomed his third grandchild, *Veronica Shannon*, on August 28.

*Efrain Silva*, Protective Department, and his wife, *Olga*, welcomed their third child, *Martin*, on September 8.

### • CONGRATULATIONS TO:

*Lydia Liquori*, who has been promoted from medical secretary, Medical Information, to Assistant Supervisor, succeeding Mrs. *Liboria Fitzpatrick*.

*John Greene*, Housekeeping Department, who has been promoted from assistant supervisor to supervisor.

*Roosevelt Brown*, also from Housekeeping, formerly head porter on the midnight staff, who has been promoted to assistant supervisor for Clinic Reception.

Mrs. *Gertrude Hopper*, receptionist, Vanderbilt Clinic, who has been promoted to assistant supervisor for Clinic reception.

### • FAREWELL TO:

Mrs. *Mary Castelo*, former member of the Assistant Treasurer's Department, cashier's branch, who resigned at the end of August, after five years' employment, to train as a registered nurse at Pace Institute.

Mrs. *Carmen Sellas*, Medical Records, who resigned after 14 years to return to her native Puerto Rico with her husband.

Mrs. *Liboria Fitzpatrick*, Assistant Supervisor, Medical Information, who has moved to Minnesota. All her friends and co-workers will miss her and wish her much happiness in her new home.

Margaret Cubberly

Mrs. Gertrude Hopper

Lydia Liquori

### • SPECIAL CONGRATULATIONS TO:

*Margaret Cubberly*, senior technologist, Department of Ophthalmology, who served on the House of Delegates at the 41st annual international meeting of the Biological Photographic Association, held in Ottawa, Canada, in August.

At this same meeting Miss Cubberly received first award for her prize photomicrograph monochrome print showing *Cestode Invasion of the Eye*.

### • CONDOLENCES TO:

The family and friends of *Louis Vorisek*, retired carpenter, Maintenance and Construction, who died on September 17 at the age of 80. He is survived by two sons, Robert and Jerry.

DR. PAUL J. POPPERS, Associate Professor of Anesthesiology, P&S, and Associate Attending Anesthesiologist, PH, recently attended the Tenth Congress of Scandinavian Societies of Anesthesiologists, held at the University Medical Center in Lund, Sweden.

He presented two papers—firstly, *Ultrasonic Blood Pressure Measurement in Children and Infants*, and secondly, *Advanced External Fetal Monitoring Technique*. The latter paper was co-authored by DR. MIECZYSLAW FINSTER, Associate Attending Anesthesiologist, PH, and S. R. Topaz & F. L. Hatke, electronics engineers from Hoffmann-La Roche, Inc.

DR. HAROLD M. BRUCK, Assistant Professor of Surgery, P&S, and Assistant Attending Surgeon, PH, won a scientific award of merit for his exhibit, *Burns in Children*, at the clinical convention of the American Medical Association, June 20-24, in the section of Pediatrics. At the same meeting, Dr. Bruck also exhibited *Opportunistic Infection in Burns in the Military Section* and showed a movie entitled *The Management of Burns in Children*.

At the XIII International Pediatric Congress in Vienna, Austria, August 29-September 4, DR. WALTER E. BEEDON, Professor of Radiology, P&S, and Attending Radiologist, BH, presented a paper entitled *Medical Respiratory Distress in the Newborn*.

DR. GUY D. POTTER, Associate Professor of Radiology, P&S, and Associate Attending Radiologist, PH, completed his seven-year study of the structures of the human head, millimeter by millimeter, in correlation with tomographic radiology.

His book, *Sectional Anatomy and Tomography of the Head*, was published by Grune & Stratton, New York, N. Y.

At the Weizman Institute of Science in Israel, on September 1, DR. BRUNO FINGERHUT, Special Lecturer in Urology, P&S, lectured on *Treatment of the Experimental Bladder Tumors by Autoimmunotherapy*.

He also attended a meeting of the Brussels Urological Society in Belgium, September 9, where he presented *Aldactone in Benign Prostatic Hypertrophy*.

DR. ROBERTO GRANATO, Instructor in Urology, P&S, lectured before the Colombia Urological Association in Bogota, August 24.

He presented the following papers: *Transsexual Operations, Evaluation of the Patient with Cancer of the Bladder: Triple Contrast Cystograms and Radioautography, and Selective Renal Angiograms in Renal Vascular Disease*.

At a meeting sponsored by the International Union Against Cancer, held at the University of Leeds in England, September 22-24, DR. RALPH J. VEENEMA, Professor of Clinical Urology, P&S, Attending Urologist, PH, and Chief of Urology at Delafield Hospital, was an invited speaker. He presented papers on *Observations on Nucleic Acid Synthesis and Electronmicroscopy in the Evaluation of Bladder Cancer, Methods and Accuracy of Clinical Staging of Bladder Carcinoma and Planned Combination Treatment for Bladder Carcinoma*.

Also in September, he was guest lecturer at the University of London's Institute of Cancer Research, and spoke on *The Treatment of Bladder Cancer*.

As guest professor of urology at the University of Copenhagen in Denmark that same month, Dr. Veenema lectured on *Experimental and Clinical Studies in Prostate Cancer and Experimental Studies in Bladder Cancer*.

DR. FRANK E. STINCHFIELD, Professor and Chairman, Department of Orthopaedic Surgery, was principal guest speaker at the Minnesota-Dakota-Manitoba Orthopaedic Association's annual meeting, September 10-11.

He gave two lectures on the *Indications, Contraindications and Complications of Total Hip Replacement Arthroplasty*.

DR. WILLIAM KENNEDY, chief resident, orthopedic surgery, has initiated a series of Saturday morning seminars by prominent surgeons. Dr. Jack Hughston of Atlanta, Georgia, spoke on *The Orthopedic Evaluation of Knee Injuries* on September 11.

DR. ALEXANDER GARCIA, Attending Orthopaedic Surgeon, PH, was chairman and moderator of the 23rd annual meeting of the Association of Bone and Joint Surgeons, held in Madrid in May.

At the same meeting, DR. ROBERT E. CARROLL, Attending Orthopaedic Surgeon, PH, was elected President of the Association.

DR. DAVID L. ANDREWS, Associate Attending Orthopaedic Surgeon, PH, is regional chairman of *Emergency Care and Transportation of the Sick and Injured*, scheduled for October 14-16, to be held at the Medical Center.

On September 10 he lectured to the P&S medical student body on this subject at the 102nd Engineer Battalion Armory on Ft. Washington Avenue and 168th Street.

Dr. David L. Andrews

Dr. William A. Bauman

DR. WILLIAM A. BAUMAN, Director, Medical Data Processing, recently visited three medical computer installations to observe new developments in computer-assisted patient information processing. He visited the Permanent Medical Group in Oakland, the El Camino Hospital in Mountain View and the Los Angeles County Medical Center, all in California, and was shown prototypes of hospital and pharmacy information systems, all of which use cathode ray terminals for input and display of medical data.

DR. GORDON I. KAYE, Associate Professor of Surgical Pathology, P&S, and Director of the Higginson Cabot Laboratory, was an invited speaker at a symposium of biological transport, held in conjunction with the 29th annual meeting of the Electron Microscopy Society of America, in Boston, August 9-13. He spoke on *Localization of Sodium in Normal and Inhibited Transportation Epithelia*.

Dr. Kaye and DR. GEORGE I. LYTCHCOTT, Associate Dean for Urban and Community Health Affairs, P&S, were named to an Emergency Committee to Save Health Research in New York City. The Committee, headed by Mr. Gerard Piel, publisher of *Scientific American*, has been working to convince the city and state to restore adequate funding to the Health Research Council of the City of New York. There are 28 scientists on the staff at the Medical Center whose work has been supported by the Council.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXVI, NUMBER 11

NOVEMBER, 1971

## DR. R. S. ASNES HEADS PEDIATRIC AMBULATORY CARE

Dr. Russell S. Asnes, Assistant Attending Pediatrician, PH, and Assistant Professor of Pediatrics, P&S, has been appointed Director of the Division of Pediatric Ambulatory Care in the Department of Pediatrics of the College of Physicians and Surgeons. This Division is responsible for the delivery of comprehensive and emergency medical care to children from the communities served by the Medical Center. The programs of the Division include general pediatric clinics, specialty clinics, and adolescent clinics. The Division is also responsible for the development and implementation of

Dr. Russell S. Asnes

programs in social and community pediatrics.

Dr. Asnes had a pediatric internship at Boston City Hospital and received three years of pediatric residency at the Johns Hopkins Hospital. Following his pediatric training he spent two years in the United States Air Force, developing and participating in programs concerned with improving care of children of service families and in teaching pediatrics. Dr. Asnes has been on the faculty of the College of Physicians and Surgeons since 1969.

In addition to the Division's program to provide care for those children who come to Babies Hospital and the pediatric clinics, the Division is actively engaged in outreach programs to improve the health of children in the Washington Heights and Harlem communities. Dr. Asnes is also responsible for the ambulatory pediatric teaching program for medical students and house officers and is active in developing a number of research

## N. Y. Psychiatric Institute's 75th Birthday

Dr. Marshall Nirenberg, who received the Nobel Prize for deciphering a part of the genetic code, and Nelson Rockefeller, Governor of New York, will speak at the 75th Anniversary celebration of the Psychiatric Institute here this month.

The three-day program will begin at 4 p.m. on Sunday, November 21, with registration and a reception on the 10th floor of the Institute, and an Open House for Institute alumni and their guests. All anniversary events at the Medical Center are open to the public.

Following an hour and a half of case presentations in the Institute on Monday morning, November 22, the first plenary session will convene at 10:30 a.m. in the Alumni Auditorium, P&S, to hear welcoming speeches from Governor Rockefeller, Dr. William McGill, President of Columbia University, Dr. Paul Marks, Dean of P&S, Dr. Juan J. Lopez-Ibor, President of the World Congress of Psychiatry, and Dr. Alan Miller, Commissioner of the New York State Department of Mental Hygiene. Dr. Ewald Busse, President of the American Psychiatric Association, will deliver the Adolf Meyer Lecture on the future of psychiatry.

The second, or afternoon, plenary session will take place from 2:00 to 3:00 p.m. that day in the Alumni Auditorium.

Two addresses are scheduled: Dr. Bertram Brown, director of the National Institute of Mental Health, Washington, D. C., will pose and answer the question, "Psychiatry, through Mental Health to Human Services, 'What Next?'" and Dr. Seymour Kety, Professor of Psychiatry, Harvard University, will describe "The Planned Obsolescence of Psychiatric Research."

In "specialty sessions," following the second plenary session and starting at 3:00 p.m., Dr. Nirenberg will mount the rostrum of the Alumni Auditorium to deliver the Heinrich Waelisch Memorial Lecture on "In Vitro Differentiation of Neuroblastoma Cells," followed by lectures by Drs. Eliot Stellar and Joel Elkes.

As Dr. Nirenberg takes the

lectern in the Alumni Auditorium, a specialty session in the Zabriskie Auditorium of the Neurological Institute will be addressed to "Perspectives on the Genetics of Schizophrenia" and will hear Drs. John Rainer, L. Erlennmeyer-Kimling, Paul Wender, and Edith Zerbin-Rudin.

Still another specialty session, on "Psychopharmacology—Immunologic and Toxic Actions in the Central Nervous System," will convene in the Eighth Floor Auditorium of the Psychiatric Institute, also at 3:00 p.m., to hear about progress in studying the mechanisms of tranquilizing and related drugs and the immunologic mechanisms of the central nervous system.

The day's program will be completed by a banquet at the

Biltmore Hotel in New York City.

The two last morning hours of Tuesday, November 23, will be devoted to meetings of the "disciplinary groups." The group representing psychological sciences will meet in the Alumni Auditorium from 10:00 a.m. to noon to hear reports on current programs of the Department of Psychology and of the Biometrics Research Unit.

The social sciences group will meet in the same time slot at Bard Hall to hear discussions on such topics as "Urbanism and Mental Health: A Reformulation," "The Social Breakdown Syndrome," and "Evaluation of Community Psychiatric Practice."

"The Future of Psychiatric Education: Looking Toward the Year 2000" will be the subject of a panel discussion at the Eighth Floor Auditorium of the Psychiatric Institute, also at 10:00 a.m. on Tuesday. The fourth disciplinary group will meet in the Nurses' Classroom of Ninth Floor North of the Institute to hear a discussion on "Cultural Changes and Their Impact on Psychic Functioning."

The concluding plenary session of Tuesday, November 23, will start at 2:00 p.m. in the Alumni Auditorium and will hear Professor Neal E. Miller of Rockefeller University present the 39th Thomas William Salmon Lecture. Dr. Miller's topic will be "Some Psychosomatic Effects of Learning."

## Dental School Opens Wide to Medical Center Employees

### "The Revolution in Dental Care Depends on You"

A call "to the barricades" is being sounded by the School of Dental and Oral Surgery to all members of the Medical Center community. A revolution

programs to investigate improved methods of providing for the health needs of infants, children and adolescents. The Division is primarily responsible for developing programs concerned with providing well-baby care, the screening of children referred because of the possibility of minimal brain damage, and school problems.

is afoot, organized by the cadres of the dental school, and the Medical Center is invited to join it.

The invitation by the Preventive Dentistry and Community Health Division of the school coincides with the announcement by Dr. Melvin L. Moss, Dean of the School of Dental and Oral Surgery, that "arrangements have been made" for Medical Center staff to receive diagnostic services, counseling and preventive care in the newly renovated Preventive Dentistry Clinic.

The clinic serves as a kind

of revolutionary headquarters of the new movement, a movement that its advocates hope will spread across the country.

"Get your own weapons, there is going to be a moderate degree of violence," says Dr. Irwin Mandel, Director of the Division of Preventive Dentistry and Community Health and one of the leading activists in the movement. The weapons Dr. Mandel has in mind are, of course, toothbrushes and lassoes of dental floss, and the violence to be done is to dental plaque, oral enemy number one

# Many Presbyterian Hospital Employees Are Continuing Education, Aided by Weinberg Plan

Nine years ago the late Sidney J. Weinberg, philanthropist, and several of his friends established an educational aid plan for employees of The Presbyterian Hospital. Today, as a result of their generosity, more than 70 of our employees are being assisted in their rise to a higher level of education.

Full-time employees of Presbyterian who enroll in approved schools to continue education along the lines of their employment may, through the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan, be reimbursed half the cost of their tuition fees for one to six credits per semester.

To take advantage of the plan, the employee must make application through the office of Lillian Oring, Personnel Assistant, PH 1-44, and receive approval before the beginning of each new semester.

This fall 74 applications were approved. These 74 employees are attending classes while continuing in their regular jobs. Fifty-two of them are working toward degrees, as follows: A.A., 16; Bachelor's, 19; Master's, 15; Ph.D., 2.

Twenty universities and other schools are represented with the following enrollments: Alphonsus College, 2 employees; Bernard Baruch College, 1; Bronx Community College, 4; Columbia University, 12.

Edward Williams College, 3; Fairleigh Dickinson University, 1; Fordham University, 5; Herbert Lehman College, 1; Hunter College, 4; Iona College, 2; Long Island University, 1; Manhattan College, 5; Manhattan Community College, 14; New York City Community College, 3; New York University, 8; St. John's University, 1.

State University at Farmingdale, 1; The City College, 4; The New School, 1; Wood Secretarial School, 1.

Congratulations to the following employees of Presbyterian, whose applications have been approved:

## MRS. VIRGINIA SMITH PARTICIPATES IN "ADMITTING PROCEDURES" MEETING

Mrs. Virginia B. Smith, Administrative Assistant, Front Office and Information Services,

Mrs. Virginia B. Smith

participated in a two-day Institute on Admitting Procedures as Part of the Total Information System.

The Institute, held at the Conrad Hilton Hotel in Chicago, September 15-16, attracted 250 admitting officers, medical record librarians, business and systems managers, from hospitals in 31 states and Canada.

The Institute was conducted by the American Medical Record Association. Myra R. Enkelis, Presbyterian Hospital's Chief Medical Record Librarian, is a director of that Association.

## Wanted—Volunteers To Offer Loving Care To Little Children

An urgent appeal has come from Mrs. Dorothy Diamond, Director of Volunteers, PH, and Cynthia Lepore, Director of Recreational Therapy, BH, for volunteers for the Tender Loving Care (TLC) program at the Babies Hospital unit of Presbyterian Hospital.

There are no barriers or restrictions regarding age or sex. Young or old, men or women, all are needed. The only requirement is compassion and a desire to brighten the early evening hours of hospitalized youngsters, who frequently need no more than reassurance and plenty of TLC. You may be asked to read to a child, help him participate in some recreational activity, or to simply hold him in your lap for some extracurricular, substitute mothering or fathering.

A spontaneous smile, an extra hug, may mean more than all the recreational therapy in the world to these little ones, away from home and the loving care of their parents.

All it takes is one night a week, from about five o'clock in the evening until eight.

If you have a few hours to spare once a week, won't you please contact either Mrs. Diamond or Miss Lepore?

\* \* \*

Miss Lepore also requests donations of old, washed nylon stockings to Recreational Therapy, BH 7. These are needed as stuffing for toys.

## Simulated Accident at Emergency Care Course

Awaiting "emergency care" in a demonstration area of 102 Engineers Armory, these two nursing students of Columbia University are center of attention of a group of ambulance attendants, firemen, policemen and nurses taking part in course on Emergency Care and Transportation of the Sick and Injured at the College of Physicians and Surgeons on October 15. More than 450 signed up for three-day course to narrow, in the words of Dr. David Andrews, the "applications" between "what we know and what we apply at the scene of an accident." Dr. Andrews, who is Associate Attending Surgeon, Orthopedic Service, PH, and Assistant Professor of Clinical Orthopedic Surgery, P&S, gave a lecture and served as chairman of the course, which drew about 20 other Columbia-Presbyterian doctors as lecturers and instructors.

## DENTAL CARE . . .

Continued from page one

of the working and the non-working classes.

The revolution in dental care that the School of Dental and Oral Surgery is proclaiming has been in the planning stage for several years. Its architects drafted an "ideology" of dental care as an immediate approach to the prevention of cavities, while awaiting the hoped-for development of preparations that would prevent cavities chemically.

"Dentistry is now psyched for total war against tooth decay," Dr. Mandel declares. "This war emphasizes offense. In years past, dentistry fought a rear-guard action with a dental drill; today, we have learned to anticipate cavities and to attack the conditions that favor them."

The ideological basis for the revolution rests in new insights about the formation of plaque and the process of tooth decay. The decay is caused by acids released by bacteria inhabiting plaque when they metabolize food sugars. But the revolution has also enlisted an old ally, fluoride, for which several new applications have been developed.

"There is little doubt that those who religiously follow our program can prevent most periodontal problems and caries (cavities)," says Mrs. Patricia McLean, Director of the Division of Dental Hygiene, DOS. It is the students in this division—the oral hygienists—who team up with third-year dental students to staff the Preventive Dentistry Clinic. In concert with the total-war approach, the dental school has instituted a new four-year course on preventive dentistry to prepare all students to work in the clinic under the supervision of Dr. Stephen Wotman, Associate Professor of Preventive Dentistry, its head. The clinic is jointly sponsored by the Divisions of Oral Hygiene, Periodontics and Preventive Dentistry.

To help the Medical Center community become part of the revolution, the dental school invites community members to call the Preventive Dentistry Clinic at extension 3401 to obtain appointments for registration and x-rays.

"The results of the examination and diagnosis," according to the announcement by Dr. Moss, "will be made available to the family dentist, since most of the Medical Center community is treated privately and since it is not possible to bring large additional groups of patients into the dental school for comprehensive care at this time."

The usual clinic fees of \$15 for registration and x-rays plus \$15 for usual preventive dentistry services will be charged, along with a small additional fee for sending transcripts of findings to the

Dr. Stephen Wotman, director of Preventive Dentistry Clinic (center), inspects setup for preventive dentistry diagnostic work and treatment by third-year student of School of Dental and Oral Surgery.

family dentist, the announcement states.

The services to be provided the Medical Center community include a dental examination and x-rays, followed by a series of three "preventive visits" and one checkup visit.

The total of five visits coincides with the dental school's basic preventive dentistry program, Mrs. McLean explains. The first visit, as envisioned in the program, consists of evaluations of the visitor's attitude toward oral health, examinations of teeth and gums, and of several chemical tests for tendencies to develop tooth decay. The visitor also receives an introduction to proper tooth-brushing and other oral physiotherapy aids.

"Our clinic's slogan, 'the revolution in dental care depends on you,' puts it in a nutshell: it's up to the patient to carry on the work started here," says Mrs. Dona McKinney, clinic supervisor. "And let's face it, this takes a certain amount of effort, learning and time."

During the second visit, the patient is shown how he can "disclose" his plaque with the aid of a disclosing wafer or a food-coloring rinse. The visitor learns how to brush his teeth and the importance of plaque removal by the dental student or hygienist. Following plaque removal, a fluoride coating is applied to the biting surfaces of the patient's teeth. His dietary history is taken and he is asked to record the foods he eats in five days. During the third visit, additional aids for dental care, such as fluoride mouthguards or gels, are prescribed, and the patient's progress and his test results are discussed or acted upon. A fourth checkup and reinforce-

ment visit completes the program.

After the fourth visit, the patient is more or less on his own, but follow-up visits may be scheduled for patients who are unable to adjust to their active role in preventive dentistry.

### A PRIMER OF PREVENTIVE DENTAL CARE FOR READERS OF THE STETHOSCOPE

1. Brush at least once a day to remove dental bacterial plaque which accumulates at the gumline. The plaque is easier to see after using a tablet with a dye that colors it (disclosing tablets). A fluoride toothpaste helps to increase tooth resistance to decay.
2. Bacterial plaque between the teeth can't be removed with the brush. Unwaxed dental floss used as instructed in the Preventive Dentistry Clinic or by your dentist can do the job.
3. Control the amount of food supply for bacteria in plaque by avoiding sugared snacks and drinks, especially between meals.
4. Start to become independently healthy by fighting plaque and preventing more dental disease.

The visitor's attitude toward oral health is evaluated in a question-and-answer test during his first visit to the Preventive Dentistry Clinic.

Teaching the patient to "disclose" his plaque to himself with a disclosing tablet and to remove it with the proper brushing technique is the key part of the preventive dentistry program.

## Dr. Hugh E. Huxley is Winner Of Louisa Gross Horwitz Prize

Hugh E. Huxley, whose studies have revealed the structural mechanism of muscle contraction, is the winner of the Louisa Gross Horwitz Prize for 1971.

The choice of the British scientist for the \$25,000 award was announced October 3 by Dr. William J. McGill, President of Columbia University, the awarding institution. The actual presentation of the prize to Dr. Huxley took place October 6 in the Rotunda of Low Memorial Library on the University's downtown campus, with Dr. Paul A. Marks, Columbia's Vice President in Charge of Medical Affairs and Dean of P&S, presiding and Dr. McGill presenting the award. The traditional Louisa Gross Horwitz Prize Lecture—by Dr. Huxley on "Molecular Changes in Muscle During Contraction"—was given in the P&S Alumni Auditorium the next day.

Dr. Huxley's investigations into the nature of muscle contraction have, in the words of the award citation, broad implications for biology as a whole in that they "provide for the first time an understanding of the manner in which chemical energy can be transformed into mechanical energy in the living organism."

The Cambridge University biologist described in 1953 how each muscle fiber contains six-sided arrays of both thick and thin threadlike filaments that interlock with each other.

Dr. Huxley proposed at this time the "sliding filament hypothesis"—that the thick and thin filaments, sliding past one another, can form bridges, which provide the basis for the weight-bearing capacity of contracting muscle. He went on to show, by chemical extraction procedures, that the thick filaments contain myosin and the thin ones actin. The interaction of the two proteins provides the bridges between the filaments.

Dr. Huxley was born in Birkenhead, England, February 24, 1924. A fellow of Churchill College, Cambridge, he has spent most of his professional life at that university. Cambridge awarded him the B.A. in 1948, the M.A. in 1950, the Ph.D. in 1952, and the Sc.D. in 1964. He was a research student in the Molecular Biology Unit from 1948 to 1952; a Research Fellow of Christ's College from 1954 to 1956, and a member of the scientific staff of the university's laboratory of Molecular Biology, Medical Research Council from 1956 to 1961. He was a Fellow of King's College from 1961 until 1967, when he became associated with Churchill College.

From 1952 to 1954, he was a Commonwealth Fellow at the

Dr. Hugh E. Huxley, British scientist, was presented the 1971 Horwitz Prize at Low Memorial Library, Columbia University.

Massachusetts Institute of Technology.

Dr. Huxley was awarded the Fedelberg Prize in 1963 and the Hardy Prize in 1966. He is a Fellow of the Royal Society (London), a member of the Leopoldina Academy of Science and an Honorary Foreign Member of the American Academy of Arts and Sciences. He was the Harvey Society Lecturer in 1964 and the Dunham Lecturer at Harvard University in 1969. Harvard awarded him an honorary Sc.D. in that year.

A member of the editorial boards of several biological journals, Dr. Huxley was editor of *Progress in Biophysics and Molecular Biology* from 1960 to 1966.

The Louisa Gross Horwitz Prize, established under the will of the late S. Gross Horwitz in memory of his mother, honors scientific investigators for outstanding contributions to knowledge in biology or biochemistry. The first prize was awarded in 1967 to Professor Luis F. Leloir. The Argentine biochemist went on to receive the Nobel Prize in Chemistry in 1970. In 1968, the Horwitz Prize was awarded to Dr. Har Gobind Khorana of the University of Wisconsin and Dr. Marshall Nirenberg of the National Heart Institute. Both men later that year received the Nobel Prize in Medicine and Physiology. In 1969, the prize was again awarded to two scientists who also became Nobel Laureates of the year, Dr. Max Delbrück of the California Institute of Technology and Dr. Salvador Edward Luria of the Massachusetts Institute of Technology. In 1970, Dr. Albert Claude of the Free University of Brussels, Belgium, Dr. George E. Palade of The Rockefeller University, and Dr. Keith R. Porter of the University of Colorado were the Horwitz Prize recipients.

# Graduation of 38 Practical Nurses

Like birds shedding their feathers during molting season, a record graduating class of 38 young women of the Columbia-Presbyterian School of Practical Nursing shed their blue and white student uniforms and caps in favor of full-dress whites and the blue-striped organdy caps of the graduate practical nurse, as they marched down the aisle of the P&S Alumni Auditorium on October 1 to receive diplomas and pins.

The auditorium was filled to capacity with relatives, friends, colleagues and faculty as this fifth class, having happily outgrown the smaller seating capacity of the Pauline A. Hartford Memorial Chapel, held its graduation exercises there for the first time.

After Chaplain Robert B. Reeves, Jr., gave the invocation, the Star Spangled Banner was sung by all.

Brief but meaningful addresses were delivered by Dr. Robert H. E. Elliott, Jr., As-

It's a proud moment for these young women of the Columbia-Presbyterian School of Practical Nursing—graduation exercises in a packed auditorium.

sistant Vice President, Special Projects (Nursing), Dr. Edward T. Bowe, Assistant Attending Obstetrician and Gynecologist, PH, and Mrs. Marion Gittens, class president.

Dr. Bowe drew laughter from the graduates when he said, "... You have reached the end of the trail, no more getting up at 6:00 a.m. for classes..."

Presentation of diplomas

and pins was presided over by Edith J. Ankers, Director of the Columbia-Presbyterian School of Practical Nursing, assisted by Jean Cormack, Instructor.

Following benediction by Chaplain Reeves, the recession brought the ceremony to a close.

A reception was held in Harkness Hall immediately following the graduation exercises.

## DR. LIEBERMAN AND DR. VANDE WIELE RECEIVE N. I. H. GRANT OF \$300,000

The National Institute of Child Health and Human Development of the National Institutes of Health, has awarded to Dr. Seymour Lieberman, Professor of Biochemistry (Obstetrics & Gynecology) and Dr. Raymond L. Vande Wiele, Director of Service, Obstetrics and Gynecology, PH, and Professor and Chairman, Department of Obstetrics and Gynecology, P&S, a grant designed to train investigators in the area of *Endocrinology of Reproduction*.

Projected for a total of five years, from 1971 to 1976, the total amount of the grant is approximately \$300,000. \$63,000 has been allotted for the first year.

The primary objective of this program is to convert trainees into productive and independent biomedical scientists in the area of reproductive endocrinology. The recently accomplished liaison between the Department of Obstetrics and Gynecology and the International Institute for the Study of Human Reproduction makes it possible to

draw upon their combined members and facilities to help educate their trainees.

This training program has been in progress under the direction of Drs. Lieberman and Vande Wiele for more than a decade.

In the past the emphasis was on the biochemistry of the steroid hormones, but now the field of interest has been widened to include other aspects of the biochemistry and physiology of reproduction.

## Thanatology Symposium

The Foundation of Thanatology and the Department of Psychiatry, P&S, have announced a symposium on the "Use of Psychopharmacologic Agents in the Care of the Terminally Ill and the Bereaved," to be held at Maxwell Hall on Friday, November 12, from 8:00 a.m. to 6:00 p.m. About 150 participants are expected to attend, according to Dr. Austin H. Kutscher, Foundation President, and Dr. Ivan K. Goldberg, Program Chairman.

## Radiologic Technologists' Graduation

The second class of the Columbia-Presbyterian School of Radiologic Technology held its graduation exercises in Harkness Hall on September 30.

Dr. Robert H. E. Elliott, Jr., Vice President, Special Projects (Nursing), commended the graduates upon the successful completion of their studies and said, "... You are now ready to go forth in the ever expanding field of allied health services where your new professional skills will immediately be put to use. Hopefully some of you will remain here at Presbyterian, but our best wishes go with you wherever you decide to seek your careers..."

Mrs. Elly Metrakos, Supervisor, PH X-ray Department, and Dr. James A. Reilly, Assistant Professor of Radiology, P&S, and Assistant Radiologist, PH, substituting for

Second graduating class of Columbia-Presbyterian School of Radiologic Technologists. Rear standing, left to right: Ellery Jarrette, Brian Broderick, Mark Levine, George Spahn, James Gillen. Front seated, left to right: Joanne Thompson, Sheryl Elin, Brenda Johnson. Not shown: Robert Walsh.

Dr. William B. Seaman, Professor and Chairman of Radiology, who was out of the city, also addressed the audience briefly.

The highlight of the exercises came when Clarence Modeste, Director of the School, presented each graduate with

his diploma.

The nine graduates of the fall class of 1971 were: Brian Broderick, Sheryl Elin, James Gillen (honor roll), Ellery Jarrette, Brenda Johnson, Mark Levine, George Spahn, Joanne Thompson (honor roll) and Robert Walsh (honor roll).

## NURSING ALUMNAE MEETING NOV. 18

On November 18 there will be a general meeting of the Columbia University-Presbyterian Hospital School of Nursing Alumnae Association in Sturges Auditorium of Maxwell Hall.

Refreshments at 7:00 p.m. will precede the meeting at 7:45 p.m. For those who would like to have dinner in the Maxwell Hall Cafeteria at 6:00 p.m., please call (212) 579-3193 for reservations.

The topic of the meeting will be *Looking Ahead—Nursing Education Program—Presbyterian Hospital*.

Speakers will be: Mary I. Crawford, Director of Nursing, Presbyterian Hospital, and Associate Dean (Nursing), Department of Nursing, Faculty of Medicine, Columbia University; Dr. Bernard Schoenberg, Director, Office of Education Planning in the Health Sciences, Faculty of Medicine, Columbia University; Edith J. Ankers, Director, Columbia-Presbyterian School of Practical Nursing, and Betty J. Sanford, Supervisor, School of Operating Room Technology, Presbyterian Hospital.

## Anesthesiology Lectures

These lectures have been announced by the Anesthesiology Department for the 4th floor amphitheater, B.H., Thursdays from 5:00 to 6:00 p.m.: November 4, Oxygenation with the Membrane Lung, by Dr. Warren Zapol; Nov. 11, Respiratory Effects of Narcotics and Narcotic Antagonists, Dr. Theodore Smith; Nov. 18, Neuropathology of Respiration, Dr. S. H. Ngai; December 2, Xenon Studies of Pulmonary Function, Dr. John Benumof; and Dec. 9, Action of Drugs on Pulmonary Circulation, Dr. Keith Sykes.

630 West 168th Street, New York, N. Y. 10032. Checks should be made payable to Columbia University.

## Eye Institute Alumni Meeting Wednesday, Nov. 10

On Wednesday afternoon, previous to the Thursday-Friday symposium, the Eye Institute Alumni Meeting will be held in the Alumni Auditorium, 2:00 p.m. to 5:00 p.m.

## Register Now for Eye Surgery Symposium, Nov. 11-12

A two-day Symposium on Eye Surgery will be presented by the Edward S. Harkness Eye Institute on Thursday and Friday, November 11 and 12, at the P&S Alumni Auditorium, Columbia-Presbyterian Medical Center, 638 West 168th Street, New York, N. Y.

The program will include detailed discussion of selected aspects of the surgery of glaucoma, cataract, cornea, retina and the orbit. Particular attention will be given to the latest techniques.

Following check-in at 8:30 Thursday morning, the day's program will begin at 9:00 a.m. and will continue until 4:15. Noon luncheons are scheduled, and on Thursday there will be a cocktail party at the Plaza

Hotel from 6:00 p.m. to 8:30 p.m. The registration fee of \$150 includes the two-day program of meetings, the two luncheons and the Thursday evening cocktail party. The program ends at 4:05 p.m. on Friday.

Guest speakers from several of the nation's universities and hospitals, from Canada, and from England will include:

Lloyd M. Aiello, M.D., Raymond N. Berke, M.D., William G. Everett, M.D., Max Fine, M.D., Joseph S. Haas, M.D., Charles D. Kelman, M.D., J. Harry King, Jr., M.D., Clement McCulloch, M.D., John W. McTigue, M.D., Edward W. D. Norton, M.D., Harold G. Scheie, M.D., Donald M. Shaffer, M.D., Redmond Smith,

F.R.C.S., Paul C. Wetzig, M.D.

Participating faculty members from Columbia University's College of Physicians and Surgeons will include:

Charles J. Campbell, M.D., Hernando Cardona, M.D., D. Jackson Coleman, M.D., Andrew deRoeth Jr., M.D., A. Gerard DeVoe, M.D., Robert M. Ellsworth, M.D., R. Linsy Farris, M.D., Max Forbes, M.D., Ira S. Jones, M.D., Francis A. L'Esperance, M.D., George R. Merriam, Jr., M.D., Ellen F. Regan, M.D., Algeron B. Reese, M.D., Harold F. Spalter, M.D.

For advance registration, send name and address to Melvin D. Yahr, M.D., Associate Dean, College of Physicians and Surgeons, Columbia University,

## Want to Doll Up a Doll?

Volunteers are needed to dress the dolls which will be given to those children who are in Babies Hospital on Christmas Day.

If you would like to dress a doll please call Miss Jane McConville, Assistant Director of Nursing, Babies Hospital, Extension 3223.

# ANNUAL FASHION SHOW

The annual luncheon and fashion spectacular, sponsored by The Presbyterian Hospital Women's Auxiliary, was held in the ballroom of the Hotel Pierre on October 21. This annual event benefits the Presbyterian Hospital by the sale of your thrift to the Stuyvesant Square Thrift Shop.

Bonwit Teller presented their Boutique Designer Col-

lection, which drew oohs and ahs from an appreciative audience. The fashions were lovely and reflected the trend back to the casual look which dominates this year's fashion scene.

They ranged from casual sport clothes to the popular "chubby" fur coats to strikingly simple but elegant evening wear.

Not one, but two highlights gave this year's extravaganza a really new look.

With Andrea Fisher, Director of Recruitment, Department of Nursing, as narrator, uniforms identifying student nurses, student practical nurses, graduate nurses (one wearing the "liberated" look of the white pant-suit), and several foreign exchange visitor nurses, modeling the nursing uniforms of their countries, were presented. The foreign countries represented were Japan, Norway and India.

The second delightful highlight was the appearance of the children of several PH doctors and auxiliary members.

These youngsters took their turns on the modeling runway right along with the professional models, looking like pros themselves.

Mrs. George A. Carden, President of the Auxiliary, presented a plaque, expressing the Hospital's appreciation of Bonwit Teller's generosity in presenting these magnificent fashions, to Mrs. Marjorie Downey, representing William M. Fine, President of Bonwit Teller, who could not attend.

Mrs. Carden commented that without the support of institutions like Bonwit Teller, affairs such as this to help the Hospital carry on its charitable endeavors, would be worthless.

There were four lucky door-prize winners, who received two tickets for cocktails and lunch at Giovanni's, a basket of Vendome liquors, a General Electric portable television set

and a beautiful pin from Tiffany's.

An elegant flacon containing Revlon's Ultima Eau de Parfum spray cologne, was given to each guest at the luncheon, courtesy of Charles Revson.

Narration for the Bonwit Boutique Designer Collection was done by Mrs. Downey, who is public relations director at

Bonwit's and assistant to the President.

The "model" children were: Adrienne Buda, daughter of Dr. & Mrs. Joseph Buda; Tracey and Colleen Cooper, daughters of Dr. & Mrs. William C. Cooper; Linda and Laura L'Esperance, daughters of Dr. & Mrs. Francis L'Esperance; Karen and Ashley Lovejoy, daughters of Dr. & Mrs. William Lovejoy, Jr.; Jeffrey Susman, son of Mr. & Mrs. Truman Susman; Agnes Tyson, daughter of Dr. & Mrs. Cornelius J. Tyson, Jr.; Lee White, daughter of Mrs. Richard L. White and Wendy Weil, daughter of Dr. & Mrs. Richard Weil, III.

Mrs. David L. Andrews was chairman of the benefit committee, assisted by Mrs. Truman Susman, Mrs. Cornelius J. Tyson, Jr., Mrs. Robert M. Ellsworth and Mrs. Richard Weil, III.

The Auxiliary cooperates in supporting the student nurses scholarship fund, the patient's library, the volunteer service, the emergency nursing fund, social service needs, occupational and recreational therapy, and patient and staff needs, including the purchase of television sets for the wards, special recreational items such as talking books for the blind, and homemaker and camping needs for clinic families when illness or accident strikes.

Guests at the luncheon attended only if they contributed \$25 or more of thrift to the Stuyvesant Square Thrift Shop.

There is an urgent need for thrift all year round. Your contribution, marked for The Presbyterian Hospital, may be brought to the Thrift Shop, 1430 Third Avenue (81st Street). If you cannot bring or send your contribution, a pick-up service is available by telephoning SW-5-3638.

And remember, your receipt is tax-deductible.

## DR. JEROME P. WEBSTER, RENOWNED PLASTIC SURGEON, RECEIVES COLUMBIA UNIVERSITY LIBRARIES' AWARD

Dr. Jerome Pierce Webster, an internationally renowned plastic surgeon, will receive the 1971 award of the Columbia University Libraries at the Fall Meeting of the Friends of the Columbia Libraries on Wednesday, November 3, at Low Library, Columbia University.

During his many years of service at the Columbia-Presbyterian Medical Center, Dr. Webster has assembled and maintained the Jerome P. Webster Library of Plastic Surgery, a truly distinguished collection. He will be presented the Citation for Distinguished Service for his role in developing this unique resource for scholarly research at Columbia. The honor will be conferred upon him by Warren J. Haas, Director of Libraries of Columbia University. The principal address at the meeting will be made by the lawyer and author Louis S. Auchincloss. Dr. Morris H. Saffron, Chairman of the Friends, will preside.

Dr. Webster became a member of the surgical staff at the Columbia-Presbyterian Medical Center in 1928. Six years earlier, in the year 1922, a friendly and grateful Chinese government had conferred upon him the Order of the Plentiful Harvest, an honor that was surely prophetic, in view of his half a century of achievements which followed. It has been his role to perform tirelessly as a surgeon, consultant, lecturer, counselor and friend to countless colleagues, and teacher of some 44 plastic surgeons of the United States and other countries, many of whom are now training other plastic surgeons. Development of plastic surgery has been his life. He started the first continuing plastic surgery training program in the world and directed it for more than 25 years.

Dr. Webster was born in Ashland, New Hampshire, on August 2, 1888. After receiving a Bachelor of Arts degree from Trinity College in Hartford, Connecticut in 1910, he entered Johns Hopkins Medical School and received the degree of Doctor of Medicine in 1914. He remained at Johns Hopkins as an intern and resident in surgery until 1916.

While America was being drawn closer to the war in Europe, he went to Berlin as a Special Assistant to the American Ambassador to Germany to inspect the prisoner-of-war camps, for which service he was awarded a silver plate by the British Government. After the United States entered the war, he joined the Medical Corps of the U. S. Army as a First Lieutenant. He served in

France with the first American troops trained by the British on the Ypres-Lens sector, with the French and the A.E.F. on the Toul, Chateau-Thierry,

Dr. Jerome P. Webster

and St. Mihiel sectors. He was with the A.E.F. throughout the Argonne offensive. In June, 1918, he received the French Croix de Guerre with star, with a citation for bravery on the Toul sector.

After World War I he returned to the Johns Hopkins surgical staff. In 1921 he began his long association with the people of China by going to Peking, as the first resident in surgery at the opening of the Peking Union Medical College and there he became Associate Professor of Surgery. He made an extensive tour of the Orient, Near East, and Europe, visited many clinics and in particular observed the work of Sir Harold Gillies in London.

In 1928, Dr. Allen O. Whipple, Director of Surgery, asked Dr. Webster to create the Division of Plastic Surgery at the newly opened Columbia-Presbyterian Medical Center. There he became Chief of Plastic Surgery in Vanderbilt Clinic, Professor of Clinical Surgery in Columbia University's College of Physicians and Surgeons, and Attending Surgeon on the Presbyterian Hospital's Surgical Service.

In the early part of World War II, four 12-week courses in plastic and maxillo-facial surgery were given at Columbia under his direction, with the aid of a corps of about 75 instructors, to more than 80 Army medical and dental officers. At the request of the Surgeon General of the U. S. Army, he inspected, with Dr. Robert H. Ivy, the nine plastic surgery centers in the Army General Hospitals in the United States.

In the year 1954 he became Consultant in Plastic Surgery in the Presbyterian Hospital and Emeritus Professor of Clinical Surgery in Columbia University.

Many are Dr. Webster's memberships in professional societies, his participation on

boards, his offices held and honors received. From active service and high offices in the various plastic surgery societies, his list of memberships extends outward to China, Great Britain, Italy, and several countries in Latin America.

In the realm of publications and books, he has held such offices in the New York Academy of Medicine as Chairman of the Editorial Board for 20 years; Secretary and Chairman of the Section on Historical and Cultural Medicine; Vice President, President, and Director of the Friends of the Rare Book Room. He was a member of the Council of the Grolier Club; he is a member of the Century Association; a Fellow in the Pierpont Morgan Library; and a Member of the Friends of the Columbia Libraries. He is President of the Watkinson Library Trustees at Trinity College, Hartford, Connecticut. With Mrs. Martha Teach Gnudi as co-author, their book, *The Life and Times of Gaspare Tagliacozzi, Surgeon of Bologna, 1545-1599*, was awarded the William H. Welch medal of the American Association of the History of Medicine, and has been recognized as a classic in medical biography.

Dr. Webster was asked recently at what point did his growing collection of books and other library items officially become the Jerome P. Webster Library of Plastic Surgery? In answer, he produced two letters, one which he wrote on April 27, 1938, to the late Dr. Nicholas Murray Butler, then President of Columbia University, and the other, Dr. Butler's reply, dated May 19, 1938. Through this exchange the library was given to the Columbia Libraries, to be made readily available for the entire Medical Center and especially for residents in plastic surgery, with the provision that it be preserved as a library unit.

The library now contains over 5,000 books, including many rare first editions, and 29,000 reprints, plus many thousands of photographs of patients treated at the Columbia-Presbyterian Medical Center for over 40 years. These photographs form an integral part of the library.

This is the third year of the Columbia University Libraries' awards. Two years ago the citation was conferred upon Professor Allan Nevins; last year upon Alfred C. Berol. This year a Committee of the Council of the Friends recommended that Dr. Webster be the 1971 recipient. The Columbia Trustees at their October meeting acted in accordance with the recommendation.

## Words Spoken at the John M. Baldwin, Jr. Memorial

At the Memorial Service for Dr. John M. Baldwin, Jr. on September 30 at the Pauline A. Hartford Memorial Chapel, Dr. Henry Aranow, Jr., presented the following address.

"The secret of the care of the patient is in caring for the patient." John Baldwin, in whose honor we are gathered here today, long before he entered medical school was privy to that secret, published by Francis Peabody. The universality and intensity with which John put it into force are among the reasons our sense of loss is so profound.

John was born in Norfolk, Virginia, on November 18, 1914. He attended Granby School in that city before entering William & Mary College. In 1935 he came North to enter the College of Physicians and Surgeons, and for most of the next 36 years the Columbia-Presbyterian Medical Center was the focus of his professional life. Even before his official graduation from P&S, John started as an intern on the Medical Service of the Presbyterian Hospital. At the conclusion of his internship he broadened his knowledge of disease by an assistantship in Pathology, and this was followed by a year as an assistant resident in Cardiology.

During the war years Trans World Airlines was fortunate enough to enlist him as a flight surgeon, and he went on to become director of TWA's international division. His interest in, and mastery of, aviation medicine continued throughout his life; he was frequently consulted by TWA and other airlines on matters related to the health of flying personnel.

In 1947, John returned to the Medical Center to assume an ever-growing role in patient care and in teaching. His wide concern for the well-being of the people with whom he worked, and his administrative skills, led him into the organization of medical care for the hospital personnel. As director of this enterprise he supervised a great increase in its scope.

Dr. Baldwin was a much-sought-after consultant by many members of the hospital's varied services. Although he had special skills in cardiology, he was never thought of as a specialist but, rather, as a superbly capable and well-rounded internist with a specialist's knowledge of cardiology. His wisdom and clinical judgment were of great value in the planning and in the operation of the Cardiac Intensive Care Unit.

These substantial accomplishments do not explain, however, the deep hold that John Baldwin had on all of our hearts. This afternoon it is my impossible task to try to put into words some of the in-

enarrable qualities which do. Sketching the roles I shared in his life may bring into relief some of the facets of this extraordinary being.

We started as fellow medical students. Those were the depression years, and John earned extra money by working in the P&S bookstore under George Eliot. The Spanish Civil War was then in progress, and we were all exposed to the burning concerns of those who saw in it a rehearsal for the clash which culminated in World War II. John was free from the parochialisms and prejudices which one often acquires in an education confined to one sector of the country. He had friends from all groups; among them was the late Dr. Stephen S. Hudack, of

Dr. John M. Baldwin, Jr.

our Fracture Service, who was providing medical help to the beleaguered Loyalists.

When we interned together on the Medical Service, the Presbyterian Hospital House Staff was still small enough to be a club. Only a minority were married, so that most of us ate, drank, and played cards and billiards together. John was a witty and gay companion, and an enthusiastic although indifferently skilled billiard player. His and my liking for billiards persisted through the years, and we continued to play at his home after he acquired the House Staff billiard table when the second floor was made over.

At John's wedding to Elizabeth Johnson, in 1941, I was almost overwhelmed to learn at first-hand the true meaning of Southern hospitality, and to see the well-springs of many of his qualities. The three sons of that marriage, John, Kenyon, and Robert, grew to enjoy a relationship with their father which enabled him to share with them the realities of his final illness. Their admirable bearing and conduct during this stressful period show that many of the strengths of John's character survive in them. Those of you who have been fortunate enough to visit the Baldwins at home know what an oasis of warmth and elegance his wife, Detty, provided there.

Our professional association began shortly after John's re-

turn from his wartime service with TWA. During the succeeding quarter of a century we covered one another, and took care of one another's patients when one of us was on vacation, attending a meeting, or ill. No single conflict ever marred our relationship. Returning after a period away I often thought I detected a tinge of regret in the attitude of my patients when I resumed their care, so charmed and impressed were they by his attentions. Our arrangement made it difficult for us both to be away together, but we did manage some joint trips to Europe and Africa. There, as everywhere, John's charm opened all doors. Good traveling companions are more difficult to find than good wives; John was outstanding. I was with him in Liberia when President Tubman presented him with the Order of African Redemption.

The role I share with so many of you here today was that of being John's patient. I know at first-hand the warm thoughtfulness, the instinctive awareness of my needs, and the shared concern for my worries that marked his relationship with all of his patients. Long before Dr. Weed formalized the organization of problem lists, John always had a complete mental register of all of his patient's problems, and saw to it that none was neglected. I, too, have experienced the sense of lightening that lifted his patients when they imparted a symptom or an anxiety to him, and knew that he would deal with it. I feel, with you, an emptiness which is almost physical, knowing that he is no longer here to lean on.

I have not yet mentioned the role of friend, but each of you who has been his patient knows that he was also your friend. It is the loss of this irreplaceable friend which causes most of our grief.

Finally, he was my patient. Many of you have spoken to me, during these last trying months, of the heartaches and difficulties of caring for someone one loves, when he is suffering from an incurable illness for which medicine has little to offer. These were more than overbalanced by the privilege of sharing with him and his family the unflinching courage, the undiminished gallantry, and the uncomplaining fortitude with which he bore his illness and faced his death.

In closing I feel that I may quote from Shakespeare and say,

His life was gentle, and the elements

So mix'd in him that Nature might stand up

And say to all the world, "This was a man!"

## Thirteen New Titles

The Milbank Library announces the recent acquisition of the following new books: *Economics, Peace and Laughter*, by John Kenneth Galbraith; *The Female Eunuch*, by Germaine Greer; *The Underground Man*, by Ross Macdonald; *Kent State*, by James A. Michener; *A Late Education*, by Alan Moorehead; *The European Discovery of America*, by Samuel Eliot Morison; *Bound to Violence*, by Yambo Oulougoum; *The Greening of America*, by Charles A. Reich; *Boss*, by Mike Royko; *The Story of a Humble Christian*, by Ignazio Silone; *Angle of Repose*, by Wallace Stegner; *Passions of the Mind*, by Irving Stone; *QB VII*, by Leon Uris.

## Anesthesiologists Speak At the Atlanta Meeting

Ten Columbia-Presbyterian staff members are the authors of scientific papers delivered at this year's meeting of the American Society of Anesthesiologists in Atlanta, Georgia, from October 16 to October 20. They are members of the Department of Anesthesiology, P&S: Dr. S. H. Ngai, Professor and Department Chairman; Drs. Richard W. Patterson and Stuart F. Sullivan, Associate Professors; Drs. Robert A. Baratz and Lubos Triner, Assistant Professors; and Dr. David S. Skene, Dr. Yvonne Vulliamoz, and Mariagnes Verosky, Research Associates. The remaining two Medical Center contributors are Drs. Hoshang J. Khambatta and Dr. Joseph Yang, Visiting Fellows, PH.

Also at the meeting, Dr. Ernest Salanitro, Associate Professor of Clinical Anesthesiology, co-chaired the intra-operative management section of the pediatrics and neonatology workshop while Drs. Ronald Katz, Professor, and Ralph Epstein, Assistant Professor, lectured in the two-day refresher course program conducted by the Society.

## P.H. MAIL ROOM NEEDS YOUR HELP FOR CHRISTMAS

Medical Center personnel are reminded that Christmas cards should not be sent to co-workers through the Hospital internal mail system. Outgoing Christmas cards should be deposited in U.S. Post Office receiving boxes and sent to co-workers at their home address. It is necessary to make this request since large Christmas card mailings going through the Hospital Mail Room would inevitably delay the processing of regular Hospital business mail.

J. P. Kiernan  
Superintendent of Services

## Computer Course Announcement

Two short computer courses will once again be offered to all Columbia-Presbyterian Medical Center personnel.

"Introduction to Medical Computing" will be given on November 15, 16 and 17 from 4:00 to 5:00 p.m. Classes will be held in the Armory, 168th Street entrance, Room 1. No previous knowledge of computing is necessary. Students and members of the CPMC staff must have the permission of their supervisors or department chairmen.

"Introduction to Programming" will be given on November 30, December 2, 3 and 7 from 3:30 to 4:30. These classes will also be held in the Armory, Room 1.

"Introduction to Programming" is offered to the Columbia-Presbyterian personnel who have completed either the "Introduction to Medical Computing" course or its equivalent. This course provides a basic understanding of how a computer is made to do work. It is a prerequisite for subsequent computer language courses.

Homework will be assigned to achieve sufficient ability to run one simple program.

Registration cards may be obtained at PH 4-33 and should be returned by November 12.

William A. Bauman, M.D.,  
Director,  
Medical Data Processing,  
Tel. 579-2077.

## In Memoriam

Dr. Franklin McCue Hanger

Dr. Franklin McCue Hanger died in his sleep at his home in Staunton, Virginia, on October 10. He was 77 years old.

Receiving his M.D. from Johns Hopkins, Dr. Hanger spent his career at Presbyterian Hospital and at Columbia's College of Physicians and Surgeons, rising to the ranks of Attending Physician and Professor of Medicine.

At the time of his death he was a Consultant in Medicine, PH, and Professor Emeritus of Medicine, P&S. In 1962-63 he was President of the American College of Physicians.

Dr. Hanger is survived by his widow, the former Harriet Echols Ewing, and a daughter, Harriet.

Interment was in Staunton.

## Memorial Service

A memorial service will be held in the Pauline A. Hartford Memorial Chapel for Katherine Malkin Rubin, P&S Alumni Office secretary, on Thursday, November 18, at 3:00 p.m. Rabbi Meyer Machlis will officiate.

Miss Rubin, who was 26 years old, died in September.

## New 20-Bed Unit, Harkness Pavilion

On October 19 the doors of a new 20-bed in-patient unit on Harkness Pavilion first floor were opened to receive its first admissions.

Pavilion.

During construction of this attractive, thoroughly modern in-patient facility, Abe Weinhaus, superintendent of con-

This busy scene at the nurses' station on HP I on its first day graphically illustrates the ever increasing need for expanded inpatient facilities. Joyce Vogt, head nurse on the unit, is shown at extreme right, speaking on the telephone.

According to George Lumley, supervisor of project planning, the creation of this new unit was made possible by the removal of the doctors' private practice offices to Atchley

struction, reported that special care was exercised so that there would be no disturbance to the Harkness Pavilion main lobby and office areas on the floor below.

## Speaking of the Children's Zoo . . .

(Continued from October)

**BIG AL, AS YOU MAY REMEMBER** from last month's *Stethoscope*, is the second year dental student who, along with wife, Robin, and colleague Alfred Lanfranchi (Little Al), first conceived the idea of a zoo several months ago.

In less time than it takes to shake a monkey's tail, a 6' square frame was built in the center of the zoo to hold two fish tanks and a monkey cage above it. Two air conditioners, one broken and repaired by the Committee, were donated by another staff member.

The plan is to erect two-by-four struts from each corner of the ceiling, leading down to the frame, which will be covered with thatching to make the jungle setting look real.

Big Al described another special touch. "In one corner we will have a little water spilling down into a pond, all enclosed to hold aquatic animals. Jungle music will be taped in for authentic atmosphere. Elsa the lion will probably be our star attraction."

At this writing, a six inch alligator, a boa constrictor, a squirrel and a monkey have been acquired. "If Elsa gets too difficult to handle as she grows older, we'll borrow other cubs from zoos on a lend-lease basis."

Big Al concluded by saying, "We've got the manpower, the location, the tools, even volunteers, plus the encouragement of many wonderful people. All we need now is the money."

To date the money has been slow in coming. Will you help these munificent young people carry on with their mission and truly make this a "mission possible?"

Donations may be sent either to the Office of Public Inter-

est, Presbyterian Hospital, 622 West 168th Street, New York, N. Y. 10032, or to the Institute of Comparative Medicine, 630 West 168th Street, New York, N. Y. 10032. (Please make checks payable to Department of Comparative Medicine, Children's Zoo Committee.)

### ANNOUNCEMENT: MACHINE SHOP SERVICES

The services of a fully equipped machine shop and an experienced machinist are now available on a time and materials basis to the Medical Center.

The shop, located on the 11th floor of P&S, Room 446, will also give expert assistance in the design of specialized scientific equipment. Mr. Sander van Peski, machinist, can be reached at extension 3703.

## Faculty Appointments

The Department of Nursing, Faculty of Medicine, C.U., announces the appointment of the following faculty members:

In Public Health—Mrs. Charmaine Fitzig, Assistant Professor; Mrs. Smriti Pawar, Associate in Nursing; Mrs. Harriet Nussbaum, Part-time Instructor; Harriet Fields, Instructor in Nursing; Muriel Kneeshaw, Associate in Nursing.

In Obstetrics and Gynecology—Marjorie Bredice, Associate in Nursing.

In Pediatrics—Mrs. Ann Wharton, Instructor; Mrs. Ann McMath, Instructor (Affiliate Program).

In Psychiatric Nursing—Mrs. Keville Frederickson.

In Medical/Surgical Nursing—Etta Brenner, Instructor; Mrs. Mary Ann Brewer, Associate in Nursing; Mrs. Penny Klatell, Associate in Nursing; Margaret Kelly, Associate in Nursing and Mrs. Lois Lorenz, Instructor.

## Names on Dean's List

The following members of the class of 1972, the Department of Nursing, Faculty of Medicine, C.U., have been placed on the Dean's List:

Group A: Claudia Bennett, Inge Bickel, Ruthe Boyea, Barbara Boyinton, Lucy Conan, Carol Eggleston, Jeanne Hovis, Susan Krienke, Nora McCarthy, Rosemary Meisner, Judith Murray, Paula Pollack, Penny Redman and Lillian Tweedy.

Group B: Gail Bain, Mary Barber, Judith Begelspiker, Barbara Bennett, Marguerite Brown, Susan Carrington, Susan Caulo, Mrs. Kimberly Chester, Jo Ann Cronk, Debra Feldman, Margaret Ferri, Sara Furman, Margaret Gioia, Ann Glosser, Margaret Grob, Mary Heroy, Patricia Hill, Mrs. Diann Holvig, Christine Howley, Janet Johnsen, Deborah Koop, Ray Lavandero, Catherine Litteer, Ann McKenney, Marilyn Majors, JoAnne Messorre, Mary Moyer, Carol Navin, Carol Poehlmann, Ruth Prokop, Catherine Radix, Linda Russo, Nancy Scannell, Shirley Swieringa, Elaine Thompson, Judith White, Celeste Yanni and Priscilla Zodiates.

## Present Papers

On October 13, Patricia Buchholz, Assistant Professor of Nursing, CU, and Shirlee Stokes, Assistant Professor of Nursing (on leave of absence), CU, presented "The Effect of Nurse Teaching and Patient Learning" to the Sigma Theta Tau-Upsilon Chapter of New York University.

This is the third time that the Misses Buchholz and Stokes presented material pertinent to their study project

# News of Nursing

Left, Cathy Litteer, '72, and Ray Lavandero, '72, look over issues of *Alumnae Nursing Magazine* to become acquainted with on-going activities.

in the evaluation of nurses teaching patients with congestive heart failure.

Both nurses are pursuing doctoral studies on a part-time and full-time basis, respectively.

## Student Election

In what Ray Lavandero '72, President of the Undergraduate Student Association of Columbia's School of Nursing, described as an "effort to get the nursing students involved in activities outside of Maxwell Hall by offering a program of activities and opportunities to help them develop as nurse-persons," the Association announced the election of the following officers to serve a one-year term:

Cathy Litteer '72, Chairman,

Communications Committee; Katie Burke '72, Chairman, Social Activities Committee; Gail Bain '72, Chairman, Human Relations Committee; Peggy Ferri and Kathy Wall '72, Co-chairmen, Annual Activities Committee; Cathy Radiz '72, Chairman, Honor Board; Sister Maureen d'Auria '72, Student Coordinating Committee and Margaret Grob '72, Chairman, Student Life Committee.

Secretary, Treasurer and class representatives will be elected from the incoming junior class.

Interested? For more information call Mr. Lavandero or Miss Litteer, Extension 1931.

## Orthopaedic Course on Scoliosis, Dec. 2-4

A novel technique for the correction of scoliosis will be presented by its developer here next month.

Professor Yves Cotrel, of Berck-Plage, France, will be a featured lecturer at the Third Annual Postgraduate Course on the Management and Care of the Scoliosis Patient, sponsored by the New York Orthopaedic Hospital.

Scoliosis is a disfiguring condition of the back and is typically manifested by a gradually increasing sideways curve and a compensating curve of the spine. The result is an S-shaped backbone accompanied by an unsightly rib hump. The condition occurs usually in children—mostly adolescent girls—and can lead to severe disability.

Called the "E.D.F." technique, Professor Cotrel's method of straightening the back uses elongation-derotation-flexion to minimize the rib hump. The technique is employed together with surgical fusion of the spine to keep it straight.

While "EDF" will be the subject of two lectures by the French orthopedic surgeon and of two showings of a movie, other techniques of scoliosis correction will not be neglected by any means in the three-day course.

The course, organized and directed by Dr. Hugo A. Keim, has again drawn a distinguished faculty of speakers, including Drs. Louis Goldstein of Rochester, Paul Harrington of Houston, Dean Mac Ewen of Wilmington; and John Moe of Minneapolis. Professor J. I. P. James, the international scoliosis authority from Edinburgh, Scotland, is scheduled to give two lectures. Dr. Keim, who will present the introductory lecture, is an Assistant Professor of Clinical Orthopedic Surgery, P&S, and an Assistant Orthopedic Surgeon, PH. He is head of the Scoliosis Clinics at the Medical Center.

The course will take place in the P&S Alumni Auditorium from 8 a.m. to 6 p.m. on Thursday and Friday, December 2 and 3, and from 9 a.m. to noon on Saturday. Practicing physicians, residents, physiotherapists and nurses interested in joining an anticipated audience of 200 orthopedic surgeons from all parts of the country may write to Dr. Melvin D. Yahr, Associate Dean, College of Physicians and Surgeons, 630 West 168th Street, NYC, for application blanks. The fees are \$150 for practicing physicians and \$75 for residents, physiotherapists and nurses.

### • ENGAGEMENTS

Lucille Savarese, staff nurse, N.I. 7, is engaged to Raymond Pecci.

Anneke Knoppers is engaged to R. Craig Woodward, P&S '72. Karen J. Thompson is engaged to Jack M. Greene, P&S medical student. Miss Thompson's father, Dr. Errol A. Thompson, is Associate Professor of Otolaryngology, P&S (at Harlem Hospital Center). A December wedding is planned.

### • MARRIAGES

Sarah Fulton, Social Service, BH, was married to John Delano Harding on August 28. Mr. Harding is a doctoral student in Biochemistry at Columbia University. The bride's father, a minister, performed the ceremony at the First Moravian Church, New York City.

Dr. Maryann J. Colenda, Intern, Department of Pediatrics, BH, was married to Dr. Ralph E. Ricciardi Jr., in Fort Lee, New Jersey, in September.

### • NEW ARRIVALS

Mrs. Lourdes Semiglia, technician, Clinical Pathology, on leave of absence, and her husband, Marco, welcomed their first child, a daughter, Denise, on September 21.

Dr. Darrell L. Southern, Intern, Pediatric Service, BH, and his wife welcomed their first child, a son, Christopher William, on September 27 at Sloane Hospital.

### • WELCOME TO:

Al Costello, recently appointed Assistant Purchasing Agent, Purchasing Department. Mr. Costello was formerly president of the Hospital Equipment Corporation in East Orange, N. J.

Al Costello

Celia Marquez

Shiony Orillo

Yvonne Hinds, Sue Lin, Shiony Orillo, Janet Rosenbluth and Celia Marquez, technologists, and Mrs. Tess Turner, diener, Clinical Pathology. Mrs. Turner was formerly with Housekeeping Department.

Brenda Johnson, radiotherapy technologist, and Mrs. Lucille Haigler, secretary, new members of Radiotherapy staff. Miss Johnson is a recent graduate of the Columbia-Presbyterian School of Radiologic Technology.

### • FAREWELL TO:

Mrs. Ellen Collins, diener, Clinical Pathology, who chose early retirement. Mrs. Collins has been associated with the Medical Center since 1945.

Mrs. Pat Monahan, technologist, Clinical Pathology, who recently resigned to become a full-time housewife. She had been with the laboratory since 1956.

### • CONGRATULATIONS TO:

Rita Downing, R.N., radiotherapy technologist, who has recently been promoted to Assistant Supervisor, Department of Radiotherapy.

### • DOUBLE CONGRATULATIONS TO:

Janet Molluzzo, R.N., N.I. 8, who is engaged to Walter Richie. Miss Molluzzo was also recently promoted from staff nurse to assistant head nurse.

### • NOTES OF INTEREST

For Mrs. Elizabeth Gutierrez, technologist, Microbiology Laboratory, E.S.H. Eye Institute, a vacation in Spain turned out to be a good will tour for the Institute.

While vacationing in Torremolinos, Malaga (Costa del Sol), she was invited to attend the 49th Congreso de la Sociedad

Espanola de Oftalmologia (Society of Spanish Ophthalmologists) by the Society's secretary, Dr. Don Antonio Alcala-Lopez. She was the only technologist among approximately 650 ophthalmologists from Spain, Portugal, South America, Philippines and Hawaii.

DR. DANIEL C. BAKER, JR., Professor and Chairman, Department of Otolaryngology, gave the Wherry Memorial Lecture at the American Academy of Ophthalmology and Otolaryngology in Las Vegas, Nevada, September 21. His subject was *Steroid Therapy in Otolaryngology*.

DR. HAROLD F. SPALTER, Assistant Ophthalmologist, PH, and Associate in Ophthalmology, P&S, presented a paper entitled *Diabetic Maculopathy* at the first Jerusalem Seminar for the Prevention of Blindness, in Israel, August 25-27.

At the August meeting of the International Cardiovascular Society meeting in Moscow, DR. JAMES R. MALM, Attending Surgeon, PH, and Professor of Clinical Surgery, P&S, spoke on *Ventricular Electrophysiology: An Aid in Surgery for the Complications of Coronary Artery Disease*. Also at this meeting, DR. JOHN M. KINNEY, Attending Surgeon, PH, and Professor of Surgery, P&S, lectured on *Monitoring the Critically Ill Patient—A Biochemical as well as Physiologic Challenge*.

DR. ARTHUR B. VOORHEES, JR., Associate Attending Surgeon, PH, and Professor of Clinical Surgery, P&S, recently attended the XII Brazilian and Inter-American Congress of Surgery, School of Medicine and Surgery in Rio de Janeiro, where he presented papers on *Management of Portal Hypertension and Recent Advances in the Surgical Treatment of Cirrhosis and Portal Hypertension*.

Dr. Voorhees was elected to Honorary Fellowship in the Academy of Military Medicine, Rio de Janeiro.

The third edition of *The Thyroid*, a textbook edited by DR. SIDNEY C. WERNER, Professor of Medicine, P&S, and Attending Physician, PH, was published in July by Harper & Row, New York City. Co-editor of the book is Dr. Sidney H. Ingbar, William B. Castle Professor of Medicine at Harvard Medical School in Boston.

DR. GUY D. POTTER, Associate Attending Radiologist, PH, and Associate Professor of Radiology, P&S, presented a refresher course on *Sialography* at the 72nd annual meeting of the American Roentgen Ray Society held in Boston, September 28-October 1.

The September issue of the *Medical Clinics of North America* consisted of a symposium on *Intensive Care*, edited by DR. JAMES S. TODD, Instructor in Surgery, P&S, and Assistant Surgeon, V.C. Other Presbyterian Hospital contributors to the issue were: DR. J. THOMAS BIGGER, JR., JAMES CORRELL, CHARLES W. FINDLAY, JR., FRANK E. GUMP, GERARD KAISER, DONALD S. KORNFIELD, FERDINAND MCALLISTER, ALFRED MARKOWITZ and JOHN B. PRICE, JR.

Dr. Todd is president of the Bergen County Medical Society and has recently been elected a Trustee of the Medical Society of New Jersey.

DR. STUART W. TANENBAUM, Professor of Microbiology, P&S, is on leave of absence for one year beginning September 1. During that year he will serve as Program Director, Molecular Biology Section of the National Science Foundation.

At the 162nd meeting of the American Chemical Society in Washington, D. C., in September, Dr. Tanenbaum presented a paper on *Isolation and Biological Properties of Cytochalasin D*.

DR. REINHOLD BENESCH, Professor of Biochemistry, P&S, gave the first lecture in a series entitled *Scientific Basis of Medicine* before the Dalhousie University, Halifax, Nova Scotia, in October.

In October, DR. THOMAS V. SANTULLI, Attending Surgeon, PH, Chief of Pediatric Surgical Service, BH, and Professor of Surgery, P&S, was visiting professor at the Department of Surgery, University of Cincinnati, where he spoke on *Necrotizing Enterocolitis in the Newborn*. He also addressed the Cincinnati Surgical Society, speaking on *Congenital Atresia of the Intestine*.

DR. ORLANDO J. MILLER, Attending Obstetrician and Gynecologist, PH, Professor of Obstetrics & Gynecology and of Human Genetics and Development, P&S, attended the Fourth International Congress of Human Genetics in Paris, in September. Dr. Miller spoke on *Implications of Quinacrine-Fluorescence Analysis for Chromosome Mapping and on Assignment of the Human Thymidine Kinase Gene Locus to Chromosome-17 by Identification of its Distinctive Quinacrine-Fluorescence in Man/Mouse Somatic Hybrid Cells*.

At the same meeting DR. DOROTHY A. MILLER, Research Associate, Department of Human Genetics and Development, P&S, and wife of Dr. O. J. Miller, presented a paper entitled *Common Markers in Hela Cell Lines and D98 Revealed by Quinacrine-Fluorescence*.

The Doctors Miller also participated in the Fourth International Conference on Standardization of Chromosome Nomenclature in Paris, September 2-4.

Dr. Orlando J. Miller

Dr. John D. Rainer

DR. JOHN D. RAINER, Associate Professor of Clinical Psychiatry, Associate Professor of Human Genetics, P&S, and Associate Attending Psychiatrist, PH, also attended the Paris congress and spoke on *Chronological Parameters, Twin Studies and Mental Disorders*.

While abroad, Dr. Rainer visited the Department of Medical Genetics of the Institute of Psychiatry of the Academy of Medical Sciences in Moscow.

At the same Paris congress, DR. L. ERLMEYER-KIMLING, Assistant Professor of Psychiatry, P&S, and Assistant Attending Psychiatrist, PH, was co-chairman of the session on *Behavior Genetics*, while DR. MIHALY BARTALOS, Assistant Professor of Human Genetics and Development, P&S, presented a paper with Dr. Rainer on a technique of staining non-DNA components of chromosomes, and also spoke on *Aspects of the Genetics of Neoplastic Diseases*.

DR. GERARD A. KAISER, Associate Attending Surgeon, PH, and Associate Professor of Surgery, P&S, has accepted a position at the University of Miami School of Medicine as Professor of Surgery and Chief of the Division of Thoracic and Cardiovascular Surgery.

DR. J. LAWRENCE POOL, Professor and Chairman, Neurological Surgery, lectured on *Current Treatment of Paget's Disease of the Spine* at the annual meeting of the American Academy of Neurological Surgery, Lake Tahoe, California, September 29.

VOLUME XXVI NUMBER 12

DECEMBER, 1971

## Merry Christmas

### C. P. M. C.'s Forty Years Of Continuous Research Is Now Helping Victims Of High Blood Pressure

On the way to a concert in Stockholm, Sweden some six years ago, Mrs. Mildred Back Kronish pushed her friend off the sidewalk.

"I'm awfully sorry," Mrs. Kronish said.

"What's happening?" her friend wanted to know. "You've been pushing me for the last half hour as we're walking."

"I'm not always this dizzy," Mrs. Kronish explained, "but today I feel terrible."

This episode was to mark the beginning of the end of a difficult chapter in the life of Mrs. Kronish, punctuated by spells of dizziness and bouts with side effects of pills she had to take for the high blood pressure she had suffered since she was a girl of sixteen.

In another part of the world a few years later, Susan Lynn Shackelford of San Antonio, Texas, was about to have her

tonsils removed at four years of age. After her preoperative workup, a doctor told Mr. and Mrs. I. J. Shackelford that Susan had high blood pressure. There was a note of worry and concern in his voice. Susan's tonsillectomy was canceled, and she was transferred to another section of the hospital for a more thorough workup. An operation was decided upon, and the surgeon removed an overgrowth of fibrous tissue that was pressing on Susan's major kidney artery.

The paths of Susan and Mrs. Kronish have converged on our Medical Center, and appropriately so, for centered on Dr. John H. Laragh, a major effort is going on here to study hypertension and to control it.

A national health problem of gigantic proportions, high blood pressure affects more than 25 million Americans. It is a condition of complex origins and of many types, varying in severity from individual to individual. In most types of untreated hypertension, the conditions that result in high blood pressure also lead to arteriosclerosis, heart and blood vessel disease, heart attacks and strokes. Thanks to work done at Columbia-Presbyterian, these types are now being identified and regarded as separate diseases. Left untreated, they cut life expectancy or lead to severe disabilities. They are tragic—to the hypertensive's family and to the nation—because they occur at a time when his job experience and knowledge are just beginning to bear fruit—in the fifth or sixth decades of his life. Thus high blood pres-

Gathered in their living room, which suddenly seems smaller as the quintuplets come in, Mr. and Mrs. William Kienast and the "crew" send their warmest Yuletide greetings to the Medical Center community, and their sincerest wishes for peace and health for everyone in the coming year. Testing their attention span in this exclusive Stethoscope photo are,

from left, Abigail, Gordon, Meg, Ted, John, Sara, and Amy. The quintuplets—girls in white blouses, boys in striped shirts—were born at the Presbyterian Hospital on February 24, 1970, and have been in the national spotlight since. They are five alert and bright children, and there will be much joy indeed at the Kienasts' Christmas tree this year.

sure saps the nation of the contributions of its citizens at a time when they are reaching their most productive years.

High blood pressure is a major factor in morbidity and mortality. Thus it is by far the major "risk factor" in causing coronary heart disease, which is by far the leading cause of death, accounting for about 50 per cent of all deaths. High blood pressure is also the major predisposing factor in causing strokes, another leading cause of morbidity and mortality.

Recently the National Institutes of Health, recognizing the need to stop the drain of the nation's most valuable resource—its citizens—awarded a \$5,000,000 grant to Dr. Laragh to study hypertension and its relation to diseases of the heart and blood vessels.

#### Work Began 40 Years Ago

It is no accident that the government funding agency entrusted this medical center

with the creation of a hypertension center to generate new research in hypertensive disease. The choice was, rather, a logical one, for the Presbyterian Hospital's specialized care of patients with high blood pressure and the associated laboratory work are an outgrowth of investigations that started here more than 40 years ago, with the very opening of the medical center in Washington Heights.

Then as now, the investigations were centered on the Hospital's metabolism ward, one of the first of its kind. Dr. Dana W. Atchley and Dr. Robert F. Loeb were studying patients with diabetes and Addison's Disease there. Dr. Laragh, who is now an Attending Physician, P.H., and a Professor of Clinical Medicine, P&S, got interested in the metabolism unit's work in 1950, as house officer and a resident in cardiology. Their endeavors to explain congestive heart failure as a kidney disease in

which the kidney retains salt led into studies of high blood pressure, long associated with excessive salt intake.

After the discovery of aldosterone in 1953, Dr. Laragh studied the way this salt-retaining hormone relates to congestive heart failure. Aldosterone is secreted by the adrenals, the two small glands located above the kidneys. Having established that too much aldosterone does indeed contribute to heart failure by causing salt retention, Dr. Laragh sought to isolate the agent that causes adrenal glands to overproduce aldosterone. Because of the known connection between too much salt and hypertension, he suspected that aldosterone is involved in blood pressure elevation. But what was causing overproduction of aldosterone?

#### They Played A Hunch

"Our first real clue," Dr. Laragh recalls, "came when  
*Please turn to next page*

Susan Shackelford shows off a string of beads she fashioned in the Recreational Therapy Department. The seven-year-old girl, whose renal artery stenosis was causing hypertension, had a good response to a special drug and left our Hospital in the middle of November for her home town of San Antonio, to keep an appointment with a huge Texas gobbler.

# Improving The Quality Of Life Of Patients Is What?

*Continued from page one*

we applied the marvelous aldosterone-measuring methods developed by Dr. Stanley Ulick and Dr. Seymour Lieberman. "With this new laboratory tool, we surveyed aldosterone levels in hypertensive patients. Our finding was that only people with malignant hypertension had above-normal aldosterone levels."

Knowing that malignant hypertension has damaged kidneys, Dr. Laragh and his colleagues played a hunch: they analyzed renin, the kidney hormone neglected by physiologists because of its apparent lack of participation in human endocrine processes. It was found that, injected in a patient, angiotensin, the potent blood pressure hormone released by renin, caused the adrenals to produce a huge amount of aldosterone! It did not take long, after this momentous discovery, for our researchers to describe the complete hormonal cycle: renin reacts with a protein in blood plasma to produce angiotensin and angiotensin both raises blood pressure and stimulates the adrenals to produce a lot of aldosterone.

This discovery led to an enormous amount of work in laboratories throughout the world, Dr. Laragh recalls. The fluid retention in heart failure, cirrhosis of the liver and nephrosis were also explained by the oversecretion of renin and consequent aldosterone excess.

The description of the renin-angiotensin-aldosterone mechanism also suggested ways of arresting malignant hypertension and opened the door to the study of essential hypertension, that is, high blood pressure of unknown causation. The discovery made in 1960 became a milestone in endocrinology.

## They Found The Right Channel

Yet, as the stories of many hypertension patients show, the scope and the achievements of Dr. Laragh's group are not widely known to the patient community. Many patients now being treated for high blood pressure at Columbia-Presbyterian heard of Dr. Laragh indirectly or by accident.

A business trip to the West Coast found Susan's father sitting in a Los Angeles hotel

room in April of this year, desperately worried, as he related, over his daughter's blood pressure, "which was creeping back up despite her being on pressure control medications." Mr. Shackelford turned on the hotel TV set and happened to tune in on a science program, featuring Dr. Laragh's lectures on hypertension.

With the name he had heard constantly on his mind, Mr. Shackelford impatiently returned to San Antonio. He obtained Dr. Laragh's address from the county medical society, and he and Mrs. Shackelford decided to ask the New York doctor to accept Susan as a patient. Thus Susan's trip to Columbia-Presbyterian was decided by a turn of the TV dial.

On the other side of the continent, another TV dial was flipped about the same time of year by the brother-in-law of David Horn, a Mineola electronics specialist with a ten-year history of hypertension, culminating in a heart seizure about a year ago. His brother-in-law, having watched Dr. Laragh discuss the disease on television, strongly urged Mr. Horn to seek treatment at

A composer and violinist, Mrs. Mildred Back Kronish now creates and enjoys music without interruptions from hypertension symptoms that used to plague her under previous drug regimens. Her treatment at P.H. was specifically tailored to her type of high blood pressure.

Columbia-Presbyterian. Mr. Horn was evaluated here in July and given a drug regimen to follow. He still makes periodic visits to the Hypertension Center, but he is now back at work in the electronics field.

Mrs. Kronish, who took a chance and attended the Swedish concert anyway, despite her dizzy spell, returned home to Teaneck, New Jersey, where she is the director of vocal music at the Benjamin Franklin Junior High School. She had another dizzy spell there, and the school nurse exclaimed: "My goodness, you carry around so many bottles of medicine and you still feel that way!" This was the last straw that broke Mrs. Kronish's bottles. She spoke about her unhappy state of mind to a friend, who happened to be a neighbor of Dr. Raffaele Lattes, Attending Surgical Pathologist at the Presbyterian Hospital and Professor of Surgical Pathology at Columbia University's College of Physicians and Surgeons. "Call him please; please call him," the friend implored Mrs. Kronish. And call him she did, "in complete desperation," and he put her on the trail of Dr. Laragh.

And so it was that six years ago last month, Mrs. Kronish lined up all her bottles with the 9 different pills she had to take on Dr. Laragh's desk. He decisively swept them aside with his hand. "Take nothing," he said. Many tests followed, and when they were completed Mrs. Kronish was given one bottle—two pills in the morning, two at night.

Today, her blood pressure is controlled by the same pills, without the side effects which used to overwhelm her under previous drug regimens, and she is happily and gratefully looking forward to teaching the young people of Teaneck to appreciate music.

Another method of obtaining the latest treatment for hypertension was tested by Henry Schwartz, President of the Elmhurst Milk and Cream Company, who decided to call the "best teaching hospital" in the area and ask for "the leading specialist in hypertension treatment." Then 31, he had continual headaches and was getting tired and tense at the same time without there being a reason for it.

Mr. Schwartz, whose high blood pressure developed after a period of six years of hard work of building up his Jamaica-based company, naturally wound up in the care of Dr. Laragh.

One of the things that he was impressed with was that Dr. Laragh did not oppose his

## Hypertension Unit Opens For High Pressure Business

Mrs. Marie Eno walked into a small office on the third floor of the Dana Atchley Pavilion at Columbia-Presbyterian Medical Center and made history. The time was five minutes past one o'clock in the afternoon on October 18 and the new Hypertension Center had just opened for business. Mrs. Ita Flood, in charge of the Center's communications, and Mrs. Joan Banes, Administrative Assistant, greeted Mrs. Eno. Later the Washington Heights resident was introduced to Dr. John H. Laragh, principal investigator of a \$5,000,000 Federal grant for the diagnosis and treatment of patients with high blood pressure.

The Columbia-Presbyterian Medical Center was one of 29 universities and hospitals selected by the National Heart and Lung Institute of the National Institutes of Health as sites of the so-called SCOR's, or Specialized Centers of Research, on diseases of the heart, lungs and the circulatory system. The grant to Dr. Laragh was the largest single grant in the program.

The nation's health officials hope that these centers, being organized at a total cost of \$16,400,000, will once and for all conquer the blight of vascular disease and the conditions associated with it.

Under this government support, Dr. Laragh said, any American with high blood pressure, whether it be of unknown origin or caused by kidney or adrenal disease, can

Dr. John H. Laragh, director of the Hypertension Center, greets Mrs. Marie Eno on the historic occasion of the Center's opening.

After having her medical history recorded, Mrs. Eno has a blood sample taken for an analysis of the hypertension causing hormones.

be considered for acceptance in the study program and receive treatment.

The Hypertension Center becomes an integral part of this Medical Center's facilities for the treatment of high blood pressure. This means that patients accepted for study and treatment under the government program may be trans-

ferred to the Presbyterian Hospital's eight-bed metabolism ward for round-the-clock studies and that the special hypertension laboratory in the Black Building of the College of Physicians and Surgeons will perform the sophisticated analyses involved in distinguishing between varieties of high blood pressure.

Henry Schwartz handles many of his business problems on the telephone in his Jamaica, Queens, office.

# Presbyterian Hospital Is Really All About

belief that a hypertensive can help himself and his doctor by taking his own blood pressure regularly. "He was open to new ideas," Mr. Schwartz recalls.

"In my business, I am under pressure much of the time," he reasons, "and strain causes elevation of my blood pressure above what has been normal under drug treatment. By finding out which situations cause my pressure to go up I give myself a choice of avoiding them."

Armed with pills prescribed for him at Columbia-Presbyterian, with a "sphyg" to measure his arterial pressure, and with an increasing knowledge of what in his environment causes it to rise, Mr. Schwartz is coping with his business problems and devoting ample time to his family. He has taken up jogging, to get in better condition for singles tennis, which he plays about eight hours a week.

While Mr. Schwartz is trying to help himself and Dr. Laragh by keeping a daily record of his blood pressure and by relating its changes to his environment, intense clinical and laboratory studies are going on at our medical center to make drug therapy more efficient and to search for the causes of essential hypertension.

## An Enigma Under Attack

The approach through intensive research to the phenomenon of hypertension has led to dramatic cures of many hypertensive diseases. A host of pressure-raising conditions with such menacing names as pheochromocytoma, coarctation of the aorta, Cushing's syndrome, renal artery stenosis and primary aldosteronism, have been conquered with surgical and medical techniques. The dire progression of Cushing's syndrome, for example, a condition due to either adrenal or pituitary disease, is now reversed with surgery, or irradiation, along with associated drug therapy. "Unfortunately," reminds Dr. Laragh, "these conditions all together account for only a small fraction—less than ten per cent—of the nation's hypertensives. Essential hypertension remains an enigma."

Although the basic cause of essential hypertension has not been found, the scientists in the hypertension group at Columbia-Presbyterian take great pleasure in the knowledge that they have learned to suppress it effectively and keep it suppressed. Especially gratifying is the progress that the hypertension group has achieved in the management of malignant hypertension—the galloping form that 20 years ago had a life expectancy of two years after onset. Today many patients with this

condition have a better than 50 per cent chance of living ten years or more after their swiftly rising blood pressure is arrested.

Recently, Pedro Sosa, a 41-year-old New York tailor, admitted to the Presbyterian Hospital in a hypertensive crisis, was "stabilized" in the Hospital's Medical Intensive Care Unit. His accelerating hypertension was stopped with infusions of sodium nitropruside with the Harvard pump—a precision-made device to insure correct dosage. Mr. Sosa has left the intensive care unit for a medical ward, where he is being watched for alterations of his blood pressure under drug therapy. Mr. Sosa has a good chance of making alterations in the garments of his customers a decade from now. The important question in this condition is which anti-hypertensive drugs to choose to stabilize blood pressure, a question that our hypertensive crew has learned to answer to

kidney and adrenal hormones have opened a new dimension in research on hypertension. Some of the more recent findings suggest intriguing possibilities for clinical investigation.

## An Entity Is Broken Up

Using radioactive tracer and immune-reaction techniques, developed with the help of other medical center specialists, the members of the hypertension group have discovered that what was believed to be a single disease entity, essential hypertension, contains, in reality, nine distinct types, with distinct reactions to various drugs.

The nine types are classified according to the level of renin into three groups, and each of the three groups subdivided on the basis of aldosterone levels. Thus group one consists of low-renin patients who have one of three associated patterns of aldosterone secretion: low, normal or high.

Pedro Sosa, whose rapidly progressing hypertension required vigorous treatment, is having his blood pressure reduced in the Presbyterian Hospital's Medical Intensive Care Unit.

the satisfaction of many patients.

The key factor in the improved management of all essential hypertensives—whether it be the accelerated or the mild form—has been laboratory work. Very few laboratories in the world can reliably do the measurements being done here. Says Dr. Laragh: "We have now developed an approach with which we can measure amounts of renin, aldosterone and angiotensin at once in a patient, measure them in relation to the amount of salt he is eating, construct a 'profile' and classify the patient, and also know whether his kidneys and adrenals are functioning well." The angiotensin method, which measures picograms of the hormone in the blood (a ten thousandth of a microgram), was developed with the help of Dr. David J. Cocks of the Department of Medicine.

These refined methods of measuring minute amounts of

The people in group two have normal plasma renin levels; they are subdivided into three categories: those exhibiting low, normal or elevated aldosterone levels.

The hypertensive patients in group three secrete an above-normal amount of renin; they, too, are subdivided on the basis of their aldosterone level.

Using this approach of "biochemical profiling," the Hypertension Center research team has already identified several types of hypertension caused by the hormones of the renin-angiotensin-aldosterone system.

These are: malignant hypertension—a serious condition that is usually fatal if vigorous treatment is not instituted—renal hypertension, and oral contraceptive hypertension, all of which may require different specific medical or surgical treatments.

In addition, the group discovered during the past year that renin is an important risk

Guided away from the brink of invalidism, Mrs. Joan Bartwink now works in her husband's dental office five and a half days a week.

factor in causing strokes and heart attacks, so that hormone measurements can forecast prognosis and modify treatment plans. Conversely, hypertensive patients with "low renin" may not need drug treatment because they seem to be protected from both strokes and heart attacks. "They may be under a self-physiological treatment of nature, which is better than man can devise," Dr. Laragh said. Low-renin patients comprise about 30 per cent of all patients with essential hypertension.

## Many Tests Are Needed

In view of these complex interrelationships, determined by submicroscopic amounts of the hormones circulating in the patient's blood, it may take time and a lot of persistent detective work in the laboratory to determine the subtype of high blood pressure and the appropriate drug for it.

Dorothy Schoonmaker of Scarsdale, New York, for example, had a kidney x-ray taken in one of her early visits to the medical center. Her saliva was analyzed for potassium in a test developed here to distinguish between primary aldosterone oversecretion and pseudo-primary aldosteronism. The latter condition, first described by Drs. Leslie Baer and Laragh, does not disappear after the patient's adrenals are removed to cure him of his primary condition. Miss Schoonmaker had a whole battery of blood and urine tests during her two-and-a-half-week sojourn in the metabolism unit on the Hospital's 9th floor, but she is expecting more tests because Dr. Laragh believes a more efficient drug should be applied in her case.

Because of the interaction of renin and aldosterone, the patient frequently benefits from a combination of two drugs, one for renin, the other for aldosterone. Donald Weiss, who is in retail men's wear in the Garment District pressure cooker, is doing well now after years of complaining of the classical symptoms of hypertension—headaches and diz-

ziness. His pressure is "well within normal range now," he says, from taking a combination of two drugs that he used to take separately without any beneficial effect before coming to the Presbyterian Hospital.

The government-supported Hypertension Center has been in existence only a short while, but a facility at P.H., referred to informally as "our hypertension center" by patients, has been improving the quality of their lives for years. Mrs. Lila Sherman of South Orange, New Jersey, sums it up simply: "The treatment I received at the hypertension center has meant everything—my life." Mrs. Sherman's hypertension manifested itself following a car accident eight and a half years ago. She started experiencing headaches, dizziness, depression, pains in her arms, and anxiety. Today she is symptom-free on a combination of drugs.

Other patients with stabilized blood pressures are no less emphatic over the value of the hypertension center. "I would have been an invalid without the treatment," says Mrs. Joan Bartwink, the wife of a Rockville Centre periodontist. "My headaches used to knock me out completely, and my tiny blood vessels were already beginning to break down under the pressure." Today she is functioning at full capacity, as a homemaker, mother of two, works as a nurse in her husband's office five and a half days a week, and attends school two mornings a week to learn Spanish and French. As do other hypertensive patients, she takes pills every day and sees Dr. Laragh periodically.

What may be the most wearying schedule of any ex-hypertensive patient is maintained by Mrs. Marion Cohane of Hawthorne, New York, the wife of a Union Carbide attorney. Her job and her hobby, she quips, are "surviving with my six children." The catch is that five of the six children, aged from 12 to 6, are very active boys and the sixth is a very active girl. Four of the

# The Strength Of Our Medical Center Lies In The Interaction Of People

The Hypertension Center is really a team operation in which the interaction of people with various skills yields a more sophisticated analysis than anyone working alone could hope to achieve. Associated with the Center is a group of research-minded physi-

cians of varying ages and experience whose treatment of hypertensive disease is based on continuing group analysis and study of the clinical problems presented by the patients. These physicians collaborate closely with the Center's full-time laboratory team of the

"core group," and some of them conduct experiments with the laboratory research group. In addition, the "core" physicians work closely with supporting diagnostic and study groups of the Departments of Medicine, Radiology, and Ophthalmology.

The "core group" consists of Drs. Leslie Baer, Hans Brunner, Fritz Buhler, and Darracott Vaughan of the Hypertension Center, Drs. Ginette Jacob and Austin Pattner, who are in charge of the renal disease and artificial kidney patients, and Jean Sealey, who directs the research laboratory programs and is responsible for laboratory personnel. This core group works closely with diagnostic teams in Radiology who study heart, kidney and brain circulations. These activities involve Drs. Paul Cannon, William Casarella, Don Schmidt, Sadek Hillal. Eye studies in hypertension are directed by Dr. Harold Spalter, and salivary function is followed by Dr. Stephen Wotman and his group.

Jean Sealey, Research Associate (left), and Mrs. Faye Petzoldt, grant secretary, proofread a scientific text.

*Your Gift to the Hospital may be used for general purposes, or, if you prefer, you may mark it for the use of one hospital or for an individual project in the Presbyterian Hospital's Development Program.*

*Funds may also be marked for the Emergency Nursing Funds at the Babies Hospital unit and The Neurological Institute unit. Such funds provide nursing care for acutely-ill patients who may not be able to pay for such needed services.*

*Those projects in most urgent need of funds at present are the Babies Hospital unit and the new Emergency Facilities at Vanderbilt Clinic unit.*

*On behalf of the patients who will benefit from your gift—thank you.*

## The Quality of Life . . .

*Continued from page three*

boys are sports-minded and have signed up for community sports programs, and Mrs. Cohane's car is seen on the road every half hour taking one or the other son to basketball, baseball, swimming practice, etc., and taking them home from practice and games.

"There is no time off to have a breather," she says, "but I really feel it's the best for them." Four of the boys and the girl are also aspiring musicians, and each plays a different musical instrument. This means taking them to practice sessions of two separate orchestras and picking them up after practice. "I am doing so much chauffeuring that I think I should get a cab," Mrs. Cohane says. And yes, then there is the housecleaning. . . .

Mrs. Cohane began to notice the classical symptoms of high blood pressure—severe headaches, dizziness—in 1962. "I was getting treatment elsewhere, but I would find myself walking in my sleep from the drugs and just getting nowhere because my pressure would go up again." After coming to our medical center in 1968, she has been in the transportation business full time without her previous

symptoms.

Some hypertensive patients develop symptoms so early in life that they do not know what it feels like to live at normal pressure. One of this group, Mrs. Bernice Kimball, exults over not having that "great fatigue" and "tension in your head"; the feeling "as if you're always in a hurry. . . ." Mrs. Kimball, who is a fund-raising consultant in New York City and runs a small antique business there with her sister, now knows "a different stage of being."

The anti-hypertension fighters at the Presbyterian Hospital are helping thousands to achieve this "different stage of being" in this part of the country. Many of these patients have been helped through the Hypertension and Nephritis Clinic of the Vanderbilt Clinic, which was started by Drs. Atchley and Loeb and which now is attended by nearly 1,000 hypertensives each year. This specialized clinic, one of the largest such clinics in the country, has been accepting patients for treatment since the medical center was started.

The thoughtfulness of Friends of the Hospital has been a key factor in the continued operation of this unit and of all other vital patient care facilities in the Presbyterian Hospital complex.

Mrs. Ita Flood and Mrs. Joan Banes of the Hypertension Center's administrative staff confer about patient scheduling.

Betsy Manning, research worker, joined the laboratory staff two years ago. She has extensive experience with radio active technology.

### Beep-Beep Means Trouble

The hypertension-nephrology team also provides a 24-hour consultation service using a radio-call beeper system. This system allows the group to treat people in hypertensive emergencies, such as stroke, encephalopathy, and acute kidney failure.

Dr. Leslie Baer is seemingly wired into his patient's sound system as he takes her blood pressure.

With Christmas only a few weeks away, Mrs. McElhinney decorates nurses' station of metabolism unit with holly.

## CALENDAR OF CHRISTMAS EVENTS

**Monday, December 6**

9:00 a.m.-4:30 p.m.

PAINT SUPPLIES become available for two weeks, for use in window decorations. (Chaplain's Office)

**Monday, December 13**

11:00 a.m.-1:00 p.m.

3:00 p.m.-4:30 p.m.

\*CHRISTMAS MUSIC—on daily radio broadcast through December 31.

7:00 p.m.

BABIES HOSPITAL CHILDREN'S PAGEANT on PH 5E.

7:30 p.m.

BABIES HOSPITAL CHILDREN'S PAGEANT on PH 5C.

**Tuesday, December 14**

6:15 p.m.

PHYSICAL THERAPY CAROLERS on the wards.

**Wednesday, December 15**

1:45 p.m.

MELODY QUARTETTE caroling on the wards.

5:15 p.m.

\*CANDLELIGHT VESPER SERVICE in the Pauline A. Hartford Memorial Chapel.

7:00 p.m.

NURSES CAROLING GROUP on the wards.

**Thursday, December 16**

7:00 p.m.

NURSES AND DOCTORS traditional caroling procession through the Hospital.

**Friday, December 17**

4:30 p.m.

CHANUKAH PARTY in the Pauline A. Hartford Memorial Chapel.

**Sunday, December 19**

3:00 p.m.

\*STUDIO RECITAL: SPECIAL CHRISTMAS BROADCAST.

**Monday, December 20**

11:00 a.m.

\*BOGOTA HIGH SCHOOL CHORUS in the Pauline A. Hartford Memorial Chapel.

**Tuesday, December 21**

7:00 p.m.

CHINESE STUDENT CHOIR on the wards.

**Saturday, December 25**

CHRISTMAS DAY SERVICES in the Pauline A. Hartford Memorial Chapel.

7:00 a.m.

\*ROMAN CATHOLIC MASS.

10:30 a.m.

\*PROTESTANT HOLY COMMUNION.

\*Broadcast over BEDSIDE Broadcasting System—Channel 1.
